Wojciech Kowalczyk, MA

Panstwowe Zaklady Lotnicze (State Aviation Works) formed by industrial syndicate in 1928 from existing factories to produce aircraft for domestic use and export, until 1981 aviation industry organised under ZPLS-PZL (Aircraft and Engine Industry Union) control, activities came under Bureau of Ministers control 1982 (see earlier *Jane's*). Aviation and diesel engine industry encompassed 19 factories and other establishments in early 1992, with combined workforce of approximately 50,000; currently undergoing further reorganisation following democratisation and dissolution of USSR, with aviation industry grouped from 1991 under council of factories headed by Pezetel. Aviation Holding, a consortium formed by PZL Mielec/Swidnik/Okecie (aircraft), PZL Rzeszów (aero-engines) and PZL Hydral Wroclaw (hydraulics) concerns, is being assisted by Polish Industrial Development Agency in attempt to raise new investment capital. PZL Swidnik, which has made the most progress towards privatisation, will serve as the model for the other member companies. Eventual plan is to privatise entire aviation industry.

Polish aviation industry has relied substantially on aircraft engines (see Aero-Engines section) and equipment (military, propellers, and ground equipment for agricultural aircraft and helicopters) of its own design, as well as on co-operation and co-production with manufacturers from East and West, also undertakes component manufacture for Russian Il-96 airliner. Pezetel handles export sales of Polish aviation products.

AGROLOT

WYPOSAŻEŃ AGROLOTNICZYCH (Agrolot Foundation)

Aleja Krakowska 110/114, PL-00-971 Warsaw
Telephone: 48 (22) 466350
CHAIRMAN: Andrzej Slocinski

This foundation (established 1990) is responsible for PZL-126P Mrówka programme previously listed under PZL Warszawa-Okecie.

NEW ENTRY

PZL-126P MRÓWKA (ANT)

TYPE: Single-seat light agricultural and ecological support aircraft.

PROGRAMME: See under PZL Warszawa-Okecie in 1993-94 and previous editions for early history. PZL-126 prototype (SP-PMA) made first flight 20 April 1990; this aircraft now used (1994) to test modified 44.7 kW (60 hp) PZL-F2A 120 C1 two-cylinder engine driving two-blade fixed-pitch propeller. PZL-126P is planned operational version, being designed and developed at Warszawa-Okecie factory; funded by Agrolot Foundation, chief designer Andrzej Slocinski.

CURRENT VERSIONS: **PZL-126P:** Under construction 1995. Increased wing span and area, more powerful engine, larger fuel tanks and increased payload compared with PZL-126 prototype. Intended as economical carrier of airborne systems for forestry protection (for example, combating pests, identifying diseased vegetation, detecting/controlling forest fires, spreading non-toxic small-volume selective-action agents for plant protection such as Trichogramma parasitic wasp eggs laid in eggs of host insect). Other applications include air pollution monitoring and pipeline patrol. *Description applies to PZL-126P except where indicated.*

DESIGN FEATURES: Single-engined low wing monoplane with rectangular tail surfaces, meets requirements of FAR Pt 23. Semi-monocoque fuselage with equipment bay in lower portion aft of cockpit, accessible through hatch, upswept rear fuselage facilitates access to this bay. Quick-fastening lock beneath each wingtip for attachment of integral spraypod. Aircraft can be dismantled quickly for towing on own landing gear by light all-terrain vehicle. Wing aerofoil section NASA GA(W)-1, dihedral 3°.

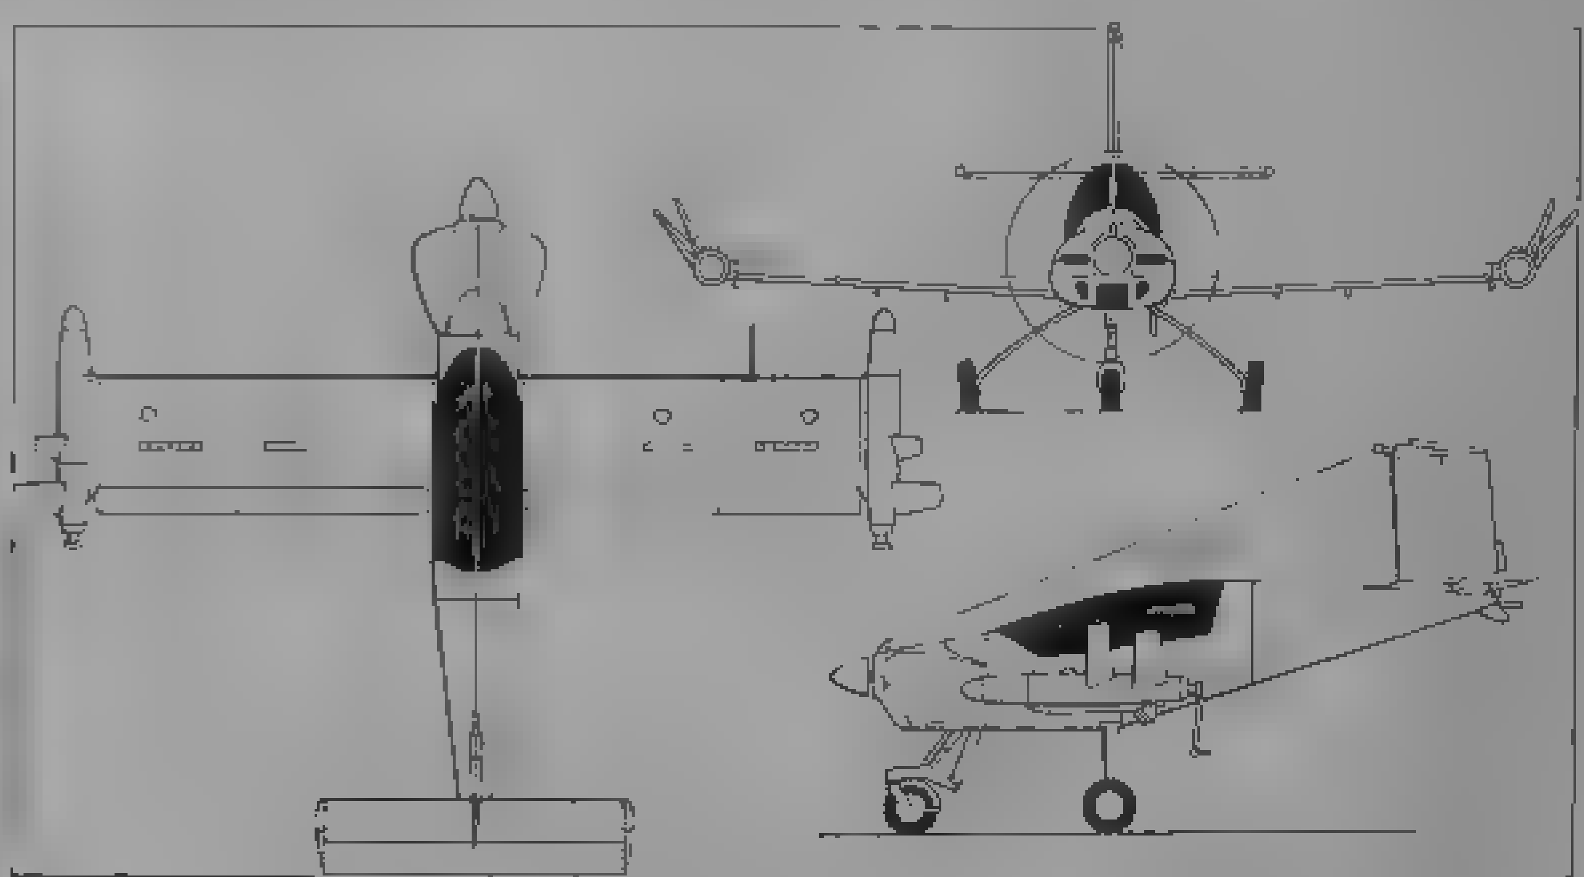
FLYING CONTROLS: Area-increasing flaps and flaperons, actuated by pushrods and interconnected by single central system located under cockpit floor, elevator actuated by pushrods, rudder by cables from adjustable rudder pedals. trim tab on elevator, ground adjustable tab on rudder.

STRUCTURE: All-metal except for GFRP/epoxy engine cowling, laminated wingtips and fairings. Single-spar wings and fixed tail surfaces, wings mounted on fuselage mandrels and offset spars connected with single pin, front part of fusetage has two 'tusks' for engine and nosewheel mounting.

LANDING GEAR: Non-retractable tricycle type. Self-springing cantilever mainwheel legs of duralumin; castoring nosewheel with oleo-pneumatic shock absorber. Wheel and tyre size 350 × 135 mm on all three units. Hydraulic differential mainwheel disc brakes.

POWER PLANT: One 74.6 kW (100 hp) Teledyne Continental O-200A flat-four engine, driving a McCauley 1A100MCM6950 two-blade metal propeller. Integral fuel

First prototype PZL-126 Mrówka agricultural aircraft, without wingtip pods *1994*



PZL 126 Mrówka light agricultural aircraft *(Jane's/Mike Keep)* *1987*

tank in each wing, combined capacity 200 litres (52.8 US gallons, 44 Imp gallons)

ACCOMMODATION: Single-seat cockpit, fitted with airbag enabling in-flight seat adjustment. One-piece organic glass moulded canopy, opening sideways to starboard

SYSTEMS: Hydraulic system for mainwheel brakes only, 24 V electrical system, hand pump to inflate seat cushion

AVIONICS: *Comms:* 720-channel UHF radio and 10-channel radiotelephone.

Instrumentation: Basic version fitted with VFR instrumentation. Electronic engine monitoring instruments are up to seven times lighter than standard. Instrument panel, with cover, can be lifted up for access to instruments and front part of cockpit

EQUIPMENT: Spraypod can be fitted to each wingtip. Pod is an integral unit with all necessary attachments for spraying, attached to wingtips by quick fastening locks, electric multiplug socket supplying power to atomisers, and electric valve controlling outflow of liquid from tank. Optional third spray unit can be mounted under fuselage. Up to 35 ha (86.5 acres) can be sprayed in one flight with 70 litres (18.5 US gallons, 15.4 Imp gallons) of pesticide delivered at rate of 2 litres (0.53 US gallon, 0.44 Imp gallon)/ha

Special biological spreader developed for dosing and spreading eggs of Trichrogramma wasp, eggs are carried in capsules in reel of tape covered with thin paper, spreader holding four such reels. Spreader is powered by electric motor and activated or stopped by push-button on throttle lever; 3 kg (6.6 lb) load of capsules is sufficient, at typical dispersal rate of four capsules every 50 m (164 ft) in rows 50 m apart, to seed an area of 800 ha (1,977 acres). Rotational mounting of spreader allows for full deflection and easy replacement of egg reels.

Aircraft can also carry miniaturised equipment such as photographic, video, thermal or other systems, coupled to satellite navigation system, monitoring and recording pictures or other signals from space

Aerodynamic model of the IL Kobra 2000 light attack aircraft *1995*

IL KOBRA 2000

TYPE: Battlefield light attack aircraft.

PROGRAMME: Revealed publicly 11 September 1993; first flight late 1990s.

CURRENT VERSIONS: Proposed in single- and two-seat versions

CUSTOMERS: Candidate for Polish Air Force requirement (60 to 100 reportedly wanted) for service entry by 2005. Competitors are PZL Mielec M-99 Orkan and PZL Warszawa-Okecie PZL-230F Skorpion (which see)

DESIGN FEATURES: Sweptback mid-wing configuration; dorsal air intake, large vertical fin; tailplane halves carried on twin underfins. Chief designer Wlodzimierz Gnarowski

LANDING GEAR: Retractable tricycle type, twin wheels on each unit

POWER PLANT: Twin turbofans (27.0 kN, 6,063 lb st IL D-28 or 26.2 kN; 5,900 lb st Rolls-Royce Turbomeca Adour Mk 871), mounted side by side in rear fuselage, combined dorsal intake aft of cockpit

DIMENSIONS, EXTERNAL:

Wing span	11.00 m (36 ft 1 in)
Length overall	13.70 m (44 ft 11½ in)
Height overall	5.20 m (17 ft 0¾ in)

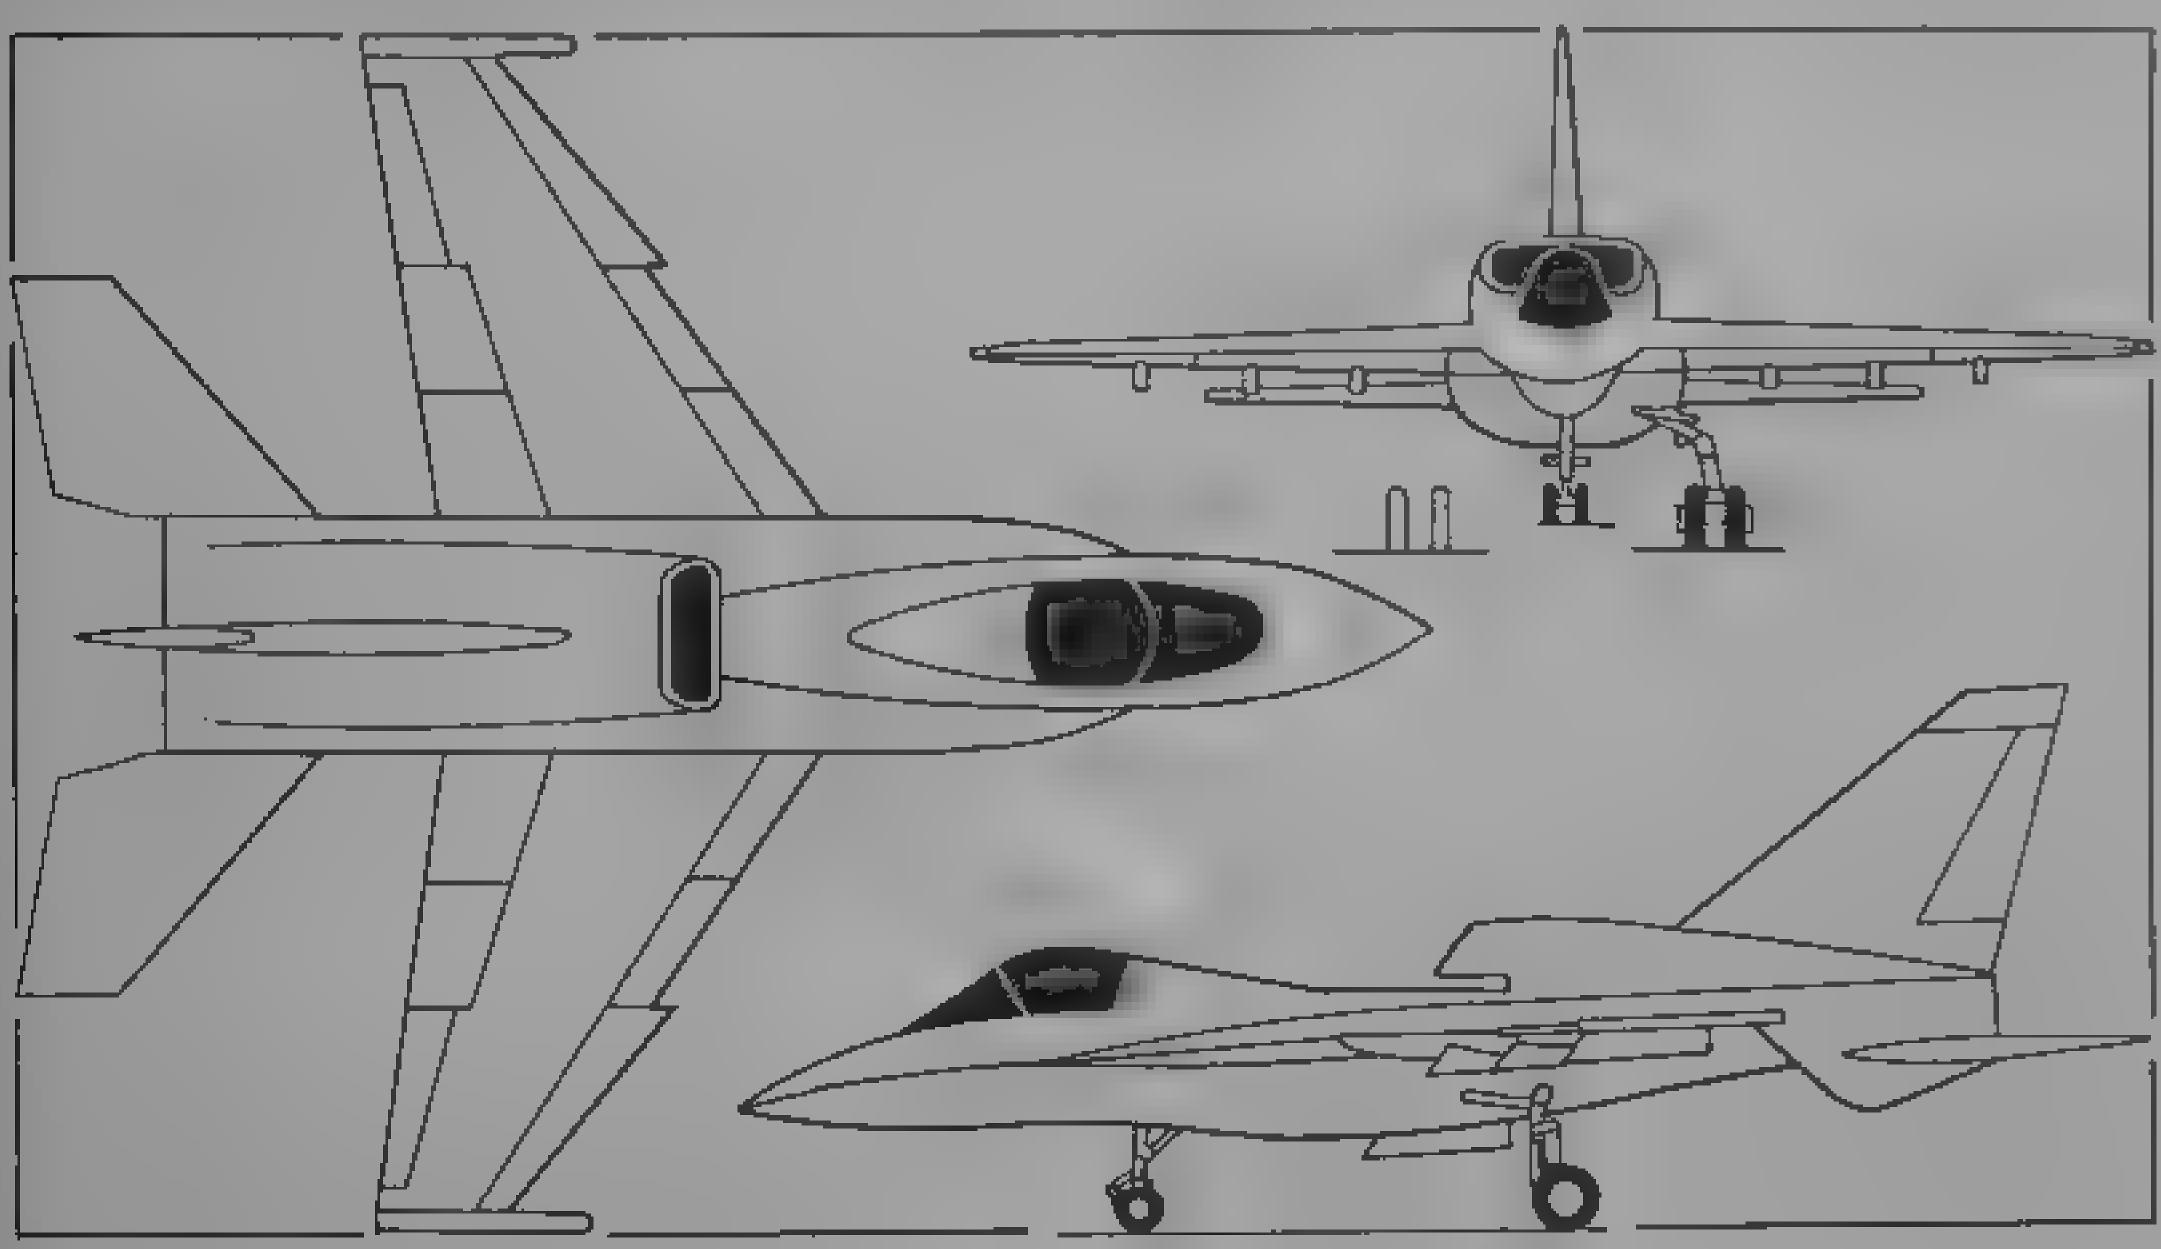
WEIGHTS AND LOADINGS:

Weight empty	4,430 kg (9,766 lb)
Max external stores load	3,350 kg (7,385 lb)
Max T-O weight	10,690 kg (23,567 lb)

PERFORMANCE (estimated):

Max level speed at S/L	567 kts (1,050 km/h; 652 mph)
Max rate of climb at S/L	6,000 m (19,685 ft)/min
Service ceiling	18,000 m (59,050 ft)
T-O run	380 m (1,247 ft)
Combat radius	189-216 n miles (350-400 km, 217-248 miles)

UPDATED



Provisional drawing of IL Kobra 2000 ***(Jane's/Paul Jackson)*** *1995*

IL I-23

TYPE: Four-seat light aircraft

PROGRAMME: Launched June 1992, construction started January 1994 of one static test and two flying prototypes, first flight scheduled for August 1995; series production planned to begin January 1996, followed by certification (to Normal and Utility category JAR Pt 23) in September 1996, first flight of production I-23 in October 1996 and first customer delivery 1997. Output of 100 per year foreseen by 1999

COSTS: $4 million for development programme, standard aircraft $100,000 (1994)

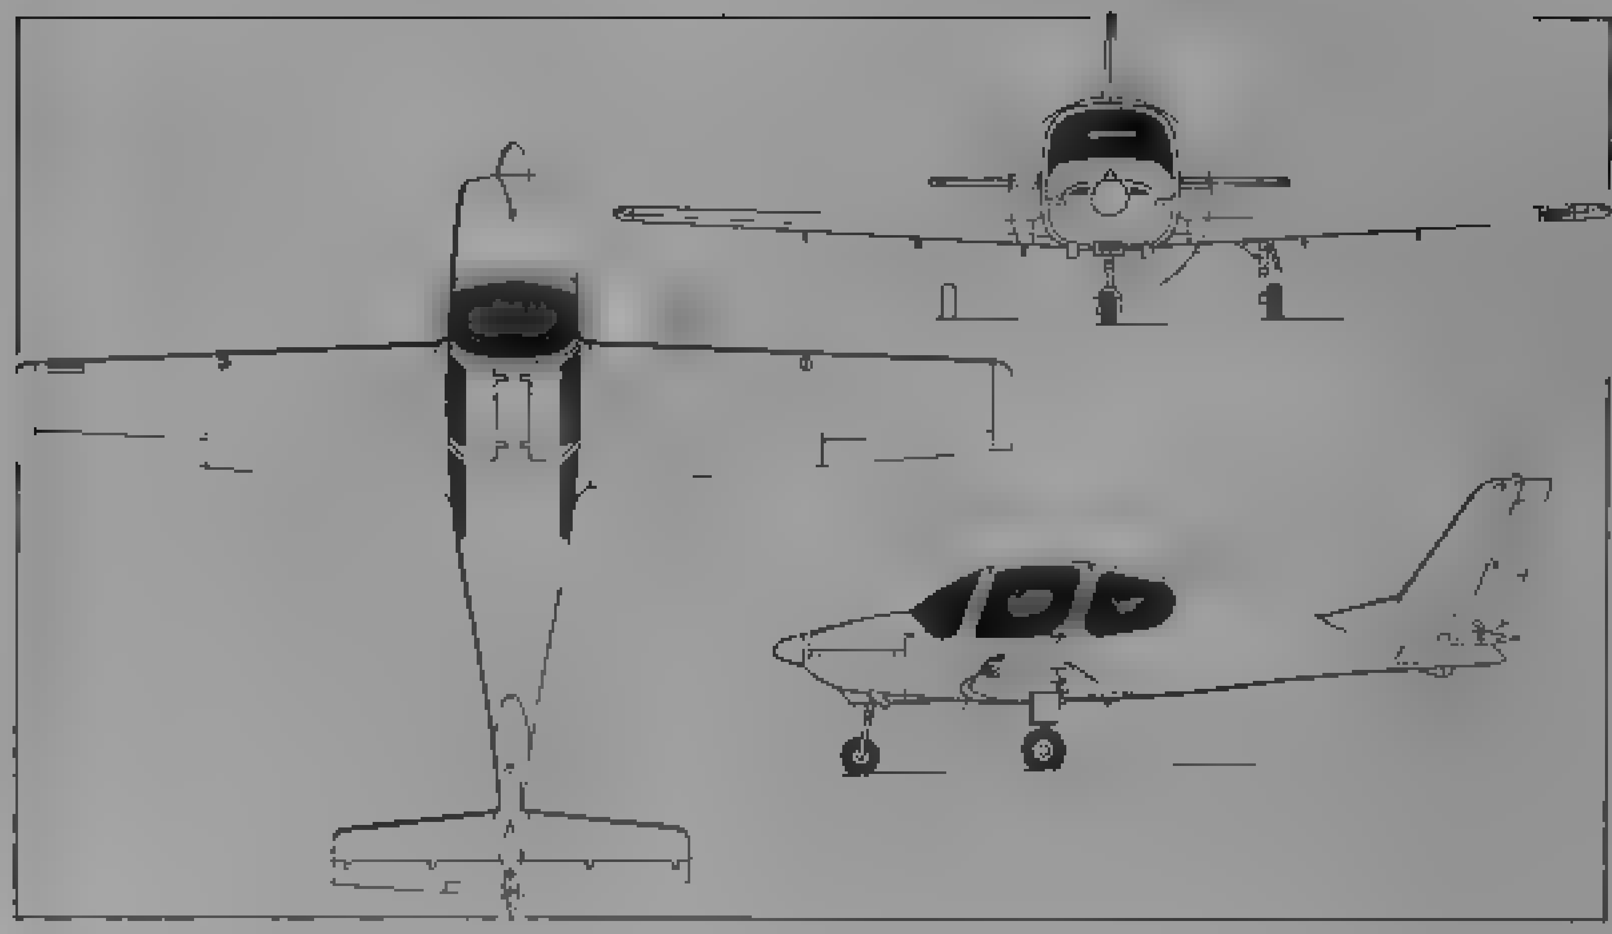
DESIGN FEATURES: Intended as safe, low-cost, low fuel consumption private owner aircraft. Conventional low-wing, tricycle-gear design with fully enclosed cabin. Wing has ILL-217 (root) and ILL-213 (tip) aerofoil sections, 2° 30′ leading-edge sweepback, 4° dihedral, 2° incidence and -1° 30′ twist.

Design permits use of any Textron Lycoming flat-four engine from 86 to 149 kW (115 to 200 hp), option for fixed or retractable landing gear, and equipment to customer's specifications.

FLYING CONTROLS: Manual/mechanical primary surfaces, single-slotted flaps

STRUCTURE: Mainly composites (GFRP/CFRP/epoxy), with sandwich skins

Model of the Instytut Lotnictwa I-23 (119 kW, 160 hp O-320 engine) *1994*



Instytut Lotnictwa I-23 four-seat light aircraft (*Jane's/Mike Keep*) *1994*

LANDING GEAR: Electrohydraulically retractable tricycle type with oleo-pneumatic shock absorbers; mainwheels retract inward, nosewheel rearward. Goodrich tyres 360 × 125 mm (main) and 336 × 128 mm (nose) tyres; tyre pressure 2.4 bars (34.8 lb/sq in) on all units. Non-retractable gear optional.

POWER PLANT: Standard engine is a Textron Lycoming O-320-D1A flat-four (119 kW; 160 hp at 2,700 rpm), driving a Hartzell two-blade constant-speed propeller. Higher or lower powered alternatives optional (see Design Features). Integral fuel tank in each wing, combined capacity 150 litres (39.6 US gallons; 33 Imp gallons); provision for eventual increase to 200 litres (52.8 US gallons; 44 Imp gallons). Pressure refuelling. Oil capacity 7.5 litres (1.98 US gallons; 1.65 Imp gallons).

ACCOMMODATION: Pilot and three passengers in side by side pairs. Upward-opening cabin door each side. Cabin heated and ventilated.

SYSTEMS: Electrohydraulic system for landing gear actuation; hydraulic system for mainwheel brakes only. Electrical power from 12 V 60 A alternator and 12 V 32 Ah battery. Liquid (spirit) windscreen de-icing. Heated pitot head.

AVIONICS: *Comms*: Bendix/King com transceiver and ATC transponder standard.

Flight: Bendix/King nav transceiver, ADF and KCS 55A HSI standard, optional full IFR system with KNS 81 integrated nav/RNav, DME and GPS. Two-axis autopilot with altitude/vertical speed preselect also optional.

DIMENSIONS, EXTERNAL:

Wing span	8.94 m (29 ft 4 in)
Wing chord: at root	1.312 m (4 ft 3½ in)
at tip	0.838 m (2 ft 9 in)
Wing aspect ratio	7.99
Length: overall	6.76 m (22 ft 2¼ in)
fuselage	5.70 m (18 ft 8½ in)
Height overall	2.40 m (7 ft 10½ in)
Tailplane span	3.20 m (10 ft 6 in)
Wheel track	2.60 m (8 ft 6½ in)
Wheelbase	1.65 m (5 ft 5 in)
Propeller diameter	1.80 m (5 ft 10¾ in)
Propeller ground clearance	0.20 m (7¾ in)

AREAS:

Wings, gross	10.00 m² (107.6 sq ft)
Ailerons (total)	0.72 m² (7.75 sq ft)
Trailing-edge flaps (total)	1.54 m² (16.58 sq ft)
Fin	0.85 m² (9.15 sq ft)
Rudder	0.48 m² (5.17 sq ft)
Tailplane	2.08 m² (22.39 sq ft)
Elevators (total)	0.39 m² (4.20 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	552 kg (1,217 lb)
Max standard fuel weight	80 kg (176 lb)
Max T-O and landing weight	950 kg (2,094 lb)
Max wing loading	95.0 kg/m² (19.46 lb/sq ft)
Max power loading	7.98 kg/kW (13.09 lb/hp)

PERFORMANCE (estimated, at max T-O weight):

Never-exceed speed (V_{NE})	183 kts (340 km/h; 2.1 mph)
Max level speed	162 kts (300 km/h; 186 mph)
Max cruising speed at 2,400 m (7,875 ft)	151 kts (280 km/h; 174 mph)
Econ cruising speed at 2,400 m (7,875 ft)	135 kts (250 km/h; 155 mph)
Stalling speed, flaps up, power off	59 kts (109 km/h; 68 mph)
Max rate of climb at S/L	306 m (1,004 ft)/min
Service ceiling	4,400 m (14,435 ft)
T-O run	165 m (542 ft)
T-O to 15 m (50 ft)	327 m (1,073 ft)
Landing from 15 m (50 ft)	330 m (1,083 ft)
Landing run	122 m (401 ft)
Range: with max fuel	809 n miles (1,500 km; 932 miles)
with max payload	499 n miles (925 km; 575 miles)

VERIFIED

POLITECHNIKA WARSZAWSKA PW-4

TYPE: Two-seat motor glider.

PROGRAMME: Based on PW-3 sailplane (see 1992-93 *Jane's*) but rear fuselage boom lower to permit mounting of engine at wing trailing-edge; first flight 23 December 1990.

DESIGN FEATURES: Strut-braced high wing, pod and boom fuselage.

FLYING CONTROLS: Mechanical for conventional primary surfaces; airbrakes in wing upper surfaces.

STRUCTURE: Mainly GFRP/epoxy except for fabric covering on wings and rudder.

LANDING GEAR: Non-retractable tricycle type, with self-sprung mainwheel legs. Mainwheel tyres size 350 × 150 mm; steerable tailwheel, size 300 × 125 mm. Mainwheel disc brakes.

POWER PLANT: One 59.7 kW (80 hp) Limbach L 2000 EC1 flat-four engine, driving a Hoffmann two-blade fixed-pitch pusher propeller. Fuel capacity 40 litres (10.6 US gallons; 8.8 Imp gallons).

ACCOMMODATION: Two tandem seats.

Politechnika Warszawska PW-4 tandem two-seat motor glider *1994*

DIMENSIONS, EXTERNAL:

Wing span	16.20 m (53 ft 1¾ in)
Wing aspect ratio	13.95
Length overall	8.00 m (26 ft 3 in)
Height overall	2.40 m (7 ft 10½ in)

AREAS:

Wings, gross	18.80 m² (202.4 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	500 kg (1,102 lb)
Max T-O weight	720 kg (1,587 lb)
Max wing loading	38.30 kg/m² (7.84 lb/sq ft)
Max power loading	12.07 kg/kW (19.83 lb/hp)

PERFORMANCE, UNPOWERED (at max T-O weight):

Stalling speed	38 kts (70 km/h; 44 mph)
Min rate of sink at 46 kts (86 km/h; 53 mph)	1.20 m (3.94 ft)/s
Best glide ratio at 51 kts (95 km/h; 59 mph)	20
Design g limits	+5.3/−2.65

MANAGING DIRECTOR: Zdzisław Klonowski
TECHNICAL DIRECTOR: Piotr Rudny
COMMERCIAL DIRECTOR: Ryszard Migryt

WSK PZL Mielec is largest and best equipped aircraft factory in Poland; founded 1938, had produced over 15,000 aircraft by 1 January 1995. R&D department is responsible for aircraft design, modification and development.

In addition to production of aircraft of its own and foreign design, Mielec manufactures components for Boeing 757 and Ilyushin Il-96, began manufacture and subassembly March 1991 of components for Socata TB series light aircraft (see French section).

UPDATED

PZL MIELEC I-22 IRYDA (IRIDIUM)

TYPE: Two-seat basic and advanced jet trainer.

PROGRAMME: Launched 1977, leading to 1980 Polish Ministry of National Defence 'Iskra-22' requirement for combat capable jet trainer, designed by OBR SK/IL/PZL Warszawa team led initially by Dr Eng Alfred Baron and from

1987 by Dr Eng W Gnarowski construction began 1982, static test aircraft completed 1983, five flying prototypes, all with PZL-5 turbojets, of which first one (c/n 1ANP01-02) made first flight 3 March 1985 but lost in crash 31 January 1987; first flights of remaining four 26 June 1988 (SP-PWB, c/n 1ANP01-03), 13 May 1989 (SP-PWC, c/n 1ANP01-04), 22 October 1989 (SP-PWD, c/n AN001-01) and 4 July 1991 (SP-PWE, c/n AN001-02); fatigue test aircraft completed 1990, factory and state tests (1,040 flights totalling 900 hours) completed by end March 1992, followed by award of state test certificate 14 April 1992

First order (for nine preproduction aircraft) announced during Poznan air show September 1991, first of these (serial number 103) made first flight 5 May 1992, handed over to Polish Air Force (with second aircraft 105) 24 October, entering service 27 November 1992; next three aircraft delivered February 1994

CURRENT VERSIONS: **I-22**: Initial two-seat training version with PZL-5 engines. *Detailed description applies to this version.*

M-93, M-95, M-97 and M-99: Developed versions, described separately

CUSTOMERS: Polish Air Force (58th Lotniczy Pulk Szkolny: Air School Regiment)

COSTS: Development programme Zł 5 billion (1991); I-22 approximately $3.5 million (1993).

DESIGN FEATURES: Intended to replace TS-11 Iskra and LiM-6 with Polish Air Force, covers full spectrum of pilot, navigation, air combat, reconnaissance and ground attack training, with day/night and bad weather capability, able to operate from unprepared airstrips and carry variety of ordnance; airframe designed to be tolerant of battle damage, capable of quick and inexpensive repair, and stressed to permit use of more powerful engines and carriage of greater weapons load without jeopardising permissible load factors, service life calculated on basis of 2,500 flying hours or 10,000 take-offs and landings

Laminar flow aerofoil section (NACA 64A-010 at root, 64A-210 at tip), with 0° incidence and 1° 43′ 48″ geometric twist sweepback 18° 58′ 12″ on leading edges, 14° 27′ 36″ at quarter-chord, no sweep on trailing edges, anhedral from roots 3° on wings, 6° on tailplane

FLYING CONTROLS: Mechanically (rod) actuated mass balanced, differentially operable ailerons (with hydraulic boost and manual reversion), elevators and rudder, ground adjustable tab on rudder and each aileron, hydraulically actuated single-slotted trailing-edge flaps (25° for T-O and landing), with emergency pneumatic operation, variable incidence tailplane (0°/−7.5°) and twin airbrakes (maximum deflection 62°) in upper rear fuselage also actuated hydraulically

STRUCTURE: All-metal light alloy (aluminium/magnesium/steel) stressed skin, with limited use of glassfibre (for example, fuselage/fin fairing); two-spar wing, built as one unit with centre and inboard portions forming integral fuel tanks. Titanium heatshields in engine bays. Elevator trailing-edges of honeycomb sandwich from third preproduction aircraft onward

LANDING GEAR: Retractable tricycle type, with oleo-pneumatic shock-absorber, single wheel and tubeless tyre on each unit. Hydraulic extension and retraction, nose unit retracts forward, main units forward and upward into engine nacelles. Auxiliary pneumatic system for emergency extension. Mainwheel tyres size 670 × 210 mm, pressure 7.06 bars (102.4 lb/sq in), nosewheel tyre 430 × 170 mm, pressure 5.78 bars (84 lb/sq in). Nosewheel steerable ±45°. Hydraulic disc brakes on mainwheels, auxiliary mainwheel parking brake serves also as emergency brake. Maximum rate of descent 220 m (722 ft)/min at AUW of 6,600 kg (14,550 lb). SH 21U 1 brake-chute (area 15 m², 161.5 sq ft, drag coefficient 0.45) in fuselage tailcone. Small tail bumper under rear of fuselage

POWER PLANT: Two 10.79 kN (2,425 lb st) PZL-5 (formerly SO-3W22) non-afterburning turbojets, pod-mounted on lower sides of centre-fuselage. Fuel in three integral wing tanks (combined capacity 1,090 litres, 288 US gallons, 240 Imp gallons) and two rubber tanks and two header tanks in fuselage (combined capacity 1,340 litres, 354 US gallons, 295 Imp gallons), to give total internal capacity of 2,430 litres (642 US gallons, 535 Imp gallons)

Fuel system permits up to 30 seconds of inverted flight. Single-point pressure refuelling (at front of port engine nacelle), plus four gravity filling points (two in upper fuselage, one on each wing). Oil capacity 10 litres (2.6 US gallons, 2.2 Imp gallons) per engine

ACCOMMODATION: Pressurised, heated and air conditioned cockpit, with tandem seating for pupil (in front) and instructor; rear seat elevated 400 mm (15.7 in). For solo flying, pilot occupies front seat. Back-type parachute, oxygen bottle and emergency pack for both occupants. Individual framed canopies, each hinged at rear and opening upward pneumatically. Rearview mirror in front cockpit. VS1 BRI/P rocket-assisted ejection seats, fitted with canopy breakers, can be operated at zero altitude and at speeds down to 81 knots (150 km/h, 94 mph). Dual controls standard, front cockpit equipped for IFR flying. Windscreen anti-iced by electric heating, supplemented by alcohol spray. Remaining transparencies anti-iced and demisted by hot engine bleed air

SYSTEMS: Cockpits pressurised (maximum differential 0.185 bar; 2.68 lb/sq in) and air conditioned by engine bleed air. Air from air conditioning system also used to pressurise crew's g suits. Main hydraulic system, pressure 210 bars (3,045 lb/sq in), actuates landing gear extension and retraction, wing flaps, airbrakes, tailplane incidence, brake-chute deployment, differential braking of mainwheels, and nosewheel steering. Auxiliary hydraulic system for aileron control boost. Pneumatic system comprises three separate circuits, each supplied by a nitrogen bottle pressurised at 150 bars (2,175 lb/sq in): one powers emergency extension of wing flaps for landing, one the emergency extension of landing gear; third is for canopy opening, closing and sealing, windscreen fluid anti-icing system, and hydraulic reservoir pressurisation. All three bottles charged simultaneously through a common nozzle

Electrical system, powered by two 9 kW PR-9 DC starter/generators, supplies 115 V single-phase AC (via two 1 kVA LUN 2458.8 static converters) and 36 V three-phase AC (via two 500 VA PT-500C converters), both at 400 Hz; two 24 V 25 Ah 20NKBN-25 batteries provide DC power in event of a double failure. Each AC voltage supplied by one main converter and one standby, latter automatically assuming full load if a main converter fails. Crew oxygen system, capacity 9 litres (549 cu in). Engine intakes anti-iced by engine bleed air; fire detection and extinguishing system (two Freon bottles in rear fuselage). Electronic control system for gun firing and weapon release

AVIONICS: *Comms*: Unimor RS-6113 VHF/UHF multichannel com radio and SRO-2 IFF.

Flight: ARK-15M ADF; RW-5 radio altimeter, ORS-2M marker beacon receiver (from third preseries aircraft onward), SOD-57M ILS, SARPP-12WM flight data recorder in dorsal fin fillet

Instrumentation: Blind-flying instrumentation standard.

Mission: Integrated analog weapon delivery control system

Self defence: SPO-1 RWR

ARMAMENT: One 23 mm GSz-23L twin-barrel gun in ventral pack, with up to 200 rounds in fuselage (normal load 50 rounds on training missions), ASP-PFD-I22 gyro gunsight, S-13-100 nose-mounted gun camera and (optionally) SSz-45-1-100-05 firing effect monitor camera. Four UBP I-22 underwing multiple stores carriers normally, each stressed for load of up to 500 kg (1,102 lb) (but maximum external stores load 1,100 kg, 2,425 lb); on these can be carried various bombs of 50, 100, 250 or 500 kg size (alternative MBD2-67U carriers for 50 and 100 kg bombs), from 32 to 128 57 mm S-5 unguided rockets in Mars-2, Mars-4, UB-16-57U or UB-32A-1 launchers, or R-60 air-to-air homing missiles on APU-60IM launch rails. Alternative underwing loads can include 23 mm UPK-23-250 gun pods, Zeus-1 7.62 mm gun pods, ZK-300 Kisajno cluster bombs, a ZR-8MB bomblet dispenser, Saturn-2 and Fobos-3 camera pods, 80 mm S-8 rockets in B-8M launchers, drop tanks or other weapons

DIMENSIONS, EXTERNAL:

Wing span	9.60 m (31 ft 6 in)
Wing chord, at root	2.90 m (9 ft 6¼ in)
at tip	1.25 m (4 ft 1¼ in)
Wing aspect ratio	4.63
Length overall	13.22 m (43 ft 4½ in)
Height overall	4.30 m (14 ft 1¼ in)
Tailplane span	4.20 m (13 ft 9¼ in)
Wheel track	2.71 m (8 ft 10¾ in)
Wheelbase	4.91 m (16 ft 1¼ in)

AREAS:

Wings, gross	19.92 m² (214.4 sq ft)
Ailerons (total)	1.362 m² (14.66 sq ft)
Trailing-edge flaps (total)	3.22 m² (34.66 sq ft)
Airbrakes (total)	0.40 m² (4.31 sq ft)
Fin	2.705 m² (29.12 sq ft)
Rudder, incl tab	0.975 m² (10.49 sq ft)
Tailplane	3.57 m² (38.43 sq ft)
Elevators (total)	1.26 m² (13.56 sq ft)

WEIGHTS AND LOADINGS:

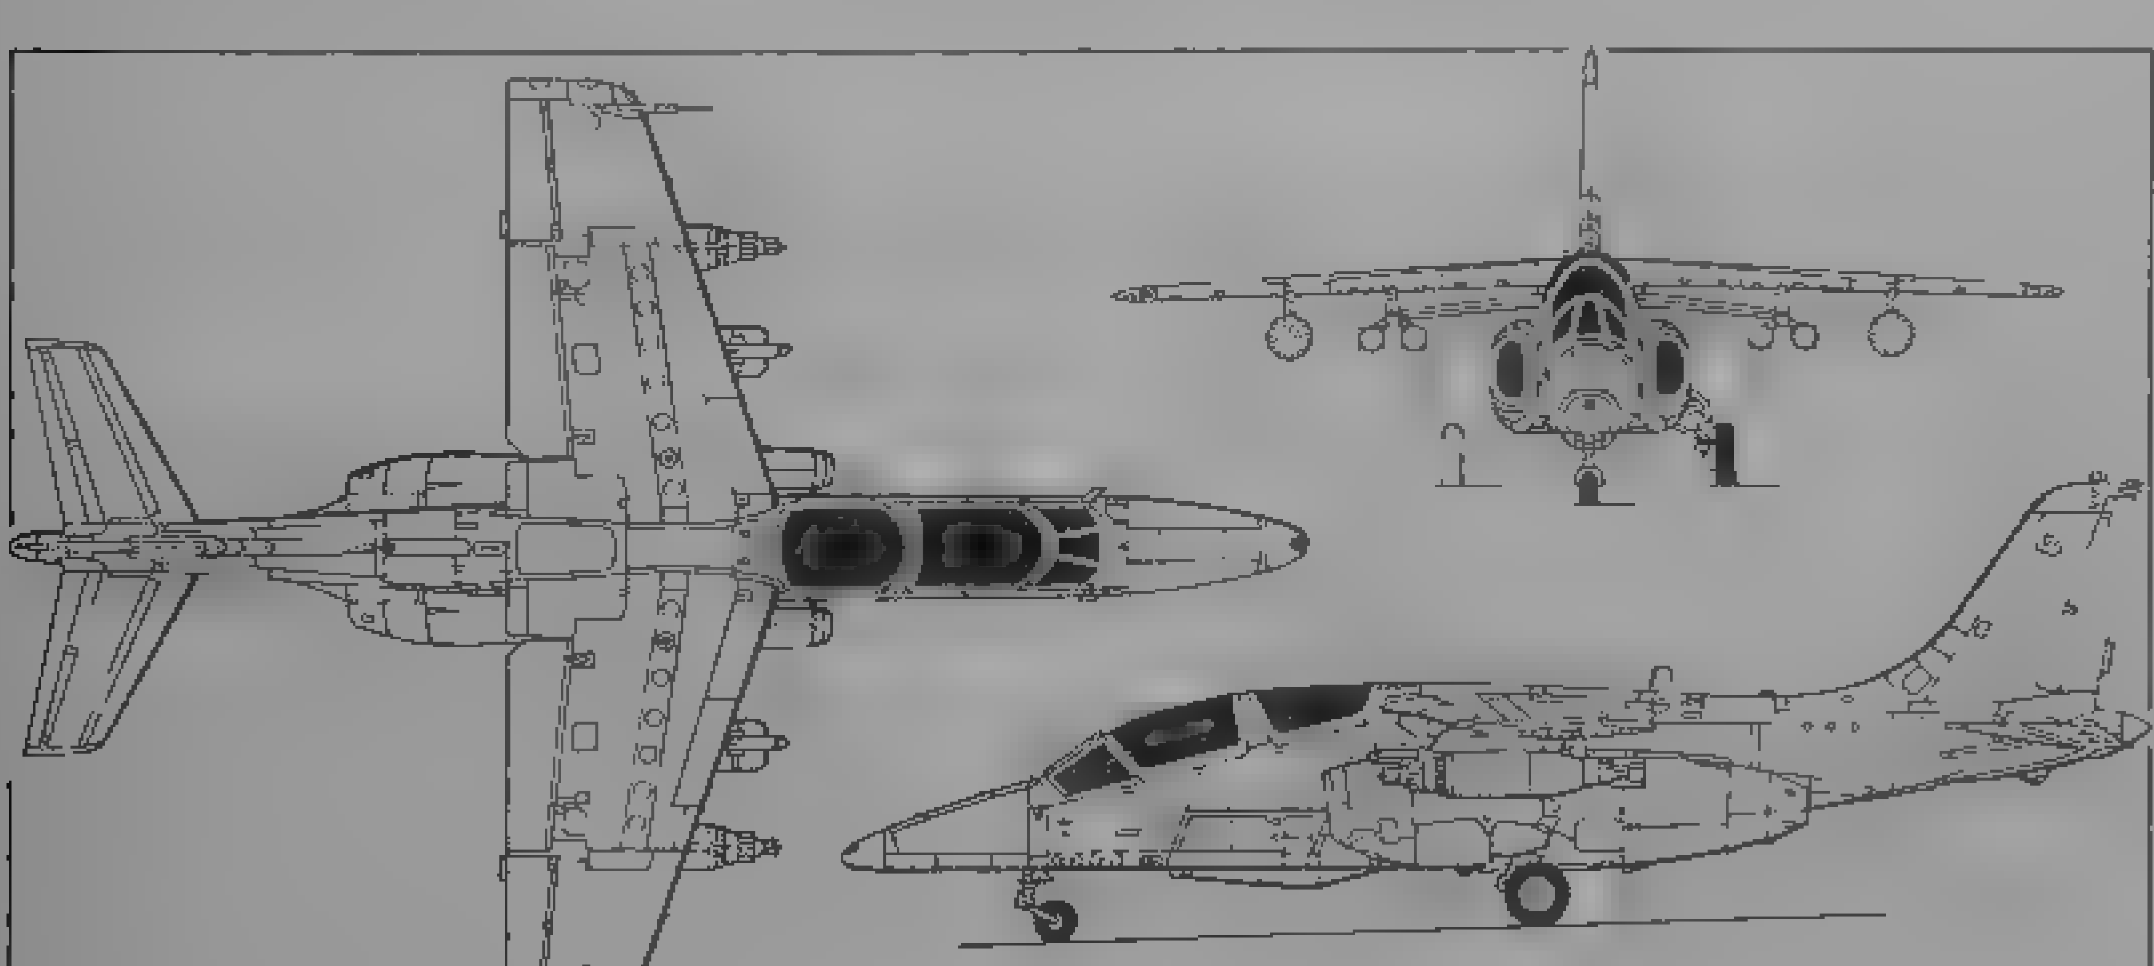
Weight empty, equipped	4,560 kg (10,053 lb)
Max internal fuel	1,895 kg (4,178 lb)
Max external stores load	1,100 kg (2,425 lb)
Max T-O weight: clean	6,620 kg (14,594 lb)
with external stores	6,900 kg (15,212 lb)
Max landing weight	6,600 kg (14,550 lb)
Max wing loading: clean	332.3 kg/m² (68.06 lb/sq ft)
with external stores	346.4 kg/m² (70.95 lb/sq ft)
Max power loading: clean	306.77 kg/kN (3.01 lb/lb st)
with external stores	319.8 kg/kN (3.14 lb/lb st)

PERFORMANCE (A: clean aircraft at 5,850 kg, 12,897 lb T-O weight, B: with 820 kg, 1,808 lb of external stores comprising four 50 kg bombs and two 16-round 57 mm rocket launchers for T-O weight of 6,600 kg, 14,550 lb, except where indicated):

Max limiting Mach number: A	0.80
B	0.70
Max permissible diving speed	
A	512 kts (950 km/h, 590 mph)
B	445 kts (826 km/h, 513 mph)
Max level speed at S/L	
A	424 kts (785 km/h, 488 mph)
B	369 kts (684 km/h, 425 mph)
Max level speed at height	
A at 5,000 m (16,400 ft)	450 kts (835 km/h, 519 mph)
B at 4,000 m (13,125 ft)	374 kts (694 km/h, 431 mph)
Stalling speed, flaps down	
A	110 kts (203 km/h, 126 mph)
B	118 kts (218 km/h, 136 mph)
Max rate of climb at S/L: A	1,500 m (4,925 ft)/min
B	1,008 m (3,305 ft)/min

Early production I-22 Iryda of the Polish Air Force (*R. J. Malachowski*)

1995



PZL Mielec I-22/M-93 Iryda tandem-seat advanced trainer with external armament (*Jane's/Mike Keep*)

1993

SP-PWE, the prototype for the Viper-engined M 93V Iryda *(Paul Jackson)*

1995

Rate of climb at S/L, OEI: A — 300 m (985 ft)/min
Time to 5 000 m (16,400 ft): A — 4 min 24 s
B — 6 min 48 s
Service ceiling: A — 12,000 m (39,375 ft)
B — 9,500 m (31,175 ft)
Service ceiling, OEI: A — 5 000 m (16,400 ft)
T-O run: A — 730 m (2,395 ft)
B — 1,250 m (4 100 ft)
T-O to 15 m (50 ft): A — 1 200 m (3,940 ft)
B — 2 200 m (7,220 ft)
Landing from 15 m (50 ft)
A with brake-chute — 1 340 m (4 400 ft)
A without brake-chute — 2 160 m (7 090 ft)
B with brake-chute — 1,570 m (5,150 ft)
B without brake-chute — 2 240 m (7,350 ft)
Landing run: A with brake-chute — 640 m (2,100 ft)
A without brake-chute — 1,400 m (4 595 ft)
B with brake-chute — 760 m (2,495 ft)
B without brake-chute — 1,570 m (5,150 ft)
Combat radius at 500 m (1,640 ft)
B — 108 n miles (200 km, 124 miles)
Range at 5,000 m (16,400 ft)
A at 6,650 kg (14,660 lb) T-O weight — 620 n miles (1,150 km; 714 miles)
B at 6,900 kg (15,211 lb) T-O weight — 326 n miles (605 km, 376 miles)
Endurance at 5 000 m (16,400 ft), weights as for ranges above: A — 2 h 33 min
B — 1 h 32 min
g limits
clean, AUW below 5 865 kg (12,930 lb) — +8/−4
clean, AUW above 5 865 kg (12,930 lb) — +7.3/−4
with external stores — +6/−3

UPDATED

PZL MIELEC M 93 IRYDA

TYPE: Two-seat basic and advanced jet trainer, increased capability development of I-22

PROGRAMME: Initiated (originally under designation M-92) when fourth I-22 prototype (SP-PWD) refitted with II K-15 turbojets, making new 'first' flight 22 December 1992, fifth I-22 prototype (SP-PWE), refitted with Viper engines, flew 25 April 1994. These variants, now known as M 93K and M 93V respectively (see Current Versions) also incorporate other changes (see Design Features and later paragraphs); either can be fitted with SAGEM Maestro (Modular Avionics Enhancement System Targeted for Retrofit Operations), first test-flown in SP-PWD on 24 May 1994

CURRENT VERSIONS: **M-93K**: As I 22 but with K 15 engines and other improvements First flight of production M 93K (SP-PWF/0204), 6 July 1994; state qualification board type certificate January 1995, seven production aircraft (retaining I-22 avionics) due for delivery to Polish Air Force by end of 1995, six to eight more to follow in 1996

M-93V Viper-engined equivalent of M 93K, intended mainly for export, also type certificated January 1995

M-93R. Proposed two-seat reconnaissance version specialised mission equipment in fuselage and/or external pods, modified systems and equipment

M-93M: Proposed maritime attack and overwater reconnaissance version

CUSTOMERS. Polish Air Force (M-93K); two delivered by end of April 1995

DESIGN FEATURES: Generally as for I 22 except for different power plants, new design airbrakes, modified systems and equipment and some minor changes

FLYING CONTROLS As for I-22

STRUCTURE. As for I-22.

LANDING GEAR Mainwheel units have automatic braking system and 8 83 bars (128 lb/sq in) tyre pressure, otherwise as for I-22

POWER PLANT: Two turbojets: 14.71 kN (3,307 lb st) Instytut Lotnictwa K-15s in M-93K, 14.71 kN (3,307 lb st) Rolls-Royce Viper 545s (modified 535) in M 93V Internal fuel as for I-22 Provision for one 380 litre (100 US gallon, 83 6 Imp gallon) auxiliary fuel tank under each wing.

ACCOMMODATION: Martin-Baker PL10LR zero/zero ejection seats, otherwise as for I-22

SYSTEMS: As for I-22

AVIONICS (initial production M 93K): As for I 22 except

Flight RW 5 radio altimeter replaced by Instytut Lotnictwa RWL-750; SARPP 12WM flight data recorder replaced by Polish S2-3 recorder

AVIONICS (optional for any M-93 variant): SAGEM Maestro nav/attack suite, operated with MIL-STD-1553B databus and comprising

Flight: 12-channel INS/GPS hybrid nav and mission computers integrated with nav/attack unit

Instrumentation: Wide-angle (26°) HUD in front cockpit, second HUD in rear cockpit, video recorder; camera recording of HUD symbology; air data sensor; EFIS indicators (EHSI and EADI), magnetic bubble memory

ARMAMENT: As for I-22

DIMENSIONS EXTERNAL As for I-22

AREAS: As for I 22

WEIGHTS AND LOADINGS
Weight empty, equipped — 4,650 kg (10,251 lb)
Max fuel weight: internal — 1,895 kg (4,178 lb)
external — 608 kg (1,340 lb)
Max external stores load — 1,800 kg (3,968 lb)
Max T-O weight: clean — 6,700 kg (14,771 lb)
with external stores — 8,700 kg (19,180 lb)
Max landing weight — 6,600 kg (14,550 lb)
Max wing loading: clean — 336 3 kg/m² (68 89 lb/sq ft)
with external stores — 436.7 kg/m² (89 45 lb/sq ft)
Max power loading: clean — 227.7 kg/kN (2.23 lb/lb st)
with external stores — 295.7 kg/kN (2 90 lb/lb st)

PERFORMANCE (M-93K and M-93V at clean T-O weight of 5,900 kg; 13,007 lb except where indicated)
Max limiting Mach number — 0 83
Max level speed at 5,000 m (16,400 ft) — 513 kts (950 km/h, 590 mph)
Stalling speed, flaps down — 110 kts (203 km/h, 127 mph)
Max rate of climb at S/L — 2,520 m (8,268 ft)/min
Rate of climb at S/L, OEI — 732 m (2,401 ft)/min
Time to climb to 5 000 m (16,400 ft) — 2 min 30 s
Service ceiling — 13,700 m (44 950 ft)
Service ceiling, OEI — 9 000 m (29,520 ft)
T-O run at max clean T-O weight — 670 m (2,199 ft)
T-O to 15 m (50 ft) at max clean T-O weight — 1,060 m (3,478 ft)
Landing from 15 m (50 ft) at MLW
without brake-chute — 1,400 m (4,594 ft)
with brake-chute — 1,150 m (3,773 ft)
Landing run at MLW
without brake-chute — 670 m (2,199 ft)
with brake-chute — 420 m (1 378 ft)
Tactical radius at 500 m (1,640 ft) at max T-O weight with max external stores — 135 n miles (250 km, 155 miles)

NEW ENTRY

Front cockpit of the M 93K *(R. J. Malachowski)*

1995

PZL MIELEC M 95 IRYDA

TYPE Proposed multipurpose combat aircraft; development of M-93

CURRENT VERSIONS **M-95T** Combat trainer

M-95R: Reconnaissance version, expanded combat and reconnaissance capability compared with M-93R

M-95M Maritime reconnaissance/attack version, more capable than M-93M

M-95MS: As M-95M, with capability comparable with Hawk 200 or Alpha Jet 3

DESIGN FEATURES Based on M-93, but with sweptback, supercritical section wing and wider choice of power plants Wing swept 20° at quarter-chord and fitted with Fowler flaps; all-moving tailplane with 26° 30′ quarter-chord sweepback

POWER PLANT: Two K-15 or Viper 545 turbojets, as in M-93; or two Viper 632 (each 17 70 kN, 3,980 lb st) or 680; or two Larzac 04-V3 turbofans (each 16 18 kN, 3,637 lb st), or other 17 8 kN (4,000 lb st) class engines

AVIONICS More sophisticated than in M-93, including modern nav/attack and self-defence systems

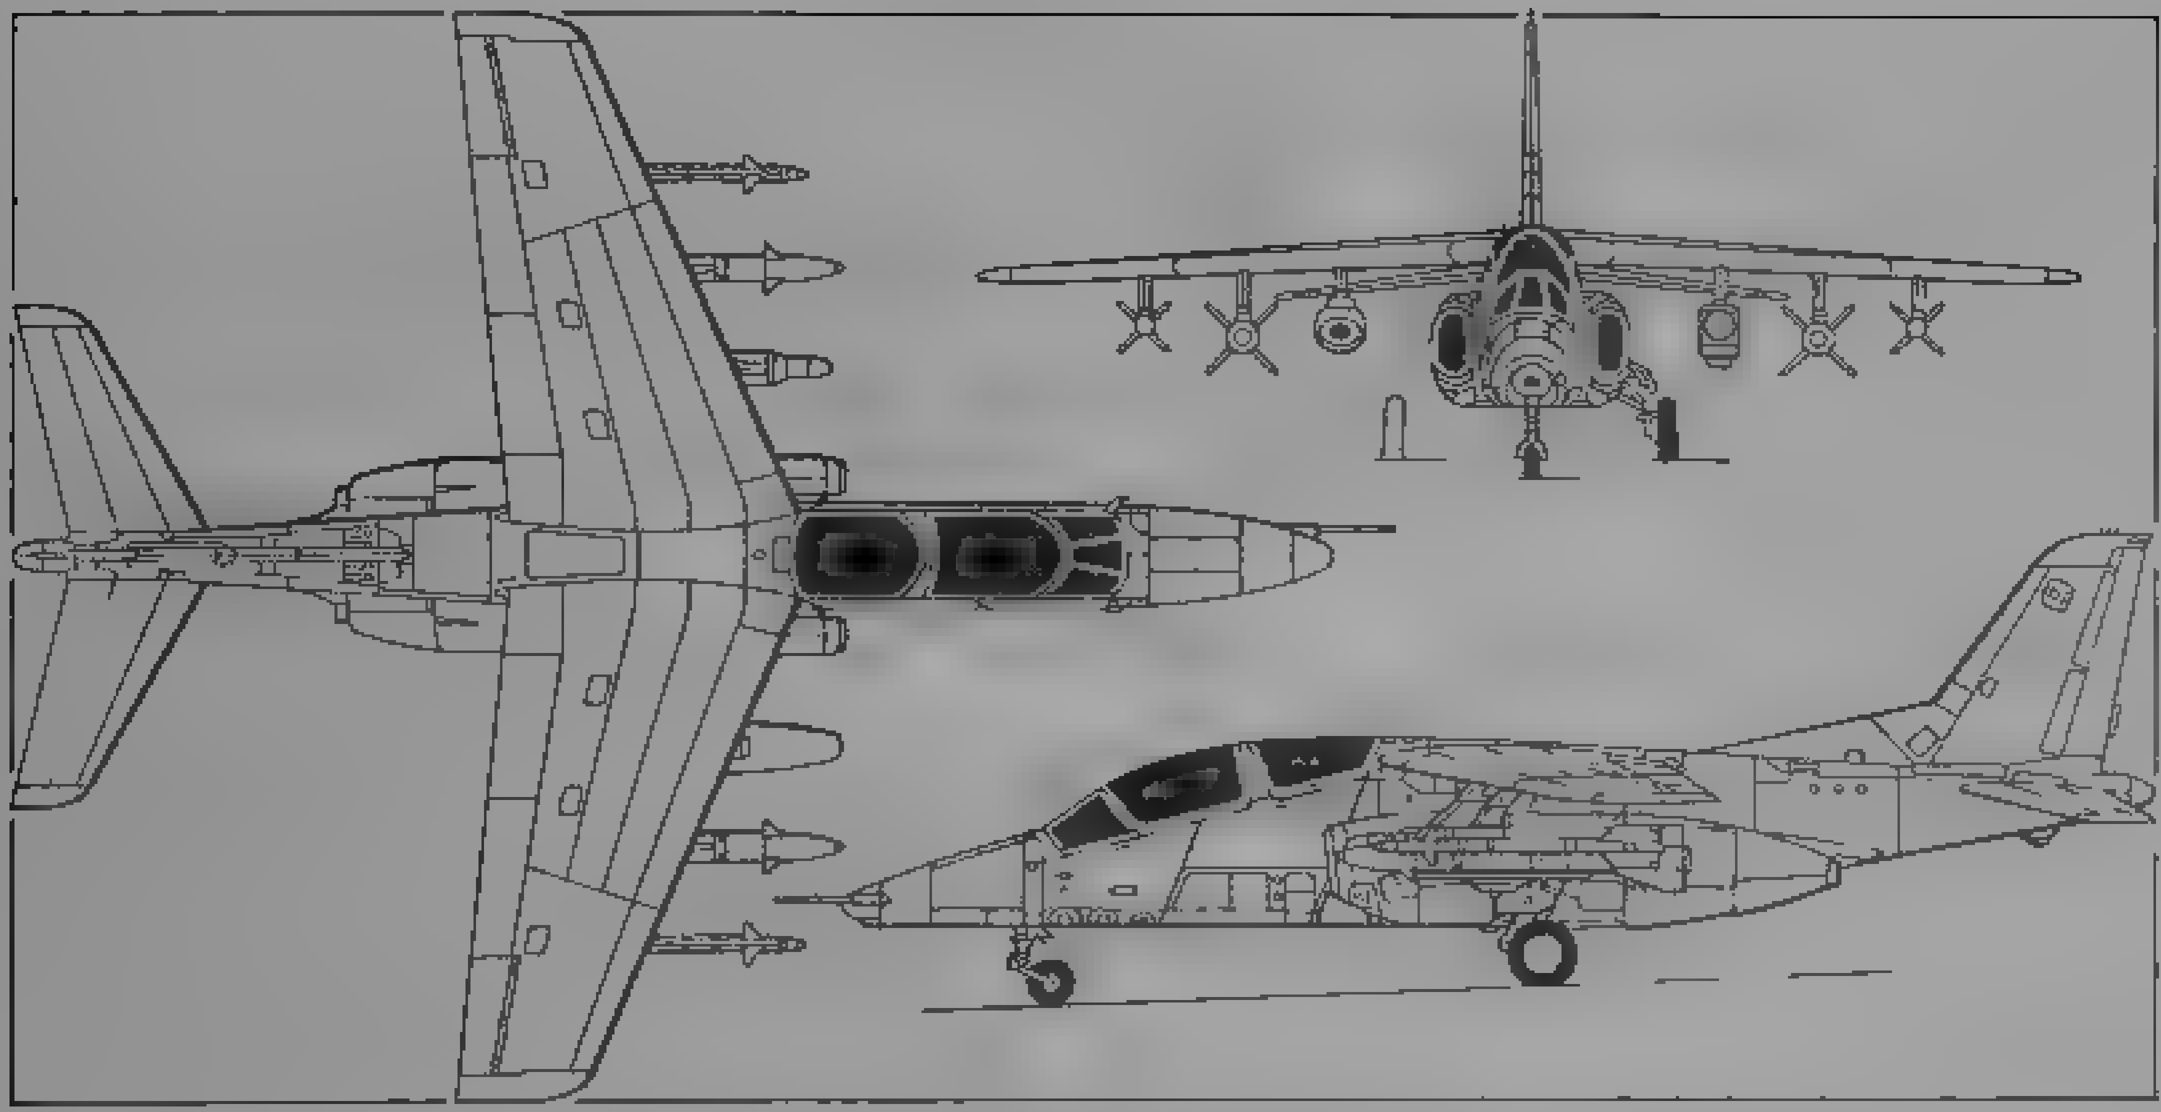
ARMAMENT: Fuselage-mounted gun (existing 23 mm or new 30 mm), range of externally mounted weapons expanded to include conventional or guided bombs, smart ammunition pods, guided and/or unguided air-to-air and air-to-surface (including anti-ship) weapons

WEIGHTS AND LOADINGS (A: K-15 or Viper 545 engines, B Larzac 04-V3s, C Viper 632s)
Max external stores load A, B — 2,500 kg (5,511 lb)
C — 3,000 kg (6,614 lb)
Max T-O weight: A — 9,500 kg (20,944 lb)
B — 10,000 kg (22,046 lb)
C — 10,700 kg (23,589 lb)

PERFORMANCE (estimated, at clean T-O weight of 5,900 kg, 13,007 lb except where indicated; A, B and C as above)
Max level speed at S/L
A — 513 kts (950 km/h; 590 mph)
B — 524 kts (970 km/h, 603 mph)
C — 540 kts (1,000 km/h, 621 mph)
Stalling speed, flaps down
A, B, C — 87 kts (160 km/h; 100 mph)

0204 (formerly SP-PWF), the first production M 93K for the Polish Air Force *(R. J. Malachowski)*

1995



Proposed M-95 reconnaissance and close support derivative of the I-22, with sweptback wings, revised nose/tail contours and other modifications *(Jane's/Mike Keep)*

1993

Max rate of climb at S/L: A 2,520 m (8,268 ft)/min
B 2,820 m (9,252 ft)/min
C 3,600 m (11,811 ft)/min
Service ceiling: A 13,000 m (42,650 ft)
B 12,300 m (40,350 ft)
C 14,000 m (45,930 ft)
Time to climb at 10,000 m (32,800 ft): A 6 min 40 s
B 8 min 0 s
C 4 min 40 s
T-O to 15 m (50 ft) at AUW of 6,700 kg (14,771 lb)
A 750 m (2,461 ft)
B 650 m (2,133 ft)
C 570 m (1,870 ft)
Landing from 15 m (50 ft) at AUW of 6,600 kg (14,550 lb), brake-chute deployed
A, B, C 800 m (2,625 ft)
Tactical radius at 500 m (1,640 ft), depending upon mission profile and external load configuration
A, C 135-189 n miles (250-350 km, 155-217 miles)
B 162-243 n miles (300-450 km, 186-279 miles)

NEW ENTRY

PZL MIELEC M-97 IRYDA

TYPE: Proposed single-seat development of M-95.

CURRENT VERSIONS: **M-97S**: Attack version.
M-97MS: Dual-role attack/fighter.

DESIGN FEATURES: As M-95 except for deletion of second cockpit and incorporation of mission-specific armament and equipment.

WEIGHTS AND LOADINGS: As for M-95 except:
Max external stores load: A 2,500 kg (5,511 lb)
B 2,800 kg (6,173 lb)
C 3,500 kg (7,716 lb)

NEW ENTRY

PZL MIELEC M-99 ORKAN (EAGLE)

TYPE: Proposed single-seat attack aircraft, further development of M-95/-97.

PROGRAMME: Announced 1994, in competition with IL Kobra 2000 and PZL Warsaw Skorpion (which see) to fulfil Polish Air Force requirement.

CURRENT VERSIONS: **M-99A**: With two 26.77 kN (6,018 lb st) Rolls-Royce/SNECMA Adour Mk 871 turbofans.
M-99S: With two 21.58 kN (4,850 lb st) Slovak PS DV-2 turbofans.
M-99SA: With two 25.01 kN (5,622 lb st) PS DV-2A turbofans.

DESIGN FEATURES: Generally similar to M-95/-97 except for minor engine nacelle differences, limited use of composites, longer landing gear legs, expanded armament and equipment.

DIMENSIONS, EXTERNAL:
Wing span, excl wingtip launch rails 10.83 m (35 ft 6½ in)
Length overall 13.22 m (43 ft 4½ in)
Height overall 4.62 m (15 ft 2 in)

AREAS:
Wings, gross 23.00 m² (247.6 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: A 5,410 kg (11,927 lb)
S, SA 5,170 kg (11,398 lb)
Max fuel weight: internal 2,800 kg (6,173 lb)
external 1,880 kg (4,144 lb)
Max external stores load: all 4,000 kg (8,818 lb)
Max T-O weight, clean: A 8,300 kg (18,298 lb)
S, SA 8,060 kg (17,769 lb)

PERFORMANCE (estimated, at max clean T-O weight except where indicated):
Max level speed at S/L:
A 389 kts (720 km/h, 447 mph)
S 504 kts (935 km/h, 581 mph)
SA 545 kts (1,010 km/h, 627 mph)
Max rate of climb at S/L: A 4,740 m (15,551 ft)/min
S 2,400 m (7,874 ft)/min
SA 3,900 m (12,795 ft)/min
Rate of climb at S/L, OEI: A 1,440 m (4,724 ft)/min
S 780 m (2,559 ft)/min
SA 1,200 m (3,937 ft)/min
Time to climb to 10,000 m (32,800 ft):
A 4 min 0 s
S 4 min 40 s
SA 4 min 20 s
Service ceiling: A 14,500 m (47,570 ft)
S, SA 14,400 m (47,245 ft)
Service ceiling, OEI: A 10,000 m (32,800 ft)
S, SA 10,100 m (33,140 ft)
T-O to 15 m (50 ft): A 420 m (1,378 ft)
S 530 m (1,739 ft)
SA 450 m (1,477 ft)
Landing from 15 m (50 ft): A 650 m (2,133 ft)
S, SA 600 m (1,969 ft)
Tactical radius at 500 m (1,640 ft), depending upon mission profile and external load configuration:
A 162-324 n miles (300-600 km; 186-372 miles)
S, SA 162-351 n miles (300-650 km; 186-404 miles)
g limits (all): clean +9/−4
with external stores +7/−3

NEW ENTRY

PZL MIELEC (ANTONOV) An-28

NATO reporting name: Cash
Polish Air Force name: Bryza

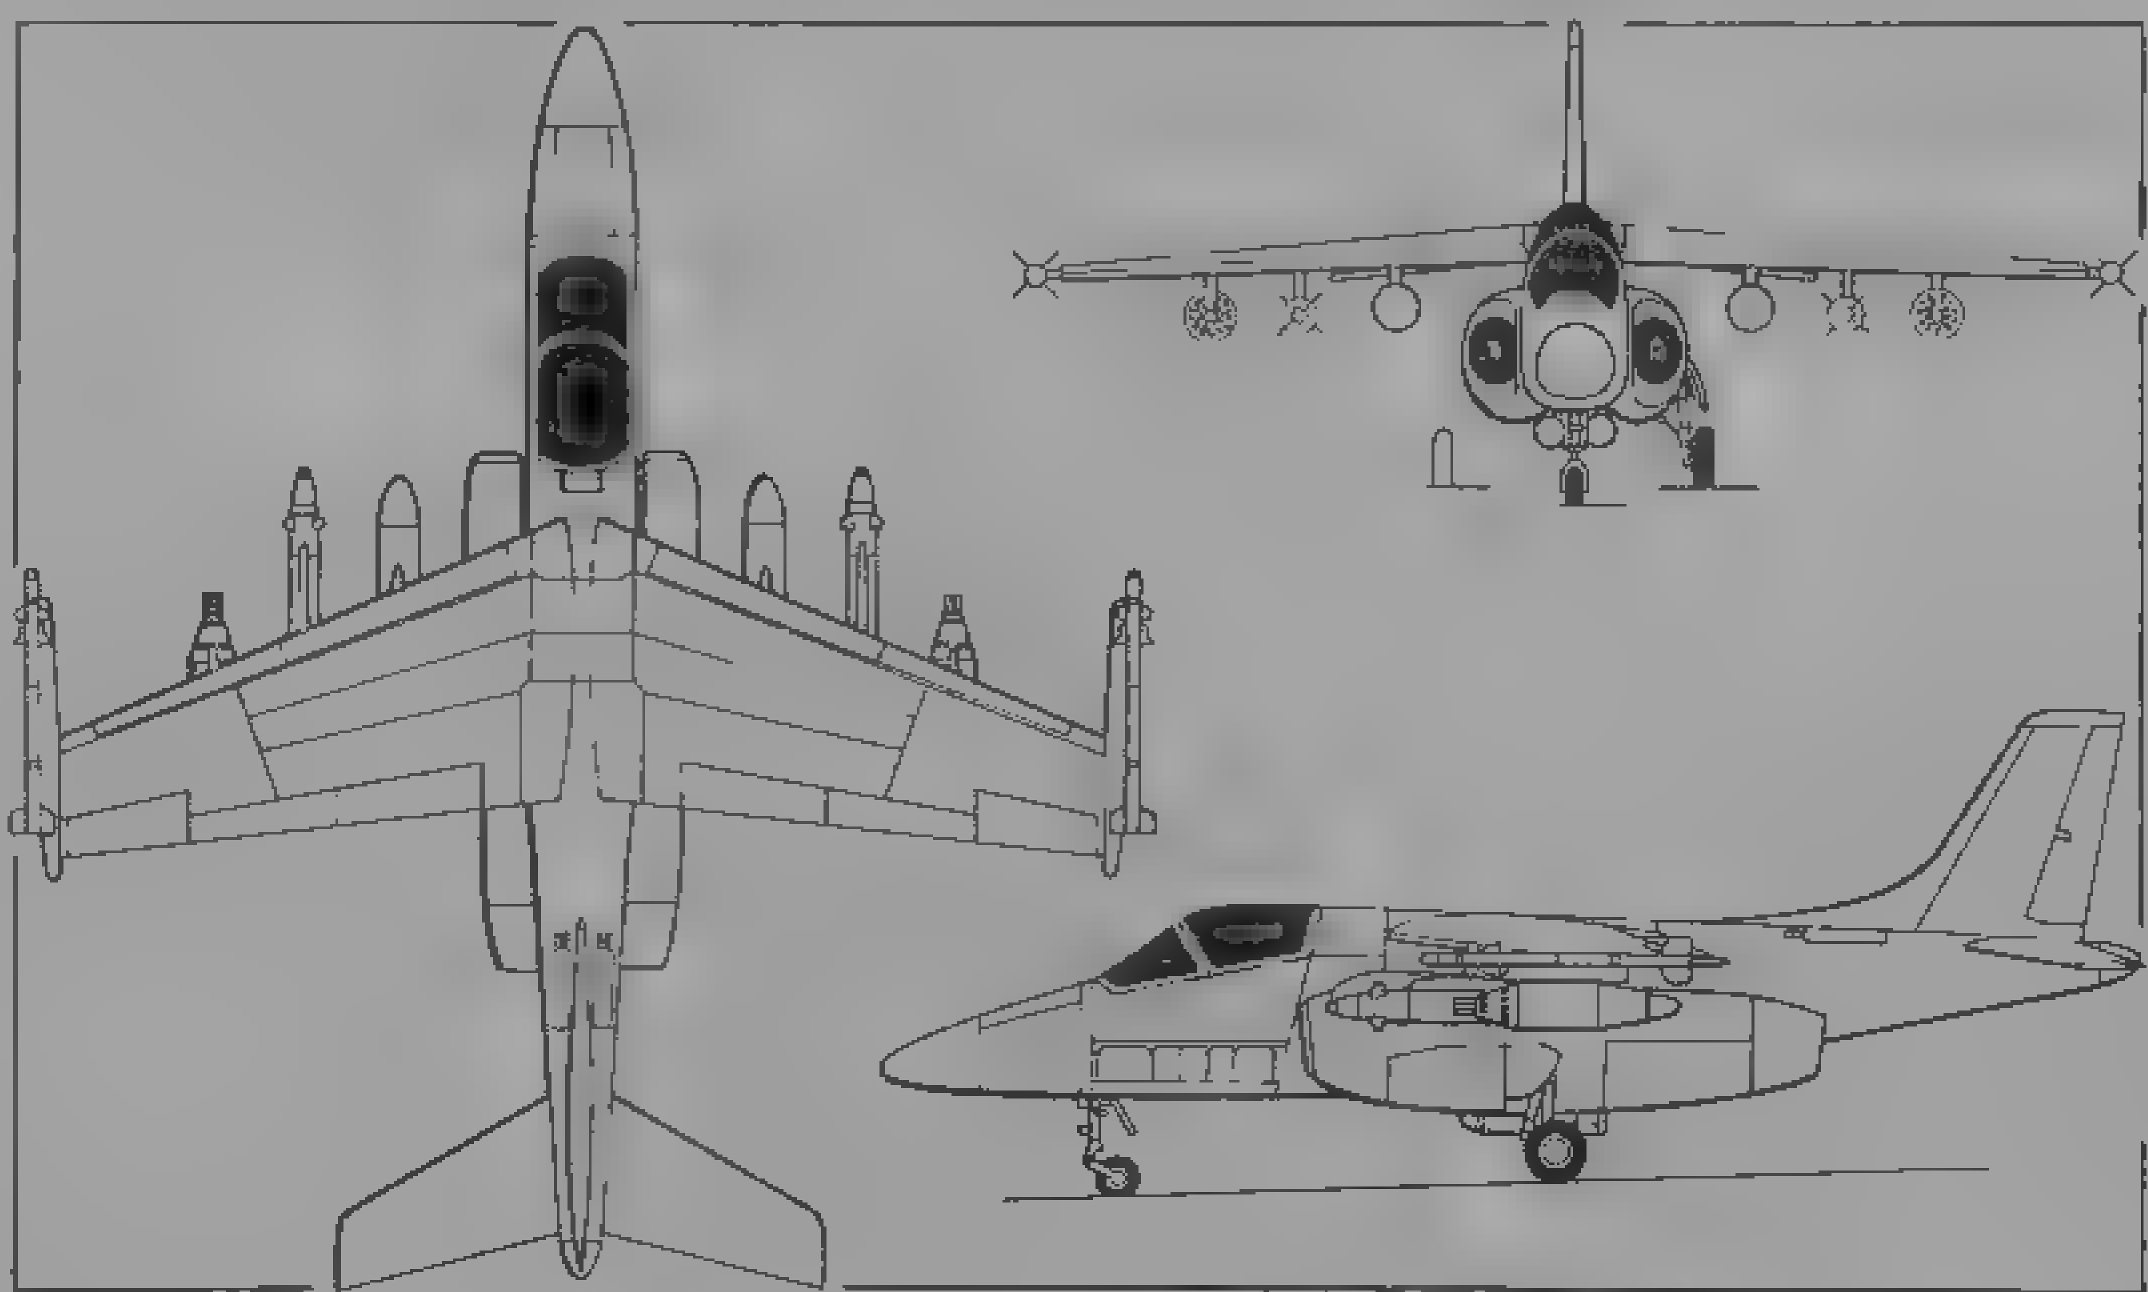
TYPE: Twin turboprop short-range transport.

PROGRAMME: Developed by Antonov in former USSR for service on Aeroflot's shortest routes, particularly those operated by An-2s into places relatively inaccessible to other fixed-wing aircraft; official Soviet flight testing completed 1972; first preproduction An-28 (SSSR-19723) originally retained same engines as prototype, but re-registered SSSR-19753 April 1975 when flown with current engines; production assigned to PZL Mielec 1978; temporary Soviet NLGS-2 type certificate awarded 4 October 1978 to second Soviet-built preproduction aircraft. Polish manufacture started with initial batch of 15, first flight of Polish An-28 (SSSR-28800) 22 July 1984; version received full Soviet type certificate 7 February 1986. Polish production now for domestic use only; current marketing effort concentrated on M-28 Skytruck derivative (which see). See 1994-95 and earlier *Jane's* for full An-28 description.

CURRENT VERSIONS: **An-28RM Bryza 1RM** (Ratowh ctwa Morskiego: maritime reconnaissance, search and rescue

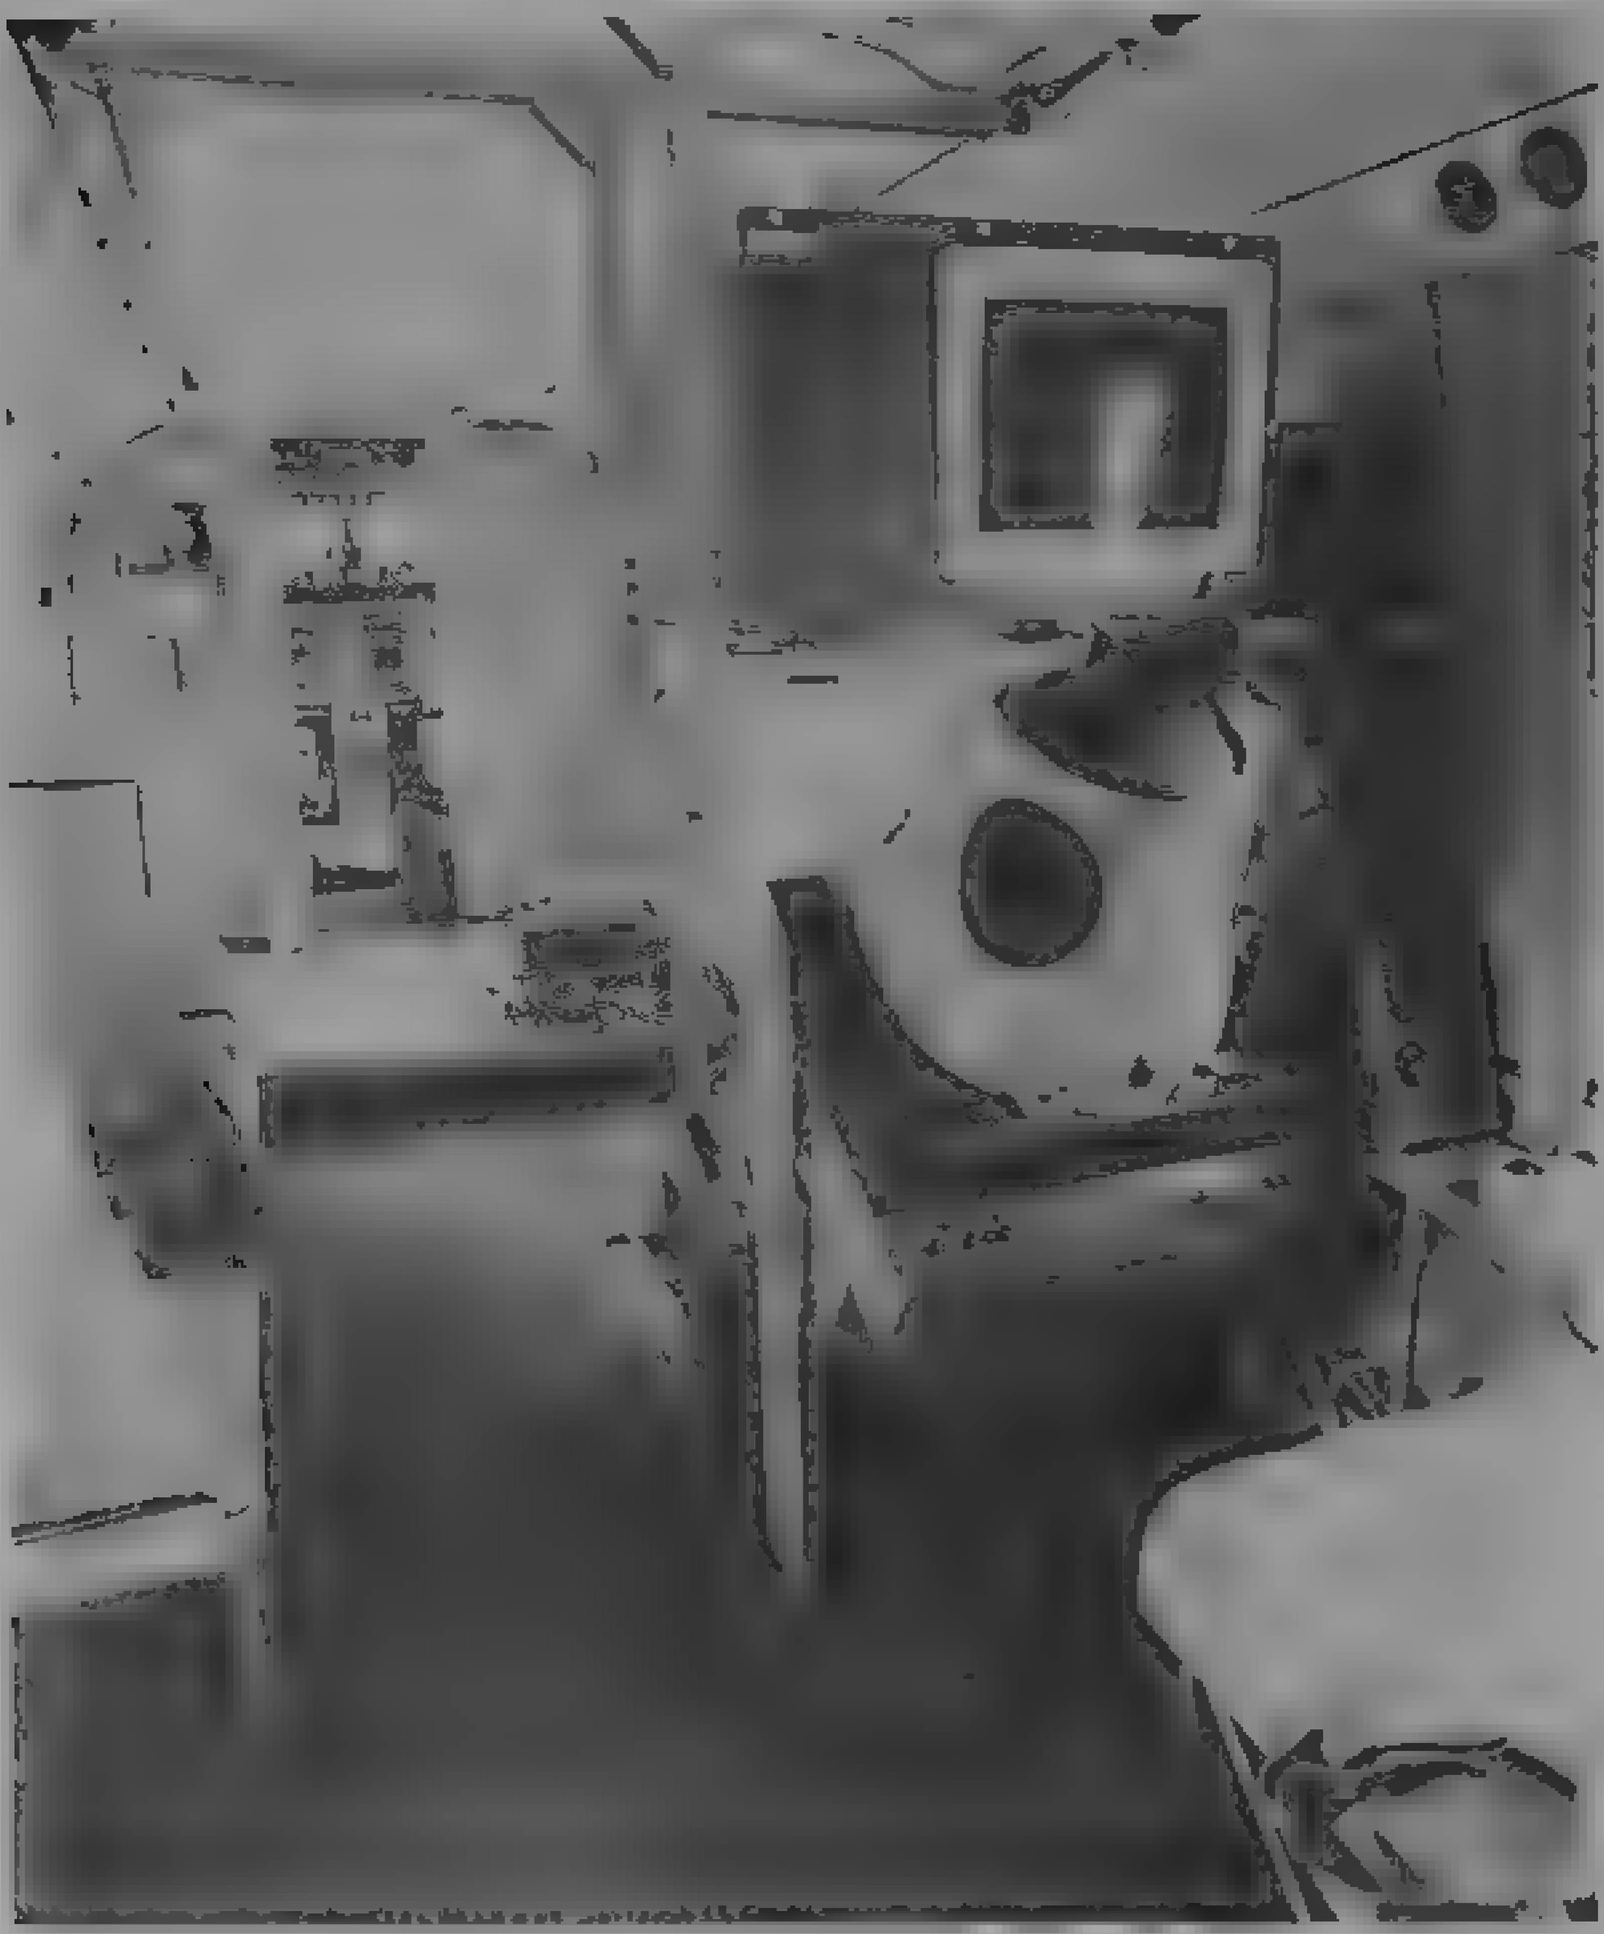
Single-seat proposed developments of the I-22 include the ground attack M-97S (main drawing) and fighter/ground attack M-97MS (upper side view) *(Jane's/Mike Keep)*

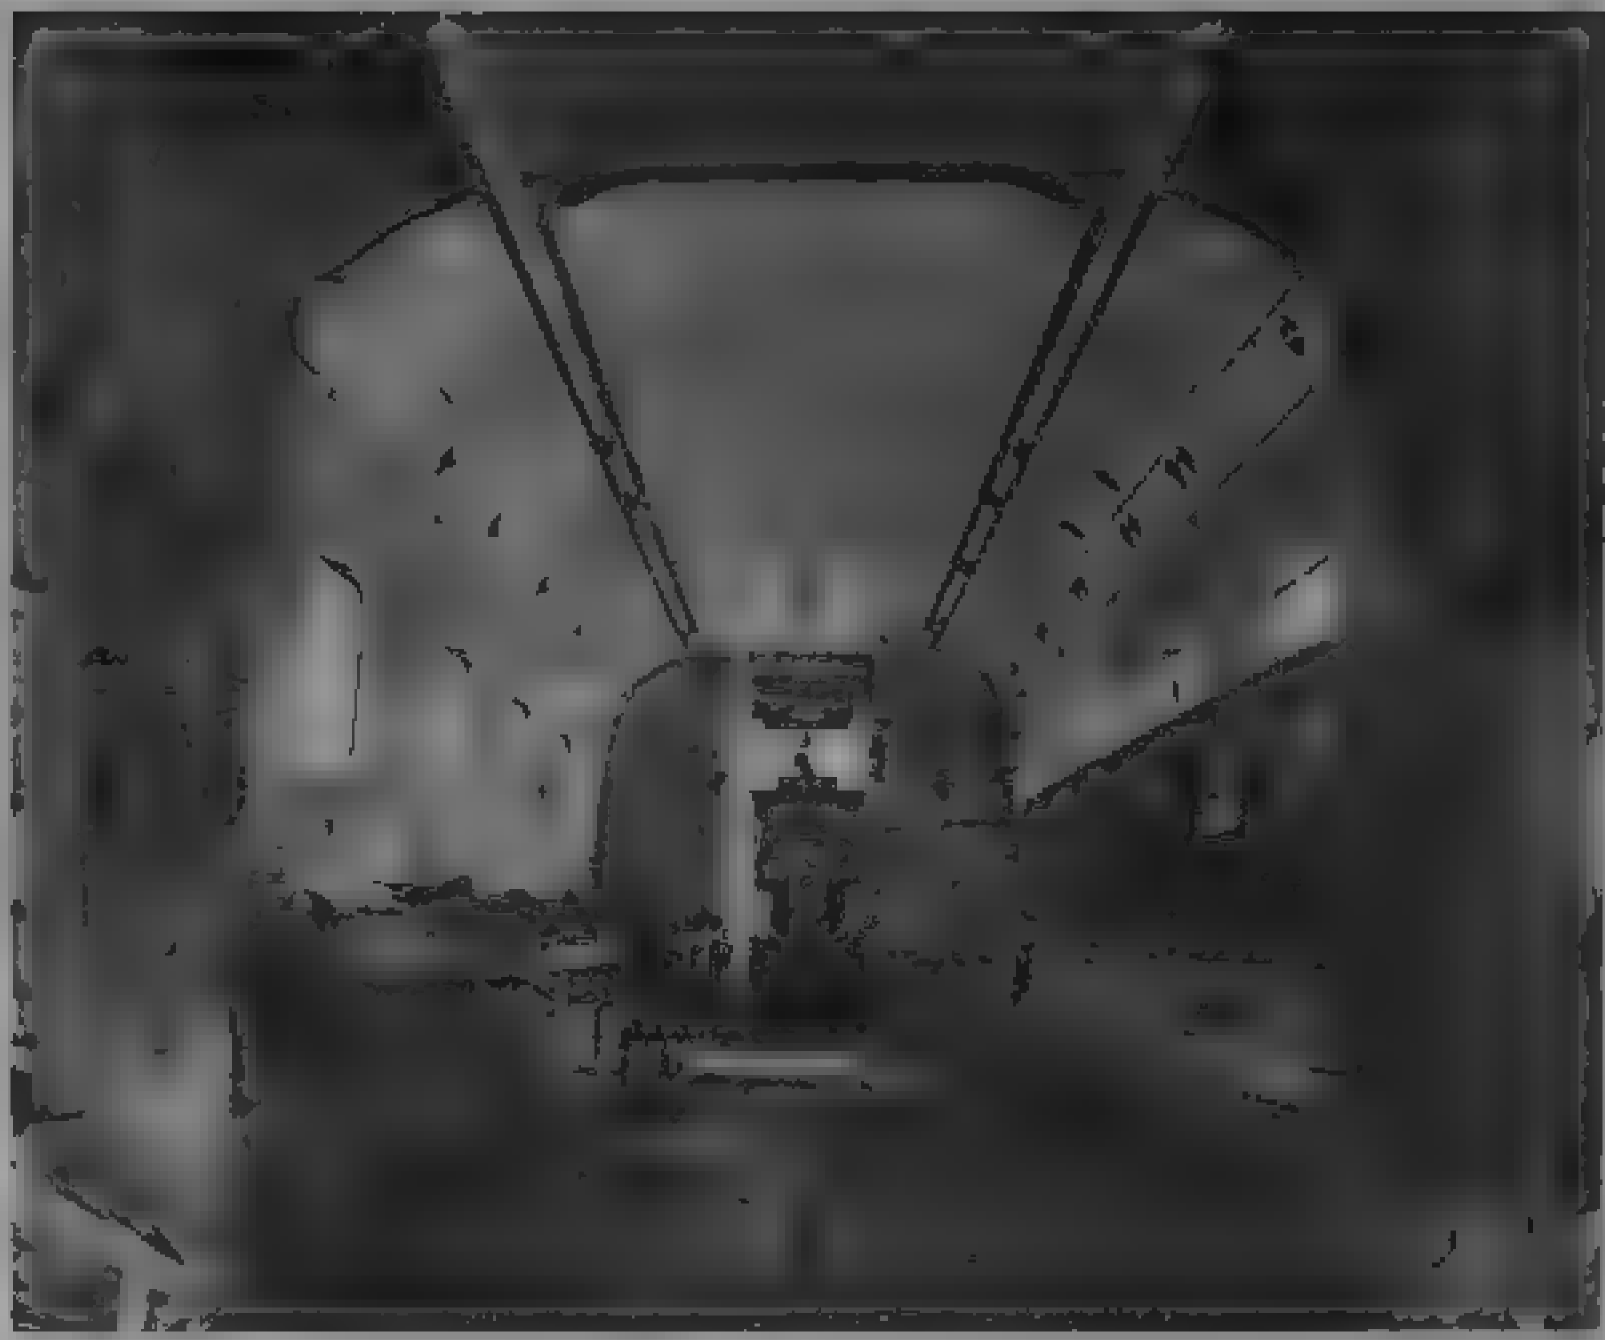
1993



M-99 Orkan proposed single-seat attack aircraft *(Jane's/James Goulding)*

1995





Foldaway seating in the An-28 cabin

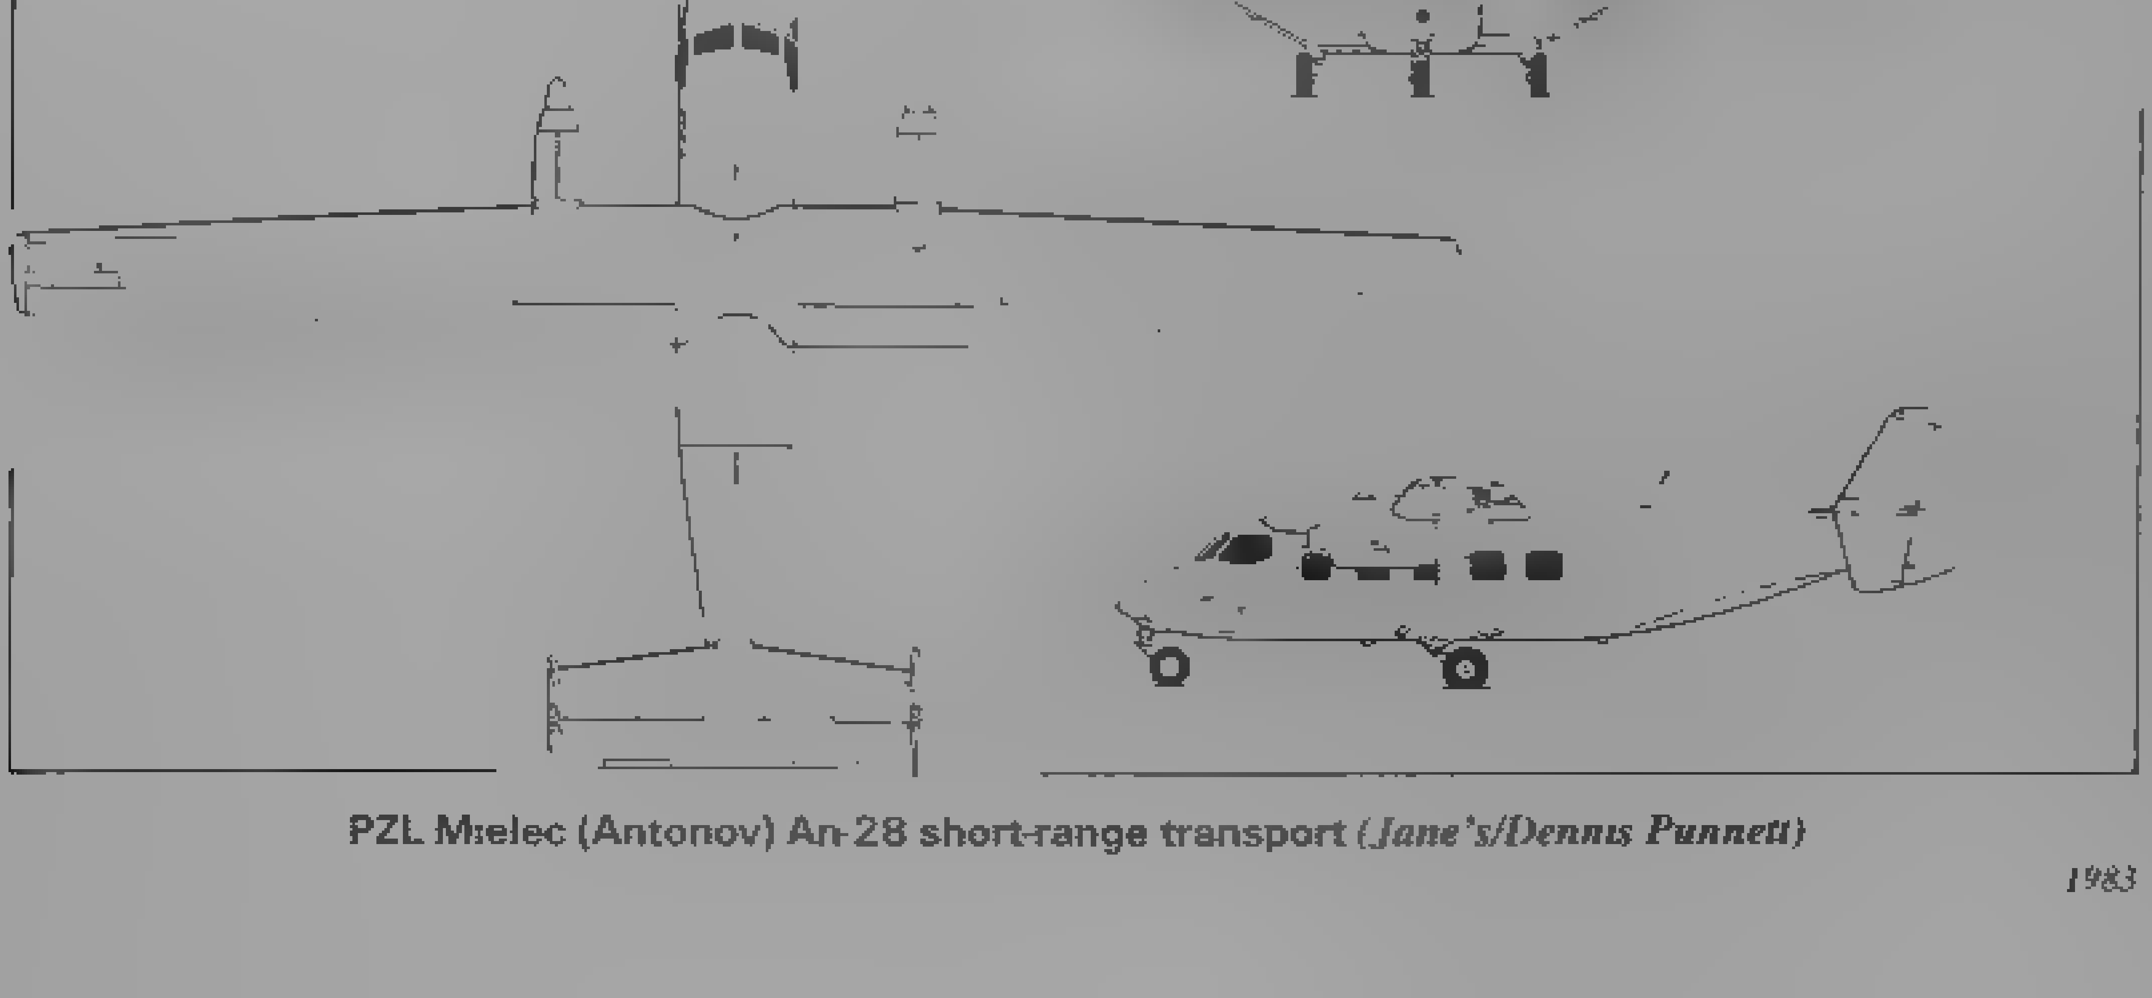
1993

Cabin interior of the Bryza 1RM *(R. J.Malachowski)*

1995

Bryza 1RM (An 28RM) with ventral SAR radar bulge *(R J Malachowski)*

1995



PZL Mielec (Antonov) An-28 short-range transport *(Jane's/Dennis Punnett)*

1983

version (formerly An-28B1R) for use by Polish agencies for SAR missions in Baltic; improved avionics include Chelton DF-707-1 radio search system, GPS receiver, Doppler navigation, Bendix/King RDS-81 weather radar Polish Radwar SRN-441XA search radar in ventral radome, two 100 kg illumination bombs, rescue dinghy, stretchers, automatic datalink and other specialist equipment. Prototype (SP-PDC) completed 1992 and delivered to Polish Air Force 1993

An-28TD Bryza 1TD (Transportowa Desantowy cargo airdrop): Adapted for airdrop operations, with clamshell rear doors replaced by single door sliding forward under fuselage, similar to that of An-26 (which see). Previously known as An-28B1T First use may be to transport and drop firefighting teams. Prototype (SP-PDE) converted 1992

CUSTOMERS: See 1994-95 and earlier *Jane's*. Recent deliveries to Polish Air Force include two Bryza 1RMs and one 1TD, respectively to the 7th Special Regiment at Siemirowice and the 13th Transport Regiment at Krakow. Further orders for these models are expected if defence budget permits

UPDATED

PZL MIELEC M-28 SKYTRUCK

TYPE: Twin-turboprop short-range transport

PROGRAMME: Westernised development of An-28, with Polish power plant and avionics replaced by P&WC PT6A-65B turboprops, Hartzell five-blade propellers and Bendix/King nav/com, weather radar and other equipment. Prototype conversion (SP-PDF) begun early 1991; first flight July 1993. Polish temporary type certificate to FAR Pt 23 Amendment 34 granted March 1994, permanent certificate expected early 1995

CUSTOMERS: Customer deliveries due to begin in first quarter 1995 after permanent type certificate obtained

DESIGN FEATURES: Braced wings, will not stall because of action of automatic slats; if an engine fails, patented upper surface spoiler forward of aileron on opposite wing is opened automatically, resulting in wing bearing dead engine dropping only 12° in 5 seconds instead of 30° without spoiler; patented fixed tailplane slat improves handling during high angle of attack climb-out; under icing conditions, if normal anti-icing system fails, ice collects on slat rather than tailplane, to retain controllability; short stub-wing extends from lower fuselage to carry main landing gear and support wing bracing struts, curving forward and downward at front to serve as mudguards; underside of rear fuselage upswept, incorporating clamshell doors for passenger/cargo loading, twin fins and rudders, mounted on inverted-aerofoil no-dihedral fixed incidence tailplane.

Wing section TsAGI R II 14 thickness/chord ratio 14 per cent, constant chord, non-swept, no-dihedral centre section, with 4° incidence; tapered outer panels with 2° dihedral, negative incidence and 2° sweepback at quarter-chord

FLYING CONTROLS: Unpowered single-slotted mass and aerodynamically balanced ailerons (port aileron has trim tab),

Bryza 1TD (An-28TD), showing the slide-under door which replaces the normal clamshell pair *(R. J. Malachowski)*

1995

designed to droop with large, hydraulically actuated, two segment double-slotted flaps, elevators with electrically actuated trim tabs, twin rudders each with electrically actuated trim tab, automatic leading-edge slats over full span of wing outer panels, slab type spoiler forward of each aileron and each outer flap segment at 75 per cent chord, fixed slat under full span of tailplane leading-edge

STRUCTURE: Mostly metal, duralumin ailerons with fabric covering, duralumin slats with CFRP skins, CFRP spoilers and trim tabs. Air intakes lined with epoxy laminate

LANDING GEAR: Non-retractable tricycle type, with single wheel and PZL oleo-pneumatic shock absorber on each unit. Main units, mounted on small stub-wings, have wide tread balloon tyres, size 720 × 320 mm, pressure 3.5 bars (51 lb/sq in). Steerable (±50°) and self-centring nosewheel, with size 595 × 185 × 280 mm Stomil (Poland) tyre, pressure 3.5 bars (51 lb/sq in). Multidisc hydraulic brakes on main units, and inertial anti-skid units. Minimum ground turning radius 16.00 m (52 ft 6 in). Ski gear under development

POWERPLANT: Two 820 kW (1,100 shp) Pratt & Whitney Canada PT6A-65B turboprops, each driving a Hartzell HC-B5MP-3M10876ASK five-blade propeller. Two centre-section and two outer-wing integral fuel tanks in wing spar boxes, with total capacity of 2,440 litres (645 US gallons; 537 Imp gallons). Refuelling point on each tank. Oil capacity 16 litres (4.2 US gallons; 3.5 Imp gallons) per engine

ACCOMMODATION: Pilot and co-pilot on flight deck, which has bulged side windows and electric anti-icing for windscreens, and is separated from main cabin by bulkhead with connecting door. Dual controls standard. Jettisonable emergency door on each side. Standard cabin layout of passenger version has seats for 18 people, with six single seats on port side and six double seats on starboard side of aisle, at 72 cm (28 in) pitch. All seats easily foldable or removable for carriage of cargo. Aisle width 34.5 cm (13.5 in). Five passenger windows each side of cabin. Seats fold back against walls when aircraft is operated as a freighter or in mixed passenger/cargo role, seat attachments providing cargo tiedown points. Hoist of 500 kg (1,102 lb) capacity able to deposit cargo in forward part of cabin. Entire cabin heated, ventilated and soundproofed. Outward/downward-opening clamshell double door, under upswept rear fuselage, for passenger and cargo loading. Emergency exit at rear of cabin on each side.

SYSTEMS: No air conditioning, pressurisation or pneumatic systems. Hydraulic system, pressure 150 bars (2,175 lb/sq in), for flap and spoiler actuation, mainwheel brakes and nosewheel steering, with emergency back-up system for spoiler extension and mainwheel braking.

Primary electrical system is three-phase AC, with two engine-driven alternators providing 200/115 V power for heating systems, engine operation monitoring, fuel pump, radio, recorders and instrument lights. Transformer-rectifiers on this system provide 36 V AC power for pressure gauges, artificial horizon, navigation and recording equipment, and 27 V DC for control systems and signalling, internal and external lighting, firefighting system, propeller pitch control and feathering, radio, and engine starting and monitoring systems. In emergency, single-phase 115 V AC can be provided by PO-250A converter, 36 V AC by a static inverter and 27 V DC by two 25 Ah 20NKBN-25 batteries.

Thermal (engine bleed air) anti-icing of outer-wing, fin and tailplane leading-edges and engine air intakes. Electric anti-icing of flight deck windscreens, propellers, spinners and pitot heads. Oxygen system (for crew plus two passengers) optional. No APU

AVIONICS: Standard avionics suite by Bendix/King

Comms: KY 196 VHF-AM and KX 165 HF radios, KMA 24H-70/71 audio selector panel and intercom, KT 79 transponder, dual emergency VHF

Radar: RDS 81 digital weather radar

Flight: VOR/ILS (dual), DME, ADF, marker beacon receiver, RMI and dual KCS 55A pictorial nav system, KNS 81 digital area nav and GC 381A radar graphics computer, radar altimeter; KFC 275 or KFC 325 AFCS

DIMENSIONS, EXTERNAL:

Wing span	22.063 m (72 ft 4½ in)
Wing chord: at root	2.20 m (7 ft 2½ in)
mean aerodynamic	1.886 m (6 ft 2¼ in)
at tip	1.10 m (3 ft 7¼ in)
Wing aspect ratio	12.25
Length overall	13.10 m (42 ft 11¾ in)
Fuselage: Length	12.68 m (41 ft 7¼ in)
Max width	1.90 m (6 ft 2¾ in)
Max depth	2.14 m (7 ft 0¼ in)
Height overall	4.90 m (16 ft 1 in)
Tailplane span	5.14 m (16 ft 10¼ in)
Wheel track	3.405 m (11 ft 2 in)
Wheelbase	4.40 m (14 ft 5¼ in)
Propeller diameter	2.82 m (9 ft 3 in)
Distance between propeller centres	5.20 m (17 ft 0¾ in)
Rear clamshell doors: Length	2.40 m (7 ft 10½ in)
Total width: at top	1.00 m (3 ft 3¼ in)
at sill	1.40 m (4 ft 7 in)
Emergency exits (rear, each): Height	0.91 m (3 ft 0 in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck: Length	5.26 m (17 ft 3 in)
Max width	1.74 m (5 ft 8½ in)
Max height	1.72 m (5 ft 7¾ in)
Floor area	approx 7.5 m² (80.73 sq ft)
Volume	approx 14.0 m³ (494.4 cu ft)

AREAS:

Wings, gross	39.72 m² (427.5 sq ft)
Ailerons (total)	4.33 m² (46.61 sq ft)
Trailing-edge flaps (total)	7.986 m² (85.96 sq ft)
Spoilers (total)	1.667 m² (17.94 sq ft)
Fins (total)	10.00 m² (107.64 sq ft)
Rudders (total, incl tabs)	4.00 m² (43.06 sq ft)
Tailplane	8.85 m² (95.26 sq ft)
Elevators (total, incl tabs)	2.56 m² (27.56 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	3,917 kg (8,635 lb)
Max fuel load	1,520 kg (3,351 lb)
Max payload	2,000 kg (4,409 lb)
Fuel with max payload	870 kg (1,918 lb)
Payload with max fuel	1,350 kg (2,976 lb)
Max T-O weight	7,000 kg (15,432 lb)
Max landing weight	6,650 kg (14,660 lb)
Max zero-fuel weight	5,850 kg (12,897 lb)
Normal wing loading	53.5 kg/m² (31.5 lb/sq ft)
Max power loading:	
PZL-10S	4.64 kg/kW (7.62 lb/shp)
PT6A-65B	3.96 kg/kW (6.51 lb/shp)

PERFORMANCE (standard M-28 at max T-O weight):

Max operating speed (VMO)	189 kts (350 km/h; 217 mph)
Econ cruising speed at 3,000 m (9,840 ft)	156 kts (290 km/h; 180 mph)
Unstick speed	73 kts (135 km/h; 84 mph)
Approach speed	70 kts (130 km/h; 81 mph)
Landing speed, flaps down	76 kts (140 km/h; 87 mph)
Max rate of climb at S/L	546 m (1,791 ft)/min
Time to 3,000 m (9,840 ft):	
de-icing off	6 min
de-icing on	9 min
Service ceiling (oxygen system limited)	4,200 m (13,780 ft)

Prototype/demonstrator for the PZL Mielec M-28 Skytruck *(R. J. Malachowski)*

1995

The M-18B latest production version of the Dromader agricultural aircraft *(R J Malachowski)*

1995

T-O run	250 m (821 ft)
T-O to 10.7 m (35 ft)	420 m (1,378 ft)
Landing from 15 m (50 ft)	350 m (1,149 ft)
Landing run	200 m (657 ft)
Range	
max payload, no reserves	302 n miles (560 km, 348 miles)
max fuel and 1,000 kg (2,205 lb) payload, 30 min reserves	736 n miles (1,365 km, 848 miles)
g limits	+3/-1

NEW ENTRY

PZL MIELEC M-18 DROMADER (DROMEDARY)

TYPE: Agricultural and firefighting aircraft.

PROGRAMME: Designed to meet requirements of FAR Pt 23; prototype first flights 27 August and 2 October 1976, M-18 awarded Polish type certificate 27 September 1978; 10 pre-production aircraft built, of which eight used for operational trials, later certificated in Australia, Brazil, Canada, Czech Republic, France, Germany, Poland, USA and former Yugoslavia; series production began 1979.

CURRENT VERSIONS: **M-18**: Initial single-seat agricultural version (see 1988-89 *Jane's*), production ended 1984 but available to order.

M-18A: Two-seat agricultural version, for operators requiring to transport mechanic/loader to improvised air strip, production began 1984, following Polish supplementary type certification 14 February 1984; FAA type certificate for M-18 extended to M-18A September 1987, production continuing 1995. *Detailed description applies to M-18A except where indicated.*

M-18AS: Two-seat training version, with smaller hopper to make space for instructor's cockpit aft of pilot; rear cockpit installation readily interchangeable with that of M-18A; first flown 21 March 1988; five built by 1 January 1992, remains available.

M-18B: Improved performance development of M-18A, awarded extension of Polish type certificate 15 April 1994; FAA certification applied for May 1994. Elevators horn balanced and have smaller, centrally located trim tabs, spring interconnect between elevators and flaps, and between ailerons and rudder; flaps-down deflection increased from 15° to 30°; normal and overload MTOW increased to 5,300 kg (11,684 lb); Normal category landing run reduced to 170 to 190 m (558 to 624 ft) and flaps-up stalling speed to 59 knots (108 km/h, 68 mph), lower control stick force values, enhanced static and dynamic longitudinal stability. Power plant and hopper as for M-18A.

Design work of future subvariants continuing: **M-18B/AW 2** with larger (3.60 m, 11 ft 9¾ in) diameter propeller for shorter T-O and higher climb rate, and **M-18B/AW 2/K9** with same propeller and 872 kW (1,170 hp) K9 engine.

T45 Turbine Dromader: Turboprop version, 895 kW (1,200 shp) Pratt & Whitney Canada PT6A-45AG with Hartzell propeller; developed by James Mills in co-operation with Melex USA Inc (see Melex entry).

Firefighter: Prototype first flown 11 November 1978; **amphibious water bomber floatplane** variant under consideration.

CUSTOMERS: Total of 660 built (all versions) by 1 January 1995, 90 per cent for export, sold to operators in Australia, Brazil, Bulgaria, Canada, Chile, China, Cuba, Czech Republic, Germany, Greece (30 for firefighting), Hungary, Iran, Morocco, Nicaragua, Poland, Portugal, Spain, Swaziland, Trinidad, Turkey, USA, Venezuela and former Yugoslavia. Total includes 24 new or modified M-18Bs operating in Poland and three M-18Bs sold to Italy by 1 January 1995.

The M-18AS version of the Dromader has an extra cockpit at the rear for an instructor

1991

DESIGN FEATURES: Emphasis on crew safety, all parts exposed to chemical contact treated with polyurethane or epoxy enamels, or manufactured of stainless steel; detachable fuselage side panels for airframe inspection and cleaning; braced tailplane.

Wing sections NACA 4416 at root, NACA 4412 at end of centre-section and on outer panels, incidence 3°.

FLYING CONTROLS: Mechanically actuated, mass and aerodynamically balanced slotted ailerons with trim tabs, using pushrods, aerodynamically and mass balanced rudder and elevators with trim tabs, actuated by cables and pushrods respectively, hydraulically actuated two-section trailing-edge slotted flaps.

STRUCTURE: All metal, stainless steel capped duralumin wing spar, fuselage mainframe of helium-arc welded chromoly steel tube, oiled internally against corrosion, duralumin fuselage side panels and stainless steel bottom covering, corrugated tail unit skins.

LANDING GEAR: Non-retractable tailwheel type. Oleo-pneumatic shock-absorber in each unit. Main units have tyres size 800 × 260 mm, and are fitted with hydraulic disc brakes, parking brake and wire cutters. Fully castoring tailwheel, lockable for take-off and landing, with size 380 × 150 mm tyre.

POWER PLANT: One PZL Kalisz ASz-621R nine-cylinder radial air-cooled supercharged engine (721 kW, 967 hp at 2,200 rpm), driving a PZL Warszawa AW-2-30 four-blade constant-speed aluminium propeller. Integral fuel tank in each outer wing panel, combined usable capacity 400 or 712 litres (105.7 or 188 US gallons; 88 or 156.6 Imp gallons). Gravity feed header tank in fuselage.

ACCOMMODATION: Single adjustable seat in fully enclosed, sealed and ventilated cockpit stressed to withstand 40 *g* impact. Additional cabin located behind cockpit and separated from it by a wall. Latter equipped with rigid seat with protective padding and safety belt, port-side jettisonable door, windows (port and starboard), fire extinguisher, and ventilation valve. Communication with pilot provided via window in dividing wall, and by intercom. In M-18AS, standard hopper is replaced by smaller one, permitting installation of bolt-on instructor's cabin. Second cockpits of M-18A and M-18AS quickly interchangeable. Glassfibre cockpit roof and rear fairing, latter with additional small window each side. Rear cockpit of M-18AS has more extensive glazing. Adjustable shoulder type safety harness. Adjustable rudder pedals. Quick-opening door on each side of front cockpit, port door jettisonable.

SYSTEMS: Hydraulic system, pressure 98 to 137 bars (1,421 to 1,987 lb/sq in), for flap actuation, disc brakes and dispersal system. Electrical system powered by 28.5 V 100 A generator, with 24 V 25 Ah Ni/Cd battery and overvoltage protection relay.

AVIONICS: *Comms:* RS-6102 (Polish built), Bendix/King KX 175B or KY 195B com transceiver.

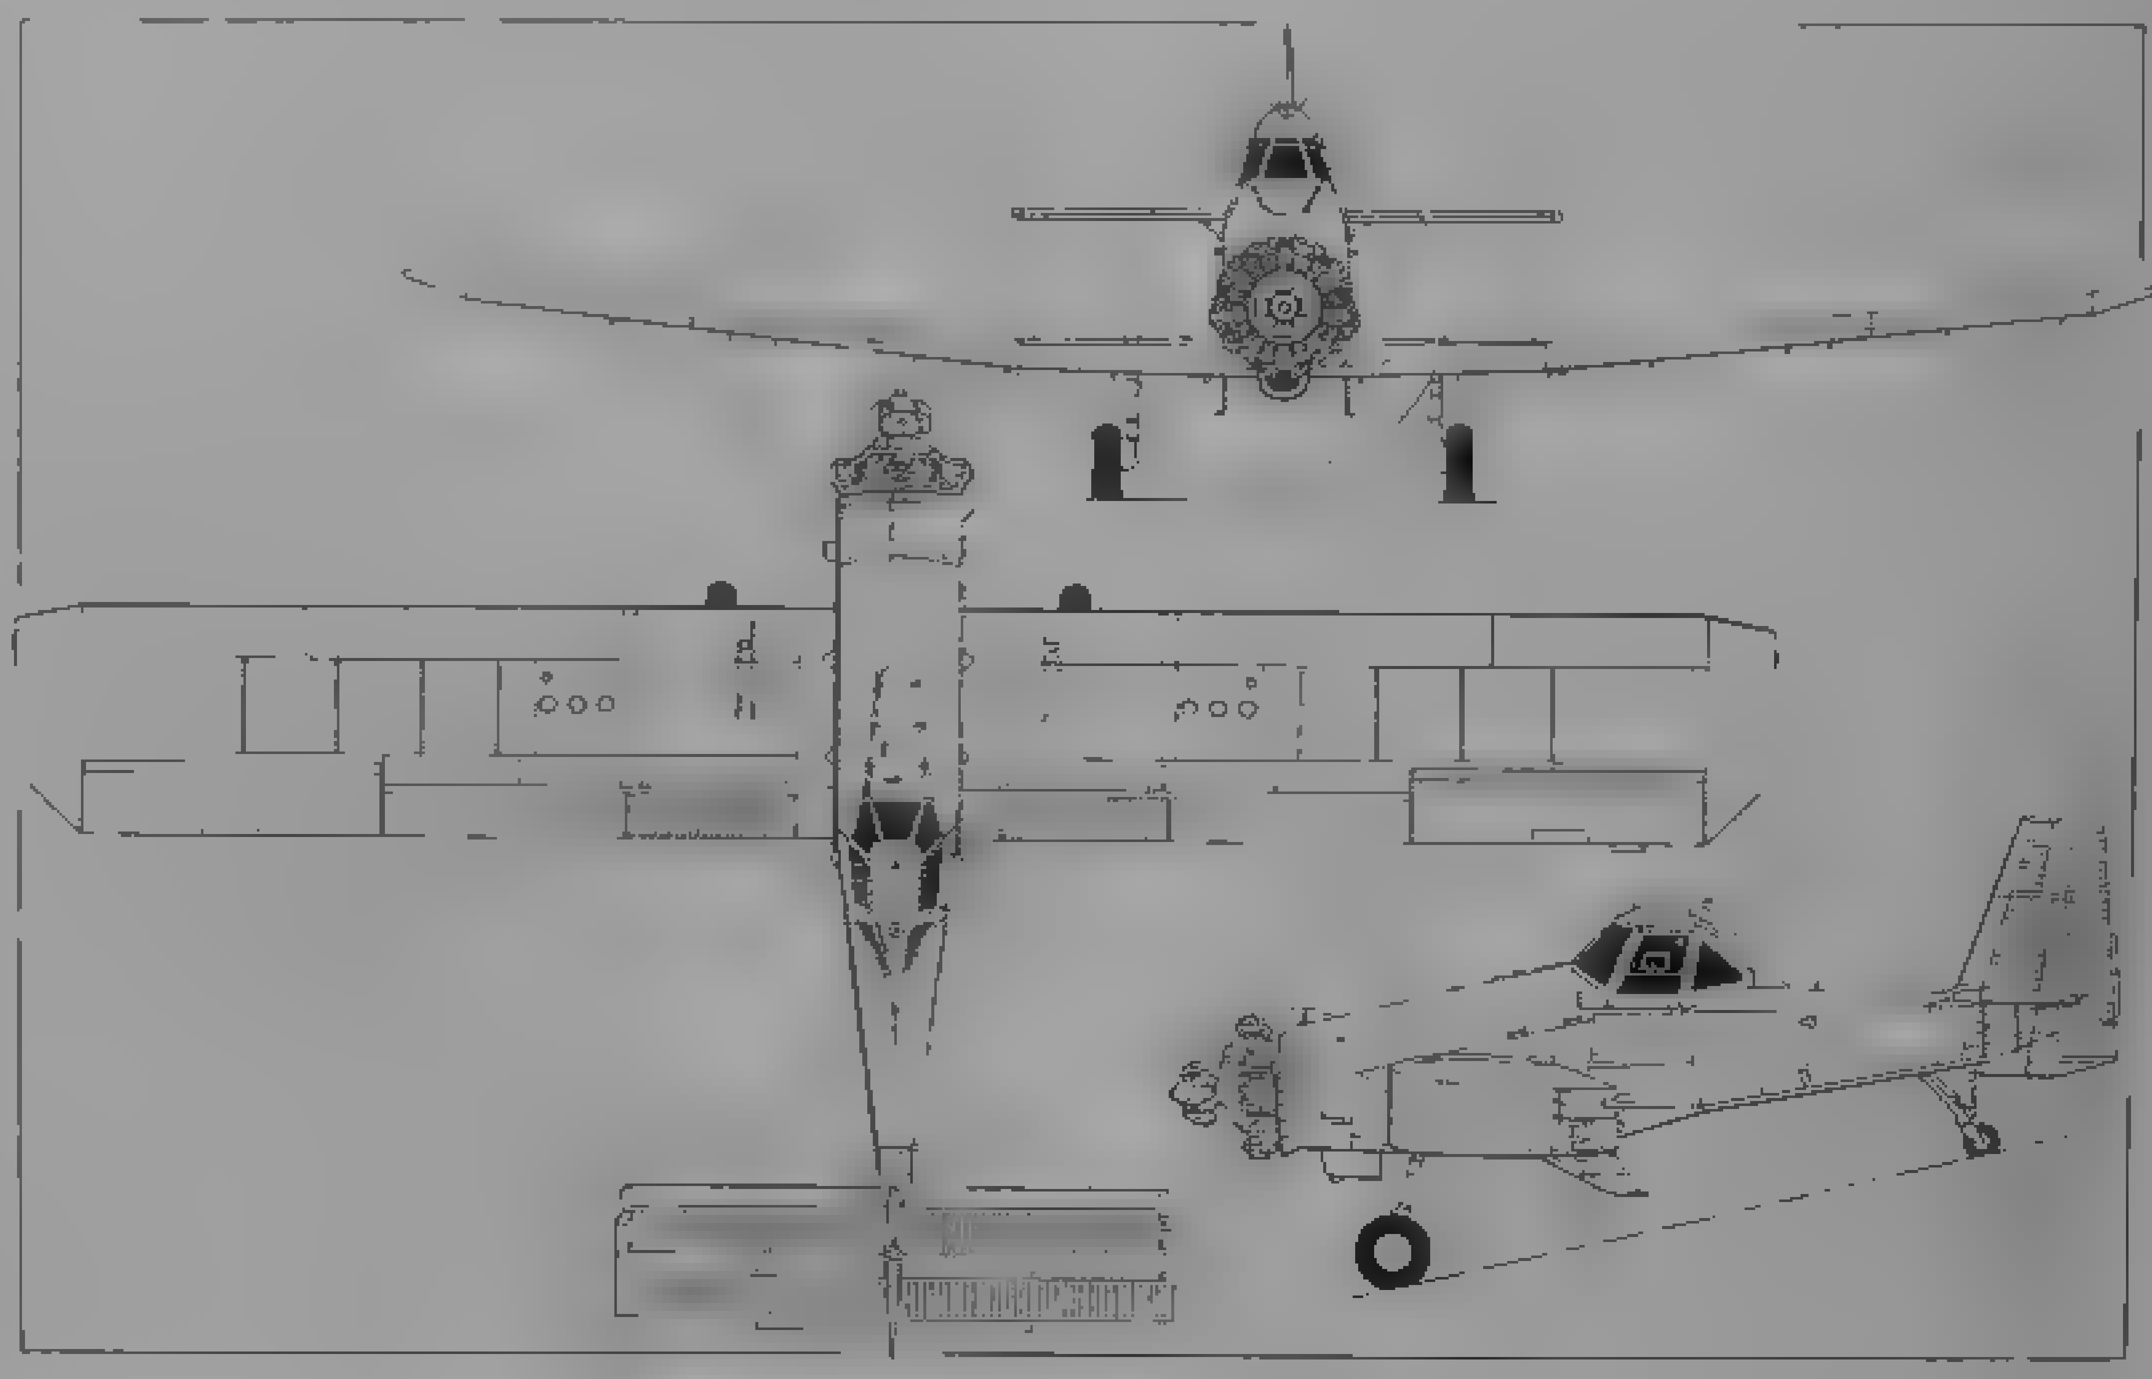
Flight: KI 201C nav receiver, VOR/OBS indicator, gyro-compass, radio compass and stall warning.

EQUIPMENT: Glassfibre epoxy hopper, with stainless steel tube bracing, forward of cockpit, capacity (M-18A) 2,500 litres (660 US gallons, 550 Imp gallons) of liquid or 1,350 kg (2,976 lb) of dry chemical (1,850 kg, 4,078 lb under CAM 8 conditions). Smaller hopper in M-18AS. Deflector cable from cabin roof to fin.

M-18 variants can be fitted optionally with several different types of agricultural and firefighting systems, as follows: spray system with 54/96 nozzles on spraybooms, dusting system with standard, large or extra large spreader; atomising system with six atomisers, water bombing installation, and fire bombing installation with foaming agents. Aerial application roles can include seeding, fertilising, weed or pest control, defoliation, forest and bush firefighting, and patrol flights. Special wingtip lights permit agricultural flights at night, and aircraft can operate in both temperate and tropical climates. Navigation lights, cockpit light, instrument panel lights and two rotating beacons standard. Landing lights, taxi light and night working light optional. Built-in jacking and tiedown points in wings and rear fuselage, towing lugs on main landing gear. Cockpit fire extinguisher and first aid kit.

DIMENSIONS, EXTERNAL:

Wing span	17.70 m (58 ft 0¾ in)
Wing chord, constant	2.286 m (7 ft 6 in)
Wing aspect ratio	7.83
Length overall	9.47 m (31 ft 1 in)
Height: over tailfin	3.70 m (12 ft 1¾ in)
overall (flying attitude)	4.60 m (15 ft 1 in)
Tailplane span	5.60 m (18 ft 4½ in)
Wheel track	3.48 m (11 ft 5 in)
Propeller diameter	3.30 m (10 ft 10 in)
Propeller ground clearance (tail up)	0.23 m (9 in)



PZL Mielec M-18A Dromader *(Jane's/Dennis Punnett)*

1983

DIMENSIONS, INTERNAL
Hopper volume 2.50 m³ (88.3 cu ft)
AREAS
Wings, gross 40.00 m² (430.5 sq ft)
Ailerons (total) 3.84 m² (41.33 sq ft)
Trailing-edge flaps (total) 5.69 m² (61.25 sq ft)
Vertical tail surfaces (total) 2.65 m² (28.5 sq ft)
Horizontal tail surfaces (total) 6.50 m² (70.0 sq ft)
WEIGHTS AND LOADINGS (M-18A):
Basic weight empty 2,710 kg (5,975 lb)
Weight empty, equipped 2,750-2,860 kg (6,063-6,305 lb)
Payload: FAR 23 1,050-1,350 kg (2,315-2,976 lb)
CAM 8 1,550-1,850 kg (3,417-4,078 lb)
Max T-O weight: FAR 23 4,200 kg (9,259 lb)
Restricted 4,700 kg (10,362 lb)
CAM 8 (max) 5,300 kg (11,684 lb)
Max landing weight 4,200 kg (9,259 lb)
Max wing loading (FAR 23) 105.0 kg/m² (21.51 lb/sq ft)
Max power loading (FAR 23) 5.83 kg/kW (9.58 lb/hp)
PERFORMANCE (M-18A at 4,200 kg; 9,259 lb T-O weight, ISA. A: without agricultural equipment, B: with spreader equipment)
Never-exceed speed (VNE)
A 151 kts (280 km/h; 174 mph)
Max level speed: A 138 kts (256 km/h; 159 mph)
B 128 kts (237 km/h; 147 mph)
Cruising speed at S/L:
A 110 kts (205 km/h; 127 mph)
B 102 kts (190 km/h; 118 mph)
Normal operating speed
A 124 kts (230 km/h; 143 mph)
B 92 kts (170 km/h; 106 mph)
Stalling speed, power off, flaps up
A, B 65 kts (119 km/h; 74 mph)
Stalling speed, power off, flaps down
A, B 59 kts (109 km/h; 68 mph)
Max rate of climb at S/L: A 414 m (1,360 ft)/min
B 340 m (1,115 ft)/min
Service ceiling: A 6,500 m (21,325 ft)
T-O run: A 180-200 m (590-656 ft)
B 210-245 m (689-805 ft)
Landing run: A, B 260-300 m (853-984 ft)
Max range, no reserves
A, 400 litres (105.7 US gallons, 88 Imp gallons) fuel 291 n miles (540 km; 335 miles)
A, 712 litres (188 US gallons, 156.6 Imp gallons) fuel 523 n miles (970 km; 602 miles)
g limits: FAR 23 +3.4/−1.4
CAM 8 +3/−1.2

UPDATED

PZL MIELEC M-20 MEWA (GULL)

TYPE: Six/seven-seat executive transport, liaison, survey and ambulance aircraft.

PROGRAMME: Developed from PA-34-200T Seneca II light twin under 1977 agreement with Piper Aircraft Corporation, USA; nine Piper kits supplied to Pezetel 1978-80; adapted to accept PZL-F (Polish Franklin) engines 1978 and made first flight (SP-PKA) 25 July 1979; first four completed as M-20 00 and next five as M-20 01 (first flight by SP-PKE, 22 September 1982); Polish certification of 00/01 22 September 1983; fifth M-20 01 converted as M-20 02 prototype, making first flight in this form 10 October 1985, but non-availability of production PZL-F engines resulted in switch to Teledyne Continental power plant in current M-20 03 model, which made first flight (SP-DMA) 13 October 1988 and received Polish certification 12 December same year; 03 since certificated by Germany (2 October 1991), Australia (3 March 1992) and US FAA (16 July 1993).

CURRENT VERSIONS: See 1987-88 and earlier *Jane's* for M-20 00/01/02, no longer in production.

M-20 03: Current production version, with Polish built airframe and Teledyne Continental engines. Marketed as **Gemini** for export. *Detailed description applies to this version.*

M-20 04: Under development for first flight in 1995, strengthened wing with new main spar; maximum T-O weight increase to 2,156 kg (4,753 lb), Bendix/King avionics and 28 V electrical system.

CUSTOMERS: Four M-20 00 and five M-20 01 built 1979-80 and 1983-84 respectively (one 01 converted to M-20 02). 12 M-20 03 completed by early 1993, at which time orders for up to 60 more, including customers in USA.

DESIGN FEATURES: Can be operated from concrete runways or grass strips. Wing section NACA 65_2-415 (constant chord); 7° dihedral from roots, 2° incidence, leading-edges sweptforward at root.

FLYING CONTROLS: Frise differential ailerons, aerodynamically and mass balanced rudder with anti-servo tab, and slab type all-moving tailplane with trim tab, single-slotted trailing-edge flaps.

STRUCTURE: Safe-life aluminium alloy.

LANDING GEAR: Electrohydraulically retractable tricycle type, with single wheel and oleo-pneumatic shock-strut on each unit. Mainwheels retract inward into wings, nosewheel forward. Size 6.00-6 wheels on all three units (McCreary main, Air Hawk nose), tyre pressures 3.79 bars (55 lb/sq in) on main units, 2.76 bars (40 lb/sq in) on nose unit. Nosewheel steerable ±27°. Emergency gravity extension. Cleveland disc brakes; parking brake. Minimum ground turning radius about nosewheel 5.00 m (16 ft 5 in).

POWER PLANT: Two 164 kW (220 hp) Teledyne Continental TSIO/LTSIO-360-KB turbocharged, contrarotating flat six engines, each driving a Hartzell BHC-2CYF-2CK three-blade constant-speed propeller. Two 92 litre (24.3 US gallon, 20.3 Imp gallon) fuel tanks in each wing leading-edge, total standard fuel capacity 368 litres (97.2 US gallons, 81 Imp gallons). Optional auxiliary tank in each leading-edge can increase this total to 480 litres (127 US gallons, 105.5 Imp gallons). Gravity fuelling points in top of each wing. Oil capacity 7.6 litres (2 US gallons; 1.7 Imp gallons) per engine.

ACCOMMODATION: Passenger version seats one or two pilots plus five or four passengers, with optional seventh seat. Forward-opening door at front (starboard) and rear (port). Space for 68 kg (150 lb) of baggage in nose and 91 kg (200 lb) aft of rear seats. Ambulance version can carry one stretcher patient, two medical attendants and one other person in addition to pilot. Stretcher rack replaces right hand centre seat and, like seat, can be quickly and easily removed. Rack has special guides which can be connected to door threshold to facilitate stretcher loading; they can be folded back when stretcher is on board and locked. Hooks in cabin ceiling for suspending transfusion set, oxygen installation for patient. Doctor's seat (centre, left) has ear phone and microphone, enabling him to contact ground for assistance; nurse's seat at rear. Modified electrical system permits incubator to be installed.

SYSTEMS: Two independent hydraulic systems, one operating at 154 bars (2,233 lb/sq in) for landing gear extension/retraction and one at 103.5 bars (1,500 lb/sq in) for wheel braking. Electrical system powered by two 24 V 55 A alternators and a 24 V 25 Ah battery. Pneumatic wing, tailplane and fin leading-edge anti-icing, and electric de-icing of propeller blades, optional.

AVIONICS: *Comms*: RS-6102 VHF transceiver, SSA-1 audio control panel and multichannel VOR/LOC radio standard.
Flight: Polish ARL-1601 ADF, CG-121 slaved gyro and MRP-66 marker transceiver standard. DME, marker beacon receiver, radio compass and three-axis autopilot optional.
Bendix/King Silver Crown package optional.

DIMENSIONS, EXTERNAL
Wing span 11.86 m (38 ft 11 in)
Wing chord: at root 1.88 m (6 ft 2 in)
at tip 1.60 m (5 ft 3 in)

PZL Mielec M-20 Mewa, a Polish version of the Piper PA-34-200T Seneca II *(R. J. Malachowski)* 1995

PZL MIELEC M-26 ISKIERKA (LITTLE SPARK)

TYPE: Tandem two-seat primary training aircraft, for civil pilot training and military pilot selection.

PROGRAMME: Designed to FAR Pt 23, two versions being developed; first flight of first prototype (SP-PIA) with PZL-F engine 15 July 1986, first flight of Textron Lycoming-engined prototype (SP-PIB) 24 June 1987; flight testing completed, Polish certification obtained 26 October 1991; production of M-26 01 launched Spring 1994 with initial 20-aircraft order from US distributor Melex (which see), US FAA certification and first Melex deliveries expected 1995.

CURRENT VERSIONS: **M-26 00**: PZL-F engine and Polish avionics.

M-26 01: Textron Lycoming AEIO-540 engine and Bendix/King avionics.

CUSTOMERS: Melex USA Inc (20); "more than 70" claimed ordered by undisclosed Latin American government in early 1995.

COSTS: $180,000 in civilian configuration, $220,000 military (1995).

DESIGN FEATURES: Selected parts and assemblies of M-20 Mewa used in design of wings, tail unit, landing gear, power plant, and electrical and power systems. Wing section NACA 65_2-415 (constant chord); 7° dihedral from roots, 2° incidence, leading edges sweptforward at root. Fixed incidence tailplane.

FLYING CONTROLS: Frise ailerons, balanced rudder, and elevators with starboard trim tab; single-slotted trailing-edge flaps.

STRUCTURE: Safe-life aluminium alloy.

LANDING GEAR: Retractable tricycle type, actuated hydraulically, with single wheel and oleo strut on each unit. Main wheels retract inward into wings, nosewheel rearward. Size 6.00-6 wheels on all three units; tyre pressures 3.43 bars (50 lb/sq in) on main units, 2.16 bars (31 lb/sq in) on nose unit. PZL Hydral hydraulic disc brakes on mainwheels. Parking brake.

POWER PLANT (M-26 00): One 153 kW (205 hp) PZL-F 6A-350CA flat-six engine, driving a PZL Warszawa-Okecie US 142 three-blade constant speed propeller, or a two-blade Hartzell BHC-C2YF 2CKUF constant-speed propeller. One 92 litre (24.3 US gallon, 20.2 Imp gallon) fuel tank in each wing leading edge, plus a 9 litre (2.4 US gallon, 2.0 Imp gallon) fuselage tank, to give total capacity of 193 litres (51 US gallons, 42.4 Imp gallons). Gravity fuelling point in top of each wing tank. Oil capacity 10 litres (2.6 US gallons; 2.2 Imp gallons).

POWER PLANT (M-26 01): One 224 kW (300 hp) Textron Lycoming AEIO-540-L1B5D flat-six engine, driving a Hoffmann HO-V123K-V/200AH-10 three-blade constant speed propeller. Second tank in each wing. Total fuel capacity 377 litres (99.6 US gallons; 82.8 Imp gallons). Gravity fuelling point in top of each outer wing tank. Oil capacity 15 litres (4.0 US gallons, 3.3 Imp gallons).

PZL Mielec M-26 01 Iskierka registered in USA *(Geoffrey P. Jones)*

1995

ACCOMMODATION: Tandem seats for pupil (in front) and instructor, under framed canopy which opens sideways to starboard. Rear seat elevated. Baggage compartment aft of rear seat. Both cockpits heated and ventilated.

SYSTEMS: Two independent hydraulic systems, one operating at 154 bars (2,233 lb/sq in) for landing gear extension/retraction and one at 103 bars (1,494 lb/sq in) for wheel braking. DC electrical power supplied by 24 V alternator (50 A in M-26 00, 100 A in M-26 01) and 25 Ah battery.

AVIONICS: *Comms*: RS-6102 VHF transceiver and SSA-1 audio control panel.

Flight: Polish ARL-1601 ADF, CG-121 slaved gyro and ORS-2M marker beacon receiver standard.

Bendix/King avionics optional.

ARMAMENT: Up to 120 kg (265 lb) of ordnance on each of two underwing hardpoints, total 240 kg (529 lb). Melex offers a simulated air combat package of smoke, video guns and laser guns.

EQUIPMENT: Landing light in port wing leading-edge.

DIMENSIONS, EXTERNAL:

Wing span	8.60 m (28 ft 2½ in)
Wing chord: at root	1.88 m (6 ft 2 in)
at tip	1.60 m (5 ft 3 in)
Wing aspect ratio	5.28
Length overall	8.30 m (27 ft 2¾ in)
Height overall	2.96 m (9 ft 8½ in)
Tailplane span	3.80 m (12 ft 5½ in)
Wheel track	2.93 m (9 ft 7¼ in)
Wheelbase	1.93 m (6 ft 4 in)
Propeller diameter	1.90 m (6 ft 2¾ in)

DIMENSIONS, INTERNAL:

Cockpits: Total length	2.91 m (9 ft 6½ in)
Max width	0.88 m (2 ft 10½ in)
Max height	1.30 m (4 ft 3¼ in)

AREAS:

Wings, gross	14.00 m² (150.7 sq ft)
Ailerons (total)	1.17 m² (12.59 sq ft)
Trailing-edge flaps (total)	1.06 m² (11.41 sq ft)
Fin	1.96 m² (21.10 sq ft)
Rudder	0.89 m² (9.58 sq ft)
Tailplane	3.30 m² (35.52 sq ft)
Elevators (total, incl tab)	1.15 m² (12.38 sq ft)

WEIGHTS AND LOADINGS (M-26 01):

Weight empty	940 kg (2,072 lb)
Max fuel weight	271 kg (597 lb)
Max T-O and landing weight	1,400 kg (3,086 lb)
Max wing loading	100.0 kg/m² (20.5 lb/sq ft)
Max power loading	6.26 kg/kW (10.29 lb/hp)

PERFORMANCE (M-26 01 at max T-O weight except where indicated):

Never-exceed speed (VNE)	215 kts (400 km/h; 248 mph)
Max level speed at S/L	178 kts (330 km/h; 205 mph)
Stalling speed, flaps down	60 kts (110 km/h; 69 mph)
Max rate of climb at S/L	420 m (1,378 ft)/min
T-O to 15 m (50 ft)	570 m (1,870 ft)
Landing from 15 m (50 ft)	685 m (2,248 ft)
Range with max fuel, 30 min reserves	874 n miles (1,620 km; 1,006 miles)
g limits	+7/–3.5 at 1,100 kg (2,425 lb) AUW
	+4/–1.72 at max T-O weight

UPDATED

PZL MIELEC (ANTONOV) An-2 ANTEK

NATO reporting name: Colt

TYPE: Single-engined general purpose biplane.

PROGRAMME: First flight of An-2 prototype, designed to specification of USSR Ministry of Agriculture and Forestry, 31 August 1947; went into production in USSR 1948, with 746 kW (1,000 hp) ASh-62 engine; over 5,000 built in USSR by 1960; licence rights granted to China, where first Y-5 completed December 1957 and limited production continues (see SAF heading in that section); since 1960, apart from few dozen Soviet built An-2Ms (see 1971-72 *Jane's*), continued production primarily by PZL Mielec; original licence agreement provided for An-2T and An-2R versions; first flight of Polish An-2 on 23 October 1960. Further details of Geofiz, LW, PK, P-Photo, PR, S and TD specialised versions in 1983-84 and earlier *Jane's*. Polish production now drastically reduced.

CURRENT VERSIONS: **An-2P**: Passenger version, 12 adult passengers and two children; improved cabin layout and comfort, better soundproofing, new propeller and spinner, weight-saving instruments and equipment compared with Soviet model; entered production 1968. *Detailed description applies to this version.*

An-2R: Agricultural version, 1,350 kg (2,976 lb) capacity GFRP reinforced epoxy resin hopper or 1,400 litre (370 US gallon, 308 Imp gallon) capacity tank for dry or liquid chemicals; 7,782 built by Mielec up to end of 1991 (latest figure supplied).

An-2T: General purpose transport version; 12 passengers plus baggage or 1,500 kg (3,306 lb) of cargo.

An-2TP: Passenger version, similar to An-2T but with higher cabin standard.

CUSTOMERS: Over 11,950 An-2s built by Mielec for domestic use and export to USSR/CIS (10,440), Bulgaria, former Czechoslovakia, Egypt, France, former East Germany, Hungary, Iraq, North Korea, Mongolia, Netherlands, Nicaragua, Romania, Sudan, Tunisia, Turkey, the UK, Venezuela and former Yugoslavia; in 1989, AICSA of Colombia assembled two An-2s from kits supplied via Pezetel.

DESIGN FEATURES: Unequal span single-bay biplane, braced wings and tail, fuselage circular section forward, rectangular in cabin section, oval in tail section; fin integral with rear fuselage. RPS wing section, thickness/chord ratio 14 per cent (constant); dihedral, both wings, approximately 2° 48′.

FLYING CONTROLS: Dual controls and blind-flying instrumentation standard. Mechanically actuated differential ailerons, elevators and rudder, using cables and push/pull rods, electric trim tab in port aileron, rudder and port elevator; full-span automatic leading-edge slots on upper wings, electrically actuated slotted trailing-edge flaps on both wings.

STRUCTURE: All metal, with fabric covering on wings aft of main spar and on tailplane.

LANDING GEAR: Non-retractable split axle type, with long stroke oleo-pneumatic shock-absorbers. Mainwheel tyres size 800 × 260 mm, pressure 2.25 bars (32.7 lb/sq in). Pneumatic shoe brakes on main units. Fully castoring and self-centring PZL Krosno tailwheel, size 470 × 210, with electropneumatic lock. For rough field operation shock-absorbers can be charged from compressed air cylinder installed in rear fuselage. Interchangeable ski landing gear available optionally.

POWER PLANT: One 746 kW (1,000 hp) PZL Kalisz ASz-621R nine-cylinder radial air-cooled engine, driving an AW-2 four-blade variable-pitch metal propeller. Six fuel tanks in upper wings, with total capacity of 1,200 litres (317 US gallons, 264 Imp gallons). Fuel consumption 120 to 170 litres (31.7 to 45.0 US gallons, 26.4 to 37.4 Imp gallons)/h. Oil capacity 120 litres (31.7 US gallons, 26.4 Imp gallons).

ACCOMMODATION: Crew of two on flight deck, with access via passenger cabin. Standard accommodation for 12 passengers, in four rows of three with single aisle. Two foldable seats for children in aisle between first and second rows, and infant's cradle at front on starboard side. Toilet at rear on starboard side. Overhead racks for up to 160 kg (352 lb) of baggage, with space for coats and additional 40 kg (88 lb) of baggage between rear pair of seats and toilet. Emergency exit on starboard side at rear. Walls of cabin lined with glass-wool mats and inner facing of plywood to reduce internal noise level. Cabin floor carpeted. Cabin heating and starboard windscreen de-icing by engine bleed air; port and centre windscreens electrically de-iced. Cabin ventilation by ram air intakes on underside of top wings.

SYSTEMS: Compressed air cylinder, of 8 litres (0.28 cu ft) capacity, for pneumatic charging of shock-absorbers and operation of tailwheel lock at 49 bars (711 lb/sq in) pressure and operation of mainwheel brakes at 9.80 bars (142 lb/sq in). Contents of cylinder maintained by AK-50P engine-driven compressor, with AD-50 automatic relief device to prevent overpressure. DC electrical system supplied with basic 27 V power (and 36 V or 115 V where required) by engine-driven generator and storage battery. CO_2 fire extinguishing system with automatic fire detector.

AVIONICS: *Comms*: R-842 HF and RS-6102 or Bak an-5 VHF lightweight radio transceivers and SPU-7 intercom.

Flight: A-037 radio altimeter (RW-UM before April 1989), ARK-9 radio compass, MRP-56P marker beacon receiver, GIK-1 gyro compass and GPK-48 gyroscopic direction indicator.

DIMENSIONS, EXTERNAL:

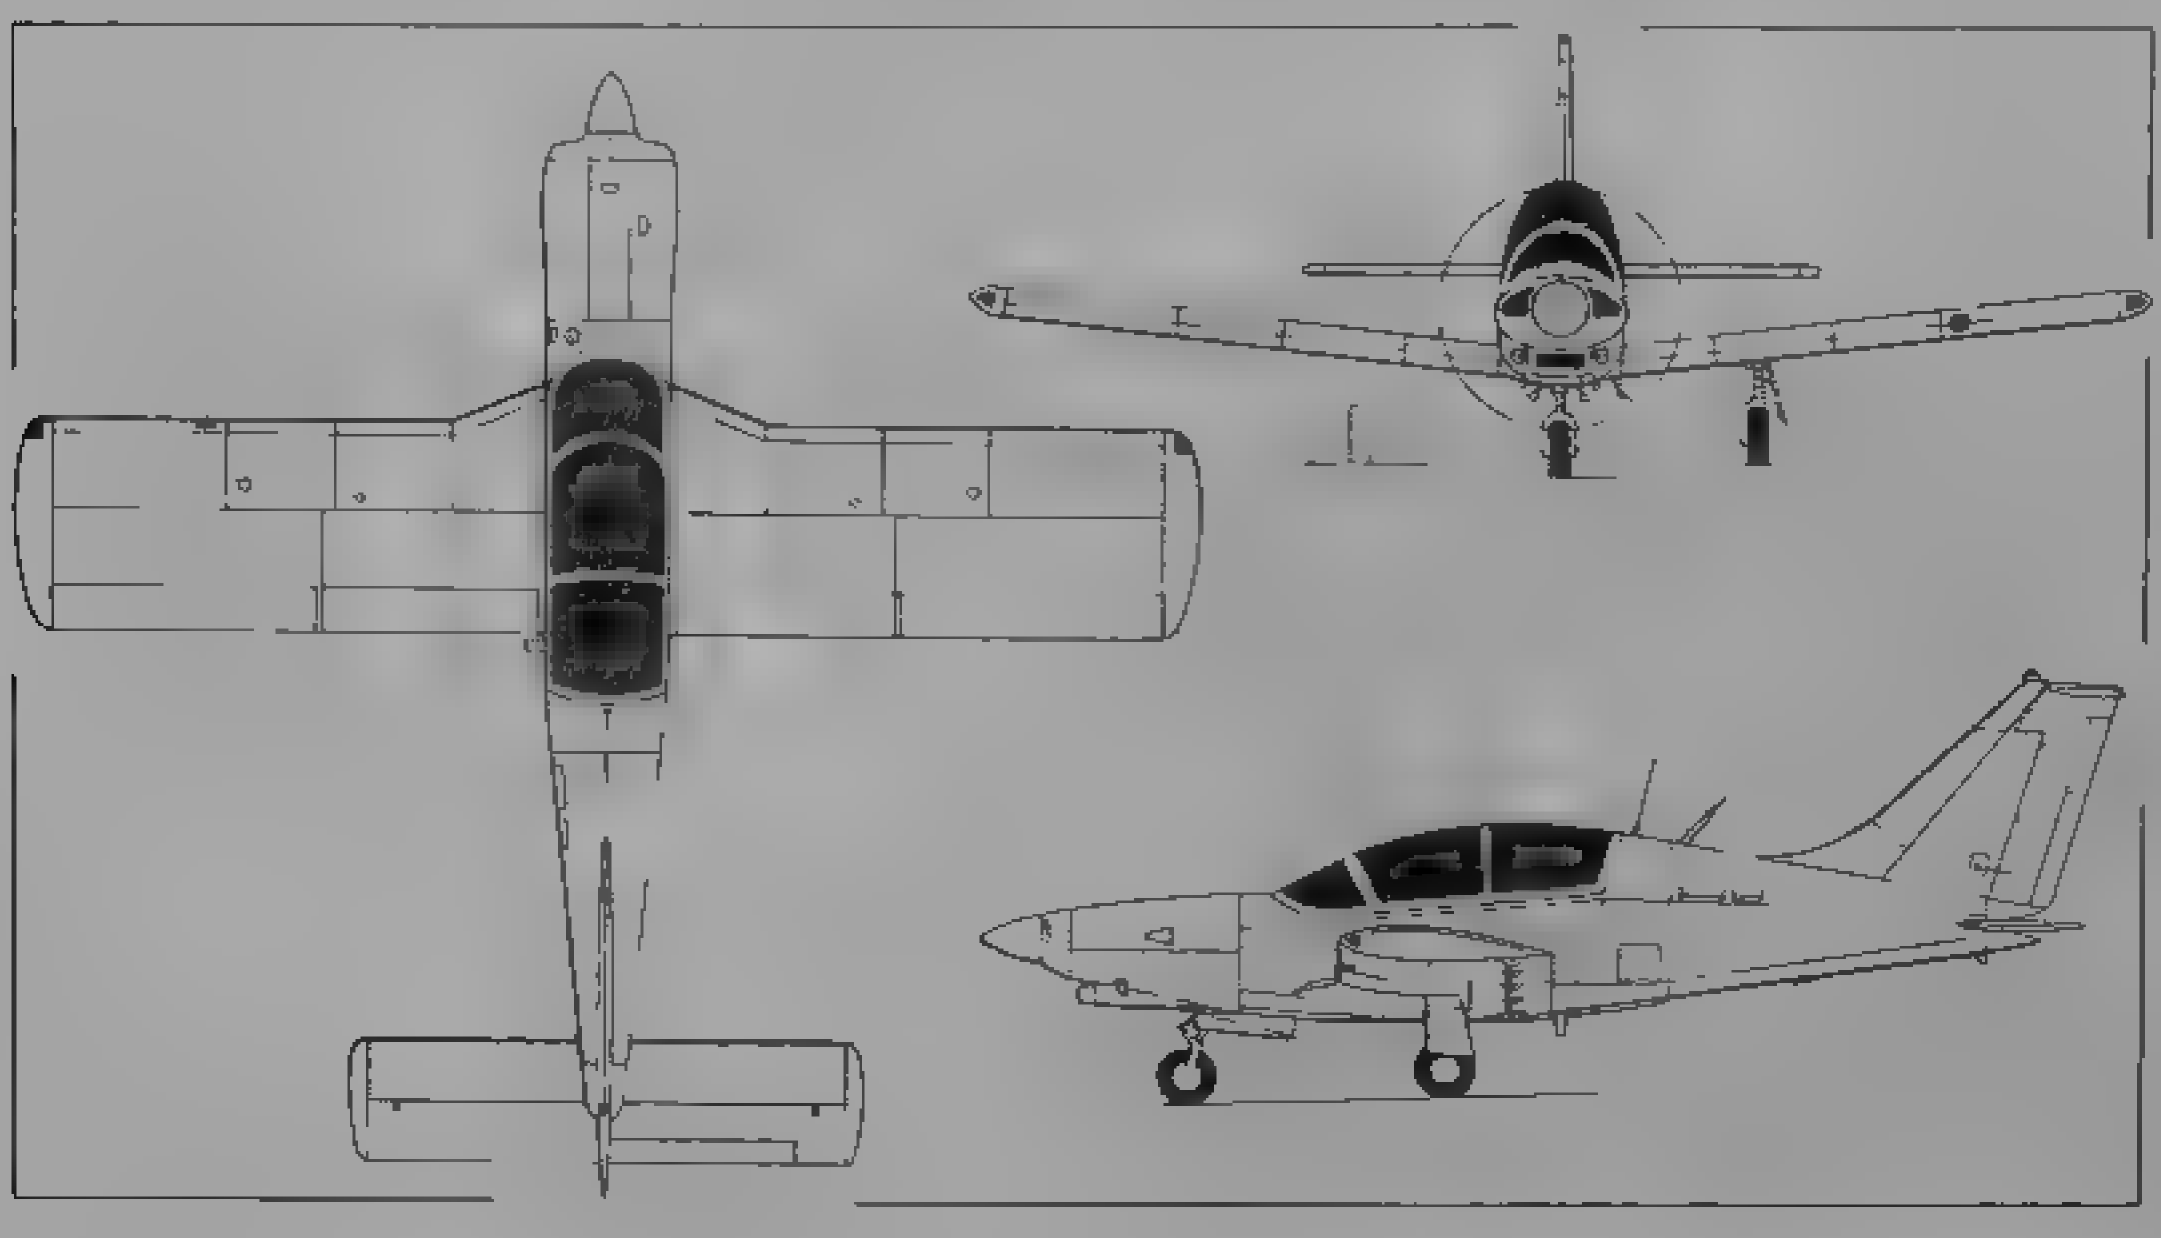
Wing span: upper	18.18 m (59 ft 7¾ in)
lower	14.24 m (46 ft 8½ in)
Wing chord, constant: upper	2.45 m (8 ft 0½ in)
lower	2.00 m (6 ft 6¾ in)
Wing aspect ratio: upper	7.59
lower	7.25
Wing gap	2.17 m (7 ft 1½ in)
Length overall: tail up	12.74 m (41 ft 9½ in)
tail down	12.40 m (40 ft 8¼ in)
Height overall: tail up	6.10 m (20 ft 0 in)
tail down	4.01 m (13 ft 2 in)
Tailplane span	7.20 m (23 ft 7½ in)
Wheel track	3.36 m (11 ft 0¼ in)
Wheelbase	8.19 m (26 ft 10½ in)
Propeller diameter	3.60 m (11 ft 9¾ in)
Propeller ground clearance	0.69 m (2 ft 3¼ in)
Cargo door (port): Mean height	1.55 m (5 ft 1 in)
Mean width	1.39 m (4 ft 6¾ in)
Emergency exit (stbd, rear): Height	0.65 m (2 ft 1½ in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:

Cargo compartment: Length	4.10 m (13 ft 5½ in)
Max width	1.60 m (5 ft 3 in)
Max height	1.80 m (5 ft 10¾ in)

AREAS:

Wings, gross: upper	43.54 m² (468.7 sq ft)
lower	27.98 m² (301.2 sq ft)
Ailerons (total)	5.90 m² (63.5 sq ft)
Trailing-edge flaps (total)	9.60 m² (103 sq ft)
Fin	3.20 m² (34.4 sq ft)



PZL Mielec M-26 Iskierka tandem two-seat primary trainer *(Jane's/Dennis Punnett)*

1985

Rudder, incl tab	2.65 m² (28.52 sq ft)
Tailplane	7.56 m² (81.4 sq ft)
Elevators (total, incl tab)	4.72 m² (50.81 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	3,450 kg (7,605 lb)
Max fuel weight	900 kg (1,984 lb)
Max T-O weight	5,500 kg (12,125 lb)
Max landing weight	5,250 kg (11,574 lb)
Max zero-fuel weight	4,800 kg (10,582 lb)
Max wing loading	76.82 kg/m² (15.7 lb/sq ft)
Max power loading	7.38 kg/kW (12.13 lb/hp)

PERFORMANCE (at AUW of 5,250 kg, 11,574 lb):

Max level speed at 1,750 m (5,740 ft)	139 kts (258 km/h, 160 mph)
Econ cruising speed	100 kts (185 km/h, 115 mph)
Min flying speed	49 kts (90 km/h, 56 mph)
T-O speed	43 kts (80 km/h, 50 mph)
Landing speed	46 kts (85 km/h, 53 mph)
Max rate of climb at S/L	210 m (689 ft)/min
Service ceiling	4,400 m (14,425 ft)
Time to 4,400 m (14,425 ft)	30 min
T-O run: hard runway	150 m (492 ft)
grass	170 m (558 ft)
T-O to 15 m (50 ft): hard runway	475 m (1,558 ft)
grass	495 m (1,624 ft)
Landing from 15 m (50 ft): hard runway	427 m (1,401 ft)
grass	432 m (1,417 ft)
Landing run: hard runway	170 m (558 ft)
grass	185 m (607 ft)
Range at 1,000 m (3,280 ft) with 500 kg (1,102 lb) payload	485 n miles (900 km, 560 miles)

PZL SWIDNIK SA

ZYGMUNTA PULAWSKIEGO-PZL SWIDNIK (Zygmunt Pulawski Transport Equipment Manufacturing Centre, Swidnik)

Al. Lotników Polskich 1, PL-21-045 Swidnik k/Lublina
Telephone: 48 (81) 12061, 13071 and 13249
Fax: 48 (81) 13505 and 12173
Telex: 0642301 WSK PL
GENERAL MANAGER: Mieczyslaw Majewski, MScEng
DIRECTOR OF RESEARCH AND DEVELOPMENT:
Ryszard Kochanowski, MScEng
MARKETING MANAGER: Andrzej Stachyra

Swidnik factory established 1951, engaged initially in manufacturing components for LiM-1 (MiG-15) jet fighter, began licence production of Soviet Mi-1 helicopter in 1955 building some 1,700 as SM-1s, followed by 450 Swidnik developed SM-2s, design office formed at factory to work on variants/developments of SM-1 and original projects such as SM-4 Latka.

Swidnik works named after famous pre-war PZL designer, Zygmunt Pulawski, currently employs about 4,800 persons production concentrates on W-3A Sokol, Kania and SW-4; also manufactures PW-5 composites sailplane and large components for ATR 72.

UPDATED

PZL SWIDNIK (MIL) Mi-2

NATO reporting name: Hoplite

TYPE: Twin-turbine general purpose light helicopter.

PROGRAMME: Designed in USSR by Mikhail L. Mil and first flown September 1961; January 1964 agreement assigned further development, production and marketing exclusively to Polish industry; first flight of Polish example 4 November 1965, series production began 1965 and exceeds 5,400. Has undergone continuous development and upgrading, with versions for new applications developed to meet specific customers' requirements (see list in 1984-85 and earlier *Jane's*). Production now continuing only on very limited basis. See 1994-95 and earlier *Jane's* for detailed description.

UPDATED

PZL SWIDNIK KANIA/KITTY HAWK

TYPE: Twin turboshaft multipurpose light helicopter.

PROGRAMME: Modification of Mi-2 (1994-95 *Jane's*), developed in collaboration with Allison in USA, two prototypes produced by converting Mi-2 airframes, first flight of first prototype (SP-PSA) 3 June 1979; Polish supplementary type certificate to Mi-2 on 1 October 1981, full type certificate as FAR Pt 29 (Transport Category B) day and night VFR multipurpose utility helicopter with Category A engine isolation on 21 February 1986 as considerably improved Kania Model 1.

CURRENT VERSIONS: **Kania Model 1**: Intended for passenger transport (with standard, executive or customised interiors), cargo transport (internal or sling load), agricultural (LV and ULV spraying spreading/dusting), medevac, training, rescue, and aerial surveillance configurations.

CUSTOMERS: Four prototypes and several production aircraft in service in Cyprus (two) and Poland. Further four in production for Polish Ministry of Interior in early 1995.

DESIGN FEATURES: Three-blade fully articulated main rotor with hydraulic dampers. Main rotor blade section NACA 230-12M. Main rotor shaft driven via gearbox on each engine; three-stage WR-2 main gearbox, intermediate gearbox and tail rotor gearbox, main gearbox provides drive for auxiliary systems and oil-take for rotor brake; pitch change centrifugal loads on tail rotor carried by ribbon type steel torsion elements.

FLYING CONTROLS: Hydraulic system for cyclic and collective pitch control boosters, variable incidence horizontal stabiliser, controlled by collective pitch lever.

STRUCTURE: Main and tail rotor blades of glassfibre/epoxy, pod and boom fuselage of sheet duralumin, in three main assemblies (nose including cockpit, central section and tailboom).

LANDING GEAR: Non-retractable tricycle type, plus tailskid. Twin-wheel nose unit, single wheel on each main unit. Oleo-pneumatic shock absorbers in all units. Mainwheel tyres size 600 × 180; nosewheel tyres size 400 × 125. Pneumatic brakes on mainwheels. Metal ski landing gear optional.

POWER PLANT: Two 317 kW (425 shp) Allison 250-C20 turboshafts, mounted side by side above cabin. Fuel in single rubber tank, capacity 600 litres (158.5 US gallons, 131 Imp gallons), under cabin floor; 238 litre (63 US gallon, 52.4 Imp gallon) external tank on each side of cabin. Oil capacity 25 litres (6.6 US gallons, 5.4 Imp gallons).

ACCOMMODATION: Normal accommodation for one pilot on flight deck. Seats for up to nine passengers in air conditioned cabin; all seats removable for carrying up to 800 kg (1,763 lb) of internal cargo. Access to cabin via forward-hinged doors on each side at front of cabin and aft on port side. Windows jettisonable in emergency. Cabin heating and air conditioning standard.

SYSTEMS: Hydraulic system, pressure 65 bars (940 lb/sq in), for cyclic and collective pitch control boosters. Pneumatic system, pressure 49 bars (710 lb/sq in), for mainwheel brakes. Optional electric de-icing for main and tail rotor blades and windscreen; engine air intake de-icing by engine bleed air.

AVIONICS: *Comms*: Two transceivers (MF and HF) and intercom standard.

Flight: Gyrocompass, radio compass, radio altimeter and blind-flying panel standard.

Instrumentation: Bendix/King Silver Crown or Gold Crown IFR avionics optional.

EQUIPMENT: Search and rescue version can be equipped with Lucas electric hoist, FLIR, and special medical and communications systems. Automatically activated Freon fire extinguishing system for engine bays and gearbox compartments.

ARMAMENT: See Current Versions.

DIMENSIONS, EXTERNAL:

Main rotor diameter	14.50 m (47 ft 6¾ in)
Tail rotor diameter	2.70 m (8 ft 10¼ in)
Length: overall, rotors turning	17.42 m (57 ft 2 in)
fuselage	11.40 m (37 ft 4¾ in)
Height to top of rotor head	3.75 m (12 ft 3¾ in)
Stabiliser span	1.85 m (6 ft 0¾ in)
Wheel track	3.05 m (10 ft 0 in)
Wheelbase	2.71 m (8 ft 10¾ in)

DIMENSIONS, INTERNAL:

Cabin, incl flight deck: Length	4.07 m (13 ft 4¼ in)
Mean width	1.20 m (3 ft 11¼ in)
Mean height	1.40 m (4 ft 7 in)

AREAS:

Main rotor disc	166.4 m² (1,791.11 sq ft)
Tail rotor disc	5.73 m² (61.68 sq ft)

WEIGHTS AND LOADINGS:

Basic operating weight empty	2,077 kg (4,579 lb)
Max payload	800 kg (1,763 lb)
Max external load	1,200 kg (2,645 lb)
Max T-O weight	3,550 kg (7,826 lb)
Max disc loading	21.3 kg/m² (4.4 lb/sq ft)

PERFORMANCE (at 3,550 kg, 7,826 lb T-O weight):

Never-exceed speed (VNE) at 500 m (1,640 ft)	113 kts (210 km/h, 130 mph)
Econ cruising speed at 500 m (1,640 ft)	102 kts (190 km/h, 118 mph)
Max rate of climb at S/L	594 m (1,949 ft)/min
Service ceiling	4,000 m (13,125 ft)
Hovering ceiling: IGE	2,005 m (6,575 ft)
OGE	850 m (2,790 ft)
Range at 500 m (1,640 ft): max internal fuel, no reserves	259 n miles (480 km, 298 miles)
max internal and auxiliary fuel, reserves	451 n miles (835 km, 519 miles)

UPDATED

PZL SWIDNIK W-3 SOKÓL (FALCON)

TYPE: Twin-turboshaft medium weight multipurpose helicopter

PROGRAMME: Developed in second half of 1970s; static/fatigue ground test airframe followed by five flying prototypes, first of which (SP-PSA) made first flight 16 November 1979, and used in subsequent tiedown tests, remaining prototypes embodied changes resulting from tests, manufacturer's flight trials resumed 6 May 1982 with second prototype (SP-PSB), third, fourth and fifth prototypes ad made first flights in 1984, on 24 July (SP-PSC), 4 June (SP-PSD) and 26 November (SP-PSE) respectively, certification trials carried out in wide range of operating conditions, including heavy icing and extreme temperatures of –60°C and +50°C, certification to Russian NLGW regulations received by early 1993, production started 1985 and continuing in 1995 US FAA and German certification of W-3A received 1993

CURRENT VERSIONS: **W-3 Sokól**: Standard civil and military version *Detailed description applies to this model except where indicated*

W-3A Sokól: Improved version for Western certification, redesign started 1989, first flight 30 July 1992, FAA type approval to FAR Pt 29 received 31 May 1993, German LBA certification 6 December 1993 Dual hydraulic systems, new de-icing system, Western instrumentation First delivery, to Saxony Police Department, Germany, 20 December 1993, Marketed in the Americas and Pacific Rim by Piasecki Aircraft Corporation, USA

W-3RM Anakonda: Offshore search and rescue version, watertight cabin, six inflatable flotation bags, additional window in lower part of each flight deck door

W-3U Salamandra: Armed version with undernose 23 mm GSh-23L gun cabin-side weapon outriggers, roof-mounted sight with TV and FLIR cameras; Mars-2 16-round rocket launchers and Grot anti-tank missiles standard, ZR-8 submunition dispensers, Gad launchers each for two 9M32M Strela anti-aircraft missiles, laser rangefinder and helmet sight optional Development halted due to problems with Russian equipment. No longer produced

W-3W: Armed version (W for Wielozadaniowy multipurpose) with starboard-mounted 23 mm GSz-23 twin-barrel gun, Mars-2 launchers for sixteen 57 mm S-5 or 80 mm S-8 unguided rockets, ZR-8 bomblet dispensers, Platan minelaying packs, and six cabin window-mounted AK 47, 5.45 mm Tantal or PKM machine guns. Ten delivered by July 1994 to Polish Air Force 47 Szkolny Pulk Smiglowcow (Helicopter School Regiment) at Nowe Miasto

W-3WB Huzar: Armed prototype similar to W-3W but with mainly South African Rooivalk type weapons fit including 20 mm Denel GA-1 undernose gun, roof-mounted weapon aiming system (thermal imaging camera and laser designator), ZT-35 127 mm laser-guided anti-tank missiles, and Polish Mars-2 rocket launchers, air-to-air missiles and bomblet dispensers. First flight August 1993. One only; armament deleted and reverted to W-3, 1994.

ECR version: Electronic reconnaissance and ECM variant, being developed to meet Polish MoD requirement, Polish designation not yet known

CUSTOMERS: In service by early 1995 with Polish Army (15 W-3s), Navy (two W-3s and five Anakondas), Air Force (one VIP and six general purpose W-3s plus 10 W-3Ws) and Ministry of Interior (one W-3, one W-3RM); Myanma (12 W-3Us); and Saxony Police, Germany (one W-3A of two on order). Additional order for W-3A (one) from unidentified customer. Eighteen W-3s leased via Swidnik subsidiary Heliseco for firefighting missions in Spain.

Total production (excluding prototypes) 80 by mid-1995, including 34 for export

COSTS: Basic W-3A $2.5 million (1994)

DESIGN FEATURES: Four-blade fully articulated main rotor and three-blade tail rotor; main rotor has pendular Salomon type vibration absorber for smooth flight and low vibration levels. Transmission driven via main, intermediate and tail rotor gearboxes. Tailfin integral with tailboom, fixed incidence horizontal stabiliser, not interconnected with main rotor control system

Main rotor blades have NACA 23012M aerofoil section and optional manual folding. Rotor brake standard. Rotor rpm 268.5 (main) and 1,342 (tail), main rotor blade tip speed 220.7 m/s (494 mph)

FLYING CONTROLS: Three hydraulic boosters for longitudinal, lateral and collective pitch control of main rotor, one booster for tail rotor control. Constant-speed rpm control for continuous operation (manual rpm control also available). Two-axis stability augmentation system with pitch and roll hold. Three- and four-axis AFCS available from late 1994

STRUCTURE: Rotor blades (main and tail) and single-spar horizontal stabiliser of laminated GFRP impregnated with epoxy resin, tail rotor driveshaft of duralumin tube with splined couplings, duralumin fuselage, GFRP fin trailing-edge

LANDING GEAR (W-3): Non-retractable tricycle type, plus tailskid beneath tailboom. Twin-wheel castoring and self-centring nose unit, single wheel on each main unit. Oleo-pneumatic shock absorber in each unit. Mainwheel tyres size 500 × 250 mm, nosewheel tyres size 400 × 150 mm. Pneumatic disc brakes on mainwheels. Metal ski landing gear optional. Six inflatable flotation bags on Anakonda

LANDING GEAR (W-3A): As W-3 but with IL gas/hydraulic shock absorption, Stomil Poznań tyres, sizes 700 × 250 mm (main) and 400 × 140 mm (nose), tyre pressures 4.9 and 4.4 bars (71.06 and 63.81 lb/sq in) respectively

POWER PLANT: Two WSK PZL Rzeszów PZL-10W turboshafts, each with rating of 671 kW (900 shp) for T-O and emergency ratings of 746 kW (1,000 shp) and 858 kW (1,150 shp) for 30 and 2½ minutes OEI respectively

Particle separators on engine intakes, and inlet de-icing, standard. Power plant equipped with advanced electronic fuel control system for maintaining rotor speed at pilot-selected value amounting to ±5 per cent of normal rpm, and also for torque sharing as well as for supervising engine limits during start-up and normal or OEI operation. Engines and main rotor gearbox mounted on bed frame, eliminating drive misalignment due to deformations of fuselage. Transmission rating 1,342 kW (1,800 shp) maximum for T-O, 1,163 kW (1,560 shp) maximum continuous and 857 kW (1,150 shp) OEI. Engine input rpm 23,615.

Four bladder fuel tanks beneath cabin floor, with combined capacity of 1,720 litres (454.4 US gallons, 378.4 Imp gallons). Auxiliary tank, capacity 1,100 litres (290.5 US

1993

gallons; 242 Imp gallons), optional (not FAA approved). Oil capacity 14 litres (3.7 US gallons; 3.1 Imp gallons) per engine.

ACCOMMODATION: Pilot (port side), and co-pilot or flight engineer, side by side on W-3 flight deck, on adjustable seats with safety belts. W-3A can be flown by single pilot in VFR, with extra passenger in co-pilot seat. Dual controls and dual flight instrumentation optional. Accommodation for 12 passengers in main cabin or up to eight survivors plus two-person rescue crew and doctor in Anakonda SAR version. Seats removable for carriage of internal cargo. Ambulance version can carry four stretcher cases and medical attendant. Baggage space at rear of cabin.

Door with bulged window on each side of flight deck, large sliding door for passengers and/or cargo loading on port side at forward end of cabin, second sliding door at rear of cabin on starboard side. Optically flat windscreens, improving view and enabling wipers to sweep a large area. Accommodation soundproofed, heated (by engine bleed air) and ventilated.

SYSTEMS: Two independent hydraulic systems, working pressure 90 bars (1,300 lb/sq in), for controlling main and tail rotors, unlocking collective pitch control lever, and feeding damper of directional steering system. Flow rate 11 litres (2.9 US gallons, 2.4 Imp gallons)/min in each system. Vented gravity feed reservoir, at atmospheric pressure. Pneumatic system for actuating hydraulic mainwheel brakes. Electrical system providing both AC and DC power. Electric anti-icing of rotor blades. Fire detection/extinguishing system. Air conditioning and oxygen systems optional. Neutral gas system optional, for inhibiting fuel vapour explosion.

AVIONICS: Standard IFR nav/com avionics permit adverse weather operation by day or night.

Comms: Chrom (NATO 'Pin Head') IFF transponder in military versions.

Radar: Bendix/King RDS-82 weather radar in W-3A. SA-813 radar in W-3RM.

Flight: Stability augmentation system standard. AP Decca navigator in W-3RM.

Mission: SPOR search and detection system in W-3RM.

Self-defence: Modified Syrena RWR in military versions.

EQUIPMENT: Cargo version equipped with 2,100 kg (4,630 lb) capacity external hook and 150 kg (331 lb) capacity rescue hoist. W-3RM has 267 kg (589 lb) capacity electric hoist, stretchers, two-person rescue basket, rescue belts, liferafts for six people, rope ladder, portable oxygen equipment, electric blankets and vacuum flasks, various types of buoy (light, smoke and radio) and marker, binoculars, flare pistol and searchlights.

ARMAMENT: As described under Current Versions.

DIMENSIONS, EXTERNAL:
Main rotor diameter 15.70 m (51 ft 6 in)
Tail rotor diameter 3.03 m (9 ft 11¼ in)
Main rotor blade chord 0.44 m (1 ft 5¼ in)
Distance between rotor centres 9.50 m (31 ft 2 in)
Length: overall, rotors turning 18.85 m (61 ft 10¼ in)
fuselage 14.21 m (46 ft 7½ in)
Height: to top of rotor head 3.80 m (12 ft 5½ in)
overall, rotors turning 4.20 m (13 ft 9½ in)
Stabiliser span 3.45 m (11 ft 3¾ in)
Wheel track 3.15 m (10 ft 4 in)
Wheelbase 3.55 m (11 ft 7¾ in)
Passenger/cargo doors:
Height (each): 1.20 m (3 ft 11¼ in)
Width: port 0.95 m (3 ft 1½ in)
starboard 1.25 m (4 ft 1¼ in)
Height to sill 0.86 m (2 ft 10 in)

Polish Air Force W-3W armed version of the Sokól *(Grzegorz Holdanowicz)*

1995

DIMENSIONS, INTERNAL:
Cabin: Length 3.20 m (10 ft 6 in)
Max width 1.56 m (5 ft 1½ in)
Max height 1.40 m (4 ft 7 in)
Floor area 4.80 m² (51.7 sq ft)
Volume 6.30 m³ (222.5 cu ft)

AREAS:
Main rotor blades (each) 2.90 m² (31.22 sq ft)
Tail rotor blades (each) 0.28 m² (3.01 sq ft)
Main rotor disc 193.6 m² (2,083.8 sq ft)
Tail rotor disc 7.21 m² (77.6 sq ft)
Fin 1.00 m² (10.76 sq ft)
Elevator 2.16 m² (23.25 sq ft)

WEIGHTS AND LOADINGS:
Min basic weight empty 3,300 kg (7,275 lb)
Basic operating weight empty (multipurpose versions):
W-3 3,630 kg (8,002 lb)
W-3A 3,850 kg (8,488 lb)
Max fuel weight 1,326 kg (2,923 lb)
Max payload, internal or external 2,100 kg (4,630 lb)
Normal T-O weight 6,100 kg (13,448 lb)
Max T-O weight 6,400 kg (14,110 lb)
Max disc loading 33.06 kg/m² (6.77 lb/sq ft)
Max power loading 4.77 kg/kW (7.84 lb/shp)

PERFORMANCE (at normal T-O weight at 500 m, 1,640 ft, ISA, except where indicated):
Never-exceed speed (VNE):
W-3 145 kts (270 km/h; 167 mph)
W-3A 140 kts (260 km/h; 161 mph)
Max level speed: W-3 138 kts (255 km/h; 158 mph)
Max cruising speed: W-3 127 kts (235 km/h; 146 mph)
W-3A at 1,000 m (3,280 ft) 128 kts (238 km/h; 148 mph)
Econ cruising speed: W-3 119 kts (220 km/h; 137 mph)
W-3A at 1,000 m (3,280 ft) 121 kts (225 km/h; 140 mph)
Touchdown speed for power-off landing:
W-3A 33 kts (60 km/h; 38 mph)
Max rate of climb at S/L:
W-3, W-3A 510 m (1,673 ft)/min
Rate of climb at S/L, OEI:
W-3 at 30 min rating 96 m (315 ft)/min
W-3 at 2½ min emergency rating 186 m (610 ft)/min
W-3A at 2½ min emergency rating 171 m (561 ft)/min
Vertical rate of climb at S/L:
W-3A at max T-O weight 74 m (243 ft)/min
W-3A at normal T-O weight 219 m (718 ft)/min
Service ceiling:
W-3, W-3A at normal T-O weight 5,100 m (16,725 ft)
W-3, W-3A at T-O weight below normal up to 6,000 m (19,680 ft)
Service ceiling, OEI:
W-3 at 30 min rating 1,800 m (5,905 ft)
W-3 at 2½ min emergency rating approx 2,300 m (7,545 ft)
W-3A at 2½ min emergency rating 2,600 m (8,530 ft)
Hovering ceiling IGE:
W-3 3,000 m (9,850 ft)
W-3A at max T-O weight 2,700 m (8,860 ft)
Hovering ceiling OGE:
W-3 2,100 m (6,890 ft)
W-3A at max T-O weight 2,100 m (6,890 ft)
Range:
standard fuel, 5% reserves 367 n miles (680 km; 422 miles)
standard fuel, no reserves:
W-3 386 n miles (715 km; 444 miles)
W-3A 410 n miles (760 km; 472 miles)

PZL Swidnik W-3A Sokól (two PZL-10W turboshafts)

1995

with auxiliary fuel, 5% reserves
W-3: 626 n miles (1,160 km; 721 miles)
with auxiliary fuel, no reserves
W-3: 661 n miles (1,225 km; 761 miles)
W-3A: 696 n miles (1,290 km; 801 miles)
with max payload, no reserves
W-3A: 108 n miles (200 km; 124 miles)

Endurance:
standard fuel, 5% reserves: 3 h 50 min
standard fuel, no reserves: 4 h 5 min
with auxiliary fuel, 5% reserves: 6 h 41 min
with auxiliary fuel, no reserves: 7 h 5 min

PERFORMANCE (W-3RM at max T-O weight of 6,400 kg, 14,110 lb at 500 m, 1,640 ft except where ind cated):
Max level speed: 124 kts (230 km/h; 143 mph)
Cruising speed:
max continuous power: 118 kts (218 km/h; 135 mph)
econ cruise power: 111 kts (206 km/h; 128 mph)
Max rate of climb at S/L: 492 m (1,615 ft)/min
Rate of climb at S/L, OEI: 60 m (197 ft)/min
Service ceiling: 4,650 m (15,250 ft)
Hovering ceiling: IGE: 2,500 m (8,200 ft)
OGE: 660 m (2,165 ft)
Range, 30 min reserves:
standard fuel: 334 n miles (620 km; 385 miles)
with auxiliary fuel: 574 n miles (1,065 km; 662 miles)

UPDATED

Prototype of the SW-4 four/five-seat light helicopter

1995

PZL SWIDNIK SW-4

TYPE: Four/five-seat, single-engined multipurpose light helicopter.

PROGRAMME: Development began 1985, full-scale mockup completed 1987 (see description and illustrations in 1991-92 and earlier *Jane's*); major redesign undertaken 1989-90, now using Allison 250 engine in more streamlined fuselage with modified tail unit. Prototype (c/n 600102), rolled out December 1994, is 'iron bird' for ground and equipment tests; '101 is static test airframe, '103 and '104 are flying prototypes. First flight now rescheduled for November 1995, with FAR/JAR Pt 27 certification planned for July 1997. Series production expected to be initiated in early 1996. Option of 462 kW (620 shp) P&WC PW206 to be offered on later production aircraft; twin-engined version also being studied.

CURRENT VERSIONS: Intended applications include passenger and cargo transport, medevac, border patrol, armed scout, training and agricultural use.

DESIGN FEATURES: Three-blade main rotor; arrowhead tailfin on port side, with two-blade tail rotor to starboard; narrow tailplane with small endplate fins; skid landing gear.

STRUCTURE: GFRP for approximately 20 per cent of airframe.

POWER PLANT: One 335 kW (450 shp) Allison 250-C20R/2 turboshaft. Transmission rating 335 kW (450 shp) for T-O, 283 kW (380 shp) maximum continuous, 30 minute run dry capability. Standard fuel capacity 500 litres (132 US gallons; 110 Imp gallons).

ACCOMMODATION: Pilot and up to four passengers or one stretcher patient and two medical attendants. One front-hinged and one rearward-sliding door on each side of cabin.

AVIONICS: *Instrumentation:* Bendix/King VFR in first prototype, IFR optional in production aircraft.

DIMENSIONS, EXTERNAL:
Main rotor diameter: 9.00 m (29 ft 6½ in)
Tail rotor diameter: 1.50 m (4 ft 11 in)
Distance between rotor centres: 5.25 m (17 ft 2¾ in)
Length:
overall, both rotors turning: 10.55 m (34 ft 7½ in)
fuselage: 8.238 m (27 ft 0¼ in)
Fuselage max width: 1.515 m (4 ft 11¾ in)
Height overall: 2.939 m (9 ft 7¾ in)
Tail unit span (over endplates): 1.831 m (6 ft 0 in)
Skid track: 2.00 m (6 ft 6¾ in)

DIMENSIONS, INTERNAL:
Cabin: Length: 2.14 m (7 ft 0¼ in)
Max width: 1.415 m (4 ft 7¾ in)
Max height: 1.27 m (4 ft 2 in)

AREAS:
Main rotor disc: 63.62 m² (684.8 sq ft)
Tail rotor disc: 1.77 m² (19.05 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: 730 kg (1,609 lb)
Max payload: internal: 400 kg (882 lb)
on external sling: 750 kg (1,653 lb)
Normal T-O weight (internal payload): 1,512 kg (3,333 lb)
Max T-O weight with sling load: 1,700 kg (3,748 lb)
Max disc loading: 26.72 kg/m² (5.47 lb/sq ft)
Max power loading: 5.07 kg/kW (8.33 lb/shp)

PERFORMANCE (estimated, at normal T-O weight, ISA):
Never-exceed speed (VNE): 155 kts (288 km/h; 179 mph)
Max level speed at 500 m (1,640 ft): 132 kts (245 km/h; 152 mph)
Max cruising speed, 70% power at 500 m (1,640 ft): 129 kts (240 km/h; 149 mph)
Max rate of climb at S/L: 600 m (1,968 ft)/min
Service ceiling: 6,500 m (21,325 ft)
Hovering ceiling: IGE: 3,500 m (11,480 ft)
OGE: 2,900 m (9,515 ft)
Range, standard fuel, no reserves: 323 n miles (600 km; 373 miles)
with auxiliary fuel tank: 486 n miles (900 km; 559 miles)
Endurance: 5 h 30 min

SALES MANAGER: Maciej Kozlowski, MScEng

Okecie factory founded in 1928, responsible for light air craft development and production, and for design and manufacture of associated agricultural equipment for its own aircraft and those built at other Polish factories; has produced over 3,700 aircraft since 1945.

Light Aircraft and Agricultural Equipment Pilot Plant

DIRECTOR: Wladyslaw Skorski, MScEng

Main function of this PZL Warszawa-Okecie plant is to develop and perform research tasks, build and flight test prototypes.

PZL-130 ORLIK

TYPE: Tandem-seat basic and advanced turboprop trainer.

PROGRAMME: Development of piston-engined Orlik (Spotted Eaglet: see 1989-90 *Jane's*) discontinued 1990. Development of turboprop derivative began 1985 with collaboration of Airtech Canada by refitting third Orlik prototype (SP-PCC, c/n 004) with P&WC PT6A-25A; this aircraft made first flight 13 July 1986 but lost in crash January 1987. Test programme continued with two further Turbo-Orliks: c/n 007 and 008, former with 560 kW (750 shp) Walter M 601 E engine and latter with 410 kW (550 shp) PT6A-25A, these prototypes designated **PZL-130TM** and **PZL-130TP** respectively. All turboprop variants now known simply as Orlik.

Modifications resulting from Polish Air Force trials and overseas demonstration flights included provision for ejection seats, plans for M 601 in Polish Air Force aircraft (PZL-130TB) and PT6A for export (PZL-130TC/TD/TE), extensive nav/com avionics, and strengthened landing gear to cater for increased MTOW; c/n 010 static test aircraft for TC version, and c/n 011 first flying TC prototype. First deliveries, to Polish Air Force Academy at Deblin, were two PZL-130TMs (c/n 005 and 006) in October 1992, followed by first two PZL-130TBs (c/n 012 and 013) December 1992.

Intended TC/TD/TE export versions (see 1994-95 *Jane's*) suspended due to poor response; instead, TC designation subdivided 1994 into TC, TC-1 and TC-2 to indicate firm and potential upgrading of aircraft for Polish Air Force (see Current Versions below).

CURRENT VERSIONS: **PZL-130TB**: For Polish Air Force. Differences from TM include greater wing span, increased wing incidence (to lower nose in flight), double-slotted flaps, redesigned ventral fin, Polish ejection seats, revised

canopy, new cockpit layout, more powerful brakes, steerable nosewheel, six (instead of four) underwing hardpoints, and higher maximum T-O weight. Standard engine is fully aerobatic M 601 T. First example (c/n 009) rolled out May 1991, making first flight 18 September 1991. Nine delivered, of which 013 became TC-1 demonstrator and 021 lost on 30 April 1994, remainder in service with 1 Eskadra/60 Lotniczy Pulk Szkolny (1 Squadron/60th Air School Regiment) at Radom. To be retrofitted to TC-1 standard by June 1995. *Detailed description applies to TB and TC-1 except where otherwise indicated.*

PZL-130TC: Advanced version, with 708 kW (950 shp) P&WC PT6A-62 engine, Bendix/King avionics, Martin-Baker Mk PL11B ejection seats and Flight Vision HUD, c/n 011 completed as prototype/demonstrator SP-PCE and made first flight 2 June 1993.

PZL-130TC-1: Upgraded version of PZL-130TB, first flown (converted 013/SP-PCF) 9 July 1994. Power plant as for TB, but Martin-Baker Mk PL11B zero/zero seats, Bendix/King GPS, multifunction flight data recorder and servo-tabbed control surfaces. Eleven in production at March 1995; 18 earlier TBs to be brought up to same standard by June 1995.

PZL-130TC-2: Alternative version; same equipment as TC but lower powered 559 kW (750 shp) PT6A-25C engine. First flight scheduled for June 1995.

CUSTOMERS: Polish Air Force 31. Two PZL-130TMs and 18 PZL-130TBs in service at end March 1995, with 11 PZL-130TC-1s then in production. All TBs in service to be upgraded to TC-1s, and all 11 new TC-1s delivered by June 1995.

DESIGN FEATURES: Two seats in tandem, modular installation of instruments and displays, wings have detachable leading-edges and raked tips; shallow underfin beneath tailcone; fixed incidence tailplane.

Wing section NACA 64_2215 (modified), 6° (±3°) twist, 5° dihedral from roots.

FLYING CONTROLS: Frise differential ailerons, elevators and rudder all aerodynamically and mass balanced and actuated mechanically (ailerons by pushrods and torque tube, elevators by rods and cables, rudder by cables); electrically actuated trim tabs on port aileron, port elevator and rudder. Three-position double-slotted trailing-edge flaps, also actuated electrically.

New trim system flight tested early 1995, with Lear Astronics computer controlling a movable undertail fin.

STRUCTURE: All-metal, except for GFRP/epoxy wingtips. One-piece light alloy multispar wing box, stiffened by riveted omega formers, forms integral fuel tanks; wing trailing-edges and fuselage skin panels stiffened by L formers, electrically spot-welded, fin integral with fuselage.

LANDING GEAR: Hydraulically retractable tricycle type, all three units retracting into fuselage (mainwheels inward, steerable nosewheel rearward). PZL Warszawa-Okecie oleo-pneumatic shock-absorber in each unit. All three wheels same size, with 500 × 200 mm tubeless tyres. Differential hydraulic multidisc brakes, parking brakes for main and nosewheels. No anti-skid system.

POWER PLANT: One 560 kW (750 shp) Walter M 601 E turboprop, driving a five-blade propeller. Fuel in four integral wing tanks, total usable capacity 540 litres (142.7 US gallons; 118.8 Imp gallons). Overwing refuelling point for each tank. Fuel and oil systems permit up to 30 seconds of inverted flight. Provision for two 340 litre (90 US gallon; 74.8 Imp gallon) underwing drop tanks.

ACCOMMODATION: Tandem seating for pupil (in front) and instructor under one-piece canopy which opens sideways to starboard. Rear seat elevated 65 mm (2.6 in). Polish LFK-K1 ejection seats in PZL-130TB (zero height/70 to 323 knots, 130 to 600 km/h, 81 to 373 mph), Martin-Baker Mk PL11B zero/zero seats in TC/TC-1/TC-2. Baggage space aft of rear seat. Full dual controls standard. Cockpit heating and ventilation, canopy demisting.

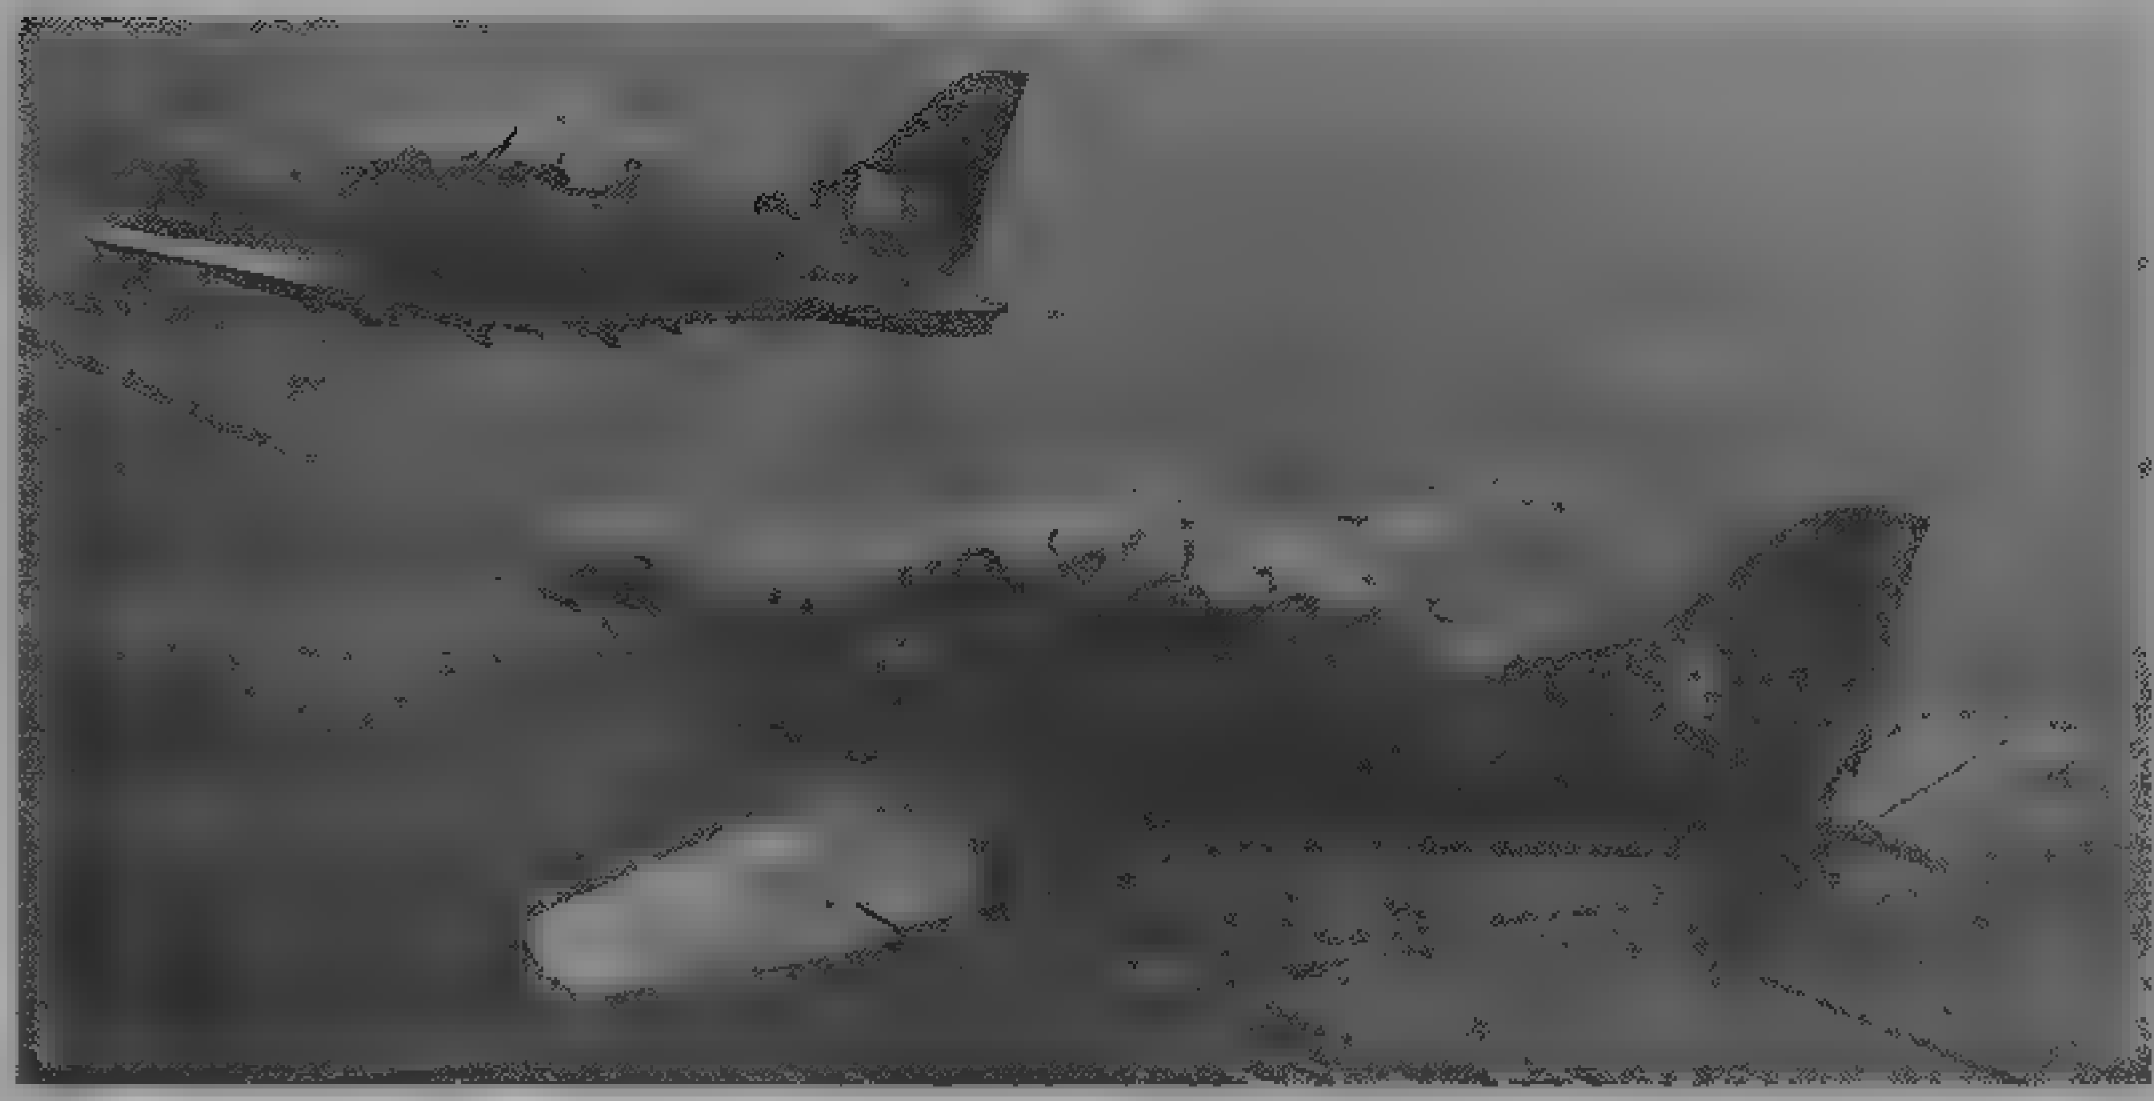
SYSTEMS: Cockpit ventilation, cooling, heating and canopy demisting provided by integral system utilising air cycle unit and engine bleed air. Engine-driven hydraulic pump provides power for landing gear actuation and wheel brakes, with hydraulic accumulator for emergency braking and pneumatic (nitrogen bottle) power for emergency landing gear extension. Lear Siegler 6 kW starter/generator and two 24 V 15 Ah Ni/Cd batteries provide power for 27.5 V DC electrical system, with solid state inverter for 115/26 V AC power; ground power receptacle fitted. Diluter demand oxygen system, capacity 2.716 litres (166 cu in).

AVIONICS (PZL-130TC): *Comms:* Bendix/King KTR 908 VHF and KXP 756 transponder.

Flight: Bendix/King KNR 634 nav with glide slope, KPI 525 HSI, KDF 806 ADF, KDM 706 DME, KTU 709 Tacan and Omega long-range nav system.

See also TC/TC-1/TC-2 under Current Versions.

ARMAMENT: Three hardpoints under each wing, inboard and centre ones stressed for loads of 160 kg (353 lb) each and outboard stations for 80 kg (176 lb) each. Typical external loads for PZL-130TB include free fall bombs of up to 100 kg, Tejsy and Mokrzycko bomb canisters, Zeus gun pods each with two 7.62 mm machine guns, launchers for 57 mm or 80 mm rockets, or Strela IR air-to-air missiles, plus S-17 gunsight and S-13 gun camera. Export versions can be equipped with Alkan or FN Herstal pylons and armament to customer's requirements.



All PZL-130TB Turbo-Orliks (illustrated) were due to be upgraded to TC-1 standard by mid-1995

1995

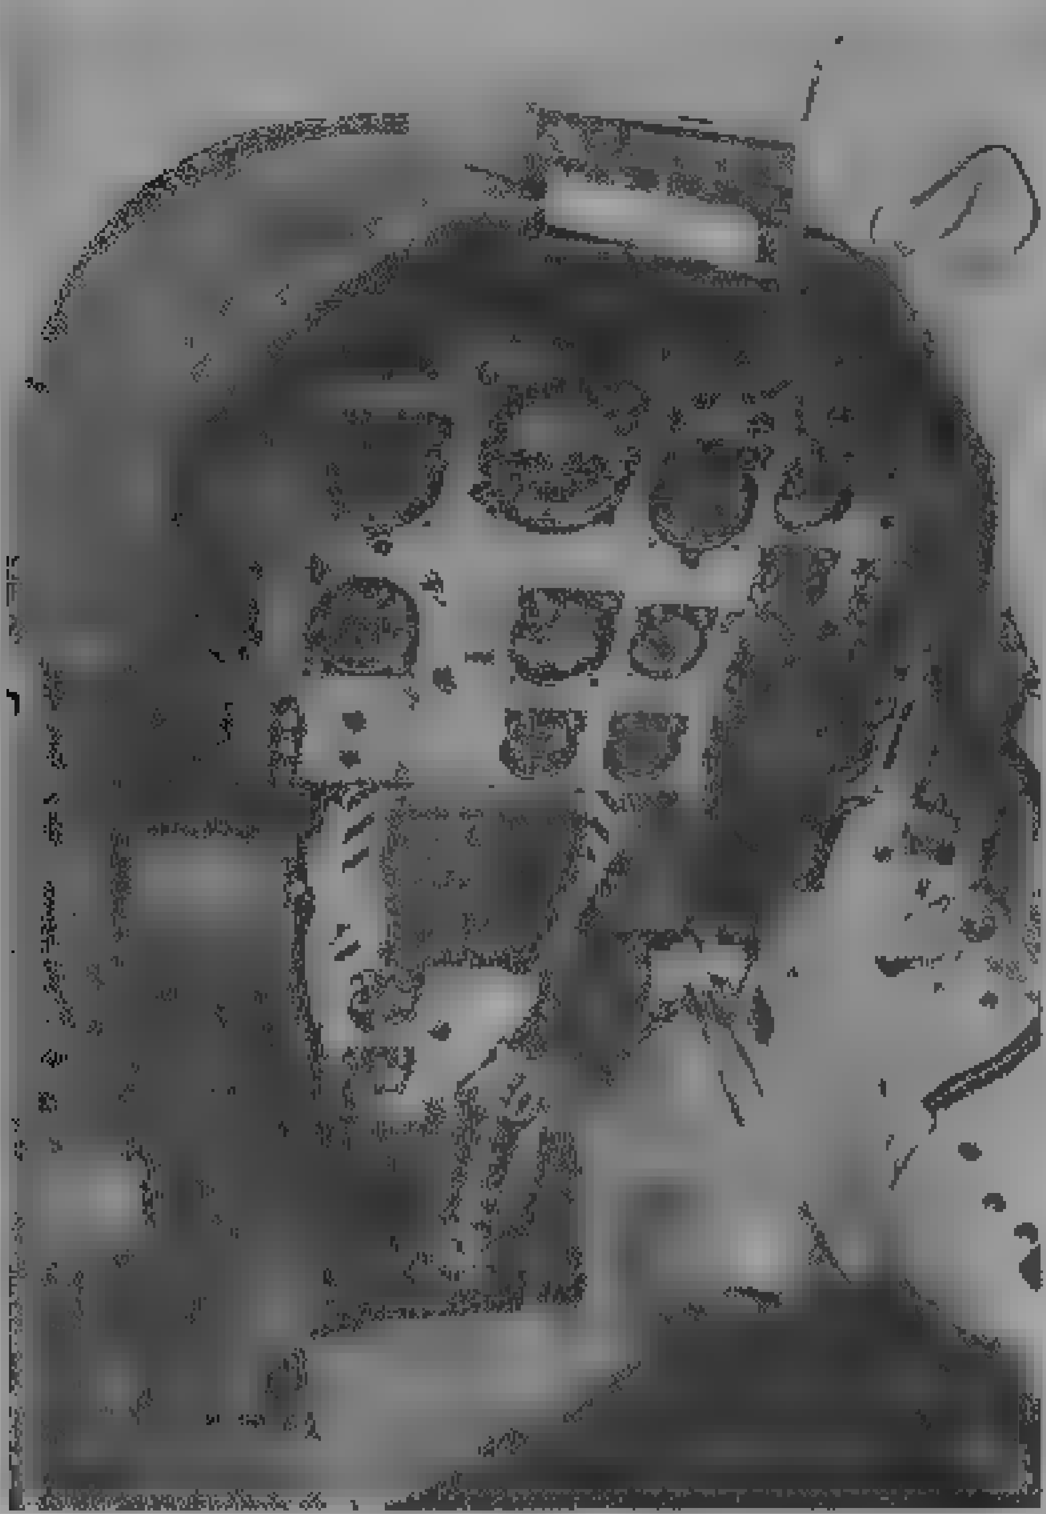
Wings, gross	13.00 m² (139.93 sq ft)
Ailerons (total, incl tab)	1.16 m² (12.49 sq ft)
Trailing-edge flaps (total)	2.34 m² (25.19 sq ft)
Fin	0.82 m² (8.83 sq ft)
Rudder, incl tab	0.81 m² (8.72 sq ft)
Tailplane	1.63 m² (17.55 sq ft)
Elevators (total, incl tab)	3.05 m² (32.83 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: TC	1,450 kg (3,197 lb)
TC-1	1,600 kg (3,527 lb)
TC-2	1,380 kg (3,042 lb)
Max external stores load: all	800 kg (1,764 lb)
Max T-O weight:	
Aerobatic: all	2,000 kg (4,409 lb)
Utility: all	2,700 kg (5,952 lb)
Max wing loading:	
Aerobatic: all	153.8 kg/m² (31.50 lb/sq ft)
Utility: all	207.7 kg/m² (42.54 lb/sq ft)
Max power loading:	
Aerobatic: TC	2.82 kg/kW (4.64 lb/shp)
TC-1, TC-2	3.58 kg/kW (5.88 lb/shp)
Utility: TC	3.81 kg/kW (6.27 lb/shp)
TC-1, TC-2	4.83 kg/kW (7.94 lb/shp)



Front (above) and rear cockpits of the PZL-130TB *(Piotr Butowski)*

1994

PERFORMANCE (at max Aerobatic T-O weight, clean configuration, except where indicated):

Max level speed at S/L	
TC	274 kts (508 km/h, 316 mph)
TC-1, TC-2	245 kts (454 km/h, 282 mph)
Max level speed at 6,000 m (19,685 ft)	
TC	302 kts (560 km/h, 348 mph)
TC-1, TC-2	270 kts (501 km/h, 311 mph)
Max rate of climb at S/L	
TC	1,236 m (4,055 ft)/min
TC-1, TC-2	798 m (2,620 ft)/min
Service ceiling: all	10,060 m (33,000 ft)
T-O run at S/L: TC	172 m (565 ft)
TC-1, TC-2	222 m (729 ft)
T-O to 15 m (50 ft): TC	266 m (873 ft)
TC-1	280 m (919 ft)
TC-2	342 m (1,122 ft)
Landing run: TC	184 m (604 ft)
Range with max fuel	
TC	501 n miles (930 km, 577 miles)
TC-1	523 n miles (970 km, 602 miles)
TC-2	620 n miles (1,150 km, 714 miles)
Range at 3,000 m (9,840 ft), clean configuration, no reserves	
TC	593 n miles (1,100 km, 683 miles)
TC-1	620 n miles (1,150 km; 714 miles)
TC-2	745 n miles (1,380 km, 857 miles)
Range with two 340 litre (90 US gallon, 74.8 Imp gallon) drop tanks, no reserves	
TC	1,242 n miles (2,300 km; 1,429 miles)

UPDATED

Prototype of the PZL-130TC Orlik, with PT6A-62 engine

1995

PZL-230F SKORPION

TYPE: Single-seat small agile battlefield attack (SABA) aircraft.

PROGRAMME: Preliminary PZL-230 design revealed late 1990 with twin turbofan power plant, changed to twin pusher PT6A-67A turboprops 1991 (see 1991-92 *Jane's*), further redesign (PZL-230F) reverted to turbofans and slimmer profile, as illustrated in 1993-94 *Jane's*, further extensive redesign since then, as shown in accompanying new illustrations, by 1995, PZL assessing comparative merits of V tail and alternative twin vertical fins plus all-moving tailplanes. Proposed for Polish Air Force requirement, to enter service after 2000. In competition with IL Kobra 2000 and PZL Mielec M-97/M-99 (which see); rejected Spring 1994 by Polish MoD, but continuing with company funding. *All details provisional.*

DESIGN FEATURES: Double-delta main wings, outer portions of which all-moving, working with close-coupled all-moving canards for simultaneous pitch and roll control as well as conventional T-O/landing function, claimed to make possible flight at 50° angle of attack and ability to make 180° turn in only 5 seconds, outward canted tailfins (narrow and wide angles both being evaluated). Intended for battlefield support close to FLOT, able to use unprepared airstrips.

FLYING CONTROLS: Lear Astronics electronic fly-by-wire system.

STRUCTURE: Mainly composites.

LANDING GEAR: Retractable tricycle type. All wheels remain partly exposed when retracted.

POWER PLANT: Twin rear-mounted AlliedSignal 27.8 kN (6,250 lb st) LF507 turbofans. Integral fuel tank in wing centre-section, capacity 3,500 litres (925 US gallons, 770 Imp gallons).

ACCOMMODATION: Pilot only, under rear-hinged, upward-opening canopy. Martin-Baker Mk 10L zero/zero ejection seat, inclined at 34° from perpendicular. Armoured cockpit to protect pilot against rounds of up to 12.7 mm calibre.

AVIONICS: By Bendix/King.

ARMAMENT: Internally mounted 25 mm Lockheed Martin GAU-12/U five-barrel gun, with 220 rounds, plus a 30 mm GAU-8 gun in ventral pod. Up to 11 external weapon stations (five on fuselage and centre-section, three under each outer wing).

DIMENSIONS, EXTERNAL:	
Wing span	10.00 m (32 ft 9¾ in)
Length overall: V tail	9.30 m (30 ft 6¼ in)
conventional tail	12.10 m (39 ft 8½ in)
Height overall	4.20 m (13 ft 9¼ in)
WEIGHTS AND LOADINGS:	
Weight empty	3,600 kg (7,937 lb)
Max external stores load	4,000 kg (8,818 lb)
Max T-O weight	10,000 kg (22,046 lb)
Max wing loading	393.7 kg/m² (80.6 lb/sq ft)
Max power loading	179.8 kg/kN (1.76 lb/lb st)
PERFORMANCE (estimated):	
Max level speed	561 kts (1,040 km/h, 646 mph)
Service ceiling	12,000 m (39,370 ft)
T-O run	370 m (1,214 ft)
Combat radius	162 n miles (300 km, 186 miles)
g limit	+9

UPDATED

PZL-104 WILGA (ORIOLE) 35 and 80

TYPE: Single-engined general purpose light aircraft.

PROGRAMME: First flight of prototype Wilga 1, 24 April 1962 (see 1968-69 *Jane's*), first flight of improved Wilga 35, 28 July 1967, production of Wilga 35 and 32 began 1968, both received Polish type certificate 31 March 1969 (Wilga 32 described in 1974-75 *Jane's*; see 1975-76 edition for Lipnur Gelatik Indonesian modified Wilga 32), first flight of Wilga 80, 30 May 1979.

CURRENT VERSIONS: **Wilga 35 and 80**: Currently built versions; meet requirements of British BCAR and US FAR Pt 23 respectively; 80 has carburettor air intake further aft, *details below apply to these versions except where indicated.*

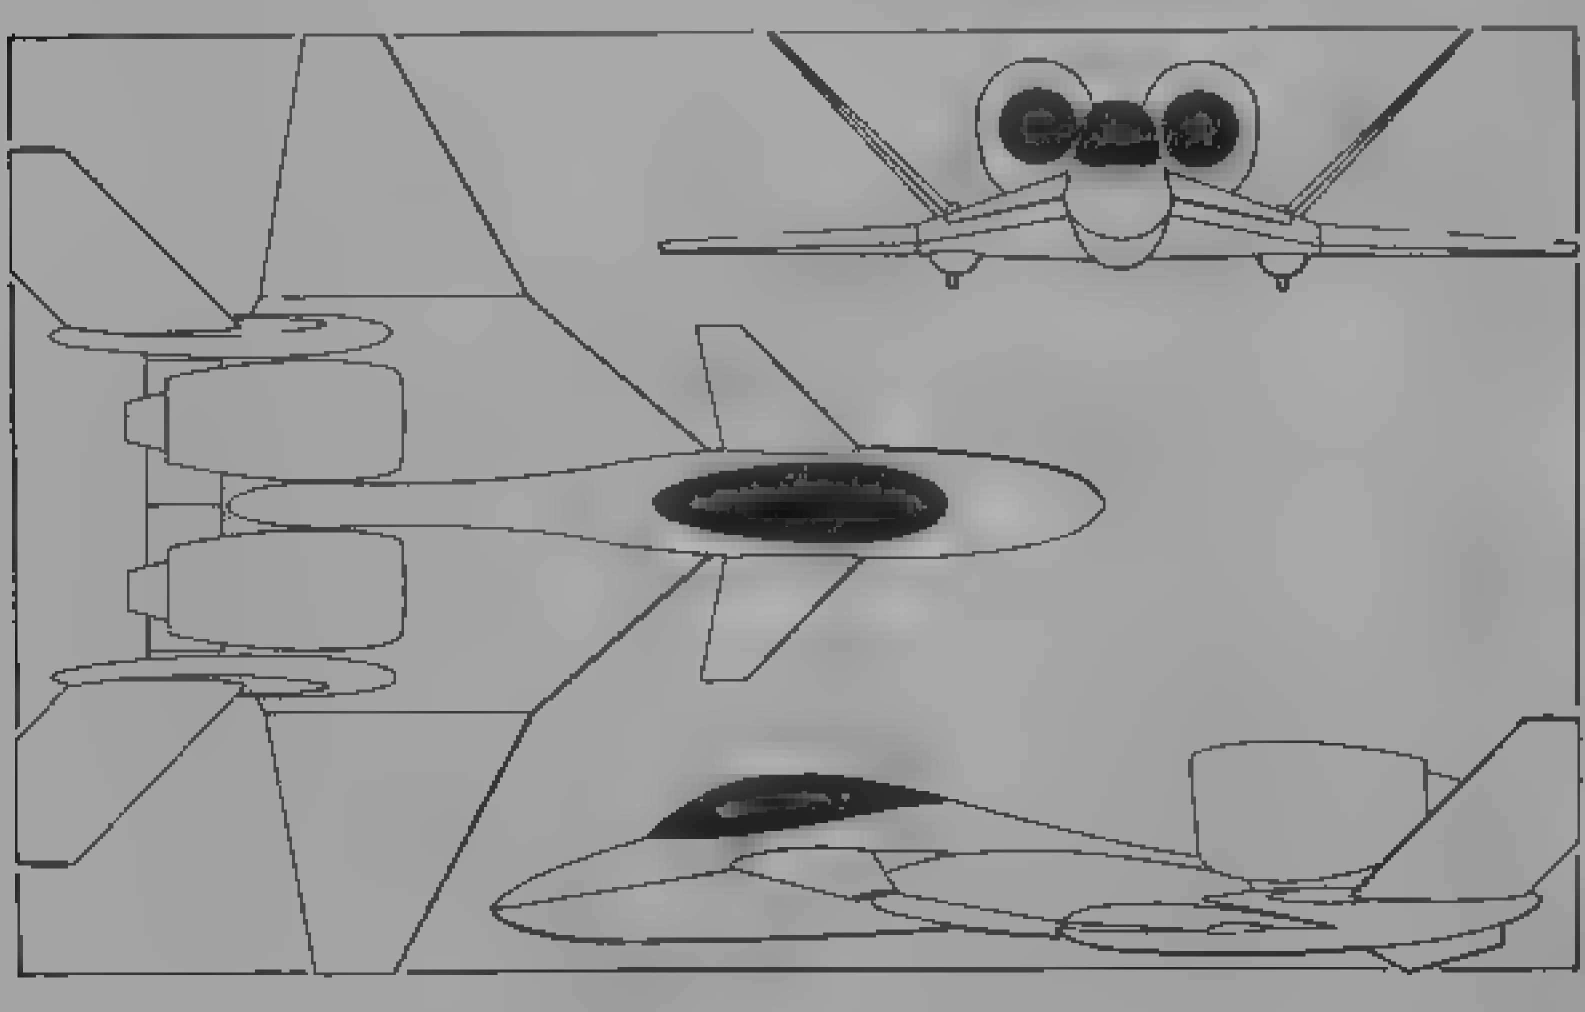
Wilga 35A and 80A: Aeroclub versions, with glider towing hook.

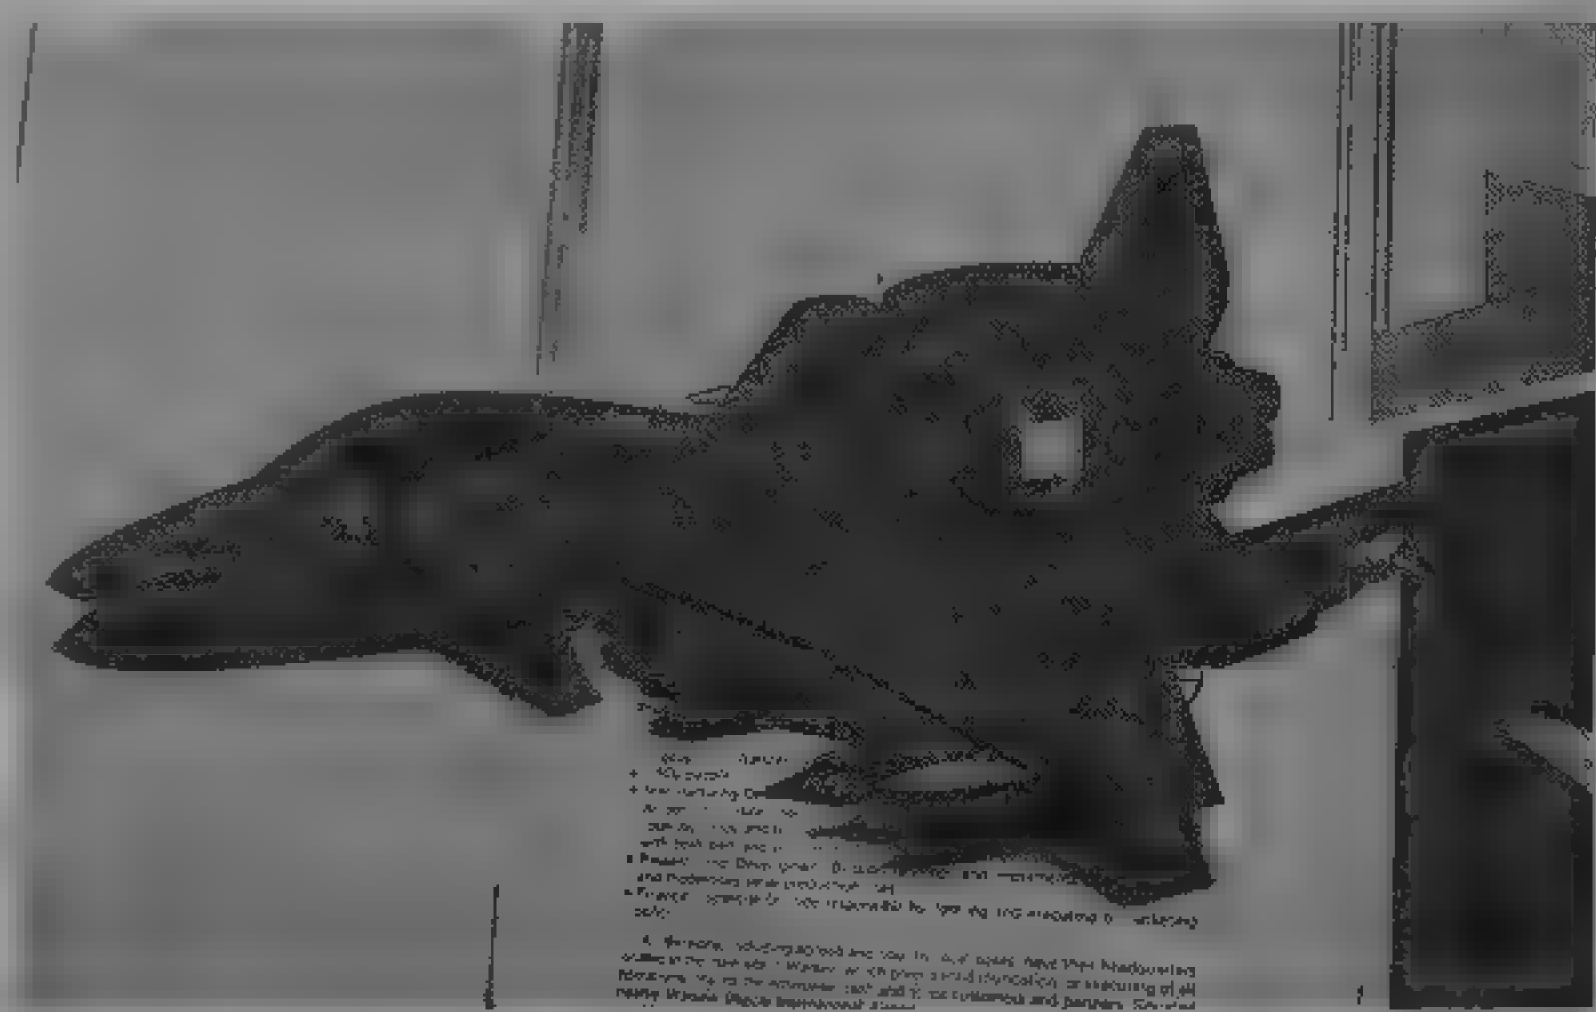
Wilga 35H and 80H: With Airtech (Canada) LAP-3000 floats.

Wilga 35M: Projected multipurpose variant of Wilga 35A (see 1994-95 *Jane's*), programme suspended.

Wilga 35R and 80R: Agricultural versions.

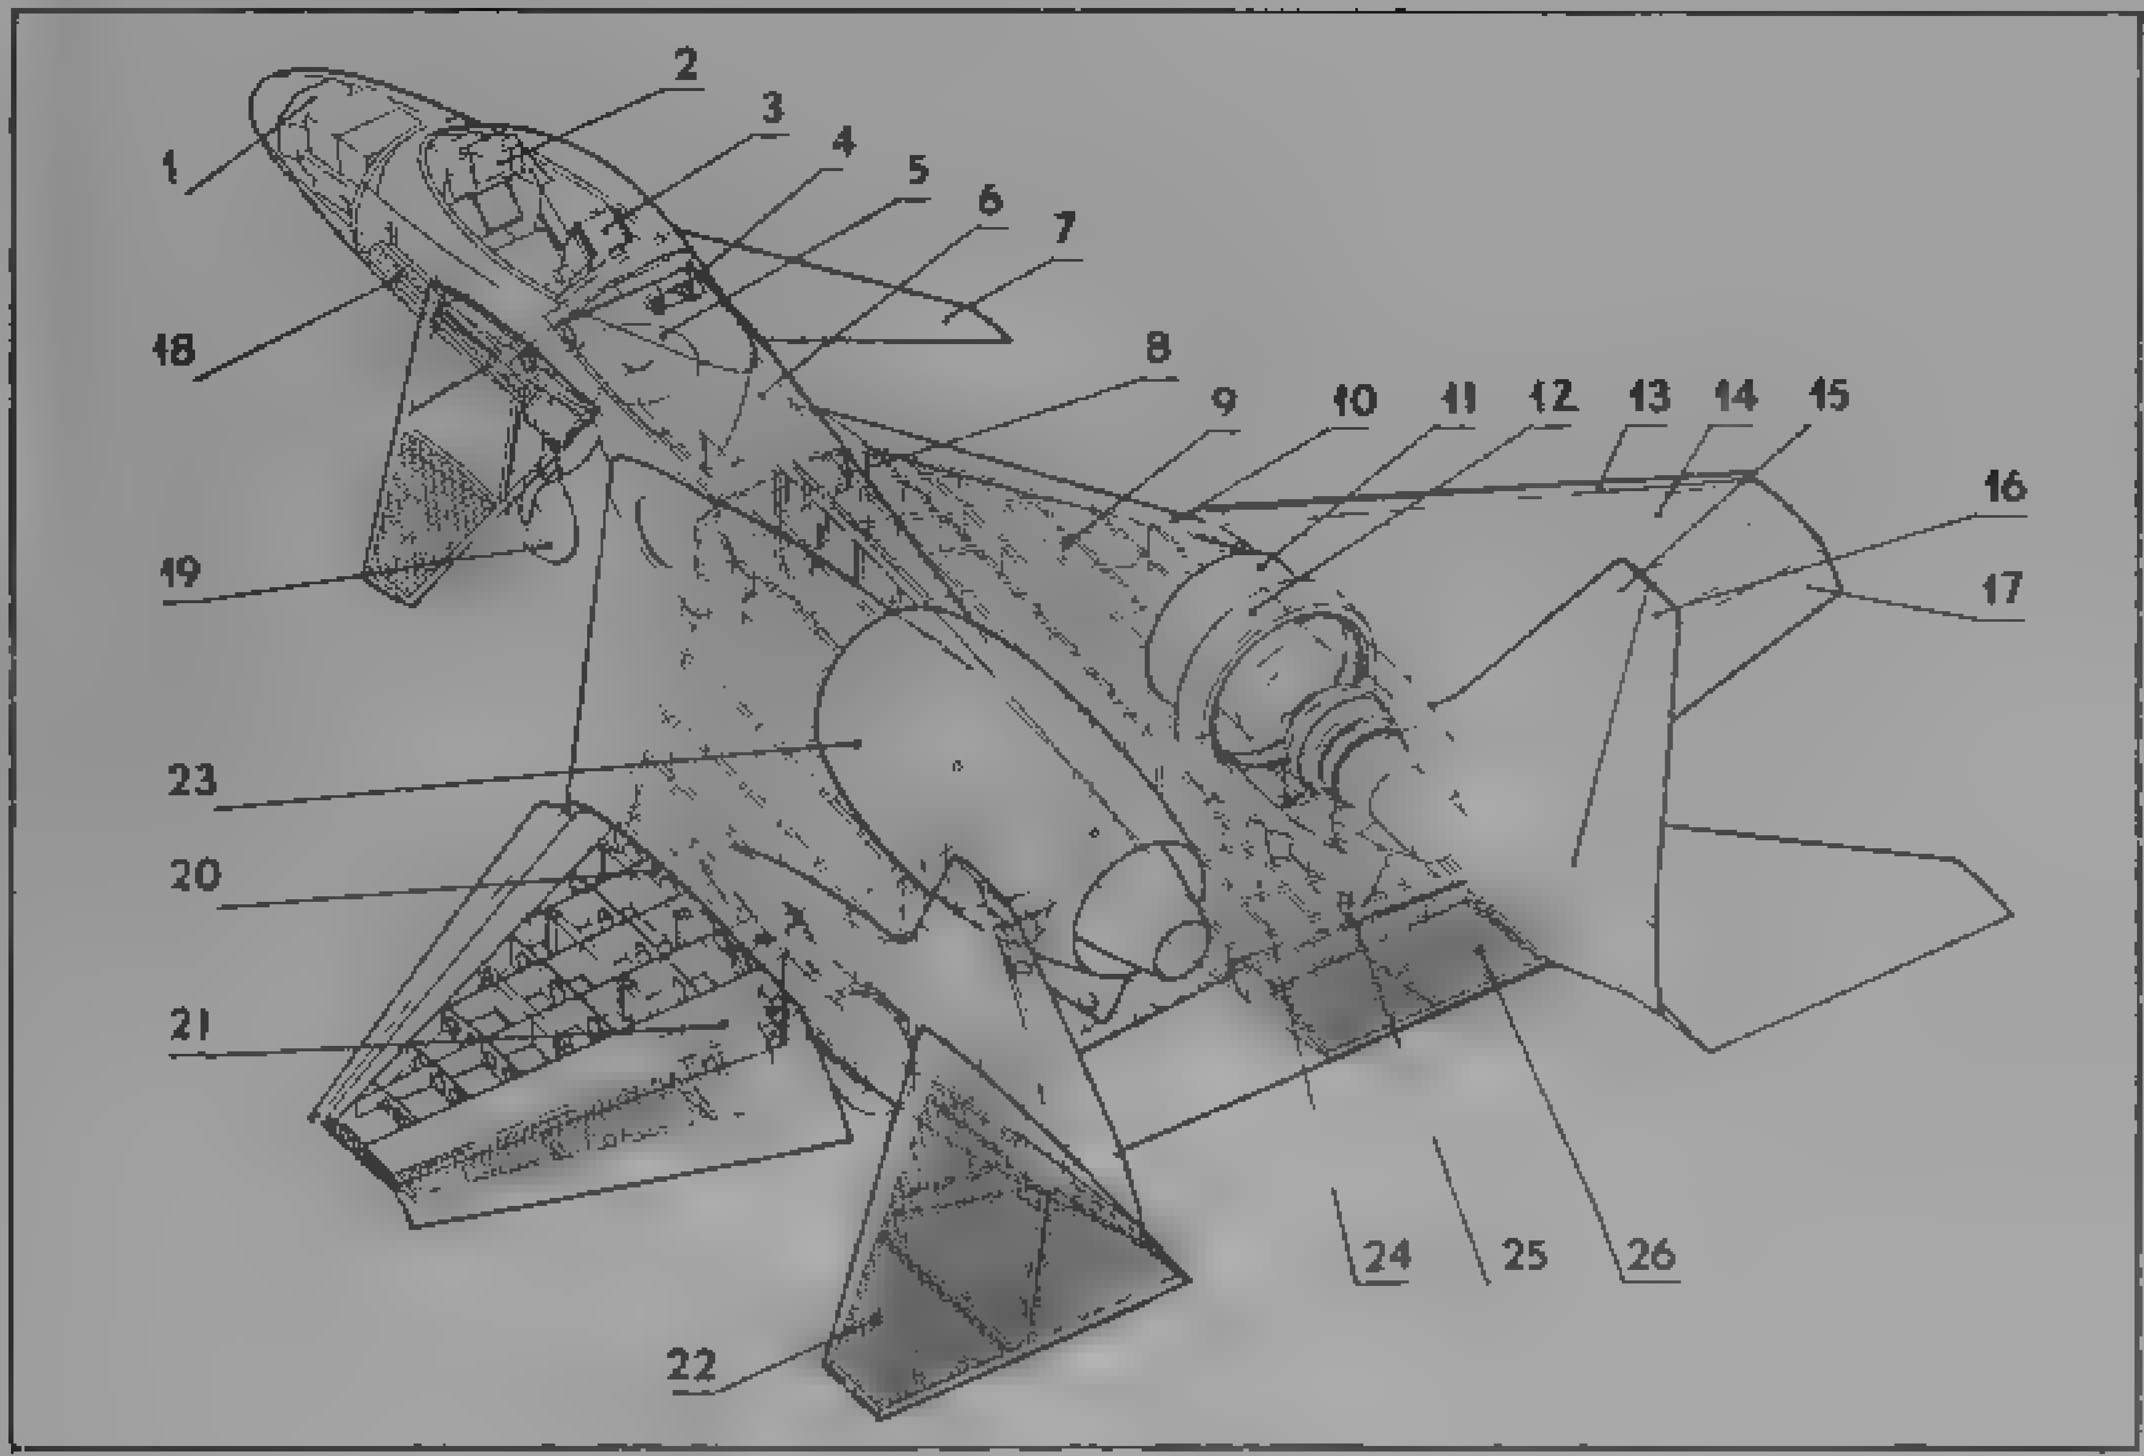
Wilga 80-550: Version for Western markets, with 224 kW (300 hp) Teledyne Continental IO-550 flat-six engine; see under Melex heading in US section.





General arrangement drawing ***(Jane's/Paul Jackson)*** **and model photograph** ***(Paul Jackson)*** **of V tailed configuration for PZL-230F Skorpion**

1995



Cutaway drawing of alternative (twin fin and all-moving tailplane) configuration for PZL-230F Skorpion

1 Pulse-Doppler radar—Thomson-CSF Phantom, 2: Head-up (HUD) and multifunction (EFIS) displays, 3: Martin-Baker Mk 10L ejection seat, 4: Forward control surface (canard) spigot mounting and actuation, 5: 25 mm ammunition drum—250 rounds, 6: Navigational equipment and fly-by-wire system compartment, 7: All-moving forward control surface (canard)—destabiliser, 8: Mid-wing to fuselage joint—four bolts, 9: Mid-wing/eight chamber fuel tank—capacity 3,500 litres (925 US gallons; 770 Imp gallons), 10: Control system compartment, 11: AlliedSignal LF 507 turbofan jet engine, 12: Engine supporting frame, 13: Automatically controlled leading-edge slat, 14: Outer wing (removable), 15: Vertical fin and landing gear bay, 16: Rudder, 17: Double slotted flap on trailing edge of outer wing, 18: GAU-12 25 mm multibarrel cannon, 19: Front landing gear (low-pressure tyre), 20: Quick-disconnect wing joint, 21: Main landing gear (low-pressure tyre), 22: All-moving tailplane (stabilator/taileron), 23: LF 507 engine nacelle, 24: Mid-wing aft part-power systems compartment-servicing deck, 25: Quick-disconnect engine-airframe joint, 26: Central elevator

1995

CUSTOMERS: Total of 951 (all versions) sold by 1 January 1995 to customers in Argentina, Australia, Austria, Belgium, Bulgaria, Canada, Cuba, Czech Republic, Denmark, Egypt, Finland, France, Germany, Hungary, Indonesia, Italy, North Korea, New Zealand, Poland, Romania, Slovakia, South Africa, Spain, Sweden, Switzerland, Turkey, UK, USA, former USSR (more than 380), Venezuela and former Yugoslavia.

DESIGN FEATURES: Used for wide variety of general aviation and flying club duties; high-mounted cantilever wings; braced tail unit, tall landing gear legs. Wing section NACA 2415, dihedral 1°.

FLYING CONTROLS: Aerodynamically and mass balanced slotted ailerons can be drooped to supplement flaps during landing, tab on starboard aileron, aerodynamically, horn and mass balanced one-piece elevator and rudder; trim tab in centre of elevator; manually operated slotted flaps, fixed slat on wing leading-edge along full span.

STRUCTURE: All-metal, with beaded skins; single-spar wings, with leading-edge torsion box, fuselage in two portions, forward incorporating main wing spar carry-through structure; rear section is tailcone, cabin floor of metal sandwich, with paper honeycomb core, covered with foam rubber, aluminium tailplane bracing strut.

LANDING GEAR: Non-retractable tailwheel type. Semi-cantilever main legs, of rocker type, have oleo-pneumatic shock-absorbers. Low-pressure tyres size 500 × 200 mm on mainwheels. Hydraulic brakes. Steerable tailwheel, tyre size 255 × 110 mm, carried on rocker frame with oleo-pneumatic shock absorber. Metal ski landing gear and Airtech Canada LAP-3000 twin-float landing gear optional.

POWER PLANT: One 194 kW (260 hp) PZL AI-14RA nine-cylinder supercharged radial air-cooled engine (AI-14RA KAF in Wilga 80), driving a PZL US-122000 two-blade constant-speed wooden propeller. Two removable fuel tanks in each wing, with total capacity of 195 litres (51.5 US gallons, 43 Imp gallons). Refuelling point on each side of fuselage, at junction with wing. For longer range operation, additional 90 litre (23.8 US gallon, 19.8 Imp gallon) fuel tank can be installed in place of rear pair of seats. Oil capacity 16 litres (4.2 US gallons, 3.5 Imp gallons).

ACCOMMODATION: Passenger version accommodates pilot and three passengers, in pairs, with adjustable front seats. Baggage compartment aft of seats, capacity 35 kg (77 lb). Rear seats can be replaced by additional fuel tank for longer range operation. Upward-opening door on each side of cabin, jettisonable in emergency. In parachute training version, starboard door is replaced by two tubular uprights with central connecting strap, and starboard front seat is rearward-facing. Jumps are facilitated by step on starboard side and by parachute hitch. Controllable towing hook can be attached to tail landing gear permitting Wilga, in this role, to tow single glider of up to 650 kg (1,433 lb) weight or two or three gliders with combined weight of 1,125 kg (2,480 lb).

SYSTEMS: Hydraulic system pressure 39 bars (570 lb/sq in). Engine started pneumatically by compressed air stored in 7 litre (0.25 cu ft) capacity bottle at pressure of 49 bars (710 lb/sq in) charged by engine. Electrical system powered by DC generator and 24 V 10 Ah battery.

AVIONICS: *Comms:* Polish R-860 II, R-860 IIM or RS-6102, Bendix/King KY 195 or other VHF transceiver standard. ARL-1601 VHF optional.

Flight: ARK-9, Bendix/King KR 85 or AV-200 ADF, GB-1 gyrocompass and K2-715 airspeed and altitude recorder optional.

Instrumentation: Blind-flying instrumentation standard.

EQUIPMENT: Sun visors, exhaust silencer and windscreen wiper optional.

DIMENSIONS, EXTERNAL:

Wing span: 35	11.12 m (36 ft 5¾ in)
80	11.13 m (36 ft 6¼ in)
Wing chord, constant	1.40 m (4 ft 7 in)
Wing aspect ratio	7.98
Length overall: 35	8.10 m (26 ft 6¾ in)
80	8.03 m (26 ft 4¼ in)
Height overall	2.96 m (9 ft 8½ in)
Tailplane span	3.70 m (12 ft 1¾ in)
Wheel track	2.75 m (9 ft 0¼ in)
Wheelbase	6.70 m (21 ft 11¾ in)
Propeller diameter	2.65 m (8 ft 8 in)
Passenger doors (each): Height	1.00 m (3 ft 3¼ in)
Width	1.50 m (4 ft 11 in)

DIMENSIONS, INTERNAL:

Cabin: Length	2.20 m (7 ft 2⅝ in)
Max width	[illegible]20 m (3 ft 1[illegible] in)
Max height	[illegible]50 m (4 ft 11 [illegible])
Floor area	2.20 m² (23.8 sq ft)
Volume	2.40 m³ (85 cu ft)
Baggage compartment	0.50 m³ (17.5 cu ft)

AREAS:

Wings, gross	15.50 m² (166.8 sq ft)
Ailerons (total)	1.57 m² (16.90 sq ft)
Trailing-edge flaps (total)	1.97 m² (21.20 sq ft)
Fin	0.97 m² (10.44 sq ft)
Rudder	0.92 m² (9.90 sq ft)
Tailplane	3.16 m² (34.01 sq ft)
Elevator, incl tab	1.92 m² (20.67 sq ft)

WEIGHTS AND LOADINGS (Wilga 35A and 80):

Weight empty, equipped	870 kg (1,918 lb)
Max T-O and landing weight	1,300 kg (2,866 lb)
Max wing loading	83.9 kg/m² (17.18 lb/sq ft)
Max power loading	6.70 kg/kW (11.02 lb/hp)

PERFORMANCE (Wilga 35A, at max T-O weight):

Never exceed speed (VNE)	150 kts (279 km/h, 173 mph)
Max level speed	105 kts (194 km/h, 120 mph)
Cruising speed (75% power)	85 kts (157 km/h, 97 mph)
Cruising speed for max range	74 kts (137 km/h; 85 mph)
Stalling speed: flaps up	35 kts (65 km/h, 41 mph)
flaps down	30 kts (56 km/h, 35 mph)
Max rate of climb at S/L	276 m (905 ft)/min
Time to 1,000 m (3,280 ft)	3 min
Service ceiling	4,040 m (13,250 ft)
T-O run (grass)	121 m (397 ft)
Landing run	106 m (348 ft)
Range with max fuel, 30 min reserves	275 n miles (510 km, 317 miles)

UPDATED

PZL-105L FLAMING (FLAMINGO)

TYPE: Single-engined general purpose light aircraft (passenger or cargo transport, sport and aero club flying, glider towing, parachute training, air ambulance, patrol, geophysical survey, agricultural and other uses).

PROGRAMME: Originally referred to as Wilga 88, but entirely new design. Static test airframe and two flying prototypes built; first prototype (SP-PRC), with M-14P engine (PZL-105M), made first flight 19 December 1989; second aircraft (SP-PRD), with IO-720 engine, made first flight 27 July 1991 as prototype for PZL-105L, this version was intended to gain FAR Pt 23 certification in Normal category, but status of programme currently unclear and no further aircraft had been produced by early 1995.

CURRENT VERSIONS: **PZL-105L:** Textron Lycoming IO-720 flat-six engine. Second prototype completed to this configuration. *Description applies to this version.*

PZL-105M: VMKB (Vedeneyev) M-14P radial engine. Development suspended. Details in 1993-94 *Jane's*.

DESIGN FEATURES: Braced high wings (single strut each side), cantilever tail unit, STOL characteristics combined with better speed range and payload than Wilga, choice of landing gears; operable from unprepared airstrips. Wing section (constant) similar to NASA GA W-1, dihedral 1°, incidence 4°, no twist.

FLYING CONTROLS: Mechanically actuated (by push/pull rods and cables) single slotted flaperons, rudder and elevators, fixed tab on port flaperon, ground adjustable tab on rudder, electrically actuated trim tab on port elevator, rudder and elevators horn balanced, electrically operated single-slotted Fowler trailing-edge flaps.

STRUCTURE: All-metal except for glassfibre wing/rudder/elevator tips and spinner; two-spar wing box, entire structure

PZL-104 Wilga 80 general purpose light aircraft

1995

protected against weather, corrosion and abrasion and finished in polyurethane paint

LANDING GEAR: Non-retractable type, with single mainwheels on glassfibre spring cantilever legs and steerable tailwheel with oleo-pneumatic shock absorption. Tyre sizes 500 × 200 mm (main) and 250 × 125 mm (tail), pressure 3.5 bars (50.75 lb/sq in) on all units. Single-disc hydraulic brake on each mainwheel. Optional gear includes floats, skis (with snow brakes) and wheel/skis.

POWER PLANT: One 298 kW (400 hp) Textron Lycoming IO-720-A1B flat-eight engine and Hartzell three-blade constant-speed metal propeller. Fuel in integral tanks in wings, total capacity 270 litres (71.3 US gallons, 59.4 Imp gallons). Gravity fuelling point in upper surface of each wing.

ACCOMMODATION: Fully enclosed, heated and ventilated cabin, with seats for up to six persons including pilot (four individual seats in two rows and two-place rear bench seat). All passenger seats and bench can be quickly removed to provide space for up to 450 kg (992 lb) of cargo. Cabin has flat floor, flush with door sill. Large door each side, with upward opening top half; lower halves open downward and incorporate steps. Doors are non-structural. Dual controls optional.

SYSTEMS: Hydraulic system for brakes only. Electrical system (28 V DC) supplied by 24 V 70 A alternator and 24 V 15 Ah Ni/Cd battery.

AVIONICS: *Comms*: ARL-1601 VHF and RS-6102 radio in prototypes.

Flight: GB 1 gyrocompass in prototypes.

Provision for Bendix/King Silver Crown avionics in production aircraft.

EQUIPMENT: Navigation/anti-collision/cabin/landing lights standard.

DIMENSIONS, EXTERNAL:

Wing span	12.98 m (42 ft 7 in)
Wing chord, constant	1.35 m (4 ft 5¼ in)
Wing aspect ratio	9.97
Length overall	8.70 m (28 ft 6½ in)
Tailplane span	4.108 m (13 ft 5½ in)
Height overall (tail down)	2.755 m (9 ft 0½ in)
Wheel track	3.085 m (10 ft 1½ in)
Wheelbase	6.08 m (19 ft 11½ in)
Propeller diameter	2.18 m (7 ft 1¾ in)
Cabin doors (two, each): Height	1.00 m (3 ft 3¼ in)
Width	1.60 m (5 ft 3 in)

DIMENSIONS, INTERNAL:

Cabin: Length	2.80 m (9 ft 2¼ in)
Max width	1.19 m (3 ft 11 in)
Max height	1.20 m (3 ft 11¼ in)

AREAS:

Wings, gross	16.90 m² (181.9 sq ft)

WEIGHTS AND LOADINGS:

Standard weight empty, equipped	1,150 kg (2,535 lb)
Max T-O weight	1,850 kg (4,078 lb)
Max wing loading	109.5 kg/m² (22.43 lb/sq ft)
Max power loading	6.21 kg/kW (10.20 lb/hp)

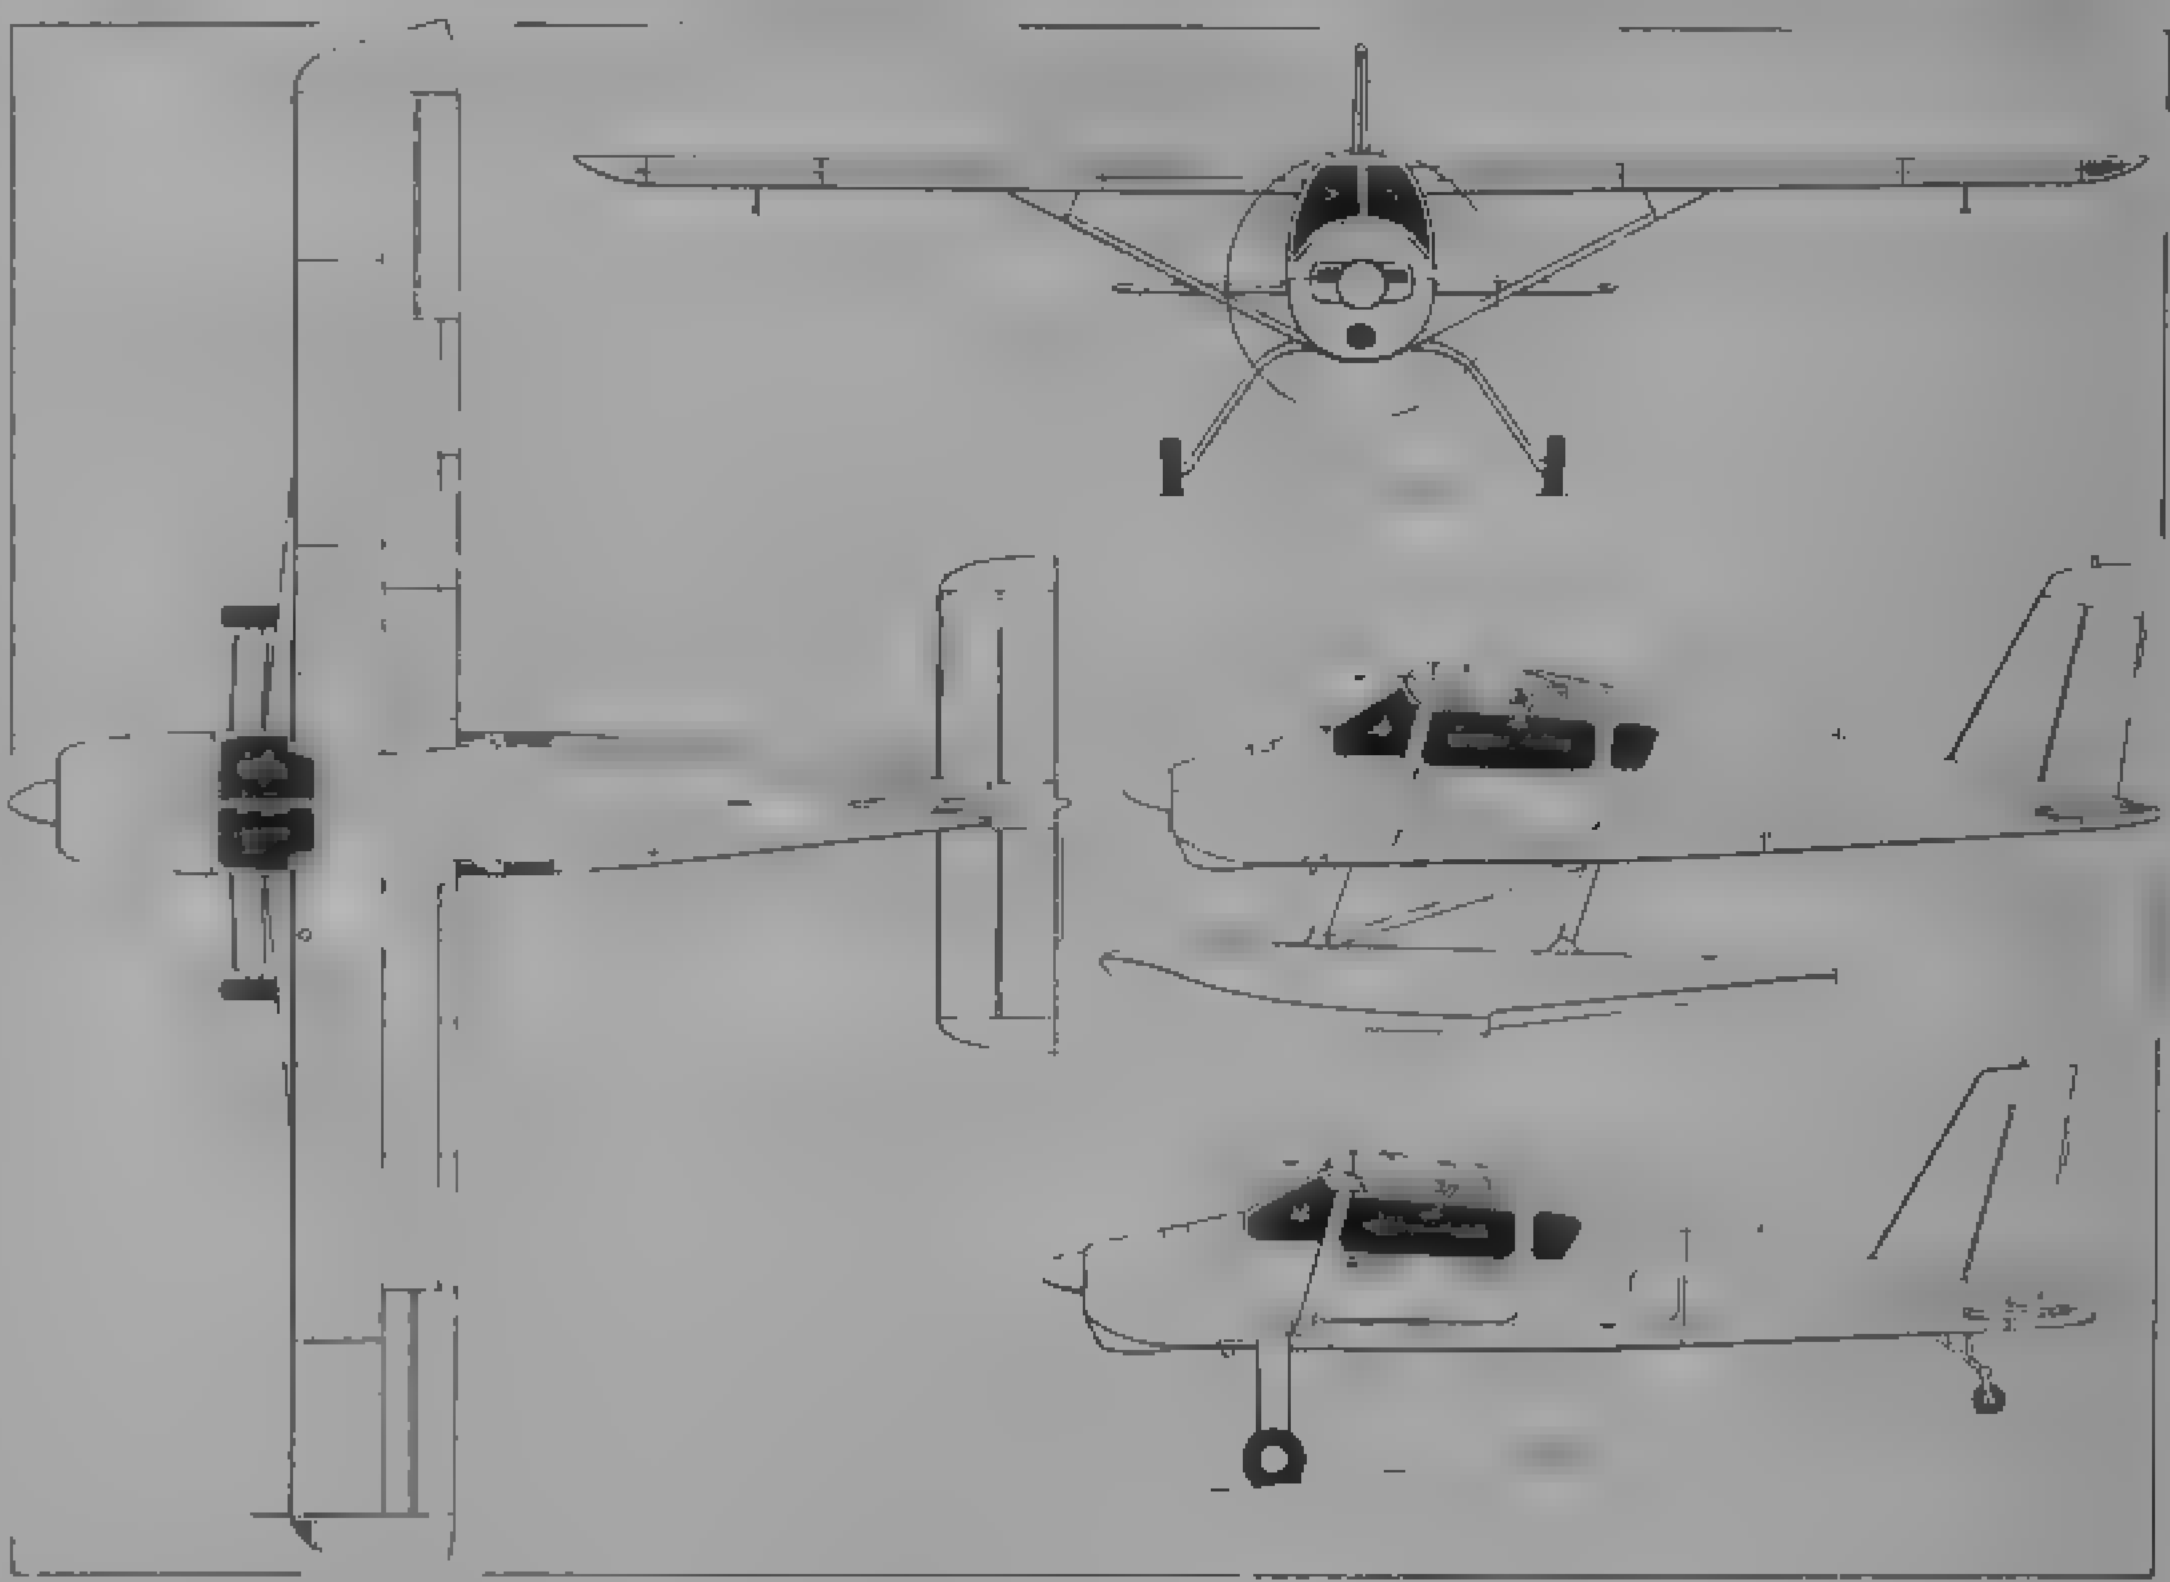
PERFORMANCE (estimated, at max T-O weight):

Never-exceed speed (V_{NE})	165 kts (306 km/h; 190 mph)
Max level speed	140 kts (260 km/h; 162 mph)
Max cruising speed	134 kts (248 km/h; 154 mph)
Econ cruising speed, 50% power	111 kts (205 km/h; 127 mph)
Stalling speed, flaps down, engine idling	55 kts (102 km/h; 64 mph)
Max rate of climb at S/L	336 m (1,100 ft)/min
Service ceiling	4,660 m (15,290 ft)
T-O run	189 m (620 ft)
T-O to 15 m (50 ft)	351 m (1,152 ft)
Landing from 15 m (50 ft)	330 m (1,083 ft)
Landing run	157 m (515 ft)
Range with max fuel: at max cruising speed	461 n miles (854 km; 530 miles)
at econ cruising speed	563 n miles (1,043 km; 648 miles)
g limits	+3.8/−1.52

UPDATED

Second Flaming, with IO-720 engine as prototype for PZL-105L

1995



PZL Warszawa-Okecie PZL-105L (Textron Lycoming IO-720 flat-six engine), with additional side view of optional floatplane version *(Jane's/Dennis Punnett)*

1992

PZL-106B KRUK (RAVEN)

TYPE: Single-engined agricultural aircraft.

PROGRAMME: Original PZL-106 designed early 1972; first flight of first prototype (SP-PAS), with IO-720 engine, 17 April 1973, five further prototypes, latter four with PZL-3S engine, superseded by current B series from early 1980s. Production at standstill since early 1992, but expected to resume eventually with new option of larger hopper. Full description in 1993-94 and earlier editions, shortened version in 1994-95 *Jane's*.

CURRENT VERSIONS: Details of PZL-106A, AR, AT and B in 1985-86 and earlier *Jane's*; PZL-106AS in 1991-92 and earlier editions.

PZL-106BR: Geared PZL-3SR engine, first flown 8 July 1983; tested with wingtip vanes (three at each tip). 64 built so far.

PZL-106BS: Uprated version, with PZL (Shvetsov) ASz-62IR engine, for Restricted category operation, with higher maximum T-O weight and increased chemical load; prototype first flown 8 March 1982. 15 built so far.

PZL-106BT: Turboprop version (marketed in West as **Turbo Javelin**), described separately.

CUSTOMERS: Manufactured initially for member countries of CMEA (Council for Mutual Economic Aid); total of 248 (all versions, including Turbo-Kruk) built and sold so far, including 144 PZL-106As produced 1976-81. Currently in service mainly in Africa, Argentina, the Middle East and USA.

UPDATED

PZL-106BT Turbo-Kruk agricultural aircraft

1995

PZL-106BT TURBO-KRUK

TYPE: Turboprop version of Kruk agricultural aircraft.

PROGRAMME: First flight of prototype (SP-PAA) 18 September 1985; FAR Pt 23 certification early 1994.

CURRENT VERSIONS: **Turbo-Kruk**: Standard version, marketed in West as **Turbo Javelin**.

CUSTOMERS: 21 built by 1 January 1992; six built 1994 but unsold at 1 January 1995. Operated mainly in Argentina, Egypt and Iran.

DESIGN FEATURES: Compared with Kruk, has turboprop engine, 6° sweepback at quarter-chord, 6° dihedral, taller fin and larger chemical load.

Description as for piston-engined Kruk except as follows:

POWER PLANT: One 544 kW (730 shp) Walter M 601 D turboprop; Avia V 508 D three-blade propeller.

DIMENSIONS, EXTERNAL:

Wing span	15.00 m (49 ft 2½ in)
Wing aspect ratio	7.10
Length overall	10.24 m (33 ft 7¼ in)
Height overall	3.82 m (12 ft 6½ in)
Propeller diameter	2.50 m (8 ft 2½ in)

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,680 kg (3,704 lb)
Max chemical payload	1,300 kg (2,866 lb)

Max T-O weight	3,500 kg (7,716 lb)
Max landing weight	3,000 kg (6,614 lb)
Max wing loading	110.44 kg/m² (22 62 lb/sq ft)
Max power loading	6 07 kg/kW (9 97 lb/shp)
PERFORMANCE (at max T-O weight):	
Never-exceed speed (VNE)	145 kts (270 km/h; 167 mph)
Max level speed at S/L:	
without agricultural equipment	135 kts (250 km/h, 155 mph)
with agricultural equipment	116 kts (215 km/h, 134 mph)
Operating speed with max chemical load	81 92 kts (150-170 km/h; 93-106 mph)
Stalling speed at S/L	49 kts (90 km/h, 56 mph)
Max rate of climb at S/L (with agricultural equipment)	360 m (1,180 ft)/min
T-O run (with agricultural equipment)	230 m (755 ft)
Landing run (with agricultural equipment)	130 m (427 ft)
Range with max standard fuel	485 n miles (900 km, 559 miles)

UPDATED

PZL-110 KOLIBER (HUMMING BIRD)

TYPE: Two/four-seat training and multipurpose light aircraft, licence-built and uprated version of Socata Rallye 100 ST.

PROGRAMME: First PZL-110, modified to receive 86 5 kW (116 hp) PZL-F (Franklin) engine, first flown 18 April 1978; first flight of Koliber 150 prototype (SP-PHA) 27 September 1988. Polish type certificate for 150 awarded January 1989, FAA certificate for 150A February 1995.

CURRENT VERSIONS: **Koliber**: See 1991-92 and earlier *Jane's* for details of initial **Series I/II/III** with 93 2 kW (125 hp) PZL-Franklin engines; production (total of 40 built) ended December 1989 and included 675 sets of spare fuselage/wing/aileron/flap/control surface assemblies, some of them exported to France.

Koliber 150: Current production version, *as described below*, higher powered Textron Lycoming engine and detail improvements. Currently (1995) certificated in Australia, Denmark, Germany, Netherlands, Norway, Poland, Sweden, UK and USA.

Koliber 150A: Export version of 150 (known in USA as **Koliber II**), same power plant but with Western avionics, for night/IFR flying, improved (24 V) electrical system. Performance differs slightly from that of Koliber 150. Certification to FAR Pt 23 Amendment 23 awarded February 1995. Cadmus Corporation of Northfield, Illinois, is sole distributor for USA.

Koliber 235 (PZL-111): More powerful version, described separately.

CUSTOMERS: Koliber 150s sold to Denmark, Germany, Netherlands, Sweden and UK. Total of 14 Koliber 150s sold in 1994, including 150As to US and Canadian customers.

COSTS: Koliber II/150A, $89,500 basic (1995).

DESIGN FEATURES: Wing section NACA 63A-416 (modified); dihedral 7° 7' 30"; incidence 4°.

FLYING CONTROLS: Mechanically (pushrod) actuated, aerodynamically and mass balanced ailerons with ground adjustable tabs, aerodynamically and mass balanced elevator with control tab, rudder with ground adjustable tab; full-span automatic leading-edge slats, electrically actuated Fowler flaps.

STRUCTURE: All-metal, flaps, elevators and rudder have corrugated skins; wing torsion box and trailing-edge segments electrically spot-welded.

LANDING GEAR: Non-retractable tricycle type, with leg fairings and oleo-pneumatic shock-absorption. Castoring nosewheel, size 330 × 130 mm, mainwheels size 380 × 150 mm. Tyre pressures 1 4 and 1 8 bars (20 3 and 26.1 lb/sq in) respectively. Hydraulic disc brakes.

POWER PLANT: One 112 kW (150 hp) Textron Lycoming O-320-E2A flat four engine, driving a Sensenich 74DM6-054, -056 or -058 two blade constant speed metal propeller. Fuel in two metal tanks in wings, with total capacity of 105 or 177 litres (27 7 or 46.8 US gallons, 23 1 or 38 9 Imp gallons). Refuelling points above wings. Oil capacity 7 litres (1 85 US gallons; 1 54 Imp gallons).

ACCOMMODATION: Two side by side seats, plus two-person bench seat at rear, under large rearward-sliding canopy. Dual controls. Heating and ventilation standard.

SYSTEMS: 12 V electrical system, with 70 A alternator and 30 Ah battery.

AVIONICS: *Comms*: Bendix/King KX 155 or Narco Mk 12D 1 HF transceiver.

Flight: ADF, VOR, electrically powered gyro attitude indicator, turn and bank indicator, and directional gyro.

EQUIPMENT: For training role, includes pupil's window blinds for instrument training, front seat backrests suitable for use with back type parachutes, safety belts, and accelerometers.

PZL 110 Koliber 150, Polish built version of the Socata Rallye *1995*

DIMENSIONS, EXTERNAL:	
Wing span	9.75 m (31 ft 11¾ in)
Wing chord, constant	1 30 m (4 ft 3 in)
Wing aspect ratio	7 50
Length overall	7 37 m (24 ft ? in)
Height overall	2 80 m (9 ft 2¼ in)
Tailplane span	3.67 m (12 ft 0½ in)
Wheel track	2.01 m (6 ft 7¼ in)
Wheelbase	1.71 m (5 ft 7¼ in)
Propeller diameter	1 78 m (5 ft 10 in)
AREAS:	
Wings, gross	12 68 m² (136 5 sq ft)
Ailerons (total)	1 56 m² (16 79 sq ft)
Trailing-edge flaps (total)	2 40 m² (25 83 sq ft)
Vertical tail surfaces (total)	1.74 m² (18 73 sq ft)
Horizontal tail surfaces (total)	3 48 m² (37 50 sq ft)
WEIGHTS AND LOADINGS (U Utility, N Normal category):	
Weight empty, equipped	548 kg (1,208 lb)
Max T-O weight: U	770 kg (1,697 lb)
N	850 kg (1,874 lb)
Max wing loading: U	60.72 kg/m² (12 44 lb/sq ft)
N	67.03 kg/m² (13 73 lb/sq ft)
Max power loading: U	8 90 kg/kW (14 63 lb/hp)
N	7 60 kg/kW (12 49 lb/hp)
PERFORMANCE (Koliber 150 at max T-O weight):	
Never-exceed speed (VNE):	
U	145 kts (270 km/h; 167 mph)
N	134 kts (250 km/h, 155 mph)
Max level speed at S/L:	
U, N	108 kts (200 km/h, 124 mph)
Max cruising speed at S/L:

N	320 m (1,050 ft)
Landing run at S/L: U	125 m (411 ft)
N	138 m (453 ft)
Range at 500 m (1,640 ft) with max fuel, no reserves	324 n miles (600 km; 373 miles)
g limits	+4 4/−1 76 (ultimate)
PERFORMANCE (Koliber 150A):	
Max cruising speed	102 kts (190 km/h, 118 mph)
Econ cruising speed	92 kts (170 km/h; 105 mph)
Stalling speed, flaps up	48 kts (89 km/h, 56 mph)
Max rate of climb at S/L	203 m (666 ft)/min
Service ceiling	3,700 m (12,140 ft)
T-O to 15 m (50 ft)	400 m (1,313 ft)
Landing from 15 m (50 ft)	300 m (985 ft)
Range with max fuel	448 n miles (830 km, 515 miles)

UPDATED

PZL-111 KOLIBER

TYPE: Higher powered versions of Koliber 150.

PROGRAMME: Construction of first prototype began August 1990; static testing completed March 1993.

CURRENT VERSIONS: **Koliber 235**: With 175 3 kW (235 hp) Textron Lycoming engine. First prototype is of this version, first flight was expected in 1995. *Details apply to this version.*

Koliber 200: Alternative version with 149 kW (200 hp) Lycoming.

Koliber 180: Second alternative version with 134 kW (180 hp) Lycoming.

Koliber 160: Third alternative; 119 kW (160 hp) Lycoming engine.

DESIGN FEATURES: Designed at PZL Warszawa-Okecie Pilot Plant (project engineer Ryszard Kaczkowski); approximately 40 per cent commonality with PZL-110 series. Intended for basic, navigation and general training, glider towing, sport flying, touring, executive flights; and special missions.

POWER PLANT: One 175 3 kW (235 hp) Textron Lycoming O-540-B4B5 flat-six engine, Hartzell HC-C2YK-13F/F8468A4 two-blade metal propeller. Fuel capacity 170 litres (45 US gallons; 37 4 Imp gallons).

SYSTEMS: 12 V electrical system with 22 Ah battery.

DIMENSIONS, EXTERNAL: As Koliber 150 except:	
Length overall	7.32 m (24 ft 0¼ in)
Propeller diameter	2 03 m (6 ft 8 in)
WEIGHTS AND LOADINGS (U Utility, N Normal category):	
Weight empty	650 kg (1,433 lb)
Max T-O weight: U	1,000 kg (2,204 lb)
N	1,150 kg (2,535 lb)
Max wing loading: U	77 52 kg/m² (15 88 lb/sq ft)
N	89 15 kg/m² (18 26 lb/sq ft)
Max power loading: U	5 70 kg/kW (9 38 lb/hp)
N	6 56 kg/kW (10 79 lb/hp)
PERFORMANCE (estimated):	
Max level speed	130 kts (240 km/h, 149 mph)
Econ cruising speed	108 kts (200 km/h, 124 mph)
Stalling speed, flaps down	44 kts (80 km/h, 50 mph)
Max rate of climb at S/L	360 m (1,180 ft)/min
Service ceiling	4,500 m (14,775 ft)
Range with max fuel	539 n miles (1,000 km, 621 miles)

UPDATED

PZL-126P MRÓWKA

This aircraft now described under Agrolot heading elsewhere in Polish section.

NEW ENTRY

PZL-140 ORZEL (EAGLE)

TYPE: Proposed seven-seat twin-turboprop business transport.

PROGRAMME: Begun 1993 as single-engined derivative of PZL-130T, but much redesigned subsequently; go-ahead dependent upon funding being sought by Cadmus Corporation, Okecie's US marketing associate.

COSTS: Estimated at $3 million to $4 million per unit.

DESIGN FEATURES: Forward swept wings, canard control surfaces, pressurised fuselage, twin-tailboom configuration with inward-canted fins and rudders, combiner gearbox to single pusher propeller.

STRUCTURE: Mainly metal.

POWER PLANT: Two Pratt & Whitney Canada PT6A turboprops in Soloy Dual Pac installation.

PERFORMANCE (estimated):	
Max cruising Mach number	0 7
Max cruising altitude	13,700 m (45 000 ft)
Max range	2,700 n miles (5,000 km, 3,106 miles)

NEW ENTRY

GENERAL MANAGER: Dan Gozia

New holding company for Romanian aircraft industry replacing former CNIAR (1991-92 and earlier *Jane's*). Aircraft and aero-engine companies and R&D institutes given full autonomy from 1990, when all became joint stock companies as prelude to privatisation. Current shareholding divided between State Ownership Fund (70 per cent) and Private Ownership Funds (30 per cent); objective is full privatisation by end of 1990s. Total of 18 companies/institutes comprised Romania aeronautical industry in 1994, with combined workforce of nearly 19,000.

Following overthrow of Ceaucescu regime, industry continues to operate, but at very reduced rate; is looking for opportunities to work for or with Western companies and projects.

Factory founded 1953 as URA (later IRAv, then IAv Bacau), originally as repair centre for Romanian Air Force Yak-17/23, MiG-15/17/19/21 and Il-28/H-5 front-line military aircraft and Aero L-29/L-39 jet trainers, built first Romanian prototype of IAR-93 between 1972 and 1974. Five other specialised work sections: (1) landing gears, hydraulic and pneumatic equipment, (2) special production, (3) light aircraft, (4) engines and reduction gears; (5) avionics. Site area 3.45 ha (8.53 acres), including 143,000 m² (1,539,250 sq ft) of covered workshop space. Workforce in 1994 totalled 5,500.

Aerostar factory's main product is Iak-52 trainer; other products include microlight aircraft. Company now involved in MiG-21 upgrade with Israeli firms; also intends to align Iak-52 manufacturing process to meet requirements of Western standards.

Landing gears and/or hydraulic/pneumatic equipment have been produced for IAR-316B (Alouette III), IAR 330 (Puma), IAR-93, IAR-99, Romaero (BAC) One-Eleven and Iak-52. Engines include M-14P for Iak-52, M-14V26 for Ka-26 and RU-19A-300 APU for An-24; reduction gears include R-26. Avionics factory produces radio altimeters, radio compasses, marker beacon receivers, IFF and other radio/radar items.

UPDATED

Aerostar (Yakovlev) Iak-52 tandem two-seat primary trainer *(Jane's/Dennis Punnett)*

1983

AEROSTAR (YAKOVLEV) Iak-52

TYPE: Tandem two-seat piston-engined primary trainer (licence version of former Soviet Yak 52).

PROGRAMME: Design in USSR began 1975, series production assigned to Comecon programme (Council for Mutual Economic Assistance), following Romanian USSR intergovernmental agreement of 1974 construction began 1977 and first Romanian prototype made first flight May 1978, series production began 1979; first deliveries (to DOSAAF, USSR, 1979; production continuing.

CURRENT VERSIONS: **Iak-52**. Romanian designation of standard Yak-52. *Detailed description applies to this version*

CUSTOMERS: More than 1,700 produced by early 1995, mainly for USSR and Romanian Air Force but also for West European and American markets, Hungarian Air Force received 12 in early months of 1994

DESIGN FEATURES: Tandem cockpit variant of Yak 50, with unchanged span and length, but with semi-retractable landing gear to reduce damage in wheels-up landing, straight-tapered wings, 'glasshouse' canopy. Wing section Clark YN with thickness/chord ratios of 14.5 per cent at root and 9 per cent at tip, dihedral 2° from roots, incidence 2° at root, no sweep

FLYING CONTROLS: Mechanical actuation of mass balanced slotted ailerons (by rods), mass balanced elevators (rods/cables) and horn balanced rudder (cables), manually operated trim tab in port elevator, ground adjustable tab on rudder and each aileron. Ailerons deflect 22° up/16° down, elevators 25° up/down, rudder 27° left/right. Pneumatically actuated trailing-edge split flaps (maximum deflection 45°).

STRUCTURE: All-metal (D-16 and AK-6 aluminium alloy) stressed skin, with 30 HGSA steel reinforcement in high-stress areas, except for fabric covered primary control surfaces, single-spar wings

LANDING GEAR: Semi-retractable tricycle type, with single wheel on each unit. Pneumatic actuation, nosewheel retracting rearward, main units forward. All three wheels remain fully exposed to air flow, against undersurface of fuselage and wings respectively, to offer greater safety in event of wheels-up emergency landing. Aerostar oleo-pneumatic shock-absorbers. Mainwheel tyres size 500 × 150 mm; nosewheel tyre size 400 × 150 mm. Tyre pressure (all units) 3.0 bars (43 lb/sq in). Pneumatic mainwheel brakes, operated differentially from pedals. Minimum ground turning radius 6.22 m (20 ft 5 in). Non-retractable plastic coated duralumin skis, with shock-struts, can be fitted in place of wheels for Winter operations.

POWER PLANT: One 268 kW (360 hp) Aerostar built VMKB (Vedeneyev) M-14P nine-cylinder air-cooled radial, driving a V 530TA D35 two-blade constant speed wooden propeller. Adjustable louvres in front of cowling to regulate cooling. Two-part cowling, split on horizontal centreline. Two aluminium alloy fuel tanks, in wingroots forward of spar, each with capacity of 61 litres (16.1 US gallons, 13.5 Imp gallons). Collector tank in fuselage of 5.5 litres (1.45 US gallons, 1.25 Imp gallons) capacity supplies engine during inverted flight. Total internal fuel capacity 122 litres (32.2 US gallons; 27 Imp gallons). Gravity fuelling point in upper surface of each wing. Oil capacity 20 litres (5.3 US gallons, 4.4 Imp gallons)

ACCOMMODATION: Tandem seats for pupil (at front) and instructor under long 'glasshouse' canopy, with separate rearward-sliding hood over each seat. Dual controls standard. Seats and rudder pedals adjustable. Heating and ventilation standard. Optional 0.20 m³ (7.06 cu ft) baggage compartment, accessible from rear seat

SYSTEMS: No hydraulic system. Independent main and emergency pneumatic systems, pressure 50 bars (725 lb/sq in), for flap and landing gear actuation, engine starting and brake control. Pneumatic systems supplied by 11 litre (main) and 3 litre (emergency) compressed air bottles (671 and 183 cu in), mounted behind rear seat and recharged in flight by an AK-50T engine-driven compressor. Electrical system (27 V DC) supplied by 3 kW engine-driven generator and (in port wing) 12 V 23 Ah ASAM battery; two static inverters in fuselage for 36 V AC power at 400 Hz. Heated pitot tube and stall speed sensor. Oxygen system available optionally

AVIONICS: *Comms*: Balkan 5 VHF radio and SPU-9 intercom

Flight: ARK-15M automatic radio compass and GMK-1A gyrocompass.

Founded 1 February 1972 as IAv Craiova, changing to present name 29 March 1991, a major domestic and international aviation enterprise, producing wide range of products and services for both military and civil aviation. Activities include aircraft and equipment design and manufacture, repair and overhaul, life cycle management and integrated logistics support. Site area 1.70 ha (4.20 acres), including 47,500 m² (511,275 sq ft) shop floor area. Principal military programmes are IAR-93 and IAR-99.

UPDATED

AVIOANE IAR-99 ŞOIM (HAWK)

TYPE: Advanced jet trainer and light ground attack aircraft.

PROGRAMME: Existence revealed at 1983 Paris Air Show; designed by INAv (Institutul de Aviatie) at Bucharest; three prototypes built at Craiova, including one for structural testing; first flight 21 December 1985.

CURRENT VERSIONS: **IAR-99**: Standard version for Romanian Air Force; *detailed description applies to this version.*

IAR-109 Swift: Upgraded version, described separately.

CUSTOMERS: Initial 20 delivered to Romanian Air Force from 1987, further 30 reportedly on order, of which six delivered by mid-1991. No subsequent update received.

DESIGN FEATURES: Tandem cockpits (rear seat elevated); straight wings. Wing section NACA 64_1A-214 (modified) at centreline, 64_1A-212 (modified) at tip; dihedral 3° from roots, quarter-chord sweepback 6° 35', incidence 1° at root.

FLYING CONTROLS: Statically balanced ailerons hydraulically actuated, with manual reversion; horn balanced elevators and statically balanced rudder actuated mechanically by push/pull rods; servo tab in port aileron, trim tabs in rudder and each elevator, all operated electrically; ailerons deflect 15° up/15° down, elevators 20° up/10° down, rudder 25° to left and right. Hydraulically actuated single-slotted flaps, deflecting 20° for T-O and 40° for landing, retract gradually when airspeed reaches 162 knots (300 km/h, 186 mph); twin hydraulically actuated airbrakes under rear fuselage.

STRUCTURE: All-metal, aluminium honeycomb ailerons/elevators/rudder; semi-monocoque fuselage includes honeycomb panels for fuel tank compartments; machined wing skin panels form integral fuel tanks.

LANDING GEAR: Retractable tricycle type, with single wheel and oleo-pneumatic shock absorber on each unit. Main wheels retract inward, castoring nosewheel forward, all being fully enclosed by doors when retracted. Landing light in port wingroot leading-edge. Mainwheels fitted with tubeless tyres, size 552 × 164-10, pressure 7.5 bars (108.8 lb/sq in), and hydraulic disc brakes with anti-skid system. Nosewheel has tubeless tyre size 445 × 150-6, pressure 4.0 bars (58.0 lb/sq in).

POWER PLANT: One Turbomecanica Romanian built Rolls-Royce Viper Mk 632-41M turbojet, rated at 17.79 kN (4,000 lb st). Fuel in two flexible bag tanks in centre-fuselage, capacity 900 litres (238 US gallons, 198 Imp gallons), and four integral tanks between wing spars, combined capacity 470 litres (124 US gallons, 103 Imp gallons). Total internal fuel capacity 1,370 litres (362 US gallons, 301 Imp gallons). Gravity refuelling point on top of fuselage. Provision for two drop tanks, each of 225 litres (59.5 US gallons; 49.5 Imp gallons) capacity, on inboard underwing stations. Maximum internal/external fuel capacity 1,820 litres (481 US gallons, 400 Imp gallons).

ACCOMMODATION: Crew of two in tandem, on zero/zero ejection seats in pressurised and air conditioned cockpit. Rear seat elevated 35 cm (13.8 in). Dual controls standard. One piece canopy with internal screen (trainer), or (in ground attack version) individual canopies, all opening sideways to starboard.

SYSTEMS: Engine compressor bleed air for pressurisation, air conditioning, anti-g suit and windscreen anti-icing system, and to pressurise fuel tanks. Hydraulic system, operating at pressure of 206 bars (2,990 lb/sq in), for actuation of landing gear and doors, flaps, airbrakes, ailerons and mainwheel brakes. Emergency hydraulic system for operation

of landing gear, doors, flaps and wheel brakes. Main electrical system, supplied by 9 kW 28 V DC starter/generator with 28.5 V 36 Ah Ni/Cd battery, ensures operation of main systems, in case of emergency, and engine starting. Two 750 VA static inverters supply two secondary AC networks: 115 V/400 Hz and 26 V/400 Hz. Oxygen system for two crew for 2 hours 30 minutes.

AVIONICS: *Comms:* Include VHF/UHF com radio, SRR-2 IFF and intercom.

Flight: Include radio altimeter, marker beacon receiver, ADF, gyro platform and flight recorder.

ARMAMENT: Removable ventral gun pod containing 23 mm GSh-23 gun with 200 rounds. Gun/rocket firing and weapon release controls, including electrically controlled AA-1F gyroscopic gunsight and AFCT-1 gun camera, in front cockpit only. Four underwing hardpoints stressed for loads of 250 kg (551 lb) each. Typical underwing stores can include four 250 kg bombs, four triple carriers each for three 50 kg bombs (or two 100 kg and one 50 kg), four L16-57 launchers each containing sixteen 57 mm air-to-surface rockets; four L 32-42 launchers each containing thirty-two 42 mm air-to-surface rockets; infra-red air-to-air missiles (inner pylons only); two twin 7.62 mm machine gun pods with 800 rds/pod (inboard pylons only) and auxiliary fuel tanks (see under Power Plant) on inboard pylons.

AREAS:

Wings, gross	18.71 m² (201.4 sq ft)
Ailerons (total)	1.56 m² (16.79 sq ft)
Flaps (total)	2.54 m² (27.34 sq ft)
Fin, inc dorsal fin	1.919 m² (20.66 sq ft)
Rudder	0.629 m² (6.77 sq ft)
Tailplane	3.123 m² (33.62 sq ft)
Elevators (total)	1.248 m² (13.43 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	3,200 kg (7,055 lb)
Max fuel weight: internal	1,100 kg (2,425 lb)
external	350 kg (772 lb)
Max T-O weight: trainer	4,400 kg (9,700 lb)
ground attack	5,560 kg (12,258 lb)
Max wing loading: trainer	235.2 kg/m² (48.17 lb/sq ft)
ground attack	297.2 kg/m² (60.86 lb/sq ft)
Max power loading: trainer	247.5 kg/kN (2.42 lb/lb st)
ground attack	312.7 kg/kN (3.06 lb/lb st)

PERFORMANCE:

Max Mach number	0.76
Max level speed at S/L: trainer	467 kts (865 km/h; 537 mph)
Max rate of climb at S/L	2,100 m (6,890 ft)/min
Service ceiling	12,900 m (42,325 ft)
Min air turning radius	330 m (1,083 ft)
T-O run: trainer	450 m (1,477 ft)
ground attack	960 m (3,150 ft)
T-O to 15 m (50 ft): trainer	750 m (2,461 ft)
ground attack	1,350 m (4,430 ft)
Landing from 15 m (50 ft): trainer	740 m (2,428 ft)
ground attack	870 m (2,855 ft)
Landing run: trainer	550 m (1,805 ft)
ground attack	600 m (1,969 ft)

Typical combat radius (one pilot, ventral gun, internal fuel only):

lo-lo-hi, four 16-round rocket pods, AUW 5,000 kg (11,023 lb) — 189 n miles (350 km; 217 miles)

hi-lo-hi, two 16-round rocket pods, two 50 kg and four 100 kg bombs, AUW 5,280 kg (11,640 lb) — 186 n miles (345 km; 214 miles)

hi-hi-hi, four 250 kg bombs, AUW 5,480 kg (12,081 lb) — 208 n miles (385 km; 239 miles)

Max range with internal fuel:

trainer	593 n miles (1,100 km; 683 miles)
ground attack	522 n miles (967 km; 601 miles)
Max endurance with internal fuel: trainer	2 h 40 min
ground attack	1 h 46 min
g limits	+7/−3.6

UPDATED

AVIOANE IAR-109 SWIFT

TYPE: All-through jet trainer and close support aircraft (upgraded IAR-99).

PROGRAMME: Announced Autumn 1992, at which time development aircraft (modified IAR-99, serial number 712) under test. New demonstrator (715) made first flight November 1993 in Israel after fitment of Israeli avionics suite; had made 50 flights totalling 60 hours by mid-February 1994.

CURRENT VERSIONS: **IAR 109T:** Tandem-seat trainer.

IAR 109TF: Combat trainer and close support/COIN version.

DESIGN FEATURES: Same airframe and power plant as IAR-99; upgraded and expanded avionics and enhanced weapons delivery capability; steerable nosewheel.

ACCOMMODATION: Martin-Baker Mk 10L lightweight zero/zero ejection seats.

AVIONICS (IAR-109TF): *Comms:* Com radio(s) and IFF transponder to customer's requirements.

Flight: Ring laser gyro INS, Astronautics digital ADC; radio altimeter; ADI, HSI, nav radio(s); full ILS package.

Instrumentation: Multiplex 1553B integrated databus system with high-capacity Astronautics mission display processor, El-Op HUD, up-front control panel, cockpit TV centre and video tape recorder, laser rangefinder and HOTAS.

ARMAMENT: Underwing pylons adaptable for Eastern or Western weapons, of types generally similar to those listed for IAR-99, plus capability for infra-red air-to-air missiles, precision guided munitions and larger (300 litre, 79 US gallon, 66 Imp gallon) drop tanks.

WEIGHTS AND LOADINGS: As for IAR-99 except:

Max T-O weight: trainer	4,800 kg (10,582 lb)

PERFORMANCE: As for IAR-99 except:

Unstick speed: T	108 kts (200 km/h; 124 mph)
Approach speed: T	127 kts (235 km/h; 146 mph)
Landing speed: T	103 kts (190 km/h; 118 mph)
Stalling speed: T	93 kts (172 km/h; 107 mph)
Max turn rate at 915 m (3,000 ft)	22°/s
Time to 6,100 m (20,000 ft): T	5 min
T-O run: T	500 m (1,640 ft)
Landing from 15 m (50 ft): T	900 m (2,953 ft)
Landing run: T	600 m (1,969 ft)

Typical combat radius with c/l gun, two rocket pods, two 225 litre drop tanks and max internal fuel, 10% reserves:

TF, lo-lo-lo	151 n miles (280 km; 174 miles)
TF, hi-lo-hi	178 n miles (330 km; 205 miles)

GENERAL MANAGER: Marian Marinescu
DEPUTY MANAGER: Vali Bribie

NEW ENTRY

CPCA DK-10 DRACULA

TYPE: Side by side two-seat trainer

PROGRAMME: Revealed at ILA '94 in May 1994. Design started February 1992, prototype to begin construction October 1995 and make first flight May 1996, intended for Normal category FAR Pt 23 certification

COSTS: Development programme $355 230; standard civil aircraft $78,000 (1995)

DESIGN FEATURES: To have short-field capability and be highly manoeuvrable. NACA wing aerofoil sections (23,023 at root, 23 012 at tip); 4° leading-edge sweepback, 5° dihedral, 2° 30' incidence

FLYING CONTROLS: Conventional surfaces, actuated mechanically; electrically actuated trim tab in port aileron, rudder and each elevator. Slotted trailing-edge flaps

STRUCTURE: All-metal (aluminium alloy and steel); fuselage conventional semi monocoque; two-spar wings and tail surfaces with ribs and sheet metal skins

LANDING GEAR: Hydraulically retractable tricycle type with inward-retracting mainwheels and rearward-retracting, ±30° steerable nosewheel. Cleveland 5.00-5 wheels (Type 40-77B main, 40-78 nose) and Goodyear tyres, pressure 2.2 bars (31.9 lb/sq in) on main units, 1.9 bars (27.6 lb/sq in) on nose unit. Cleveland type 30-9 hydraulic mainwheel brakes. Minimum ground turning radius 2.20 m (7 ft 2½ in)

POWER PLANT: One 112 kW (150 hp) Textron Lycoming O-320-A1A flat-four engine, driving a Hartzell two-blade constant-speed propeller. Fuel tank in each wing combined capacity 92 litres (24.3 US gallons, 20.2 Imp gallons), of which 88 litres (23.2 US gallons, 19.4 Imp gallons) are usable. Gravity refuelling point on top of each wing. Oil capacity 7 litres (1.8 US gallons, 1.5 Imp gallons)

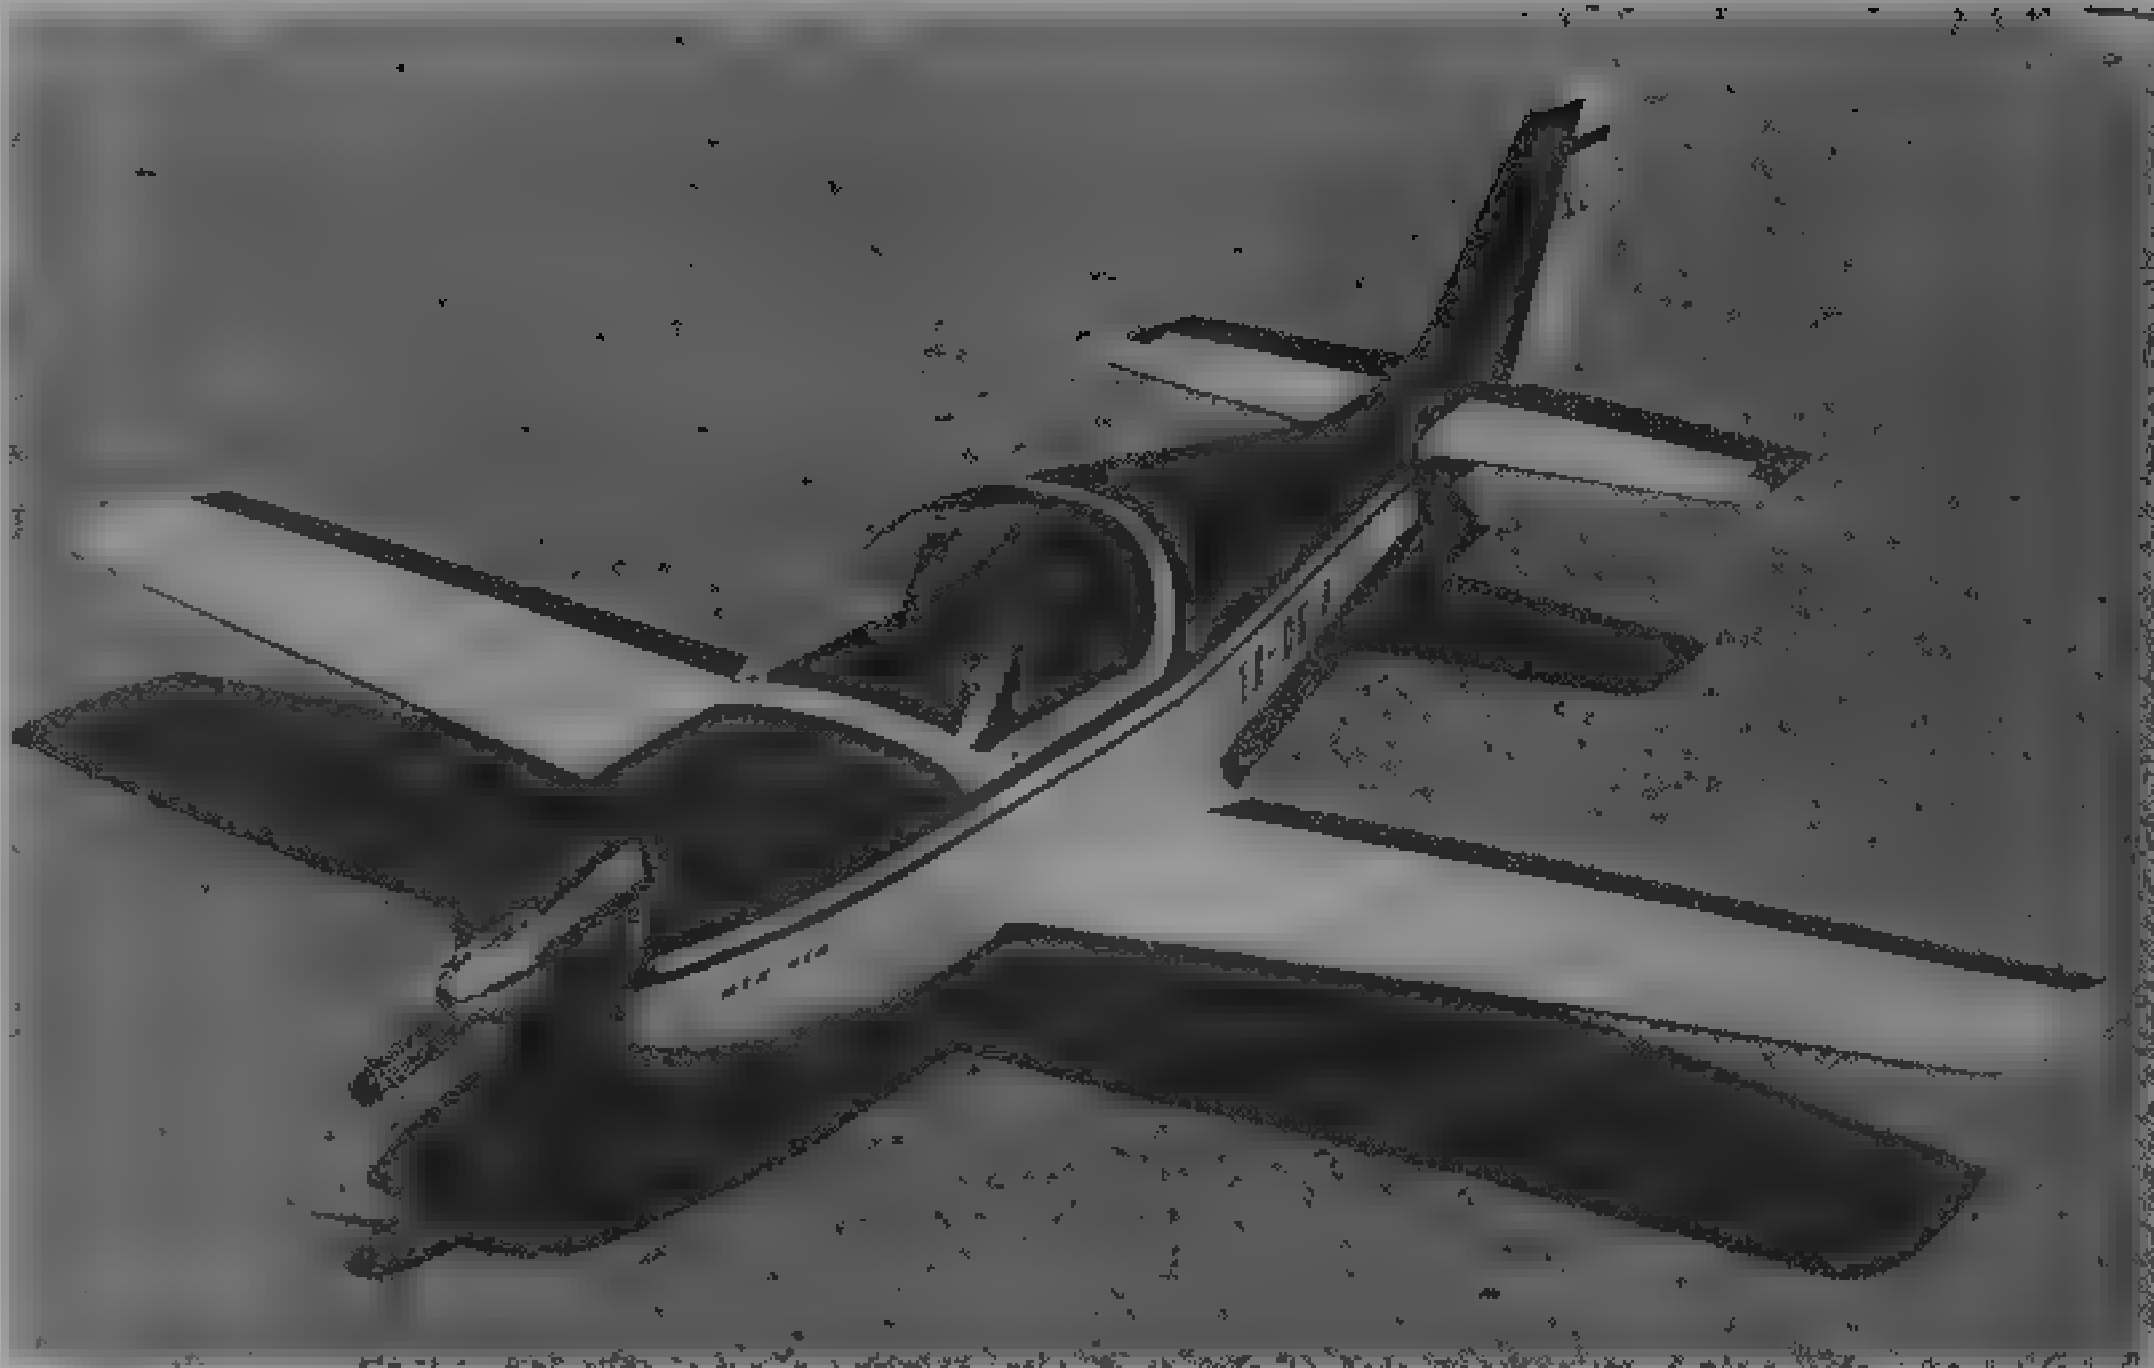
ACCOMMODATION: Seats for two persons side by side, with 0.17 m³ (6.0 cu ft) of baggage space behind. One-piece rearward-sliding bubble canopy. Cockpit heated and ventilated

SYSTEM: Single hydraulic system for landing gear and flap actuation, pressure 210 bars (3,045 lb/sq in), flow rate at 1,000 rpm 36 litres (9.5 US gallons; 7.9 Imp gallons)/min. Electrical system 28 V DC) supplied by 28 V engine-driven starter/generator and 24 V 37 Ah battery

AVIONICS: *Comms:* Bendix/King VHF radio, intercom and transponder

Flight: Bendix/King VOR/ILS, DME and marker beacon receiver

Instrumentation: Conventional analog type

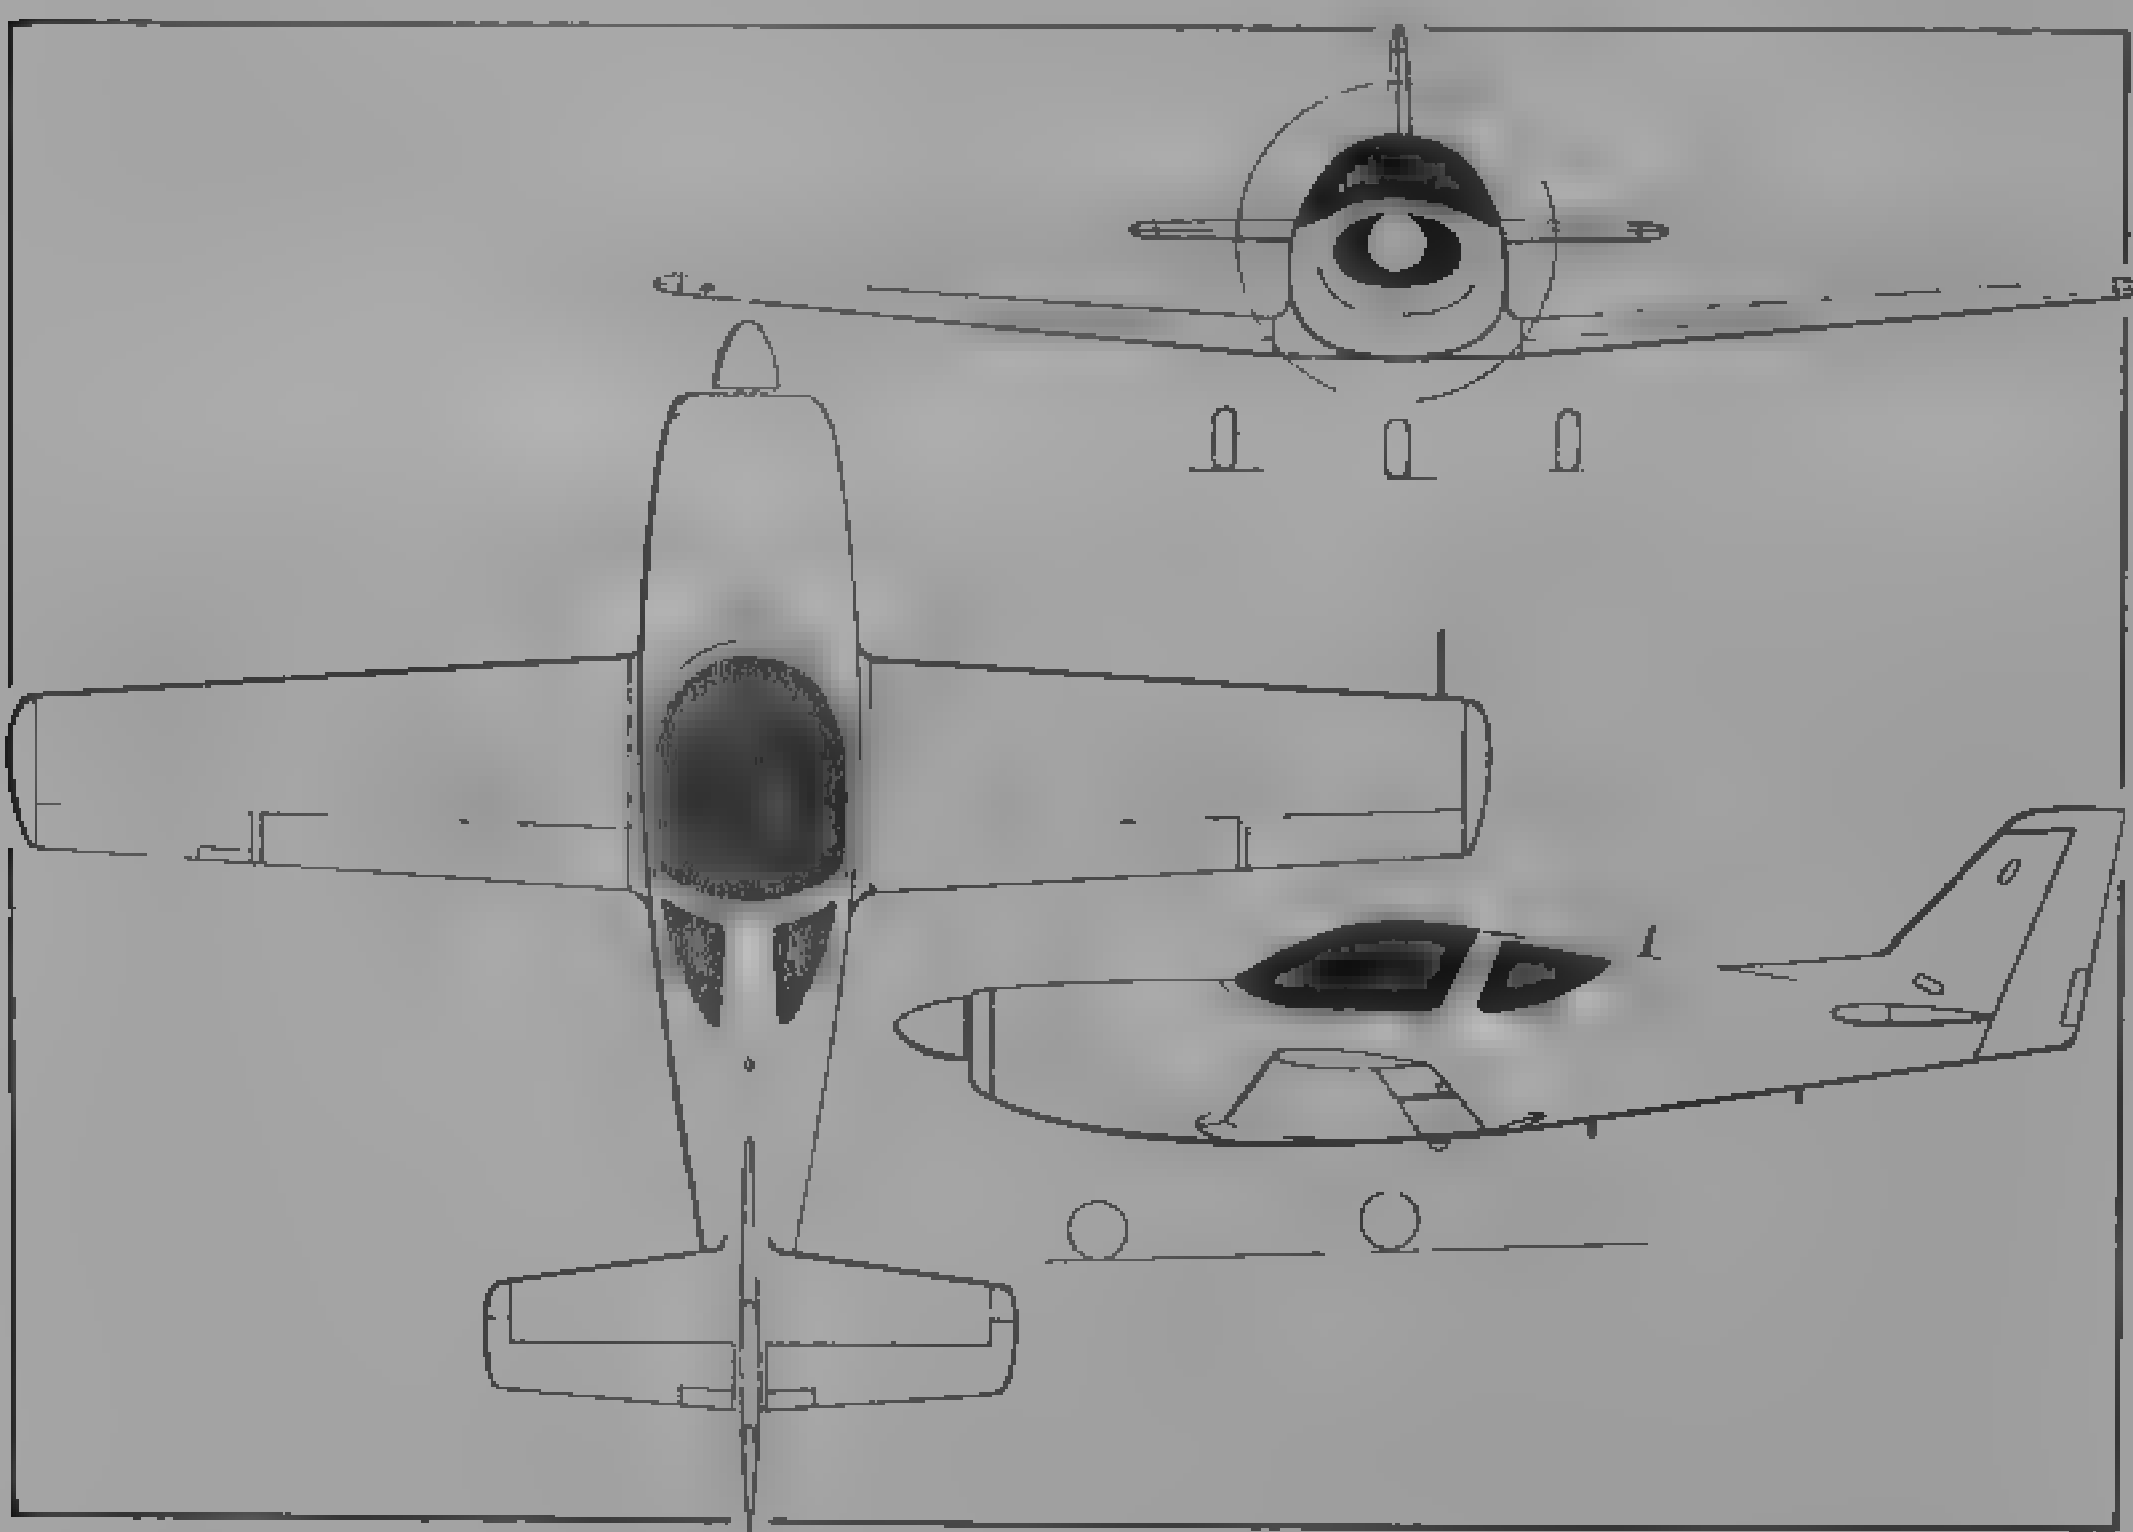


Model of the DK 10 Dracula two-seat trainer

1995

DIMENSIONS, EXTERNAL:	
Wing span	8.38 m (27 ft 6 in)
Wing chord: at root	1.50 m (4 ft 11 in)
at tip	0.887 m (2 ft 11 in)
Wing aspect ratio	7.02
Length overall	6.98 m (22 ft 10¾ in)
Fuselage: Length	5.98 m (19 ft 7½ in)
Max width	1.20 m (3 ft 11¼ in)
Max depth	1.335 m (4 ft 4½ in)
Height overall	2.10 m (6 ft 10¾ in)
Tailplane span	3.00 m (9 ft 10 in)
Wheel track	1.755 m (5 ft 9 in)
Wheelbase	2.64 m (8 ft 8 in)
Propeller diameter	1.82 m (5 ft 11¾ in)
Propeller ground clearance	0.26 m (10¼ in)
Baggage door: Height	0.90 m (2 ft 11¼ in)
Width	1.20 m (3 ft 11¼ in)
Height to sill	0.30 m (11¾ in)
DIMENSIONS, INTERNAL:	
Cockpit: Length	1.18 m (3 ft 10½ in)
Max width	1.10 m (3 ft 7¼ in)
Max height	1.225 m (4 ft 0¼ in)
Floor area	1.15 m² (12.38 sq ft)
Volume	0.95 m³ (33.5 cu ft)
AREAS:	
Wings, gross	10.00 m² (107.6 sq ft)
Ailerons (total, incl tab)	0.727 m² (7.82 sq ft)
Trailing-edge flaps (total)	1.458 m² (15.69 sq ft)
Fin	1.31 m² (14.10 sq ft)
Rudder, incl tab	0.562 m² (6.05 sq ft)
Tailplane	2.325 m² (25.03 sq ft)
Elevator (total,incl tabs)	0.939 m²(10.11 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty	490 kg (1,080 lb)
Max payload	184 kg (405 lb)
Max T-O and landing weight	750 kg (1,653 lb)
Max zero-fuel weight	674 kg (1,486 lb)
Max wing loading	75.0 kg/m² (15.36 lb/sq ft)
Max power loading	6.71 kg/kW (11.02 lb/hp)
PERFORMANCE (estimated, at max T-O weight):	
Max level speed at S/L	163 kts (302 km/h; 188 mph)
Max cruising speed at S/L	151 kts (280 km/h; 174 mph)
Econ cruising speed at 3 000 m (9,840 ft)	124 kts (230 km/h; 143 mph)
Stalling speed, power off:	
flaps up	58 kts (107 km/h, 67 mph)
flaps down	52 kts (96 km/h, 60 mph)
Max rate of climb at S/L	228 m (748 ft)/min
Service ceiling	5,000 m (16,400 ft)
T-O run	273 m (896 ft)
T-O to 15 m (50 ft)	364 m (1,195 ft)
Landing from 15 m (50 ft)	383 m (1 257 ft)
Landing run	250 m (821 ft)
Range with max fuel	540 n miles (1,000 km; 621 miles)

NEW ENTRY



CPCA Dracula (O-320 flat four engine) *(Jane's/James Goulding)*

1995

IAR

SC IAR SA (formerly ICA)

1 Aeroportului Street, PO Box 198, R-2200 Brasov
Telephone: 40 (68) 150015
Fax: 40 (68) 151304
Telex: 61266 ICAER R
MANAGING DIRECTOR: Dipl Eng Neculai Banea

Factory, created 1968, continues work begun in 1926 by IAR Brasov and undertaken 1950-59 as URMV 3 Brasov; occupies 1.26 ha (3.11 acre) site, including 160,000 m² (1,722,225 sq ft) factory area, and had 1995 workforce of 2,930. Currently manufactures Romanian designed light aircraft and (under licence from Eurocopter France) Puma helicopter; IS-28/29/35 series sailplanes (see 1992-93 and earlier *Jane's*), spares for IAR 316B Alouette III helicopter; aircraft components and equipment.

UPDATED

IAR (EUROCOPTER FRANCE) IAR-330L PUMA

TYPE: Twin-turboshaft medium transport helicopter

PROGRAMME: Agreement for licence production of AS 330 Puma in Romania concluded 1977, 100 initially covered, since expanded, current production rate about 10 a year. Romania sole producer of Puma, see IAR entry in 1991-92 *Jane's* for details of earlier French and other production

CURRENT VERSIONS: **Civil:** For oil platform, police security and patrol, casevac, aerial photography, drug interdiction, power/pipeline patrol, surveillance and other duties.

Coastguard: Customs and Excise patrol, search and rescue, sea survey and emergency missions.

Military: Artillery observation, troop transport, medevac, cargo/sling transport, border security, anti-armour attack and air-to-air defence

Oryx: South African developed version, described under Atlas heading in that section.

Naval: Anti-submarine, air-to-surface attack, reconnaissance, personnel transport and air ambulance.

VIP/Executive: 8/15-seat VIP transport or airborne command post.

Puma 2000. Upgraded version; described in *Jane's Aircraft Upgrades*.

CUSTOMERS: 165 built by mid-1991, most for Romanian Air Force but 60 to 70 exported to Pakistan, South Africa (50), Sudan and others. No updated total received since then, but IAR reports Romanian Air Force order for six. United Arab Emirates Air Force received 10 second-hand aircraft in 1993-94, and has option for 10 new built Pumas.

DESIGN FEATURES: Four-blade main rotor, with fully articulated hub and integral hydraulically actuated rotor brake (on main gearbox, stopping rotor 15 seconds after engine shutdown), blade cuffs, with horns, connected by link rods to swashplate articulated by three hydraulic twin-cylinder servo-control units, each blade attached to sleeve by two quick-disconnect pins for rapid folding. Starboard five-blade tail rotor with flapping hinges.

Mechanical shaft and gear drive, five-stage main gearbox, atop cabin behind engines, has two separate inputs from engines; first stage drives (from each engine) intermediate shaft directly driving alternator and ventilation fan and indirectly two hydraulic pumps; at second stage, action of both units synchronises on single main driveshaft by freewheeling spur gears – if one or both engines stops, gears rotated by remaining turbine or autorotating rotor, maintaining drive to ancillary systems.

Drive to tail rotor via shafting and intermediate angle gearbox, terminating at right-angle tail rotor gearbox. Turbine output 23,000 rpm, main rotor shaft 265 rpm; tail rotor shaft 1,278 rpm. Engine installation outside main fuselage shell, port horizontal stabiliser at tail.

FLYING CONTROLS: Fully powered dual hydraulic with full-time yaw damper operating series hydraulic servo in control runs; autopilot, with provision for coupling to self-contained navigation and microwave landing systems (see Avionics).

STRUCTURE: Moulded main blades have GFRP roving spar, GFRP/CFRP fabric skins and Moltoprene/honeycomb filler, with stainless steel covered leading-edges; titanium leading-edge shielding of heating mat if optional blade de-icing fitted on either rotor. Tail rotor blades metal. All-metal airframe structure, local use of titanium alloy under engines.

LANDING GEAR: Messier-Bugatti semi-retractable tricycle type, with twin wheels on each unit. Main units retract upward hydraulically into fairings on sides of fuselage, self-centring nose unit retracts rearward. When landing gear is down, nosewheel jack is extended and mainwheel jacks are telescoped. Dual-chamber oleo-pneumatic shock-absorbers. All tyres same size (7.00-6), of tubeless type, pressure 6.0 bars (85 lb/sq in) on all units. Hydraulic differential disc brakes, controlled by foot pedals. Lever-operated parking brake. Emergency pop-out flotation units can be mounted on rear landing gear fairings and forward fuselage.

POWER PLANT: Two Turbomecanica Romanian built Turbomeca Turmo IVCA turboshafts, each rated at 1,184 kW (1,588 shp) (S/L, ISA) for maximum emergency power, 1,114 kW (1,494 shp) for T-O, 1,029 kW (1,380 shp) intermediate emergency power and 941 kW (1,262 shp) maximum continuous. Intake anti-icing. Engines mounted side by side above cabin forward of main rotor and separated by firewall. They are coupled to main rotor transmission box, with shaft drive to tail rotor, and form a completely independent system from fuel tanks up to main gearbox inputs.

Fuel in four flexible tanks and one auxiliary tank beneath cargo compartment floor, total capacity 1,544 litres (408 US gallons; 339.5 Imp gallons). External auxiliary tanks (two, each 350 litres, 92.5 US gallons, 77 Imp gallons capacity) available. For long-range missions (mainly offshore) one or two special internal tanks (each 215 litres; 56.8 US gallons, 47.25 Imp gallons) can be fitted in cabin. Each engine supplied normally by two interconnected primary tanks, lower halves of which have self-sealing walls for protection against small calibre projectiles. Refuelling point on starboard side of main cabin. Oil capacity 22 litres (5.8 US gallons; 4.8 Imp gallons) for engines, 25.5 litres (6.7 US gallons, 5.6 Imp gallons) for transmission.

ACCOMMODATION: Crew of one (VFR) or two (IFR) side by side on anti-crash seats on flight deck, with jump-seat for third crew member if required. Door on each side of flight deck. Internal doorway connects flight deck to cabin, with folding seat in doorway for extra crew member or cargo supervisor. Dual controls standard.

Accommodation in main cabin for 16 individually equipped troops, six stretchers and seven seated patients, or equivalent freight; number of troops can be increased to 20 in high-density version. Alternative 17/20-seat civil passenger or 8/15 seat executive interiors (including toilet) available. Strengthened floor for cargo-carrying, with lashing points. Jettisonable sliding door on each side of main cabin. Removable panel on underside of fuselage, at rear of main cabin, permits longer loads to be accommodated and also serves as emergency exit. Hatch in floor below centreline of main rotor for carrying up to 3,200 kg (7,055 lb) on internally mounted cargo sling. Fixed or retractable rescue hoist (capacity 275 kg, 606 lb) can be mounted externally on starboard side of fuselage. Cabin and flight deck heated, ventilated and soundproofed. Demisting, de-icing, washers and wipers for pilots' windscreens. Air conditioning system optional.

IAR-330L Puma in Romanian Air Force camouflage

1995

SYSTEMS: Two independent hydraulic systems, each 172 bars (2,500 lb/sq in), supplied by self regulating pumps driven by main gearbox. Each system supplies one set of servo unit chambers, left-hand system also supplying autopilot, landing gear, rotor brake and wheel brakes. Freewheels in main gearbox ensure that both systems remain in operation, for supplying servo-controls, if engines are stopped in flight. Other hydraulically actuated systems can be operated on ground from main gearbox, or through ground power receptacle. Independent auxiliary system, fed through hand pump, can be used in emergency to lower landing gear and pressurise accumulator for parking brake on ground.

Three-phase 200 V AC electrical power supplied by 20 kVA 400 Hz alternator, driven by port side intermediate shaft from main gearbox and available on ground under same conditions as hydraulic ancillary systems. Second 20 kVA alternator optional. 28.5 V 10 kW DC power provided from AC system by two transformer-rectifiers. Main aircraft battery used for self-starting and emergency power in flight. For latter purpose, emergency 400 VA inverter can supply essential navigation equipment from battery, permitting at least 20 minutes continued flight in event of main power failure.

Optional electric de-icing of main and tail rotor blades, with heating mat protected by titanium shielding on leading-edge of each blade. De-icing of engines and engine air intakes by warm air bled from compressor. Anti-snow shield for Winter operations.

AVIONICS: *Comms:* Optional VHF, UHF, tactical HF and HF/SSB com radio and intercom.

Radar: Nose-mounted Bendix/King RDR 1400 or Honeywell Primus 40 or 50 search radar in SAR versions.

Flight: Radio compass, radio altimeter, GPS, VLF Omega, Decca navigator and flight log, Doppler, and VOR/ILS with glide path optional. Autopilot, with provision for coupling to self contained navigation and microwave landing systems. SAR version has full IFR instrumentation optional. Doppler and Decca self-contained navigation system, including navigation computer, polar indicator, roller-map display, hover indicator, route mileage indicator and ground speed and drift indicator.

Instrumentation: Full IFR panel optional. Roof-mounted sight for missiles.

Self-defence: Laser/radar warning system, chaff/flare dispensers and smoke launchers optional in armed version.

ARMAMENT: Armed version equipped with two forward firing 23 mm guns in streamline pods attached to lower sides of fuselage at front, steel tube carriers attached to sides of main cabin can each carry two or four unguided air-to-ground rocket pods (sixteen or thirty two 57 mm or two 122 mm), plus two wire-guided or four laser-guided anti-tank missiles, or two or four infra-red air-to-air missiles, anti-infantry mines or anti-submarine mines. 12.7 mm machine gun pintle-mounted in each cabin doorway. Alternative loads on cabin outriggers can include two or four 7.62 mm GMP 2 machine gun pods (550 rds/pod) or four 100 kg bombs.

DIMENSIONS, EXTERNAL:
- Main rotor diameter: 15.08 m (49 ft 5⅜ in)
- Tail rotor diameter: 3.04 m (9 ft 11¾ in)
- Distance between rotor centres: 9.20 m (30 ft 2¼ in)
- Main rotor blade chord: 0.60 m (1 ft 11½ in)
- Tail rotor ground clearance: 2.10 m (6 ft 10¾ in)
- Length
  - overall, both rotors turning: 18.22 m (59 ft 9¼ in)
  - fuselage: 14.06 m (46 ft 1½ in)
  - main blades folded, tail rotor turning: 14.82 m (48 ft 7½ in)
- Height
  - overall, tail rotor turning: 5.14 m (16 ft 10½ in)
  - to top of rotor head: 4.54 m (14 ft 10¾ in)
- Width, blades folded: 3.62 m (11 ft 10½ in)
  - over wheel fairings: 3.00 m (9 ft 10 in)
- Wheel track: 2.38 m (7 ft 10¼ in)
- Wheelbase: 4.045 m (13 ft 3 in)
- Tail rotor ground clearance: 2.10 m (6 ft 10¾ in)
- Passenger cabin doors, each
  - Height: 1.35 m (4 ft 5 in)
  - Width: 1.35 m (4 ft 5 in)
  - Height to sill: 1.00 m (3 ft 3¼ in)
- Floor hatch, rear of cabin
  - Length: 0.98 m (3 ft 2¾ in)
  - Width: 0.70 m (2 ft 3½ in)

DIMENSIONS, INTERNAL:
- Cabin: Length: 6.05 m (19 ft 10 in)
  - Max width: 1.80 m (5 ft 10¾ in)
  - Max height: 1.55 m (5 ft 1 in)
  - Floor area: 7.80 m² (84 sq ft)
  - Usable volume: 11.40 m³ (403 cu ft)

AREAS:
- Main rotor blades (each): 4.00 m² (43.06 sq ft)
- Tail rotor blades (each): 0.28 m² (3.01 sq ft)
- Main rotor disc: 176.7 m² (1,902.1 sq ft)
- Tail rotor disc: 7.26 m² (78.13 sq ft)
- Horizontal stabiliser: 1.34 m² (14.42 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty, standard aircraft: 3,615 kg (7,970 lb)
- Max fuel load: standard internal: 1,220 kg (2,690 lb)
  - external auxiliary tanks: 552 kg (1,217 lb)
- Max cargo sling load: 3,200 kg (7,055 lb)
- Max T-O and landing weight: 7,400 kg (16,315 lb)
- Max disc loading: 41.88 kg/m² (8.58 lb/sq ft)

PERFORMANCE (A: at 6,000 kg; 13,230 lb AUW, B: at max T-O weight):
- Never-exceed speed (VNE)
  - A: 158 kts (294 km/h; 182 mph)
  - B: 142 kts (263 km/h, 163 mph)
- Max cruising speed: A: 146 kts (271 km/h, 168 mph)
  - B: 139 kts (258 km/h, 160 mph)
- Normal cruising speed: B: 134 kts (248 km/h, 154 mph)
- Max rate of climb at S/L: A: 552 m (1,810 ft)/min
  - B: 366 m (1,200 ft)/min
- Service ceiling (30 m, 100 ft/min rate of climb)
  - A: 6,000 m (19,680 ft)
  - B: 4,800 m (15,750 ft)
- Hovering ceiling IGE: A, ISA: 4,400 m (14,435 ft)
  - A, ISA +20°C: 3,700 m (12,135 ft)
  - B, ISA: 2,300 m (7,545 ft)
  - B, ISA +20°C: 1,600 m (5,250 ft)
- Hovering ceiling OGE: A, ISA: 4,250 m (13,940 ft)
  - A, ISA +20°C: 3,600 m (11,810 ft)
  - B, ISA: 1,700 m (5,575 ft)
  - B, ISA +20°C: 1,050 m (3,445 ft)
- Max range at normal cruising speed, no reserves
  - A: 309 n miles (572 km; 355 miles)
  - B: 297 n miles (550 km; 341 miles)
- Max endurance at 70 kts (130 km/h, 81 mph), no reserves: 3 h 9 min

UPDATED

IAR (BELL) AH-1F HUEYCOBRA

Reported in mid-1995 that agreement signed between Romanian government and Bell Helicopter Textron for licence production of up to 96 AH-1F HueyCobras (airframes by IAR, engines and transmission system by Turbomecanica), deliveries to begin 1999.

NEW ENTRY

IAR IS-28M2A

TYPE: Two-seat motor glider

PROGRAMME: Two motor glider versions originally developed from IS-28B2 sailplane, of which tandem-seat IS-28M1 (later redesignated IAR-34) last described in 1981-82 *Jane's*; principal version is side by side IS-28M2 (M2A with strengthened wings from c/n 41 onwards); prototype (YR-1013) made first flight 26 June 1976; 50.7 kW (68 hp) engine in earlier aircraft, but 59.7 kW (80 hp) now standard, certificated in Australia, Japan, Norway, Portugal and UK. Small-scale production believed continuing. Two prototypes with Rotax 912 engine (**IS-28 M2RS**) completed in 1993

CUSTOMERS: Sold in Argentina, Australia, Canada, Denmark, Hungary, India, Israel, Norway, Philippines, Spain, Sweden, Switzerland, UK and USA. Present production total not known

DESIGN FEATURES: Low-mounted wing, redesigned forward fuselage/canopy/main landing gear, otherwise similar to IS-28B2 sailplane (1992-93 *Jane's*). T tailplane with anhedral

Wortmann wing sections (root FX-61-163, tip FX-60-126), dihedral 2°, sweepforward 2° 30' at quarter-chord

FLYING CONTROLS: Mechanical for ailerons/elevators/rudder, two-segment Hütter airbrakes in each wing upper surface, trim tab in each elevator. Optional split flaps, capable of negative setting

STRUCTURE: Mainly aluminium alloy. Single-spar wing, with metal ribs and skin, all-metal flaps (when fitted) and air brakes, ailerons, and elevator/rudder trailing-edges, are fabric covered. Front fuselage has metal longerons and frames with glassfibre fairings and engine cowling panels, centre-fuselage is metal monocoque, rear fuselage metal frames and skin

LANDING GEAR: Two retractable mainwheels side by side under centre-fuselage, with rubber disc shock-absorbers and mechanical drum brakes. Steerable, non-retractable tailwheel, also with shock-absorber

POWER PLANT: One 59.7 kW (80 hp) Limbach L 2000 EO1 flat-four engine, driving a Hoffmann HO-V62R/L160T two-blade adjustable-pitch fully feathering propeller. Single fuel tank aft of cockpit, capacity 40 litres (10.6 US gallons, 8.8 Imp gallons) standard, 60 litres (15.8 US gallons, 13.2 Imp gallons) optional

ACCOMMODATION: Two seats side by side under rearward-sliding canopy. Dual controls standard

DIMENSIONS, EXTERNAL:

Wing span	17.00 m (55 ft 9¼ in)
Wing aspect ratio	15.84
Length overall	7.00 m (22 ft 11½ in)
Height over tail	2.15 m (7 ft 0 [illegible] in)
Wheel track	1.36 m (4 ft 5 [illegible] in)

AREAS:

Wings, gross	18.24 m² (196.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	560 kg (1,234 lb)
Max T-O weight	760 kg (1,675 lb)
Max wing loading	41.67 kg/m² (8.54 lb/sq ft)
Max power loading	12.75 kg/kW (20.94 lb/hp)

PERFORMANCE, POWERED (at max T-O weight):

Never-exceed speed (VNE)	113 kts (210 km/h; 130 mph)
Max level speed	100 kts (185 km/h; 115 mph)
Max cruising speed	92 kts (170 km/h; 106 mph)
Econ cruising speed	70 kts (130 km/h; 81 mph)
Stalling speed, flaps down, power on or off	36 kts (66 km/h; 41 mph)
Max rate of climb at S/L	138 m (453 ft)/min
Service ceiling	5,000 m (16,400 ft)
T-O run (grass)	250 m (820 ft)
T-O to 15 m (50 ft) (grass)	430 m (1,410 ft)
Landing run	90 m (295 ft)
Range with max fuel, no reserves	243 n miles (450 km; 280 miles)
g limits	+5.3/−2.65

PERFORMANCE, UNPOWERED (at max T-O weight):

Max speed: smooth air	113 kts (210 km/h; 130 mph)
rough air	95 kts (177 km/h; 110 mph)
Min rate of sink at 43 kts (80 km/h; 50 mph)	1.20 m (3.94 ft)/s
Best glide ratio at 54 kts (100 km/h; 62 mph)	27

UPDATED

IAR IS-28M2A two-seat motor glider *(Brian M. Service)* 1994

IAR-46

TYPE: Two-seat Utility category very light aircraft

PROGRAMME: Definition phase and marketing studies started early 1991; detail design began late 1991, development phase initiated mid-1992, first of two prototypes (YR-1037) shown at Paris Air Show June 1993, but no evidence of production since then. Intended for JAR VLA certification

DESIGN FEATURES: High-aspect ratio low-wing monoplane with raked tips and T tail. Dihedral 2° from flat centre-section, incidence 4° at root, no twist

FLYING CONTROLS: Conventional mechanical, trim tab in each elevator. Plain trailing-edge flaps

STRUCTURE: All-metal except fabric covering on elevators and rudder and GFRP for non-stressed fairings

LANDING GEAR: Semi-retractable single mainwheels with rubber in compression shock-absorption and toe operated brakes, non-retractable tailwheel

POWER PLANT: One 59 kW (79 hp) Rotax 912A flat four engine, driving a Mühlbauer MTV-1 A/170-08 two-blade variable-pitch propeller with composite blades. Fuel in single tank in fuselage, capacity 78 litres (20.6 US gallons, 17.2 Imp gallons)

ACCOMMODATION: Two adjustable seats side by side, dual controls standard. Fixed windscreen and rearward-sliding canopy. Baggage compartment aft of seats. Cockpit ventilated, heating optional

AVIONICS: *Instrumentation*: Standard VFR instrumentation to JAR 22.1303 and JAR 22.1305. Options include horizon and directional gyros, and turn co-ordinator

EQUIPMENT: Optional anti-collision and position lights

DIMENSIONS, EXTERNAL:

Wing span	11.42 m (37 ft 5½ in)
Wing chord: at root	1.40 m (4 ft 7 in)
at tip	0.929 m (3 ft 0½ in)
Wing aspect ratio	9.40
Length overall	7.85 m (25 ft 9 in)
Height overall	2.15 m (7 ft 0½ in)
Propeller diameter	1.70 m (5 ft 7 in)

DIMENSIONS, INTERNAL:

Cockpit: Length	1.54 m (5 ft 0½ in)
Max width	1.04 m (3 ft 5 in)
Max height (from seat cushion)	0.85 m (2 ft 9½ in)

AREAS:

Wings, gross	13.87 m² (149.30 sq ft)
Ailerons (total)	0.82 m² (8.83 sq ft)
Trailing-edge flaps (total)	1.36 m² (14.64 sq ft)
Vertical tail surfaces (total)	1.50 m² (16.15 sq ft)
Horizontal tail surfaces (total)	2.73 m² (29.39 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	500-530 kg (1,102-1,168 lb)
Max T-O weight	750 kg (1,653 lb)
Max wing loading	54.07 kg/m² (11.08 lb/sq ft)
Max power loading	12.74 kg/kW (20.93 lb/hp)

PERFORMANCE (estimated, at max T-O weight at S/L, ISA):

Never-exceed speed (VNE)	151 kts (280 km/h; 174 mph)
Max level speed	110 kts (204 km/h; 127 mph)
Max cruising speed	97 kts (180 km/h; 112 mph)
Econ cruising speed	89 kts (165 km/h; 102 mph)
Speed for best rate of climb	54 kts (100 km/h; 62 mph)
Stalling speed, flaps up	43 kts (78 km/h; 49 mph)
Max rate of climb	604 m (1,982 ft)/min
Service ceiling	5,000 m (16,400 ft)
T-O run	235 m (771 ft)
T-O to 15 m (50 ft)	450 m (1,477 ft)
Landing run	100 m (328 ft)
Max range, no reserves	459 n miles (850 km; 528 miles)

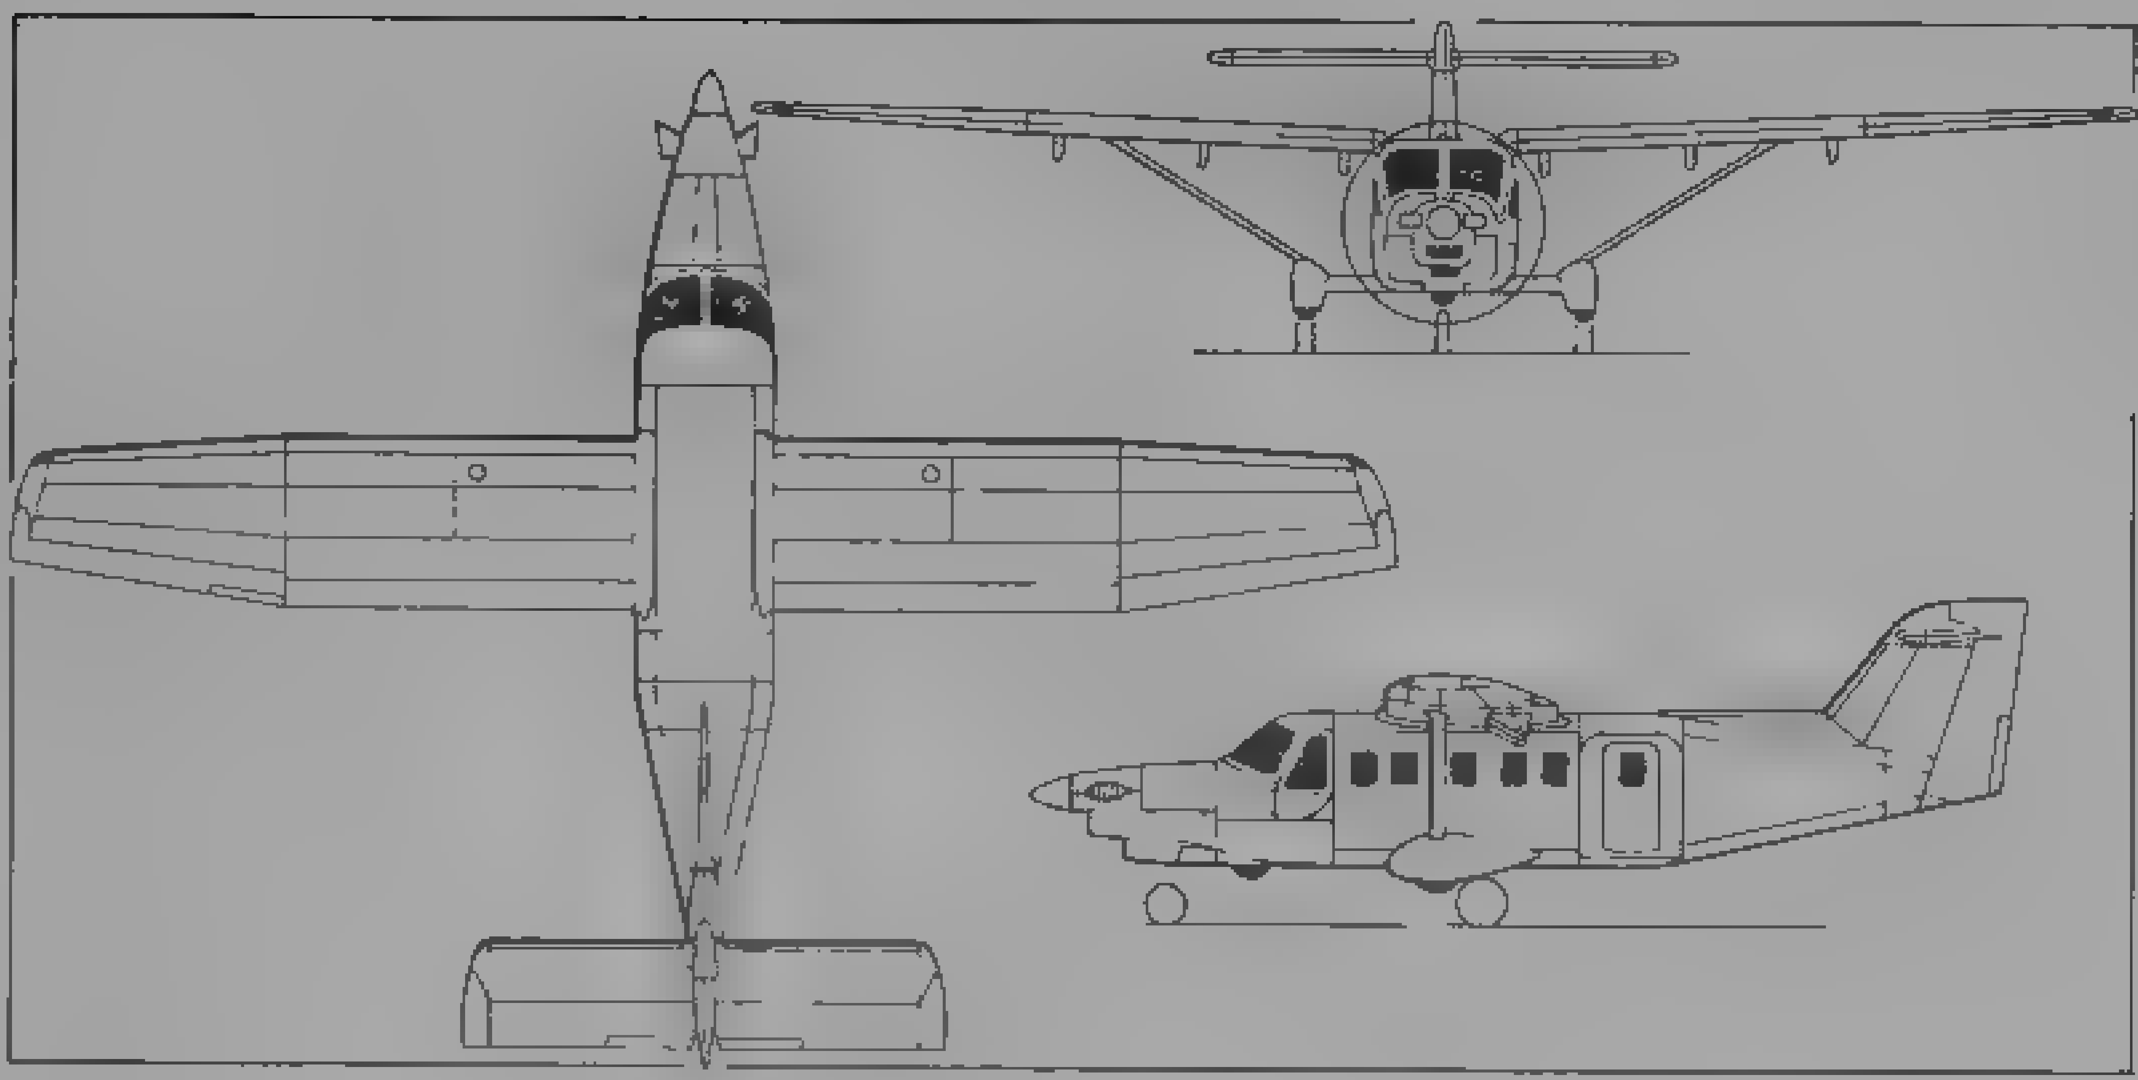
Fax 40 (1) 3128563
Telex: 11767 ITAVI R
DIRECTOR GENERAL Ilie Hrenţuc

INAV is one of several institutes resulting from separation of the former INCREST, which designed Romanian share of Soko/Avioane IAR-93/Orao (see International section) and IAR-99 Şoim jet trainer (see entry for Avioane). INAV designed AG-6 agricultural biplane (see under Aerostar in 1993-94 *Jane's*) and IAR 705 transport (see Avioane in 1993-94 edition); its latest design is AMTU light transport. IAR 503A trainer programme (1993-94 edition) has been suspended

UPDATED

INAV IAR-707 AMTU



INAV IAR-707 AMTU single-turboprop utility transport *(Jane's/Mike Keep)*
1995

TYPE: Single-turboprop multipurpose utility light transport

PROGRAMME: AMTU programme (Avion Multifunctional Pentru Transport Uşor) launched 1993 as potential An-2 replacement; construction of prototype not started by January 1995

CURRENT VERSIONS: Designed for rapid conversion from freighter to passenger transport and adaptability to wide variety of missions such as parachuting, search and rescue ambulance, aerial survey photography, border patrol and supply dropping

COSTS: About $1 million

DESIGN FEATURES: For speed range 65 to 183 knots (120 to 340 km/h; 75 to 211 mph), short field capability, 1,500 kg (3,307 lb) payload and 755 n mile (1,400 km; 870 mile) range. Braced high-wing monoplane with small stub-wings at cabin floor level supporting main landing gear fairings. Non-swept wings have constant chord inboard and tapered outer panels; wing section NACA 23015 on constant chord portion, NACA 23012 (mod) at tip; dihedral 3° from roots; incidence 3°; no twist. Sweptback fin and rudder with long dorsal fin and fixed incidence high-mounted tailplane. STOL characteristics permit operation from unprepared strips under harsh environmental conditions

FLYING CONTROLS: Primary surfaces manual/mechanical (ailerons by cables and pushrods, elevators by pushrods, rudder by cables); all surfaces horn balanced, trim tab in rudder and starboard elevator, anti-servo tab in port elevator; electrically operated trim tab in port aileron. Electrically operated double-slotted flaps; ailerons can be drooped to supplement flaps. Autopilot optional

STRUCTURE: Riveted airframe of 2000 series aluminium alloys. Two-spar wing with intermediate spanwise stringers and chordwise ribs. Tail unit two-spar fixed surfaces, single-spar mass balanced control surfaces. Conventional non-pressurised stressed skin fuselage.

LANDING GEAR: Semi-retractable tricycle type. Electromechanical actuation (with manual emergency back-up), mainwheels retracting forward into streamline fairings; rearward retracting single steerable nosewheel. All wheels remain partly exposed when retracted. Oleo-pneumatic shock-absorber in each unit. Parker Hannifin wheels, size 8.50-10 (main) and 7.00-8 (nose), tyre pressures 3.0 bars (43.5 lb/sq in) on all units. Single-disc hydraulic mainwheel brakes

POWER PLANT: One Pratt & Whitney Canada PT6A-42 turboprop, rated at 634 kW (850 shp) at 2,000 rpm at 41°C. Hartzell three-blade constant-speed fully feathering propeller with reversible pitch. Integral fuel tank in each wing, combined capacity 1,280 litres (338 US gallons, 281.5 Imp gallons), of which 1,250 litres (330 US gallons, 275 Imp gallons) are usable. Two gravity fuelling points in upper surface of each wing. Oil capacity 15 litres (4 US gallons, 3.3 Imp gallons)

ACCOMMODATION: Pilot only, or crew of two side by side. Cabin has flat floor with continuous track for seats and cargo attachments, permitting rapid rearrangement to suit alternative loads. Up to nine passengers (14 with FAR Pt 23 waiver), in two/three-abreast seating at 79 cm (31 in) pitch with single aisle. Alternative layouts include 10 to 14 paratroops plus jumpmaster; or 12 to 14 fully equipped troops, on fold-up seats along cabin sides; or six stretchers plus four seated patients or medical attendants. Forward-opening door to flight deck each side. Airstair door for passengers at rear of cabin on starboard side. Upward hinged cargo door at rear of cabin on port side, with inset rearward-hinged door for parachutist dropping. Flight deck and passenger cabin heated and ventilated

SYSTEMS: Hydraulic system for brakes only. Electrical system powered by 28 V 200 A starter/generator and 24 V 40 Ah Ni/Cd battery. Heated pitot/static probe and stall warning system. Heating and ventilation by Janitrol combustion heater. Cabin air conditioning, pneumatic-boot wing/wing strut/tail unit de-icing and 3.31 m³ (116.9 cu ft) passenger cabin oxygen system optional

AVIONICS: Bendix/King Silver Crown nav/com package standard.

Comms: KY 196 VHF com, KMA 24H audio console and KT 79 transponder standard

Radar: RDS-82 colour weather radar optional (in pod on starboard wing leading-edge)

Flight: KX 165 VHF [illegible], KR 87 ADF, KCS 55 compass system with HSI for pilot, sensitive altimeter, attitude gyro, ASI, VSI, turn and bank indicator and magnetic compass standard. KEA 130 encoding altimeter, KRA 10A radio altimeter, second KCS 55 with co-pilot's HSI, GPS and ELT optional

DIMENSIONS, EXTERNAL:
Wing span 17.85 m (58 ft 6¾ in)
Wing chord: at root 2.20 m (7 ft 2½ in)
at tip 1.40 m (4 ft 7 in)
Wing aspect ratio 8.85
Length overall 12.70 m (41 ft 8 in)
Fuselage: Max width 1.80 m (5 ft 10¾ in)
Max depth 1.97 m (6 ft 5½ in)
Height overall 4.16 m (13 ft 7¾ in)
Tailplane span 6.16 m (20 ft 2½ in)
Wheel track 3.60 m (11 ft 9¾ in)
Wheelbase 4.05 m (13 ft 3½ in)
Propeller diameter 2.56 m (8 ft 4¾ in)
Flight deck doors (each): Height 1.13 m (3 ft 8½ in)
Width 0.70 m (2 ft 3½ in)
Height to sill 1.33 m (4 ft 4½ in)
Passenger door (stbd, rear): Height 1.38 m (4 ft 6¼ in)
Width 0.65 m (2 ft 1½ in)
Height to sill 0.95 m (3 ft 1½ in)
Cargo door (port, rear): Height 1.58 m (5 ft 2¼ in)
Width 1.30 m (4 ft 3¼ in)
Height to sill 0.95 m (3 ft 1½ in)
Paratroop door: Height 1.38 m (4 ft 6¼ in)
Width 0.70 m (2 ft 3½ in)

DIMENSIONS, INTERNAL:
Flight deck: Length 1.50 m (4 ft 11 in)
Max height 1.28 m (4 ft 2½ in)
Cabin, excl flight deck: Length 4.40 m (14 ft 5¼ in)
Max width 1.65 m (5 ft 5 in)
Max height 1.65 m (5 ft 5 in)
Floor area 6.51 m² (70.1 sq ft)
Volume 11.36 m³ (401.2 cu ft)

AREAS:
Wings, gross 36.00 m² (387.5 sq ft)
Ailerons (total) 3.06 m² (32.94 sq ft)
Trailing-edge flaps (total) 5.88 m² (63.29 sq ft)
Fin, incl dorsal fin 3.46 m² (37.24 sq ft)
Rudder, incl tab 2.06 m² (22.17 sq ft)
Tailplane 4.93 m² (53.07 sq ft)
Elevators (total, incl tabs) 3.47 m² (37.35 sq ft)

WEIGHTS AND LOADINGS:
Basic weight empty 1,910 kg (4,211 lb)
Operating weight empty, two pilots 2,170 kg (4,784 lb)
Max fuel weight 1,030 kg (2,271 lb)
Max payload 1,800 kg (3,968 lb)
Max T-O weight 4,200 kg (9,259 lb)
Max landing weight 4,000 kg (8,818 lb)
Max zero-fuel weight 3,948 kg (8,704 lb)
Max cargo floor loading 900 kg/m² (184.3 lb/sq ft)
Max wing loading 116.7 kg/m² (23.89 lb/sq ft)
Max power loading 6.63 kg/kW (10.89 lb/shp)

PERFORMANCE (estimated, at max T-O weight except where indicated):
Never-exceed speed (V_{NE}) 192 kts (356 km/h; 221 mph) IAS
Max cruising speed:
at S/L 177 kts (328 km/h; 204 mph)
at 4,000 m (13,125 ft) 193 kts (357 km/h; 222 mph)
Stalling speed, power off, AUW of 4,000 kg (8,818 lb):
flaps up 66 kts (121 km/h; 76 mph)
flaps down 57 kts (105 km/h; 66 mph)
Max rate of climb at S/L, AUW of 4,000 kg (8,818 lb) 468 m (1,535 ft)/min
Service ceiling 9,500 m (31,170 ft)
T-O run 220 m (722 ft)
T-O to 15 m (50 ft) 530 m (1,739 ft)
Landing from 15 m (50 ft) 330 m (1,083 ft)
Landing run 225 m (739 ft)
Range at 55% power at 3,050 m (10,000 ft), allowances for T-O, climb, descent and 30 min reserves 1,080 n miles (2,000 km; 1,242 miles)
g limits (clean) +3.43/−1.37

CHAIRMAN AND CEO: Dumitru Cucu
EXECUTIVE DIRECTOR, SALES AND MARKETING:
Constantin Dinischiotu
CHIEF OF PUBLIC RELATIONS: Carmen Gheorghiu

Established 1951 and operated successively under several names (see 1991-92 *Jane's* for details); became commercial company under present name 20 November 1990; manufactures One-Eleven and Islander, and components for Boeing 737/757; repairs and overhauls various large and small aircraft, agent and repair centre for Textron Lycoming engines; manufactures aircraft equipment. Romaero's 3.38 ha (8.35 acre) site includes 100,370 m² (1,080,375 sq ft) of covered space

UPDATED

ROMAERO (BAC/BAe) ONE-ELEVEN and AIRSTAR 2500

TYPE: Twin-turbofan short/medium-range transport

PROGRAMME: Romaero is Romanian prime contractor for licence manufacture of BAC/BAe One-Elevens (see UK section of 1974-75 and 1981-82 *Jane's*), under technology transfer programme known as Rombac 1-11; corresponding programme covers Romanian production of Rolls-Royce Spey 512-14DW engines. One BAe built Srs 487 freighter and two Srs 525/1s delivered 1981-82, industrial transfer to Romania completed 1986, Romanian assembled Srs 560 first flight 18 September and certification November 1982 (entered service with Tarom January 1983). Future programme now concentrating on Tay-engined Airstar 2500 version

CURRENT VERSIONS: **One-Eleven Series 495**: Combines standard fuselage and accommodation of British built One-Eleven Srs 400 with wings and power plant of Srs 560 and modified landing gear (using low pressure tyres to permit operation from secondary low-strength runways with poorer grade surfaces); 10th One-Eleven, long delayed but due for completion in 1995, is first convertible passenger/cargo **Model 497** (equivalent to BAC/BAe Srs 475 but redesigned by Romaero and approved by BAe using components from Srs 487 and 560)

One-Eleven Series 560 (Model 561RC): Stretched version, derived from British Series 300/400; lengthened fuselage (2.54 m, 8 ft 4 in forward of wings, 1.57 m, 5 ft 2 in aft), accommodates up to 109 passengers; wing extensions increase span by 1.52 m (5 ft), main landing gear

strengthened, heavier wing planks to cater for increased AUW. Nine built; production completed. Details in 1994-95 and earlier *Jane's*

Airstar 2500: Basically as Series 560, seating 96 to 115 passengers, but re-engined with Rolls-Royce Tay 650 turbofans to meet current noise and environmental pollution requirements, first example due to fly late 1996. *Description applies to Airstar 2500, except where indicated*

CUSTOMERS: Options for Airstar 2500 from Tarom, which plans to have seven converted to Tay engines from One-Eleven Srs 560s; Kiwi International Airlines (USA) has placed firm order for 11 new Airstar 2500s with five more on option.

DESIGN FEATURES: Modified NACA cambered wing section, thickness/chord ratio 12.5 per cent at root, 11 per cent at tip; dihedral 2°; incidence 2° 37′ (2° 30′ on Srs 495); sweepback 20° at quarter chord.

FLYING CONTROLS: Autopilot and provision for automatic throttle control (see Avionics). Manually actuated ailerons, with servo tabs (port tab used for trimming). Hydraulically actuated variable incidence T tailplane (controlled through duplicated hydraulic units), elevators and rudder (using tandem jacks), Fowler flaps, spoiler/airbrakes on upper surface of wings, and lift dumpers (inboard of spoilers). In Airstar 2500, elevators and rudder incorporate independent hydraulic feel simulation; rudder is offset to effect directional trim; electrically actuated trim tab in port elevator can be used instead of tailplane trim in manual flight. Elevators and rudder can be operated manually in the event of hydraulic failure.

STRUCTURE: Mostly all-metal fail-safe, mainly of copper based aluminium alloy. Three-shear-web wing torsion box with integrally machined skin/stringer panels. Redux bonded light alloy honeycomb ailerons; Srs 495 flaps have GFRP coating; fuselage uses continuous frames and stringers.

LANDING GEAR: Retractable tricycle type, with twin wheels on each unit. Hydraulic retraction, nose unit forward, main units inward. Oleo-pneumatic shock-absorbers. Hydraulic nosewheel steering. Wheels have tubeless tyres, five-plate heavy duty hydraulic disc brakes, and anti-skid units. Mainwheel tyres size 40 × 12 on Airstar 2500, pressure 11.79 bars (171 lb/sq in); size 44 × 16 on Srs 495, pressure 5.72 bars (83 lb/sq in). Nosewheel tyres size 24 × 7.25 on Airstar 2500, pressure 8.27 bars (120 lb/sq in); size 24 × 7.7 on Srs 495, pressure 7.24 bars (105 lb/sq in). Minimum ground turning radius (nosewheel to outer wingtip) 15.24 m (50 ft 0 in) for Srs 495, 17.07 m (56 ft 0 in) for Airstar 2500.

POWER PLANT (Airstar 2500): Two 67.2 kN (15,100 lb st) Rolls-Royce Tay Mk 650-14 turbofans with hydraulically actuated target type thrust reversers. Fuel tank capacities are 10,182 litres (2,690 US gallons; 2,240 Imp gallons) in main wing tanks, 3,982 litres (1,052 US gallons; 876 Imp gallons) in centre-section, and 1,562 litres (412.5 US gallons; 344 Imp gallons) in auxiliary tank. Total fuel capacity thus 15,726 litres (4,154.5 US gallons; 3,460 Imp gallons), of which 15,593 litres (4,119 US gallons; 3,430 Imp gallons) are usable. Oil capacity 8 litres (2.1 US gallons; 1.8 Imp gallons).

POWER PLANT (Srs 495): Two Rolls-Royce Spey Mk 512-14DW turbofans, each rated at 55.8 kN (12,550 lb st), pod mounted on sides of rear fuselage. Fuel in integral wing tanks with usable capacity of 10,160 litres (2,684 US gallons; 2,235 Imp gallons) and centre-section tank of 3,968 litres (1,048 US gallons; 873 Imp gallons) usable capacity; total usable fuel 14,129 litres (3,732 US gallons; 3,108 Imp gallons). Executive versions can be fitted with auxiliary fuel tanks of up to 5,791 litres (1,530 US gallons; 1,274 Imp gallons) usable capacity. Pressure refuelling point in fuselage forward of wing on starboard side. Provision for gravity refuelling. Oil capacity (total engine oil) 13.66 litres (3.6 US gallons; 3 Imp gallons) per engine. Engine hush kits standard.

ACCOMMODATION (Airstar 2500): Flight deck crew of two, plus one supernumerary (check pilot or observer); three cabin attendants. Standard seating in main cabin for 104 economy class passengers at 76 cm (30 in) pitch. Structural provision for four galleys. Toilet on each side at rear of cabin. Overhead modular baggage bins each side throughout passenger area. Ventral entrance with hydraulically operated airstair. Forward passenger door on port side incorporates optional power operated airstair. Galley service door forward on starboard side. Two overwing emergency exits on each side. Two pressurised and air conditioned, freight holds under floor, fore and aft of wings, with outward-opening plug-type doors on starboard side.

ACCOMMODATION (Srs 495): Generally as for Airstar 2500 except maximum passenger capacity 89; single overwing emergency exit each side; optional upward-opening forward freight door. Single class or mixed class layout, with movable divider bulkhead to permit any first/tourist ratio. Typical mixed class layout has 16 first class (four-abreast) and 49 tourist (five-abreast) seats. Galley units normally at front on starboard side. Coat space available on port side aft of flight deck.

SYSTEMS: Fully duplicated air conditioning and pressurisation systems. Maximum pressure differential 0.52 bar (7.5 lb/sq in). Thermal (engine bleed air) de-icing of wing, fin and tailplane leading-edges. Two independent hydraulic systems, pressure 207 bars (3,000 lb/sq in), operate flaps, spoilers, lift dumpers, thrust reversers, rudder, elevators, tailplane, landing gear, brakes, nosewheel steering, ventral and forward airstairs and windscreen wipers. Pneumatic system provides air at correct pressure and temperature for air conditioning, pressurisation and airframe anti-icing.

Electrical 115/200 V power supply from two 40 kVA three-phase 400 Hz constant-frequency AC generators, additional 40 kVA generator mounted on APU for ground operation or emergency use; 28 V DC power from transformer-rectifier units, 24 V 37 Ah battery for selected ground functions and as in-flight back-up. Gas-turbine APU in tailcone to provide ground electric power, air conditioning and engine starting, also some system checkout capability.

Visual and automatic ice detection systems: vulnerable areas heated electrically or by hot air supplied by pneumatic system, all flying control surfaces remain fully operative under icing conditions. Separate gaseous oxygen systems for passengers and crew.

AVIONICS (Airstar 2500): EFIS CRT displays for ADI, HSI and MFD. Standard ARINC interface with radio nav system allows choice of radio equipment.

Comms: Dual VHF; single HF; ATC transponder; PA system; CVR.

Radar: Weather radar.

Flight: AFCS with integral altitude alert, dual VHF nav, ADF; DME, TCAS II Cat. II landing, integrated alerting system; radio altimeter; GPWS, flight data recorder. Options include equipment for Cat. III operation.

DIMENSIONS, EXTERNAL:

Wing span	28.50 m (93 ft 6 in)
Wing chord: at root	5.00 m (16 ft 5 in)
at tip	1.61 m (5 ft 5 in)
Wing aspect ratio	8.48
Length:	
overall: Srs 495	28.50 m (93 ft 6 in)

Wheel track	4.34 m (14 ft 3 in)
Wheelbase: Srs 495	10.08 m (33 ft 1 in)
Airstar 2500	12.62 m (41 ft 5 in)
Passenger door (fwd, port): Height	1.73 m (5 ft 8 in)
Width	0.84 m (2 ft 9 in)
Height to sill	2.08 m (6 ft 10 in)
Ventral entrance, bulkhead door:	
Height	1.83 m (6 ft 0 in)
Width	0.61 m (2 ft 0 in)
Height to sill	2.08 m (6 ft 10 in)
Freight door (fwd, starboard):	
Height (projected)	0.79 m (2 ft 7 in)
Width	0.91 m (3 ft 0 in)
Height to sill	1.04 m (3 ft 5 in)
Freight door (rear, starboard):	
Height (projected)	0.71 m (2 ft 4 in)
Width	0.91 m (3 ft 0 in)
Height to sill	1.17 m (3 ft 10 in)
Freight door, main deck (optional, fwd, Srs 495):	
Height	1.85 m (6 ft 1 in)
Width	3.05 m (10 ft 0 in)
Galley service door (fwd, starboard):	
Height (projected)	1.22 m (4 ft 0 in)
Width	0.69 m (2 ft 3 in)
Height to sill	2.08 m (6 ft 10 in)
Emergency exits (each):	
Height	0.91 m (3 ft 0 in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL (Airstar 2500):

Cabin, excl flight deck: Length	21.44 m (70 ft 4 in)
Total floor area	59.5 m² (640 sq ft)
Freight holds (total volume)	9.25 m³ (680 cu ft)

DIMENSIONS, INTERNAL (Srs 495):

Cabin, excl flight deck: Length	17.32 m (56 ft 10 in)
Max width	3.15 m (10 ft 4 in)
Max height	1.98 m (6 ft 6 in)
Floor area	47.4 m² (510 sq ft)
Freight hold: fwd	10.02 m³ (354 cu ft)
rear	4.42 m³ (156 cu ft)

AREAS (Srs 495, Airstar 2500):

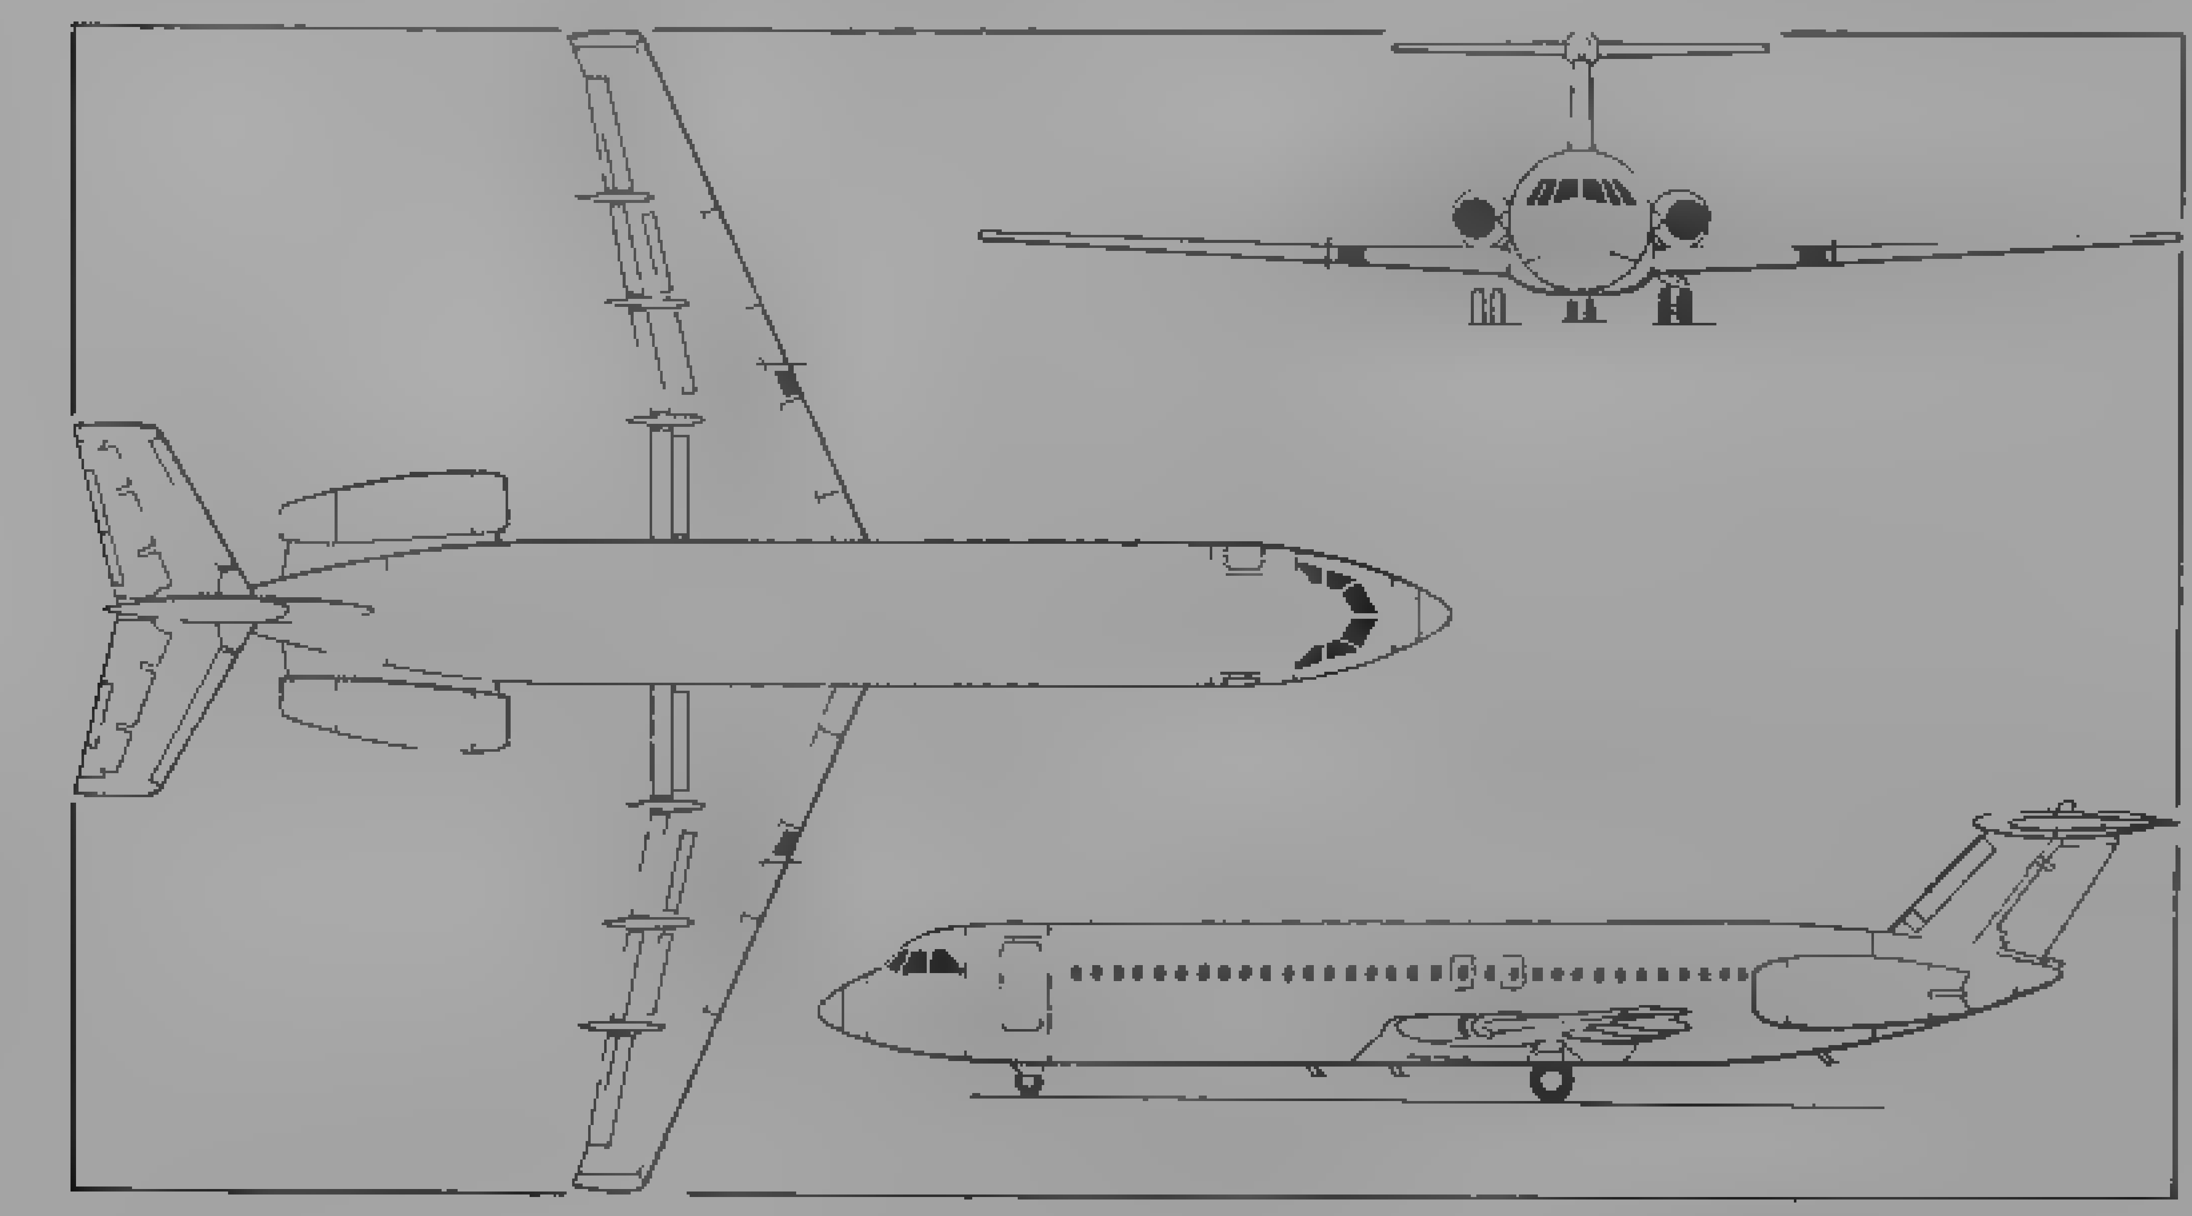
Wings, gross	95.78 m² (1,031.0 sq ft)
Ailerons (total)	2.86 m² (30.8 sq ft)
Flaps (total)	16.26 m² (175.0 sq ft)
Spoilers (total)	2.30 m² (24.8 sq ft)
Fin	7.86 m² (84.6 sq ft)
Rudder, incl tab	3.05 m² (32.8 sq ft)
Tailplane	17.43 m² (187.6 sq ft)
Elevators, incl tab	6.54 m² (70.4 sq ft)

WEIGHTS AND LOADINGS:

Operating weight empty, typical:	
Srs 495 (89 seats)	23,286 kg (51,339 lb)
Airstar 2500	27,170 kg (59,900 lb)
Max payload, typical: Srs 495	10,733 kg (23,661 lb)
Airstar 2500	10,931 kg (24,100 lb)
Max fuel weight: Airstar 2500	12,582 kg (27,738 lb)
Max T-O weight:	
Srs 495: standard	41,730 kg (92,000 lb)
optional	44,680 kg (98,500 lb)
Airstar 2500	47,400 kg (104,500 lb)
Max ramp weight:	
Srs 495: standard	41,955 kg (92,500 lb)
optional	44,905 kg (99,000 lb)
Airstar 2500	47,625 kg (105,000 lb)
Max landing weight:	
Srs 495: standard	38,100 kg (84,000 lb)
optional	39,465 kg (87,000 lb)
Airstar 2500	40,823 kg (90,000 lb)
Max zero-fuel weight:	
Srs 495: standard	33,110 kg (73,000 lb)
optional	34,020 kg (75,000 lb)
Airstar 2500	38,101 kg (84,000 lb)
Max wing loading: Srs 495	466.3 kg/m² (95.5 lb/sq ft)
Airstar 2500	495.1 kg/m² (101.4 lb/sq ft)
Max power loading: Srs 495	400.2 kg/kN (3.92 lb/lb st)
Airstar 2500	353.1 kg/kN (3.46 lb/lb st)

PERFORMANCE (at standard max T-O weights; Airstar 2500 estimated):

Design diving speed (S/L)	410 kts (760 km/h; 472 mph) EAS
Max level and max cruising speed:	
Srs 495 at 6,400 m (21,000 ft)	470 kts (870 km/h; 541 mph)
Airstar 2500 at 7,620 m (25,000 ft)	459 kts (850 km/h; 528 mph)
Econ cruising speed:	
Srs 495 at 10,670 m (35,000 ft)	410 kts (760 km/h; 472 mph)
Airstar 2500 at 7,620 m (25,000 ft)	432 kts (800 km/h; 497 mph)
Stalling speed (landing flap setting, at standard max landing weight):	
Srs 495	98 kts (182 km/h; 113 mph) EAS
Rate of climb at S/L at 300 kts (555 km/h; 345 mph) EAS:	
Srs 495	786 m (2,580 ft)/min
Max rate of climb at S/L:	
Airstar 2500	625 m (2,050 ft)/min
Max cruising altitude (both)	10,670 m (35,000 ft)
Runway LCN, rigid pavement (1.30): Srs 495	32
T-O run at S/L, ISA: Srs 495	1,676 m (5,500 ft)
Airstar 2500	2,210 m (7,250 ft)



Romaero Airstar 2500 (two Rolls-Royce Tay 650 turbofans) *(Jane's/James Goulding)* *1995*

Balanced T-O to 10.7 m (35 ft) at S/L, ISA
Srs 495 1,798 m (5,900 ft)
T-O to 15 m (50 ft): Airstar 2500 2,256 m (7,400 ft)
Landing distance (BCAR) at S/L, ISA, at standard max landing weight: Srs 495 1,440 m (4,725 ft)
Landing from 15 m (50 ft):
Airstar 2500 1,464 m (4,800 ft)
Max range, ISA, reserves for 200 n mile (370 km; 230 mile) diversion and 45 min hold:
Srs 495 1,933 n miles (3,580 km; 2,224 miles)
Range, Srs 495, with typical capacity payload, ISA, reserves as above
at 44,680 kg (98,500 lb)
1,454 n miles (2,693 km; 1,673 miles)
executive aircraft with 10 passengers and additional 5,602 litres (1,479 US gallons; 1,232 Imp gallons) fuel 2,875 n miles (5,324 km; 3,308 miles)
Range, Airstar 2500:
with max fuel 1,850 n miles (3,426 km; 2,129 miles)
with max payload
1,400 n miles (2,593 km; 1,611 miles)
OPERATIONAL NOISE LEVELS (Airstar 2500, estimated):
Approach 92 EPNdB
Sideline 93 EPNdB

UPDATED

ROMAERO (PILATUS BRITTEN-NORMAN) ISLANDER

TYPE: Twin-engined feederliner.
PROGRAMME: First flight of Romanian built Islander (built by former IRMA) 4 August 1969.
CUSTOMERS: Initial commitment to build 215 completed 1976; total of 496 delivered to Pilatus Britten-Norman by December 1994, further 14 on order for 1995. Production rate one and a half per month.

UPDATED

RUSSIA

Several 'new' aircraft manufacturing organisations appear for the first time in this section, reflecting recent changes in the Russian aerospace industry. In former times, aircraft were identified by the design bureau of their origin (MiG, Sukhoi and others) and built in State Aircraft Factories (GAZ) which had no fixed relationship with any one bureau.

The factories are now financially accountable and are assuming greater prominence in the aerospace industry. Accordingly, they appear in *Jane's* for the first time. Stronger ties are being forged between bureaux and factories but, for the moment, the Russian section remains hybrid, including both freelance design teams with no production capability and factories without a design office.

Tradition and geography have been responsible for some design/production tie-ups, such that the Kazan Helicopters Production Association (the former GAZ 22) is synonymous with the longer established name of M L Mil. Conversely, the Moscow Aircraft Production Organisation is currently building aircraft bearing the name of MiG, Ilyushin and the newer Aeroprogress and Aviatika - even though most Ilyushins are produced by the former GAZ 40 at Voronezh. Illustrating what may be a developing trend, the last-mentioned was renamed Ilyushin Aircraft Production Association in July 1994, linking design and manufacture under a single name.

NEW ENTRY

AEROPRACT A-21M SOLO

TYPE: Single-seat sporting aircraft.
PROGRAMME: Developed over 10 year period, originally with 22.4 kW (30 hp) RMZ-640 engine; available for export.
DESIGN FEATURES: Conventional cantilever low-wing monoplane, with marked dihedral from roots, constant chord and no sweep; sweptback vertical tail surfaces, high and extensive glazed canopy.
FLYING CONTROLS: Three-axis.
LANDING GEAR: Non-retractable tricycle type, single wheel on each unit, steerable and faired nosewheel, cantilever mainwheel legs.
POWER PLANT: One 34.3 kW (46 hp) Rotax 503 piston engine, two-blade propeller.
ACCOMMODATION: Single seat under side-hinged (to starboard) canopy.
DIMENSIONS, EXTERNAL:
Wing span 6.65 m (21 ft 9¾ in)
Wing chord (constant) 0.90 m (2 ft 11½ in)
Length overall 4.73 m (15 ft 6¼ in)
Height overall 1.79 m (5 ft 10½ in)
Tailplane span 1.96 m (6 ft 5¼ in)
Wheel track 1.42 m (4 ft 8 in)
AREAS:
Wings, gross 6.00 m² (64.6 sq ft)
WEIGHTS AND LOADINGS:
Max fuel 22 kg (48.5 lb)
Max T-O weight 280 kg (617 lb)

Aeropract A-21M Solo single-seat sporting aircraft *(David Stephens)*

1995

Max wing loading 46.7 kg/m² (9.55 lb/sq ft)
Max power loading 8.16 kg/kW (13.4 lb/hp)
PERFORMANCE:
Max level speed 102 kts (190 km/h; 118 mph)
Nominal cruising speed 81 kts (150 km/h; 93 mph)
Min flying speed 43 kts (80 km/h; 50 mph)
Max rate of climb at S/L 300 m (985 ft)/min
T-O run 100 m (328 ft)
Range with max fuel 116 n miles (215 km; 133 miles)
g limits +6/-3

NEW ENTRY

AEROPROGRESS/ROKS-AERO

AEROPROGRESS CORPORATION

Ulansky Al 16, Office 521, 101849 Moscow
Telephone: 7 (095) 207 05 51, 155 67 82, 491 74 33
Fax: 7 (095) 207 03 41
PRESIDENT AND GENERAL DESIGNER: Evgeny P. Grunin
DEPUTY GENERAL DESIGNER: Arnold I. Andrianov
DEPUTY GENERAL DESIGNER, FOREIGN ECONOMIC RELATIONS: Alexander V. Andreev
DESIGN BUREAU MANAGER: Sergei M. Zhiganov

Known initially as ROS-Aeroprogress, and listed in the 1993-94 *Jane's* as ROKS-Aero Corporation, this organisation was founded in 1990, to design and manufacture utility, commuter, amphibian, aerobatic, agricultural, firefighting, training and attack aircraft, WIG (wing in ground effect) vehicles, replicas and other vehicles. ROKS-Aero is the design bureau of Aeroprogress, which is a member of the Business Aviation Association, together with Moscow Aviation Production Organisation, Yakovlev's Skorost factory, the Myasishchev experimental plant, and aviation works in Komsomolsk-on-Amur, Smolensk, Novosibirsk, Ulan-Ude and Lukhovitsy. Its divisions are:

Utility Aircraft Division
DIRECTOR: Yuri I. Polavsky
CHIEF DESIGNER: Mikhail M. Vasyuk
Amphibian and Special Aircraft Division
DIRECTOR AND CHIEF DESIGNER: Mikhail S. Remizov
Business and Touring Aircraft Division
DIRECTOR AND CHIEF DESIGNER: Leonard A. Tarasevich
Trainer and Aerobatics Division
DIRECTOR: Valentin A. Fomin
Replica Division
DIRECTOR: Mikhail V. Korenkov

Washington Aeroprogress Inc of Seattle (which see) manufactures and markets this organisation's designs in the USA.

UPDATED

AEROPROGRESS/ROKS-AERO T-101 GRATCH (ROOK)

TYPE: Turboprop-powered general utility aircraft.
PROGRAMME: Design started by Utility Aircraft Division in September 1991, as monoplane successor to Antonov An-2/3 biplane; construction of first of five prototypes started April 1992; manufacture of production aircraft by Moscow Aviation Production Organisation (MAPO) initiated January 1993; first flight 7 December 1994.
CURRENT VERSIONS: **T-101**: Basic passenger/cargo transport. *Detailed description applies specifically to T-101.*

T-101E: As basic T-101 but with 917 kW (1,230 shp) P&WC PT6A-65AR turboprop, driving Hartzell propeller. AlliedSignal TPE331-14 turboprop also being considered. Maximum T-O weight 5,670 kg (12,500 lb), maximum cargo payload 2,000 kg (4,409 lb), maximum cruising speed 172 knots (320 km/h; 198 mph), range, 1 hour fuel reserve, 561 n miles (1,040 km; 646 miles).

T-101V: As basic T-101 but with amphibious float landing gear. Described separately.

T-101P: Firefighting version, on non-amphibious floats.

T-101L: As basic T-101 but with ski landing gear.

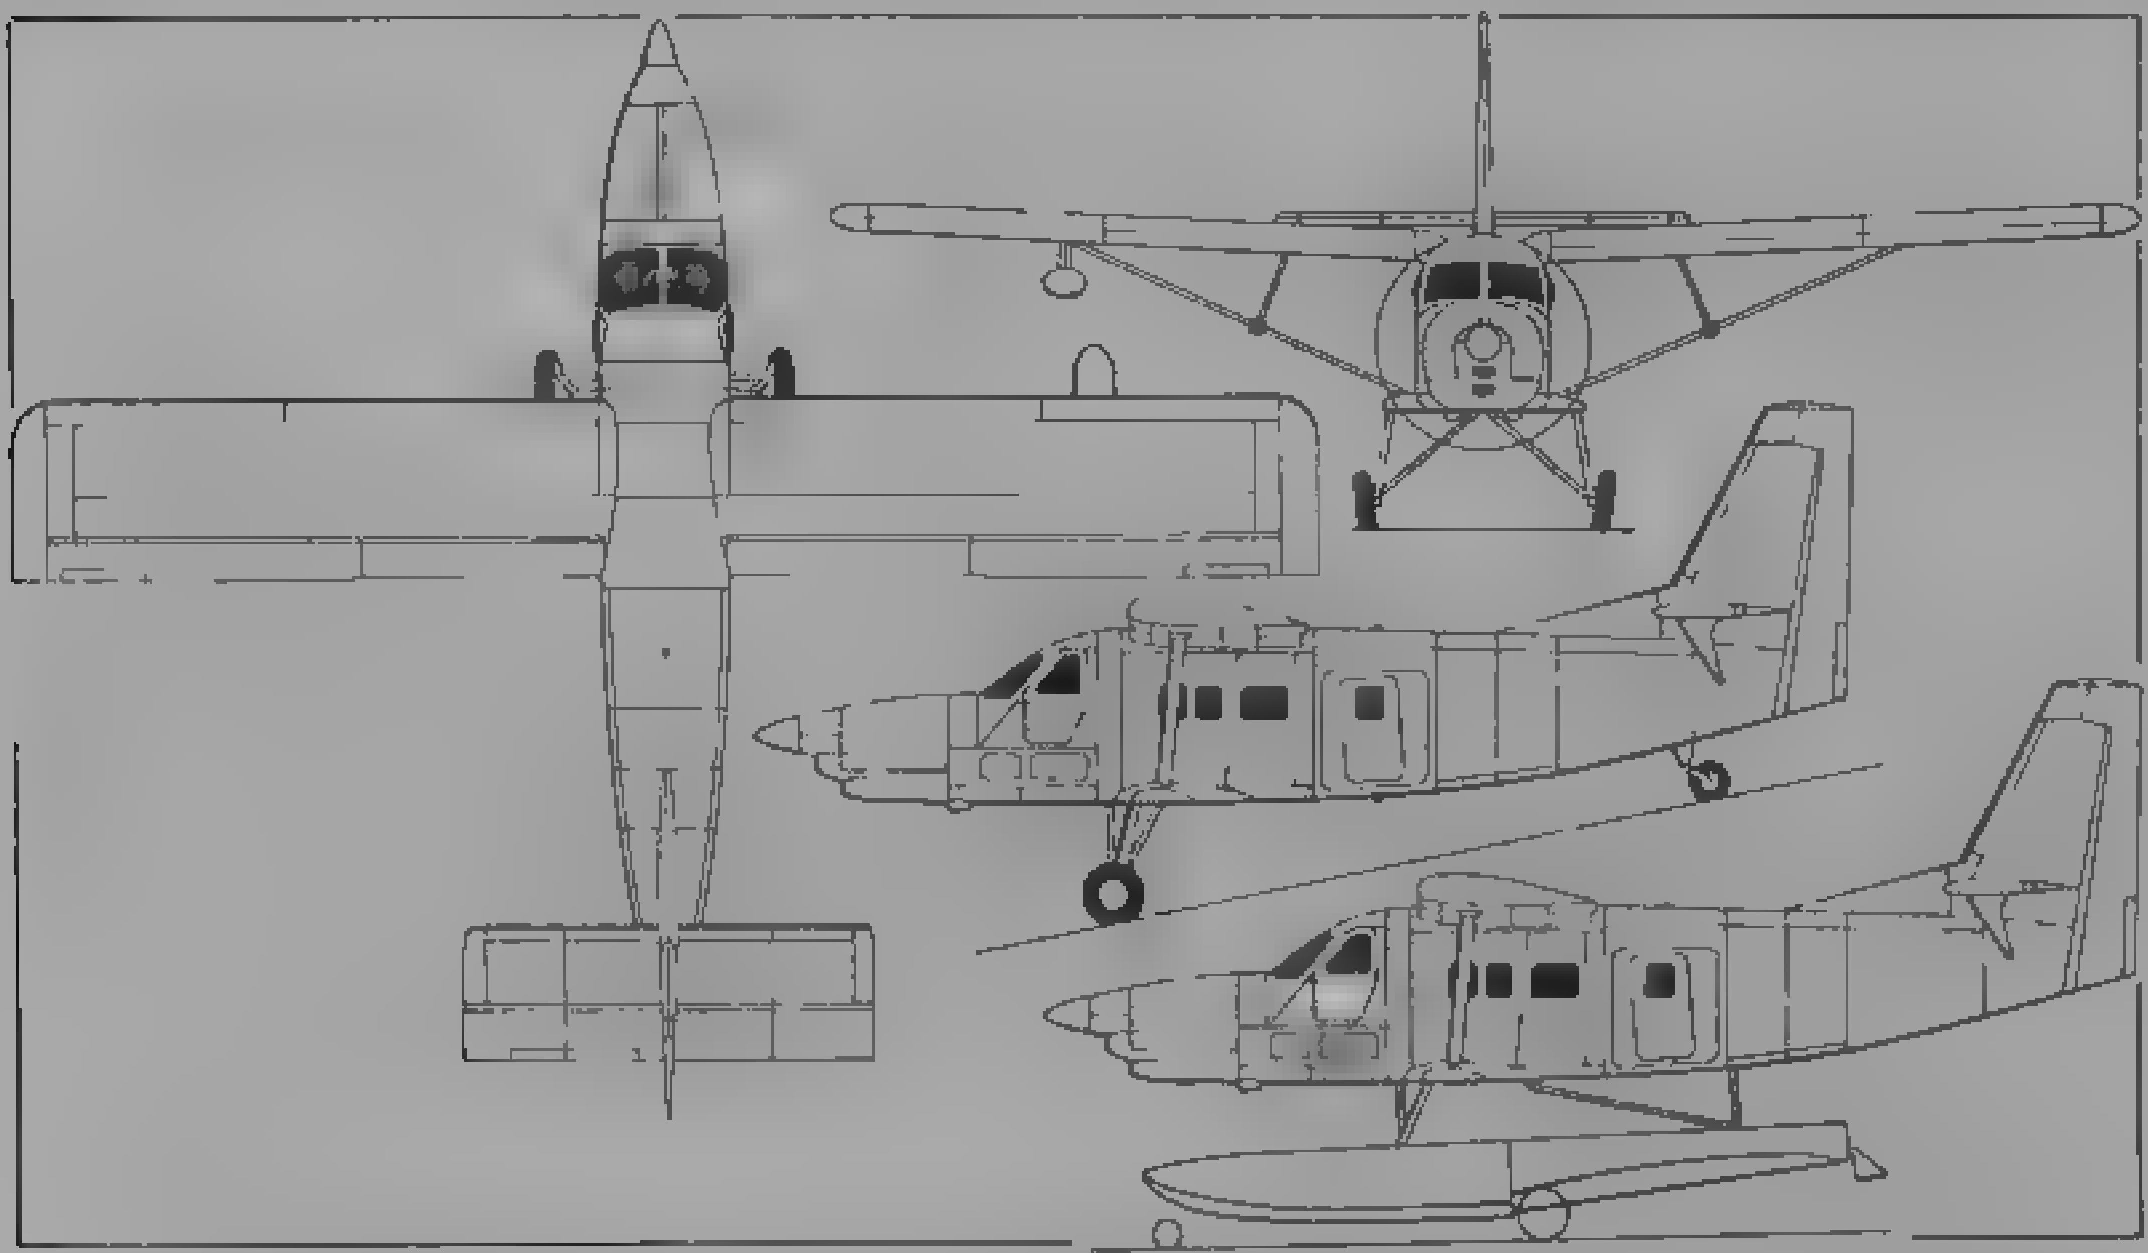
T-101Skh: Redesigned agricultural aircraft, fuselage and tail unit as basic T-101, strut braced low wings with considerable dihedral, each mainwheel on strut braced oleo, spraybars under wings, new cockpit with large flat windscreen and large side windows.

T-101S: Military version of basic T-101, small sweptback winglets, two stores pylons under each wing, added small stub-wings, each with a weapon pylon and wingtip mount for a gun pod or other store.

Further developments, with tricycle landing gear, increased wing span, more powerful engines and other changes, will be designated **T-102**, **T-103** and **T-104**.
CUSTOMERS: In January 1995, orders included 50 transports for air forces, 50 agricultural aircraft, 25 for Contingency Ministry, and 150 for airborne forces. Austrian Air Force claimed to be negotiating for 50 freighters.
DESIGN FEATURES: Single-turboprop aircraft for Normal category passenger/cargo transportation and utility applications

Aeroprogress/ROKS-Aero T-101 Gratch on an early test flight

1995



Aeroprogress/ROKS-Aero T-101 Gratch turboprop utility aircraft, with additional side view of T-101V floatplane ***(Jane's/Mike Keep)***

1995

landing gear and unpressurised cabin, STOL capable, with wide CG range; large passenger/freight door. Unswept, constant chord wings, P-11-14 wing section dihedral 3°, incidence 3° constant, sweptback fin and rudder with large dorsal fin braced constant chord tailplane and elevators

FLYING CONTROLS: Conventional mechanical control (rods and cables). Aileron deflection 30° up, 14° down, elevator deflection 42° up, 22.5° down, rudder deflection ±28 Trim tabs on port aileron, port elevator and rudder. Electrically actuated single-section slotted trailing-edge flap and two-section automatic leading-edge slats on each wing flap deflection 25° for take-off 40° for landing

STRUCTURE: All-metal (aluminium alloy and high tensile steel) structure, two-spar wings, metal skinned with integral stringers, and ribs, two-spar fin and tailplane, semi-monocoque fuselage, with frames, stringers and stressed skin

LANDING GEAR: Non-retractable tailwheel type with single wheel on each unit. Main legs of tripod type, with oleo-pneumatic shock-absorption, KT-135D mainwheels, with tyres size 720 × 320 mm, pressure 3.43 bars (50 lb/sq in) K-392 tailwheel, with tyre size 380 × 200 mm, pressure 3.43 bars (50 lb/sq in), hydraulic brakes and anti skid units on mainwheels. Skis and floats optional

POWER PLANT: One 754 kW (1,011 shp) Mars (Omsk) TVD-10B turboprop, driving AV-24AN three-blade constant-speed propeller with reverse pitch and full feathering. Three fuel tanks in each wing, each 200 litres (52.8 US gallons, 44 Imp gallons), total fuel capacity 1,200 litres (317 US gallons, 264 Imp gallons). Oil tank capacity 30 litres (7.9 US gallons, 6.6 Imp gallons)

ACCOMMODATION: Crew of one or two and nine passengers or equivalent freight. Forward-opening door each side of flight deck, large upward-opening freight door aft of wing on port side, with integral inward-opening passenger door, door between flight deck and cabin, starboard emergency exit. Cabin ventilated and heated by engine bleed air

SYSTEMS: Hydraulic system for brakes, maximum flow 4 litres (1.05 US gallons, 0.88 Imp gallons)/min, at 147 bars (2,135 lb/sq in). Three-phase 120/208 V 400 Hz AC electrical system, supplied by 6 kVA 200 A BU6BK brushless alternator, with emergency DC power supply and 24 V 40 Ah Ni/Cd battery. Electric de-icing of propeller blades and spinner, engine air intake de-iced by heated oil

AVIONICS: *Comms.* R-855A emergency locator beacon and ARB-NK emergency radio buoy

Flight: Comnav equipment for VFR and IFR operations by day and night over all terrain; PNP-72-14 nav; A-723 long-range radio nav; ARK-M ADF, GRAN low-altitude radio altimeter, GROM satellite nav, A-611 marker beacon receiver, AP-93 autopilot

Instrumentation: Air data system with digital airspeed and altitude indication, VBM IPB standby altimeter, KC-MC compact compass system, AGB-96 gyro horizon

DIMENSIONS, EXTERNAL:

Wing span	18.18 m (59 ft 8 in)
Wing chord: at root	2.40 m (7 ft 10½ in)
at tip	2.45 m (8 ft 0½ in)
Wing aspect ratio	7.58
Length overall	15.04 m (49 ft 4 in)
Fuselage: Max width	1.80 m (5 ft 10¾ in)
Max height	2.52 m (8 ft 3¼ in)
Height overall	6.67 m (21 ft 10½ in)
Tailplane span	5.80 m (19 ft 0¼ in)
Wheel track	3.24 m (10 ft 7½ in)
Wheelbase	8.30 m (27 ft 3 in)
Propeller diameter	2.80 m (9 ft 2¼ in)
Propeller ground clearance	0.97 m (3 ft 2¼ in)
Flight deck door (each): Height	1.20 m (3 ft 11¼ in)
Width at top	0.43 m (1 ft 4¾ in)
Width at bottom	0.67 m (2 ft 2¼ in)
Passenger door: Height	1.42 m (4 ft 8 in)
Width	0.81 m (2 ft 7¾ in)
Freight door: Height	1.53 m (5 ft 0¼ in)
Width	1.46 m (4 ft 9½ in)
Emergency exit: Height	0.54 m (1 ft 9 in)
Width	0.87 m (2 ft 10¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length	4.20 m (13 ft 9¼ in)
Max width	1.60 m (5 ft 3 in)
Max height	1.80 m (5 ft 10¾ in)
Floor area	6.72 m² (72.3 sq ft)
Volume	12.10 m³ (427.3 cu ft)
Flight deck/cabin door: Height	1.35 m (4 ft 5 in)
Width	0.51 m (1 ft 8 in)

AREAS:

Wings, gross	43.63 m² (469.65 sq ft)
Ailerons (total)	5.66 m² (60.93 sq ft)
Trailing-edge flaps (total)	4.02 m² (43.27 sq ft)
Leading-edge slats (total)	5.98 m² (64.37 sq ft)
Fin incl dorsal fin	5.455 m² (58.72 sq ft)
Rudder incl tab	2.955 m² (31.81 sq ft)
Tailplane	6.34 m² (68.25 sq ft)
Elevator, incl tab	4.10 m² (44.13 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	3,330 kg (7,342 lb)
Max payload	1,600 kg (3,527 lb)
Max fuel	950 kg (2,095 lb)
Max T-O and landing weight	5,500 kg (12,125 lb)
Max wing loading	126 kg/m² (25.8 lb/sq ft)
Max power loading	7.30 kg/kW (12.00 lb/shp)

PERFORMANCE (estimated):

Max level speed at 3,000 m (9,840 ft)	164 kts (305 km/h, 190 mph)
Max cruising speed at 3,000 m (9,840 ft)	161 kts (298 km/h, 185 mph)
Econ cruising speed at 3,000 m (9,840 ft)	127 kts (235 km/h, 146 mph)
Service ceiling	3,600 m (11,800 ft)
T-O run	454 m (1,490 ft)
T-O to 15 m (50 ft)	615 m (2,020 ft)
Landing from 15 m (50 ft)	370 m (1,215 ft)
Range with max fuel	712 n miles (1,320 km, 820 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-101V GRATCH (ROOK)

TYPE: Floatplane version of T-101

PROGRAMME: Design started January 1991, full-scale mockup exhibited at MosAeroshow '92; prototype scheduled for completion May 1995. Licensed production of US floats in Russia under discussion

DESIGN FEATURES: As for T-101, but with amphibious float landing gear

FLYING CONTROLS: As for T-101

STRUCTURE: As for T-101, but strengthened at float landing gear attachment points

LANDING GEAR: Twin float amphibious type, strut-mounted to fuselage, nosewheel and mainwheel on each float, retracting rearward into float, mainwheel tyre size 510 × 150 mm, nosewheel tyre size 325 × 145 mm no shock-absorbers or brakes; hydraulic retraction, minimum ground turning radius 7.0 m (23 ft). Water rudder, towing point and tie-down fitting on each float

POWER PLANT: One 1,029 kW (1,380 shp) Mars (Omsk) TVD-20 turboprop, driving AV-17 three-blade constant speed propeller with reverse pitch. Six fuel tanks in wings, capacity 1,240 litres (327 US gallons, 272 Imp gallons). Oil capacity 8 litres (2.1 US gallons, 1.75 Imp gallons)

ACCOMMODATION: Two crew and 12 passengers, doors as for T-101

DIMENSIONS, EXTERNAL:

Wing span	18.50 m (60 ft 8½ in)
Wing chord (constant)	2.40 m (7 ft 10½ in)
Wing aspect ratio	8.14
Length overall	15.23 m (49 ft 11½ in)
Fuselage: Length	15.04 m (49 ft 4¼ in)
Max width	1.80 m (5 ft 10¾ in)
Max height	2.52 m (8 ft 3¼ in)
Height overall	6.77 m (22 ft 2½ in)
Tailplane span	5.80 m (19 ft 0¼ in)
Wheel track	3.70 m (12 ft 1¾ in)
Wheelbase	4.90 m (16 ft 0¾ in)
Propeller diameter	3.60 m (11 ft 9¾ in)
Propeller water clearance	1.00 m (3 ft 3¼ in)

DIMENSIONS, INTERNAL: As for T-101

AREAS: As for T-101, except

Wings, gross	42.02 m² (452.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	3,700 kg (8,157 lb)
Max payload	1,500 kg (3,307 lb)
Max fuel	920 kg (2,028 lb)
Max T-O weight	5,715 kg (12,600 lb)
Max wing loading	136 kg/m² (27.85 lb/sq ft)
Max power loading	5.55 kg/kW (9.13 lb/shp)

PERFORMANCE (estimated):

Max level speed at 4,000 m (13,125 ft)	151 kts (280 km/h, 174 mph)
Econ cruising speed at 3,000 m (9,840 ft)	130 kts (240 km/h, 149 mph)
Min stalling speed: flaps up	89 kts (165 km/h, 103 mph)
Max rate of climb at S/L	360 m (1,180 ft)/min
T-O run	350 m (1,150 ft)
T-O to 15 m (50 ft)	550 m (1,805 ft)
Landing from 15 m (50 ft)	500 m (1,640 ft)
Landing run	300 m (985 ft)
Range, 30 min reserves: with max payload	324 n miles (600 km, 373 miles)
with max fuel	647 n miles (1,200 km, 745 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-106

TYPE: Twin-engined development of T-101 Gratch

PROGRAMME: At initial design stage 1993; included in National Programme of Aviation Development to year 2000, Komsomolsk-on-Amur preparing for manufacture

DESIGN FEATURES: Basic configuration and many components similar to T-101 series, nose faired, with provision for radar and equipment or baggage; wings braced to short stub-wings carrying mainwheels of landing gear; engines under inner wings. Intended for passenger/freight transport, ambulance, offshore patrol of 200 mile economic

Full-scale mockup of Aeroprogress/ROKS-Aero T-106 twin-engined development of T-101 Gratch *(Piotr Butowski)* *1994*

Full-scale mockup of Aeroprogress/ROKS-Aero T-101V Gratch floatplane *1993*

zones, aerial photography, geological survey, agricultural and other general duties

FLYING CONTROLS: Mechanical control. High-lift wings, with slotted aileron, two-segment double-slotted flaps and three-section leading-edge slats on each wing spoiler forward of each aileron; trim tab in each aileron, each half of tailplane, and rudder

LANDING GEAR: Non-retractable tricycle type, single wheel on each trailing link leg, tyre size 720 × 320 mm on mainwheels, 595 × 185 mm on nosewheel

POWER PLANT: Two Mars (Omsk) TVD-10B or Pratt & Whitney Canada PT6A turboprops

ACCOMMODATION: Two crew on flight deck door on each side and in rear bulkhead to cabin, as T-101; large passenger/freight door on port side of main cabin Mixed passenger/freight configurations planned

DIMENSIONS, EXTERNAL

Wing span	19.90 m (65 ft 3½ in)
Length overall	15.56 m (51 ft 0¾ in)
Height overall	6.42 m (21 ft 0¾ in)
Wheel track	3.37 m (11 ft 0½ in)
Wheel base	4.53 m (14 ft 10¼ in)
Propeller diameter (three-blade)	2.80 m (9 ft 2¼ in)
Distance between propeller centres	5.70 m (18 ft 8½ in)

DIMENSIONS, INTERNAL

Cabin: Length	5.75 m (18 ft 10¼ in)
Max width	1.65 m (5 ft 5 in)
Max height	1.85 m (6 ft 0¾ in)
Volume	15.00 m³ (530 cu ft)

WEIGHTS AND LOADINGS

Max payload	2,000 kg (4,409 lb)
Max fuel	920 kg (2,028 lb)
Max T-O weight	5,950 kg (13,117 lb)

PERFORMANCE (estimated)

Max level speed	189 kts (350 km/h, 217 mph)
Service ceiling	4,000 m (13,125 ft)
Range:	
with max payload	189 n miles (350 km, 217 miles)
with max fuel	647 n miles (1,200 km, 745 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-130 FREGAT (FRIGATE)

TYPE: Twin-engined multipurpose amphibian

CURRENT VERSIONS: Designed for light passenger/cargo, ambulance, search and rescue, and forest surveillance missions, with capability to airdrop firefighters. Passenger/cargo version with single turboprop being studied

PROGRAMME: Design started April 1993. In January 1995, programme under revision to meet requirements of Frontier Forces for weapon carriage. Prototype scheduled to fly November 1996

CUSTOMERS: Arrangements being made to manufacture T-130 in China

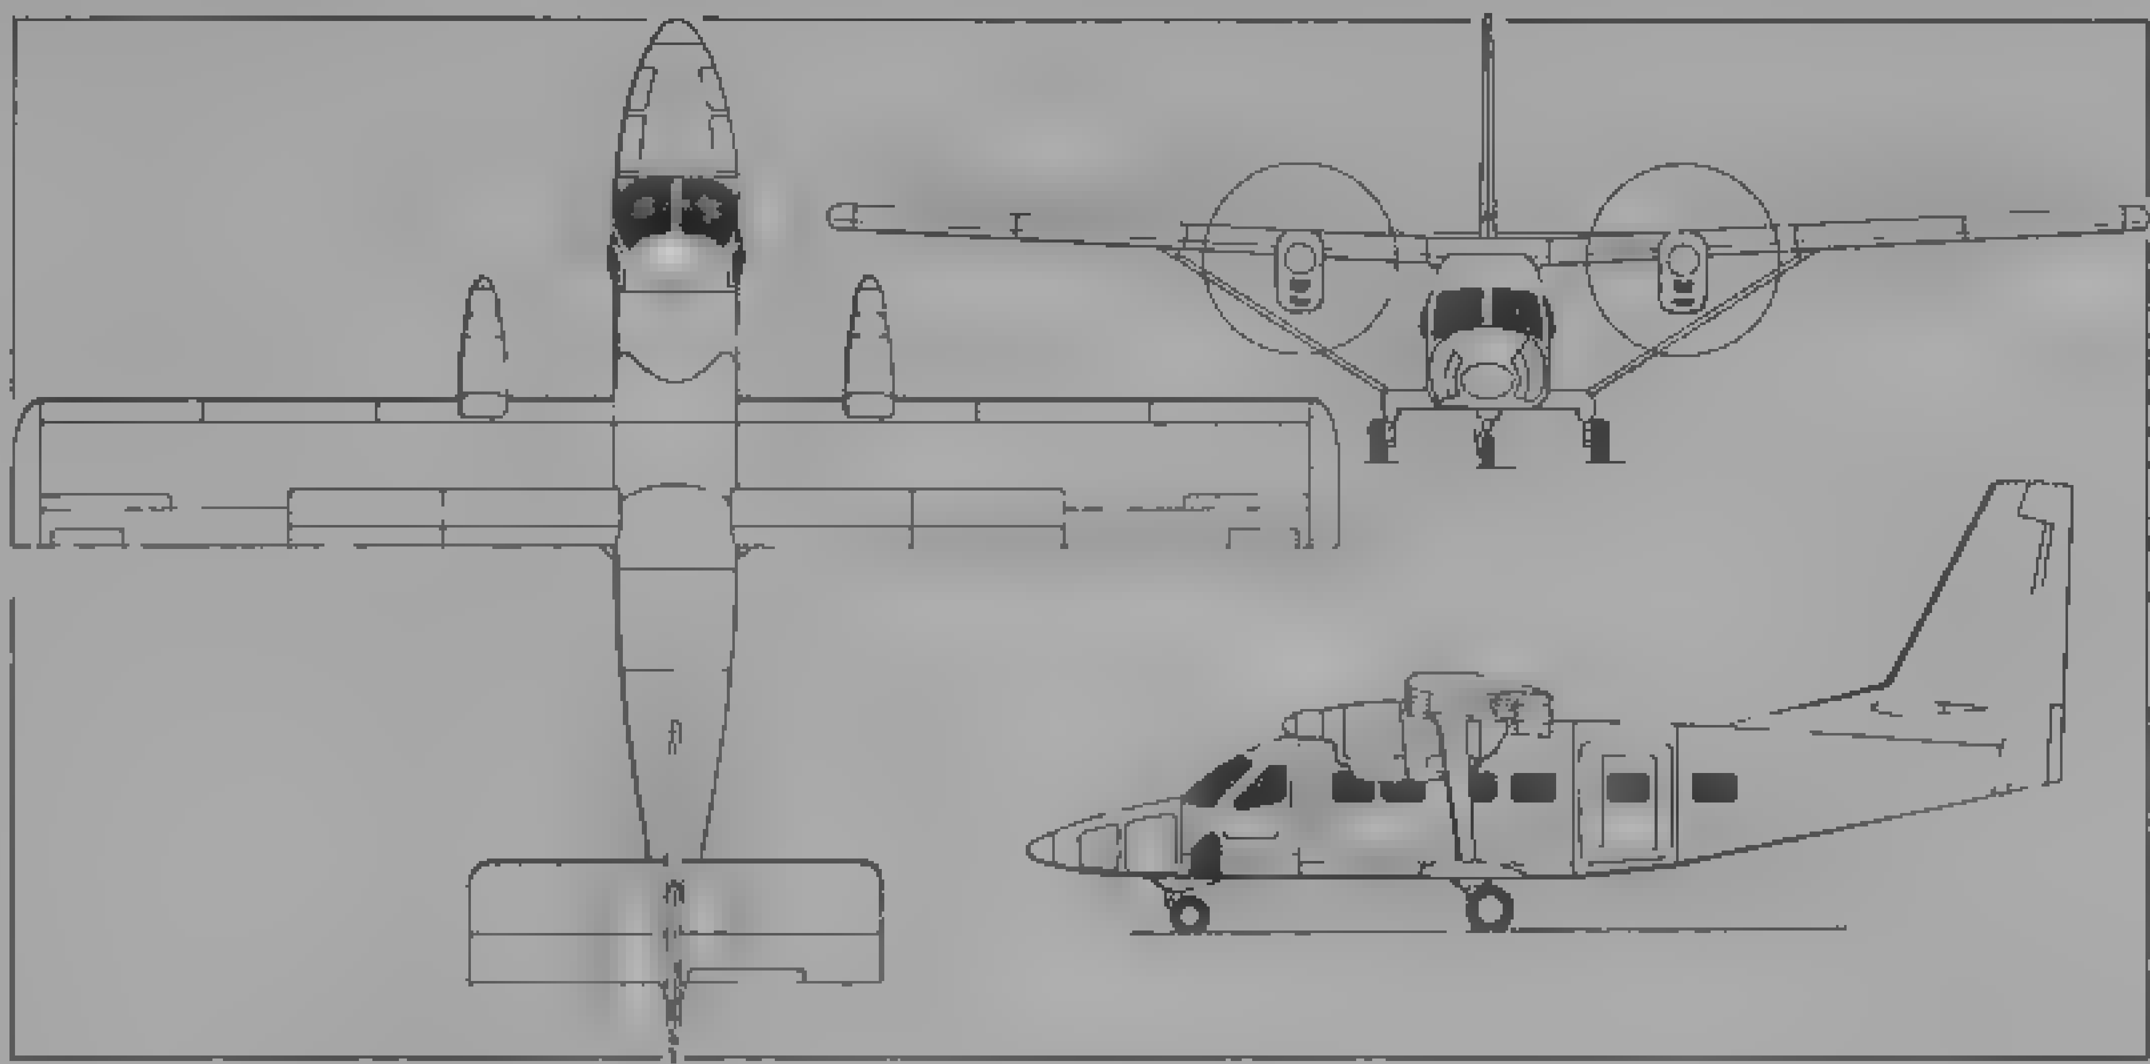
DESIGN FEATURES: Strut-braced high-wing monoplane amphibian with engines pylon-mounted above wing centre-section Unswept constant-chord wing of P-11 section, thickness/chord ratio 14 per cent, dihedral 1° 30′, incidence 2°. Flying boat hull with two steps and long-chord sponsons. Sweptback vertical tail surfaces with dorsal fin; unswept strut-braced constant-chord horizontal surfaces, horn balanced elevators and rudder Water rudder aft of rear step

FLYING CONTROLS: Mechanically controlled ailerons, rudder and elevators, via cables and rods, electrically operated trim tab in starboard elevator, single-slotted wing trailing-edge flaps.

STRUCTURE: Aluminium alloy construction. Semi-monocoque fuselage with lower portion divided into watertight and pressure-tight compartments

LANDING GEAR: Retractable tricycle type, single wheel on each unit; hydraulic retraction, nosewheels forward into hull, mainwheels forward into sponsons. Oleo-pneumatic shock-absorbers. Hydraulic shoe brakes. Mainwheel tyres size 720 × 320 mm, nosewheel tyre size 470 × 210 mm, pressure (all) 2.95 bars (43 lb/sq in). Minimum turning circle 6.0 m (19 ft 8¼ in). Nosewheel steerable ±45°

POWER PLANT: Two 560 kW (751 shp) Walter M 601 E or P&WC PT6A turboprops, driving V510 five-blade



Aeroprogress/ROKS-Aero T-106 twin-turboprop multipurpose aircraft *(Jane's/Mike Keep)* *1993*

variable-pitch propellers, tandem-mounted in single pod Three metal fuel tanks in each wing, total capacity 2,000 litres (528 US gallons, 440 Imp gallons). Overwing gravity fuelling Oil capacity 20 litres (5.3 US gallons, 4.4 Imp gallons).

ACCOMMODATION: Two crew and up to 15 passengers or equivalent freight. Door each side of flight deck, horizontally split two-part upward/downward-opening cargo/passenger door on port side aft of wings, lower portion with built-in airstairs, passage from flight deck to main cabin Cargo lashing points in floor and sides, maximum floor loading 400 kg/m² (82 lb/sq ft). Interior heated with engine bleed air and ventilated

SYSTEMS: Hydraulic system pressure 152 bars (2,200 lb/sq in) flow rate 5 litres (1.3 US gallons, 1.1 Imp gallons)/min Electrical system 27 V DC, with two 3 kW generators and two 40 Ah batteries, for flight nav, radio nav/com and lighting systems, and flap actuation. Wing leading-edges tail surfaces, and windscreen de-iced by engine bleed air, propeller leading-edges and pitot heated electrically

AVIONICS: *Comms*: Two com/nav radios and transponder standard

Flight: ADF and radio altimeter

DIMENSIONS, EXTERNAL

Wing span	18.20 m (59 ft 8½ in)
Length overall	15.50 m (50 ft 10¼ in)
Height overall	4.60 m (15 ft 1 in)

DIMENSIONS, INTERNAL

Cabin, excl flight deck: Length	4.50 m (14 ft 9 in)
Max width	1.60 m (5 ft 3 in)
Max height	1.85 m (6 ft 0¾ in)

WEIGHTS AND LOADINGS (M 601 E engines)

Max payload	1,500 kg (3,307 lb)
Max fuel	1,600 kg (3,527 lb)
Max ramp, T-O and landing weight	5,850 kg (12,895 lb)
Max power loading	5.22 kg/kW (8.58 lb/shp)

PERFORMANCE (estimated, M 601 E engines)

Max level speed	215 kts (400 km/h, 248 mph)
Max cruising speed	189 kts (350 km/h, 217 mph)
T-O run: on land	240 m (788 ft)
on water	285 m (935 ft)
Landing run with thrust reverse	
on land	180 m (590 ft)
on water	220 m (722 ft)
Range, 30 min reserve	
with max payload	296 n miles (550 km, 341 miles)
with max fuel and 500 kg (1,102 lb) payload	982 n miles (1,820 km, 1,131 miles)

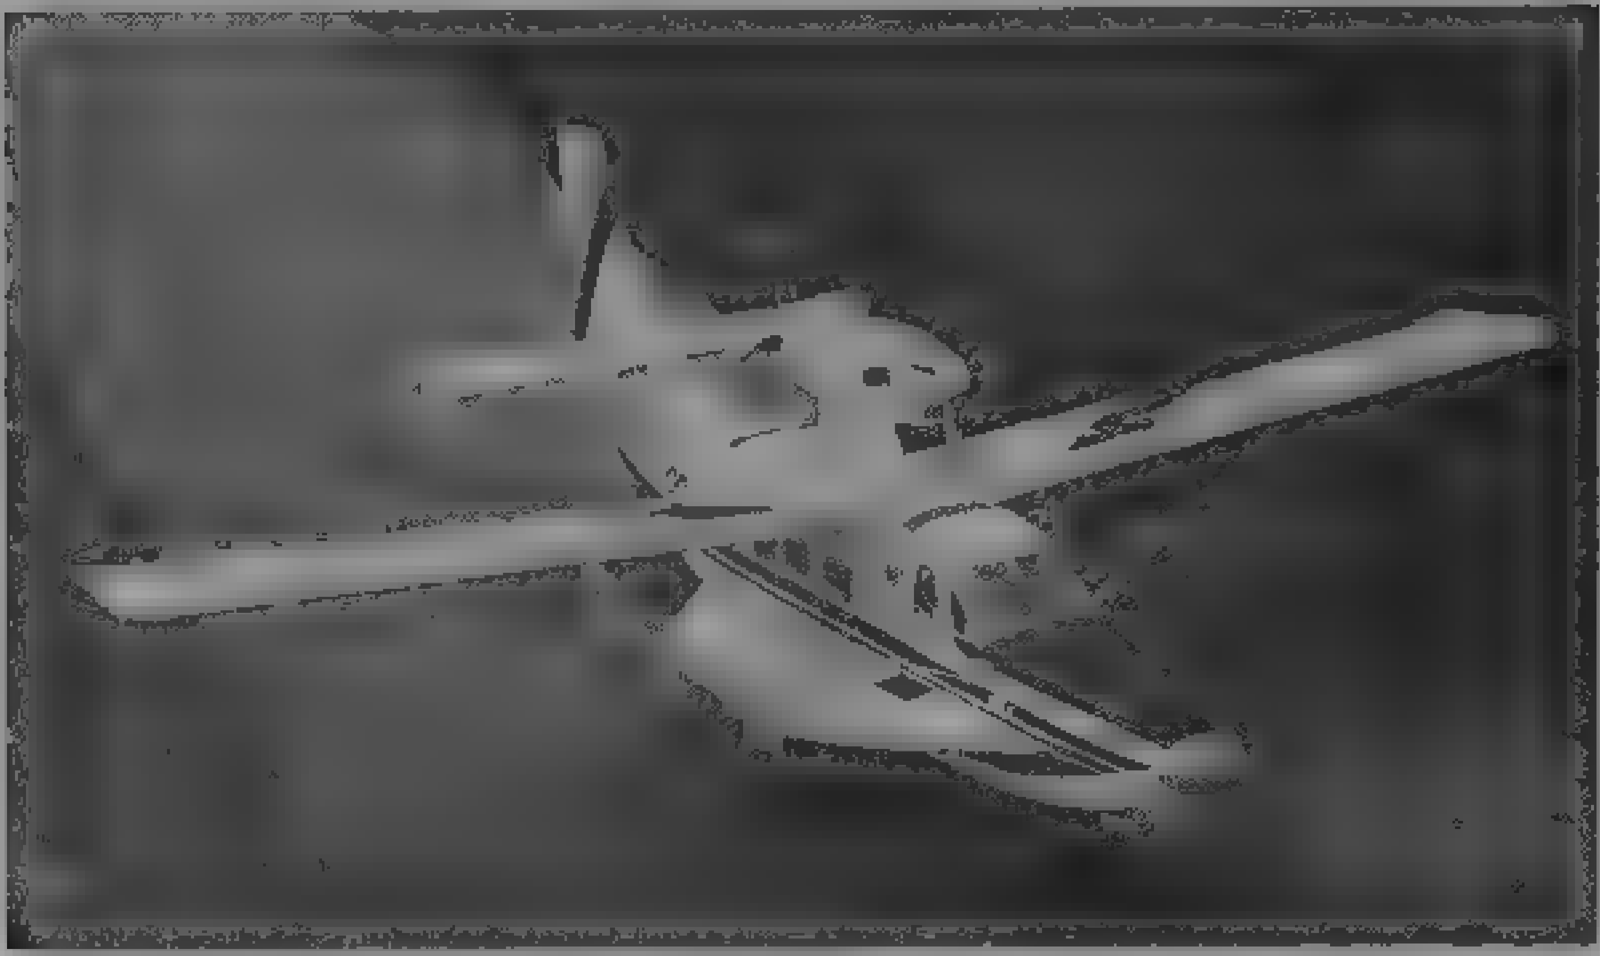
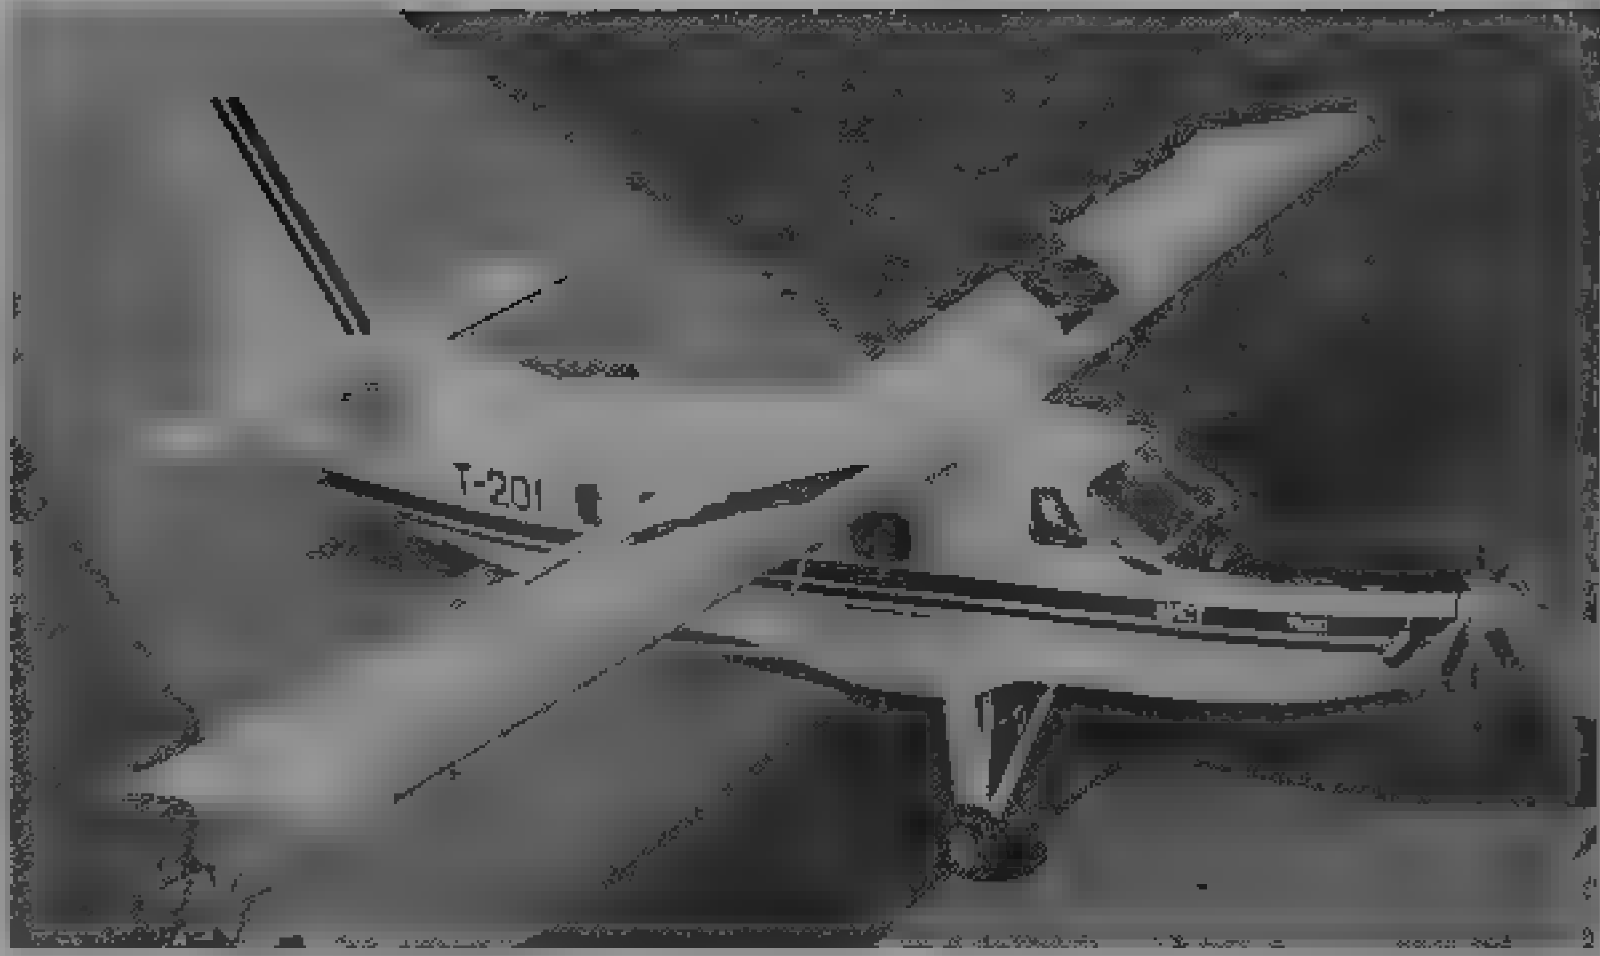
Aeroprogress/ROKS-Aero T-130 Fregat twin-turboprop multipurpose light amphibian *(Jane's/Mike Keep)* *1994*



Mockup of Aeroprogress/ROKS-Aero T-130 Fregat (two Walter M 601 E turboprops)

1994



Full-scale mockup of Aeroprogress/ROKS-Aero T-201 Aist turboprop-powered general utility aircraft

1994

AEROPROGRESS/ROKS-AERO T-201 AIST (STORK)

TYPE: Turboprop-powered general utility aircraft

PROGRAMME: Design started April 1993, decision to change engine (from Mars (Omsk) TVD-20) delayed scheduled first flight until mid-1995

CURRENT VERSIONS: Designed for military and civil passenger/cargo, paratroop and cargo airdropping, ambulance, search and rescue, forest surveillance and firefighting, agricultural and aerial photography missions

DESIGN FEATURES: Configuration similar to T-101 Grach, but considerably refined and upgraded, with new high-lift wings, more powerful turboprop, and enhanced avionics. STOL wings have four-section spoilers forward of double slotted flaps on each wing, P-301 wing section with 15 per cent thickness/chord ratio, no dihedral, 1° incidence

FLYING CONTROLS: As T-101, except for spoilers and double-slotted flaps and leading-edge slats

STRUCTURE: Generally as T-101

LANDING GEAR: Generally as T-101. Tailwheel tyre size 480 × 200 mm, hydraulic disc brakes and anti-skid units on mainwheels, floats and skis not currently optional

POWER PLANT: One P&WC PT6A-67K turboprop. One integral fuel tank in each wing, total capacity 1,400 litres (370 US gallons, 308 Imp gallons), overwing gravity fuelling. Oil capacity 60 litres (15.85 US gallons, 13.2 Imp gallons)

ACCOMMODATION: Crew of two and nine passengers standard; up to 12 passenger seats optional. Forward-opening door each side of flight deck, large upward-opening freight door aft of wing on port side, with integral inward-opening passenger door; starboard emergency exit. Up to 2,000 kg (4,409 lb) of cargo can be carried in lieu of passengers; maximum floor loading 400 kg/m² (82 lb/sq ft), cargo lashings in floor and sides of cabin. Baggage compartment and toilet aft of cabin. Accommodation heated (by engine bleed air) and ventilated

SYSTEMS: No details of hydraulic system. Electrical system 27 V DC, with 12 kW generator and 40 Ah batteries, main and emergency AC inverters for flight nav, radio nav/com and lighting systems. Oxygen system optional. Hot air airframe de-icing, using engine bleed air

AVIONICS: *Comms:* Com/nav and identification radios, transponder

Radar: Optional A-813 weather radar

Flight: ADF and radio altimeter, optional satellite nav

DIMENSIONS, EXTERNAL:

Wing span	19.90 m (65 ft 3½ in)
Wing chord (constant)	2.20 m (7 ft 2¾ in)
Length overall	15.10 m (49 ft 6[illegible] in)
Fuselage: Max width	1.80 m (5 ft 10¾ in)
Max height	2.52 m (8 ft 3¼ in)
Tailplane span	5.82 m (19 ft 1¼ in)
Wheel track	3.36 m (11 ft 0[illegible] in)
Wheelbase	8.25 m (27 ft 1 in)
Propeller diameter	3.60 m (11 ft 9¾ in)
Passenger door: Height, width	1.42 m (4 ft 8 in)
Cargo door: Height	1.80 m (5 ft 10¾ in)
Width	1.65 m (5 ft 5 in)
Passage between flight deck and cabin:	
Height	1.40 m (4 ft 7 in)
Width	0.50 m (1 ft 7½ in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck, baggage compartment and toilet:	
Length	4.20 m (13 ft 9¼ in)
Max width	1.60 m (5 ft 3 in)
Max height	[illegible] m (5 ft [illegible] in)
Floor area	6.72 m² (72.3 sq ft)
Volume	12.10 m³ (427.3 cu ft)

AREAS:

Wings, gross	43.78 m² (471.25 sq ft)
Ailerons (total)	3.16 m² (34.02 sq ft)
Trailing-edge flaps (total)	9.24 m² (99.46 sq ft)
Spoilers (total)	3.72 m² (40.04 sq ft)
Fin (total)	3.37 m² (36.28 sq ft)
Rudder, incl tab	2.52 m² (27.13 sq ft)
Tailplane	6.16 m² (66.31 sq ft)
Elevators, incl tab	4.31 m² (46.40 sq ft)

WEIGHTS AND LOADINGS:

Operating weight empty	3,400 kg (7,495 lb)
Max fuel	1,100 kg (2,425 lb)
Max ramp, T-O and landing weight	5,700 kg (12,566 lb)
Max zero-fuel weight	5,400 kg (11,905 lb)
Max wing loading	130.20 kg/m² (26.66 lb/sq ft)
Max power loading	5.54 kg/kW (9.10 lb/shp)

PERFORMANCE (estimated):

Never-exceed speed	210 kts (390 km/h, 242 mph)
Max level speed at 4,000 m (13,125 ft)	175 kts (325 km/h, 202 mph)
Max cruising speed at 1,000 m (3,280 ft)	154 kts (285 km/h, 177 mph)
Econ cruising speed at 1,000 m (3,280 ft)	105 kts (195 km/h, 121 mph)
Stalling speed, at 1,000 m (3,280 ft), flaps up, engine off	61 kts (113 km/h, 71 mph)
at S/L, flaps down, engine off	57 kts (105 km/h, 66 mph)
Max rate of climb at S/L	420 m (1,380 ft)/min
Service ceiling	4,000 m (13,125 ft)
T-O run	295 m (970 ft)
T-O to 15 m (50 ft)	450 m (1,477 ft)
Landing from 15 m (50 ft)	600 m (1,970 ft)
Landing run	160 m (525 ft)
Range, 45 min reserve, at 3,000 m (9,850 ft):	
with max payload	97 n miles (180 km; 112 miles)
with max fuel	740 n miles (1,370 km, 850 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-203 PCHEL (BEE)

TYPE: Turboprop-powered heavy-duty agricultural aircraft

PROGRAMME: Design started May 1993; intended for AP-23 certification; prototypes under construction; first flight scheduled for October 1995

DESIGN FEATURES: Strut-braced low-wing monoplane; single aerofoil-section strut each side with jury strut. Fuselage, tail unit, landing gear and power plant generally as T-201 Aist. New all-metal two-spar high-lift wings, with full-span automatic slats; no wing sweep, wing section R-2-14, thickness/chord ratio 14 per cent, dihedral 3° from roots, incidence 3°

FLYING CONTROLS: Mechanically actuated ailerons, elevators and rudder, via cables and rods, automatic leading-edge slats, simple flaps. Electrically actuated trim tab in each elevator

STRUCTURE: All metal, primarily aluminium alloy

POWER PLANT: As T-201 Aist, except three fuel tanks in each wing, total capacity 1,200 litres (317 US gallons; 264 Imp gallons)

ACCOMMODATION: Normally pilot only; provision for mechanic or loader. Chemical tank, capacity 2,200 litres (581 US gallons, 484 Imp gallons), in mid-fuselage; spraybars under wings. Some cargo can be carried with empty tank in place. Flight deck hermetically sealed from chemical tank. Jettisonable flight deck doors

SYSTEMS: As T-201 Aist, except oxygen system standard. Protective items include deflector cable from top of flight deck to fin tip

DIMENSIONS, EXTERNAL:

As for T-201 Aist, except

Wing chord (constant, slight increase over ailerons)	2.40 m (7 ft 10½ in)

DIMENSIONS, INTERNAL: As for T-201 Aist

AREAS (Tail unit as for T-201 Aist):

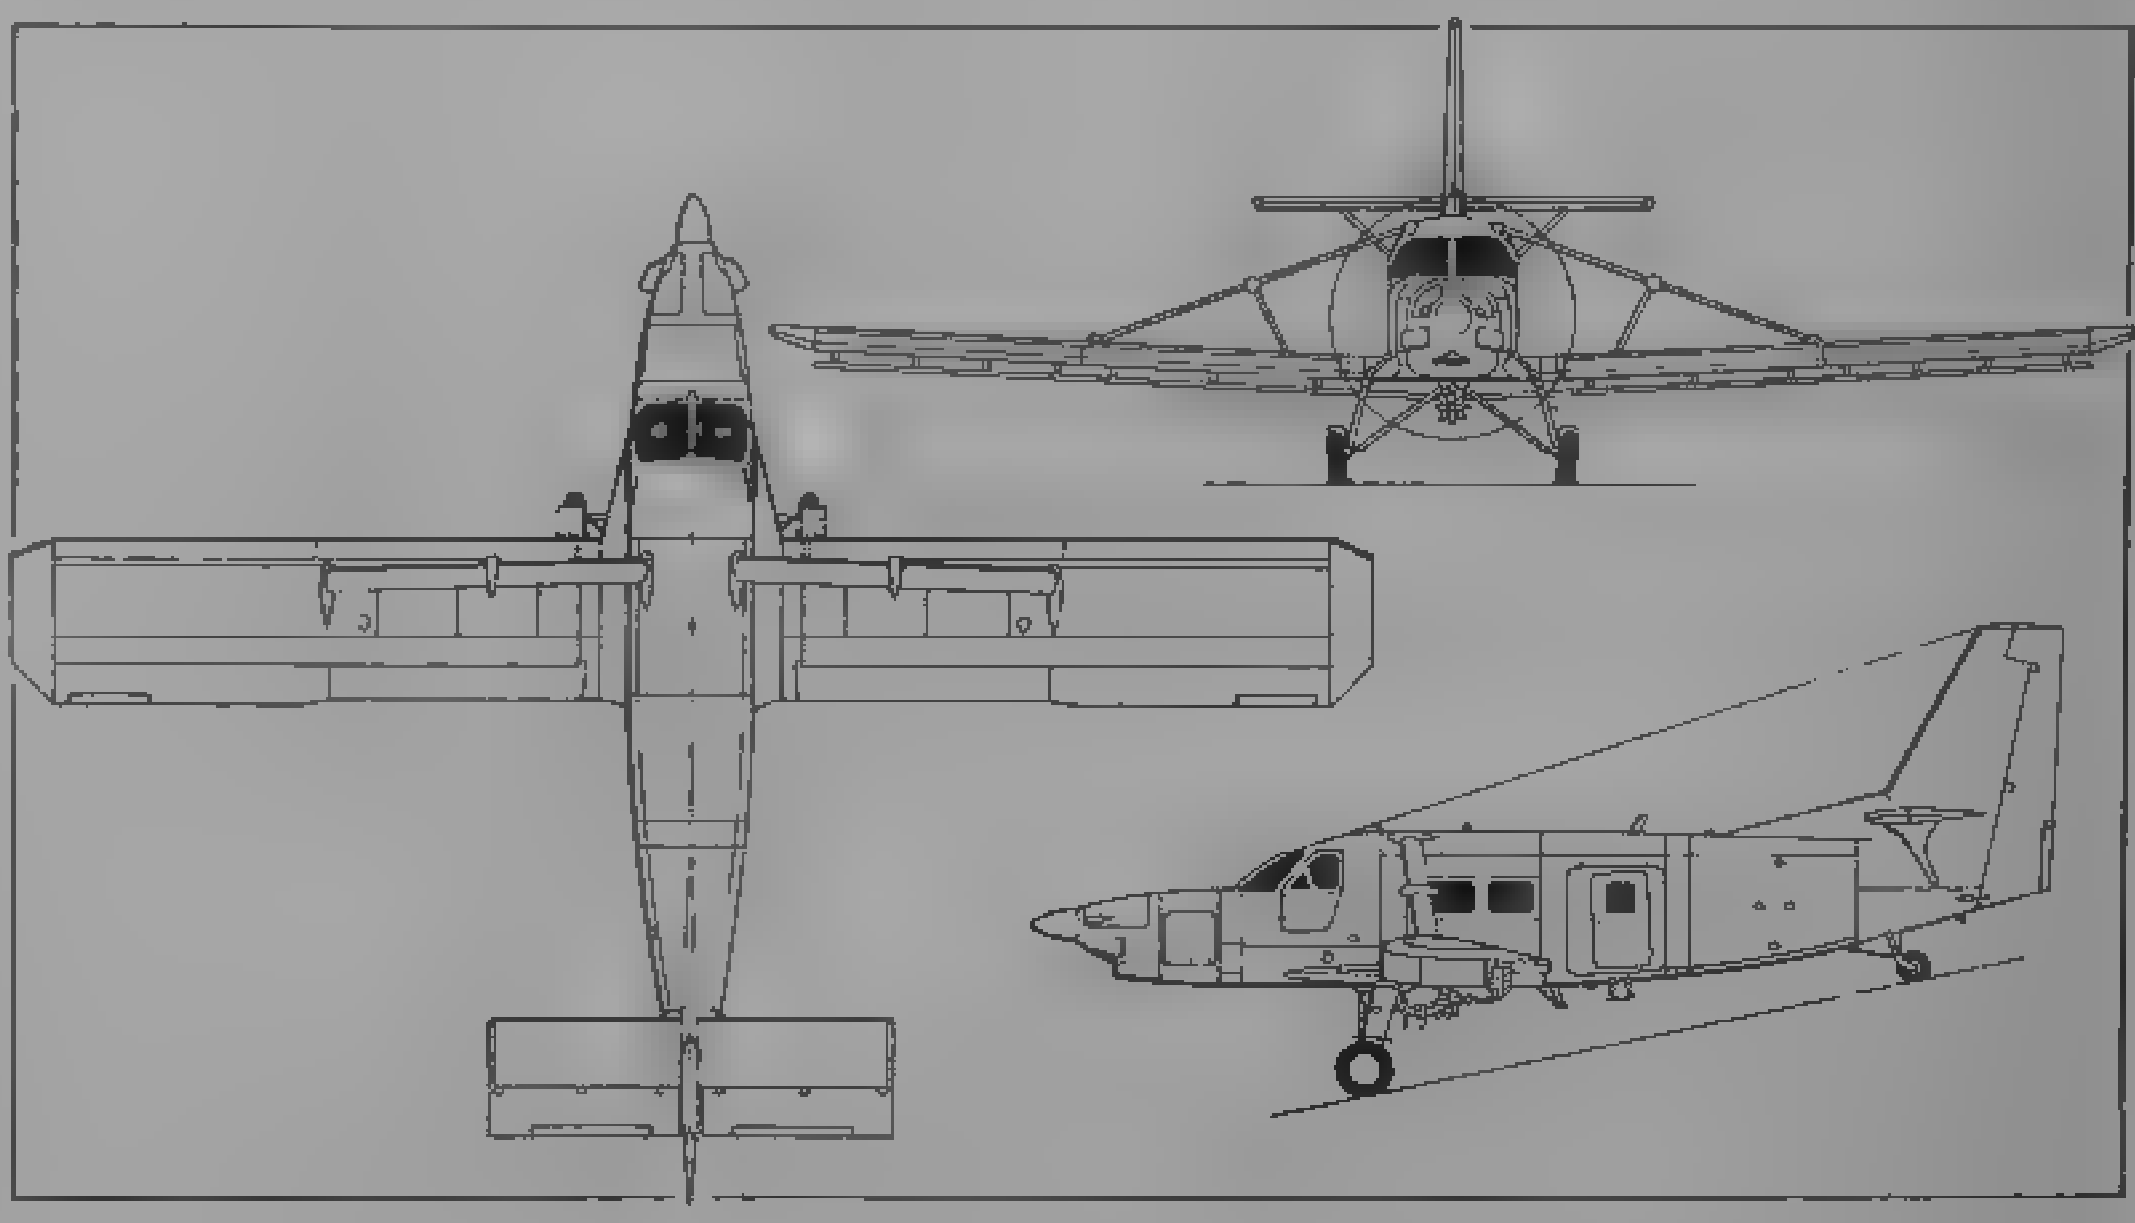
Wings, gross	47.67 m² (513.13 sq ft)
Ailerons (total)	5.66 m² (60.93 sq ft)
Trailing-edge flaps (total)	4.09 m² (44.03 sq ft)
Leading-edge slats (total)	4.90 m² (52.75 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	3,370 kg (7,430 lb)
Max payload	2,300 kg (5,070 lb)
Max fuel	900 kg (1,985 lb)
Max ramp, T-O and landing weight	5,700 kg (12,566 lb)
Max zero-fuel weight	5,400 kg (11,905 lb)
Max wing loading	119.5 kg/m² (24.49 lb/sq ft)
Max power loading	5.54 kg/kW (9.11 lb/shp)

PERFORMANCE (estimated, at 5,300 kg; 11,685 lb T-O weight):

Never-exceed speed	205 kts (380 km/h, 236 mph)
Max level speed at 4,000 m (13,125 ft)	170 kts (315 km/h; 195 mph)
Max cruising speed at 1,000 m (3,280 ft)	148 kts (275 km/h, 171 mph)
Econ cruising speed at 1,000 m (3,280 ft)	129 kts (240 km/h, 149 mph)
Agricultural spraying speed	81-108 kts (150-200 km/h, 94-124 mph)
Stalling speed, at 1,000 m (3,280 ft), flaps up, engine off	61 kts (113 km/h, 71 mph)
at S/L, flaps down, engine off	59 kts (108 km/h, 67 mph)
Max rate of climb at S/L	420 m (1,378 ft)/min
Service ceiling	4,000 m (13,125 ft)



Aeroprogress/ROKS-Aero T-203 Pchel heavy-duty agricultural aircraft *(Jane's/Mike Keep)*

1994

T O run	295 m (968 ft)
T O to 15 m (50 ft)	450 m (1,477 ft)
Landing from 15 m (50 ft)	600 m (1,970 ft)
Landing run	160 m (525 ft)
Range at 3,000 m (9,840 ft), 45 min reserve:	
with max payload	97 n miles (180 km, 112 miles)
with max fuel	739 n miles (1,370 km, 851 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-204 GRIFFON

TYPE: Twin-engined STOL transport and utility aircraft

PROGRAMME: Design started 1993

DESIGN FEATURES: Configuration reminiscent of Dornier 128-6 of 1980s (see three-view drawing), but larger and with retractable landing gear. Cantilever high-lift wings, R-P-14 wing section, thickness/chord ratio 14 per cent; no dihedral, incidence 3°

LANDING GEAR: Retractable tailwheel type: twin wheels on main units, which retract rearward into engine nacelles

POWER PLANT: Two 559 kW (750 shp) P&WC PT6A 34AC turboprops, each driving a five-blade constant-speed propeller. Fuel capacity 1,200 litres (317 US gallons, 264 Imp gallons)

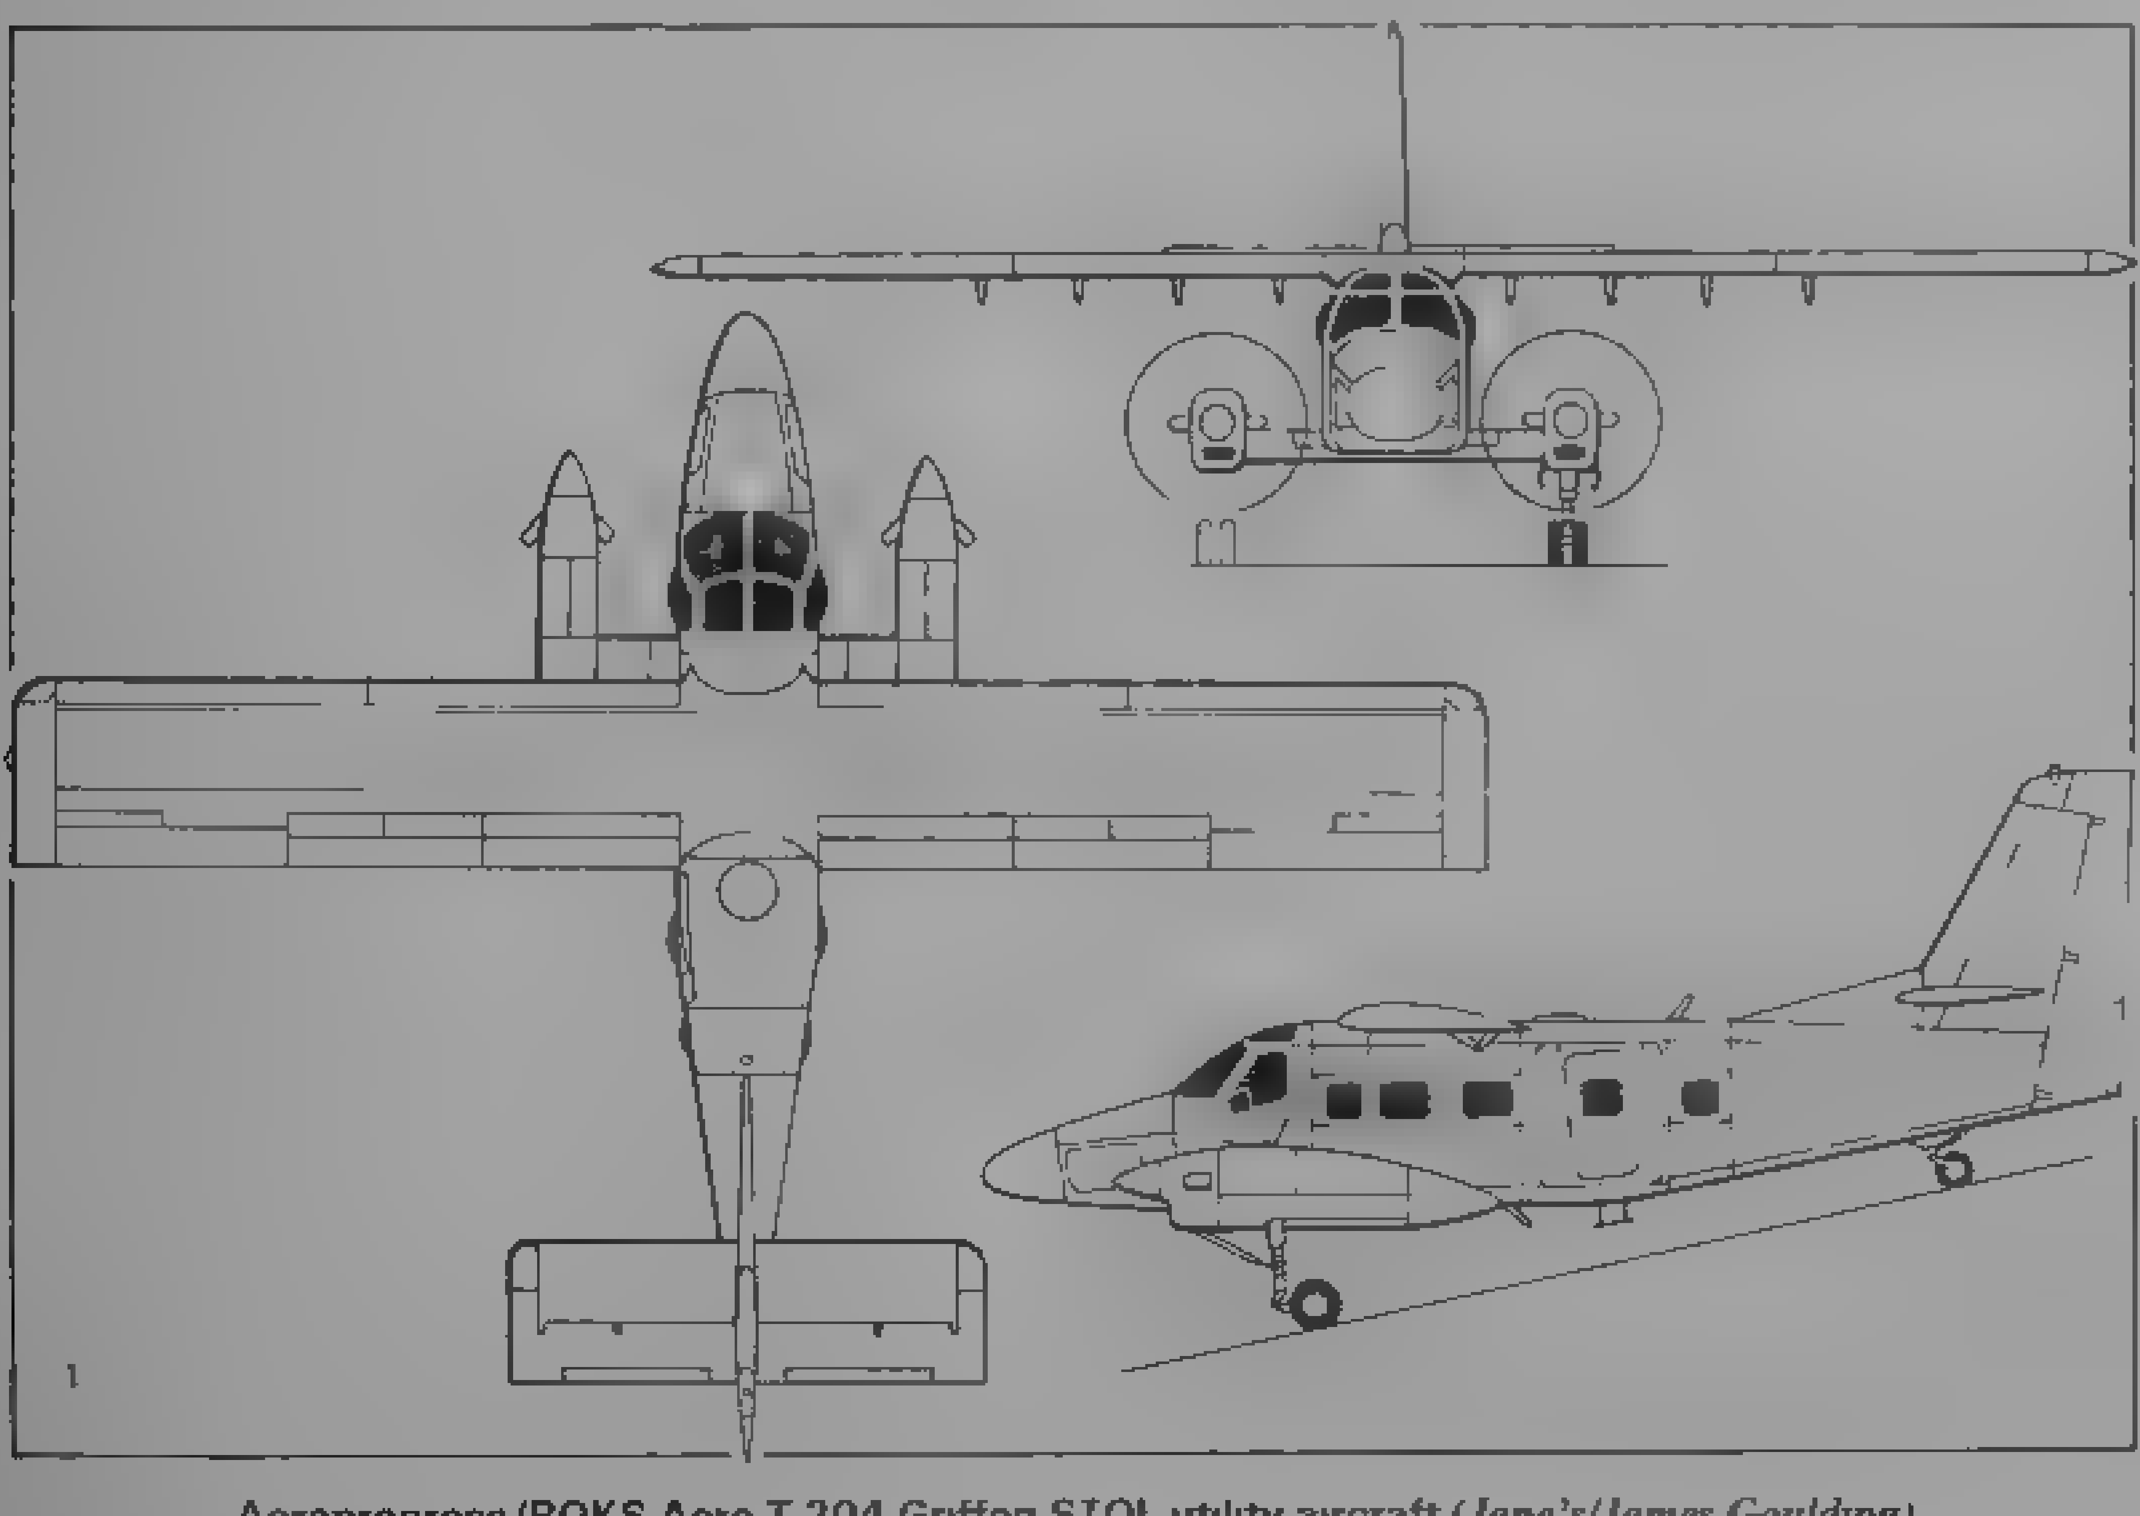
ACCOMMODATION: Two crew side by side on flight deck, standard seats for nine passengers; maximum 12; large freight door, with inset passenger door, on port side of cabin; provision for 1,300 kg (2,865 lb) freight with seats removed. Baggage compartment in nose

SYSTEMS: Electrical system 27 V DC, with 40 Ah battery

DIMENSIONS, EXTERNAL:	
Wing span	18.20 m (59 ft 8½ in)
Wing chord (constant)	2.40 m (7 ft 10½ in)
Length overall	13.65 m (44 ft 9½ in)
Fuselage: Width	1.80 m (5 ft 10¾ in)
Depth	2.52 m (8 ft 3 in)
Height overall	4.76 m (15 ft 7 in)
Tailplane span	5.82 m (19 ft 1¼ in)
Wheel track	4.40 m (14 ft 5¼ in)
Wheelbase	8.24 m (27 ft 0½ in)
Propeller diameter	2.30 m (7 ft 6½ in)
Propeller ground clearance	1.06 m (3 ft 5¾ in)
Distance between propeller centres	4.40 m (14 ft 5¼ in)
Cargo door: Height	1.80 m (5 ft 10¾ in)
Width	1.65 m (5 ft 5 in)
Inset passenger door: Height	1.42 m (4 ft 8 in)
Width	0.81 m (2 ft 8 in)
DIMENSIONS, INTERNAL:	
Cabin: Length excl flight deck	4.20 m (13 ft 9¼ in)
Width	1.60 m (5 ft 3 in)
Height	1.80 m (5 ft 10¾ in)
Floor area	6.72 m² (72.3 sq ft)
Volume	12.10 m³ (427.3 cu ft)
AREAS:	
Wings, gross	43.63 m² (469.65 sq ft)
Ailerons (total)	2.91 m² (31.32 sq ft)
Trailing-edge flaps (total)	7.52 m² (80.95 sq ft)
Leading-edge slats (total)	4.91 m² (52.85 sq ft)
Spoilers (total)	2.93 m² (31.54 sq ft)
Fin, incl dorsal fin	3.37 m² (36.28 sq ft)
Rudder	2.52 m² (27.13 sq ft)
Tailplane	6.16 m² (66.31 sq ft)
Elevators (total)	4.31 m² (46.40 sq ft)
WEIGHTS AND LOADINGS:	
Max operating weight, empty	3,600 kg (7,936 lb)
Max payload	1,300 kg (2,865 lb)
Max fuel	1,100 kg (2,425 lb)
Max ramp, T-O and landing weight	5,740 kg (12,655 lb)
Max zero-fuel weight	4,640 kg (10,230 lb)
Max wing loading	131.6 kg/m² (26.94 lb/sq ft)
Max power loading	5.13 kg/kW (8.44 lb/shp)
PERFORMANCE (estimated at 5,500 kg; 12,125 lb T-O weight):	
Never-exceed speed at 3,000 m (9,840 ft)	190 kts (352 km/h, 218 mph)
Max cruising speed at 3,000 m (9,840 ft)	172 kts (320 km/h, 199 mph)
Service ceiling	6,000 m (19,685 ft)
T-O to 15 m (50 ft)	450 m (1,475 ft)
Landing from 15 m (50 ft)	700 m (2,300 ft)
Landing run	260 m (855 ft)
Range at 3,000 m (9,840 ft), 45 min reserve:	
with max payload	205 n miles (380 km, 236 miles)
with max fuel and 940 kg (2,072 lb) payload	415 n miles (770 km, 478 miles)

NEW ENTRY

Model of Aeroprogress/ROKS Aero T-205 turboprop-powered multirole transport *1995*



Aeroprogress/ROKS-Aero T-204 Griffon STOL utility aircraft (*Jane's/James Goulding*) *1995*

AEROPROGRESS/ROKS-AERO T-205

TYPE: Turboprop-powered, light multirole transport

PROGRAMME: Airframe embodies maximum practicable commonality with that of T-101 Grach, major changes include tricycle landing gear, lengthened fuselage forward of wings, and different power plant. Options include hinging to starboard of entire rear fuselage aft of upward-hinged freight door, or loading ramp in bottom of standard rear fuselage, to provide direct access to hold, and float landing gear

POWER PLANT: One P&WC PT6A-67K turboprop; Hartzell five-blade constant-speed propeller; or Saturn AL-34 turboprop

ACCOMMODATION: One or two persons side by side on flight deck, nine to 15 passengers in pairs, or equivalent freight or combi payload, in main cabin. Freight door, with inset passenger door, at rear of cabin on port side, with removable steps, forward hinged door each side of flight deck. Optional front-hinged ramp/door forming bottom of rear fuselage

AVIONICS: *Comms*: AlliedSignal KX 155 09 radio

WEIGHTS AND LOADINGS:	
Max payload	1,600 kg (3,527 lb)
Max fuel	1,100 kg (2,425 lb)
Max T-O weight	5,700 kg (12,566 lb)
PERFORMANCE (estimated):	
Max level speed at 3,000 m (9,840 ft)	183 kts (340 km/h; 211 mph)
Nominal cruising speed at 3,000 m (9,840 ft)	165 kts (305 km/h, 190 mph)
Stalling speed	52 kts (95 km/h, 59 mph)
Service ceiling	4,000 m (13,125 ft)
T-O run	330 m (1,085 ft)
Landing run	295 m (970 ft)
Balanced field length	600 m (1,970 ft)
Range:	
with max payload	215 n miles (400 km, 248 miles)
with max fuel	701 n miles (1,300 km, 807 miles)

NEW ENTRY

AEROPROGRESS/ROKS-AERO T-274 TITAN

TYPE: Four-turboprop STOL transport

PROGRAMME: Announced early 1994; prototypes under construction, first flight scheduled for 1996, manufacture of civil and military versions planned at Polyot plant, Omsk, in co-operation with Khrunichev plant. Major production anticipated

DESIGN FEATURES: High-wing monoplane, constant-chord centre-section without dihedral or anhedral, approximately 10° anhedral and 17° sweepback on outer panels, with winglets. Fuselage of circular section, upswept rear fuselage, with undersurface formed by ramp/door that can hinge downward conventionally or slide forward under cabin to permit direct loading from truck, one-piece bottom section of 'beaver tail' drops and moves backward slightly to release ramp. Wide-chord sweptback vertical tail surfaces with T tailplane

FLYING CONTROLS: Hydraulically actuated ailerons, variable incidence tailplane, leading-edge and triple-slotted trailing-edge flaps; double-hinged rudder; four section spoilers forward of flaps on each wing. Rudder tab in lower portion of two-section aft panel, tab in port aileron, two tabs in each elevator

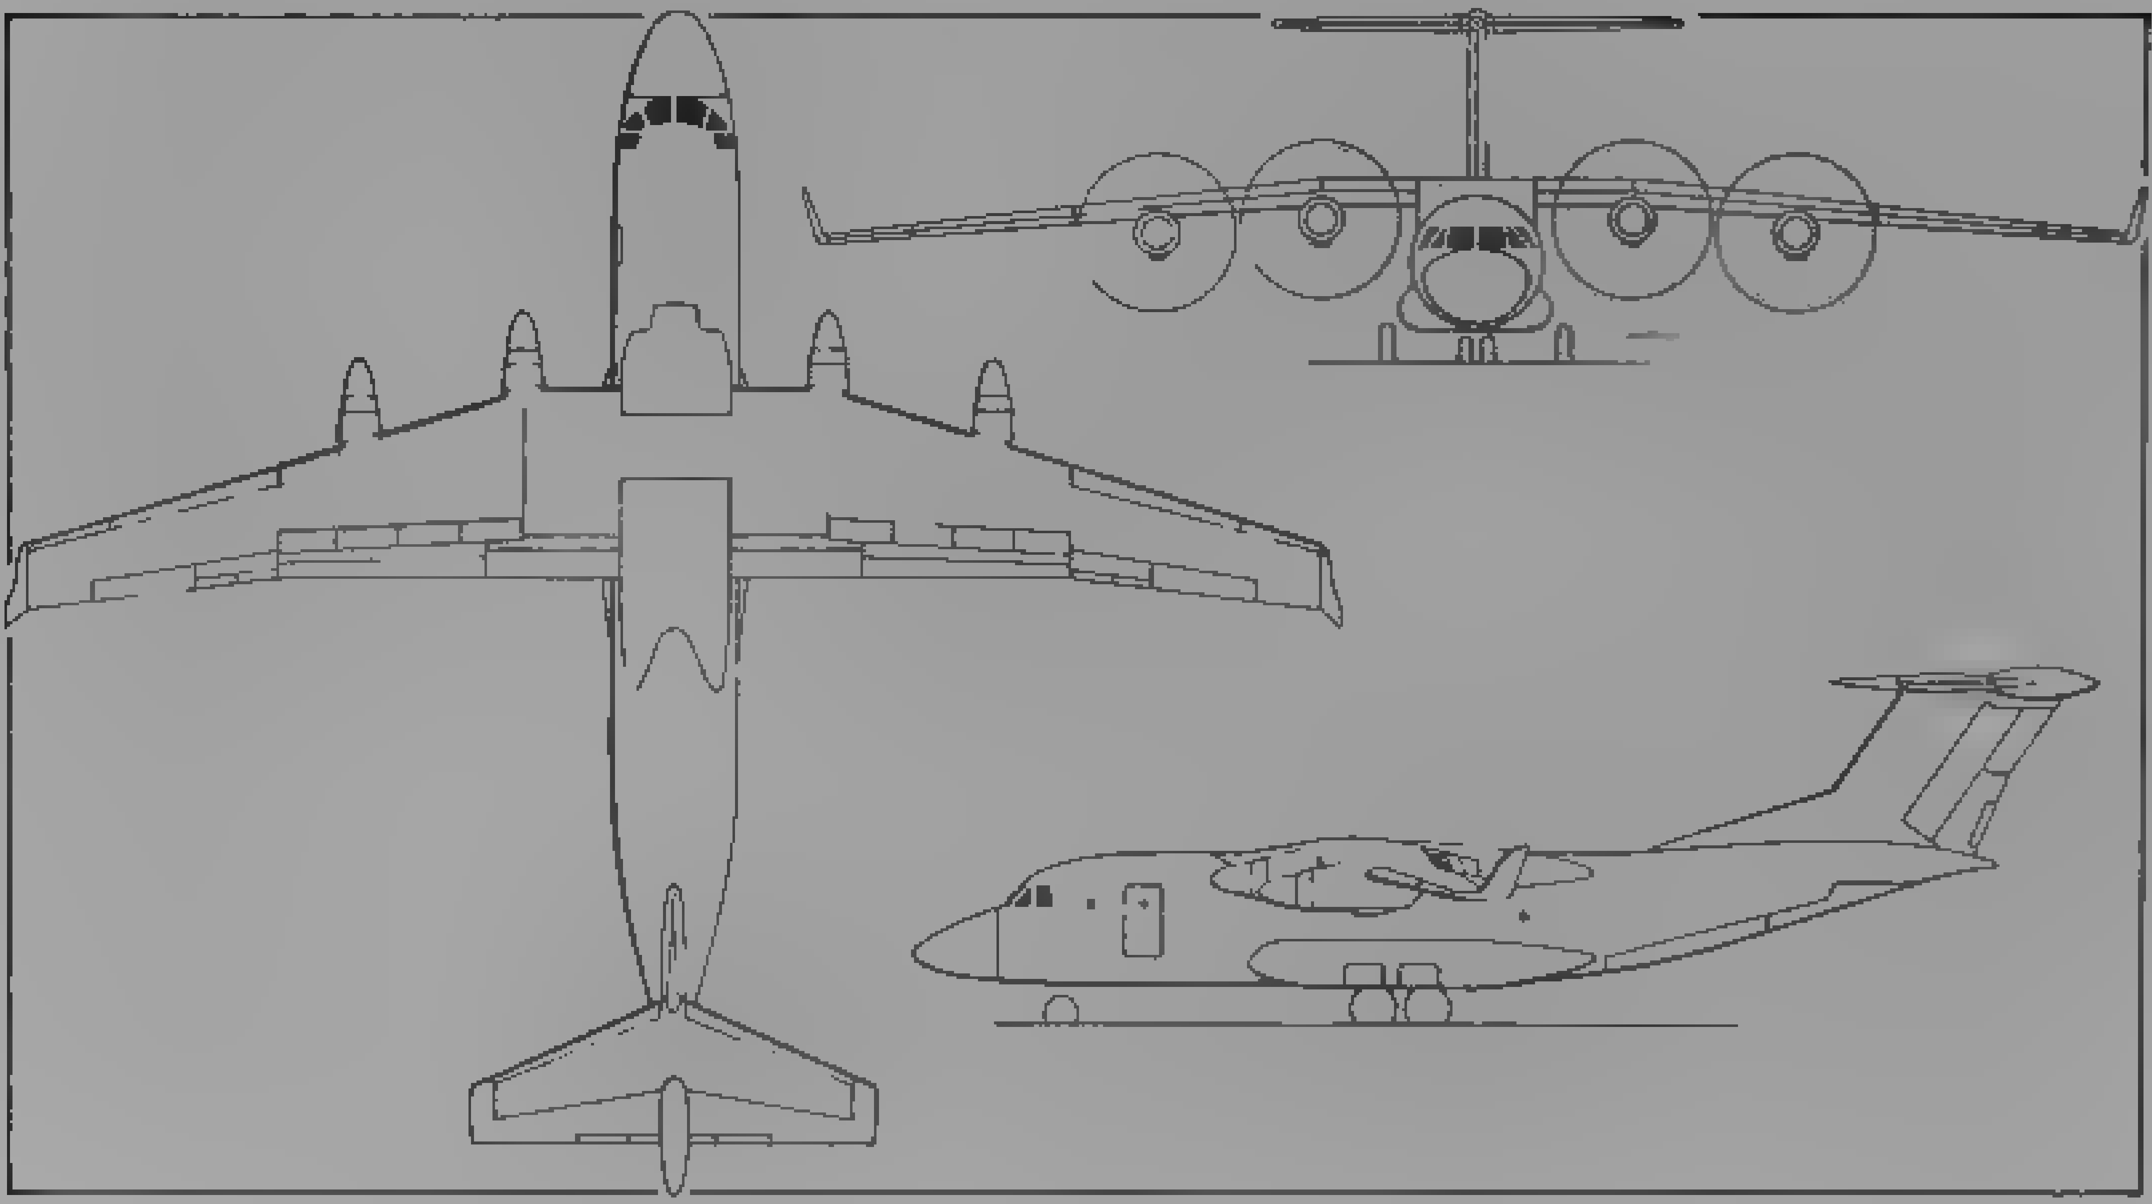
STRUCTURE: All-metal multispar wings, conventional semi-monocoque fuselage

LANDING GEAR: Hydraulically retractable tricycle type, twin wheels on rearward-retracting steerable nose unit, each main unit has two trailing link legs in tandem, each with single wheel retracting inward through 90° so that wheels lie horizontally in bottom of large fairings, outside fuselage pressure cell. Oleo-pneumatic shock-absorbers. Low pressure tyres, size 720 × 310 mm on nosewheels, 1 050 × 400 mm on mainwheels. Hydraulic disc brakes

POWER PLANT: Four Klimov TV7 117 turboprops, each driving six-blade propeller with spinner. Interspar integral fuel tanks in outer wings

ACCOMMODATION: Two crew on flight deck; payloads include containers up to 1.9 × 2.44 × 1.46 m (6 ft 3 in × 8 ft × 4 ft 9½ in), loaded with aid of mobile winch, capacity 2,500 kg (5,511 lb). Door on port side at front of cabin, emergency exit and servicing door at rear on starboard side, hydraulically actuated rear-loading ramp/door. All accommodation pressurised and air conditioned

SYSTEMS: Air conditioning system maintains comfortable environment to 10,000 m (32,800 ft), independent temperature control on flight deck and in main cabin. Electrical system powers auxiliary systems, flight deck equipment, lighting and mobile winch. Hot air de-icing system for leading-edges of wings and tail unit, engine air intakes and



Aeroprogress/ROKS-Aero T-274 Titan four-turboprop STOL transport ***(Jane's/Mike Keep)***

1994

flight deck windows. Provision for APU in starboard landing gear fairing.

AVIONICS: *Comms*: HF com and VHF com/nav.

Radar: Nav/weather radar in nose.

Flight: Doppler-based automatic nav system, with map display. ADF.

DIMENSIONS, EXTERNAL:

Wing span	31.89 m (104 ft 7½ in)
Length overall	28.07 m (92 ft 1¼ in)
Fuselage diameter	3.10 m (10 ft 2 in)
Height overall	8.65 m (28 ft 4½ in)
Wheel track	4.15 m (13 ft 7½ in)
Wheelbase	8.12 m (26 ft 7¾ in)
Propeller diameter	3.60 m (11 ft 9¾ in)
Rear-loading door: Length	7.10 m (23 ft 3½ in)
Width	2.40 m (7 ft 10½ in)

DIMENSIONS, INTERNAL:

Cabin: Length	10.50 m (34 ft 5 in)
Width at floor level	2.15 m (7 ft 0½ in)
Height	2.20 m (7 ft 2½ in)

AREAS:

Wings, gross	98.62 m² (1,062 sq ft)

WEIGHTS AND LOADINGS:

Max payload	13,000 kg (28,660 lb)
Max ramp weight	36,500 kg (80,465 lb)
Max T-O weight	36,000 kg (79,365 lb)
Max wing loading	365.0 kg/m² (74.73 lb/sq ft)

PERFORMANCE (estimated):

Max level speed at 6,000 m (19,685 ft)	340 kts (630 km/h; 391 mph)
Nominal cruising speed at 8,000 m (26,250 ft)	323 kts (600 km/h; 372 mph)
Service ceiling	9,300 m (30,500 ft)
T-O run	750 m (2,460 ft)
FAA T-O field length	1,250 m (4,100 ft)
FAA landing field length	1,150 m (3,775 ft)
Range, 60 min reserves: with max payload	485 n miles (900 km; 560 miles)
with max fuel	3,560 n miles (6,600 km; 4,100 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-401 SOKOL (FALCON)

TYPE: Single-engined light multipurpose aircraft.

CURRENT VERSIONS: Designed for passenger/freight transport, ambulance, offshore patrol, primary training and agricultural applications.

PROGRAMME: Project design started 1990; detail design, with piston engine, under way 1993; alternative turboprop engine being studied January 1995, to meet request of most potential customers for operation on kerosene fuel. First flight scheduled for October 1995.

CUSTOMERS: Initial requirement 200 aircraft.

DESIGN FEATURES: Conventional cantilever high-wing monoplane, sweptback vertical tail surfaces, non-retractable tricycle landing gear, with fairing over each wheel; wing section MS (1)-3M, dihedral 1° 30', incidence 2°. Small auxiliary fin on each side of tailplane on floatplane version.

FLYING CONTROLS: Conventional three-axis mechanical control. Trim tabs in port elevator and rudder. Large flap and aileron occupy full span of each wing trailing-edge.

STRUCTURE: All metal. Conventional two-spar wing; square-section semi-monocoque fuselage.

LANDING GEAR: Non-retractable tricycle type, single wheel on each unit; mainwheel tyres size 500 × 150 mm, nosewheel tyre size 400 × 150 mm. Minimum ground turning radius 4 m (13 ft 1½ in). Maximum steering angle of nosewheel ±40°. Optional floats and skis.

POWER PLANT: One 265 kW (355 hp) VOKBM M-14PR nine-cylinder air-cooled radial engine; alternatives include a Textron Lycoming piston engine; V530TA-D35 three-blade constant-speed propeller. Turboprop alternative, probably Allison 250-B17C, under consideration early 1995. Fuel capacity 350 litres (92.5 US gallons; 77 Imp gallons).

ACCOMMODATION: Six persons in pairs, including one or two pilots in basic version. All passenger seats removable for freight carrying. Ambulance version carries one stretcher patient, one or two medical attendants, and medical equipment including optionally An-8 narcosis apparatus, KI-4 oxygen supply or Voga MT automatic respirator, Ambu manual breathing apparatus, Salut electrocardiographic equipment and EKSN electrocardiostimulator. Provision for photographic and video equipment, PZS-68 public address system and various workstations. Forward-hinged door each side of front seats, large forward-hinged door on port side at rear of cabin.

DIMENSIONS, EXTERNAL:

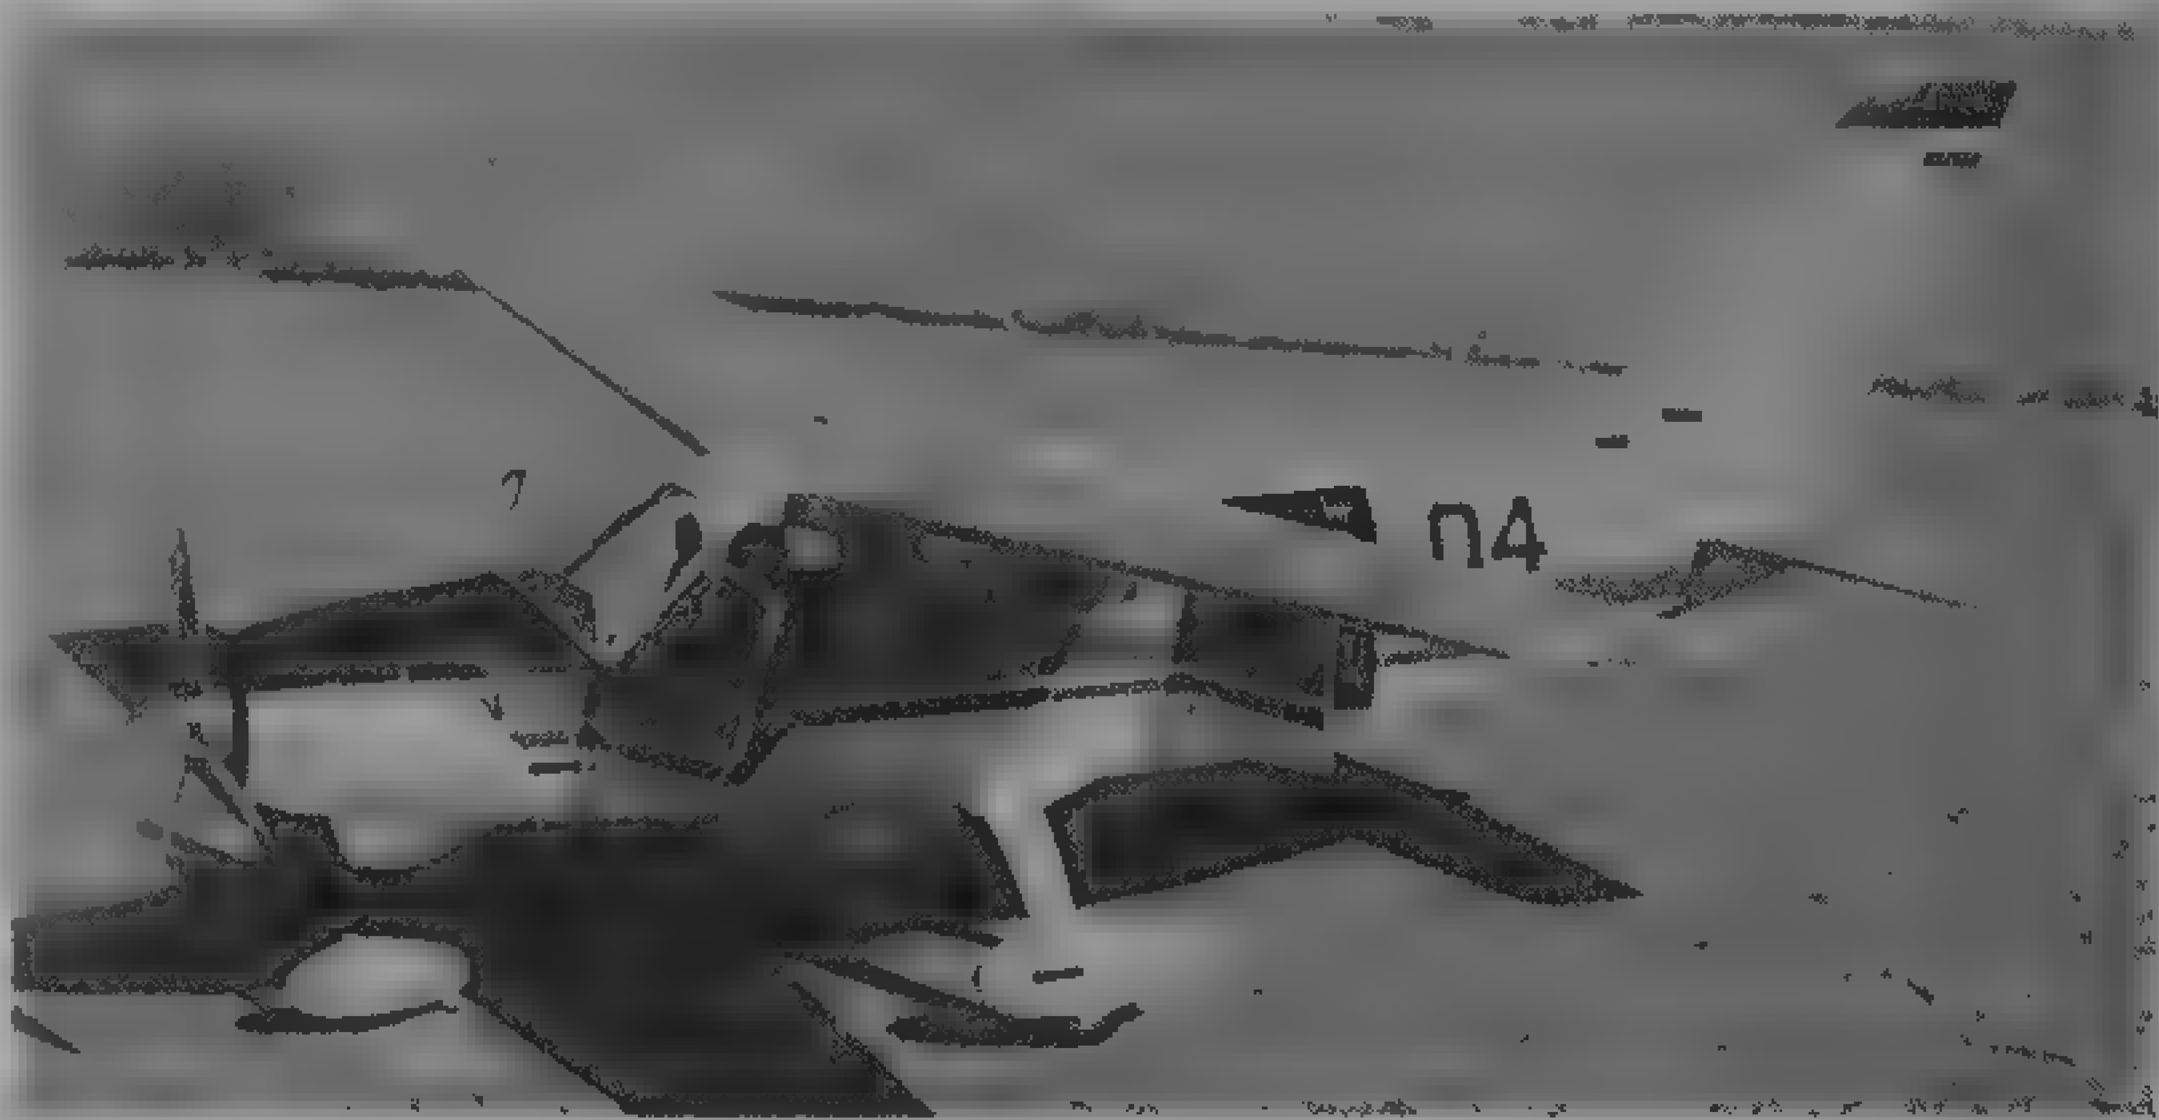
Wing span	13.66 m (44 ft 9¾ in)
Wing chord: at centreline	1.88 m (6 ft 2 in)
at wingtip	1.05 m (3 ft 5¼ in)
Wing aspect ratio	9.33
Length overall	8.90 m (29 ft 2½ in)
Fuselage: Max width	1.50 m (4 ft 11 in)
Max height	1.65 m (5 ft 5 in)
Height overall	4.39 m (14 ft 4¾ in)
Tailplane span	5.10 m (16 ft 9 in)
Wheel track	3.30 m (10 ft 10 in)
Wheelbase	2.67 m (8 ft 9¼ in)
Propeller diameter	2.40 m (7 ft 10½ in)
Propeller ground clearance	0.34 m (1 ft 1½ in)
Flight deck door (each side): Height	1.10 m (3 ft 7¼ in)
Width at top	0.47 m (1 ft 6½ in)
Width at bottom	0.78 m (2 ft 6½ in)
Cabin door: Height	1.18 m (3 ft 10½ in)
Width	1.02 m (3 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin, incl flight deck: Length	4.41 m (14 ft 5½ in)
Max width	1.34 m (4 ft 4¾ in)
Max height	1.25 m (4 ft 1¼ in)
Floor area	4.94 m² (53.2 sq ft)
Volume	6.175 m³ (218 cu ft)
Baggage space, passenger version	1.0 m³ (35 cu ft)
Volume of hold, freighter	4.76 m³ (168 cu ft)

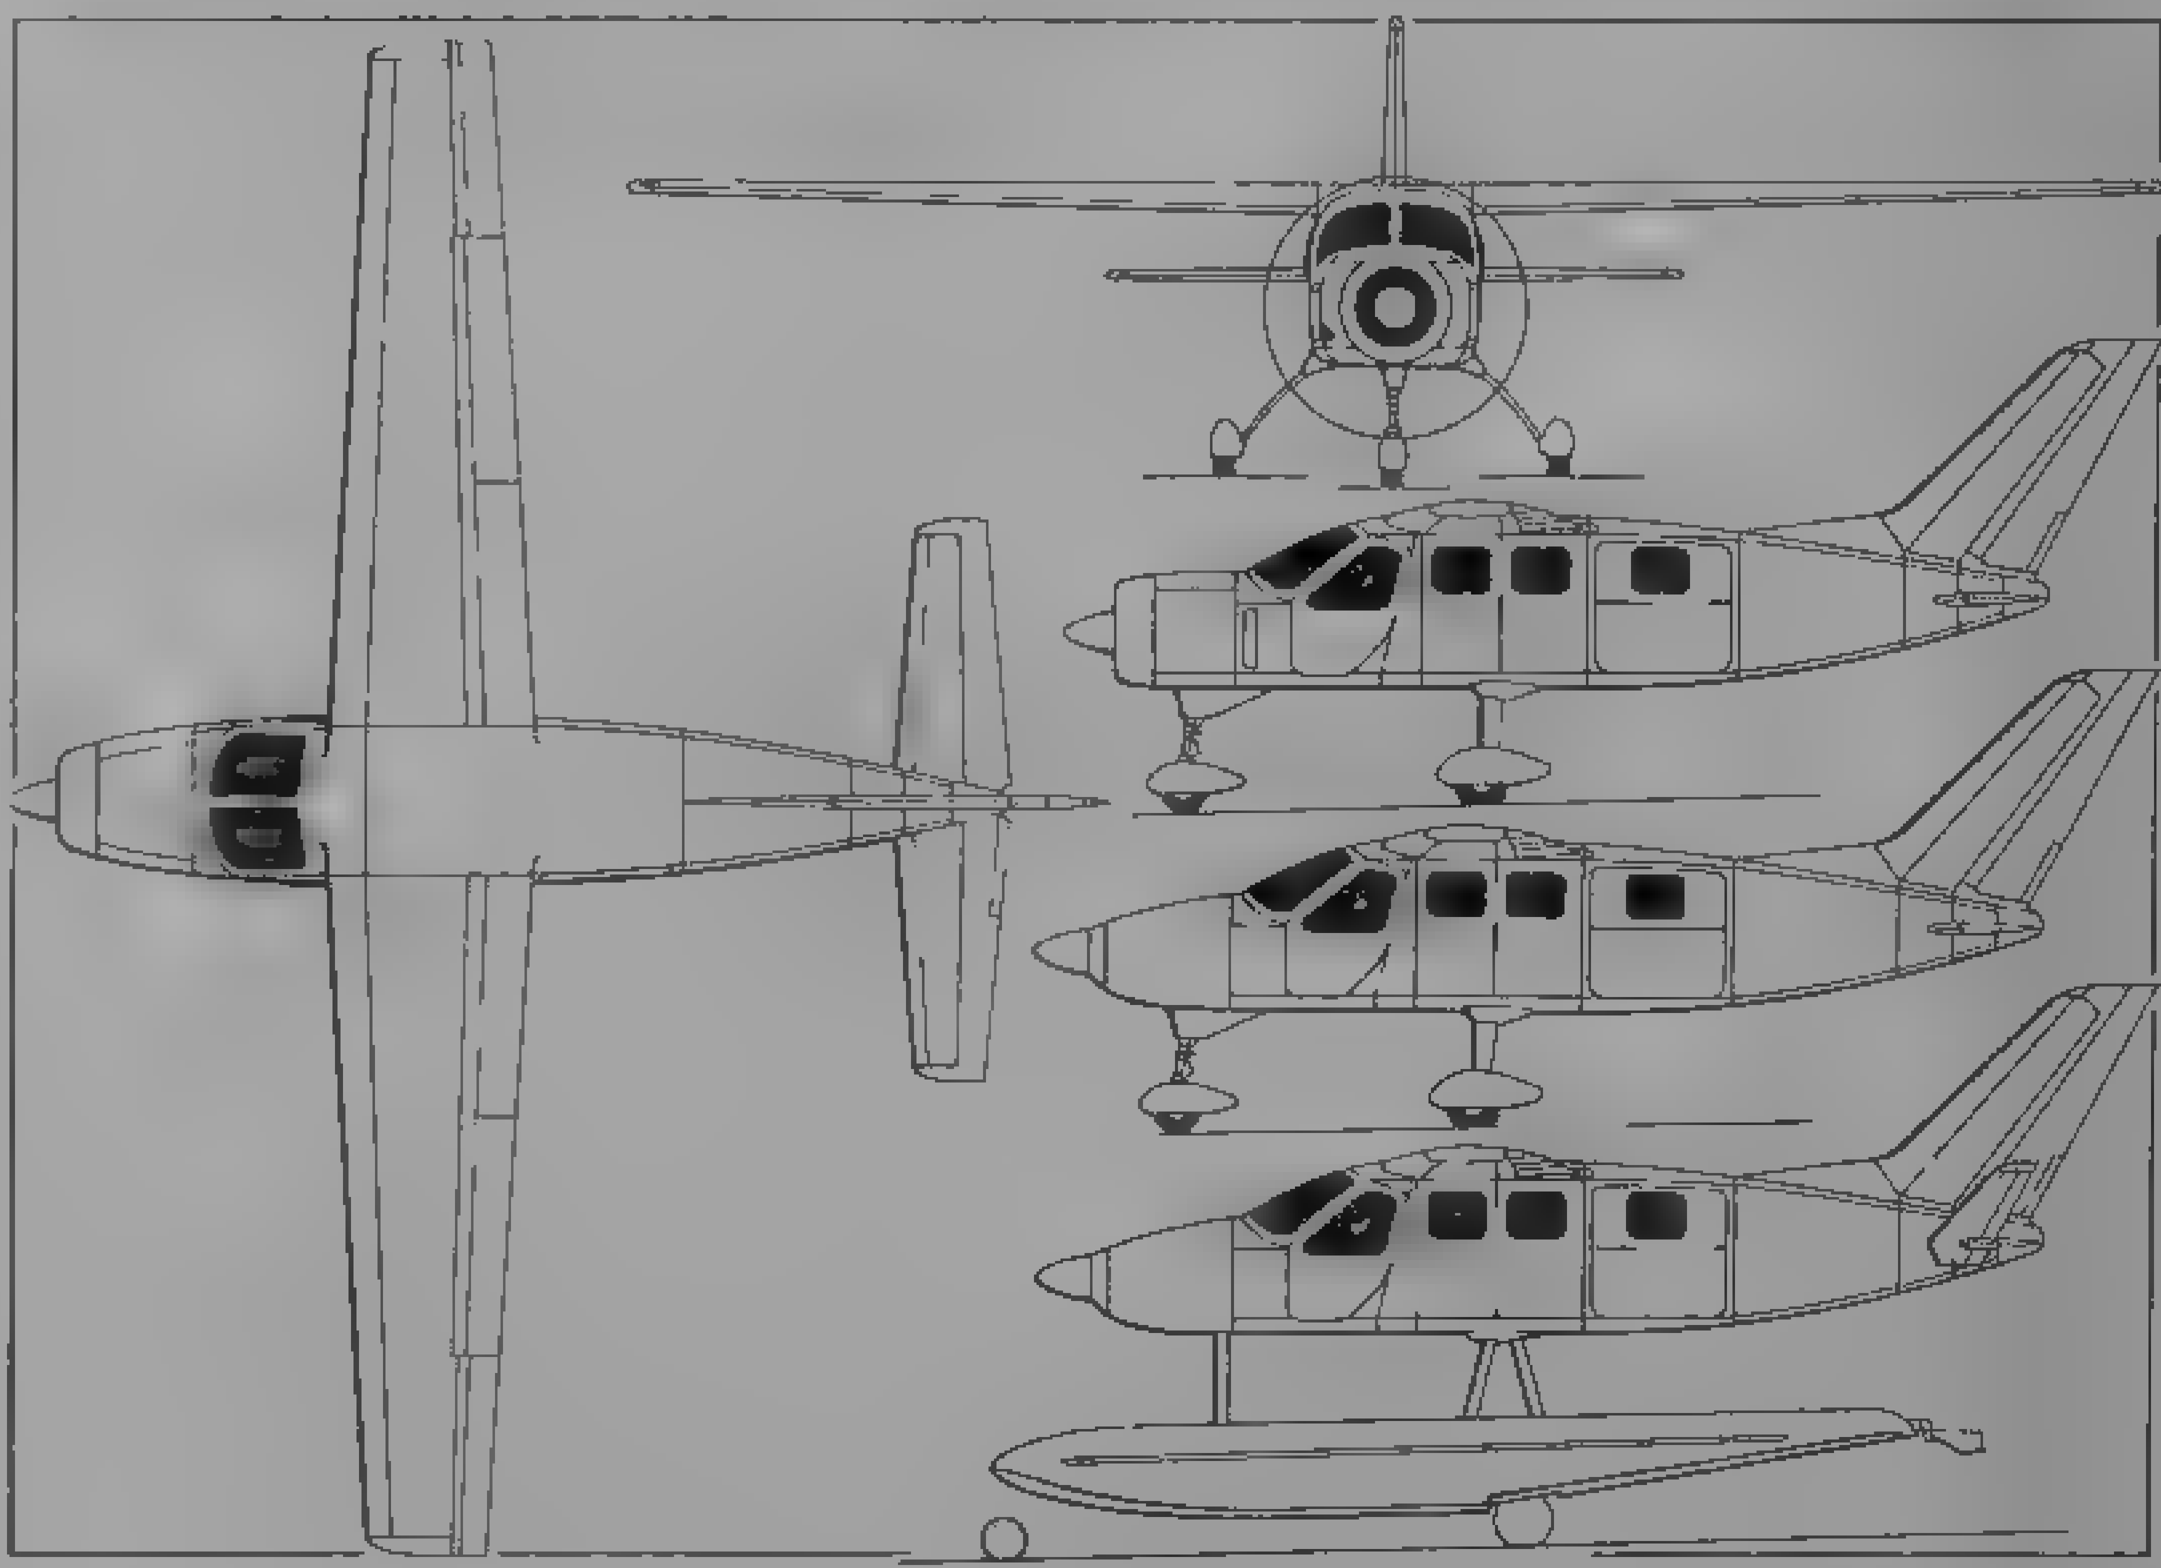
AREAS:

Wings, gross	20.00 m² (215.3 sq ft)
Ailerons (total)	1.142 m² (12.29 sq ft)



Model of Aeroprogress/ROKS-Aero T-401 Sokol with M-14PR engine

1995



Aeroprogress/ROKS-Aero T-401 Sokol light multipurpose aircraft, with additional side views showing versions with Textron Lycoming piston engine and float landing gear ***(Jane's/Mike Keep)***

1993

Trailing-edge flaps (total)	4.345 m² (46.77 sq ft)
Fin, incl dorsal fin	2.33 m² (25.08 sq ft)
Rudder	1.24 m² (13.35 sq ft)
Tailplane	2.48 m² (26.68 sq ft)
Elevators (total)	1.856 m² (19.98 sq ft)
WEIGHTS AND LOADINGS (M-14PR engine):	
Weight empty, equipped	1,430 kg (3,153 lb)
Max payload	450 kg (992 lb)
Max fuel	320 kg (705 lb)
Max T-O and landing weight	2,030 kg (4,475 lb)
Max wing loading	101.5 kg/m² (20.50 lb/sq ft)
Max power loading	7.66 kg/kW (12.6 lb/hp)
PERFORMANCE (estimated, with M-14PR engine):	
Max level speed at 3,000 m (9,840 ft)	156 kts (290 km/h; 180 mph)
Max cruising speed at 3,000 m (9,840 ft)	145 kts (270 km/h; 167 mph)
Econ cruising speed at 3,000 m (9,840 ft)	116 kts (215 km/h; 134 mph)
Stalling speed, flaps down	68 kts (125 km/h; 78 mph)
Max rate of climb at S/L	260 m (855 ft)/min
Service ceiling	4,000 m (13,125 ft)
T-O run	255 m (837 ft)
T-O to 15 m (50 ft)	430 m (1,410 ft)
Landing from 15 m (50 ft)	545 m (1,790 ft)
Landing run	233 m (765 ft)
Range: with max payload, 30 min reserves	420 n miles (780 km; 485 miles)
with max fuel	880 n miles (1,630 km; 1,012 miles)

UPDATED

AEROPROGRESS/ROKS AERO T-407 SKBORETS (STARLING)

TYPE: Single-engined light multipurpose aircraft.

PROGRAMME: Design began early 1993, full-scale mockup of M-14P version exhibited MosAeroshow '93; prototype being constructed at Khrunichev plant, for July 1995 first flight. Teledyne Continental piston engine and Allison turboprop to be installed in prototypes.

DESIGN FEATURES: Conventional strut-braced high-wing monoplane of extremely simple design; constant-chord wings and tailplane, unswept vertical tail surfaces, square section fuselage. Wing section P-II, dihedral 1° 30', incidence 2°.

FLYING CONTROLS: Conventional mechanical control. Slotted aileron and slotted flap on full span of each wing trailing edge. Horn balanced elevators and rudder. Trim tab in starboard tailplane.

STRUCTURE: All-metal, with steel-tube engine mounting and rear fuselage truss structure.

LANDING GEAR: Non-retractable tricycle type; single wheel on each unit. Each mainwheel on tripod mounting, with oleo-pneumatic shock-absorber. Mainwheel tyres size 500 × 150 mm, nosewheel tyre size 400 × 150 mm.

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial piston engine; V530TA-D35 three-blade propeller. Alternative Teledyne Continental piston engine and Allison turboprop. Fuel tanks in inner wings, capacity 380 litres (100 US gallons, 83.5 Imp gallons).

ACCOMMODATION: Basic seating for one or two persons on flight deck, up to five in cabin on two rearward-facing seats and rear bench seat. Baggage space behind rear seats. Alternative cabin configurations for freight carrying, ambulance, agricultural, offshore patrol and other utility duties. Forward-opening door each side of flight deck. Large horizontally divided two-piece door at rear of cabin, port side.

DIMENSIONS, EXTERNAL:	
Wing span	12.12 m (39 ft 9¼ in)
Wing chord (constant)	2.00 m (6 ft 6¾ in)
Wing aspect ratio	5.84
Length overall	10.00 m (32 ft 9¾ in)
Height overall	4.40 m (14 ft 5¼ in)
Wheel track	2.72 m (8 ft 11 in)
Wheelbase	3.05 m (10 ft 0 in)
DIMENSIONS, INTERNAL:	
Cabin, excl flight deck: Length	2.60 m (8 ft 6¼ in)
Max width	1.34 m (4 ft 4¾ in)
Max height	1.30 m (4 ft 3 in)
Volume	4.50 m³ (159 cu ft)
AREAS:	
Wings, gross	25.14 m² (270.6 sq ft)
Ailerons (total)	2.43 m² (26.16 sq ft)
Trailing-edge flaps (total)	3.10 m² (33.37 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty	1,250 kg (2,755 lb)
Max fuel	300 kg (661 lb)
Fuel with max payload	150 kg (331 lb)
Max payload	600 kg (1,322 lb)
Payload with max fuel	450 kg (992 lb)
Max T-O weight	2,080 kg (4,585 lb)
Max wing loading	82.74 kg/m² (16.94 lb/sq ft)
Max power loading	7.85 kg/kW (12.91 lb/hp)
PERFORMANCE (estimated):	
Max cruising speed	116 kts (215 km/h; 133 mph)
Nominal cruising height	2,000 m (6,560 ft)
T-O run	480 m (1,575 ft)
T-O to 15 m (50 ft)	600 m (1,970 ft)
Landing from 15 m (50 ft)	410 m (1,345 ft)
Landing run	290 m (952 ft)
Range, 45 min reserves:	
with max payload	410 n miles (760 km; 472 miles)
with max fuel	960 n miles (1,780 km; 1,105 miles)

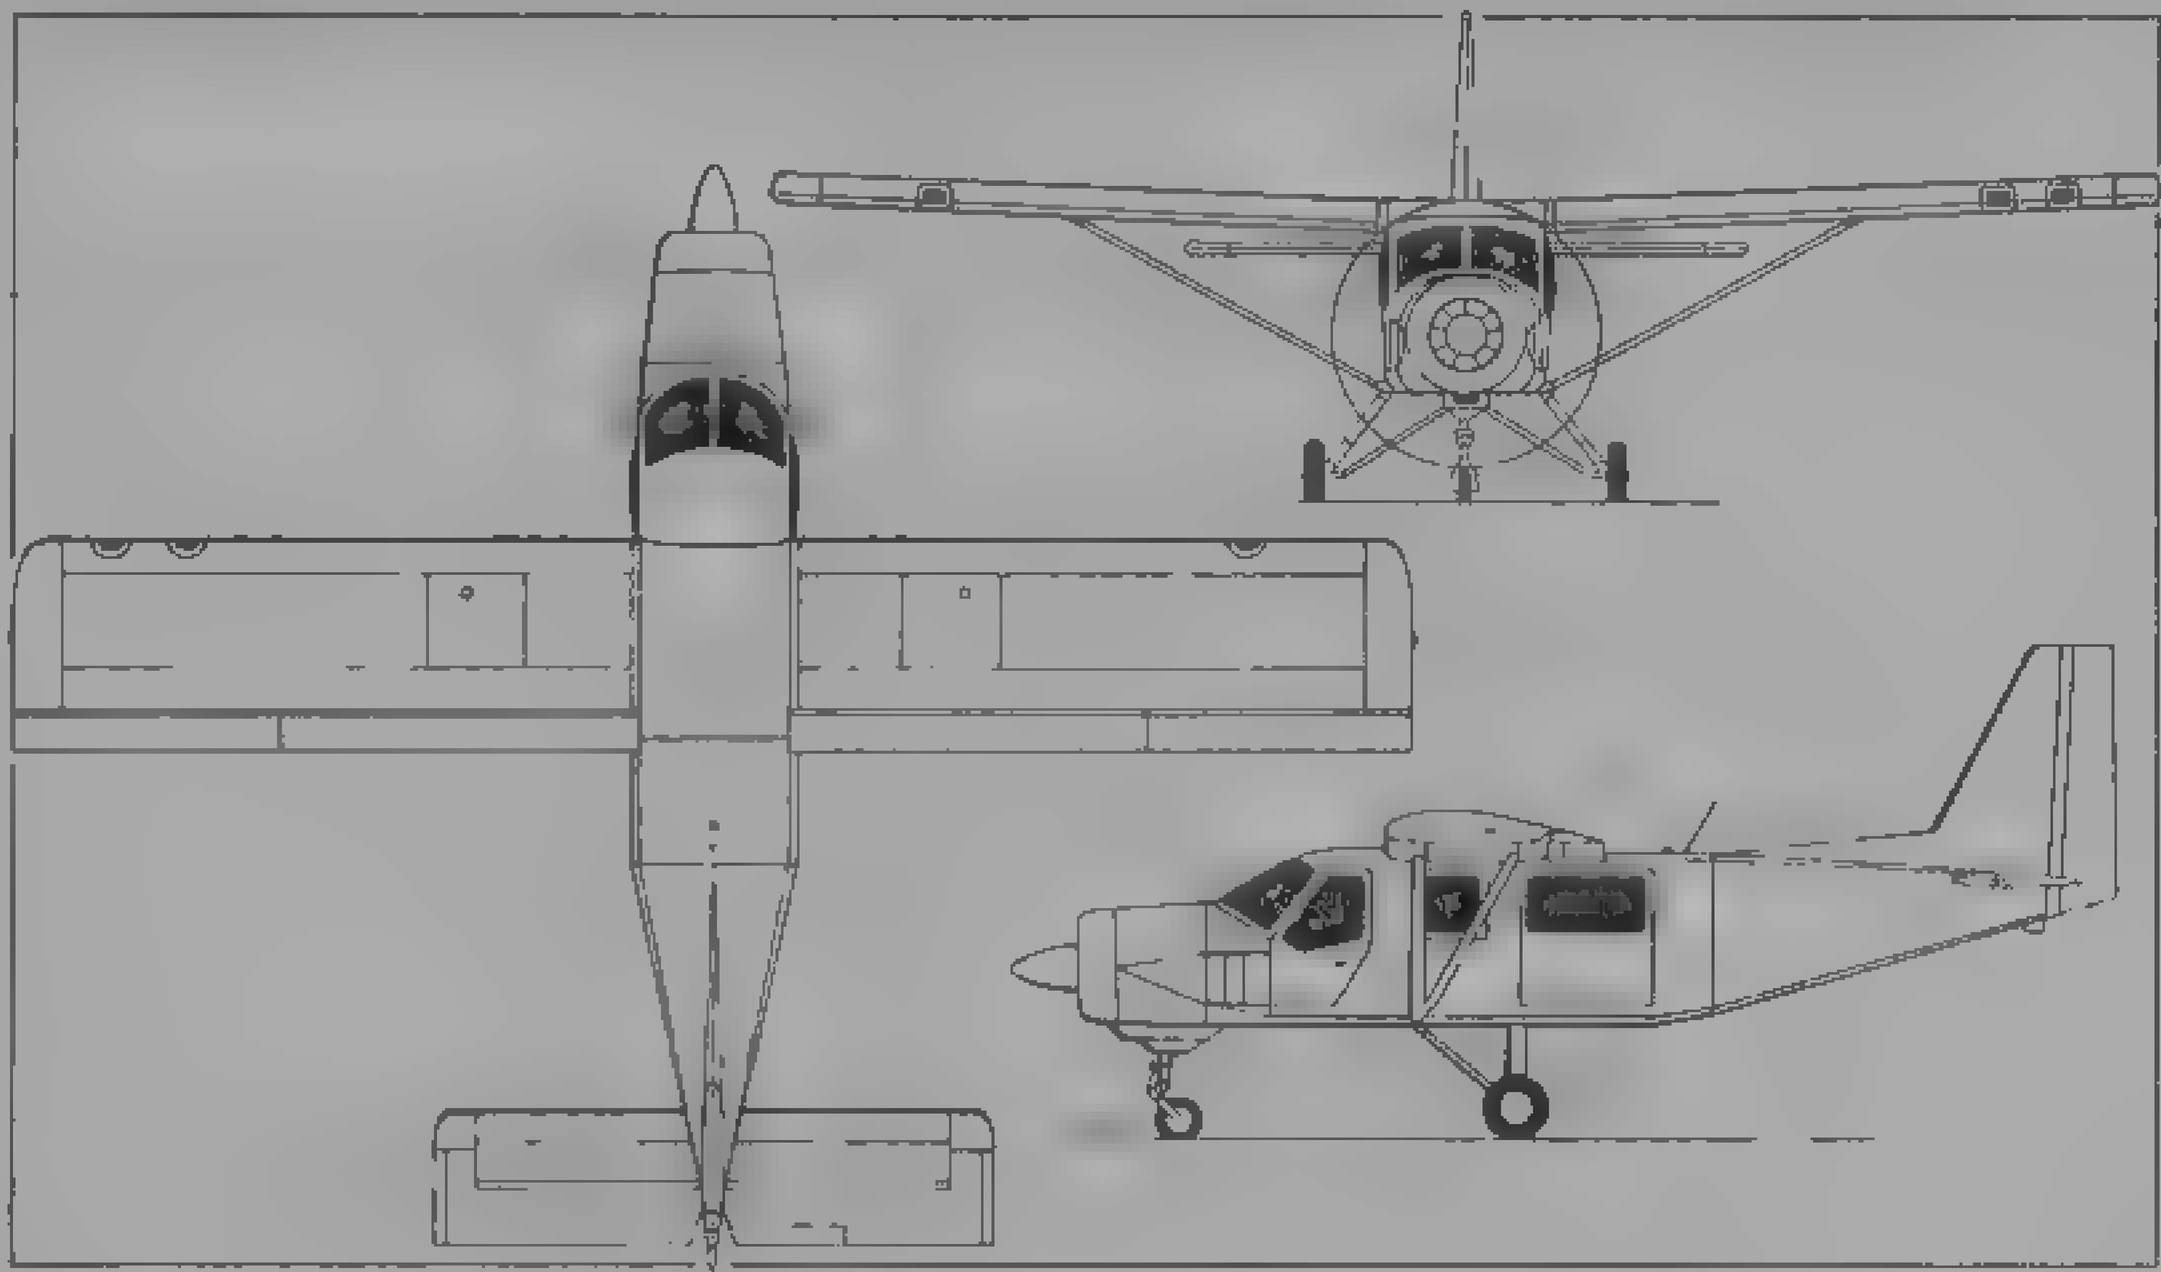
Full-scale mockup of Aeroprogress/ROKS-Aero T-407 light multipurpose aircraft with M-14P engine *(Mike Jerram)* *1994*



Aeroprogress/ROKS-Aero T-407 (M-14P radial piston engine) *(Jane's/Mike Keep)* *1993*

AEROPROGRESS/ROKS-AERO T-411 AIST-2 (STORK-2)

TYPE: Four-seat multipurpose light aircraft with STOL capability.

PROGRAMME: Design started November 1992, construction of prototype began April 1993, first flight 10 November 1993 in standard form, 15 March 1994 with ski landing gear, 250 flying hours by beginning of 1995, programme bought by Khrunichev plant, series production started November 1994.

DESIGN FEATURES: Conventional strut-braced high-wing monoplane. Constant-chord unswept wings with fixed leading-edge slat, slotted ailerons and single-slotted trailing-edge flaps, wing section NACA 23011, dihedral 2° from root, incidence 3° 30', V bracing struts. Rectangular-section fuselage. Unswept tail unit with dorsal fin, constant chord horizontal tail surfaces.

FLYING CONTROLS: Mechanically actuated ailerons, elevators and rudder, via cables and rods, electrically controlled trim tab in each elevator; fixed full-span leading-edge slats, slotted flaps. Optional autopilot.

STRUCTURE: Primary structure of aluminium alloy and alloy steel, part covered with high strength synthetic fabric. Two-spar wings, fabric covered between spars except for metal skin over fuel tanks at root. Metal tail unit structure, fabric covered.

LANDING GEAR: Non-retractable tailwheel type; single wheel on each unit with fairings on mainwheels. Side V and half-axle mainwheel legs; castoring tailwheel. Tyres size 500 × 150 mm on mainwheels, 300 × 135 mm on tailwheel. Pneumatic brakes on mainwheels. Optional skis.

Aeroprogress/ROKS-Aero T-411 Aist-2 (VOKBM M-14P air-cooled radial engine) *1994*

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine, driving V-530-TA-D35 two-blade variable-pitch propeller. Fuel in two wingroot tanks, total capacity 200 litres (53 US gallons, 44 Imp gallons), gravity fuelling. Oil capacity 25 litres (6.6 US gallons, 5.5 Imp gallons).

ACCOMMODATION: Pilot and three passengers in pairs, or pilot, one stretcher patient, one seated casualty and medical attendant. Alternative configurations for primary training, cargo/passenger, agricultural, patrol, aerial photography, ecological monitoring and glider towing missions. Baggage compartment aft of cabin, with large upward-opening door on port side, used also for loading freight or stretcher. Forward-hinged jettisonable door on each side of cabin. Cabin heated with air flow from oil radiator.

SYSTEMS: No hydraulics. Main and emergency pneumatic systems, main system for engine starting, flap control and wheel brakes, emergency system for wheel brakes and to extend flaps 20°; system pressure 50 bars (735 lb/sq in). GSR 3000M electrical generator supplies 27 V DC, PTS 250BM inverter supplies 115/200 V AC at 400 Hz, 12SAM-28 battery.

AVIONICS: *Comms:* Briz-1 com radio, R-855A1 emergency radio.

Flight: Greben-1 directional system, ARK-25 ADF, marker radio receiver; satellite nav system.

Instrumentation: IFR, includes AGB-96R gyro horizon and INP R nav indicator.

DIMENSIONS, EXTERNAL:	
Wing span	12.60 m (41 ft 4 in)
Wing chord (constant)	1.91 m (6 ft 3¼ in)
Length overall	9.36 m (30 ft 8½ in)
Fuselage: Max width	1.23 m (4 ft 0½ in)
Max depth	1.59 m (5 ft 2½ in)
Height overall	2.56 m (8 ft 4¾ in)
Tailplane span	4.03 m (13 ft 2¾ in)
Wheel track	3.00 m (9 ft 10¼ in)
Wheelbase	6.48 m (21 ft 3 in)
Propeller diameter	2.40 m (7 ft 10½ in)
Propeller ground clearance	0.78 m (2 ft 6¾ in)
Cabin doors (each): Height	1.02 m (3 ft 4¼ in)

T-O run	105 m (345 ft)
T-O to 15 m (50 ft)	252 m (827 ft)
Landing from 15 m (50 ft)	290 m (952 ft)
Landing run	122 m (400 ft)
Range, no reserve:	
with max payload	270 n miles (500 km; 310 miles)
with max fuel	442 n miles (820 km; 510 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-433 FLAMINGO

TYPE: Single-engined light multipurpose amphibian.

PROGRAMME: Design started May 1991, initially with M-14P piston engine, prototype with Allison turboprop scheduled to fly mid-1995.

CURRENT VERSIONS: Passenger/cargo transport; civil variants for economic zone patrol and fish survey, search and rescue, ecology monitoring and training, military patrol and reconnaissance.

DESIGN FEATURES: Conventional light amphibian, with boat hull, mid-mounted wings; tailplane mounted high on sweptback fin, wide-track retractable tricycle landing gear, stabilising float under each outer wing, engine pod on pylon above centre-fuselage; unpressurised cabin. Wing section P301, dihedral 4°, incidence 3° at root, 0° at tip.

FLYING CONTROLS: Conventional mechanical control, via rods. Trim tab in each aileron, port elevator and rudder. Single-slotted Fowler type flap in two sections on each wing.

STRUCTURE: All-metal (aluminium alloy and high-tensile steel). Two-spar wing with ribs, stringers and metal skin, semi-monocoque fuselage with single-step planing bottom.

LANDING GEAR: Retractable tricycle type, single wheel on each unit, hydraulic retraction, mainwheels inward into wingroots, nosewheel forward into wheelbay in hull, oleo-pneumatic shock absorber in each unit, mainwheel tyres size 500 × 150 mm, nosewheel tyre size 400 × 150 mm, pneumatic brakes on mainwheels. Minimum ground turning radius 8.0 m (26 ft 3 in). Nosewheel steering angle ±35°.

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial piston engine; V530 two-blade constant-speed propeller. Alternative Allison turboprop. Two wing fuel tanks, total capacity 300 litres (79 US gallons; 66 Imp gallons); refuelling points above wings. Oil capacity 30 litres (7.9 US gallons; 6.6 Imp gallons).

ACCOMMODATION: Pilot and passenger on individual front seats, three-place rear bench seat, passenger seats removable for other duties. Baggage hold behind rear seats. Upward-opening canopy door each side. Cabin heated by engine bleed air and ventilated.

DIMENSIONS, EXTERNAL:	
Wing span	14.20 m (46 ft 7 in)
Wing chord: at root	1.89 m (6 ft 2½ in)
at tip	1.02 m (3 ft 4¼ in)
Wing aspect ratio	9.75
Length overall	10.62 m (34 ft 10¼ in)
Fuselage: Max width	1.60 m (5 ft 3 in)
Max height	1.65 m (5 ft 5 in)
Height overall	3.93 m (12 ft 10¾ in)
Tailplane span	4.96 m (16 ft 3¼ in)
Wheel track	5.25 m (17 ft 2¾ in)
Wheelbase	3.99 m (13 ft 1 in)
Propeller diameter	2.40 m (7 ft 10½ in)
Canopy doors (each): Height	0.65 m (2 ft 1½ in)
Width at top	1.30 m (4 ft 3 in)
Width at bottom	1.00 m (3 ft 3¼ in)
DIMENSIONS, INTERNAL:	
Cabin: Length	2.50 m (8 ft 2½ in)
Max width	1.50 m (4 ft 11 in)
Max height	1.20 m (3 ft 11¼ in)
Floor area	3.60 m² (38.75 sq ft)
Volume	4.10 m³ (145 cu ft)
Baggage hold: Volume	0.60 m³ (21 cu ft)
Freight volume, seats removed	2.50 m³ (88 cu ft)
AREAS:	
Wings, gross	20.68 m² (222.6 sq ft)
Ailerons (total)	1.044 m² (11.24 sq ft)
Trailing-edge flaps (total)	4.36 m² (46.93 sq ft)
Fin, incl dorsal fin	2.67 m² (28.74 sq ft)
Rudder	1.56 m² (16.79 sq ft)
Tailplane	2.49 m² (26.80 sq ft)
Elevators (total)	1.65 m² (17.76 sq ft)
WEIGHTS AND LOADINGS (M-14P engine):	
Weight empty, equipped	1,470 kg (3,240 lb)
Max payload	370 kg (815 lb)
Max fuel	220 kg (485 lb)
Max T-O and landing weight	2,050 kg (4,520 lb)
Max wing loading	99.13 kg/m² (20.31 lb/sq ft)
Max power loading	7.74 kg/kW (12.73 lb/hp)
PERFORMANCE (estimated, at max T-O weight, with M-14P engine):	
Max level speed at S/L	132 kts (245 km/h; 152 mph)
Max cruising speed at 3,000 m (9,840 ft)	124 kts (230 km/h; 143 mph)
Econ cruising speed at 3,000 m (9,840 ft)	97 kts (180 km/h; 112 mph)
Stalling speed, flaps up at S/L	62 kts (115 km/h; 72 mph)
Max rate of climb at S/L	255 m (835 ft)/min
Service ceiling	5,900 m (19,350 ft)
T-O run: on land	205 m (675 ft)
on water	300 m (985 ft)
T-O to 15 m (50 ft): on land	365 m (1,200 ft)
on water	500 m (1,640 ft)
Landing from 15 m (50 ft): on land	445 m (1,460 ft)
on water	475 m (1,560 ft)
Landing run: on land	225 m (740 ft)
on water	270 m (885 ft)

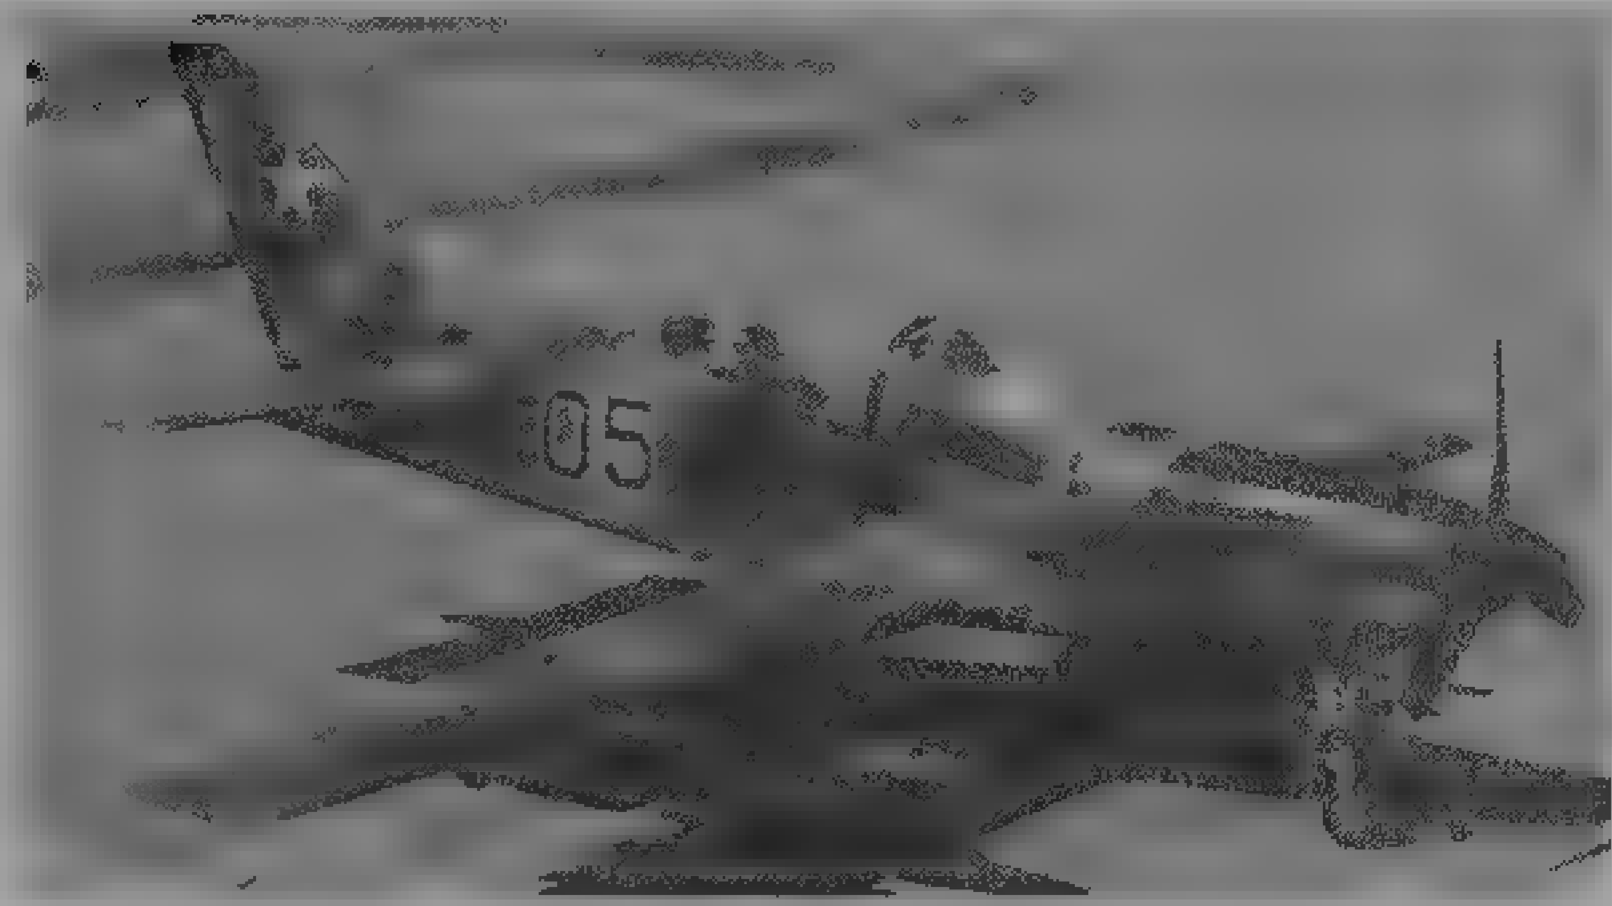
Aeroprogress/ROKS-Aero T-501 turboprop military basic trainer (*Jane's/Mike Keep*) 1993



Model of Aeroprogress/ROKS-Aero T-501 with underwing armament 1994

Range with max payload, 30 min reserves	
at 3,000 m (9 840 ft)	340 n miles (630 km, 390 miles)
at S/L	237 n miles (440 km 273 miles)
Range with max fuel, 30 min reserves	
at 3,000 m (9,840 ft)	377 n miles (700 km, 435 miles)
at S/L	485 n miles (900 km, 560 miles)
Max range, no reserves	
at 3,000 m (9 840 ft)	500 n miles (930 km, 578 miles)
at S/L	595 n miles (1,100 km, 685 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-501 STRIZH (SWIFT)

TYPE: Tandem two-seat turboprop basic trainer.

PROGRAMME: Details released and model displayed March 1992, original programme abandoned after change of air force requirements; new schedule being negotiated with Russian Air Force, production assigned to Khrunichev plant.

DESIGN FEATURES: Conventional low-wing monoplane, unswept wings without dihedral or anhedral; sweptback vertical tail surfaces; unswept horizontal tail surfaces; retractable tricycle landing gear; conventional raised rear cockpit; for other details see accompanying three-view drawing.

POWER PLANT: One 754 kW (1,010 shp) Mars (Omsk) TVD-10B turboprop. Provision for drop tank under each wing.

ARMAMENT: Provision for underwing armament.

DIMENSIONS, EXTERNAL:	
Wing span	11 00 m (36 ft 1 in)
Wing aspect ratio	7 33
Length overall	9 66 m (31 ft 8½ in)
AREAS:	
Wings, gross	16.5 m² (177 6 sq ft)
WEIGHTS AND LOADINGS:	
Max fuel weight	500 kg (1,102 lb)
Max external load	500 kg (1,102 lb)
Max T-O weight	2,670 kg (5,886 lb)
Max wing loading	161 8 kg/m² (33 14 lb/sq ft)
Max power loading	3 50 kg/kW (5 74 lb/shp)
PERFORMANCE (estimated):	
Max level speed	285-307 kts (530-570 km/h, 330-354 mph)
T-O speed	73 kts (135 km/h, 84 mph)
Landing speed	65 kts (120 km/h, 75 mph)
Max rate of climb at S/L	1,260 m (4,135 ft)/min
T-O run	160 m (525 ft)
Landing run	190 m (625 ft)
Min turning radius	90 m (295 ft)
Min 360° turn time	11 s
Max range with external fuel	
at high altitude	970 n miles (1,800 km, 1,115 miles)
at low altitude	540 n miles (1,000 km, 620 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-602 OREL (EAGLE)

TYPE: Twin-engined light business aircraft.

PROGRAMME: Prototype under construction at MAPO plant, Moscow. Intended for production as **Khrunichev T-430 Sprinter** (which see for model illustration).

DESIGN FEATURES: Conventional low-wing monoplane, with twin wing-mounted engines, large two-section passenger/freight door aft of wing on port side; swept vertical tail surfaces; unswept horizontal tail surfaces on fuselage tailcone, unswept wings with slight dihedral; for other details see accompanying three-view drawing.

LANDING GEAR: Retractable tricycle type, single wheel on each main unit; rearward retracting twin nosewheels.

POWER PLANT: Two 265 kW (355 hp) VOKBM M 14 air cooled radial engines, each driving a three-blade propeller.

ACCOMMODATION: One or two pilots; nine passengers or freight in main cabin.

DIMENSIONS, EXTERNAL:	
Wing span	13.66 m (44 ft 9¾ in)
Length overall	12.12 m (39 ft 9 in)
WEIGHTS AND LOADINGS:	
Max fuel weight	720 kg (1,585 lb)
Max payload	800 kg (1,764 lb)
Max T-O weight	3,200 kg (7,055 lb)
PERFORMANCE (estimated):	
Max level speed	188 kts (350 km/h, 217 mph)
Max cruising speed	172 kts (320 km/h; 199 mph)
T-O run	380 m (1,247 ft)
Landing run	475 m (1,560 ft)
Range	
with max payload	852 n miles (1,580 km, 980 miles)
with auxiliary fuel	1,208 n miles (2,240 km; 1,390 miles)
Endurance: with max payload	7 h
with max fuel and 1,000 kg (2,205 lb) payload	10 h

AEROPROGRESS/ROKS-AERO T-610 VOYAGE

TYPE: Single-turboprop civil and military multipurpose aircraft.

PROGRAMME: Design started November 1991, construction of first prototype began October 1992 at Tushino plant, first flight scheduled March 1996.

CURRENT VERSIONS: Suitable for civil passenger/freight transport, forest patrol, aerial photography and ambulance missions; military transport and airdropping of paratroops, equipment and supplies.

DESIGN FEATURES: Conventional strut-braced high-wing monoplane; sweptback vertical tail surfaces; non-retractable landing gear; unpressurised accommodation, large freight door. STOL capable. Wide CG range. Wing section P301, dihedral 3°, incidence 1° 30′ at root, −1° 30′ at tip.

FLYING CONTROLS: Conventional mechanical control, via cables and rods, ailerons supplemented by small single-section upper-surface spoilers forward of outer flap sections, long-span two-section Fowler type flap on each wing; trim tab in each aileron, port elevator and rudder.

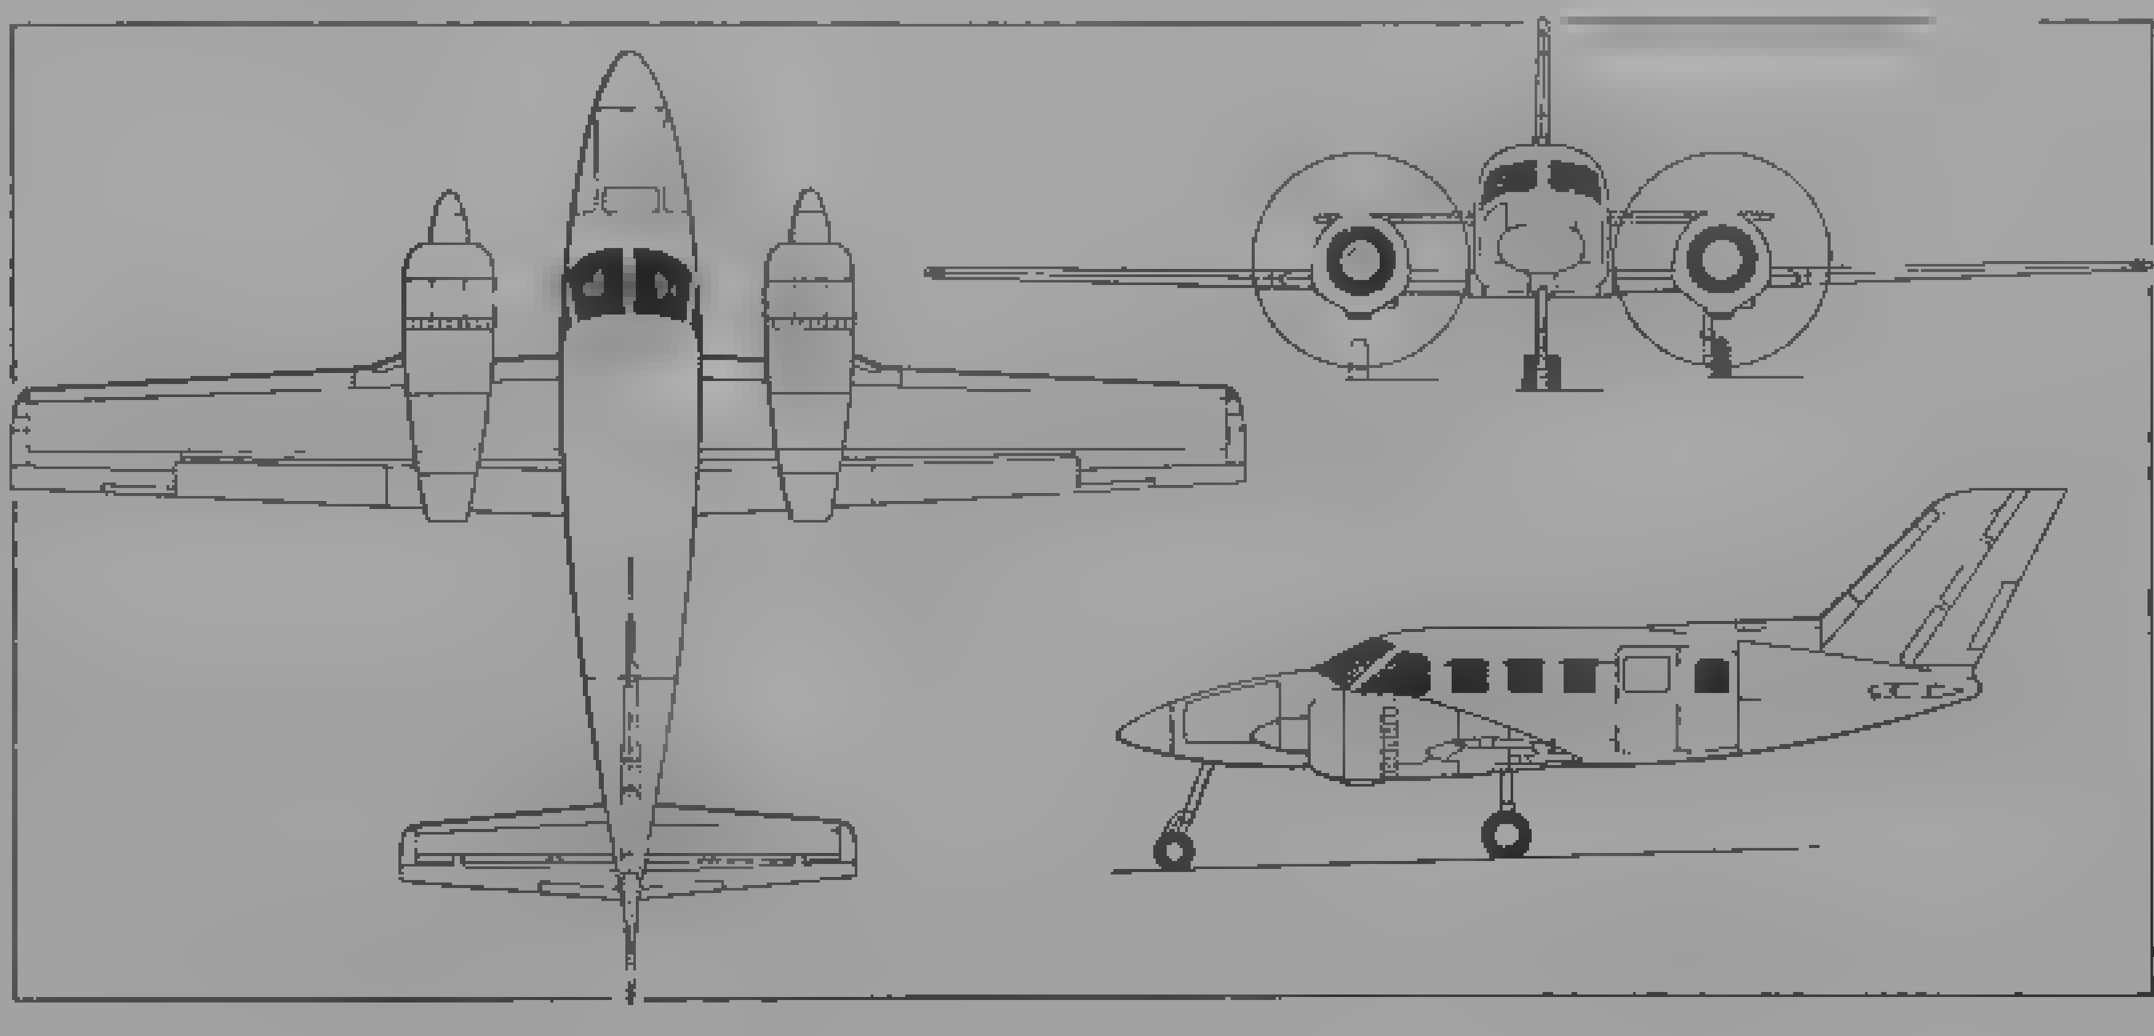
STRUCTURE: Two-spar wings, with single bracing strut each side, fuel tanks in wingroots; semi-monocoque fuselage. Basic structure aluminium alloy, with some high tensile steel.

LANDING GEAR: Non-retractable tricycle landing gear, with single wheel on each leg, mainwheels carried on cantilever steel leaf-springs; nosewheel on leaf-spring, with oleo damper; mainwheel tyres size 700 × 200 mm, nosewheel tyre size 480 × 200 mm; hydraulic brakes on mainwheels. Floats and skis optional. Minimum ground turning radius 6.5 m (21 ft 4 in). Nosewheel steering angle ±40°.

POWER PLANT: One 560 kW (751 shp) Motorlet M 601E turboprop in each prototype, one 529 kW (710 shp) Mars (Omsk) TV D-100, or one 610 kW (818 shp) Saturn AL-34, or one P&WC PT6A 114, in production aircraft. V510 five-blade constant-speed propeller with reverse thrust. Wing fuel tanks, total capacity 1,300 litres (343 US gallons, 286 Imp gallons).

ACCOMMODATION: Eleven seats, arranged 2-3-3-2-1, optional twelfth seat; front three passenger seats rearward-facing. Horizontally divided two-piece passenger door on port side at rear of cabin; airstairs in lower section; large rearward-sliding cargo door on starboard side; forward-hinged door each side of flight deck. Baggage/freight compartments forward of flight deck and at rear of cabin. Interior heated by engine bleed air and ventilated.

DIMENSIONS, EXTERNAL:	
Wing span	16 16 m (53 ft 0¼ in)
Wing chord: at root	2.23 m (7 ft 3¾ in)
at tip	1 24 m (4 ft 0¾ in)
Wing aspect ratio	9 33
Length overall	12 08 m (39 ft 7½ in)
Fuselage: Max width	1 72 m (5 ft 7¾ in)
Max height	1.70 m (5 ft 7 in)
Height overall	4.50 m (14 ft 9 in)
Tailplane span	6 52 m (21 ft 4¾ in)
Wheel track	3 64 m (11 ft 11½ in)
Wheelbase	3 48 m (11 ft 5 in)
Propeller diameter	2 30 m (7 ft 6½ in)
Propeller ground clearance	0 40 m (1 ft 3¾ in)
Crew doors (each): Height	1 20 m (3 ft 11¼ in)
Width at top	0 52 m (1 ft 8½ in)
Width at bottom	0 84 m (2 ft 9 in)
Cabin door, port: Height	1 20 m (3 ft 11¼ in)
Width	0.64 m (2 ft 1¼ in)
Cargo door, starboard: Height	1.20 m (3 ft 11¼ in)
Width	1 30 m (4 ft 3¼ in)
DIMENSIONS, INTERNAL:	
Cabin, incl flight deck and toilet	
Length	5 00 m (16 ft 4¾ in)
Max width	1 60 m (5 ft 3 in)
Max height	1 40 m (4 ft 7 in)
Floor area	7 00 m² (75 35 sq ft)
Volume	9 80 m³ (346 cu ft)
Baggage compartment volume	
Nose	0 50 m³ (17 65 cu ft)
Rear	0 70 m³ (24 72 cu ft)
Freight volume, seats removed	6 80 m³ (240 cu ft)
AREAS:	
Wings, gross	28.00 m² (301 4 sq ft)
Ailerons (total)	1 213 m² (13 06 sq ft)
Trailing-edge flaps (total)	6 38 m² (68 68 sq ft)



Aeroprogress/ROKS-Aero T-602 Orel light business transport (*Jane's/Mike Keep*) 1993

1993

Model of Aeroprogress/ROKS Aero T 710 Anaconda counter insurgency combat aircraft

1995

Spoilers (total)	0 303 m² (3 26 sq ft)
Fin, incl dorsal fin	2 388 m² (25 71 sq ft)
Rudder	1.312 m² (14.12 sq ft)
Tailplane	4 28 m² (46 07 sq ft)
Elevators (total)	2 80 m² (30 14 sq ft)

WEIGHTS AND LOADINGS

Weight empty, equipped	1,955 kg (4,310 lb)
Max payload	1,100 kg (2,425 lb)
Max fuel	1,000 kg (2,205 lb)
Max T-O weight	3,850 kg (8,488 lb)
Max landing weight	3,540 kg (7,805 lb)
Max wing loading	137.5 kg/m² (28 16 lb/sq ft)
Max power loading (M 601E engine)	6 88 kg/kW (11 30 lb/shp)

PERFORMANCE (estimated)

Max level speed	178-188 kts (330-350 km/h, 205 217 mph)
Nominal cruising speed	145-156 kts (270-290 km/h, 168 180 mph)
Stalling speed, flaps up, at 3,000 m (9 840 ft)	81 kts (150 km/h, 93 mph)
Max rate of climb at S/L	336 m (1,102 ft)/min
Service ceiling	10,000 m (32 800 ft)
T-O run	278 m (912 ft)
T-O to 15 m (50 ft)	530 m (1,740 ft)
Landing from 15 m (50 ft):	
with reverse thrust	256 m (840 ft)
without reverse thrust	826 m (2,710 ft)
Range with max payload, 30 min reserves:	
at 3,000 m (9,840 ft)	647 n miles (1,200 km, 745 miles)
at 6,000 m (19,685 ft)	863 n miles (1,600 km, 995 miles)
Range with max fuel, 30 min reserves:	
at 3,000 m (9,840 ft)	998 n miles (1,850 km; 1,150 miles)
at 6,000 m (19 685 ft)	1 257 n miles (2,330 km; 1,447 miles)
Max range, no reserve: at 3,000 m (9,840 ft)	1,250 n miles (2,320 km 1,440 miles)
at 6,000 m (19 685 ft)	1,619 n miles (3 000 km, 1,864 miles)

UPDATED

AEROPROGRESS/ROKS-AERO T-710 ANACONDA

TYPE: Projected twin-turboprop counter-insurgency aircraft

DESIGN FEATURES: Twin-boom high-wing monoplane, with constant-chord wings, podded fuselage, high-set tailplane, retractable tricycle landing gear, with single wheel on each unit. Double-slotted flaps for STOL capability

POWER PLANT: Two 1,839 kW (2,466 shp) Klimov TV7-117M turboprops, contrarotating six-blade constant-speed propellers

ACCOMMODATION: Two in tandem, on stepped ejection seats

ARMAMENT: Six stores pylons under stub-wings and fuselage for bombs, torpedo, rocket packs and other weapons; four machine guns in stub-wings, four pylons under wingtips for air-to-air missiles; twin-barrel 23 mm gun under fuselage

DIMENSIONS: Not available, except

Propeller diameter	3 60 m (11 ft 9¾ in)

WEIGHTS AND LOADINGS

Weapon load: Normal	1,000 kg (2,205 lb)
Max	2,500 kg (5,510 lb)
Max fuel	1,500 kg (3,306 lb)
Max T-O weight	7,500 kg (16,535 lb)

PERFORMANCE (estimated)

Max level speed: at height	388 kts (720 km/h, 447 mph)
at S/L	367 kts (680 km/h, 422 mph)
Service ceiling	6,000 m (19 685 ft)
Balanced field length	500 m (1,640 ft)
Radius of action: normal weapon load	242 n miles (450 km 280 miles)
g limits	+5/−2 5

NEW ENTRY

AEROPROGRESS/ROKS-AERO T-910 KURYER (MESSENGER)

TYPE: Twin-turbofan six/10-passenger business transport

PROGRAMME: Design started January 1993, to FAR Pt 25 standards, announced at MosAeroshow '93, full-scale mockup under construction early 1995, financial production group then being formed to manage programme

DESIGN FEATURES: Conventional mid-wing monoplane, winglets added 1995, podded engines on sides of rear fuselage. Compound-sweep wing leading-edge, sweepback at quarter-chord 3°; P-204-14/P-196K wing sections, dihedral 2° 30'; incidence 3°. Circular section fuselage All-swept tail unit

FLYING CONTROLS: Mechanically actuated ailerons, elevators and rudder; electrically powered variable-incidence tailplane; electrohydraulically driven spoilers, one-piece trailing-edge flaps

STRUCTURE: Aluminium alloy construction, two-spar wings, pressurised semi-monocoque fuselage

LANDING GEAR: Hydraulically actuated tricycle type, single wheel on each unit, oleo-pneumatic shock-absorbers tyres size 800 × 200 mm on mainwheels, 500 × 180 mm on nosewheel, electronic brake anti-skid protection

POWER PLANT: Two ZMDB Progress AI-25TL turbofans, each 16.67 kN (3,750 lb st). Fuel tanks in wings and aft of cabin, total 4,550 litres (1,202 US gallons, 1,000 Imp gallons)

ACCOMMODATION: Two crew side by side on flight deck, six to 10 passengers: toilet at front, baggage compartment in rear fuselage; door on port side at front of cabin; overwing emergency exit on starboard side

SYSTEMS: Air conditioning and pressurisation by engine bleed air. Main and emergency hydraulic systems Electrical supply 115 V 400 Hz. Oxygen system standard ZMDB Progress AI-9 APU

AVIONICS: IFR avionics not yet selected

DIMENSIONS, EXTERNAL

Wing span	17 00 m (55 ft 9¾ in)

AERORIC

AERORIC RESEARCH AND PRODUCTION ENTERPRISE

2 Sibirskaya Street, 86, 603089 Nizhny Novgorod
Telephone/Fax: 7 (8312) 44 19 65
DIRECTOR AND CHIEF DESIGNER: Victor P. Morozov

AeroRIC designs light aircraft for production at the Sokol State Aircraft Building Plant, Nizhny Novgorod

VERIFIED

AERORIC DINGO

TYPE: Light multipurpose aircraft with air cushion landing gear

PROGRAMME: Design started 1991, first seen in mockup form at MosAeroshow '92, construction by MAPO of two flying prototypes and static test airframe began 1993, first flight scheduled 1995, construction of 13 preproduction aircraft to start 1995

COSTS: $1.5 million for standard civil aircraft (calculated FY93)

DESIGN FEATURES: Basically conventional low-wing twin-boom pusher engined configuration; unique air cushion landing system, permitting operation from any kind of ground surface, water, snow and ice; able to overcome hummocks and tussocks up to 30 cm (1 ft) high, ledges or projections up to 50 cm (1 ft 8 in) high, ditches up to 1.0 m (3 ft 3 in) wide and slopes of up to 7°, twin-fin tail unit with tailplane above fin tips. Wing section GA(W)-1, thickness/chord ratio 14 per cent; incidence 3° 30', no twist.

Mockup of AeroRIC Dingo with air cushion landing gear

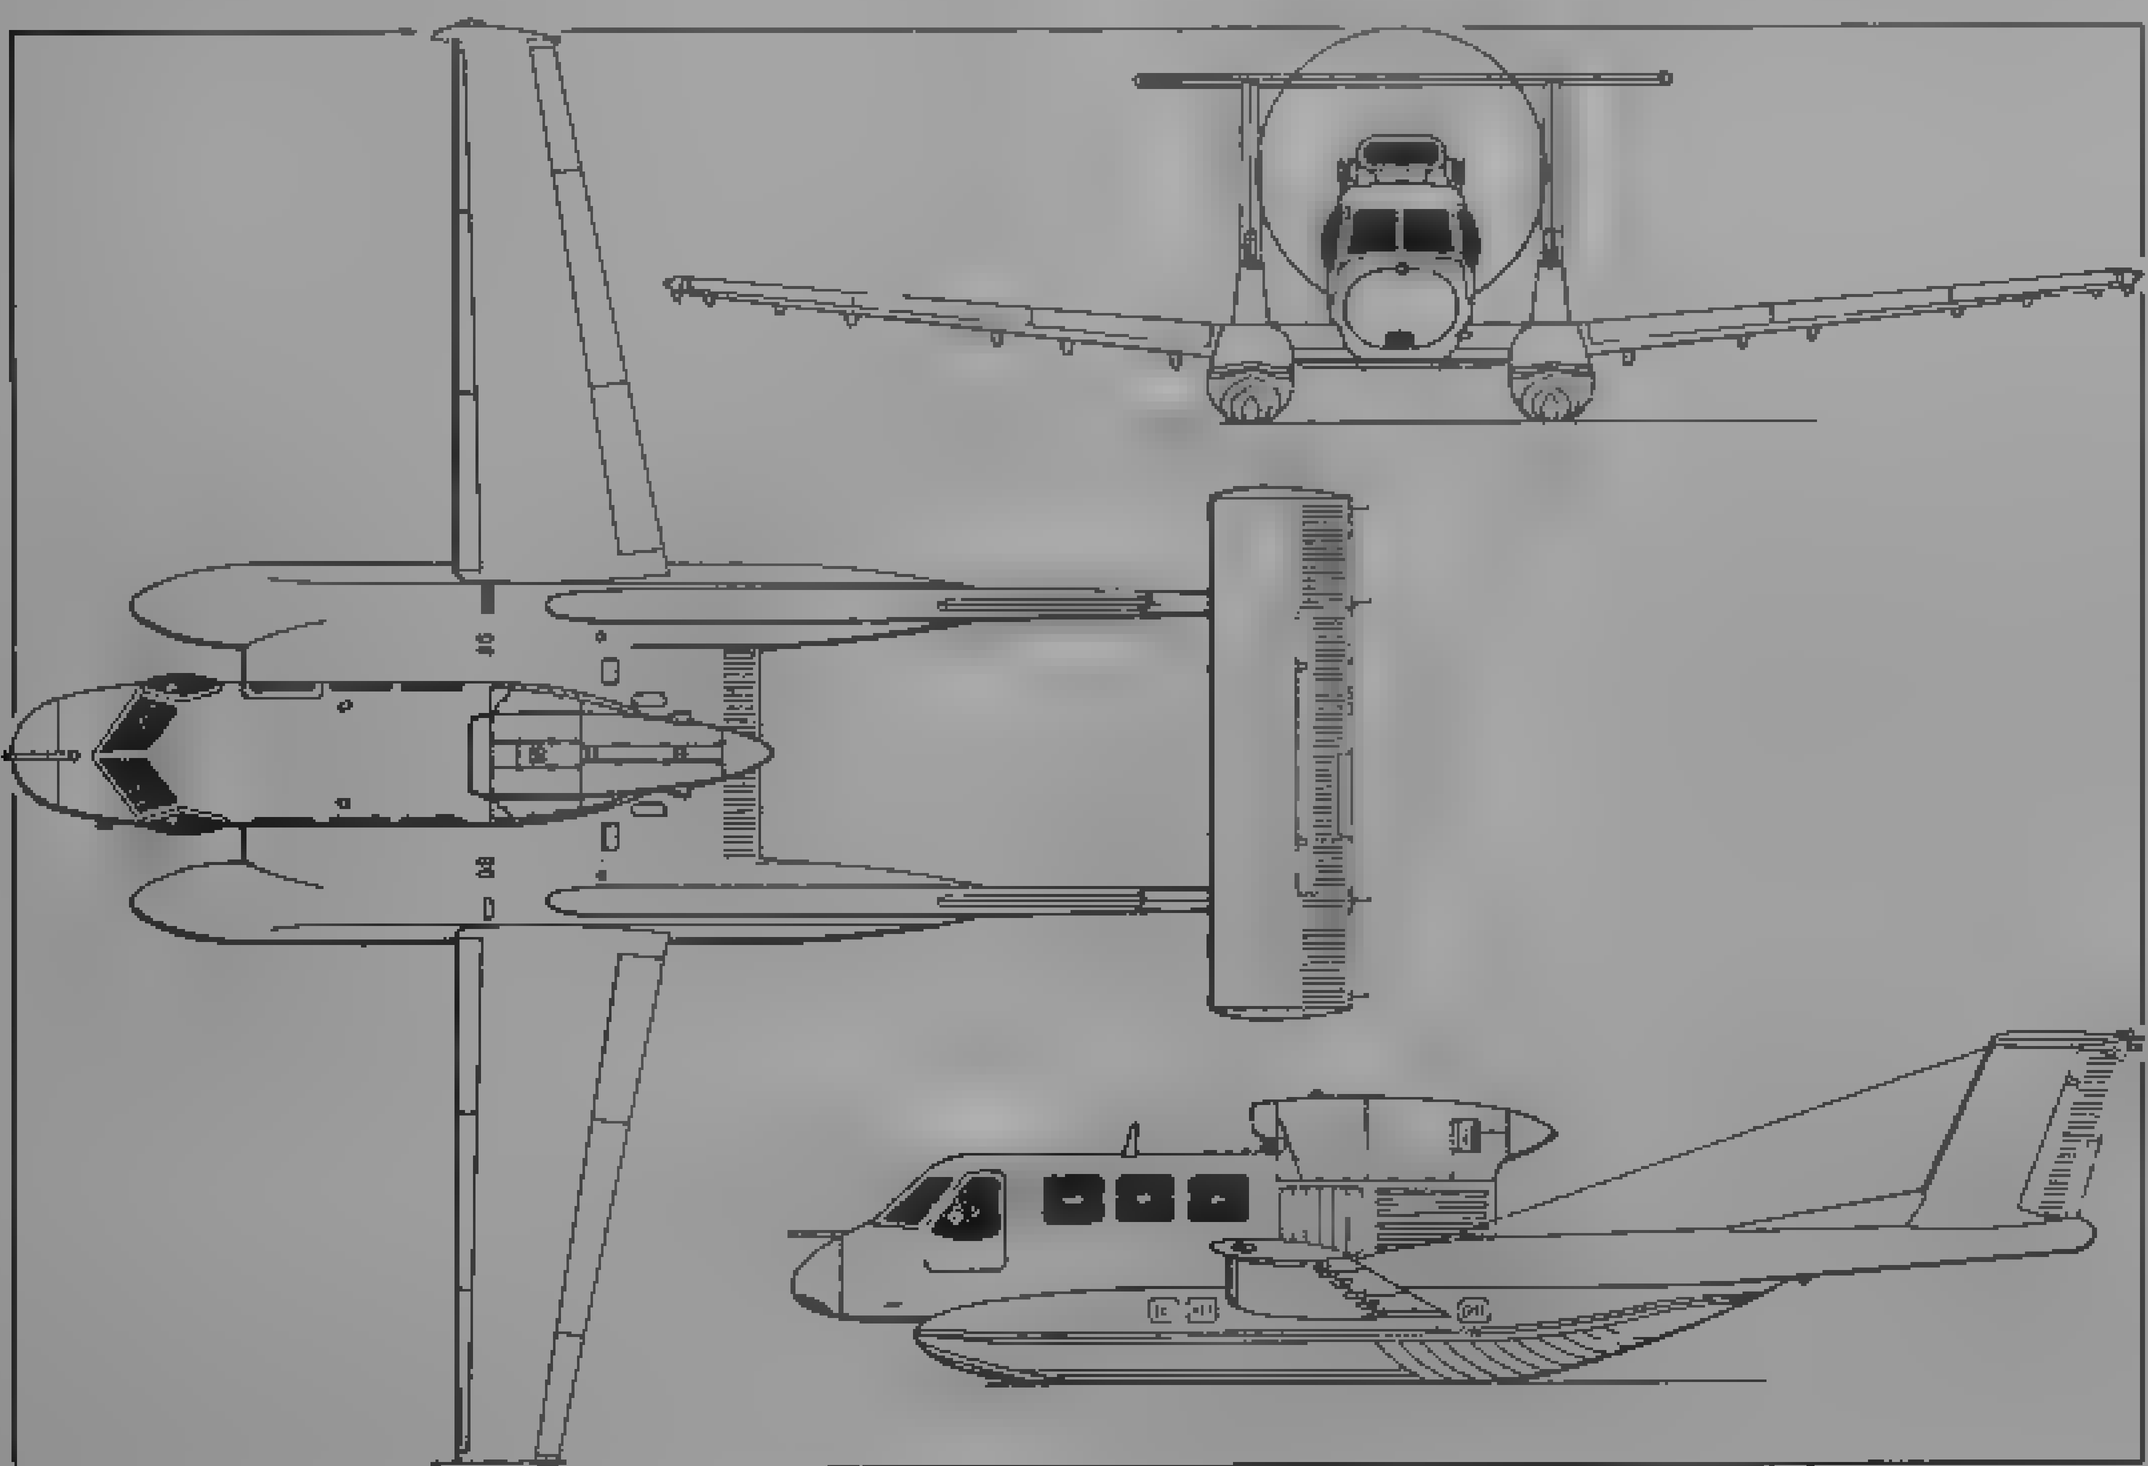
1994

FLYING CONTROLS: Manual control, ailerons 15° up/25° down, elevator 20° each way; rudders 25° each way, electrically controlled two-section Fowler flaps on each wing, 15° up/40° down; automatic leading-edge slats, 25° down, trim tab in elevator

STRUCTURE: Airframe primarily aluminium alloy

LANDING GEAR: Air cushion formed under wing, contained at sides by air bladders, at front and rear by flexible flat flaps attached to wing by hinges and retracted during flight. Bearing pressure on runway 0.035 kg/cm² (71.7 lb/sq ft)

POWER PLANT: One 820 kW (1,100 shp) Pratt & Whitney Canada PT6A-65B turboprop; three-blade Hartzell HC-B5MP-3/M10876B feathering controllable-pitch/reversible-pitch pusher propeller; built-in dust protection for engine air intake. Fuel in two main wing tanks, each 300 litres (79.25 US gallons, 66 Imp gallons); two wing tanks, each 200 litres (52.85 US gallons; 44 Imp gallons); one feeder tank in centre-section, 150 litres (39.5 US gallons; 33 Imp gallons). Total fuel capacity 1,150 litres (303.7 US gallons, 253 Imp gallons). Gravity fuelling, starboard side of fuselage



AeroRIC Dingo light multipurpose aircraft (P&WC PT6A-65B turboprop) *(Jane's/Mike Keep)*

1994

ACCOMMODATION: One or two pilots, seven or eight passengers (one optionally beside pilot, seven on inward-facing bench seats in cabin. Flight deck door on port side, passenger/cargo door on starboard side. Passenger cabin ventilated and heated

SYSTEMS: Air conditioning optional. No hydraulic system. Pneumatic system, pressure 2.5 kg/cm² (35.5 lb/sq in), inflates air bladders, pressurises fuel tanks, operates hot air anti-icing, engine dust protection and heating systems, and scavenges pitot. DC electrical generators on propulsion engine and APU, 25 Ah 28 V battery. One 186 kW (250 shp) TBA-200 turbofan APU generates air cushion

AVIONICS: To customer's requirements
Comms: Com/nav to ICAO/FAR Pt 23 standards.
Radar: Optional type 14A/813 weather radar

DIMENSIONS, EXTERNAL:	
Wing span over tip fairings	14.25 m (46 ft 9 in)
Wing chord: at root	2.48 m (8 ft 1¾ in)
at tip	1.00 m (3 ft 3¼ in)
Length overall	12.95 m (42 ft 6 in)
Fuselage: Length	6.93 m (22 ft 9 in)
Width	1.40 m (4 ft 7 in)
Height	1.65 m (5 ft 5 in)
Height overall	3.94 m (12 ft 11¼ in)
Tailplane span	5.80 m (19 ft 0½ in)
Propeller diameter	2.82 m (9 ft 3 in)
Propeller ground clearance	1.05 m (3 ft 5¼ in)
Passenger/cargo door: Height	0.95 m (3 ft 1¼ in)
Width	1.20 m (3 ft 11¼ in)
Emergency exit (port side):	
Height	0.90 m (2 ft 11½ in)
Width	0.96 m (3 ft 1¾ in)
DIMENSIONS, INTERNAL:	
Cabin, incl flight deck: Length	4.10 m (13 ft 5¼ in)
Max width	1.28 m (4 ft 2¼ in)
Max height	1.38 m (4 ft 6¼ in)
Floor area	5.02 m² (54.0 sq ft)
Volume	6.54 m³ (231 cu ft)
AREAS:	
Wings, gross	24.36 m² (262.2 sq ft)

Trailing-edge flaps (total)	3.80 m² (40.90 sq ft)
Fins (total)	5.46 m² (58.77 sq ft)
Horizontal tail surfaces (total)	7.83 m² (84.28 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty	2,242 kg (4,943 lb)
Max payload	744 kg (1,640 lb)
Max fuel	1,000 kg (2,205 lb)
Max T-O and landing weight	3,700 kg (8,157 lb)
Max zero-fuel weight	3,100 kg (6,834 lb)
Max wing loading	151.9 kg/m² (31.1 lb/sq ft)
Max power loading	4.51 kg/kW (7.41 lb/shp)

PERFORMANCE (estimated):	
Max level speed at 2,000 m (6,560 ft)	167 kts (310 km/h; 192 mph)
Econ cruising speed at 2,000 m (6,560 ft)	148 kts (275 km/h; 170 mph)
Stalling speed	62 kts (115 km/h; 72 mph)
Time to 2,000 m (6,560 ft)	6 min
Service ceiling	3,500 m (11,500 ft)
T-O run: from land	350 m (1,150 ft)
from water	450 m (1,475 ft)
T-O to 15 m (50 ft)	570 m (1,870 ft)
Landing run: on land	265 m (870 ft)
on water	220 m (722 ft)
Range:	
with max payload	431 n miles (800 km; 497 miles)
with max fuel	810 n miles (1,500 km; 930 miles)

CHIEF DESIGNERS:
Jury Lahtachev
Eugene Maslov

This company designed the Accord light twin-engined aircraft, manufactured by the Sokol plant, Nizhny Novgorod.

NEW ENTRY

AVIA ACCORD

TYPE: Twin-engined light multipurpose aircraft.

PROGRAMME: Developed to meet FAR Pt 23 requirements, for operation from land or water; first flight April 1994.

DESIGN FEATURES: High-wing monoplane with single bracing strut each side, pod and boom fuselage, cruciform tail surfaces with sweptback fin and rudder; mainwheels at tips of short stub-wings that support bracing struts. Constant chord main wing panels, with toed-out engines on leading edge; tapered outer panels. Operation practicable from unprepared surfaces.

FLYING CONTROLS: Conventional three-axis; slotted horn balanced ailerons and slotted flaps over full span, rudder and horn balanced elevators.

STRUCTURE: All-metal.

LANDING GEAR: Non-retractable tricycle type; single wheel on each unit. Optional electrically retractable (upward through 90°) floats outboard of wheels for amphibious operation.

POWER PLANT: Two 110 kW (148 hp) VAZ-4133A rotary (Wankel type) engines, two-blade propellers. Other types of engine optional.

ACCOMMODATION: Pilot and four passengers or equivalent freight; ambulance version for one stretcher patient, attendant behind pilot, and medical equipment. Large door each side and rear-loading hatch. Baggage compartment aft of rear seats.

AVIONICS: To customer's requirements, including three-CRT EFIS and GPS.

Avia Accord light multipurpose aircraft without optional floats *1995*

DIMENSIONS, EXTERNAL:	
Wing span	11.30 m (37 ft 1 in)
Length overall: on wheels	8.00 m (26 ft 3 in)
on floats	8.60 m (28 ft 2½ in)
Height overall: on wheels	3.20 m (10 ft 6 in)
on floats	3.60 m (11 ft 9¾ in)
Propeller diameter	2.00 m (6 ft 6¾ in)
AREAS:	
Wings, gross	15.00 m² (161.5 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty: on wheels	930 kg (2,050 lb)
on floats	1,070 kg (2,359 lb)
Max fuel	300 kg (661 lb)
Max T-O weight	1,740 kg (3,836 lb)

PERFORMANCE:	
Max cruising speed:	
on wheels	145 kts (270 km/h; 167 mph)
on floats	140 kts (260 km/h; 161 mph)
Econ cruising speed:	
on floats	97 kts (180 km/h; 112 mph)
T-O run: on land	175 m (575 ft)
on water	260 m (853 ft)
Range, 45 min reserve, with floats:	
200 kg (441 lb) fuel, at max cruising speed	540 n miles (1,000 km; 621 miles)
max fuel, at econ cruising speed	1,241 n miles (2,300 km; 1,429 miles)

AVIASPETSTRANS

AVIASPETSTRANS CONSORTIUM

Zhukovsky 5, Moscow Region
Telephone: 7 (095) 556 59 93
Fax: 7 (095) 292 65 11
DIRECTOR GENERAL: Valentin A. Korchagin

Consortium formed 1990 by Russia's Arctic and Antarctic Research Institute, Scientific Research Institute for Civil Aviation, Gasprom gas enterprises, Institute of Oceangeology Engineering Centre, People of the North Foundation, Myasishchev Design Bureau and Promstroybank. These have a common interest in air transport infrastructure in remote regions of the north, Siberia and Far East. Aviaspetstrans will market services such as monitoring systems and navigation aids as well as aircraft of its own design. First aircraft project, headed by Chief Designer/Director General V. A. Korchagin is amphibious twin-turboshaft Yamal, capable of autonomous operation in regions with minimal transport infrastructure.

UPDATED

AVIASPETSTRANS YAMAL

TYPE: Twin-turboshaft cargo/passenger multipurpose amphibian.

PROGRAMME: Work performed by five scientific and research institutes and aviation design bureaux under Gosaviaregistr supervision, consistent with FAR requirements. Development delegated to Myasishchev OKB. Full-scale mockup exhibited at MosAeroshow '92; prototypes to be manufactured in Moscow; first flight scheduled early 1998.

Model of Aviaspetstrans Yamal exhibited at 1995 Paris Air Show *(Paul Jackson)* *1995*

DESIGN FEATURES: Basically conventional small amphibian. Unique power plant, two turboshafts side by side on top decking over wing centre-section, driving single pusher propeller mounted behind tail unit, through helicopter-like combining reduction gearbox; position of engine air intakes protects them from water and foreign object ingestion. Flying-boat hull and two fixed underwing stabilising floats. All between-flights servicing of systems and equipment possible from technical bay inside fuselage; access to engine inspection points is provided through access panels in technical bay ceiling, protecting engineer from low temperature, precipitation, mosquitoes and effects of waves on water. Similar access practicable to remedy in-flight failure.

LANDING GEAR: Retractable tailwheel type; twin wheels on each main unit, all units retract upward, main units into sponsons each side of hull. Optional nosewheel gear under development.

POWER PLANT: Two RKBM RD600S (TVD-1500) turboshafts, six-blade propeller, dimensions and aerodynamics similar to those of Il-114 propellers. Fuel tank, capacity 2,400 kg (5,291 lb), between spars in each wing.

ACCOMMODATION: Provision for 18 passengers from land, 15 from water; or freight, stretchers and medical equipment, cameras, equipment for variety of commercial and military duties.

AVIONICS: *Radar:* In nose thimble.

EQUIPMENT: Optional equipment being developed for ecological monitoring, forest protection and firefighting, ice and fish reconnaissance, 200 mile economic zone patrol, and air/sea rescue.

DIMENSIONS, EXTERNAL:	
Wing span	21.40 m (70 ft 2½ in)
Length overall	16.825 m (55 ft 2½ in)
Height overall	5.367 m (17 ft 7½ in)
DIMENSIONS, INTERNAL:	
Passenger cabin: Volume	23.4 m³ (826 cu ft)

AREAS
Wings, gross 51 9 m² (558 7 sq ft)
WEIGHTS AND LOADINGS
Max payload 2,000 kg (4,410 lb)
PERFORMANCE (estimated, at max T O weight)
Max cruising speed at 7,500 m (24,600 ft) 235 kts (435 km/h, 270 mph)
Econ cruising speed at 7,500 m (24,600 ft) 202 kts (375 km/h, 233 mph)
T O run: on land 225 m (740 ft)
on water 230 m (755 ft)
Range with max payload at max cruising speed 631 n miles (1,170 km, 727 miles)
at econ cruising speed 755 n miles (1,400 km, 870 miles)
with 500 kg (1,100 lb) payload at max cruising speed 2,212 n miles (4,100 km, 2 547 miles)
at econ cruising speed 2,374 n miles (4,400 km, 2,734 miles)

Aviaspetstrans Yamal twin turboshaft multipurpose amphibian (*Jane's/Mike Keep*) 1994

AVIATIKA

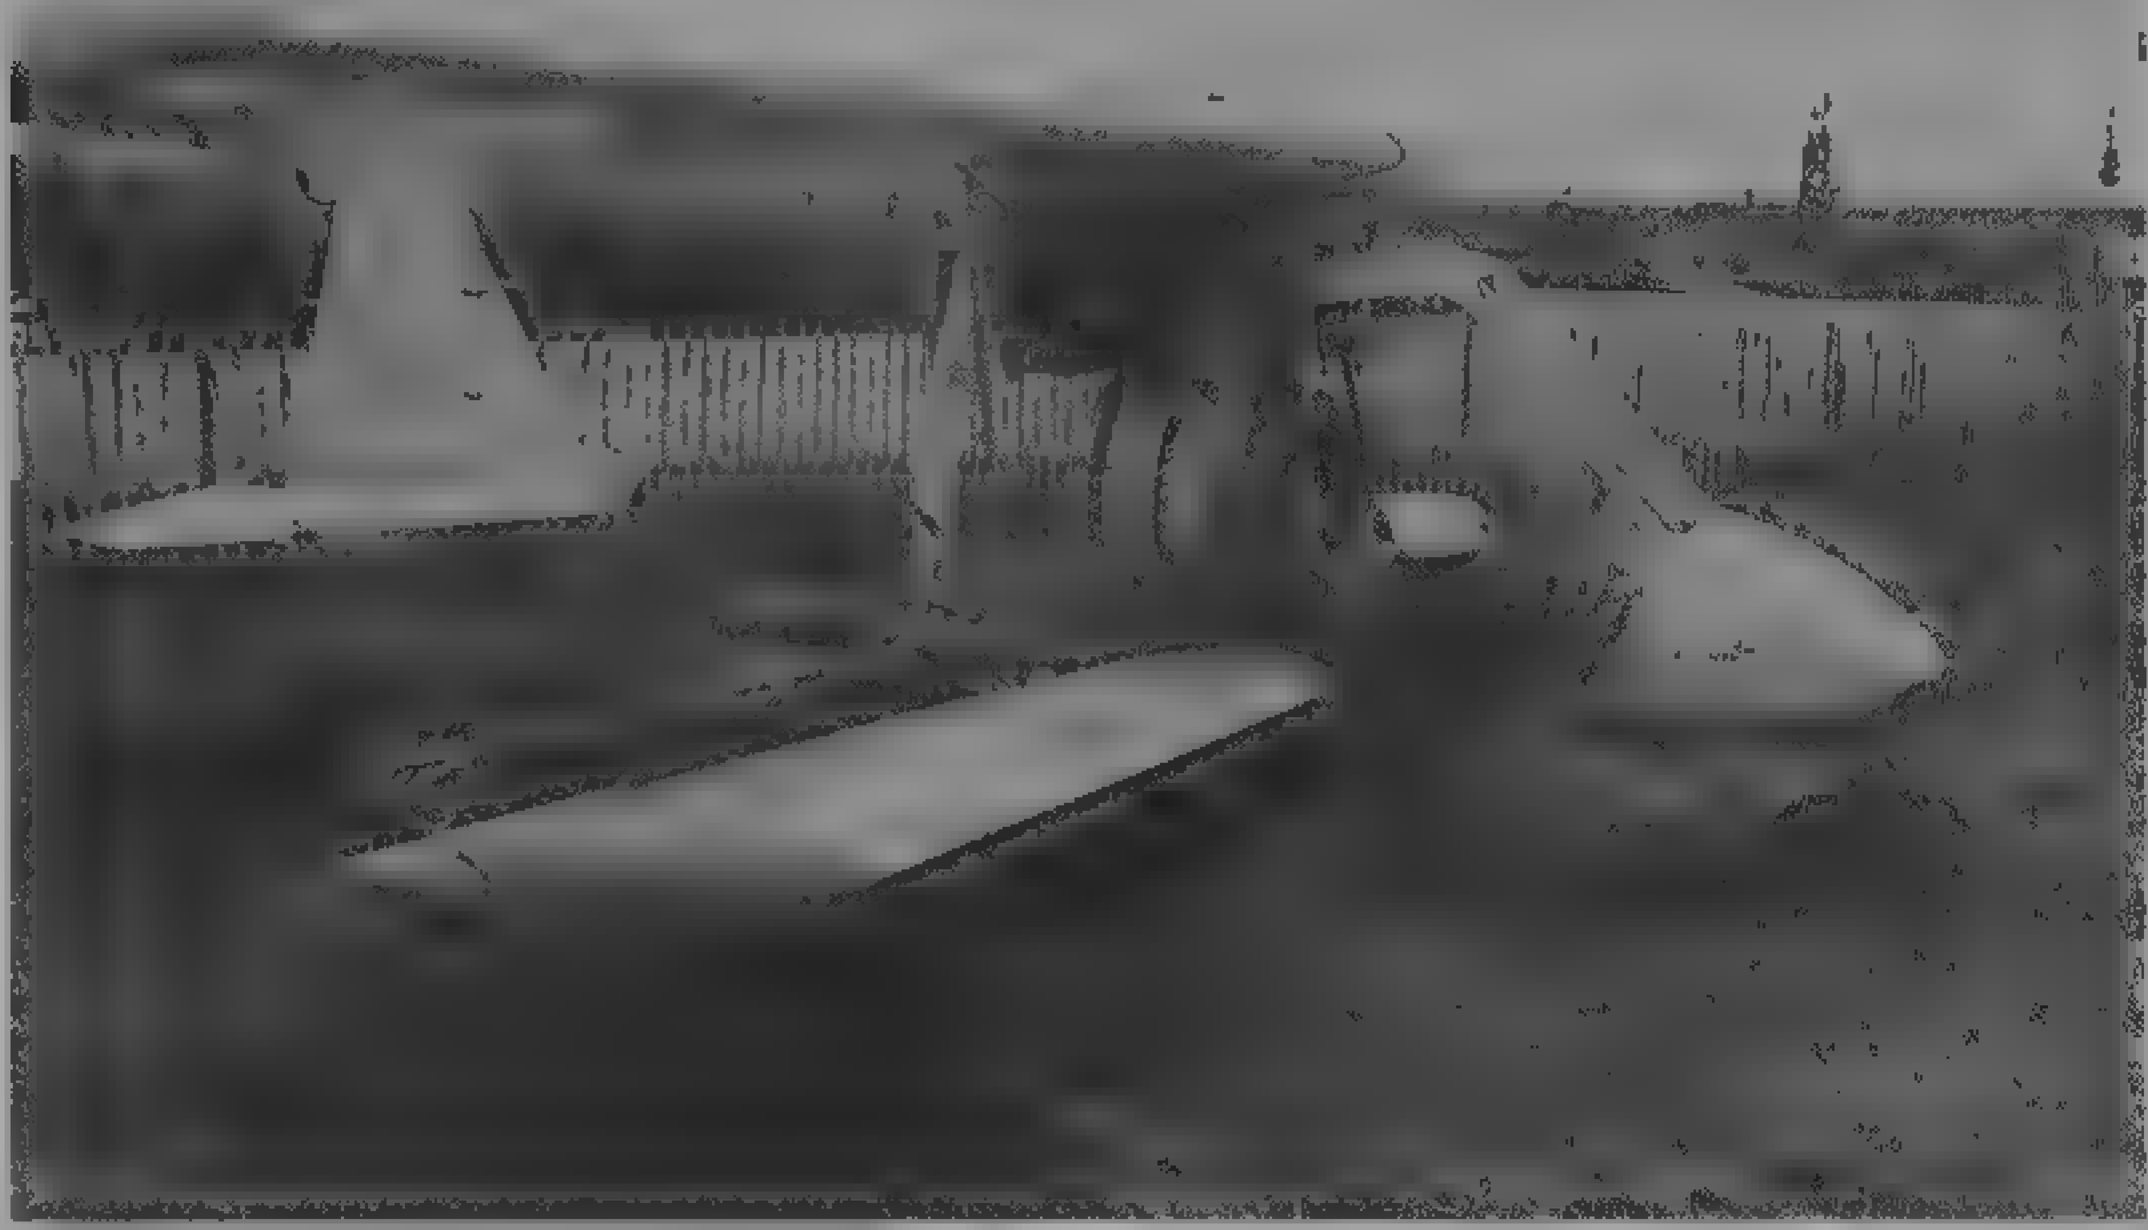
AVIATIKA JOINT STOCK COMPANY

33A Leningradsky Prospekt, 125284 Moscow
Telephone 7 (095) 945 56 54
Fax: 7 (095) 945 29 00
PRESIDENT: Igor B Pyankov
HEAD OF PATENT INFORMATION BUREAU: Vitaly Shtylkov

Aviatika Joint Stock Company was established in 1991 by Moscow Industrial Aviation Association named after Dementyev (MIAA), which is also responsible for MiG production, Gromov Flight Research Institute (FRI) and Moscow Aviation Institute (MAI). It began exporting its aircraft in 1992, delivering 90 to 12 countries in its first year

In addition to current production aircraft described, it is developing the Aviatika-910 enclosed-cockpit two-seat light plane, a twin-engined two/three-passenger and cargo carrying helicopter, and a six/eight-seat business jet with cruising speed of 460 kts (850 km/h, 528 mph) and 250 m (820 ft) runway requirement

VERIFIED



Aviatika-890 Farmer agricultural spraying aircraft (*Paul Jackson*) 1995

AVIATIKA-890

TYPE: Single- and two-seat light multipurpose biplane

PROGRAMME: Design began 1989, prototype construction 1990, first flights prototype and production aircraft 1991

CURRENT VERSIONS: **Aviatika-890** single-seater; **Aviatika-890U** two-seater, **Aviatika-890 Farmer**

DESIGN FEATURES: Strut- and wire-braced biplane; conventional tail surfaces carried on tubular boom, engine mounted under trailing edge of upper wing, slight sweepback on all wings, dihedral on lower wings only Semi-aerobatic and capable of flying in rough air conditions. Aviatika-890 Farmer has chemical tank under engine and spraybars aft of lower wings, weight of agricultural equipment 28 kg (62 lb), chemicals 60 kg (132 lb) maximum with Rotax 582 engine

FLYING CONTROLS: Full-span ailerons on lower wings, large-area rudder and elevators, each with ground adjustable tab

STRUCTURE: Aircraft grade aluminium and titanium alloys, alloy steels, fabric covering unaffected by sun's radiation or atmospheric precipitation Designed in accordance with FAR Pt 23

Aviatika-890U two-seat light biplane (*Paul Jackson*) 1995

LANDING GEAR: Non-retractable tricycle type, single wheel on each unit, cantilever spring main legs. Optional skis or floats

POWER PLANT: One 48 kW (64 hp) Rotax 582 piston engine standard, 59 6 kW (80 hp) Rotax 912 optional, two-blade pusher propeller Standard fuel 50 litres (13 2 US gallons, 11 Imp gallons), provision for 55 litre (14 5 US gallon, 12 Imp gallon) auxiliary tank on Aviatika-890

ACCOMMODATION: Open cockpit standard doors optional, one jettisonable seats side by side in Aviatika 890U, provision for backpack parachute(s), as alternative to BRS ballistically deployed parachute system for crew and aircraft

EQUIPMENT: Provision for up to 120 kg (265 lb) payload on four attachments, under engine mountings (60 kg; 132 lb), or underbelly (100 kg, 220 lb), or at lower wingtips (each 45 kg, 99 lb), including agricultural dusting and spraygear for Aviatika-890 Farmer

standard fuel: A, B	145 n miles (270 km, 167 miles)
with auxiliary tank	
A	295 n miles (550 km; 340 miles)
Endurance: C	3 h

VERIFIED

AVIATIKA-900 ACROBAT

TYPE: Single-seat aerobatic competition aircraft.

PROGRAMME: First flown 22 February 1993 at Ramenskoye; in production.

DESIGN FEATURES: Production development of MAI OSKB-1-3PM Kwant (1975-76 *Jane's*) which set five FAI-homologated records; all metal low wing monoplane, unswept-wings of symmetrical section without dihedral or anhedral, leading-edges sweptforward at root; unswept tail surfaces with strut-braced tailplane.

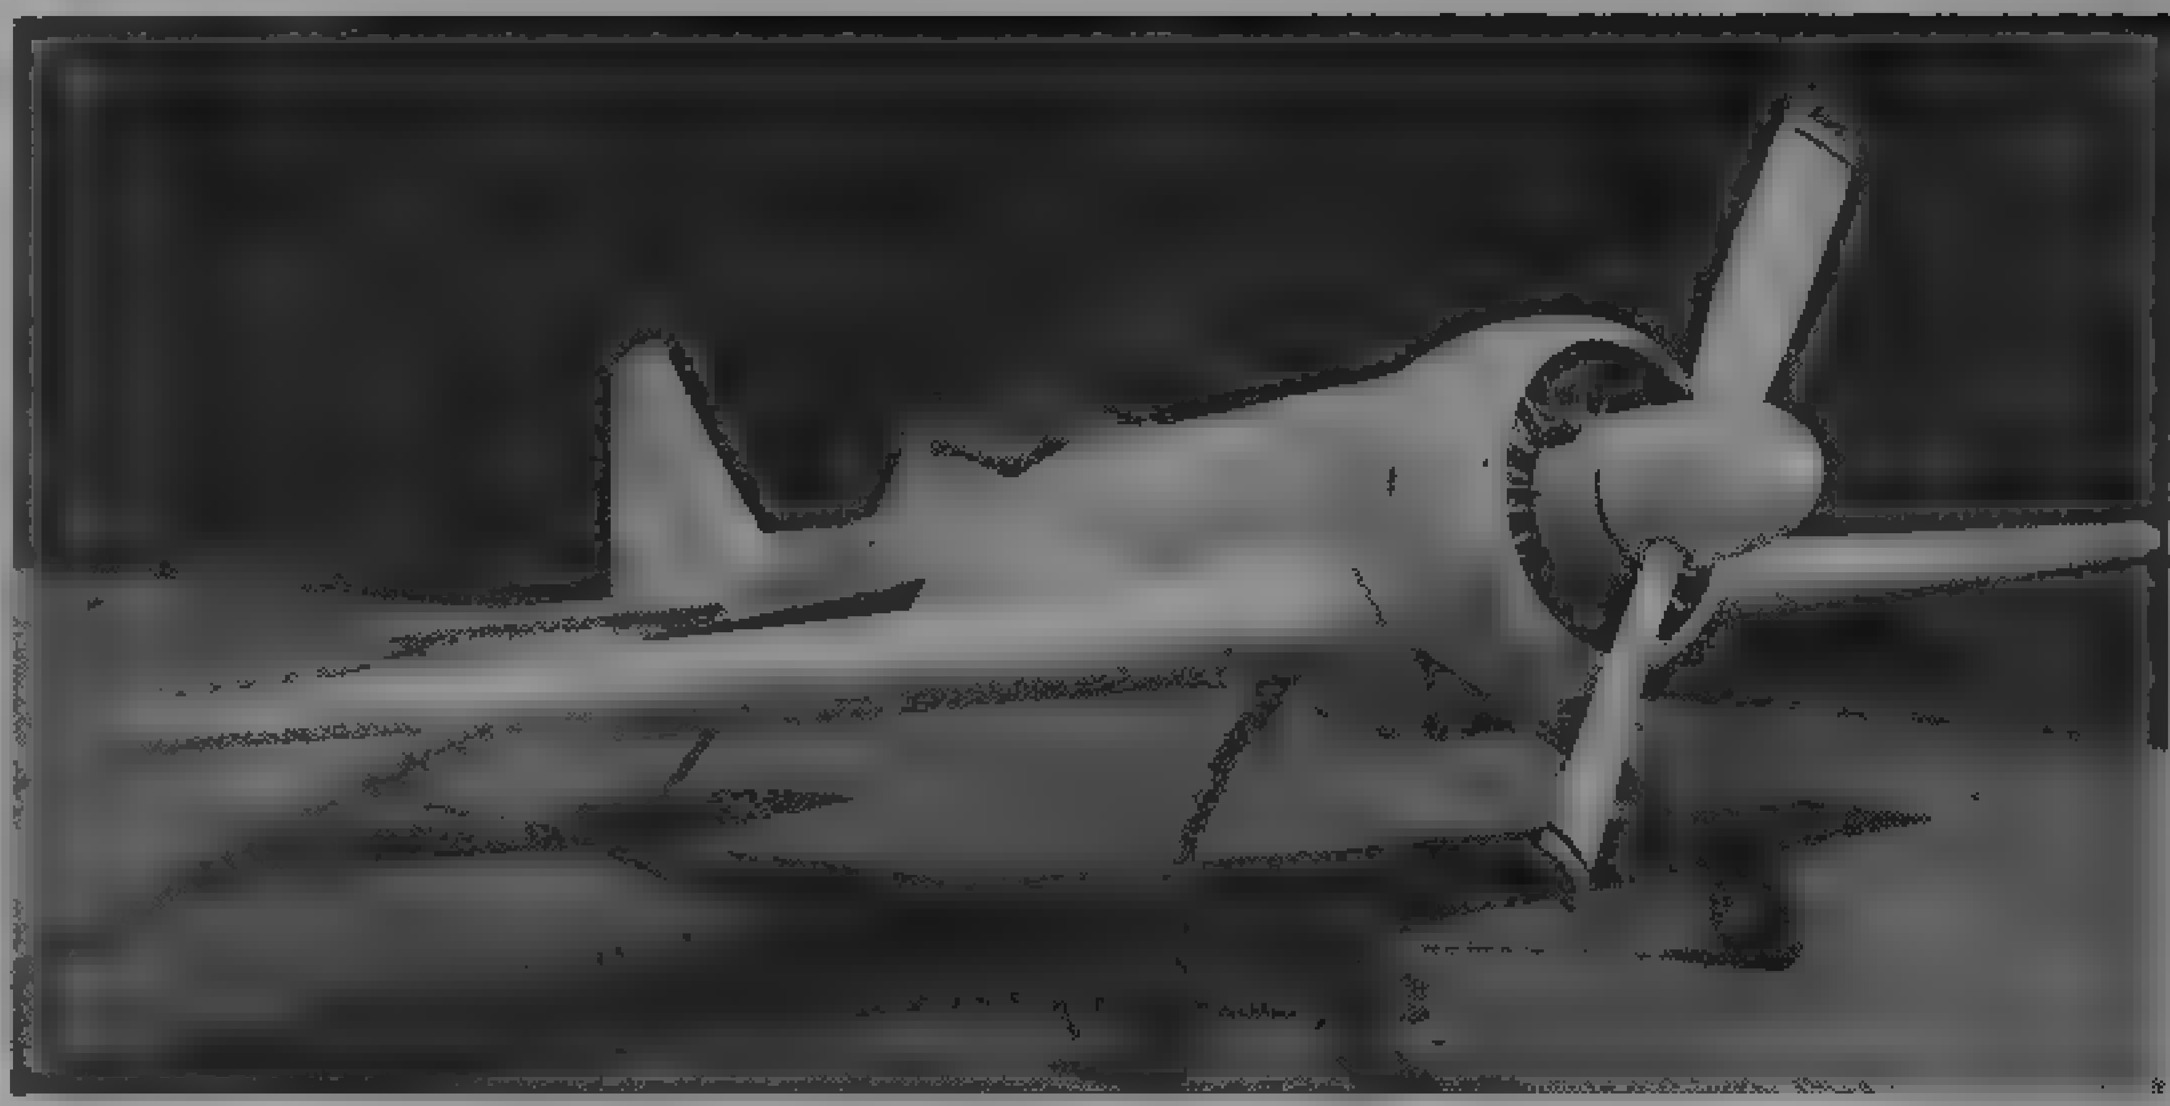
FLYING CONTROLS: Conventional three axis plus manoeuvring flaps for direct lift control, horn balanced rudder and elevators, ground adjustable tab on port aileron, rudder and starboard elevator.

LANDING GEAR: Non-retractable tailwheel type; single small wheel and tyre on each unit, arched cantilever spring mainwheel legs, steerable tailwheel.

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine, two-blade or three-blade propeller. Fuel tank in each wingroot leading-edge.

ACCOMMODATION: Pilot only, one-piece transparent blister canopy.

AVIONICS: *Comms:* Radio optional.



Aviatika-900 Acrobat aerobatic competition aircraft *1994*

DIMENSIONS, EXTERNAL:	
Wing span	7.15 m (23 ft 5½ in)
Wing chord: at root	2.38 m (7 ft 9½ in)
at tip	0.73 m (2 ft 4¾ in)
Length overall	5.70 m (18 ft 8½ in)
Height overall	3.00 m (9 ft 10 in)
Wheel track	2.00 m (6 ft 6¾ in)
Wheelbase	4.10 m (13 ft 5½ in)
Propeller diameter	2.50 m (8 ft 2½ in)
AREAS:	
Wings, gross	10.00 m² (107.6 sq ft)
Fin	0.48 m² (5.17 sq ft)
Rudder	0.64 m² (6.89 sq ft)
Tailplane	0.54 m² (5.81 sq ft)
Elevators	1.33 m² (14.32 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty, equipped	590 kg (1,300 lb)
Max payload	120 kg (265 lb)
Max T-O and landing weight	715 kg (1,576 lb)
Max wing loading	71.5 kg/m² (14.65 lb/sq ft)
PERFORMANCE:	
Max level speed at S/L	202 kts (375 km/h, 233 mph)
T-O and landing speed	60 kts (110 km/h; 69 mph)
Stalling speed	58 kts (107 km/h; 67 mph)
Max rate of climb at S/L	1,380 m (4,525 ft)/min
T-O run	66 m (217 ft)
T-O to 15 m (50 ft)	160 m (525 ft)
Landing run	120 m (395 ft)
Range with max fuel	215 n miles (400 km; 248 miles)
g limits	±1.

BERIEV (TANTK)

TAGANROG AVIATSIONNYI NAUCHNO-TEKHNICHESKIY KOMPLEKS IMIENI G M. BERIEVA (TANTK) (Taganrog Aviation Scientific-Technical Complex named after G. M. Beriev)

1 Aviatorov Square, 347928 Taganrog
Telephone: 7 (86344) 49839, 49901
Fax: 7 (86344) 41454

PRESIDENT AND GENERAL DESIGNER: Gennadv S. Panatov

This OKB founded by Georgy Mikhailovich Beriev (1902-1979) in 1932, except during Second World War, 1942-45, it has been based at Taganrog, in northeast corner of Sea of Azov; since 1948 has been primary centre for Russian sea plane development. In 1990 was redesignated as shown.

TANTK now includes the experimental design bureau experimental production facilities, a flight test complex economic, financial and logistics support services, with test bases and proving grounds at the Black Sea and Sea of Azov. Its products are experimental prototypes of amphibious aircraft and wing-in-ground-effect (WIG) vehicles, together with test reports and technical documentation for their series production. It undertakes design and development of unconventional aircraft in response to requests for proposals from other companies, testing of aircraft and assemblies in maritime conditions, and training of aircrew and ground personnel for seaplane operation.

UPDATED

BERIEV Be-32

NATO reporting name: Cuff

TYPE: Twin-turboprop unpressurised multipurpose light transport.

PROGRAMME: Development of Be-30, first flown in prototype form on 3 March 1967; eight Be-30s built, but programme terminated when Aeroflot ordered Let L-410As from Czechoslovakia. Hard currency shortage revived programme 1993, with modestly upgraded version known as Be-32, one of original Be-30s (RA 67205) exhibited at 1993 Paris Air Show, as Be-32 demonstrator with original Russian engines, certification scheduled 1995, production, with Canadian Pratt & Whitney engines, to be centred at Irkutsk Aviation Production Plant (IAPO).

CUSTOMERS: Order for 50 announced by Moscow Airways 1993.

DESIGN FEATURES: Conventional cantilever high-wing monoplane, three-section wings, with anhedral on outer panels wing section P-20, thickness/chord ratio 18 per cent at centre-section, 14 per cent at tip, 3° twist. Semi-monocoque fuselage of rectangular section; 42° sweptback vertical tail surfaces; engines at tip of centre section each side.

FLYING CONTROLS: Conventional three-axis; double-slotted flaps.

STRUCTURE: All-metal, spars and skin panels of wing torsion box are mechanically and chemically milled profile pressings, detachable bonded leading-edge, half of wings and most of tail unit covered with thin honeycomb panels stiffened with stringers, 70 per cent of fuselage made of adhesive-bonded panels, tips of wings and tail surfaces and wing/fuselage fillets of GFRP.

LANDING GEAR: Tricycle type; single wheel on each unit; nosewheel retracts forward, mainwheels rearward into engine nacelles, tyres size 720 × 320 mm on mainwheels, pressure 3.9 bars (57 lb/sq in), 500 × 150 mm on nosewheel, pressure 2.95 bars (43 lb/sq in); mainwheel brakes. Optional floats and skis.

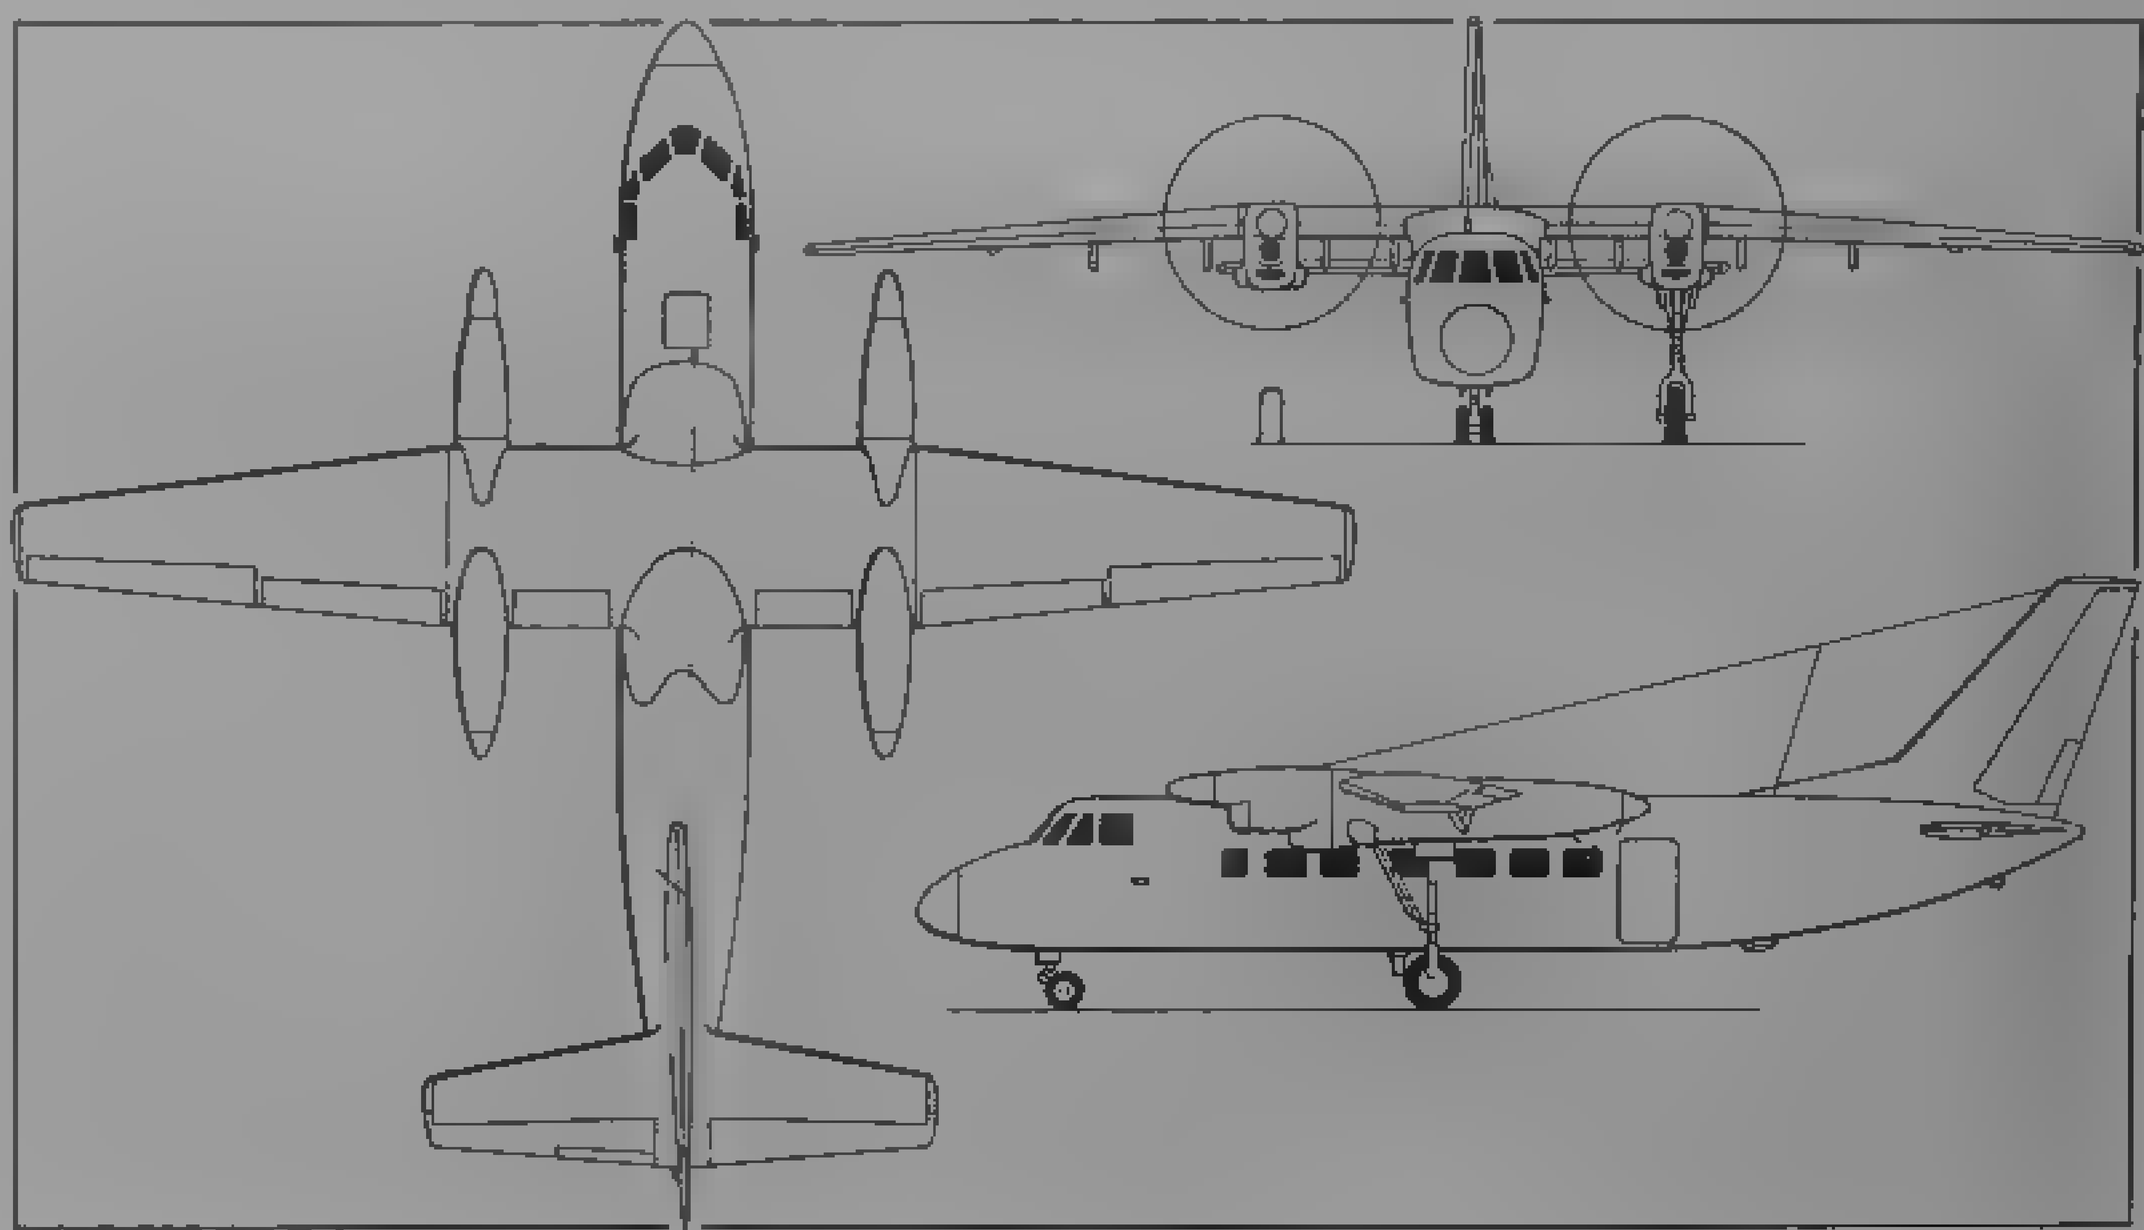
POWER PLANT: Two 820 kW (1,100 shp) P&WC PT6A-65B turboprops (754 kW; 1,011 shp Mars, Omsk, TVD-10Bs in demonstrator); three-blade propellers, six integral wing fuel tanks, total capacity 2,250 litres (594 US gallons, 495 Imp gallons).

ACCOMMODATION: Basic seating for two crew and 14 to 17 passengers in pairs, with centre aisle, other versions include a seven-passenger business transport, cargo version with 3.64 m² (39.2 sq ft) cargo floor for 2,000 kg (4,410 lb) freight, transport with sidewall seats for 12 para troops or 17 troops, and ambulance for nine stretcher patients, six seated casualties and attendant. Carry-on baggage compartment on starboard side, aft of cabin seating, opposite forward-hinged door and airstairs, toilet to rear.

SYSTEMS: Three-phase AC electrical system of 115/200 V 400 Hz, with two 16 kW GT16P48E alternators, DC supply via VU6SK 25.5 V 12 kW rectifiers. Hot air de-icing system for wing and tail unit leading-edges, engine air intakes and oil cooler; electrothermal system for propeller, spinner and windscreen anti-icing. Cabin and flight deck heated and ventilated. Portable oxygen bottles, masks and smoke protection goggles.

AVIONICS: *Comms:* Com/nav radio, emergency radio, radio beacon buoy.
Radar: Weather radar in nose.
Flight: Automatic flight control system, FON-BP type air data system.

DIMENSIONS, EXTERNAL:	
Wing span	17.00 m (55 ft 9¼ in)
Wing aspect ratio	9.03
Length overall	15.70 m (51 ft 6 in)
Fuselage width	1.70 m (5 ft 7 in)
Height overall	5.52 m (18 ft 1½ in)



Beriev Be-32 twin-turboprop multipurpose light transport (*Jane's/ Mike Keep*) *1994*

Prototype Beriev A-40 Albatross ASW/surveillance/minelaying amphibian *(Mike Jerram)*

Cargo floor area	3.64 m² (39.18 sq ft)
Baggage hold, volume	0.96 m³ (33.9 cu ft)
AREAS	
Wings, gross	32.00 m² (344.45 sq ft)
Ailerons (total)	2.60 m² (28.00 sq ft)
Trailing-edge flaps (total)	5.80 m² (62.43 sq ft)
Fin	3.14 m² (33.80 sq ft)
Rudder	2.43 m² (26.16 sq ft)
Tailplane	6.28 m² (67.60 sq ft)
Elevators (total)	2.72 m² (29.28 sq ft)
WEIGHTS AND LOADINGS (TVD-10B engines)	
Weight empty	4,760 kg (10,495 lb)
Max payload	1,900 kg (4,190 lb)
Max fuel	1,700 kg (3,750 lb)
Max T-O weight	7,300 kg (16,090 lb)
Max landing weight	6,800 kg (14,990 lb)

Refurbished Beriev Be-30, displayed as Be-32 demonstrator *(Paul Jackson)*

1995

PERFORMANCE (with TVD-10B engines. PT6A-65B estimated data similar)

Never-exceed speed	Mach 0.48 (264 kts; 490 km/h; 304 mph)
Max cruising speed at 3,000 m (9,840 ft)	Mach 0.43 (237 kts; 440 km/h; 273 mph)
Econ cruising speed at 3,000 m (9,840 ft)	202 kts (375 km/h; 233 mph)
Min manoeuvring speed	79 kts (145 km/h; 90 mph)
Max rate of climb at S/L, 15° flaps	450 m (1,475 ft)/min
Rate of climb at S/L, 15° flaps, OEI	81 m (265 ft)/min
T-O to 10.7 m (35 ft)	600 m (1,970 ft)
Landing from 15 m (50 ft)	620 m (2,035 ft)
Range: with 17 passengers (1,150 kg; 2,535 lb)	323 n miles (600 km; 373 miles)
with 14 passengers	518 n miles (960 km; 596 miles)
with seven passengers	944 n miles (1,750 km; 1,087 miles)

UPDATED

BERIEV A-40 ALBATROSS

NATO reporting name: Mermaid

TYPE: Twin-turbofan maritime patrol amphibian.

PROGRAMME: Conceived as military amphibian to carry extensive avionics and operational systems in primary anti-submarine warfare form; design started 1983, prototype construction began 1985; first flight December 1986, construction of production aircraft started 1987, mentioned Spring 1988 by Rear Admiral William O Studeman, then US director of naval intelligence, as seaplane with provisional Western designation 'Tag-D' (implying fourth unidentified type photographed by US reconnaissance satellite over Taganrog), for possible ASW/surveillance/minelaying role, identified as A-40 Albatross, designed by Alexei K. Konstantinov "for search and rescue", when prototype flown over Tushino Airport during Aviation Day display, 20 August 1989; feature in *Krasnaya Zvezda*, 6 August 1989 stated that in this role A-40 will be confined to SAR missions near coast and next task confronting designers was to produce similar aircraft capable of operating anywhere in Pacific. A-40 prototype has set 128 records, on some of which it lifted a payload of 10,000 kg to 13,281 m (43,573 ft); second prototype has flown.

CURRENT VERSIONS: **A-40**: ASW/surveillance/minelaying version.

Be-40P Passenger: Projected transport for 105 passengers, five-abreast, aisle between three-seat (port) and two-seat units, two toilets at rear (port), other facilities fore and aft of passengers, three flight crew plus cabin staff. Range with maximum payload 2,160 n miles (4,000 km; 2,485 miles).

Be-40PT Cargo-passenger: Projected transport with maximum payload of 10,000 kg (22,045 lb), 37 or 70 passengers, five-abreast at front of cabin, freight to rear. Range with maximum payload 2,265 n miles (4,200 km; 2,610 miles).

Be-42: Search and rescue version, see separate entry.

CUSTOMERS: Initial order 20 A-40s for CIS Naval Aviation, manufacture delayed by lack of funding.

DESIGN FEATURES: Largest amphibian yet built. Swept wings of moderate aspect ratio, with high-lift devices, single-step hull of high length to beam ratio, with what Russian press describes as "the world's first development of a variable-rise bottom, providing a considerable improvement in stability and controllability in the water, as well as a reduction in *g* loads when landing and taking off at sea"; small wedge-shape boxes aft of step aid 'unsticking' from water in wave heights up to 2.2 m (7 ft 2½ in); all-swept T tail, high-mounted engines protected from spray by strakes on each side of nose and by wings (length of strakes extended considerably in 1993); large underwing pod each side of hull, faired into wingroot; wing leading-edge sweep 23° 13′, supercritical wing sections, thickness/chord ratio 14.5 per cent to 11.3 per cent, incidence 3° 23′ at root, wing twist 4° 30′, no dihedral or anhedral; large dorsal fin.

FLYING CONTROLS: Entire span of each wing trailing-edge occupied by aileron and two-section area-increasing double-slotted flaps; full span leading-edge slats, outer spoilers assist ailerons, variable incidence tailplane; conventional rudder and elevators. Powered controls, with spring feel and electric trim.

Beriev A-40 Albatross amphibian *(Paul Jackson)*

1995

STRUCTURE: All metal semi monocoque boat type fuselage with heavy gauge double-chine planing bottom forward of step, conventional two spar wings, honeycomb-core sandwich panels and composites used widely, water rudder at rear of hull

LANDING GEAR: Hydraulically retractable tricycle type, twin-wheel nose unit retracts rearward, main four wheel bogies retract rearward into large underwing pods, rotating round pivot to stow as tandem twin-wheels on each side, oleo-nitrogen shock-absorbers nosewheel tyres size 840 × 290 mm pressure 6.9 to 7.35 bars (100 to 106 lb/sq in), mainwheel tyres size 1 030 × 350 mm, pressure 9.3 to 9.8 bars (135 to 142 lb/sq in) multidisc brakes on mainwheels, with inertial anti-skid units Ground turning radius 19.25 m (63 ft 2 in) Nosewheel steering angle ±55°

POWER PLANT: Two Aviadvigatel D-30KPV turbofans, pylon-mounted above wingroot pods, with outward toed exhaust efflux; each 117.7 kN (26,455 lb st), RKBM RD-60K booster turbojet, rated at 24.5 kN (5,510 lb st), in fairing on each turbofan pylon, slightly aft and slightly inboard of D-30KPV nozzle, with vertically split eyelid jetpipe closure at rear D-30KPVs to be replaced later by two 147.1 kN (33,070 lb st) turbofans Fuel tanks in wing torsion box capacity 35,100 litres (9 272 US gallons, 7,721 Imp gallons) Total oil capacity 94.5 litres (25 US gallons, 20.75 Imp gallons) Flight refuelling probe above nose

ACCOMMODATION: Crew of eight two pilots, flight engineer, radio operator, navigator/observer and three observers Door on each side to rear of flight deck, port door outward-opening, starboard door inward-opening

SYSTEMS: Flight deck and crew quarters air conditioned and pressurised by engine bleed and APU. Four hydraulic systems at 207 bars (3,000 lb/sq in), 190 litres (50 US gallons; 42 Imp gallons) of AMG-10 fluid, flow rate 55 litres (14.5 US gallons, 12 Imp gallons)/min Pneumatic system pressure 207 bars (3,000 lb/sq in), capacity of bottles 95 litres (3.35 cu ft) Three-phase 115/220 V 400 Hz AC electrical system, single-phase 115 V 400 Hz AC system; 27 V DC system, supplied by two engine-driven 60 kVA AC generators and three static inverters, three batteries. Gaseous oxygen bottle, pressure 147 bars (2,135 lb/sq in). Provision for de-icing tail unit, slats, engine air intakes and windscreen TA-12 APU, operable up to 7,000 m (23,000 ft)

AVIONICS: *Comms* Com radio and IFF

Radar: Navigation, search, surveillance and wave height measurement radar

Flight INS

Instrumentation Conventional instruments

Mission Slim container, probably for ESM, above each wingtip float pylon. bombing equipment, optical/TV sight

ARMAMENT: Stores bay in bottom of hull, aft of step.

DIMENSIONS EXTERNAL	
Wing span	41 62 m (136 ft 6½ in)
Wing chord at root	7 28 m (23 ft 10¾ in)
at tip	2.24 m (7 ft 4¼ in)

on water	85,000 kg (187,390 lb)
Max wing loading	430 kg/m² (88 07 lb/sq ft)
Max power loading	365.3 kg/kN (3 58 lb/lb st)
PERFORMANCE (at max T-O weight):	
Max Mach number in level flight	0 79
Never-exceed speed (VNE)	350 kts (650 km/h, 404 mph) EAS
Max level speed at 6,000 m (19,700 ft)	410 kts (760 km/h, 472 mph)
Max cruising speed at 6,000 m (19,700 ft)	388 kts (720 km/h, 447 mph)
Stalling speed, flaps up	146 kts (270 km/h, 168 mph)
flaps down	99 kts (182 km/h, 113 mph)
Rate of climb at S/L, OEI	1,800 m (5,900 ft)/min
Service ceiling	9,700 m (31 825 ft)
T-O run	1,000 m (3,280 ft)
T-O to 15 m (50 ft)	1,100 m (3,610 ft)
Landing from 15 m (50 ft)	1,450 m (4,760 ft)
Landing run	900 m (2,955 ft)
Range: with max payload	2,212 n miles (4,100 km, 2,547 miles)
with max fuel	2,967 n miles (5,500 km, 3,417 miles)
OPERATIONAL NOISE LEVELS	
T-O	104 EPNdB
Climb	99 EPNdB
Landing	102 EPNdB

UPDATED

BERIEV Be-42

NATO reporting name Mermaid

TYPE: Twin-turbofan search and rescue amphibian

PROGRAMME: Design started 1988 Major components completed, assembly delayed by lack of funding

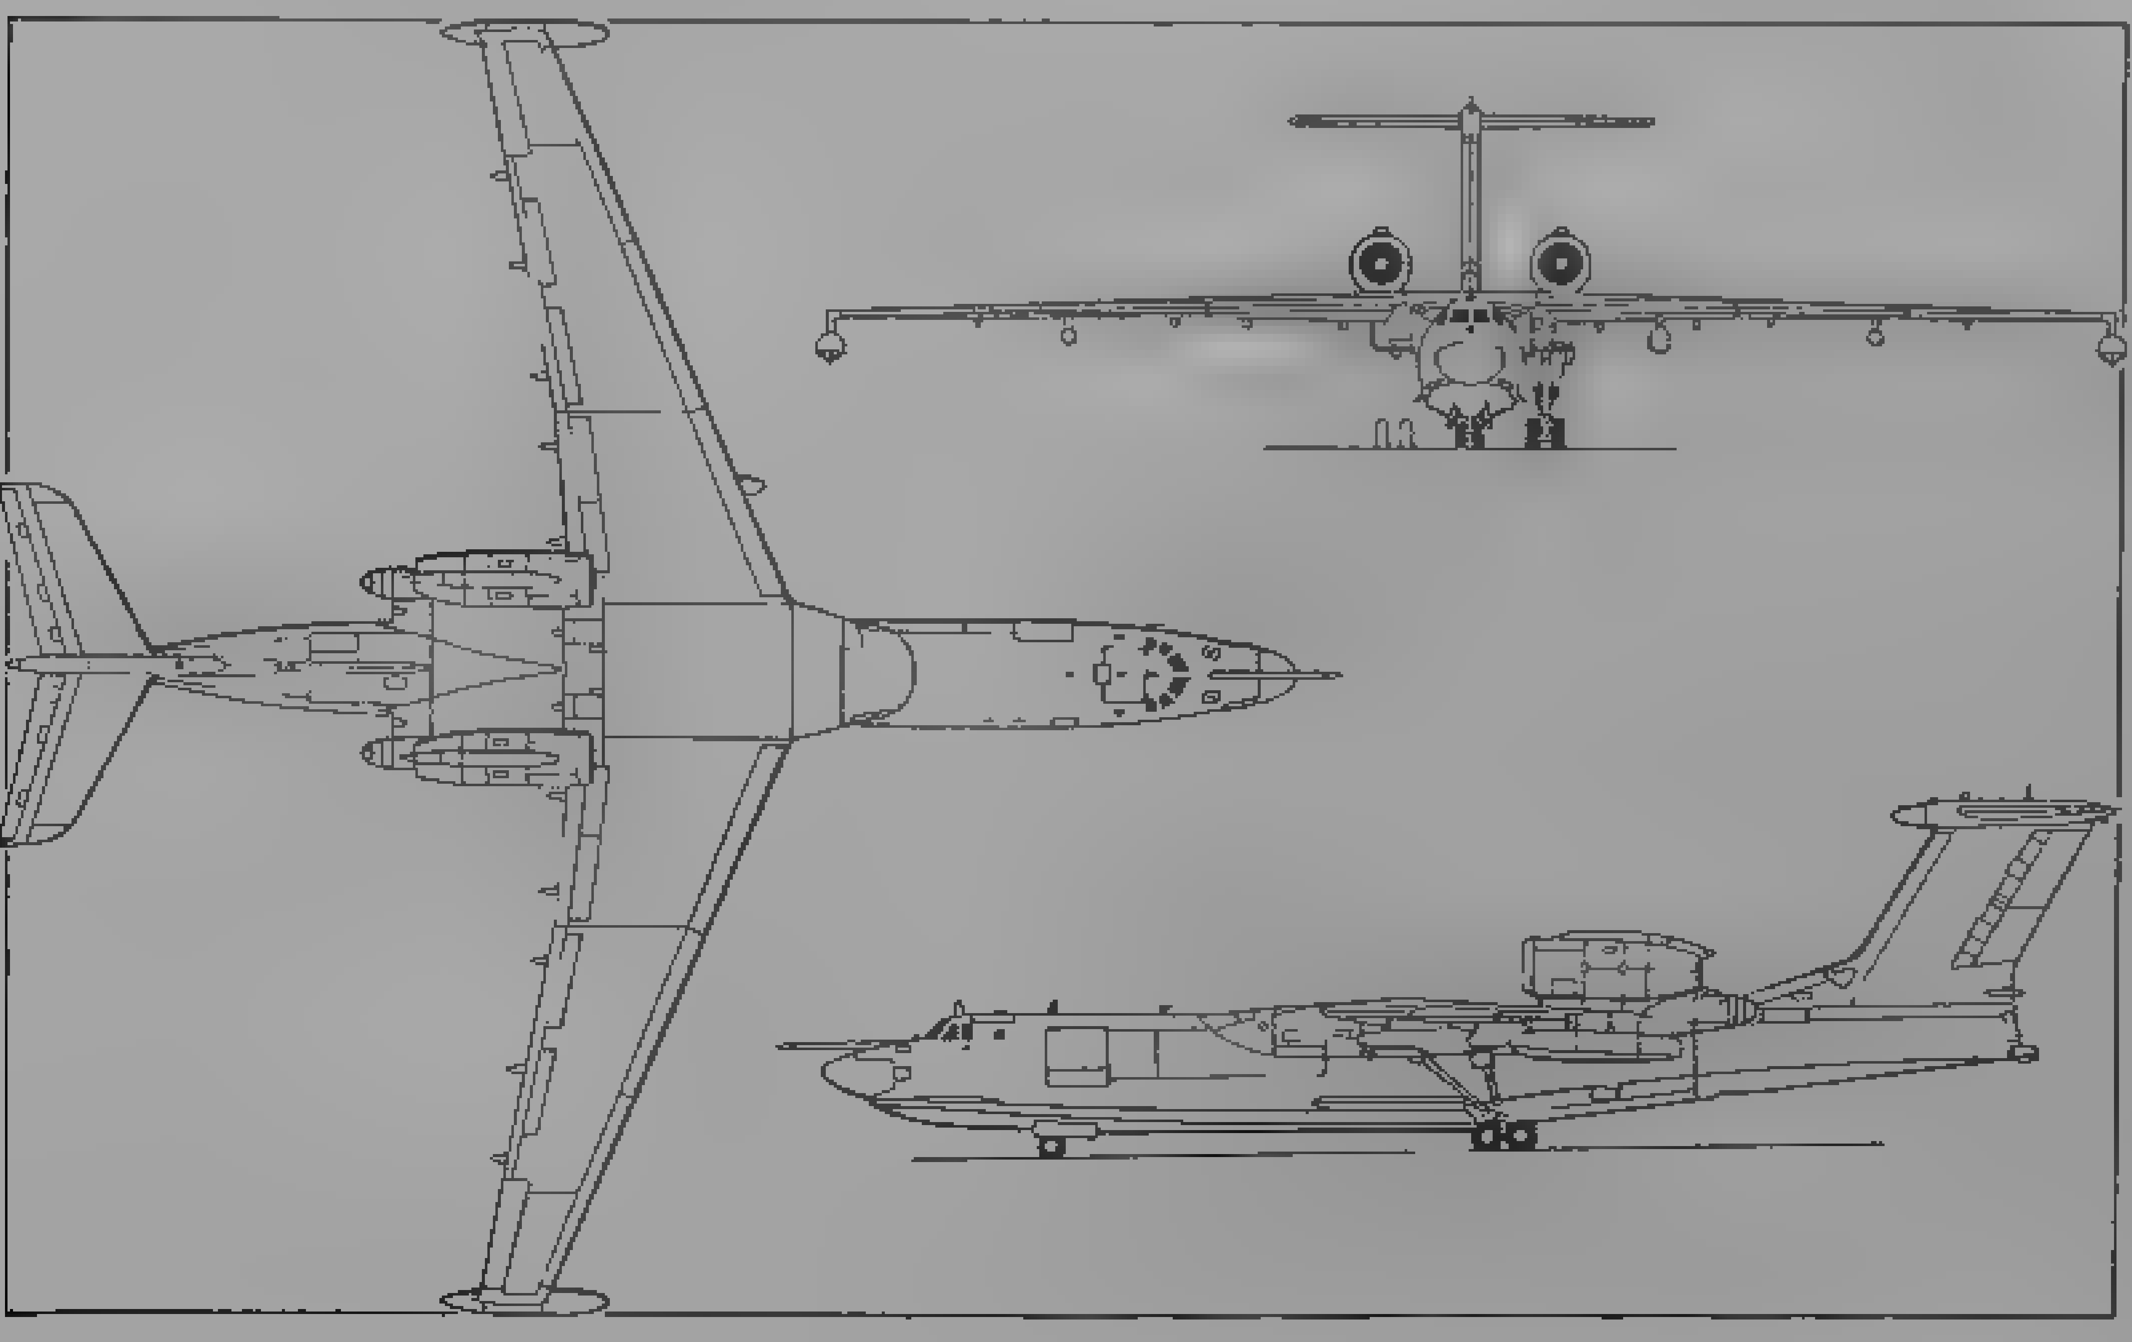
DESIGN FEATURES: As A-40, but specialised SAR equipment and no booster turbojets. No wingtip ESM containers.

ACCOMMODATION: Nine crew two pilots, flight engineer, radio operator, navigator, flight technician, senior medical attendant, two assistants. Provision for 54 survivors, who enter via side hatches, aided by mechanised ramps. Two outward-opening doors on port side, two inward-opening doors starboard

EQUIPMENT: Flares. Power boats, two LPS 6 liferafts, onboard equipment to combat hypothermia for 20 survivors, AT-2 transfusion equipment, DI-C-0.4 defibrillator, EK-1T-03M2 electrocardiograph, other resuscitation and surgical equipment and medicines Electro-optical sensors and searchlights to detect shipwreck survivors by day or night

DIMENSIONS EXTERNAL	
Forward cabin door, each side	
Height	1 80 m (5 ft 10¾ in)
Width	1 95 m (6 ft 4¾ in)
Rear cabin door, each side: Height	0 70 m (2 ft 3½ in)
Width	1 45 m (4 ft 9 in)
DIMENSIONS INTERNAL	
Cabin volume, unpressurised	69 0 m³ (2,436 cu ft)
Underfloor hold volume	6 3 m³ (222 cu ft)
WEIGHTS AND LOADINGS	
Max payload	5 000 kg (11,025 lb)
PERFORMANCE (estimated, at max T-O weight)	
Max level speed at 6,000 m (19,700 ft)	458 kts (850 km/h, 528 mph)
Max cruising speed at 5 000 m (16,400 ft)	431 kts (800 km/h, 497 mph)
Max rate of climb at S/L	840 m (2,755 ft)/min
Rate of climb at S/L, OEI	210 m (690 ft)/min
Service ceiling	10,000 m (32,800 ft)
Service ceiling, OEI	4,100 m (13,450 ft)
Range with max payload (54 survivors)	1 888 n miles (3,500 km, 2,175 miles)

UPDATED



Beriev Be-42 twin-turbofan search and rescue amphibian *(Jane's/Mike Keep)*

1995

BERIEV Be-200

TYPE: Twin-turbofan multirole amphibian, primary mission firefighting

PROGRAMME: Details announced, and model displayed, at 1991 Paris Air Show; full-scale mockup constructed 1991, two prototypes being built by Irkutsk Aircraft Production Association in partnership with ILTA Trade Finance SA of Geneva, Switzerland. first flight of first experimental prototype scheduled November 1995, two more aircraft being built 1995, certification and first deliveries 1997

CURRENT VERSIONS: **Firefighting:** Tanks under cabin floor capacity 12 m³ (423 cu ft) water; tanks in cabin for 1 2 m³ (42.3 cu ft) liquid chemicals, two retractable water scoops forward of step, two aft. 30 fully equipped smoke jumpers can be carried on seats along sidewalls of cabin, 12 tonnes of water scooped from seas with waves up to 1 2 m (4 ft) Fully fuelled, Be-200 can drop total 320,000 kg (705,465 lb) of water in successive flights when airfield to reservoir distance is 108 n miles (200 km, 125 miles) and reservoir to fire zone distance is 5 4 n miles (10 km; 6.2 miles); or 140,000 kg (308 640 lb) when distances are respectively 108 n miles (200 km, 125 miles) and 27 n miles (50 km, 31 miles). Tanks quickly removable when aircraft carries freight Flight deck and cargo hold sealed against smoke ingress. ARIA-2000 avionics features include water source/drop zone track memory, automatic glide slope and digital flight deck/ground fire crew communications

Passenger: Two flight crew, two cabin attendants, and 64 tourist class passengers four-abreast in pairs, with centre aisle at seat pitch of 75 cm (29.5 in).

Cargo: Payload 8,000 kg (17,635 lb) in unobstructed cabin 17 0 m (55 ft 9 in) long, 2 6 m (8 ft 6 in) wide and 1 9 m (6 ft 3 in) high Estimated range 595 n miles (1,100 km, 685 miles) with 7 000 kg (15 430 lb) payload

Ambulance: Two flight crew, seven seated casualties/medical personnel, 30 stretchers in three tiers

Search and rescue: Sensors and searchlights for detecting survivors, and onboard medical equipment

CUSTOMERS: Reported 54 for Russian state forest service/firefighting agency; 50 for Sakhalin regional administration; five for Irkutsk regional administration

DESIGN FEATURES: Scaled-down version of A-40. Details generally similar; underwing stabilising floats moved inboard from tips, winglets added, twin-wheel main landing gear units, and no booster turbojets. Supercritical wing sections, thickness/chord ratio 16 per cent to 11.5 per cent

STRUCTURE: Hull made primarily of high-strength aluminium/lithium alloys, interior of composites, water tanks of ferric alloys of aluminium in firefighting version

FLYING CONTROLS: Area increasing single-slotted flaps

LANDING GEAR: Twin-wheel main units, tyre size 950 × 300 mm, pressure 9.8 to 10.3 bars (142 to 150 lb/sq in), nosewheel tyre size 620 × 180 mm, pressure 7.35 to 7.85 bars (106 to 114 lb/sq in). Ground turning radius 17.4 m (57 ft 1 in). Nosewheel steering angle ±45°

POWER PLANT: Two ZMKB Progress D-436T turbofans, each 73.6 kN (16,550 lb st). Much reduced fuel capacity compared with A-40. Total oil capacity 22 litres (5.8 US gallons, 4.85 Imp gallons)

ACCOMMODATION: Two flight crew, up to 68 tourist class passengers, or 10 to 32 first class and business class passengers at up to 102 cm (40 in) seat pitch, with provision for galley, toilet and baggage stowage. Two outward-opening doors each side, cargo door and emergency exits; forward and rear freight/baggage holds

SYSTEMS: All accommodation pressurised. Three hydraulic systems at 207 bars (3,000 lb/sq in); 150 litres (39.6 US gallons; 33 Imp gallons) of MGJ-5U fluid, flow rate 70 litres (18.5 US gallons, 15.4 Imp gallons)/min. Capacity of pneumatic system bottles 29 litres (1.02 cu ft). Electrical system, de-icing and APU as A-40

AVIONICS: *Radar:* MN-85 weather radar

Flight: INS standard

Instrumentation: AlliedSignal EFIS displays, with six LCDs

DIMENSIONS, EXTERNAL:

Wing span over winglets	32.70 m (107 ft 3½ in)
Wing chord: at root	5.58 m (18 ft 3½ in)
at tip	1.72 m (5 ft 7¾ in)
Length overall	32.05 m (105 ft 1¾ in)
Length of fuselage	29.18 m (95 ft 9 in)
Max diameter of fuselage	2.86 m (9 ft 4½ in)
Height overall	8.90 m (29 ft 2½ in)
Tailplane span	10.11 m (33 ft 2 in)
Wheel track	4.30 m (14 ft 1¼ in)
Wheelbase	11.14 m (36 ft 6½ in)
Width over stabilising floats	25.60 m (84 ft 0 in)
Passenger doors (each): Height	1.70 m (5 ft 7 in)
Width	0.90 m (2 ft 11½ in)
Cargo door: Height	1.80 m (5 ft 10¾ in)
Width	2.00 m (6 ft 6¾ in)
Emergency exits: Height	1.70 m (5 ft 7 in)
Width	0.90 m (2 ft 11½ in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck: Length	17.00 m (55 ft 9 in)
Max width	2.60 m (8 ft 6¼ in)
Max height	1.90 m (6 ft 2¾ in)
Floor area	39.0 m² (420 sq ft)
Volume: forward baggage hold	8.8 m³ (310 cu ft)
rear baggage hold	4.5 m³ (159 cu ft)
main cabin and freight/baggage holds, total, cargo configuration	84 m³ (2,966 cu ft)

AREAS:

Wings, gross	117.44 m² (1,264.2 sq ft)
Ailerons (total)	3.56 m² (38.32 sq ft)
Flaps (total)	20.43 m² (219.91 sq ft)
Slats (total)	12.61 m² (135.74 sq ft)
Spoilers (total)	4.59 m² (49.41 sq ft)
Fin	12.60 m² (135.63 sq ft)
Rudder	4.60 m² (49.52 sq ft)
Tailplane	17.96 m² (193.33 sq ft)
Elevators (total)	6.96 m² (74.92 sq ft)

WEIGHTS AND LOADINGS:

Max fuel weight	12,260 kg (27,025 lb)
Max T-O and ramp weight	36,000 kg (79,365 lb)
Max airborne weight (after water scooping)	43,000 kg (94,800 lb)
Max landing weight, land or water	35,000 kg (77,160 lb)
Max wing loading	306.5 kg/m² (62.78 lb/sq ft)
Max power loading	244.5 kg/kN (2.40 lb/lb st)

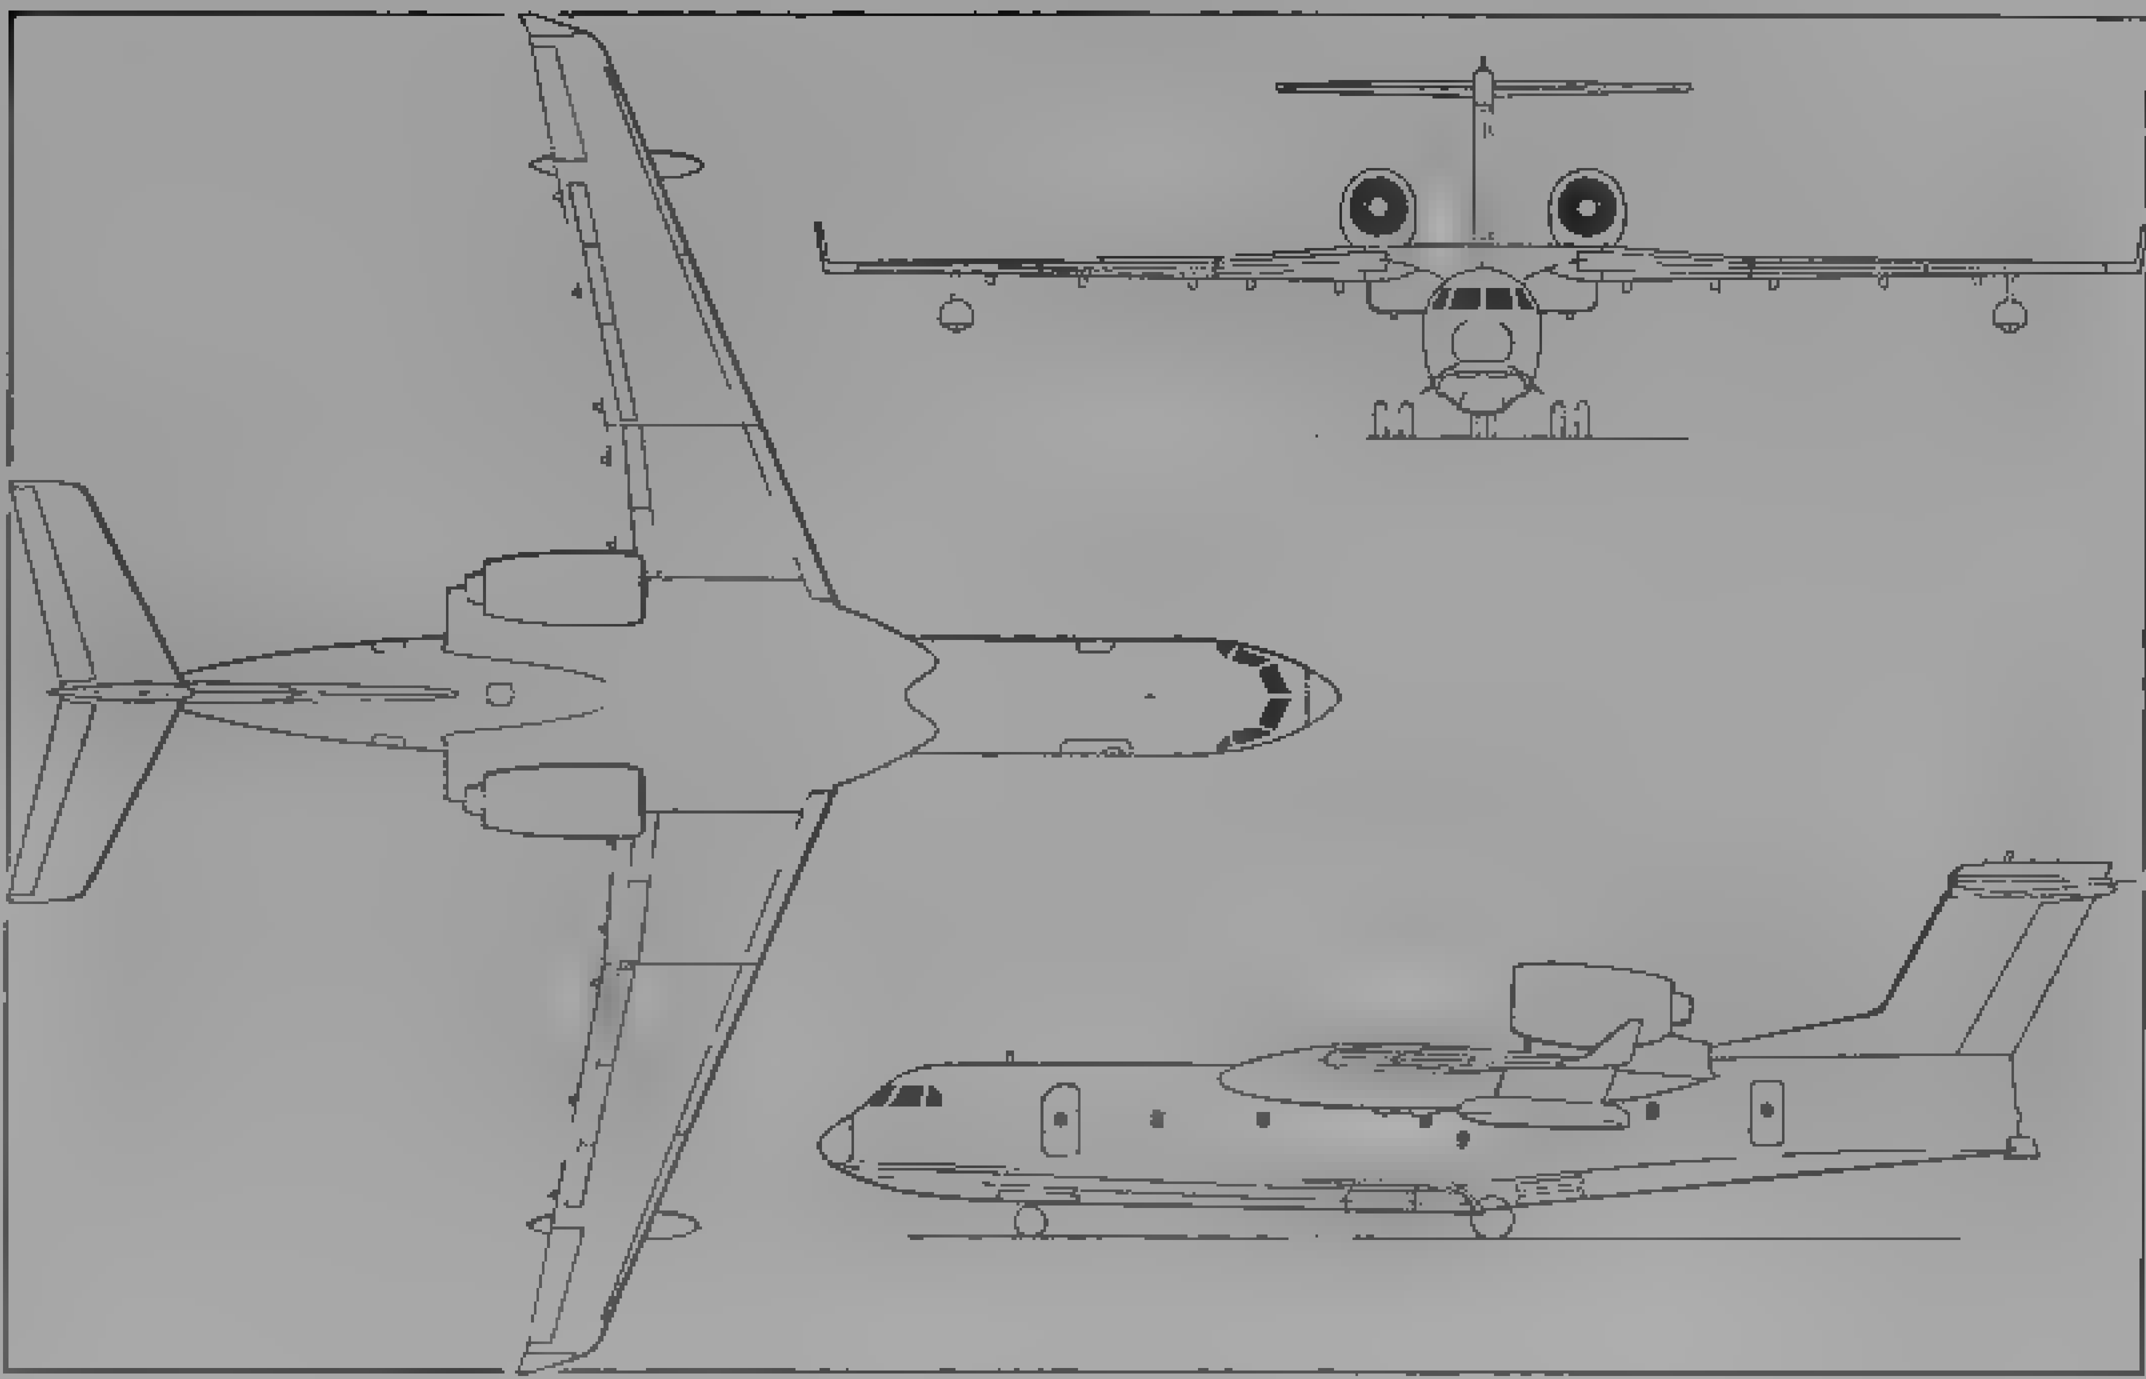
PERFORMANCE (estimated, at max T-O weight):

Max Mach number in level flight	0.69
Never-exceed speed (V_{NE})	329 kts (610 km/h, 379 mph) EAS
Max level speed at 7,000 m (22,965 ft)	388 kts (720 km/h, 447 mph)
Max cruising speed at 8,000 m (26,250 ft)	377 kts (700 km/h, 435 mph)
Stalling speed: flaps up	116 kts (215 km/h, 134 mph)
flaps down	84 kts (155 km/h, 97 mph)
Max rate of climb at S/L	840 m (2,755 ft)/min
Rate of climb at S/L, OEI	168 m (550 ft)/min
Service ceiling	11,000 m (36,090 ft)
Service ceiling, OEI	5,500 m (18,045 ft)
T-O to 15 m (50 ft): on land	600 m (1,970 ft)
on water	1,000 m (3,280 ft)
Landing from 15 m (50 ft): on land	1,050 m (3,445 ft)
on water	1,100 m (3,610 ft)
Water scooping distance to 15 m (50 ft)	1,450 m (4,760 ft)
Range: with 4,000 kg (8,818 lb) payload	1,133 n miles (2,100 km, 1,305 miles)
with max fuel	2,158 n miles (4,000 km; 2,485 miles)

OPERATIONAL NOISE LEVELS:

T-O	96 EPNdB
Climb	90 EPNdB
Landing	98 EPNdB

UPDATED



Beriev Be-200 civil utility amphibian (*Jane's/Mike Keep*) 1992

BERIEV Be-103

TYPE: Twin-engined light business amphibian

PROGRAMME: Design started 1992, model exhibited and initial data released at MosAeroshow '92, prototype construction began 1994; first flight scheduled for 1995

DESIGN FEATURES: Low-wing monoplane, with water-displacing wings of moderate sweep with large wingroot extensions, two-step boat hull, no stabilising floats; engine pylon-mounted on each side of rear fuselage, aft of wings; sweptback fin and rudder; tailplane mid-set on fin. Wing leading-edge sweep 22°; wing section NACA 2412M, dihedral 5° 3' on outer wings; incidence 1°; aspect ratio 6.46

FLYING CONTROLS: Manually operated, slab tailplane and ailerons by rods, rudder by cables, electric trim, spring feel in tailplane control, no flaps

STRUCTURE: All-metal semi-monocoque boat type fuselage; all-metal single-spar wings

LANDING GEAR: Pneumatically retractable tricycle type, single wheel on each unit, mainwheels retract inward into wing centre-section; nosewheel retracts forward, oleo-nitrogen shock absorbers, brakes on mainwheels. Mainwheel tyre size 400 × 150 mm, pressure 3 bars (43 lb/sq in); mainwheel tyres size 500 × 150 mm, pressure 3 bars (43 lb/sq in); disc brakes, self-centring nosewheel steerable ±35

POWER PLANT: Two 129 kW (173 hp) Bakanov M-17 piston engines, each driving an AV-103 three-blade variable-pitch tractor propeller, with optional reversible-pitch, fuel tank in each wing, total capacity 450 litres (119 US gallons, 99 Imp gallons)

ACCOMMODATION: Pilot and five passengers in pairs, upward-opening door on each side, hinged on centreline, baggage/freight compartment aft of cabin. Optional ambulance, all-cargo, patrol, ecological monitoring use

SYSTEMS: Interior heated and ventilated. Pneumatic system, bottle capacity 6 litres (365 cu in) of air, pressure 49 bars (711 lb/sq in). Electrical system 27 V DC and three-phase 36 V 400 Hz AC, supplied by 3 kW DC generators, rectifiers and 25 Ah battery

AVIONICS: *Comms:* VHF com radio, intercom and emergency locator beacon

Flight: Digital flight control and nav equipment; position, angle rate, linear acceleration and angle of attack sensors

Instrumentation: Conventional instrumentation

DIMENSIONS, EXTERNAL:

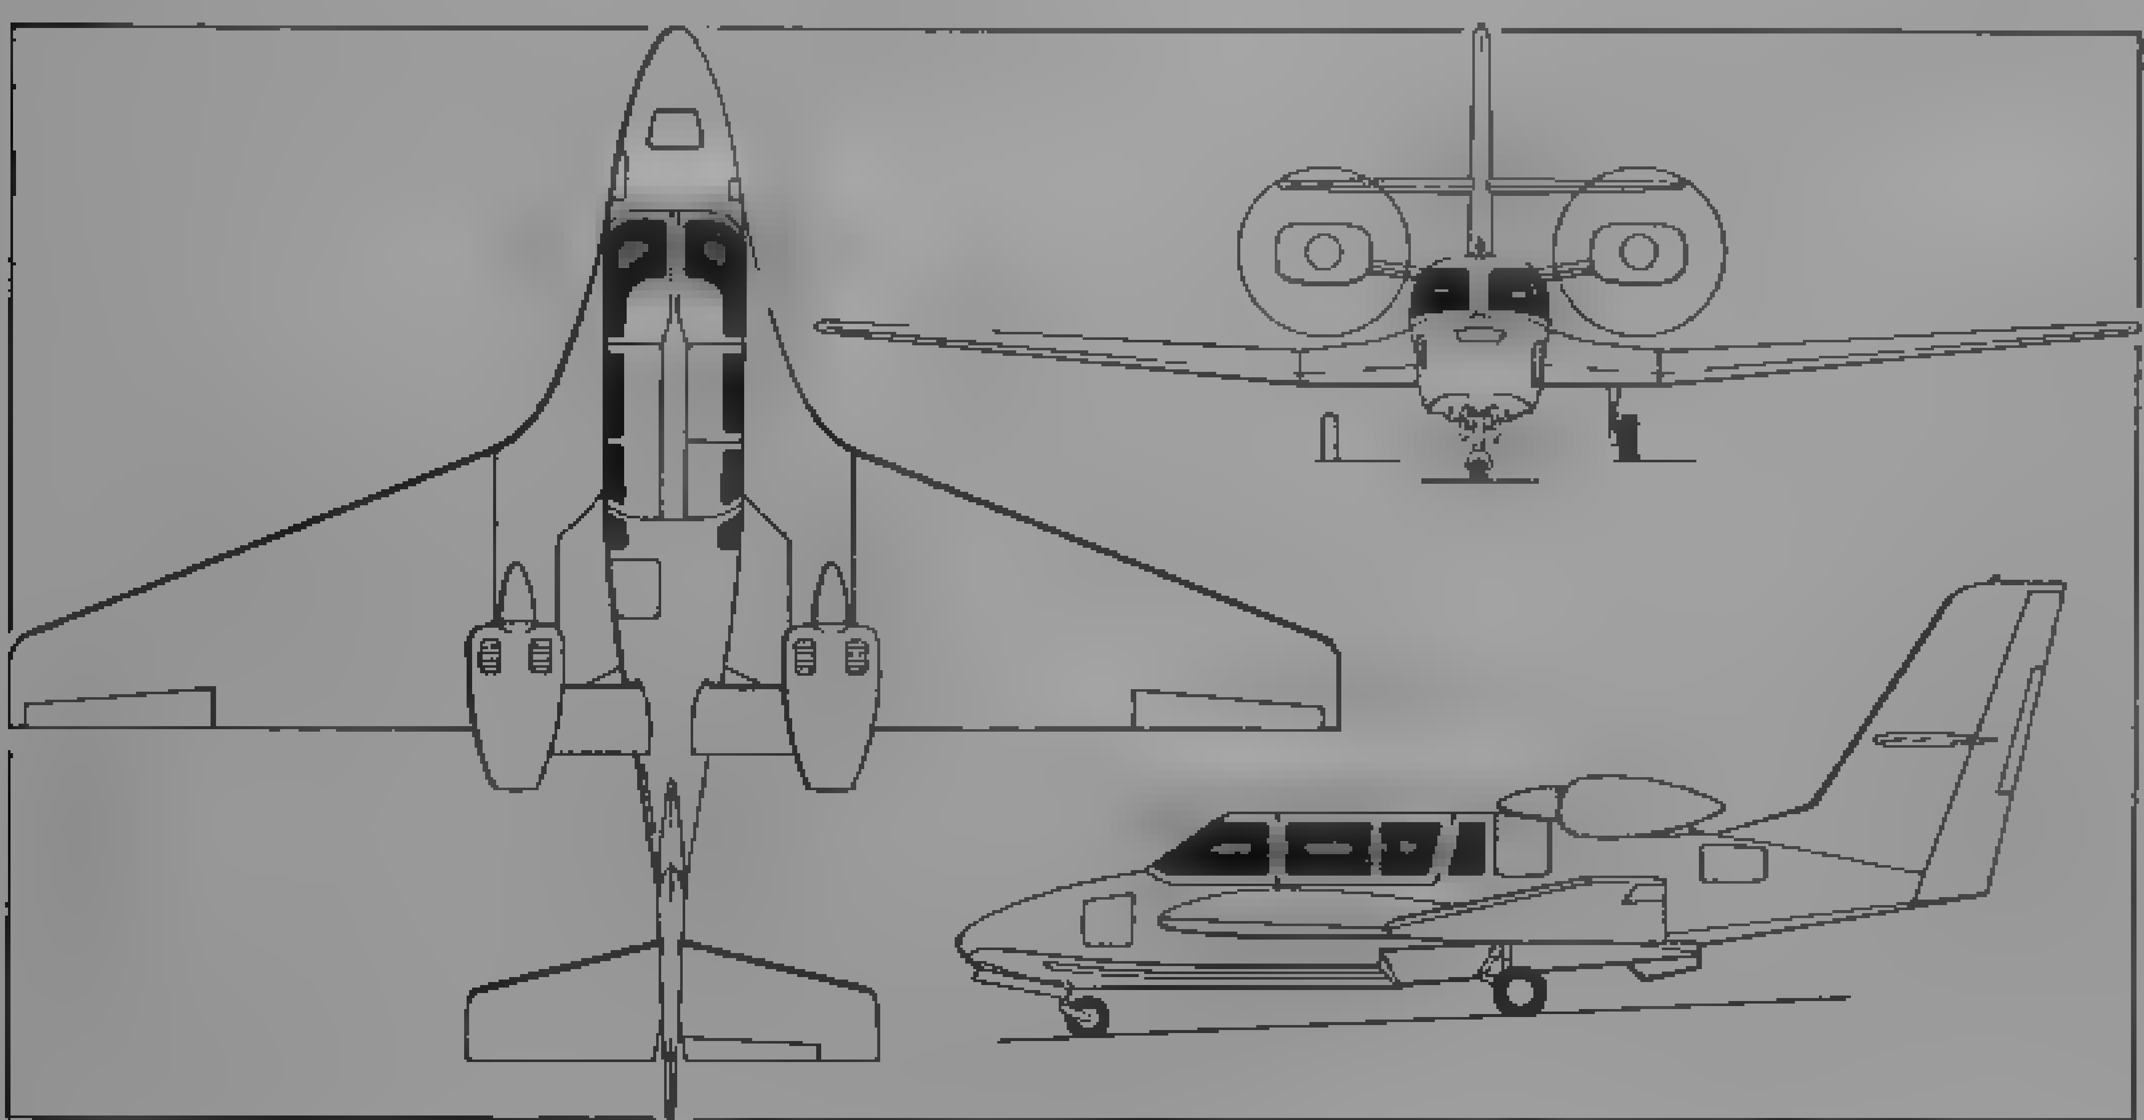
Wing span	12.72 m (41 ft 9 in)
Wing chord: at root	6.21 m (20 ft 4½ in)
at tip	0.83 m (2 ft 9 in)
Wing aspect ratio	6.45
Length overall	10.45 m (34 ft 3½ in)
Length of fuselage	9.96 m (32 ft 8 in)
Height overall	3.90 m (12 ft 9½ in)
Tailplane span	3.90 m (12 ft 9½ in)
Wheel track	2.91 m (9 ft 6½ in)
Wheelbase	4.15 m (13 ft 7¼ in)
Propeller diameter	1.60 m (5 ft 3 in)
Distance between propeller centres	3.00 m (9 ft 10¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length	3.00 m (9 ft 10¼ in)
Max width	1.34 m (4 ft 4¾ in)
Max height	1.26 m (4 ft 1½ in)
Floor area	3.00 m² (32.3 sq ft)
Volume	4.15 m³ (146.5 cu ft)

AREAS:

Wings, gross	25.10 m² (270.2 sq ft)
Ailerons, total	0.80 m² (8.65 sq ft)
Fin	2.86 m² (30.8 sq ft)



Beriev Be-103 twin-engined light multipurpose amphibian (*Jane's/Mike Keep*) 1994

Cutaway model of Beriev Be-103 *(Paul Jackson)*

1995

Flare pack on rear fuselage of A-50, and aerodynamic surface on side of landing gear fairing *(Mark Lambert)*

1993

Rudder	1.54 m² (16.6 sq ft)
Tailplane, total	3.68 m² (39.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,210 kg (2,668 lb)
Max payload, incl fuel	550 kg (1,212 lb)
Max fuel	320 kg (705 lb)
Max T-O and landing weight	1,760 kg (3,880 lb)
Max zero-fuel weight	1,665 kg (3,670 lb)
Max wing loading	70.12 kg/m² (14.36 lb/sq ft)
Max power loading	6.62 kg/kW (10.90 lb/hp)

PERFORMANCE (estimated at max T-O weight):

Never-exceed speed (VNE)	178 kts (330 km/h, 205 mph)
Max level speed at S/L	156 kts (290 km/h, 180 mph)
Max cruising speed at S/L	143 kts (265 km/h, 165 mph)
Stalling speed	54 kts (100 km/h, 62 mph)
Max rate of climb at S/L	390 m (1,280 ft)/min
Rate of climb at S/L, OEI	90 m (295 ft)/min
T-O run: on land	215 m (705 ft)
on water	390 m (1,280 ft)
T-O to 15 m (50 ft): on land	340 m (1,115 ft)
on water	500 m (1,640 ft)
Landing from 15 m (50 ft): on land	550 m (1,805 ft)
on water	590 m (1,935 ft)
Landing run: on land	190 m (625 ft)
on water	350 m (1,150 ft)
Range	
with max payload	270 n miles (500 km; 310 miles)
with max fuel	1,400 n miles (2,600 km, 1,615 miles)

UPDATED

BERIEV A-50

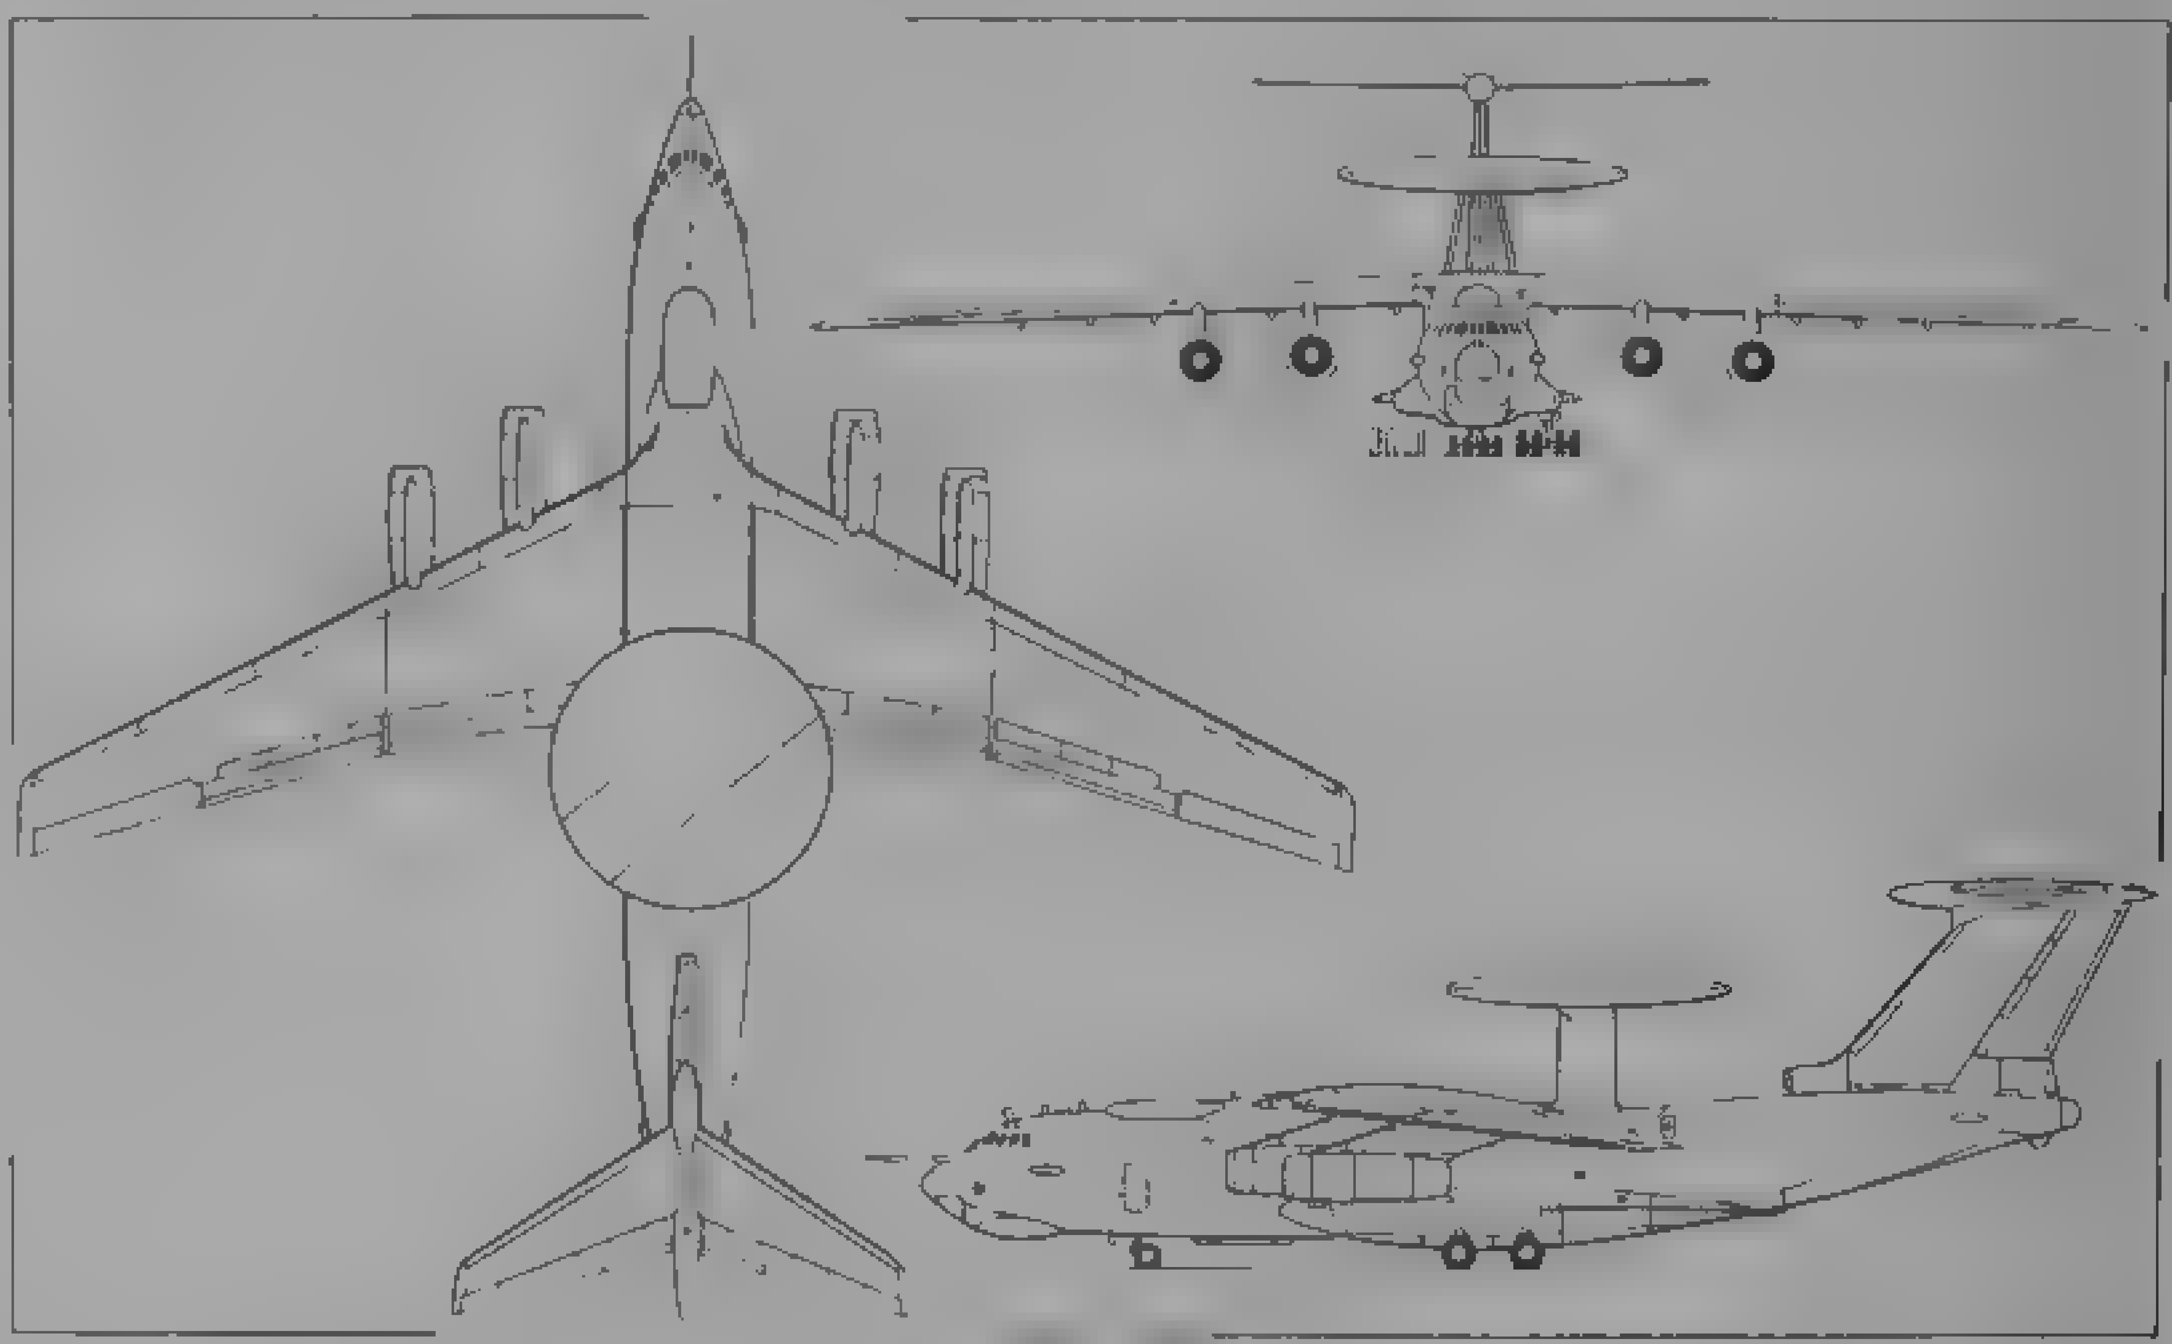
NATO reporting name: Mainstay

TYPE: Four-turbofan airborne early warning and control aircraft.

PROGRAMME: Development from Ilyushin Il-76 transport began in 1970s to replace Tu-126s of APVO; production began early 1980s, service entry 1984; at least five operated in civilian markings (RA-76452 to 76456), remainder being military, two operated round-the-clock over Black Sea during 1991 Gulf War, monitoring USAF flights from Turkey to Iraq and watching for possible stray US cruise missiles heading for CIS territory. Continued development by Beriev OKB.

CUSTOMERS: About 15 operational with MiG-29, MiG-31 and Su-27 counter-air fighters of Russian home defence and tactical air forces, alongside 10 obsolescent Tu-126s.

DESIGN FEATURES: Derivative of Il-76 (which see), with conventionally located rotating 'saucer' radome (diameter 9 m; 29 ft 6 in), lengthened fuselage forward of wings, flight refuelling noseprobe, satellite nav/com antenna above fuselage forward of wing, new IFF and comprehensive ECM, normal nose glazing around navigator's station replaced by non-transparent fairings, intake for avionics cooling at front of dorsal fin, no rear gun turret, small aerodynamic surface on each outer landing gear fairing, aft of wing trailing-edge.



Beriev A-50 AEW&C version of Ilyushin Il-76, known to NATO as 'Mainstay' *(Jane's/Dennis Punnett)*

1993

Nose of A-50 is much modified by comparison with that of Ilyushin Il-76 transport *(Linda Jackson)*

1993

FLYING CONTROLS: As for Il-76

STRUCTURE: As for Il-76, except as noted under Design Features

LANDING GEAR: As for Il-76

POWER PLANT: As for Il-76. In-flight refuelling difficult because of severe buffeting induced by rotating radome in tanker's slipstream

ACCOMMODATION: Normal crew of 15

AVIONICS: Considered capable of detecting and tracking aircraft and cruise missiles flying at low altitude over land and water, and of helping to direct fighter operations over combat areas as well as enhancing air surveillance and defence of CIS

Radar: Weather radar in nose, nav and ground-mapping radar under nose. AEW&C radar in rotating radome above fuselage.

Flight: Satellite nav/com and satellite datalink to ground stations

Instrumentation: Colour CRT displays for radar observers

Self-defence: RWR, flare pack on each side of rear fuselage; wingtip countermeasures pods under development

PERFORMANCE: Normally operates on figure-of-eight course at 10 000 m (33,000 ft), with 54 n miles (100 km, 62 miles) between centres of the two orbits

UPDATED

1991

OTHER AIRCRAFT

Beriev Be-12 (NATO 'Mail') amphibians continue in service with Russian Naval Aviation, including **Be-14** SAR conversion. Several have been modified into forest firefighting configuration, others for cargo operation. The basic anti-submarine and maritime patrol version was last described fully in the 1991-92 *Jane's*. Details of the conversions can be found in *Jane's Aircraft Upgrades*

NEW ENTRY

ILYUSHIN

AVIATSIONNYI KOMPLEKS IMIENI S. V ILYUSHINA (Aviation Complex named after S. V. Ilyushin)

45g Leningradsky Prospekt, 125190 Moscow
Telephone: 7 (095) 943 83 25
Fax: 7 (095) 212 21 32, 212 02 75
Telex: 411956 Sokol

GENERAL DESIGNER: Genrikh V. Novozhilov

CHIEF DESIGNER: I. Ya. Katyrev

FOREIGN ECONOMIC RELATIONS DEPARTMENT:
V. A. Belyakov

Ilyushin OKB is named after Sergei Vladimirovich Ilyushin, who died 9 February 1977, aged 82. OKB was founded 1933, has been headed by Genrikh Novozhilov since 1970. About 60,000 aircraft of Ilyushin design have been built.

The GAZ 40 production plant at Voronezh was linked officially to the OKB in July 1994, as Ilyushin Aircraft Production Association

UPDATED

Ilyushin Il-20 (NATO 'Coot-A') electronic intelligence (elint) and reconnaissance aircraft *(Sergey Sergeyev, via Mark Wagner)*

1995

ILYUSHIN Il-20

NATO reporting name: Coot-A

TYPE: Military elint/reconnaissance variant of Il-18 four-turboprop airliner

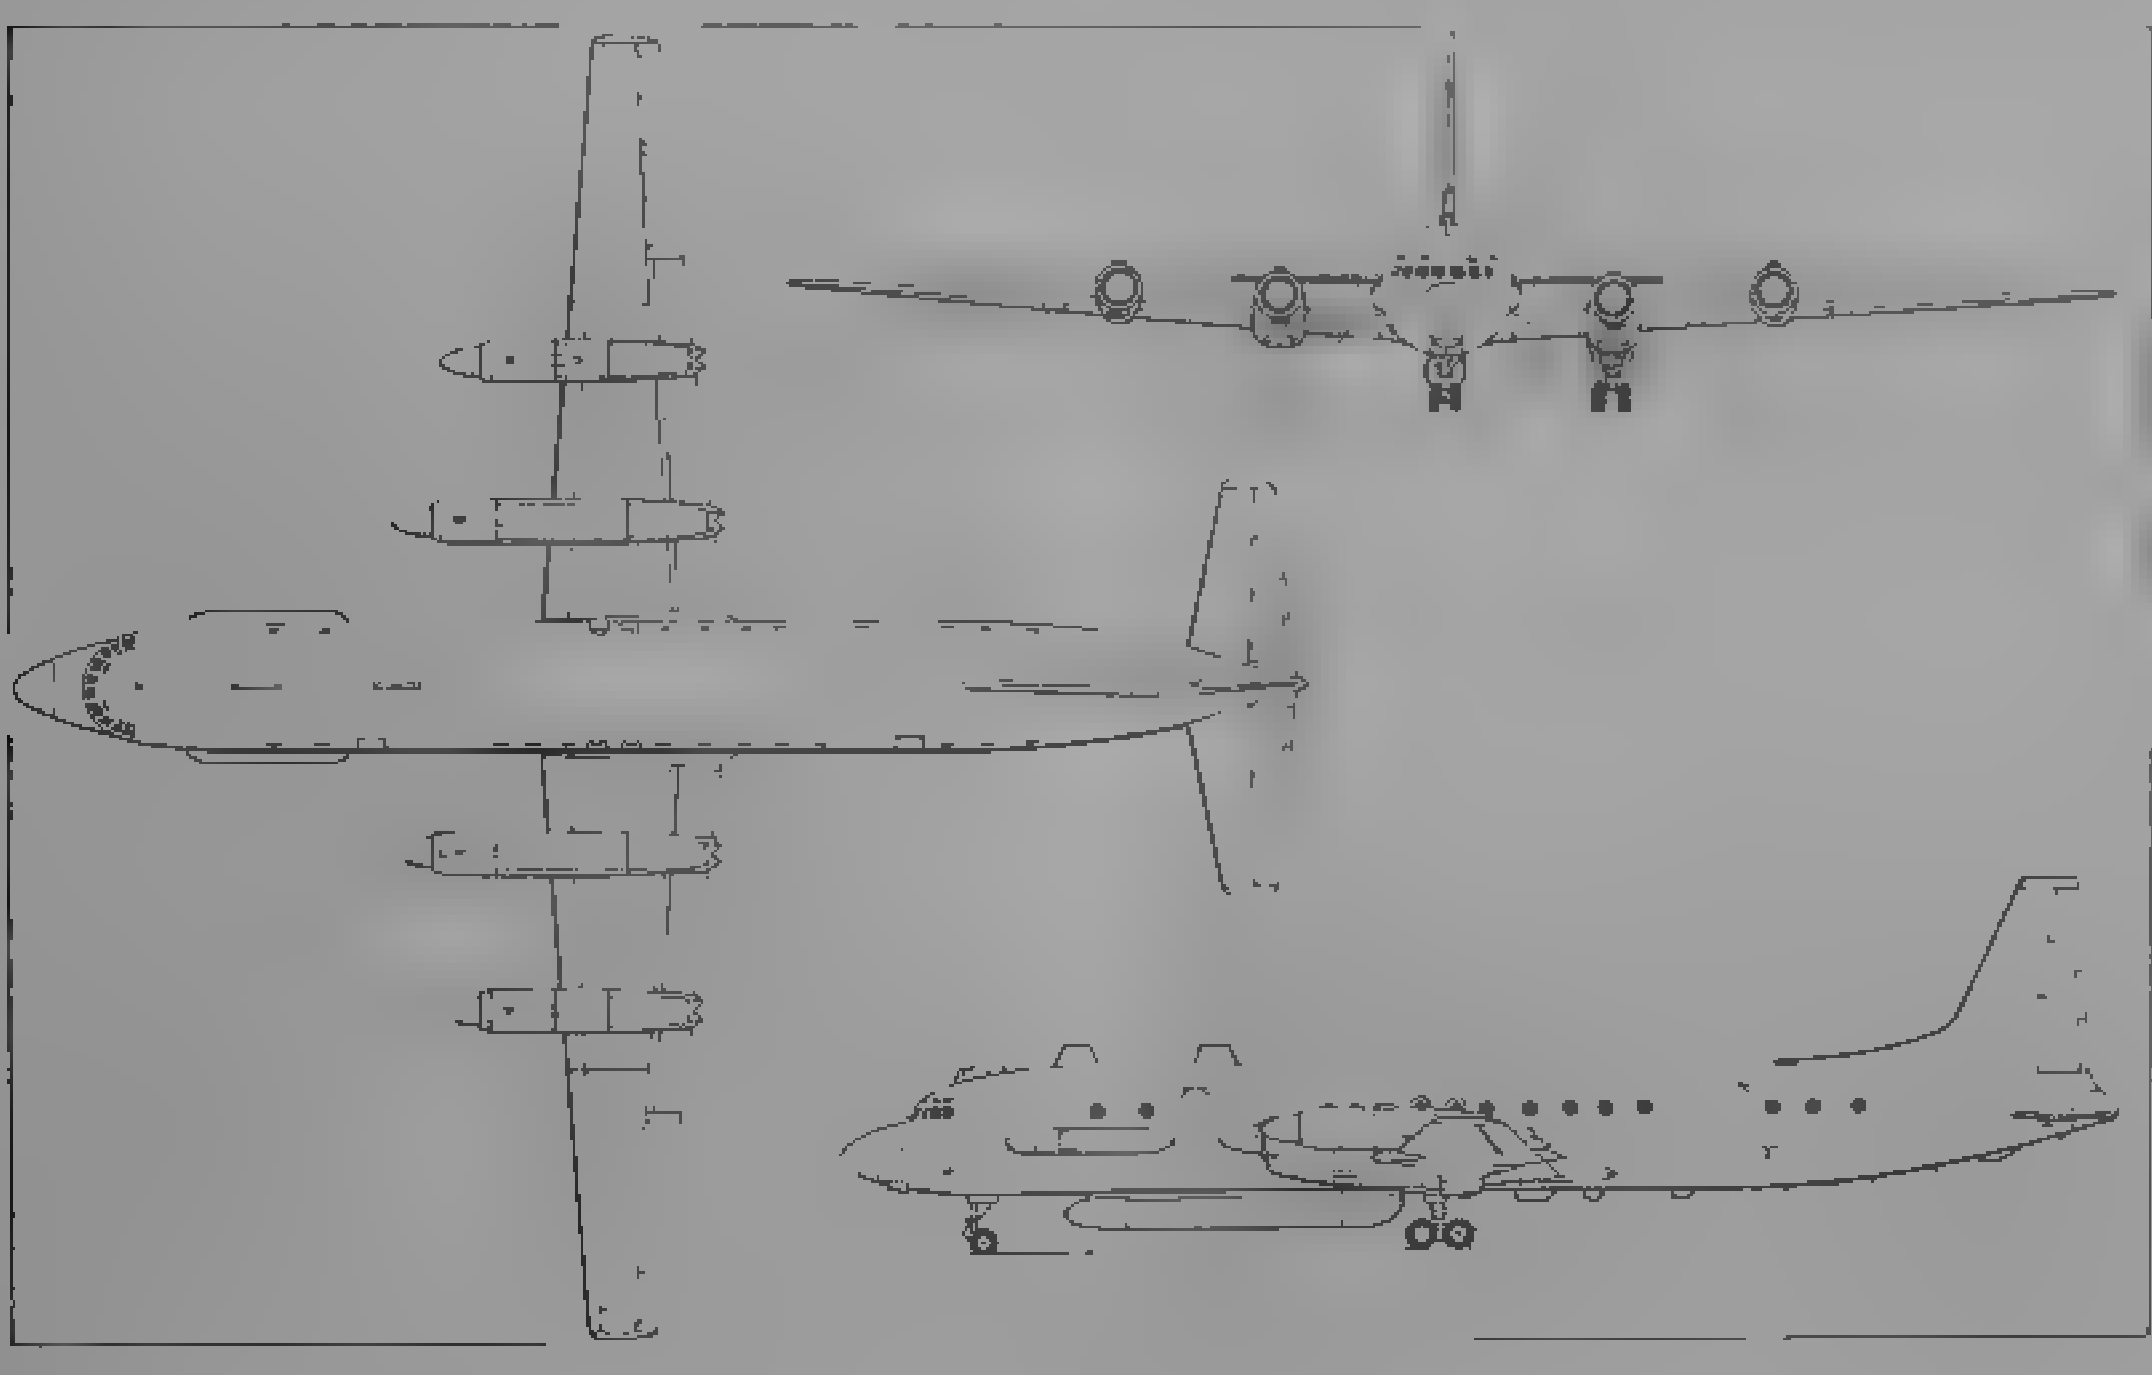
PROGRAMME: First observed 1978

CUSTOMERS: Russian air forces have 20 Il-20/22s, Naval Aviation has three Il-20s

DESIGN FEATURES: Il-18 airframe basically unchanged, underfuselage container, approximately 10.25 m (33 ft 7½ in) long and 1.15 m (3 ft 9 in) deep, assumed to house side-looking radar; container, approximately 4.4 m (14 ft 5 in) long and 0.88 m (2 ft 10½ in) deep, on each side of forward fuselage contains door over camera or other sensor; antennae and blisters include eight on undersurface of centre and rear fuselage, with two large plates projecting above forward fuselage

Detailed description of Il-18 airliner in 1979-80 and earlier editions of *Jane's; following abbreviated details of Il-18D indicate likely features retained by Il-20.*

POWER PLANT: Four 3,126 kW (4,190 ehp) ZMKB Progress/Ivchenko AI-20M turboprops, each with AV-681 four-blade reversible-pitch propeller. Ten flexible fuel tanks in inboard panel of each wing and integral tank in outboard panel; total capacity 23,700 litres (6,261 US gallons; 5,213 Imp gallons). Some Il-18 airliners have additional bag tanks in centre-section, giving total capacity of 30,000 litres (7,925 US gallons, 6,600 Imp gallons)



Ilyushin Il-20 (NATO 'Coot-A') elint/reconnaissance development of the Il-18 airliner *(Jane's/Dennis Punnett)*

1981

DIMENSIONS, EXTERNAL:
Wing span: 37.42 m (122 ft 9¼ in)
Wing chord: at root: 5.61 m (18 ft 5 in)
at tip: 1.87 m (6 ft 2 in)
Wing aspect ratio: 10.0
Length overall: 35.9 m (117 ft 9 in)
Height overall: 10.17 m (33 ft 4 in)
Tailplane span: 11.80 m (38 ft 8½ in)
Wheel track: 9.00 m (29 ft 6 in)
Wheelbase: 12.78 m (41 ft 10 in)
Propeller diameter: 4.50 m (14 ft 9 in)
Cabin doors (each): Height: 1.40 m (4 ft 7 in)
Width: 0.76 m (2 ft 6 in)
Height to sill: 2.90 m (9 ft 6 in)

DIMENSIONS, INTERNAL:
Flight deck: Volume: 9.36 m³ (330 cu ft)
Cabin, excl flight deck:
Length: approx 24.0 m (79 ft 0 in)
Max width: 3.23 m (10 ft 7 in)
Max height: 2.00 m (6 ft 6¾ in)
Volume: 238 m³ (8,405 cu ft)

AREAS:
Wings, gross: 140.0 m² (1,506.9 sq ft)

WEIGHTS AND LOADINGS (Il-18D airliner):
Max payload: 13,500 kg (29,750 lb)
Max T-O weight: 64,000 kg (141,100 lb)
Max wing loading: 457.1 kg/m² (93.6 lb/sq ft)
Max power loading: 5.12 kg/kW (8.42 lb/ehp)

PERFORMANCE (Il-18D airliner, at max T-O weight):
Max cruising speed: 364 kts (675 km/h, 419 mph)
Econ cruising speed: 337 kts (625 km/h, 388 mph)
Operating height: 8,000-10,000 m (26,250-32,800 ft)
T-O run: 1,300 m (4,265 ft)
Landing run: 850 m (2,790 ft)
Range, 1 h reserves:
with max fuel: 3,508 n miles (6,500 km, 4,040 miles)
with max payload: 1,997 n miles (3,700 km, 2,300 miles)

UPDATED

Ilyushin Il-22 (NATO 'Coot-B') airborne command post conversion of Il-18 airliner *(Mark Wagner/Flight International)*
1994

Ilyushin Il-24N derivative of Il-20 for fishery observation *(Mark Wagner/Flight International)*
1995

ILYUSHIN Il-22

NATO reporting name: Coot-B

Several Il-22 airborne command post adaptations of the Il-18 transport are operational with CIS air forces. It would be logical to expect variety of external fairings and antennae, differing from one aircraft to another, depending on its specific duties. Il-22 shown in an accompanying illustration was identified by bullet fairing at fin tip, long and shallow container under front fuselage and many small blade antennae above and below fuselage.

ILYUSHIN Il-24N

The Il-24N, shown in an accompanying illustration, is a civil derivative of the Il-20 for fishery observation. It retains the large underfuselage side-looking radar (SLAR) pod, but all elint equipment is deleted.

NEW ENTRY

ILYUSHIN Il-38

NATO reporting name: May

TYPE: Intermediate-range shore-based four-turboprop maritime patrol aircraft.

PROGRAMME: Development of Il-18 airliner, first flown 27 September 1961; 36 serve currently with Russian Naval Aviation; first export order, from India, for five in 1975.

CUSTOMERS: CIS Naval Aviation, Indian Navy (INAS 315 at Dabolim, Goa).

DESIGN FEATURES: Basic Il-18 airframe, with lengthened fuselage, and wings moved forward to cater for effect of role equipment and stores on CG position; few cabin windows, large undernose radome, MAD tail sting; wing dihedral 3° from roots; mean thickness/chord ratio 14 per cent.

FLYING CONTROLS: Flying controls cable actuated; mass and aerodynamically balanced ailerons with electric trim tabs; hydraulically assisted elevators and rudder, each with electric trim tab; additional rudder spring tab; hydraulically actuated double-slotted wing trailing-edge flaps.

STRUCTURE: All metal; three-spar wing centre-section, two spars in outer wings; circular section fail-safe semi-monocoque fuselage, with rip-stop doublers around window cutouts, door frames and more heavily loaded skin panels.

LANDING GEAR: Retractable tricycle type, strengthened by comparison with Il-18. Hydraulic actuation. Four-wheel bogie main units, with 930 × 305 mm tyres and hydraulic brakes. Steerable (±45°) twin-wheel nose unit, with 700 × 250 mm tyres. Hydraulic brakes. Pneumatic emergency braking.

POWER PLANT: Four ZMKB Progress/Ivchenko AI-20M turboprops, each 3,126 kW (4,190 ehp), with AV-68I four-blade reversible-pitch metal propellers. Multiple bag fuel tanks in centre-section and in inboard panel of each wing and integral tank in outboard panel, total capacity 30,000 litres (7,925 US gallons; 6,600 Imp gallons). Pressure fuelling through four international standard connections in inner nacelles. Provision for overwing fuelling. Oil capacity 58.5 litres (15.45 US gallons; 12.85 Imp gallons) per engine. Engines started electrically.

ACCOMMODATION: Pilot and co-pilot side by side on flight deck with dual controls, flight engineer to rear. Number of operational crew believed to be nine, but unconfirmed. Flight deck separated from main cabin by pressure bulkhead to reduce hazards following decompression of either. Main cabin has few windows and contains search equipment, electronic equipment and crew stations. Door on starboard side at rear of cabin (location of Il-18 service door).

SYSTEMS: Cabin maximum pressure differential 0.49 bar (7.1 lb/sq in). Eight engine-driven generators for 28 V DC and 115 V 400 Hz AC supply. Hydraulic system, pressure 207 bars (3,000 lb/sq in), for landing gear retraction, nosewheel steering, brakes, elevator and rudder actuators, flaps, weapon bay doors and radar antennae. Electrothermal de-icing for wings and tail unit.

AVIONICS: *Radar:* Navigation/weather radar in nose. Search radar (NATO 'Wet Eye') in undernose radome.

Flight: Automatic navigation equipment, radio compasses and radio altimeter probably similar to those of Il-18.

Mission: MAD tail sting.

ARMAMENT: Two weapons/stores bays forward and aft of wing carry-through structure on most aircraft, for attack weapons and sonobuoys.

DIMENSIONS, EXTERNAL:

As listed under Il-20 entry, except	
Length overall	39.60 m (129 ft 10 in)

WEIGHTS AND LOADINGS:

Weight empty	36,000 kg (79,367 lb)
Max T-O weight	63,500 kg (140,000 lb)
Max wing loading	453.6 kg/m² (92.9 lb/sq ft)
Max power loading	5.08 kg/kW (8.35 lb/ehp)

PERFORMANCE:

Max level speed at 6,400 m (21,000 ft)	390 kts (722 km/h, 448 mph)
Max cruising speed at 8,230 m (27,000 ft)	330 kts (611 km/h, 380 mph)
Patrol speed at 600 m (2,000 ft)	216 kts (400 km/h, 248 mph)
Min flying speed	103 kts (190 km/h, 118 mph)
T-O run	1,300 m (4,265 ft)
Landing run with propeller reversal	850 m (2,790 ft)
Range with max fuel	3,887 n miles (7,200 km, 4,473 miles)
Patrol endurance with max fuel	12 h

UPDATED

ILYUSHIN Il-62M/MK

NATO reporting name: Classic

No Il-62M four-turbofan airliners were delivered in 1993. Two were on the assembly line at Kazan (GAZ 22) in 1994; one was delivered that year; production has now terminated, approximately 285 of all variants built. Details and an illustration last appeared in the 1989-90 *Jane's*.

UPDATED

ILYUSHIN Il-76

NATO reporting name: Candid

Indian Air Force name: Gajaraj (King Elephant)

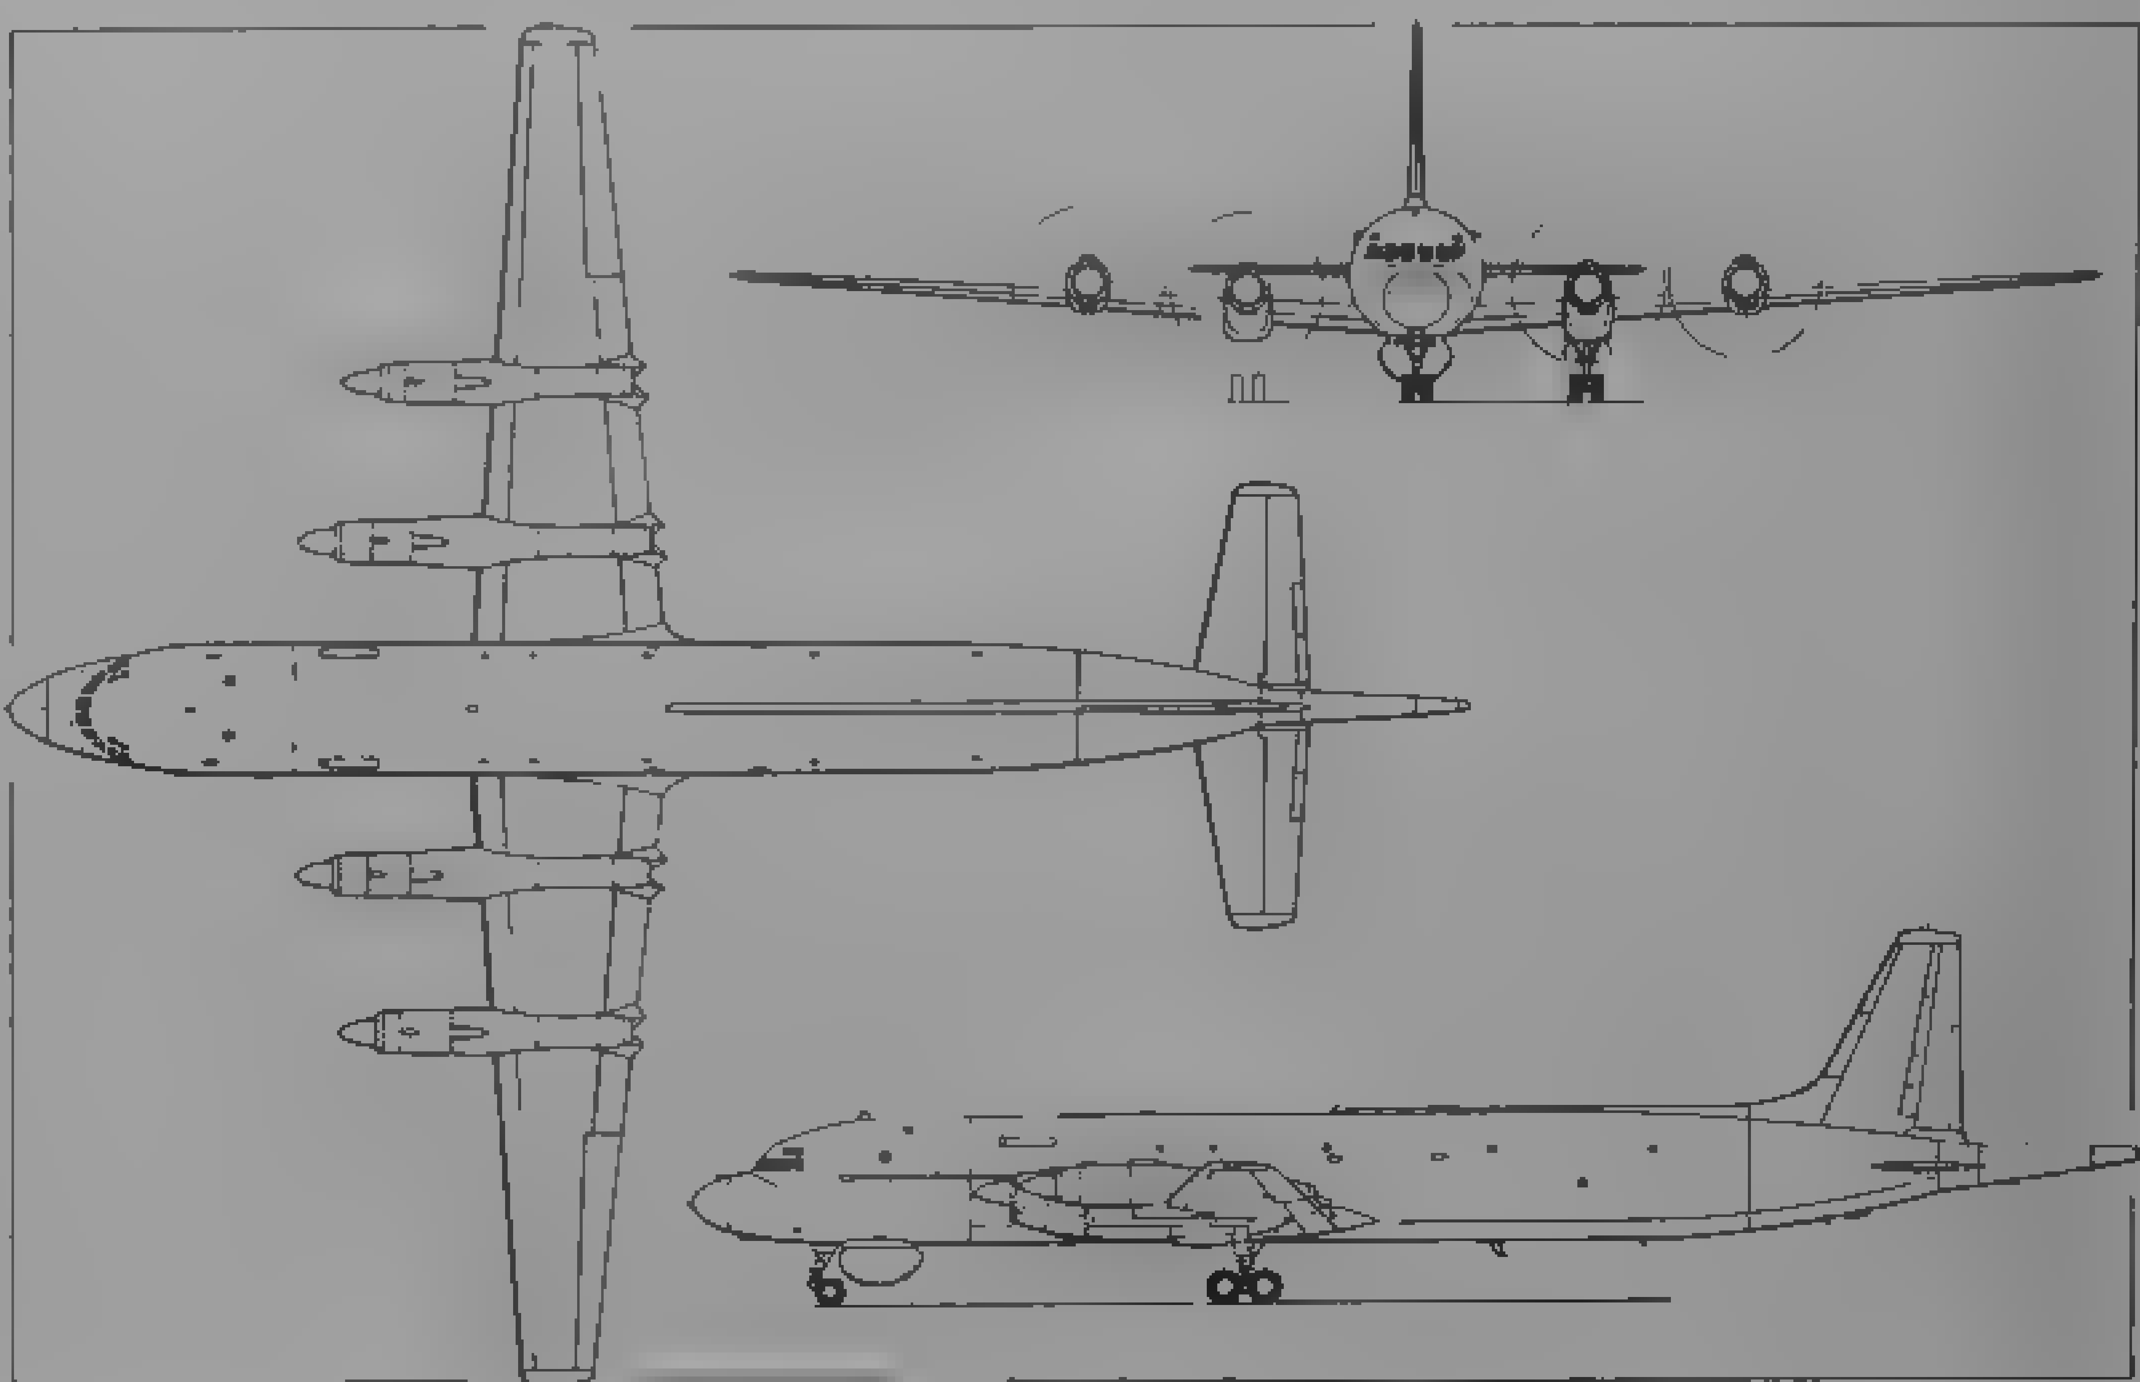
TYPE: Four-turbofan medium/long-range transport.

PROGRAMME: Design began late 1960s, led by G. V. Novozhilov, to replace turboprop An-12; prototype (SSSR-86712) flew 25 March 1971; three prototypes and three static test airframes built at Khodinka (GAZ 30); official 1974 film showed development squadron of Il-76s, with twin-gun rear turrets, as vehicles for airborne troops; series production began 1975, exceeded 800 by early 1994, seven delivered for civil use 1993; production continues at Chkalov Plant (GAZ 34), Tashkent, Uzbekistan.

CURRENT VERSIONS: **Il-76** ('Candid-A'): Initial basic military production version.

Il-76T ('Candid-A'): Civil conversion of Il-76, additional fuel in wing centre-section, above fuselage; heavier payload, no armament. *Description applies to this version.*

Il-76M ('Candid-B'): As Il-76T but military, up to 140 troops or 125 paratroops carried as alternative to freight, rear gun turret (not always fitted on export aircraft) containing two 23 mm twin-barrel GSh-23L guns, small ECM



Ilyushin Il-38 anti-submarine/maritime patrol derivative of the Il-18 airliner *(Jane's/Dennis Punnett)*
1975

Ilyushin Il-38 (four ZMKB Progress/Ivchenko AI-20M turboprops) *(Royal Air Force)*

1990

fairings (optional on export aircraft) between centre windows at front of navigator's compartment, on each side of front fuselage, and each side of rear fuselage, packs of ninety-six 50 mm IRCM flares on landing gear fairings and/or on sides of rear fuselage of aircraft operating into combat areas

Il-76K. Initial cosmonaut training version, enabling occupants to experience brief periods of weightlessness

Il-76TD ('Candid-A'). Unarmed, generally as Il-76T but with Aviadvigatel D-30KP-2 turbofans, maintaining full power to ISA +23°C against ISA +15°C for earlier models; maximum T-O weight and payload increased; 10,000 kg (22,046 lb) additional fuel increases maximum fuel range by 648 n miles (1,200 km, 745 miles); first identified when newly built SSSR 76467 passed through Shannon Airport, Ireland, November 1982, fully operational July 1983; one specially equipped with seats, soundproofing, buffet kitchen, toilet and working facilities to carry members of Antarctic expeditions between Maputo, Mozambique, and Molodozhnaya Station, Antarctica (proving flight February 1986 with 94 passengers, 4,000 kg, 30,865 lb of scientific equipment, cargo and baggage containers)

Il-76MD ('Candid-B'). Military version, generally as Il-76M but with improvements of Il-76TD

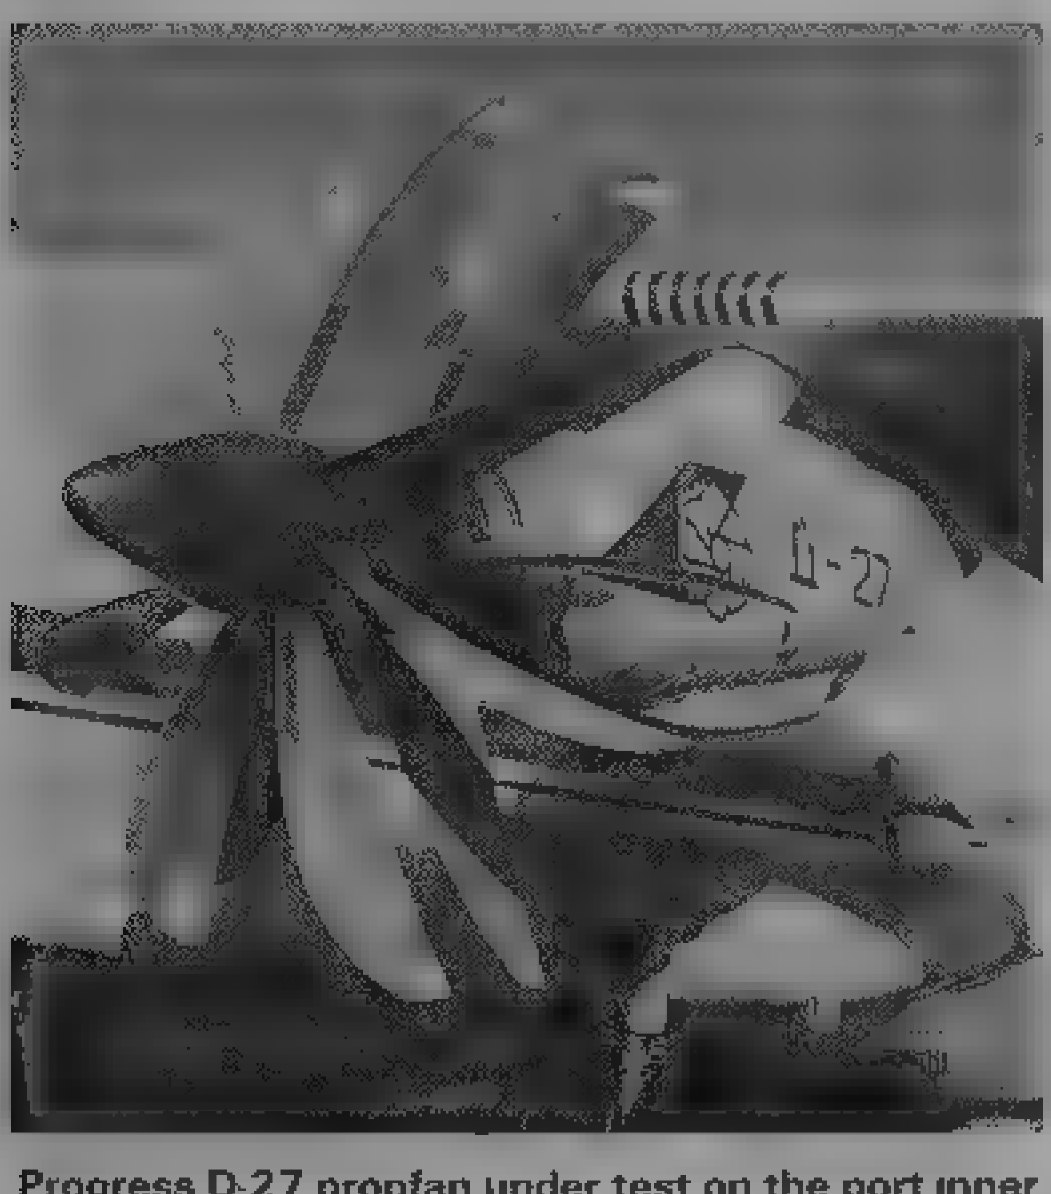
Il-76MDK: Adaptation of Il-76MD to enable cosmonauts to experience several tens of seconds of weightlessness during training

Under development is **new version** of Il-76TD **with CFM56 turbofans**, each rated at 138.8 kN (31,200 lb st), range increased 20 to 30 per cent, fuel burn decreased, noise reduced to comply with ICAO Ch 3 Appendix 16

Il-76MF: Stretched military version with four Aviadvigatel PS-90AN turbofans, each 156.9 kN (35,275 lb st). Cargo hold lengthened 6.6 m (21 ft 8 in) by two plugs, fore and aft of wings, maximum payload 52,000 kg (114,640 lb); range, with reserves, with 40,000 kg (88,185 lb) payload 2,805 n miles (5,200 km, 3,230 miles). First flight 1 August 1995. To be built in Tashkent. CFM56 engines to be optional

Il-76TF: Civil version of Il-76MF, available 1996

Il-76DMP: Firefighting conversion of Il-76 demonstrated first in 1990; up to 42,000 litres (11,095 US gallons, 9,240 Imp gallons) of water/fire retardant in two cylindrical tanks in hold, discharge, replenishment and draining systems; drop zone aiming devices; up to 384 meteorological cartridges in dispensers for weather modification, able to water-bomb an area of 550 × 100 m (1,805 × 330 ft), or to carry, and parachute when required, 40 firefighters, all airborne fire equipment (known as VAP-2, dischargeable aviation system, weight 5,000 kg, 11,025 lb) can be installed in standard Il-76, or removed, in 2 hours, tank replenishment time 10 to 12 minutes, discharge time 8 to 9 seconds, with option of successive discharge of tanks to cover 900 × 65 m (2,950 × 210 ft); airspeed during discharge 130 to 215 knots (240 to 400 km/h, 150 to 248 mph) at 80 m (260 ft)



Progress D-27 propfan under test on the port inner position of an Ilyushin Il-76LL *(Paul Jackson)*

1995

Il-76LL. Engine testbed conversion, carrying gas turbine of up to 245 kN (55,100 lb st), including turboprops, in place of normal port inner D-30KP; provisions for five test engineers, four Il-76LLs are available, on commercial contract basis, from Gromov Flight Research Institute; engines tested include NK 86, PS 90A and D-18T turbofans and D-236 and D-27 propfans, testing of NK 93 propfan scheduled to begin 1995

Il-76SK: Airborne control post for Tu-160SK/Burlak space launch system

Specialised variants and developments of Il-76 include transports modified to carry external loads, including Tu-160 tailplane, above fuselage, the AEW&C **A-50** known to NATO as 'Mainstay' (described separately under Beriev OKB entry); the **'Be-976'**, with rotating radome like A-50 and wingtip avionics pods but with nose glazing retained, used as radar picket at Zhukovsky to observe flight tests; the **Il-78** (NATO 'Midas') flight refuelling tanker (described separately); the AEW&C **Adnan 1** and single-point flight refuelling tanker modified for Iraq

CUSTOMERS: Russian Transport Aviation force (VTA) has 297 Il-76/76M/76MDs; air forces of Algeria (four MD), China (seven MD and, reportedly, 15 Ms ex-Uzbekistan)) and India (24, given name Gajaraj); commercial operators include Aeroflot and its successors (more than 180, including Il-76Ts and Ms, forming military reserve), China United Airlines (three MD), Cubana (two MD, Hungarian HeavyLift (two TD), Iraqi Airways (four T, six M and 20 MD, operated for military), Jamahiriya Libyan Arab Airlines (five M, five T and 12 TD), Air Koryo (North Korea, three MD), Inversija (Latvia) (three T and one TD) and Syrianair (two T, two M); Il-76Ms of airlines have no guns in turret. first of two Il-76MDs delivered for Cubana had no tail turret

DESIGN FEATURES: Late 1960s requirement was to carry 40 tonnes of freight 2,700 n miles (5,000 km; 3,100 miles) in less than 6 hours, with ability to operate from short unprepared airstrips, in the most difficult weather conditions experienced in Siberia, the north of the Soviet Union and the Far East, while much simpler to service and able to fly much faster than An-12, wings mounted above fuselage to leave interior unobstructed, rear loading ramp/door, unique landing gear, with two large external fairings for each main gear. Wing anhedral constant outboard of centre-section, sweepback 25° at quarter-chord, thickness/chord ratio 13 per cent at root, 10 per cent at tip; all tail surfaces sweptback

FLYING CONTROLS: Hydraulically boosted, manual operation possible in emergency, mass balanced ailerons, with balance/trim tabs; two-section triple-slotted trailing-edge flaps over approximately 75 per cent of each semi-span, eight upper-surface spoilers forward of flaps on each wing, four on each inner and outer panel, leading-edge slats over almost entire span, two on each inner panel, three on each outer panel, variable incidence T tailplane, elevators and rudder aerodynamically balanced, each with tab

STRUCTURE: All-metal, five-piece wing of multispar fail-safe construction, centre-section integral with fuselage. Basically circular-section semi-monocoque fail-safe fuselage, underside of upswept rear fuselage made up of two outward-hinged clamshell doors, upward-hinged panel between doors, and downward-hinged ramp

1995

LANDING GEAR: Hydraulically retractable tricycle type. Steerable nose unit has two pairs of wheels, side by side, with central oleo. Main gear on each side has two units in tandem, each unit with four wheels on single axle. Low pressure tyres size 1,300 × 480 mm on mainwheels, 1,100 × 330 mm on nosewheels. Nosewheels retract forward. Main units retract inward into two large ventral fairings under fuselage, with additional large fairing on each side of lower fuselage over actuating gear. During retraction mainwheel axles rotate around leg, so that wheels stow with axles parallel to fuselage axis (that is wheels remain vertical but at 90° to direction of flight). All doors on wheel wells close when gear is down, to prevent fouling of legs by snow, ice, mud, and so on. Oleo-pneumatic shock absorbers. Tyre pressure can be varied in flight from 2.5 to 5 bars (36 to 73 lb/sq in) to suit different landing strip conditions. Hydraulic brakes on mainwheels.

POWER PLANT: Four Aviadvigatel D-30KP turbofans, each 117.7 kN (26,455 lb st), in individual underwing pods. Each pod on large forward-inclined pylon and fitted with clamshell thrust reverser. Integral fuel tanks between spars of inner and outer wing panels. Total fuel capacity 109,480 litres (28,922 US gallons, 24,083 Imp gallons).

ACCOMMODATION: Crew of seven, including two freight handlers. Side by side seating for pilot and co-pilot on flight deck. Station for navigator below flight deck in glazed nose. Forward-hinged main cabin door on each side of fuselage forward of wing. Crew emergency escape hatch forward of, and lower than, main door on port side, access via two-piece upward-folding door forming flight deck floor under port rear seat and via door at rear of navigator's compartment. Two windows on each side of hold serve as emergency exits. Hold has reinforced floor of titanium alloys, with folding roller conveyors, and is loaded via rear ramp. Entire accommodation pressurised, permitting carriage of 140 troops or 125 paratroops as alternative to freight. Advanced mechanical handling systems for containerised and other freight, which can include standard ISO containers, each 12 m (39 ft 4½ in) long, building machinery, heavy crawlers and mobile cranes. Typical loads include six containers measuring either 2.99 × 2.44 × 2.44 m (9 ft 9¾ in × 8 ft × 8 ft) or 2.99 × 2.44 × 1.90 m (9 ft 9¾ in × 8 ft × 6 ft 2¾ in) and with loaded weights of 5,670 kg (12,500 lb) or 5,000 kg (11,025 lb) respectively, or 12 containers measuring 1.46 × 2.44 × 1.90 m (4 ft 9½ in × 8 ft × 6 ft 2¾ in) and each weighing 2,500 kg (5,511 lb) loaded, or six pallets measuring 2.99 × 2.44 m (9 ft 9¾ in × 8 ft) and each weighing 5,670 kg (12,500 lb), or 12 pallets measuring 1.46 × 2.44 m (4 ft 9½ in × 8 ft) and each weighing 2,500 kg (5,511 lb). Folding seats along sidewalls in central portion of hold. Quick configuration changes made by use of modules, each able to accommodate 36 passengers in four-abreast seating, litter patients and medical attendants, or cargo. Three such modules can be carried, each approximately 6.10 m (20 ft) long, 2.44 m (8 ft) wide and 2.44 m (8 ft) high, loaded through rear doors by two overhead travelling cranes, and secured to cabin floor with cargo restraints. Two winches at front of hold, each with capacity of 3,000 kg (6,615 lb). Cranes embody total of four hoists, each with capacity of 2,500 kg (5,511 lb). Ramp can be used as additional hoist, with capacity of up to 30,000 kg (66,140 lb) to facilitate loading of large vehicles and those with caterpillar tracks. Pilot's and co-pilot's windscreens can each be fitted with two wipers, top and bottom.

SYSTEMS: Flight deck only, or entire interior, can be pressurised; maximum differential 0.50 bar (7.25 lb/sq in). Hydraulic system includes servo motors and motors to drive flaps, slats, landing gear and its doors, ramp, rear fuselage clamshell doors and load hoists. Flying control boosters supplied by electric pumps independent of central hydraulic supply. Electrical system includes engine-driven generators, auxiliary generators driven by APU, DC converters and batteries. It powers pumps for flying control system boosters, radio and avionics, and lighting systems.

AVIONICS: *Radar:* Weather radar in nose, nav and ground mapping radar in undernose radome.

Flight: Full equipment for all weather operation by day and night, including computer for automatic flight control and automatic landing approach.

EQUIPMENT: APU in port side landing gear fairing for engine starting and to supply all aircraft systems on ground, making aircraft independent of ground facilities.

DIMENSIONS, EXTERNAL:

Wing span	50.50 m (165 ft 8 in)
Wing aspect ratio	8.5
Length overall	46.59 m (152 ft 10¼ in)
Fuselage: Max diameter	4.80 m (15 ft 9 in)
Height overall	14.76 m (48 ft 5 in)
Rear-loading aperture: Width	3.40 m (11 ft 1¾ in)
Height	3.45 m (11 ft 4 in)

TD 1,700 m (5,580 ft)
Landing run: T 450 m (1,475 ft)
TD 900-1,000 m (2,950-3,280 ft)
Range with max payload:
TD 1,970 n miles (3,650 km; 2,265 miles)
Nominal range with 40,000 kg (88,185 lb) payload:
T 2,700 n miles (5,000 km; 3,100 miles)
Max range, with reserves:
T 3,617 n miles (6,700 km; 4,163 miles)
Range with 20,000 kg (44,090 lb) payload:
TD 3,940 n miles (7,300 km; 4,535 miles)

UPDATED

ILYUSHIN Il-76 COMMAND POST

TYPE: Airborne command post version of Il-76MD transport.

PROGRAMME: Two examples (SSSR-76450 and -76451) photographed at Zhukovsky Flight Research Centre 1992.

DESIGN FEATURES: Large canoe-shaped fairing above fuselage forward of wings; five small antennae above centre-section, other small antennae, and air intake scoops, under front fuselage and at rear of main landing gear fairings; long and shallow fairing forward of dorsal fin on each side at top of fuselage; large downward inclined flat plate antenna on each side under tailcone; long pod-mounted probe on pylon under each outer wing; nose glazing around navigator's compartment deleted and flight deck rear side windows covered; downward-facing exhaust near end of port landing gear fairing; partially retracted basket-drogue of what appears to be a VLF trailing wire aerial under rear fuselage.

VERIFIED

ILYUSHIN Il-78M

NATO reporting name: Midas

TYPE: Four-turbofan probe-and-drogue flight refuelling tanker.

PROGRAMME: Development began in late 1970s, to replace modified Myasishchev 3MS2 and 3MN2 (NATO 'Bison') used previously in this role; first operational Il-78 with single refuelling pod entered service 1987, supporting tactical combat aircraft; fully developed Il-78 is three-point tanker.

CURRENT VERSIONS: **Il-78**: Initial version with two cylindrical fuel storage tanks inside cargo hold, convertible into transport by removal of tanks; in addition to tanks in hold, fuel can be transferred from standard tanks in wing torsion box. Able also to refuel aircraft on ground, using conventional hoses. At least three converted to transports for Busol Airline of Ukraine by 1995.

Il-78M: Current standard: non-convertible, with third storage tank in hold, increasing available transfer fuel by 20,000 kg (44,090 lb); all three tanks fixed; lower structure weight; increased maximum T-O weight.

CUSTOMERS: Russian air forces have 20 with Long Range Aviation division at Engels airbase, Saratov region.

DESIGN FEATURES: Development of basic Il-76MD; three-point tanker, with UPAZ-1A refuelling system, utilising refuelling pods of same type under outer wings and on port side of rear fuselage; rear turret retained as flight refuelling observation station, without guns; rear-facing radar range finder built into bottom of upswept rear fuselage.

POWER PLANT: Four Aviadvigatel D-30KP-2 turbofans, each 117.7 kN (26,455 lb st).

ACCOMMODATION: Crew of seven.

AVIONICS: *Mission*: Kupol navigation system and RSBN short-range nav system to permit all-weather day/night mutual detection and approach by receiver aircraft from distances up to 160 n miles (300 km; 185 miles). Systems control automatically the convergence and warn of too-close approach. Refuelling permitted only in direct visibility.

DIMENSIONS, EXTERNAL: Same as Il-76, except:
Distance of refuelling pods from c/l:
Underwing pods 16.40 m (53 ft 9¾ in)
Rear fuselage pod 3.00 m (9 ft 10⅛ in)
WEIGHTS AND LOADINGS:
Weight empty: 78 98,000 kg (216,050 lb)
Fuel load: Wing tanks: 78 90,000 kg (198,412 lb)
Fuselage tanks: 78 28,000 kg (61,728 lb)
Max T-O weight:
On concrete runway: 78 190,000 kg (418,875 lb)
78M 210,000 kg (462,965 lb)

1994

On runway with bearing strength less than 6 kg/cm (85 lb/sq in): 78, 78M 157,000 kg (346,120 lb)
Max landing weight: 78 151,500 kg (333,995 lb)

PERFORMANCE:
Nominal cruising speed:
78 405 kts (750 km/h, 466 mph)
Refuelling speed:
78 232-318 kts (430-590 km/h; 267-366 mph)
Refuelling height: 78 2,000-9,000 m (6,560-29,525 ft)
Max T-O run: 78M 2,080 m (6,825 ft)
Refuelling radius:
with 60,000-65,000 kg (132,275-143,300 lb) transfer fuel: 78 540 n miles (1,000 km, 620 miles)
with 32,000-36,000 kg (70,545-79,365 lb) transfer fuel: 78 1,350 n miles (2,500 km; 1,553 miles)

VERIFIED

ILYUSHIN Il 86

NATO reporting name: Camber

TYPE: Four-turbofan medium-range wide-bodied passenger transport.

PROGRAMME: Construction of three prototypes (second for static testing only) started 1974; first flight 22 December 1976 from Ilyushin OKB headquarters at old Moscow Central Airport, Khodinka (GAZ 30), from 1,820 m (5,970 ft) runway, to official flight test centre, by prototype SSSR-86000; first production Il-86 (SSSR 86003) flew at Voronezh assembly plant (GAZ 40) 24 October 1977; first delivery (SSSR 86004) to Aeroflot 24 September 1979; scheduled services began 26 December 1980; first international service, Moscow-East Berlin, 3 July 1981; four delivered 1993, production terminated; total of 108 built, including four command posts, remainder all commercial. Programme to re-engine with CFM56 turbofans being discussed with five Russian airlines 1995, to increase range by 40 per cent.

CUSTOMERS: Aeroflot Russian International (23), Ajt Air International (2), Armenian Airlines (2), Belavia (1), China Airlines (5), Kazakhstan Airlines (7), Krasnoyarsk Airlines (5), Moscow Airways (1), Siberia Airlines (6), St Petersburg Avia (9), Transaero Airlines (1), Ural Airlines (4), Uzbekistan Airways (10), Vnukovo Airlines (20).

DESIGN FEATURES: Conventional low/mid swept wing, two-deck fuselage, intended to be entered via lower-deck doors, into stowage compartments for coats and hand baggage, and up stairways to passenger deck (deletion of lower deck airstairs and internal stairways optional), additional centreline bogie between main landing gear units; dihedral from roots on wings and tailplane, wing sweepback 35° at quarter-chord, all tail surfaces swept.

FLYING CONTROLS: Hydraulic actuation, without manual reversion for primary surfaces, aileron and two-section double-slotted flaps occupy entire trailing-edge of each wing, multisection upper-surface spoilers and airbrakes forward of each flap section, full span leading-edge slats; variable incidence tailplane; rudder and elevators each two-section.

STRUCTURE: All-metal, inner wings three-spar, outer panels two-spar; shallow fence above wing in line with each engine pylon, circular-section semi-monocoque fuselage, floors of both decks of honeycomb and carbonfibre reinforced plastics.

LANDING GEAR: Retractable four unit type. Forward-retracting steerable twin-wheel nose unit; three four wheel bogie main units. Two of latter retract inward into wingroot fairings, third is mounted centrally under fuselage, slightly forward of the others, and retracts forward. Mainwheel tyres size 1,300 × 480 mm, nosewheel tyres size 1,120 × 450 mm.

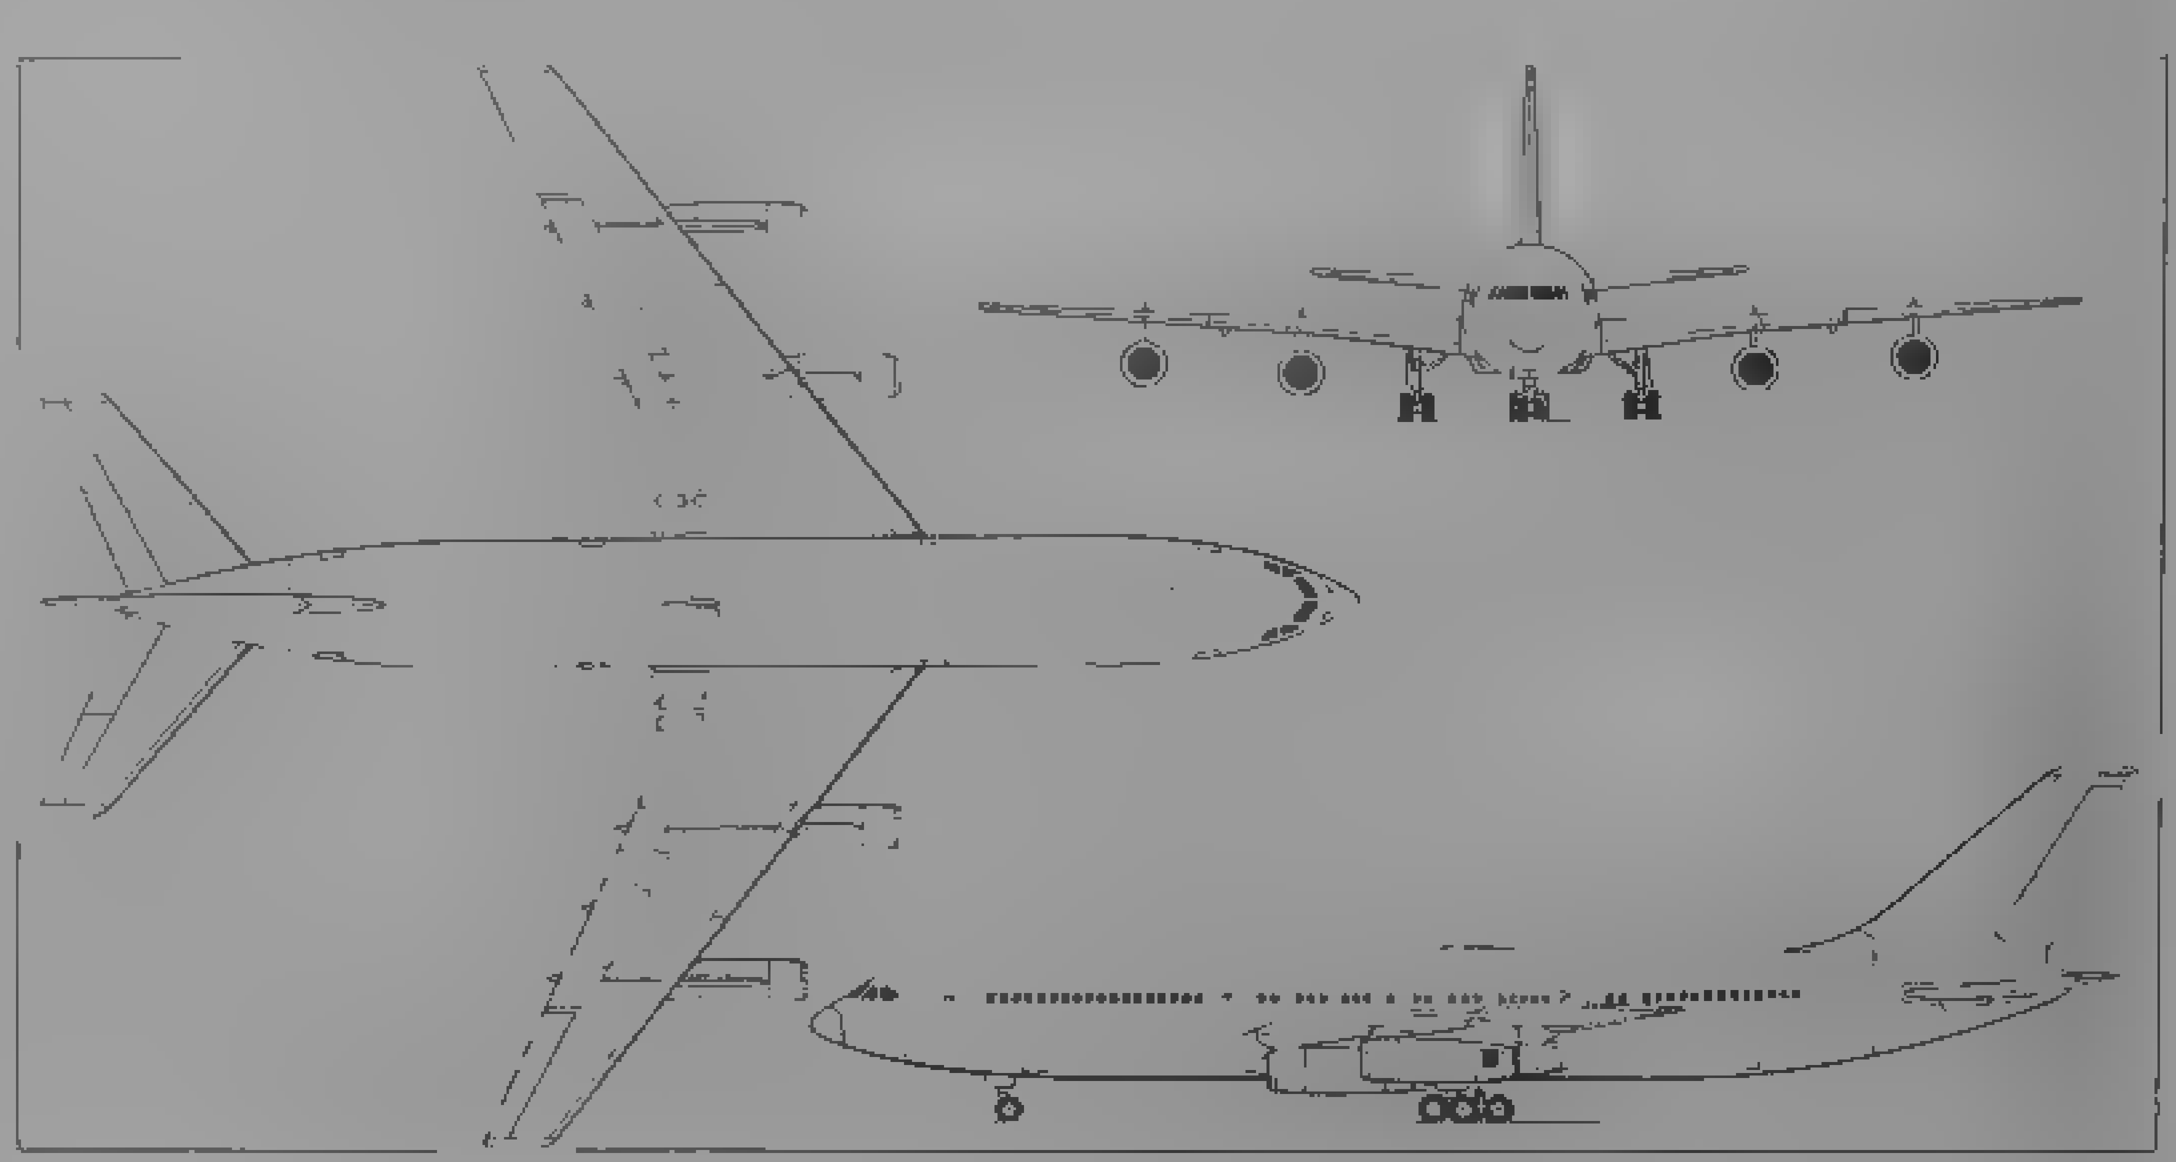
POWER PLANT: Four KKBM (Kuznetsov) NK 86 turbofans, each 127.5 kN (28,660 lb st), on pylons forward of wing leading-edges. Combined thrust reversers/noise attenuators. Integral fuel tanks in wings, capacity 114,000 litres (30,116 US gallons, 25,077 Imp gallons).

ACCOMMODATION: Two pilots and flight engineer, with provision for navigator. Flight engineer's seat normally faces to starboard, aft of co-pilot, but can pivot to central forward-facing position to enable engineer to operate throttles. Upper deck, on which all seats are located, divided into three separate cabins by wardrobes, a serving area connected by elevator to lower deck galley, and cabin staff accommodation, with eight toilets at front (two) and rear (six) of aircraft. Unusually large windows, indirect lighting in walls and in ceiling panels, and enclosed baggage lockers at top of sidewalls. Preponderance of metal and natural fibre materials rather than plastics throughout cabins to enhance safety in an emergency. Up to 350 passengers in basic nine-abreast seating throughout, with two aisles, each 55 cm (21.6 in) wide. Mixed class layout for 28 passengers six-abreast in front cabin, and 206 passengers eight-abreast in other two cabins. Three airstair doors (made in Kharkov) hinge down from port side of lower deck, one is forward of wing, others aft. Four further doors at upper deck level on each side, for emergency use (using dual inflatable escape slides) and for use at airports where utilisation of high-level boarding steps or bridges preferred. Coats and hand baggage stowed on lower deck before passengers climb one of three fixed stairways to main deck. (Optional deletion of lower deck airstair doors and stairways reduces operating weight empty by 3,000 kg; 6,610 lb and permits installation of 25 more seats on upper deck.) Cargo holds on lower deck accommodate heavy or registered baggage and freight in eight standard LD3 containers, or 16 LD3 containers if some carry-on baggage racks omitted. Access via upward-hinged doors forward of starboard wingroot leading-edge and at side of rear hold. Containers can be loaded and unloaded by self-propelled truck with built-in roller conveyor. Films can be shown in flight, and there is choice of 12 tape recorded audio programmes. A bar-buffet can be provided on lower deck in place of baggage and freight accommodation in forward vestibule.

SYSTEMS: Four self-contained hydraulic systems, each operated by one of engines, for actuation of flying control surfaces, tailplane variable incidence, spoilers, airbrakes, slats, flaps, landing gear, nosewheel steering, wheel brakes, anti-skid system, and upper level doors when passenger gangways used. All hot pipelines of air conditioning system, and all fuel supply lines, outside pressure cell. Primary 200/115 V 400 Hz AC electrical system powered by four 40 kVA engine-driven generators. Secondary 36 V three-phase AC and 27 V DC systems. Five accumulators and static transformer. Smoke detection sensors in baggage, freight and equipment stowage areas. Pulse generating de-icing system consuming 500 times less energy than conventional hot air or electrical system. APU in tailcone.

AVIONICS: *Flight*: Flight control and nav systems provide for automatic climb to selected height, control of rate of climb and automatic descent, and automatic landing in ICAO Cat. IIIa conditions. Preprogrammable Doppler nav system with readout display screen, on which microfilmed maps can be projected. Position of aircraft indicated by cursor, driven by computer. Nav system updated automatically by inputs from VOR or VOR/DME radio beacons. Collins TCAS II flight tested and available from early 1994.

DIMENSIONS, EXTERNAL:
Wing span 48.06 m (157 ft 8¼ in)
Length overall 59.54 m (195 ft 4 in)



Ilyushin Il-86 four-turbofan wide-bodied passenger transport *(Jane's/Dennis Punnett)*

1993

Ilyushin Il-86 wide-bodied transport (four KKBM NK-86 turbofans) *(Mark Wagner/Flight International)*

1995

Fuselage. Length 56.10 m (184 ft 0¼ in)
Max diameter 6.08 m (19 ft 11½ in)
Height overall 15.81 m (51 ft 10½ in)
Tailplane span 20.57 m (67 ft 6 in)
Wheel track (c/l of outer shock-struts)
11.15 m (36 ft 7 in)
Wheel base 21.34 m (70 ft 0 in)

DIMENSIONS, INTERNAL:
Main cabins. Height 2.61 m (8 ft 7 in)
Max width approx 5.70 m (18 ft 8½ in)

AREAS:
Wings, gross 320.0 m² (3,444 sq ft)

WEIGHTS AND LOADINGS:
Max payload 42,000 kg (92,600 lb)
Max fuel 88,350 kg (194,775 lb)
Max T-O weight (dependent on size and type of runway) 190,000-208,000 kg (418,875-458,560 lb)
Max landing weight 175,000 kg (385,800 lb)
Max wing loading 650.0 kg/m² (133.1 lb/sq ft)
Max power loading 407.9 kg/kN (4.0 lb/lb st)

PERFORMANCE (designed):
Normal cruising speed at 9,000-11,000 m (30,000-36,000 ft)
486-512 kts (900-950 km/h; 559-590 mph)
Approach speed
130-141 kts (240-260 km/h; 149-162 mph)
Field length for T-O and landing
2,300-2,600 m (7,550-8,530 ft)
* Range with 40,000 kg (88,185 lb) payload
1,944 n miles (3,600 km; 2,235 miles)
* with max fuel 2,480 n miles (4,600 km; 2,858 miles)

* *Reports suggest that these design ranges are not being achieved. The former East German airline Interflug quoted a max range of 1,350 n miles (2,500 km; 1,550 miles) in its sales literature*

UPDATED

ILYUSHIN Il-86 COMMAND POST

NATO reporting name: Maxdome

TYPE: Airborne command post version of Il-86 transport.

PROGRAMME: First observed at Zhukovsky Flight Research Centre 1992, four seen to be completed at that time (SSSR-86146 to 86149).

DESIGN FEATURES: Large boat-shaped fairing above fuselage forward of wings; large pod with ram air intake under each inner wing, long and shallow dished fairing forward of fin root, strake antenna under rear fuselage, small fin-like component on port side lower fuselage, carrying what appears to be drogue for VLF trailing wire aerial. SSSR 86146 and 86147 have large blade aerials above centre and rear fuselage and under forward fuselage.

UPDATED

ILYUSHIN (T-74) Il-96-300

TYPE: Four-turbofan wide-bodied passenger transport.

PROGRAMME: First of five T 74 (OKB designation) prototypes (SSSR-96000) flew at Khodinka 28 September 1988, second on 28 November 1989, further two airframes used for static and fatigue testing, all seven built at GAZ 30, Khodinka, areas of commonality with Il-86 permitted planned test programme to be reduced to 750 flights totalling 1,200 hours, route proving trials by SSSR-96005 conducted late 1991, production at GAZ 40, Voronezh, total nine (including prototypes) flying 1992; certification received 29 December 1992, two built 1993, four in 1994.

CUSTOMERS: Aeroflot Russian International Airlines had five by January 1995, operating Moscow-New York non-stop, it is expected to receive up to 10. Domodedovo Airlines has two.

DESIGN FEATURES: Superficial resemblance to Il-86, but new design, with different engines to overcome performance deficiencies of original Il-86; new structural materials and state-of-the-art technology intended to provide life of 60,000 hours and 12,000 landings; no lower-deck passenger entry, winglets standard, wing and tailplane dihedral from roots, supercritical wings, with 30° sweep at quarter-chord, sweepback at quarter-chord 37° 30′ on tailplane, 45° on fin. Current development aiming at range of 6,475 n miles (12,000 km; 7,450 miles) with 300 passengers.

FLYING CONTROLS: Triplex fly-by-wire, with manual reversion, each wing trailing-edge occupied by, from root, double slotted inboard flap, small inboard aileron, two-section single-slotted flaps, and outboard aileron used only as gust damper and to smooth out buffeting, seven-section full-span leading-edge slats on each wing, three airbrakes forward of each inboard trailing-edge flap, six spoilers forward of outer flaps, inboard pair supplement ailerons, others operate as airbrakes and supplementary ailerons; variable incidence tailplane; two-section rudder and elevators, without tabs.

STRUCTURE: Basically all-metal, including new high-purity aluminium alloy, with composites flaps, main-deck floors and underfloor holds of honeycomb and CFRP; inner wings three-spar, outer panels two-spar; each wing has seven machined skin panels, three top surface, four bottom, with integral stiffeners, circular-section semi-monocoque fuselage, leading- and trailing-edges of fin and tailplane of composites. Some components manufactured by PZL Mielec, Poland.

LANDING GEAR: Retractable four-unit type. Forward retracting steerable twin-wheel nose unit; three four-wheel bogie main units. Two of latter retract inward into wingroot/fuselage fairings, third is mounted centrally under fuselage, to rear of others, and retracts forward after the bogie has itself pivoted upward 20°. Oleo-pneumatic shock absorbers. Nosewheel tubeless tyres size 1,260 × 460 mm mainwheel tubeless tyres size 1,300 × 480 mm. Tyre pressure (all) 11.65 bars (169 lb/sq in).

POWER PLANT: Four Aviadvigatel PS-90A turbofans, each 156.9 kN (35,275 lb st), on pylons forward of wing leading-edges. Thrust reversal standard. Integral fuel tanks in wings and fuselage centre-section, total capacity 148,260 litres (39,166 US gallons; 32,613 Imp gallons).

ACCOMMODATION: Pilot, co-pilot and flight engineer; two seats for supplementary crew or observer. Ten or 12 cabin staff. Basic all-tourist configuration has two cabins for 66 and 234 passengers respectively, nine abreast at 87 cm (34.25 in) seat pitch, separated by buffet counter, video stowage and two lifts from galley on lower deck. Two aisles, each 55 cm (21.65 in) wide. Two toilets and wardrobe at front, six more toilets, a rack for cabin staff's belongings and seats for cabin staff at rear. Seats recline, and are provided with individual tables, ventilation, earphones and attendant call button. Indirect lighting is standard. 235-seat mixed class version has front cabin for 22 first class passengers, six-abreast in pairs, at 102 cm (40 in) seat pitch

Ilyushin Il-86 airborne command post (NATO 'Maxdome') *(Sebastian Zacharias)*

1995

and with aisles 75.5 cm (29.7 in) wide; [illegible] cabin with 40 business class seats [illegible] abreast at 90 cm (35.4 in) seat pitch and with aisles [illegible] 5 cm (22.25 in) wide; rear cabin for 173 tourist class passengers, basically nine-abreast at 87 cm (34.25 in) seat pitch, with aisle width of 55 cm (21.65 in). Unlike Il-86, passenger cabin is entered through three doors on port side of upper deck, at front and rear and forward of the wings. Opposite each door, on starboard side, is emergency exit door. Lower deck houses front cargo compartment for six ABK-1.5 (LD3) containers or igloo pallets, central compartment aft of wing for 10 ABK-1.5 containers or pallets, and tapering compartment for general cargo at rear. Three doors on starboard side provide separate access to each compartment. Galley and lifts are between front cargo compartment and wing, with separate door aft of front cargo compartment door.

SYSTEMS: Four independent hydraulic systems, using fireproof and explosion-proof fluid, at pressure of 207 bars (3,000 lb/sq in). APU in tailcone.

AVIONICS: *Flight*: Triplex flight control and flight management systems, together with a head-up display, permit fully automatic en route control and operations in ICAO Cat IIIa minima. Duplex engine and systems monitoring and failure warning systems feed in-flight information to both the flight engineer's station and monitors on the ground. Autothrottle is based on IAS, without angle of attack protection.

Instrumentation: On the flight deck conventional standby instruments are retained, but primary flight information is presented on dual twin-screen colour CRTs, fed by triplex INS, a satellite-based and Omega navigation system and other sensors. Another electronic system provides real-time automatic weight and CG situation data.

1993

DIMENSIONS, EXTERNAL:

Wing span: excl winglets	57.66 m (189 ft 2 in)
over winglets	60.11 m (197 ft 2½ in)
Wing aspect ratio	9.5
Length overall	55.35 m (181 ft 7¼ in)
Fuselage: Length	51.15 m (167 ft 9¾ in)
Max diameter	6.08 m (19 ft 11 in)
Height overall	17.57 m (57 ft 7¾ in)
Tailplane span	20.57 m (67 ft 6 in)
Wheel track	10.40 m (34 ft 1½ in)
Wheelbase	20.07 m (65 ft 10 in)
Passenger doors (three): Height	1.83 m (6 ft 0 in)
Width	1.07 m (3 ft 6 in)
Height to sill: Nos. 1 and 2	4.54 m (14 ft 10¾ in)
No. 3	4.80 m (15 ft 9 in)
Emergency exit doors (three):	
Height	1.825 m (5 ft 11¾ in)
Width	1.07 m (3 ft 6 in)
Cargo compartment doors (front and centre):	
Height	1.825 m (5 ft 11¾ in)
Width	1.78 m (5 ft 10 in)
Height to sill: front	2.34 m (7 ft 8¼ in)
centre	2.48 m (8 ft 1¾ in)
Cargo compartment door (rear):	
Height	1.38 m (4 ft 6¼ in)
Width	0.972 m (3 ft 2¼ in)
Height to sill	2.74 m (9 ft 0 in)
Galley door: Height	1.20 m (3 ft 11¼ in)
Width	0.80 m (2 ft 7½ in)

DIMENSIONS, INTERNAL:

Cabins, excl flight deck: Height	2.60 m (8 ft 6¼ in)
Max width	approx 5.70 m (18 ft 8½ in)
Volume	350 m³ (12,360 cu ft)
Cargo hold volume: front	37.10 m³ (1,310 cu ft)
centre	63.80 m³ (2,253 cu ft)
rear	15.00 m³ (530 cu ft)

AREAS:

Wings, gross	391.6 m² (4,215 sq ft)
Vertical tail surfaces (total)	61.0 m² (656.6 sq ft)
Horizontal tail surfaces (total)	96.5 m² (1,038.75 sq ft)

WEIGHTS AND LOADINGS:

Basic operating weight	117,000 kg (257,940 lb)
Max payload	40,000 kg (88,185 lb)
Max fuel	114,902 kg (253,311 lb)
Max T-O weight	216,000 kg (476,200 lb)
Max landing weight	175,000 kg (385,810 lb)
Max zero-fuel weight	157,000 kg (346,120 lb)
Max wing loading	551.6 kg/m² (113.0 lb/sq ft)
Max power loading	344.2 kg/kN (3.37 lb/lb st)

PERFORMANCE (estimated):

Normal cruising speed at 10,100-12,100 m (33,135-39,700 ft)
459-486 kts (850-900 km/h; 528-559 mph)

Approach speed	140 kts (260 km/h; 162 mph)
Balanced T-O runway length	2,600 m (8,530 ft)
Balanced landing runway length	1,980 m (6,500 ft)

Range, with UASA reserves: with max payload
4,050 n miles (7,500 km; 4,660 miles)
with 30,000 kg (66,140 lb) payload
4,860 n miles (9,000 km; 5,590 miles)
with 15,000 kg (33,070 lb) payload
5,940 n miles (11,000 km; 6,835 miles)

OPERATIONAL NOISE LEVELS: Il-96-300 is designed to conform with ICAO Chapter 3 Annex 16 noise requirements.

UPDATED

ILYUSHIN Il-96M and Il-96T

TYPE: Four-turbofan wide-bodied passenger or freight transport.

Prototype of increased-capacity Ilyushin Il-96M four-turbofan wide-bodied transport *(Paul Jackson)*
1995

PROGRAMME: Projected initially as Il-96-350, designation changed to Il-96M in 1990, when model exhibited at Moscow Aerospace '90; then at initial design stage, Pratt & Whitney supplying 10 PW2337 engines for two certification aircraft; conversion of Il-96-300 prototype (RA-96000) to **Il-96MO** prototype began early 1992, rolled out at Moscow City Airport 30 March 1993, first flight 6 April 1993; planned certification to FAR 25 and ICAO Annex 16 noise levels in 1995, deliveries to begin 1996. Production by GAZ 40, Voronezh.

CURRENT VERSIONS: **Il-96M**: Basic production version, as described and illustrated, scheduled to fly 1995, certification 1997.

Il-96MK: Projected development with ducted engines rated at 175 to 195 kN (38,000 to 43,000 lb st), with 17:1 or 18:1 bypass ratio.

Il-96T: Freighter; cargo door 3.60 m × 2.60 m (11 ft 9¾ in × 8 ft 6½ in) forward of wing on port side, to carry standard international containers and pallets, maximum payload 92,000 kg (202,820 lb). First flight scheduled late 1995, certification 1996.

CUSTOMERS: Aeroflot Russian International Airlines (10 Il-96T, 10 Il-96M), Uzbekistan Airways and Far East Aviation, orders and options totalled 42 in early 1995.

COSTS: Basic price $68 million.

DESIGN FEATURES: Basically as Il-96-300, lengthened fuselage of unchanged cross-section, permitting smaller tailfin, wings identical.

POWER PLANT: Four Pratt & Whitney PW2337 turbofans, each 164.6 kN (37,000 lb st), nacelles supplied by Rohr Industries, USA.

ACCOMMODATION: Two flight crew, three passenger arrangements proposed: (1) 18 first class passengers at 152.4 cm (60 in) seat pitch, with 0.77 m (2 ft 6¼ in) aisle, 44 business class at 91.5 cm (36 in) pitch, with 0.625 m (2 ft 0½ in) aisle, 250 tourist class at 86.4 cm (34 in) pitch, with 0.55 m (1 ft 9½ in) aisle; (2) 85 business class and 250 tourist class; (3) three tourist class cabins for 124, 162 and 89 passengers. Eight emergency exits. Underfloor hold for 32 standard LD3 containers.

AVIONICS: Rockwell Collins digital avionics. Designed for Cat. IIIb fully automatic landings.

Comms: Collins Srs 700 com/nav radios, Ball Airlink conformal antennae; SAT-900 satellite com.

Flight: Triple-redundant Smiths Industries flight management system to ARINC 700 specifications, three inertial platforms with laser gyros, GPWS, windshear detection radar, Litton LTN-2001 GPS and Glonass satellite nav receivers, Litton Flagship LTN-101 inertial reference centre.

Instrumentation: Six-CRT EFIS, EICAS.

DIMENSIONS, EXTERNAL:

Wing span: excl winglets	57.66 m (189 ft 2 in)
over winglets	60.11 m (197 ft 2½ in)
Length overall	63.94 m (209 ft 9 in)
Fuselage: Length	60.50 m (198 ft 6 in)
Max diameter	6.08 m (19 ft 11½ in)
Height overall	15.72 m (51 ft 7 in)
Wheel track	10.40 m (34 ft 1½ in)

DIMENSIONS, INTERNAL:

Cabin: Length	49.13 m (161 ft 2¼ in)

WEIGHTS AND LOADINGS:

Operating weight empty	132,400 kg (291,887 lb)
Max payload	58,000 kg (127,866 lb)
Max T-O weight	270,000 kg (595,238 lb)
Max power loading	410.0 kg/kN (4.02 lb/lb st)

PERFORMANCE (estimated):

Max Mach No (MMO)	0.86
Normal cruising speed at 9,000-12,000 m (29,500-39,370 ft)	459-469 kts (850-870 km/h, 528-540 mph)
Balanced T-O runway length	3,350 m (11,000 ft)
Balanced landing runway length	2,250 m (7,385 ft)
Range (30,000 kg, 66,138 lb payload, international rules)	6,195 n miles (11,482 km, 7,136 miles)

UPDATED

ILYUSHIN Il-103

TYPE: Two/five-seat light aircraft for primary training, including basic aerobatics, and general aviation.

PROGRAMME: Exhibited in model form at Moscow Aerospace '90; programme go-ahead 1990; first flight (RA-10300) 17 May 1994, second prototype (RA-10303) flew 30 January 1995, third prototype has alternative 194 kW (260 hp) Textron Lycoming engine, production under way 1994 at Lukhovitsy plant, Moscow region; two preseries aircraft scheduled to fly late 1995, intended for ARMAK SNG (CIS) and FAR Pt 23 certification.

CURRENT VERSIONS: **Il-103**: Basic passenger/light freight transport.

Il-103 SPO: Equipped for private pilot and aerobatic training. Second prototype is to this standard.

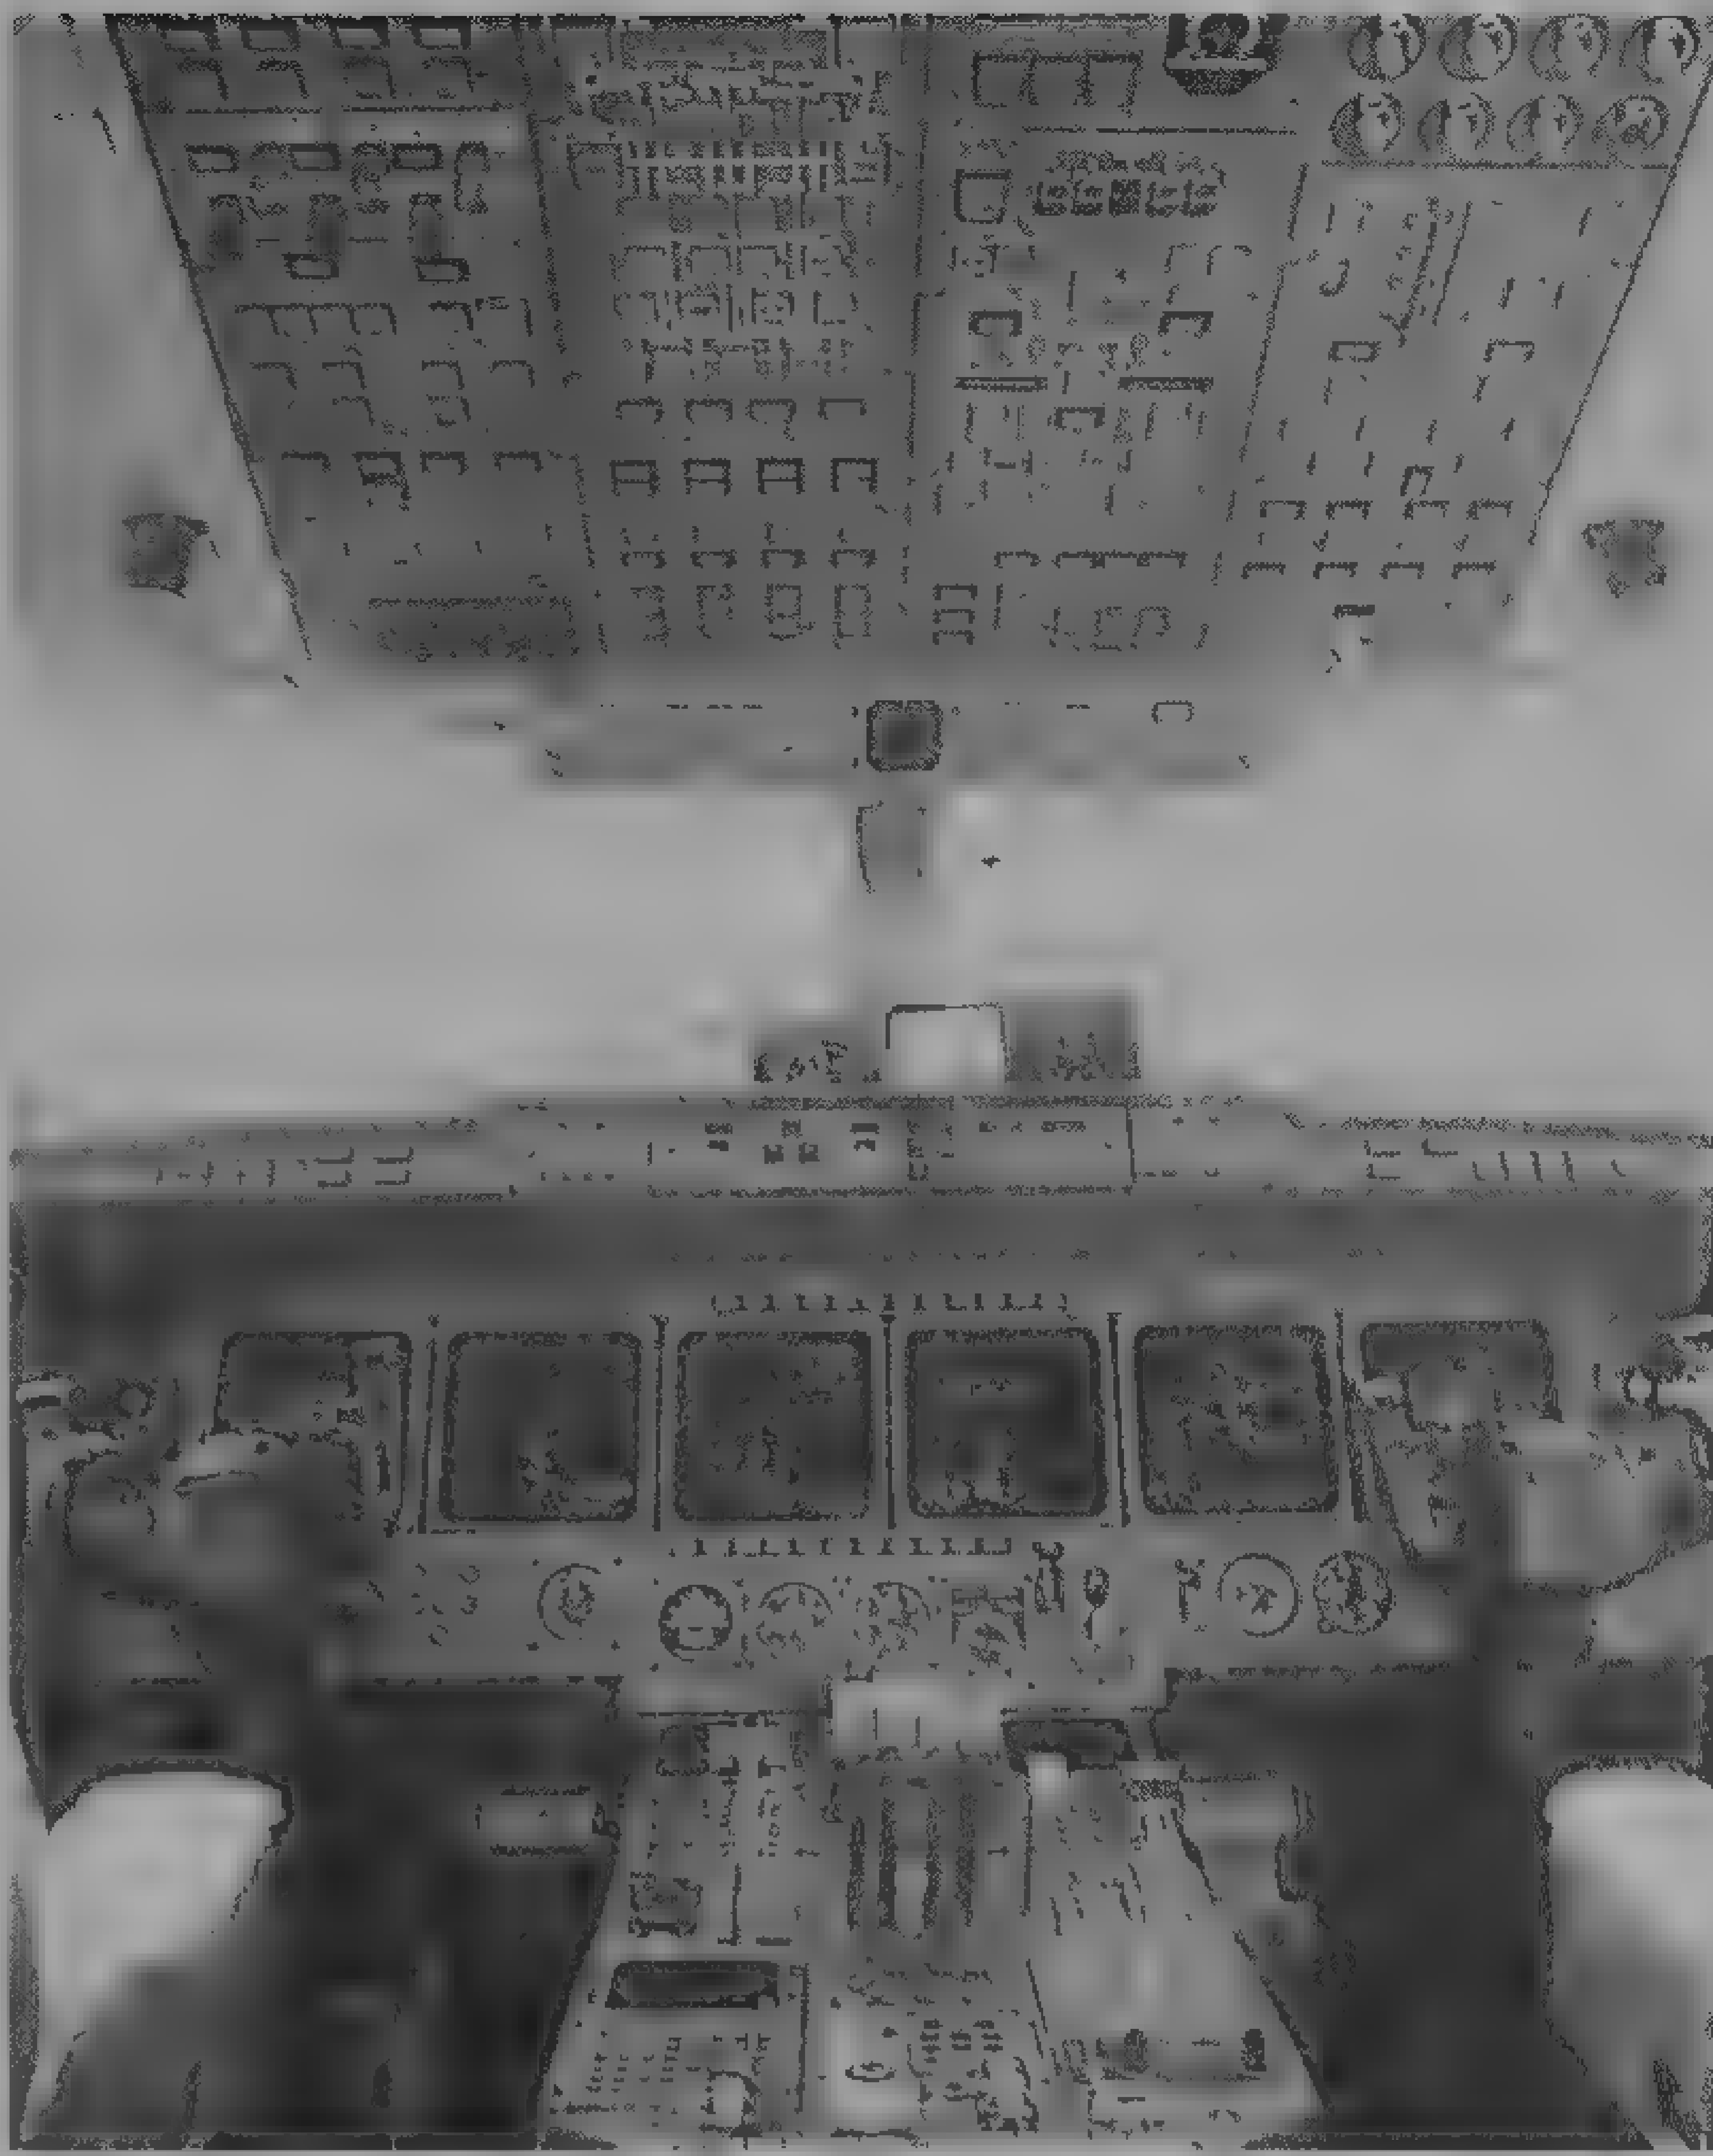
CUSTOMERS: Letters of intent for first 20 aircraft received Summer 1994.

DESIGN FEATURES: Conventional low-wing monoplane, with non-retractable landing gear, originally to meet DOSAAF requirement for 500 military/civil pilot trainers, wing sweep 0° at quarter-chord, slight dihedral from roots, twist 0°, thickness/chord ratio 16 per cent at root, 15 per cent at tip; swept vertical tail surfaces. Designed for daytime VFR flying, in non-icing conditions and ambient air temperature of −35 to +45°C.

FLYING CONTROLS: Mechanically actuated via rigid pushrods except cable-actuated rudder, conventional ailerons, horn balanced elevators and rudder, single-slotted trailing-edge flaps, electrically actuated elevator trim tab.

STRUCTURE: All-metal, basically aluminium alloy except for titanium firewall frame and wingroot attachments, and bonded GFRP wingtips, elevator and rudder tips and elevator tab. Single-spar wings, with detachable leading edge, mounted at sides of fuselage. Semi-monocoque fuselage with inbuilt wing carry-through structure. Detachable fin and tailplane.

LANDING GEAR: Non-retractable tricycle type, with single wheel on each unit, cantilever spring nose and mainwheel legs, castoring nosewheel with shimmy damper, mainwheel tyres size 400 × 150-115 mm, nosewheel tyre size 310 × 135-99 mm. Multidisc hydraulic brakes on mainwheels.



Flight deck of prototype Ilyushin Il-96M (*Mark Wagner/Flight International*) 1995

1995

Model of Ilyushin Il-106 four-turbofan heavy-lift transport *(Piotr Butowski)*

1994

POWER PLANT: One 157 kW (210 hp) Teledyne Continental IO-360-ES2B flat-six engine; Hartzell BHC-C2YF-1BF/F8459A-8R metal two-blade variable-pitch propeller. Fuel and oil systems suitable for inverted flight; two main fuel tanks in wingroots, total capacity 100 litres (26.4 US gallons, 22 Imp gallons); supply tank, capacity 3 litres (0.8 US gallons; 0.66 Imp gallons), in fuselage forward of wing front spar carry-through

ACCOMMODATION: Two forward-folding seats side by side at front of cabin; bench seat for two or three at rear; space for 220 kg (485 lb) freight with rear bench seat removed, two gull wing window/doors, hinged on centreline, at front of canopy. Unrestricted access to baggage hold

SYSTEMS: Cabin ventilated and heated and windscreen demisted electrically by fan heater. Electrical system 27 V DC, with 1,800 W generator and 25 Ah battery

AVIONICS: *Comms*: BRIZ VHF radio. Bendix/King integrated avionics under development for western market

Flight: BUR-4 flight data recorder

DIMENSIONS, EXTERNAL:

Wing span	10.56 m (34 ft 7¾ in)
Wing aspect ratio	7.58
Wing chord: at root	1.83 m (5 ft 11⅞ in)
at tip	0.96 m (3 ft 1¾ in)
Length overall	8.00 m (26 ft 3 in)
Height overall	3.14 m (10 ft 3½ in)
Tailplane span	3.90 m (12 ft 9½ in)
Wheel track	2.40 m (7 ft 10½ in)
Wheelbase	2.05 m (6 ft 8½ in)
Propeller diameter	1.93 m (6 ft 4 in)
Baggage door: Width	0.70 m (2 ft 3½ in)
Height	0.34 m (1 ft 1¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length	2.65 m (8 ft 8¼ in)
Max height	1.27 m (4 ft 2 in)
Max width	1.30 m (4 ft 3 in)

AREAS:

Wings, gross	14.71 m² (158.4 sq ft)
Ailerons (total)	1.137 m² (12.24 sq ft)
Flaps (total)	2.423 m² (26.08 sq ft)
Fin	0.84 m² (9.04 sq ft)
Rudder	0.56 m² (6.03 sq ft)
Tailplane	1.89 m² (20.30 sq ft)
Elevators (total)	1.16 m² (12.44 sq ft)

WEIGHTS AND LOADINGS (A: training, B: utility):

Weight empty: A	720 kg (1,587 lb)
B	765 kg (1,686 lb)
Payload: A	180 kg (397 lb)
B	395 kg (870 lb)

Max power loading: A	6.15 kg/kW (10.13 lb/hp)
B	8.34 kg/kW (13.75 lb/hp)

PERFORMANCE (estimated):

Max level speed at 3,000 m (9,840 ft)	
A	143 kts (265 km/h; 165 mph)
B	135 kts (250 km/h, 155 mph)
Cruising speed at 3,000 m (9,840 ft)	
A	127 kts (235 km/h, 146 mph)
B	121 kts (225 km/h, 140 mph)
Stalling speed: flaps up: A	53 kts (98 km/h, 6[illegible] mph)
B	60 kts (110 km/h, 69 mph)
flaps down: A	46 kts (85 km/h, 53 mph)
B	52 kts (95 km/h, 59 mph)
Max rate of climb at S/L: A	480 m (1,575 ft)/min
B	330 m (1,080 ft)/min
Radius of turn at 130 kts (240 km/h, 149 mph)	
A	85 m (280 ft)
Time of full turn at 130 kts (240 km/h, 149 mph)	
A	8 s
Rate of roll: A	84°/s
T-O run: B	340 m (1,115 ft)
T-O to 15 m (50 ft): B	520 m (1,706 ft)
Landing from 15 m (50 ft): B	480 m (1,575 ft)
Landing run: B	250 m (820 ft)
Max range with three passengers, with reserve	
B	577 n miles (1,070 km, 665 miles)
Max endurance: A	2 h
g limits: A	+6/−3
B	+4.4/−2.2

OPERATIONAL NOISE LEVELS: Designed to conform with GOST 23023-85 and ICAO Annex 16

UPDATED

ILYUSHIN Il-106

TYPE: Four-turbofan heavy-lift military transport

PROGRAMME: Announced late 1992, prototype planned to fly 1995

DESIGN FEATURES: High-mounted sweptback wings, with winglets, wide-body fuselage, with landing gear housed in pods on sides of lower fuselage, outside pressure cell; windows on each side of nose, below windscreen, as on Il-76, all-swept tail surfaces, with horizontal surfaces mounted on tailcone

POWER PLANT: Four Samara/Kuznetsov NK-92 turbofans, each 176.5 kN (39,680 lb st), in underwing pods

DIMENSIONS, EXTERNAL:	
Wing span	58.5 m (191 ft 11¼ in)
Length overall	57.6 m (188 ft 11¾ in)
Height overall	19.9 m (65 ft 3½ in)
DIMENSIONS, INTERNAL:	
Cabin: Length	34.0 m (111 ft 6½ in)
Width	6.0 m (19 ft 8¼ in)
Height	4.6 m (15 ft 1¼ in)
WEIGHTS AND LOADINGS:	
Nominal payload	80,000 kg (176,366 lb)
PERFORMANCE (estimated):	
Nominal cruising speed	442-458 kts (820-850 km/h; 509-528 mph)
Service ceiling	14,000 m (45,930 ft)

VERIFIED

ILYUSHIN Il-112

TYPE: Twin-turboprop short-range passenger transport

PROGRAMME: At initial design stage 1994, with Russian government considering funding, as alternative to Ukrainian Antonov An-38

DESIGN FEATURES: Conventional high-wing monoplane with T tail; no wing or tailplane sweep; sweptback fin and rudder, pressurised fuselage. Freight version with rear ramp and larger side doors being studied.

FLYING CONTROLS: Conventional ailerons, elevators and rudder; long-span trailing-edge flaps, two upper surface spoilers forward of flaps on each wing

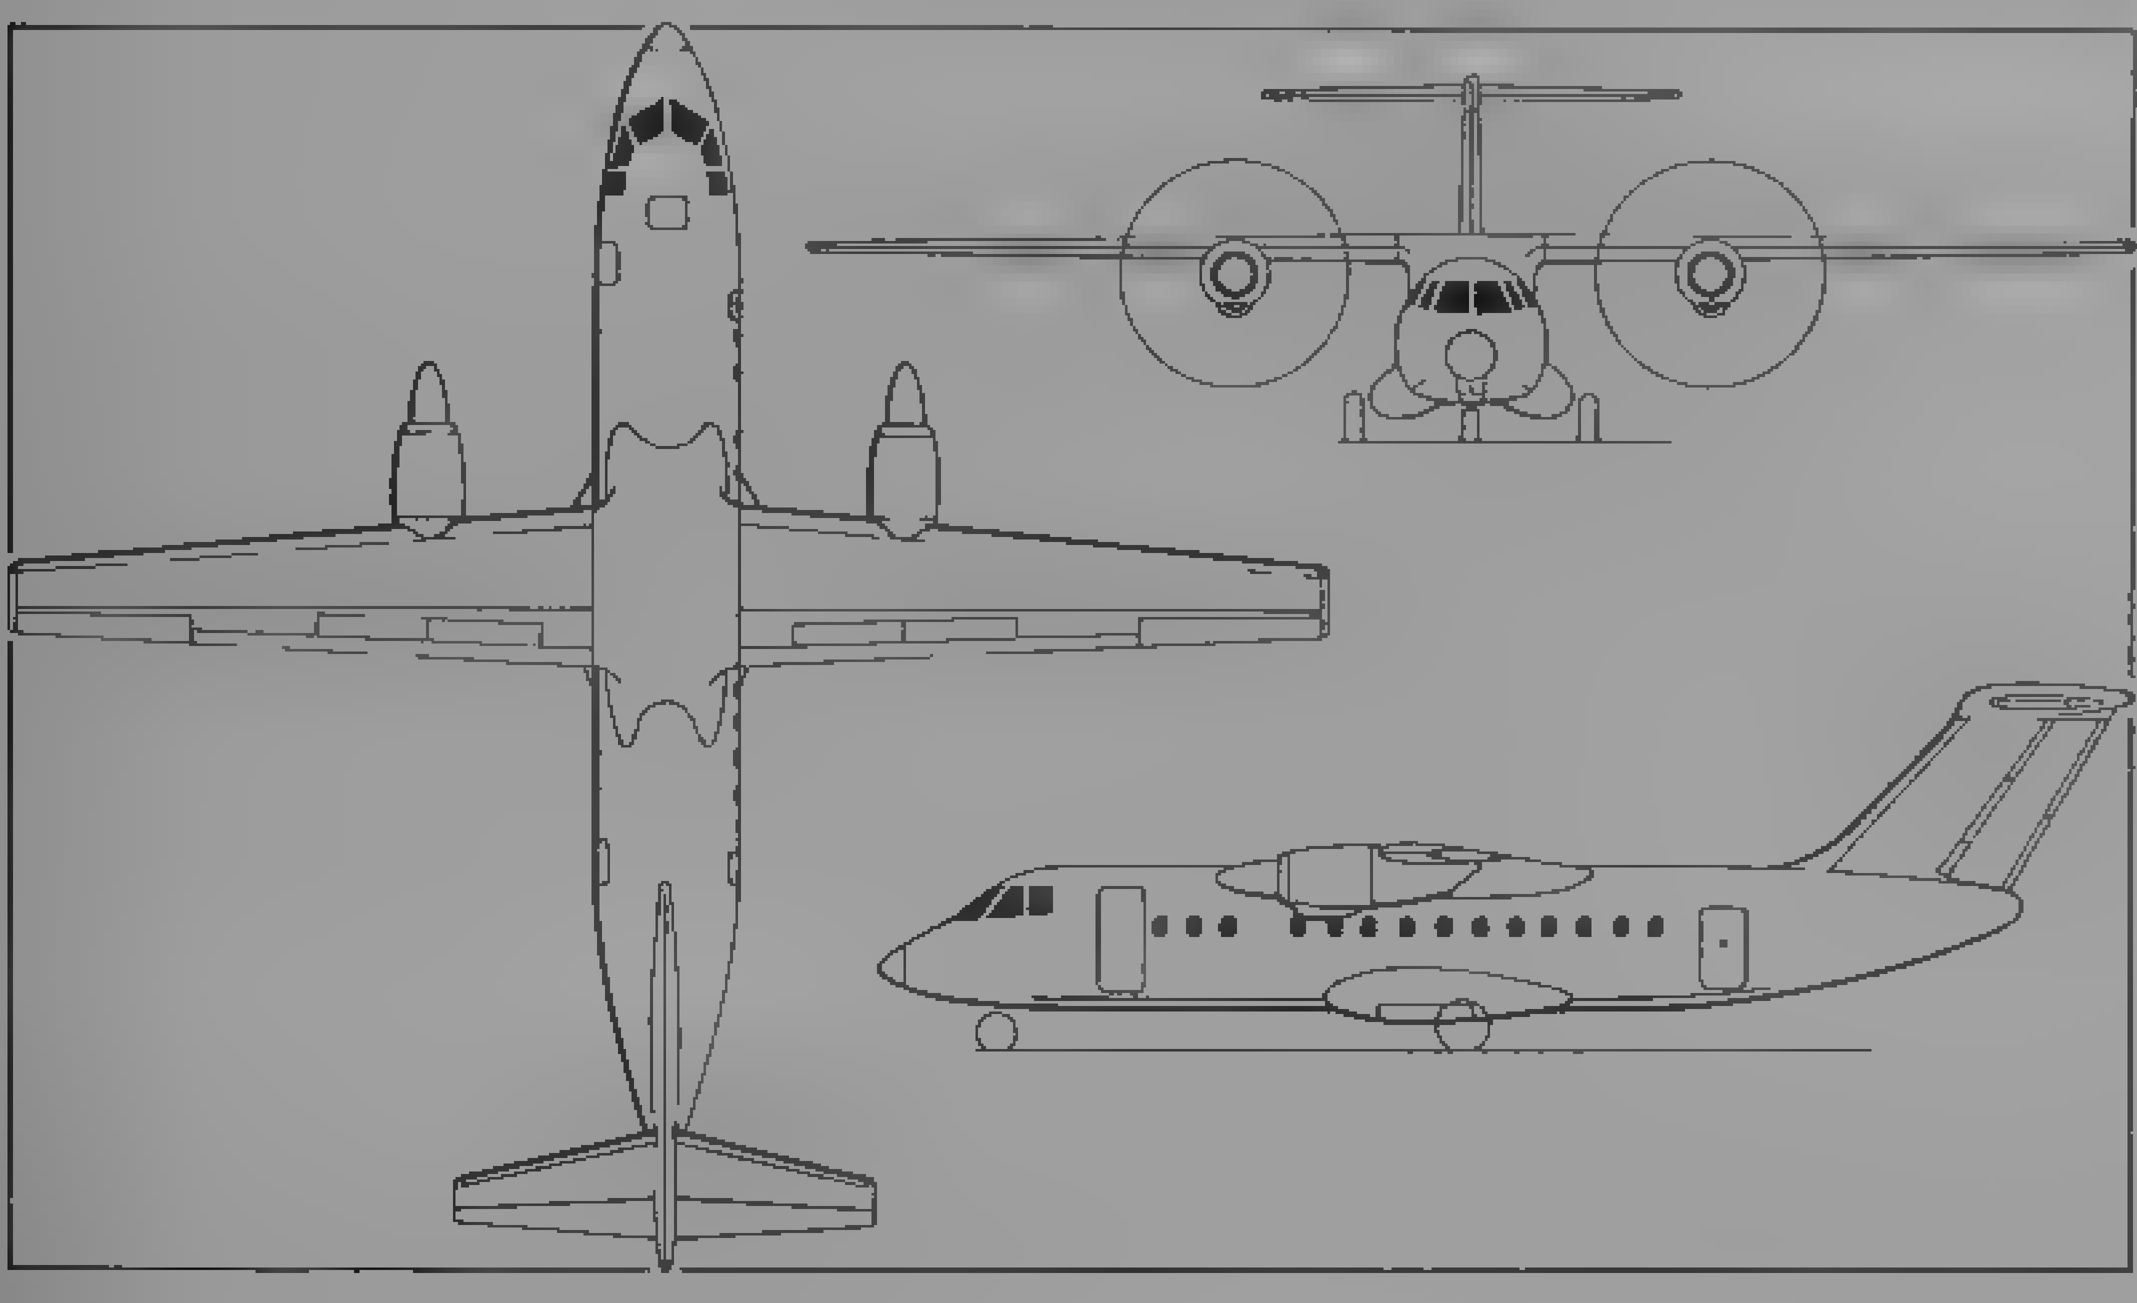
LANDING GEAR: Retractable tricycle type, with single wheel on each unit; mainwheels retract into large fairings outside fuselage pressure cell

POWER PLANT: Two 1,839 kW (2,466 shp) Klimov TV7-117 turboprops

ACCOMMODATION: Flight crew of two, up to 32 passengers, three-abreast (two seats at rear), with single aisle, toilet at front, baggage compartment to rear of cabin, with inside access; airstair doors at front and rear of cabin on port side, with service doors opposite

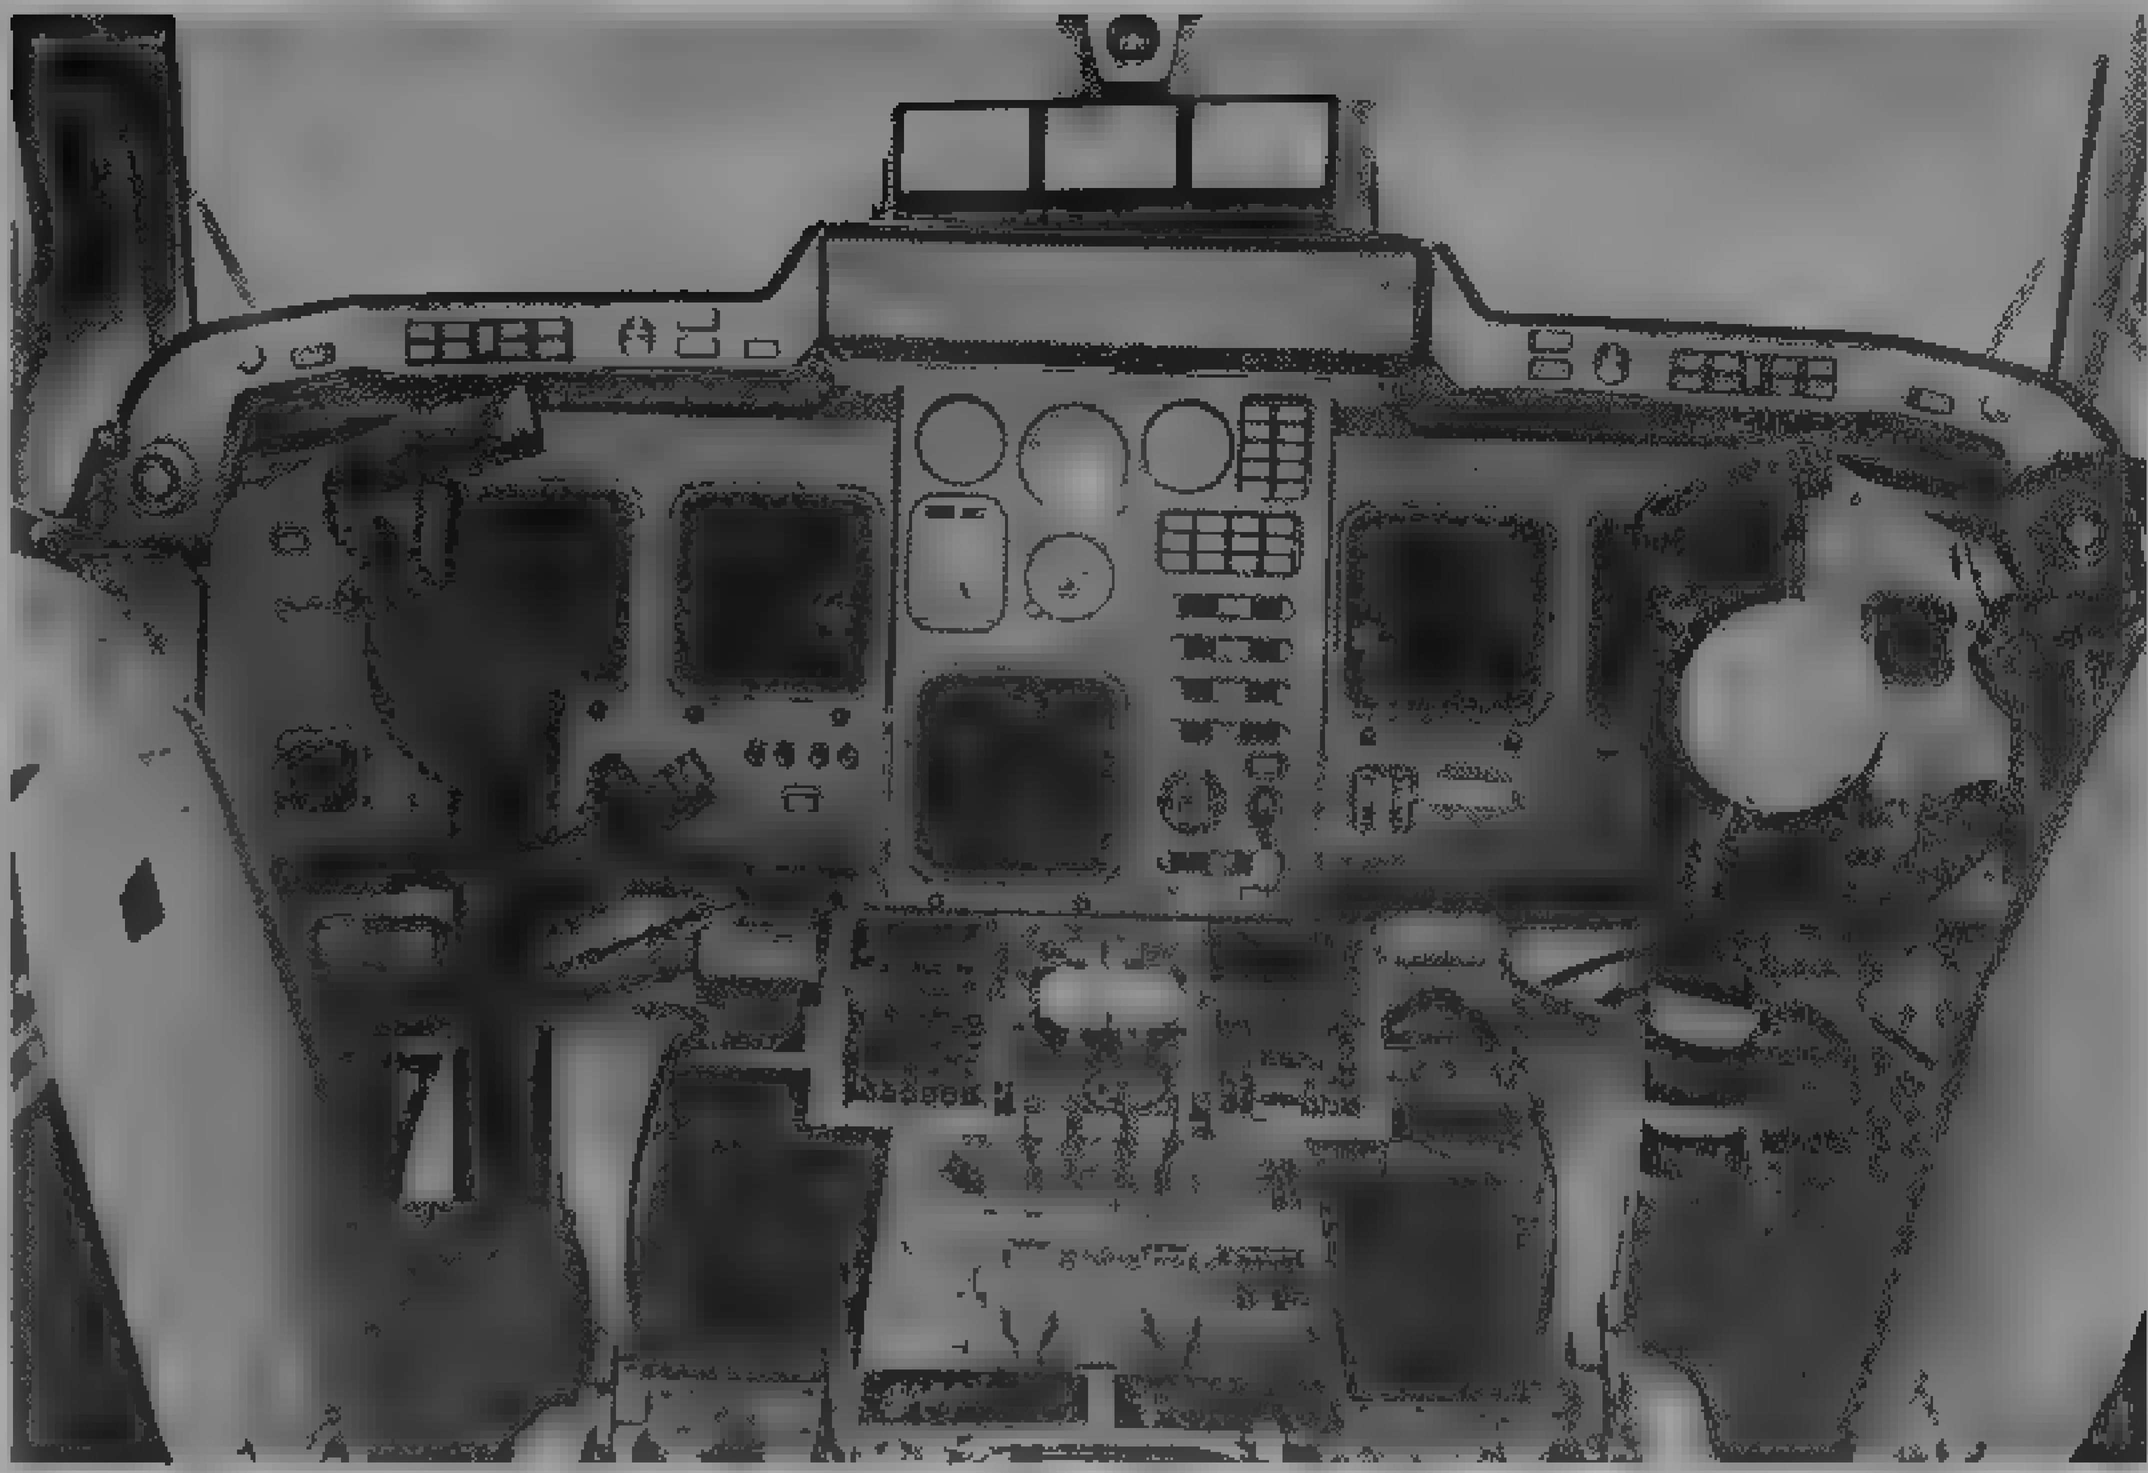
DIMENSIONS, EXTERNAL:	
Wing span	21.00 m (68 ft 10¾ in)
Length overall	20.00 m (65 ft 7½ in)
Length of fuselage	18.20 m (59 ft 8½ in)
Height overall	8.50 m (27 ft 10½ in)
Tailplane span	6.66 m (21 ft 10½ in)
Wheel track	3.60 m (11 ft 9¾ in)
WEIGHTS AND LOADINGS (A, B, C, D as below):	
Weight empty: A, B	7,600 kg (16,755 lb)
C, D	8,200 kg (18,078 lb)
Max payload: A, B	3,000 kg (6,614 lb)
C, D	3,500 kg (7,716 lb)
Max T-O weight:	
A, 32 passengers	12,360 kg (27,250 lb)
B, 11 passengers	11,590 kg (25,550 lb)
C, 21 passengers	11,300 kg (24,910 lb)
D, 32 passengers	13,000 kg (28,660 lb)
PERFORMANCE (estimated):	
Max cruising speed: A, B	323 kts (600 km/h; 372 mph)
Econ cruising speed:	
A, B, C, D	270 kts (500 km/h; 310 mph)
Nominal cruising height:	
A, B	7,000-8,000 m (22,965-26,250 ft)
C, D	8,000 m (26,250 ft)
T-O run: A	380 m (1,250 ft)
B	320 m (1,050 ft)
C	300 m (985 ft)
D	410 m (1,345 ft)
T-O balanced field length: A	740 m (2,430 ft)
B	650 m (2,135 ft)
C	600 m (1,970 ft)
D	800 m (2,625 ft)
Landing run: A, D	350 m (1,150 ft)
B	330 m (1,085 ft)
C	300 m (985 ft)
Landing balanced field length: A, D	950 m (3,120 ft)
B	910 m (2,985 ft)
C	800 m (2,625 ft)
Range at max cruising speed, with reserves:	
A	809 n miles (1,500 km; 932 miles)
B	1,565 n miles (2,900 km; 1,802 miles)
Range at econ cruising speed, with reserves:	
A, D	1,025 n miles (1,900 km; 1,180 miles)
B	1,940 n miles (3,600 km; 2,235 miles)
C	540 n miles (1,000 km; 620 miles)

VERIFIED



Ilyushin Il-112 twin-turboprop short-range passenger transport (*Jane's/Mike Keep*)

1994



Flight deck of Il-114 airliner (*Piotr Butowski*)

1995

ILYUSHIN Il-114

TYPE: Twin-turboprop short-range passenger and freight transport

PROGRAMME: Design finalised 1986, as replacement for aircraft in An-24 class; prototype (SSSR-54000) first flew at Zhukovsky flight test centre 29 March 1990; two more flying prototypes, two for static tests; in production at Tashkent; first production aircraft flew 7 August 1992; certification and delivery 1993. Eight flying, mid-1995

CURRENT VERSIONS: **Il-114**: *As described in detail.*

Il-114M: With TV7M-117 turboprops, increased maximum T-O weight and payload of 7,000 kg (15,430 lb).

CUSTOMERS: Aeroflot and its successors (original stated requirement 350), Arkhangelsk Airlines (2)

DESIGN FEATURES: Conventional low-wing monoplane; only fin and rudder swept; slight dihedral on wing centre-section, much increased on outer panels; operation from unpaved runways practical

FLYING CONTROLS: Manual actuation; each wing trailing-edge occupied entirely by aileron, with servo and trim tabs, and hydraulically actuated double-slotted trailing-edge flaps, inboard and outboard of engine nacelle; two airbrakes (inboard) and spoiler (outboard) forward of flaps; spoilers supplement ailerons differentially in event of engine failure during take-off; trim and servo tabs in rudder, trim tab in each elevator

STRUCTURE: Approximatley 10 per cent of airframe by weight made of composites; two-spar wings, removable leading-edge on outer panels; circular-section aluminium alloy semi-monocoque fuselage built as five subassemblies; metal tail unit (CFRP tailplane and fin boxes planned for later aircraft)

LANDING GEAR: Retractable tricycle type, with twin wheels on each unit. All retract forward hydraulically; emergency extension by gravity. Oleo-pneumatic shock-absorbers. Tyres size 620 × 80 mm on nosewheels, 880 × 305 mm on mainwheels. Nosewheels steerable ±55°. Disc brakes on mainwheels. All wheel doors remain closed except during retraction or extension of landing gear

POWER PLANT: Two 1,839 kW (2,466 shp) Klimov TV7-117 turboprops, each driving a low-noise six-blade SV-34 CFRP propeller. Integral fuel tanks in wings, capacity 8,360 litres (2,208 US gallons; 1,839 Imp gallons). APU in tailcone

ACCOMMODATION: Flight crew of two, plus stewardess. Emergency exit window each side of flight deck. Four-abreast seats for 64 passengers in main cabin, at 75 cm (29.5 in) seat pitch, with central aisle 45 cm (17.72 in) wide. Provision for rearrangement of interior for increased seating, removal of seats for cargo-carrying, and lengthening of fuselage for 70 to 75 passengers. Airstair door at front of cabin, further door at rear, both on port side, opening outward. Galley, cloakroom and toilet at rear, emergency escape slide by service door on starboard side. Type III emergency exit over each wing. Service doors at front and rear of cabin on starboard side. Baggage compartments forward of cabin on starboard side and to rear of cabin, plus overhead baggage racks. Optional carry-on baggage shelves in lobby by main door at front

SYSTEMS: Dual redundant pressurisation and air conditioning system using bleed air from both engines. Two independent hydraulic systems, pressure 207 bars (3,000 lb/sq in), for landing gear actuation, wheel brakes, nosewheel steering and flaps. Three-phase 115/220 V 400 Hz AC electrical system powered by 40 kW alternator on each engine. Secondary 24 V DC system. Wing and tail unit leading-edges de-iced electrically. Electrothermal anti-icing system for propeller blades and windscreen. Engine air intakes de-iced by hot air

AVIONICS: Digital avionics for automatic or manual control by day or night, including automatic approach and landing in limiting weather conditions (ICAO Cat I and II).

Instrumentation: Two colour CRTs for each pilot for flight and navigation information. Centrally mounted CRT for engine and systems data

DIMENSIONS, EXTERNAL:	
Wing span	30.00 m (98 ft 5¼ in)
Length overall	26.88 m (88 ft 2 in)
Diameter of fuselage	2.86 m (9 ft 4⅝ in)
Height overall	9.32 m (30 ft 7 in)
Tailplane span	11.10 m (36 ft 5 in)
Wheel track	8.40 m (27 ft 6¾ in)
Wheelbase	9.13 m (29 ft 11½ in)
Propeller diameter	3.60 m (11 ft 9¾ in)
Propeller ground clearance	0.50 m (1 ft 7¾ in)
Propeller fuselage clearance	0.97 m (3 ft 2¼ in)
Passenger doors (each): Height	1.70 m (5 ft 7 in)
Width	0.90 m (2 ft 11½ in)

1994

Service door (front): Height	1.30 m (4 ft 3¼ in)
Width	0.96 m (3 ft 1¾ in)
Service door (rear): Height	1.38 m (4 ft 6¼ in)
Width	0.61 m (2 ft 0 in)
Emergency exit (each): Height	0.91 m (3 ft 0 in)
Width	0.51 m (1 ft 8 in)
DIMENSIONS, INTERNAL:	
Length between pressure bulkheads	22.24 m (72 ft 11½ in)
Cabin: Max height	1.92 m (6 ft 3½ in)
WEIGHTS AND LOADINGS:	
Operating weight empty	15,000 kg (33,070 lb)
Max payload	6,500 kg (14,330 lb)
Max fuel	6,500 kg (14,330 lb)
Max T-O weight	22,700 kg (50,045 lb)
Max power loading	6.085 kg/kW (10.01 lb/shp)
PERFORMANCE:	
Nominal cruising speed	270 kts (500 km/h; 310 mph)
Approach speed	100 kts (185 km/h; 115 mph)
Optimum cruising height	7,200 m (23,625 ft)
T-O run, paved	1,550 m (5,085 ft)
Landing run, paved or unpaved	1,300 m (4,265 ft)
Range, with reserves:	
with 64 passengers	540 n miles (1,000 km; 621 miles)
with 1,500 kg (3,300 lb) payload	2,590 n miles (4,800 km; 2,980 miles)

UPDATED

INTERAVIA I-1L

TYPE: Two-seat light multipurpose aircraft.

PROGRAMME: Modification of SL-90 Leshii described under Aviotechnica entry in International section, produced since 1994 by Lukhovitsky Machine Building Plant, part of Moscow Aircraft Production Organisation (MAPO).

DESIGN FEATURES: As SL-90 Leshii. Intended for *ab initio* pilot training, passenger/cargo transport, search and rescue, aerial photography, ecological monitoring, agricultural work, patrol of forests, power lines, oil and gas pipelines, sport and touring.

POWER PLANT: One 104 kW (140 hp) Textron Lycoming O-320-E2A four-cylinder air-cooled piston engine; two-blade fixed-pitch propeller.

DIMENSIONS, EXTERNAL:	
Wing span	10.00 m (32 ft 9¾ in)
Length overall	6.70 m (22 ft 0 in)
WEIGHTS AND LOADINGS:	
Max payload	180 kg (397 lb)
Max T-O weight	820 kg (1,808 lb)
PERFORMANCE:	
Max level speed	97 kts (180 km/h; 112 mph)
Nominal cruising speed	75 kts (140 km/h; 87 mph)
T-O speed	46 kts (85 km/h; 53 mph)
Landing speed	51 kts (95 km/h; 59 mph)
Service ceiling	4,000 m (13,125 ft)
T-O run, unpaved runway	450 m (1,477 ft)
Landing run, unpaved runway	400 m (1,313 ft)
Range with max fuel	323 n miles (600 km; 372 miles)
g limits	+6/−3

NEW ENTRY

Interavia I-1L (Textron Lycoming O-320-E2A engine)

1995

INTERAVIA I-3

TYPE: Single/two-seat aerobatic aircraft.

PROGRAMME: Prototypes exhibited at MosAeroshow '93.

DESIGN FEATURES: Conventional low-wing monoplane, capable of unlimited aerobatics; tapered multispar wings of symmetrical section, without dihedral or anhedral; unswept tail surfaces with pointed rudder tip; clear view blister canopy over one or two seats. Convertible from two-seater to single-seater in 1 hour by removal of front cabin bay with control panel, installation of top fuselage panel and changing of canopy.

FLYING CONTROLS: Three-axis with long-span ailerons that can be drooped for take-off and landing; horn balanced rudder and elevators; ground-adjustable tab on rudder. Two suspended balance tabs on each aileron.

STRUCTURE: All-metal, semi-monocoque fuselage; fluted skin on fin, tailplane and all control surfaces.

LANDING GEAR: Non-retractable tailwheel type; cantilever mainwheel legs. Mainwheel tyres size 400 × 150 mm, tailwheel tyre size 200 × 80 mm

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine; three-blade wooden controllable-pitch propeller

ACCOMMODATION: One or two seats in tandem

DIMENSIONS, EXTERNAL:

Wing span	8.10 m (26 ft 7 in)
Length overall	6.72 m (22 ft 0½ in)
Tailplane span	2.80 m (9 ft 2¼ in)
Propeller diameter	2.40 m (7 ft 10½ in)

AREAS:

Wings, gross	11.54 m² (124.2 sq ft)

WEIGHTS AND LOADINGS (two seats):

Weight empty	760 kg (1,675 lb)
Max T-O weight	1,063 kg (2,343 lb)

PERFORMANCE (two seats, except where indicated):

Never-exceed speed (V_{NE})	242 kts (450 km/h; 280 mph)
Max level speed	189 kts (350 km/h; 217 mph)
Max rate of climb at S/L	660 m (2,165 ft)/min
Service ceiling	5,000 m (16,400 ft)
T-O run: paved runway	200 m (656 ft)
unpaved runway	262 m (860 ft)
Landing run: paved runway	452 m (1,483 ft)
unpaved runway	477 m (1,565 ft)
Range with max fuel	377 n miles (700 km; 435 miles)
g limits: single seat	+12, -10
two seats	+10, -8

KAMERTON-N

KAMERTON-N LTD

Tsiolkovskogo Street 2, Shchelkovo-3, 141100 Moscow Region

Telephone: 7 (095) 526 32 43

In association with V P Chkalov Air Force Science and Research Institute, Kamerton-N has designed and built the prototype Ratnik light multipurpose autogyro for military and civil use.

NEW ENTRY

KAMERTON-N RATNIK

TYPE: Experimental light two-seat autogyro.

PROGRAMME: Flight testing under way 1995.

DESIGN FEATURES: Short fuselage pod with extensively glazed cabin, engine at rear of pod, driving three-blade ducted pusher propeller; full-depth rudder in duct immediately aft of propeller; non-retractable tricycle landing gear, with single wheel on each unit; two-blade autorotating rotor, with optional drive for jump take-off.

POWER PLANT: One 50 kW (67 hp) Samson-760 or two 48 kW (64.5 hp) Rotax 582 piston engines.

ACCOMMODATION: Two seats side by side in enclosed cabin; provision for stretcher for ambulance duty, or for cargo-carrying.

ARMAMENT: Mounting for light gun or missile above landing gear each side of cabin on military version.

DIMENSIONS, EXTERNAL:

Rotor diameter	9.00 m (29 ft 6¼ in)
Overall length, excl rotor	4.95 m (16 ft 3 in)

WEIGHTS AND LOADINGS:

Normal payload	80 kg (176 lb)
Normal T-O weight	500 kg (1,102 lb)
Max T-O weight	600 kg (1,322 lb)

PERFORMANCE (estimated):

Max level speed	81 kts (150 km/h; 93 mph)
Max cruising speed	65 kts (120 km/h; 74 mph)
Econ cruising speed	43 kts (80 km/h; 50 mph)
Min flying speed	19 kts (35 km/h; 22 mph)
Service ceiling	4,000 m (13,125 ft)
Max range, 20 min reserve	135 n miles (250 km; 155 miles)
Max endurance	3 h

KAMOV

VERTOLETNYI NAUCHNO-TEKHNICHESKIY KOMPLEKS IMENI N. I. KAMOVA (VNTK) (Helicopter Scientific and Technology Complex named after N. I. Kamov)

March 8th Street, 140007 Lubertsy, Moscow Region

Telephone: 7 (095) 700 32 04, 171 37 43

Fax: 7 (095) 700 30 71

Telex: 206112 Kamov

GENERAL DESIGNER: Sergei Victorovich Mikheyev, PhD

DEPUTY GENERAL DESIGNER: Veniamin Kasjanikov

CHIEF DESIGNERS:
Juri Sokovikov
Vyacheslav Krygin
Evgeny Pak

Formed in 1947, this OKB continues work of Prof Dr Ing Nikolai Ilyich Kamov, a leading designer of rotating-wing aircraft from late 1920s, who died on 24 November 1973, aged 71; all Kamov helicopters in current service have coaxial contrarotating rotors. Ka-62, under development, has single main rotor.

VERIFIED

KAMOV Ka-25

NATO reporting name: Hormone

TYPE: Twin-turbine multipurpose military helicopter.

PROGRAMME: Prototype flew 1961; shown in Soviet Aviation Day flypast, Tushino Airport, Moscow, July 1961, carrying two dummy air-to-surface missiles (ASMs not fitted to production aircraft); about 460 built 1966-75, of which 88 remain operational with Russian Navy.

CURRENT VERSIONS: Four major variants in service:

Ka-25PL (protivolodochny) ('Hormone-A'): Ship-based anti-submarine helicopter, equipped with surveillance radar and dipping sonar; armed with one torpedo. *Detailed description applies to Ka-25PL.*

Ka-25Ts (tseleukazatel) ('Hormone-B'): Special electronics variant, providing over-the-horizon target acquisition for cruise missiles launched from ships on which it is based; larger undernose radome (NATO 'Big Bulge') than Ka-25PL, with spherical undersurface; cylindrical radome under rear cabin for missile mid-course guidance and helicopter-to-ship datalink; when radar operates, all landing gear wheels can retract upward to minimise interference to emissions; cylindrical fuel container each side of lower fuselage.

Ka-25BShZ: Equipped to tow minesweeping gear; externally similar to Ka-25PL, but without sonar.

Ka-25PS ('Hormone-C'): Search and rescue version, with special role equipment, including hoist.

CUSTOMERS: CIS Naval Aviation, India, Syria, Vietnam and former Yugoslavia.

DESIGN FEATURES: Folding three-blade coaxial rotors, requiring no tail rotor, and triple tailfins ensure compact stowed overall dimensions on board ship; engines above cabin and external mounting of operational equipment and auxiliary fuel leaves interior uncluttered.

FLYING CONTROLS, STRUCTURE, LANDING GEAR: See previous editions.

POWER PLANT: Two 662 kW (888 shp) Mars GTD-3F turboshafts, side by side above cabin forward of rotor driveshaft, on early aircraft. Later aircraft have 735 kW (986 shp) GTD-3M turboshafts. Independent fuel supply to each engine. Provision for external fuel tank each side of cabin. Single-point fuelling.

ACCOMMODATION: Pilot and co-pilot side by side on flight deck, with rearward-sliding door each side. Rearward-sliding door to rear of main landing gear on port side. Up to 12 folding seats for passengers optional.

AVIONICS: Equipment available for all versions includes autopilot, radio, nav system, radio compass, lighting for all-weather operation by day or night, and hoist above cabin door. IFF antennae (NATO 'Odd Rods') above nose and alongside central tailfin. Dipping sonar in compartment at rear of main cabin, immediately forward of tailboom, and search radar (NATO 'Short Horn') in flat bottom undernose radome (diameter 1.25 m, 4 ft 1 in) on Ka-25PL, which can have canister of sonobuoys mounted externally aft of starboard main landing gear. Most aircraft have cylindrical housing for ESM above tailboom, shallow blister fairing to rear of cylindrical housing and similar housing under rear of cabin for datalink.

ARMAMENT: Doors under fuselage of some aircraft enclose weapons bay for 450 mm (18 in) ASW torpedo.

DIMENSIONS, EXTERNAL:

Rotor diameter (each)	15.74 m (51 ft 7¾ in)
Length of fuselage	9.75 m (32 ft 0 in)
Height to top of rotor head	5.37 m (17 ft 7½ in)
Width over tailfins	3.76 m (12 ft 4 in)
Wheel track: front	1.41 m (4 ft 7½ in)
rear	3.52 m (11 ft 6½ in)
Cabin door: Height	1.10 m (3 ft 7¼ in)
Width	1.20 m (3 ft 11¼ in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck: Length	3.95 m (12 ft 11½ in)
Max width	1.50 m (4 ft 11 in)
Max height	1.25 m (4 ft 1¼ in)

AREAS:

Rotor disc (each)	194.6 m² (2,095 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	4,765 kg (10,505 lb)
Max T-O weight	7,200 kg (15,873 lb)

PERFORMANCE:

Max level speed	113 kts (209 km/h; 130 mph)
Normal cruising speed	104 kts (193 km/h; 120 mph)
Service ceiling	3,350 m (11,000 ft)
Range, with reserves:	
with standard fuel	217 n miles (400 km; 250 miles)
with external tanks	351 n miles (650 km; 405 miles)

VERIFIED

Kamov Ka-28 anti-submarine helicopter (NATO 'Helix-A') in Indian service *(SIRPA-Air)* *1995*

Kamov Ka-27PS search and rescue helicopter (NATO 'Helix-D') *(Piotr Butowski)* *1993*

KAMOV Ka-27 and Ka-28

NATO reporting names: Helix-A and D

TYPE: Twin-turbine multipurpose military helicopter.

PROGRAMME: Design started 1969 to overcome inability of Ka-25 to operate dipping sonar at night and in adverse weather; first flight of prototype 1973; first open reference in US Department of Defense's 1981 *Soviet Military Power* document, which stated that "Hormone variant" helicopters could be carried in telescoping hangar on 'Sovremenny' class of guided missile destroyers, for ASW missions; photographs of two on stern platform of *Udaloy*, first of new class of ASW guided missile destroyers, taken by Western pilots during Baltic exercises, September 1981; at least 16 observed on former 'Kiev' class carrier/cruiser *Novorossiysk* 1983, as stage in continuous replacement of Ka-25s with Ka-27s.

CURRENT VERSIONS: **Ka-27PL** ('Helix-A'): Basic ASW helicopter with three crew, operational since 1982, normally operated in pairs, one tracking hostile submarine, other dropping depth charges. Russian Naval Aviation has 88.

Ka-27PS ('Helix-D'): Search and rescue and plane guard helicopter, as Ka-27PL, but some operational equipment deleted, external fuel tank each side of cabin, as civil Ka-32, winch beside port cabin door.

Ka-28 ('Helix-A'): Export version of Ka-27PL, said by Yugoslavia to have 1,618 kW (2,170 shp) TV3-117BK turboshafts and 3,680 kg (8,113 lb) of fuel in 12 tanks.

Ka-29 ('Helix-B'): Described separately.

Ka-32 (civil 'Helix-C'): Described separately, general description (which see) applies also to Ka-27 and Ka-28.

CUSTOMERS: CIS Naval Aviation, India (at least 17 Ka-28 including three for training) and Yugoslavia (Ka-28).

DESIGN FEATURES: Basic configuration very like Ka-25, but longer and more capacious fuselage pod, no central tailfin and different undernose radome; similar overall dimensions with rotors folded enable Ka-27 to stow in shipboard hangars and use deck lifts built for Ka-25.

ACCOMMODATION: Crew of three: pilot, tactical co-ordinator, ASW systems operator.

AVIONICS: Basically as for Ka-32.

Comms: IFF (NATO 'Odd Rods').

Radar: Undernose 360° search radar; directional ESM radomes above rear of engine bay fairing and at tailcone tip.

Flight: Doppler box under tailboom.

Mission: Dipping sonar behind clamshell doors at rear of fuselage pod, sonobuoys stowed internally. MAD.

Self defence: RWR on nose and above tailplane, infrared jammer (NATO 'Hot Brick') at rear of engine bay fairing, station keeping light between ESM radome and jammer, chaff/flare dispensers; colour coded identification flares.

ARMAMENT: Ventral weapons bay for torpedoes, depth charges, other stores.

DIMENSIONS, EXTERNAL: As Ka-32

PERFORMANCE (Ka-28):

Max level speed at 10,700 kg (23,590 lb) AUW
145 kts (270 km/h; 168 mph)

Max cruising speed
124-129 kts (230-240 km/h; 143-149 mph)

Max rate of climb at S/L 750 m (2,460 ft)/min

Radius of action against submarine cruising at up to 40 kts (75 km/h; 47 mph) at depth of 500 m (1,640 ft)
108 n miles (200 km; 124 miles)

UPDATED

Kamov Ka-25PL ('Hormone-A') anti-submarine helicopter of Russian Naval Aviation *(Linda Jackson)* *1995*

KAMOV Ka-29 and Ka-31

NATO reporting name: Helix-B

TYPE: Twin-turbine assault transport and electronic warfare helicopter.

PROGRAMME: Entered service with Northern and Pacific Fleets 1985, photographed on board assault ship *Ivan Rogov* in Mediterranean 1987, thought to be Ka-27B and given NATO reporting name 'Helix-B', identified as Ka-29 combat transport at Frunze (Khodinka) air show, Moscow, August 1989. Ka-31 radar picket version completed initial shipboard trials on aircraft carrier *Admiral of the Fleet Kuznetsov* (then *Tbilisi*) 1990, both versions expected to equip this ship.

1995

Kamov Ka-31 radar picket helicopter with antenna deployed and landing gear retracted

1994

Ka-29 (NATO 'Helix-B') combat transport helicopter *(Linda Jackson)*

1995

CURRENT VERSIONS: **Ka-29** ('Helix-B'): Development of Ka-27 for transport and close support of seaborne assault troops. *Detailed description generally as for Ka-32 except as under.*

Ka-31 (formerly Ka-29RLD: radiolokatsyonnogo dozora): Radar picket helicopter; first flown 1988, two examples seen on *Admiral of the Fleet Kuznetsov* early 1992, basic airframe of Ka-27, package of special avionics includes large NIIR rotating radar antenna (area 6.0 m² 64.5 sq ft) that stows flat against underfuselage and deploys downward, turning through 90° into vertical plane before starting to rotate, landing gear retracts upward to prevent interference. Maximum surveillance radius reported to be 54 to 81 n miles (100 to 150 km, 62 to 93 miles) for fighter-size targets, 135 n miles (250 km, 155 miles) for surface vessels, up to 20 targets tracked simultaneously. Two large panniers starboard side of cabin fore and aft of main landing gear on helicopter numbered 032 (forward panniers only on 031), starboard airstair-type cabin door, aft of flight deck, divided horizontally into upward- and downward-opening sections, with box fairing in place of window, hatch window deleted above starboard rear pannier, APU repositioned above rear of engine bay fairing, with slot type air intake at front of housing, displacing usual ESM and IR jamming pods; tailcone extended by conical, probably dielectric, fairing, no stores pylons or outriggers, unidentified structure at rear of fuselage. Crew of two. Endurance on station 2 hours 30 minutes at 3,500 m (11,500 ft).

CUSTOMERS: CIS Naval Aviation (more than 30 Ka-29s).

POWER PLANT: Two Klimov TV3-117V turboshafts, each 1,633 kW (2,190 shp). Engines started by APU.

ACCOMMODATION: Wider flight deck than Ka-27 for two crew, three flat-plate windscreen glazings instead of two-piece curved transparency, main cabin port-side door, aft of landing gear, divided horizontally into upward- and downward-opening sections, to facilitate rapid exit of up to 16 assault troops, four stretcher patients and six seated casualties in ambulance role, flight deck and engine bay heavily armoured.

AVIONICS: *Flight*: Doppler box under tailboom; IFF ('Slap Shot').

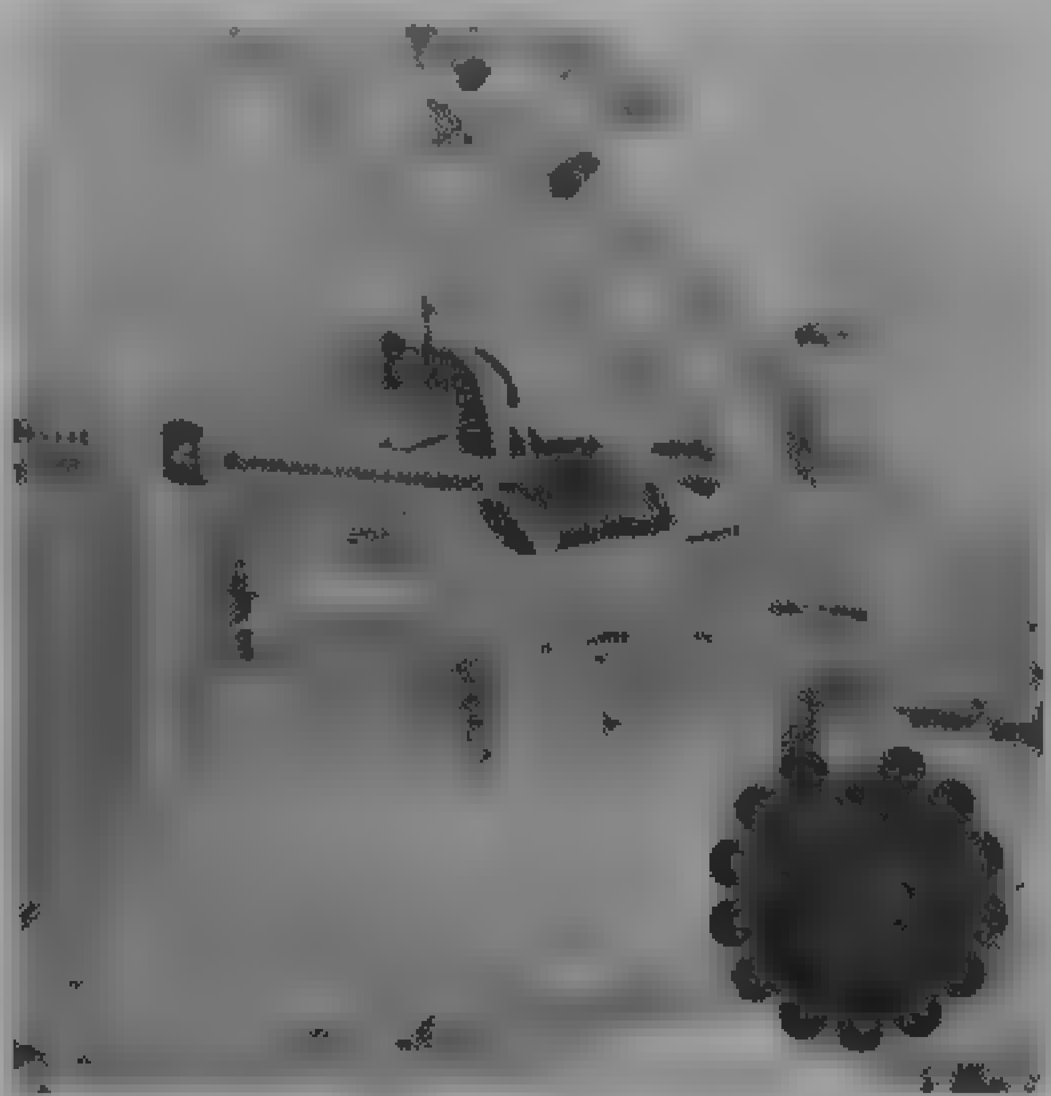
Mission: Undernose sensor pods appear similar to electro-optics and RF missile guidance pods of Mi-24V, ESM 'flower pot' above rear of engine bay fairing.

Self-defence: Infra-red jammer (NATO 'Hot Brick'); station keeping light between ESM and jammer, radar warning receivers.

ARMAMENT: Four-barrel Gatling type 7.62 mm machine gun with 1,800 rounds, flexibly mounted behind downward articulated door on starboard side of nose, four pylons on outriggers, for two four-round clusters of 9M114 Shturm (AT-6 'Spiral') air-to-surface missiles and two 57 or 80 mm rocket packs. Alternative loads include four rocket packs, two pods each containing a 23 mm gun and 250 rounds, or two ZB-500 incendiary tanks. Provision for 30 mm Type 2A42 gun above port outrigger, with ammunition feed from cabin.

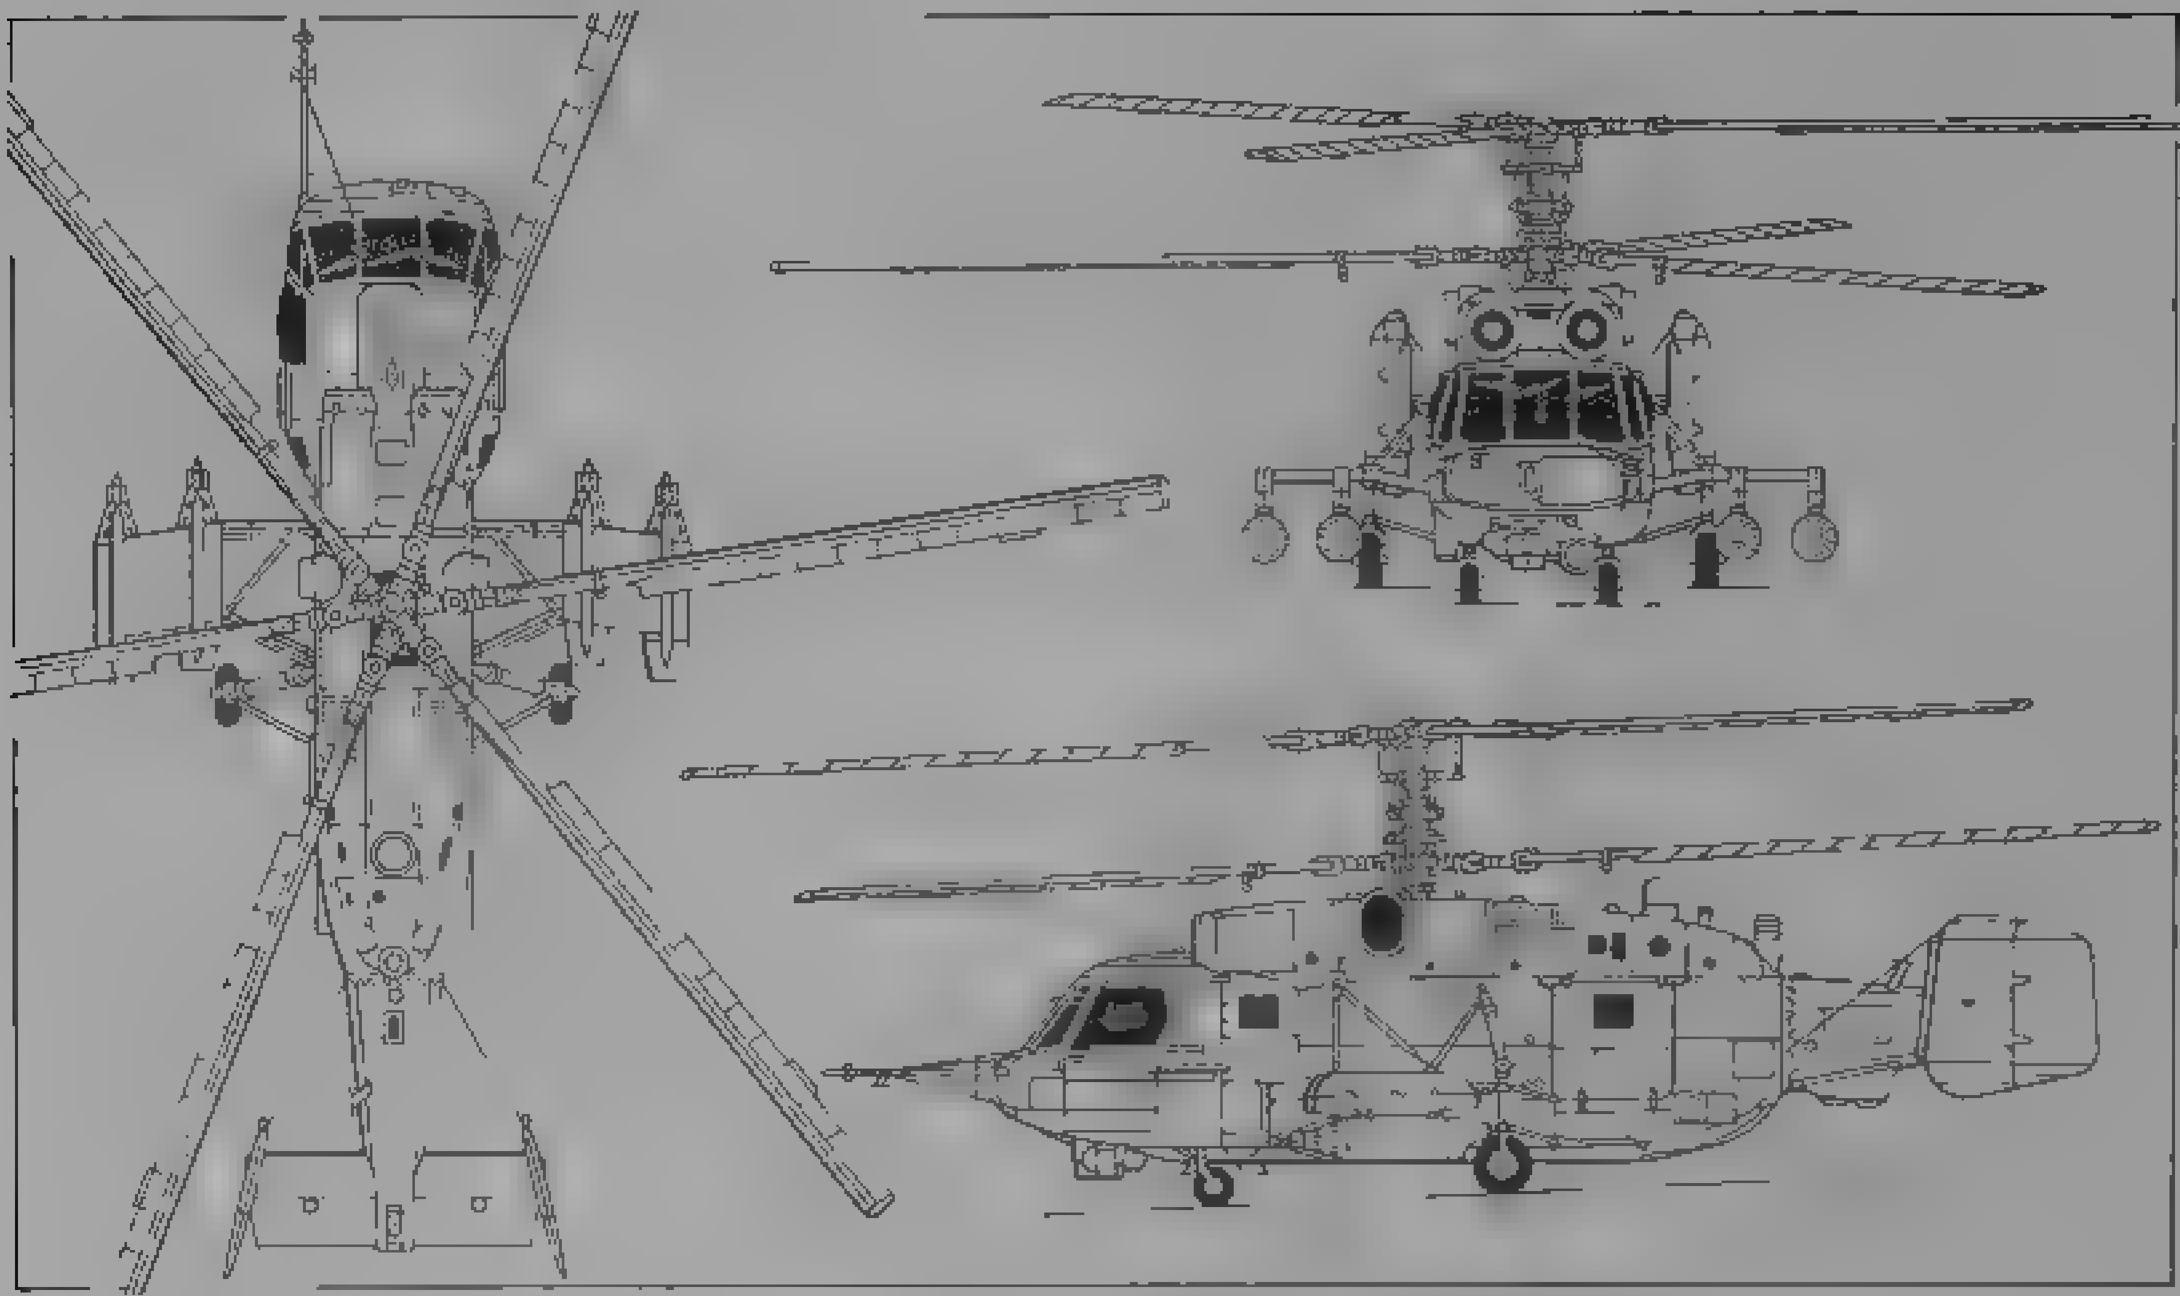
DIMENSIONS, EXTERNAL:

Rotor diameter (each)	15.90 m (52 ft 2 in)
Blade length, aerofoil section (each)	5.45 m (17 ft 10½ in)
Blade chord	0.48 m (1 ft 7 in)
Vertical separation of rotors	1.40 m (4 ft 7 in)
Length overall, excl noseprobe and rotors	11.30 m (37 ft 1 in)
Height overall	5.40 m (17 ft 8½ in)
Width: between centrelines of outboard pylons	5.65 m (18 ft 6½ in)
over tailfins and centred rudders	3.65 m (12 ft 0 in)
flight deck	2.20 m (7 ft 2 in)
Mainwheel track	3.50 m (11 ft 6 in)
Nosewheel track	1.40 m (4 ft 7 in)
Wheelbase	3.00 m (9 ft 10 in)



Type 2A42 gun on port outrigger of Ka-29

1992



Kamov Ka-29 combat transport helicopter *(Jane's/Mike Keep)*

1992

AREAS

Rotor disc (each)	98.5 m² (1,138 sq ft)

WEIGHTS AND LOADINGS

Weight empty	5,520 kg (12,170 lb)
Max load: internal	2,000 kg (4,409 lb)
external	4,000 kg (8,818 lb)
Normal T-O weight	11,000 kg (24,250 lb)
Max T-O weight	12,600 kg (27,775 lb)

PERFORMANCE

Max level speed at S/L	151 kts (280 km/h; 174 mph)
Nominal cruising speed	127 kts (235 km/h; 146 mph)
Max rate of climb at S/L	930 m (3,050 ft)/min
Service ceiling	4,300 m (14,100 ft)
Hovering ceiling OGE	3,700 m (12,140 ft)
Combat radius, with six to eight attack runs over target	54 n miles (100 km; 62 miles)
Range: max standard fuel	248 n miles (460 km; 285 miles)
ferry	400 n miles (740 km; 460 miles)

UPDATED

KAMOV Ka-32

NATO reporting name: Helix-C

TYPE: Twin-turbine civil utility helicopter.

PROGRAMME: Development of Ka-27/32 began 1969, first flight of common prototype 1973, first Ka-32 (SSSR-04173) exhibited Minsk Airport late 1981, during fourth CMEA scientific/technical conference on use of aircraft in national economy, carrying slung truck in flying display; prototype of utility version shown at Paris Air Show June 1985; in production at Kumertau Aircraft Production Enterprise.

CURRENT VERSIONS: **Ka-32T** ('Helix-C'): Utility transport, ambulance and flying crane, limited avionics; for carriage of internal or external freight, and passengers, along airways and over local routes, including support of offshore drilling rigs.

Ka-32S ('Helix-C'): Maritime version, more comprehensive avionics, including undernose radar, for IFR operation from icebreakers in adverse weather and over terrain devoid of landmarks, 300 kg (661 lb) electric load hoist standard; additional external fuel tanks available 1994, strapped on each side at top of cabin (see illustration); duties include ice patrol, guidance of ships through icefields, unloading and loading ships (up to 30 tonnes an hour, 360 tonnes a day), maritime search and rescue.

Ka-32K: Flying crane with retractable gondola for second pilot under cabin. Model shown 1990. Operational testing completed 1992.

Ka-32A: Assemblies and systems of basic Ka-32 modified in 1990-93 to meet all requirements of Russian NLGB-2 and US FAR 29/FAR 33 airworthiness standards in categories A and B. Russian type certificates obtained for Ka-32A and its TV3-117VMA engines in June 1993. Larger tyres. Optional pressure fuelling with reduced fuel capacity. Maximum accommodation for 13 passengers. Advanced avionics available, including Canadian Marconi dual CMA-900 flight management system, with EFIS, AFCS, CMA-2012 Doppler velocity sensor and CMA-3012 GPS sensor. Modification of helicopters to Ka-32A standard started by Kamov 1994.

Ka-32A1: Firefighting version of Ka-32A, available from 1994. Three delivered to Moscow fire service, with steerable water cannon and two types of rescue cage, able to lift up to 20 people from roofs of tall buildings.

CUSTOMERS: Aeroflot and its successors; operators in Bulgaria (32C), Yemen (32C/T).

DESIGN FEATURES: Conceived as completely autonomous 'compact truck', to stow in much the same space as Ka-25 with rotors folded, despite greater power and capability, and to operate independently of ground support equipment; special attention paid to ease of handling with single pilot; overall dimensions minimised by use of coaxial rotors, requiring no tail rotor, and twin fins on short tailboom; upper rotor turns clockwise, lower rotor anticlockwise; rotor mast tilted forward 3°; twin turbines and APU above cabin, leaving interior uncluttered; lower fuselage sealed for flotation.

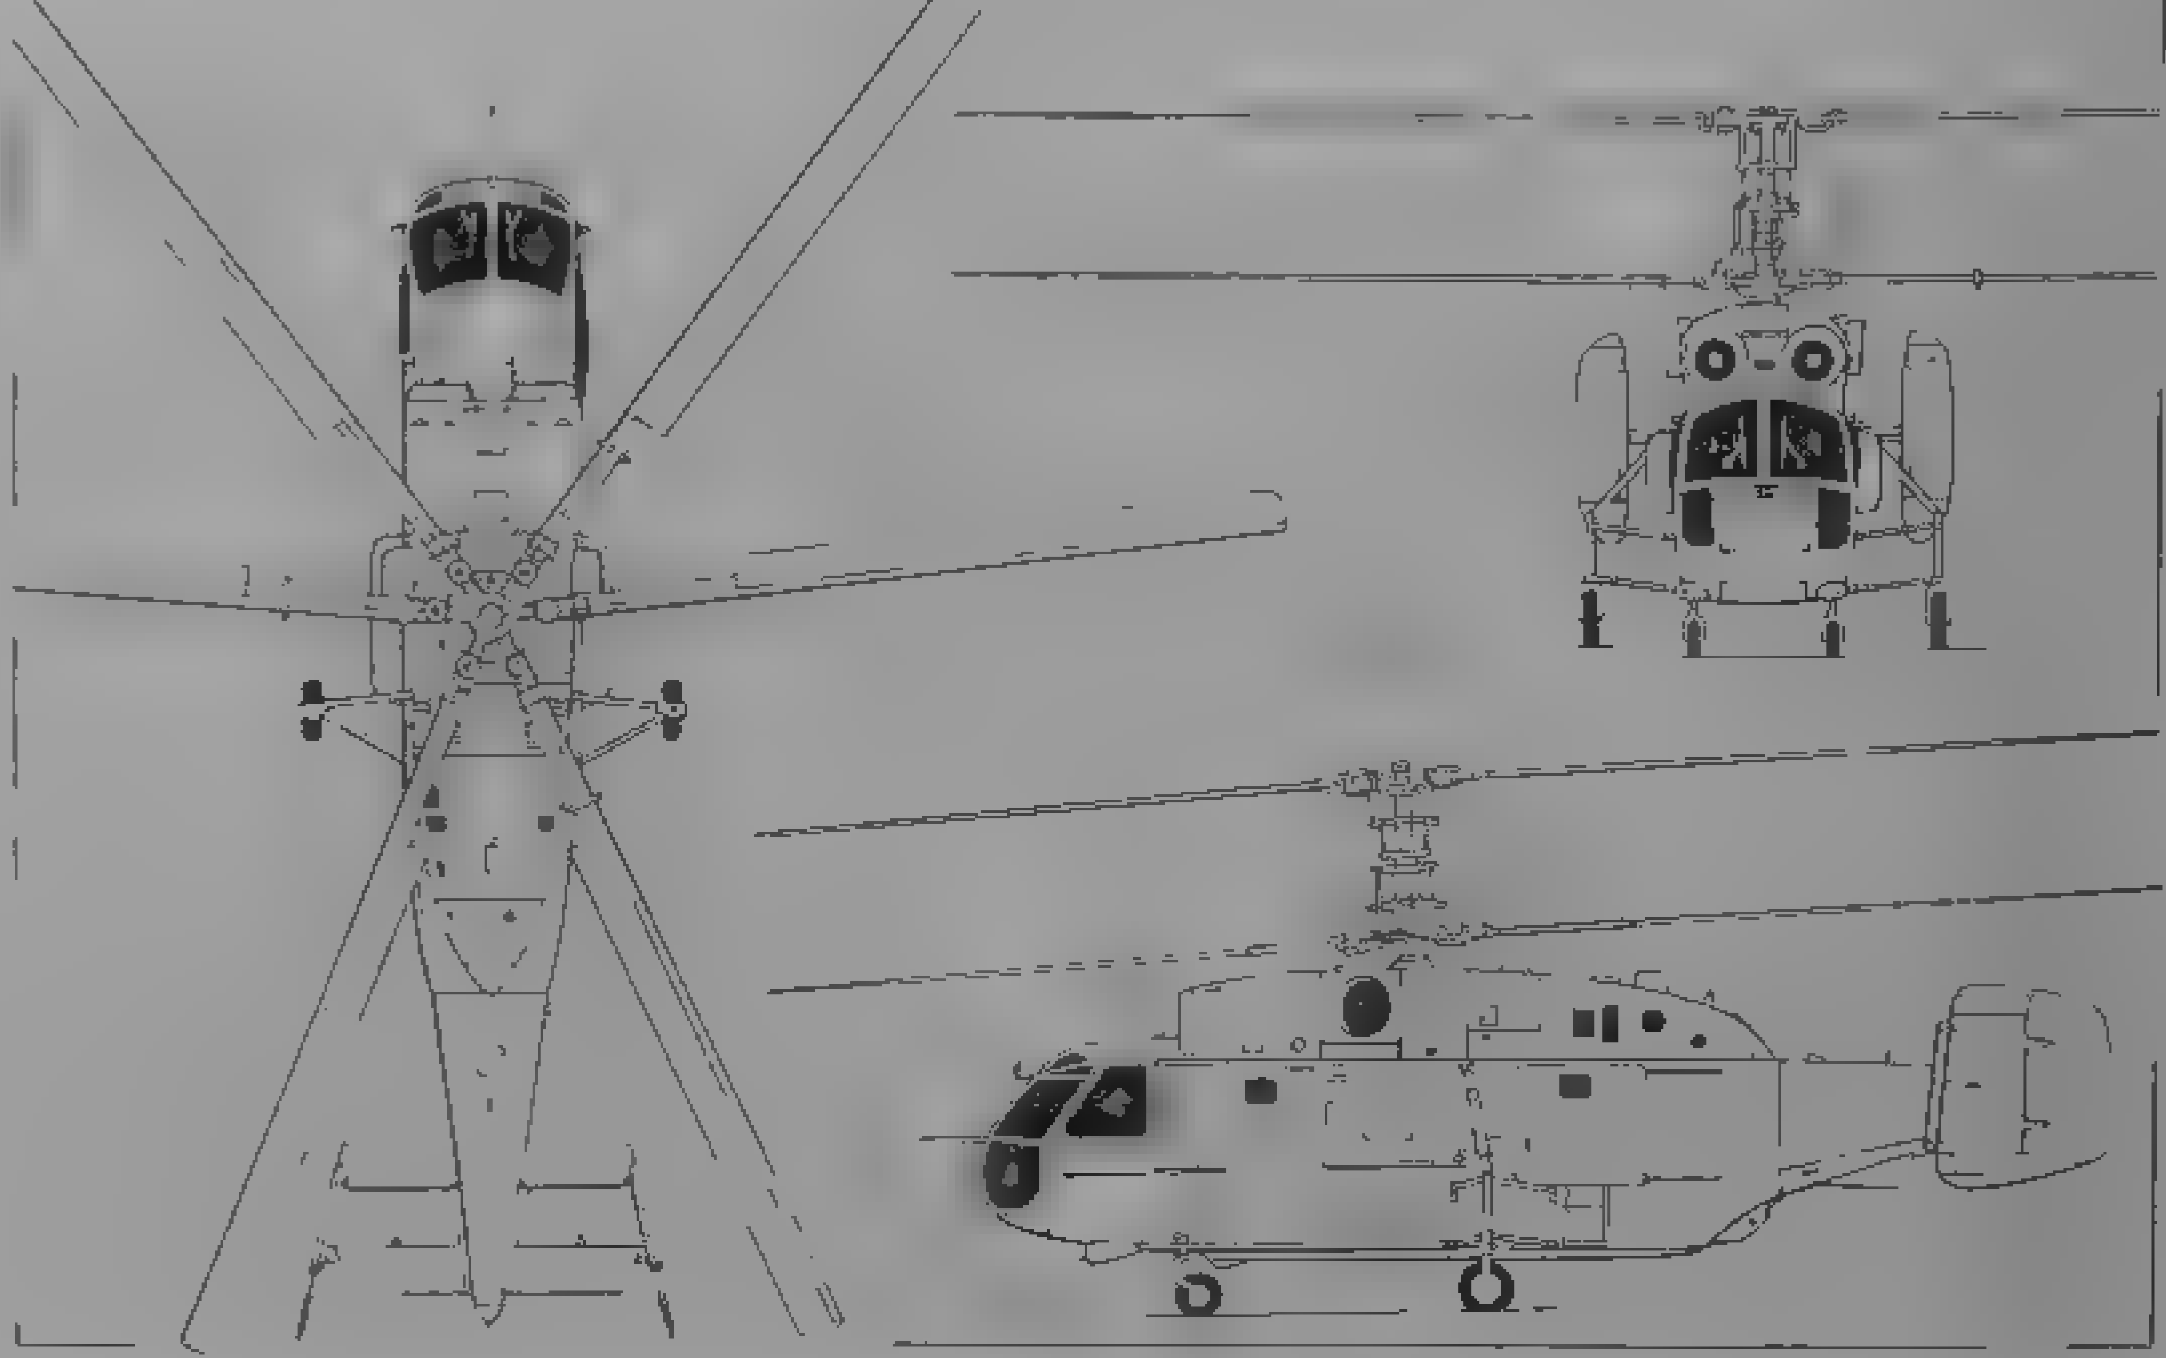
FLYING CONTROLS: Dual hydraulically powered flight control systems, without manual reversion; spring stick trim; yaw control by differential collective pitch applied through rudder pedals; mix in collective system maintains constant total rotor thrust during turns, to reduce pilot workload when landing on pitching deck, and to simplify transition to hover and landing; twin rudders intended mainly to improve control in autorotation, but also effective in coordinating turns; flight can be maintained on one engine at maximum T-O weight.

STRUCTURE: Titanium and composites used extensively, with particular emphasis on corrosion resistance; fully articulated three-blade coaxial contrarotating rotors have all-composites blades with carbonfibre and glassfibre main spars, pockets (13 per blade) of Kevlar type material, and filler similar to Nomex; blades have non-symmetrical aerofoil section, each has ground adjustable tab, each lower blade carries adjustable vibration damper, comprising two dependent weights, on root section, with further vibration dampers in fuselage; tip light on each upper blade; blades fold manually outboard of all control mechanisms, to folded width within track of main landing gear; rotor hub is 50 per cent titanium/50 per cent steel; rotor brake standard; all-metal fuselage; composites tailcone; fixed incidence tailplane, elevators, fins and rudders have aluminium alloy structure, composite skins; fins toe inward approximately 25°; fixed leading-edge slat on each fin prevents air flow over fin stalling in crosswinds or at high yaw angles.

LANDING GEAR: Four-wheel type. Oleo-pneumatic shock absorbers. Castoring nosewheels. Mainwheel tyres size 600 × 180 mm (Ka-32), 620 × 180 mm, pressure 10.8 bars (156 lb/sq in) (Ka-32A). Nosewheel tyres size 400 × 150 mm (Ka-32), 480 × 200 mm, pressure 5.9 bars (85 lb/sq in) (Ka-32A). Skis optional.

Kamov Ka-32K flying crane, with retractable pilot gondola extended under rear of cabin

1993



Kamov Ka-32T ('Helix-C') utility helicopter (two Klimov TV3-117V turboshafts) *(Jane's/Dennis Punnett)*

1985

POWER PLANT: Two 1,633 kW (2,190 shp) Klimov TV3-117V (Ka-32) or TV3-117VMA (Ka-32A) turboshafts, with automatic synchronisation system, side by side above cabin, forward of rotor driveshaft. Main gearbox brake standard. Oil cooler fan aft of gearbox. Cowlings hinge downward as maintenance platforms. Fuel in tanks under cabin floor and inside container each side of centre-fuselage, capacity of main tanks 2,180 litres (576 US gallons, 480 Imp gallons); maximum capacity with two underfloor auxiliary tanks 3,000 litres (792 US gallons; 660 Imp gallons). Single-point pressure refuelling behind small forward-hinged door on port side, where bottom of tailboom meets rear of cabin

ACCOMMODATION: Pilot and navigator side by side on air conditioned flight deck, in adjustable seats. Rearward-sliding jettisonable door with blister window each side. Seat behind navigator, on starboard side, for observer, loadmaster or rescue hoist operator. Alcohol windscreen anti-icing. Direct access to cabin from flight deck. Heated and ventilated main cabin of Ka-32 can accommodate freight or 16 passengers, on three folding seats at rear, six along port sidewall and seven along starboard sidewall (13 passengers in Ka-32A). Lifejackets under seats. Fittings to carry stretchers. No provisions for toilet or galley. Pyramid structure can be fitted on floor beneath rotor driveshaft to prevent swinging of external cargo sling loads. Rearward-sliding door aft of main landing gear on port side, with steps below. Emergency exit door opposite. Hatch to avionics compartment on port side of tailboom

SYSTEMS: Three hydraulic systems: main system supplies servos, mainwheel brakes and hydraulic winch when fitted; standby system supplies only servos after main system failure; auxiliary system supplies brakes after main system failure and adjusts height of helicopter fuselage above ground; it can also be connected to main system for checking all functions on ground. Electrical system includes two independently operating AC generators and two batteries, cut in automatically or manually via inverters after AC generating system failure. After failure of either generator, the other is switched automatically to supply both circuits. Two rectifiers supply DC power. Electrothermal de-icing of entire profiled portion of each blade switches on automatically when helicopter enters icing conditions. Hot air engine intake anti-icing. APU in rear of engine bay fairing on starboard side, for engine starting and to power all essential hydraulic and electrical services on ground, eliminating need for GPU

AVIONICS: *Flight:* Include electromechanical flight director controlled from autopilot panel, Doppler hover indicator, two HSI and air data computer. Fully coupled three-axis autopilot can provide automatic approach and hover at height of 25 m (82 ft) over landing area, on predetermined course, using Doppler. Radar altimeter. Doppler box under tailboom

EQUIPMENT: Doors at rear of fuel tank bay provide access to small compartment for auxiliary fuel, or liferafts which eject during descent in emergency, by command from flight deck. Container each side of fuselage, under external fuel containers, for emergency flotation bags, deployed by water contact. Optional rescue hoist, capacity 300 kg (661 lb), between top of door opening and landing gear. Optional external load sling, with automatic release and integral load weighing and stabilisation systems

Kamov Ka-32A ('Helix-C') modified for Russian and US civil certification *(Paul Jackson)* 1995

Kamov Ka-32S, showing external fuel tank at top of cabin *(Paul Jackson)* 1995

DIMENSIONS, EXTERNAL:

Rotor diameter (each)	15.90 m (52 ft 2 in)
Length overall: excl rotors	11.30 m (37 ft 1 in)
rotors folded	12.25 m (40 ft 2¼ in)
Width, rotors folded	4.00 m (13 ft 1½ in)
Height to top of rotor head	5.40 m (17 ft 8½ in)
Wheel track: mainwheels	3.50 m (11 ft 6 in)
nosewheels	1.40 m (4 ft 7 in)
Wheelbase	3.02 m (9 ft 11 in)
Cabin door: Height	approx 1.20 m (3 ft 11¼ in)
Width	approx 1.20 m (3 ft 11¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length	4.52 m (14 ft 10 in)
Max width	1.30 m (4 ft 3 in)
Max height	1.32 m (4 ft 4 in)

AREAS:

Rotor disc (each)	198.5 m² (2,138 sq ft)

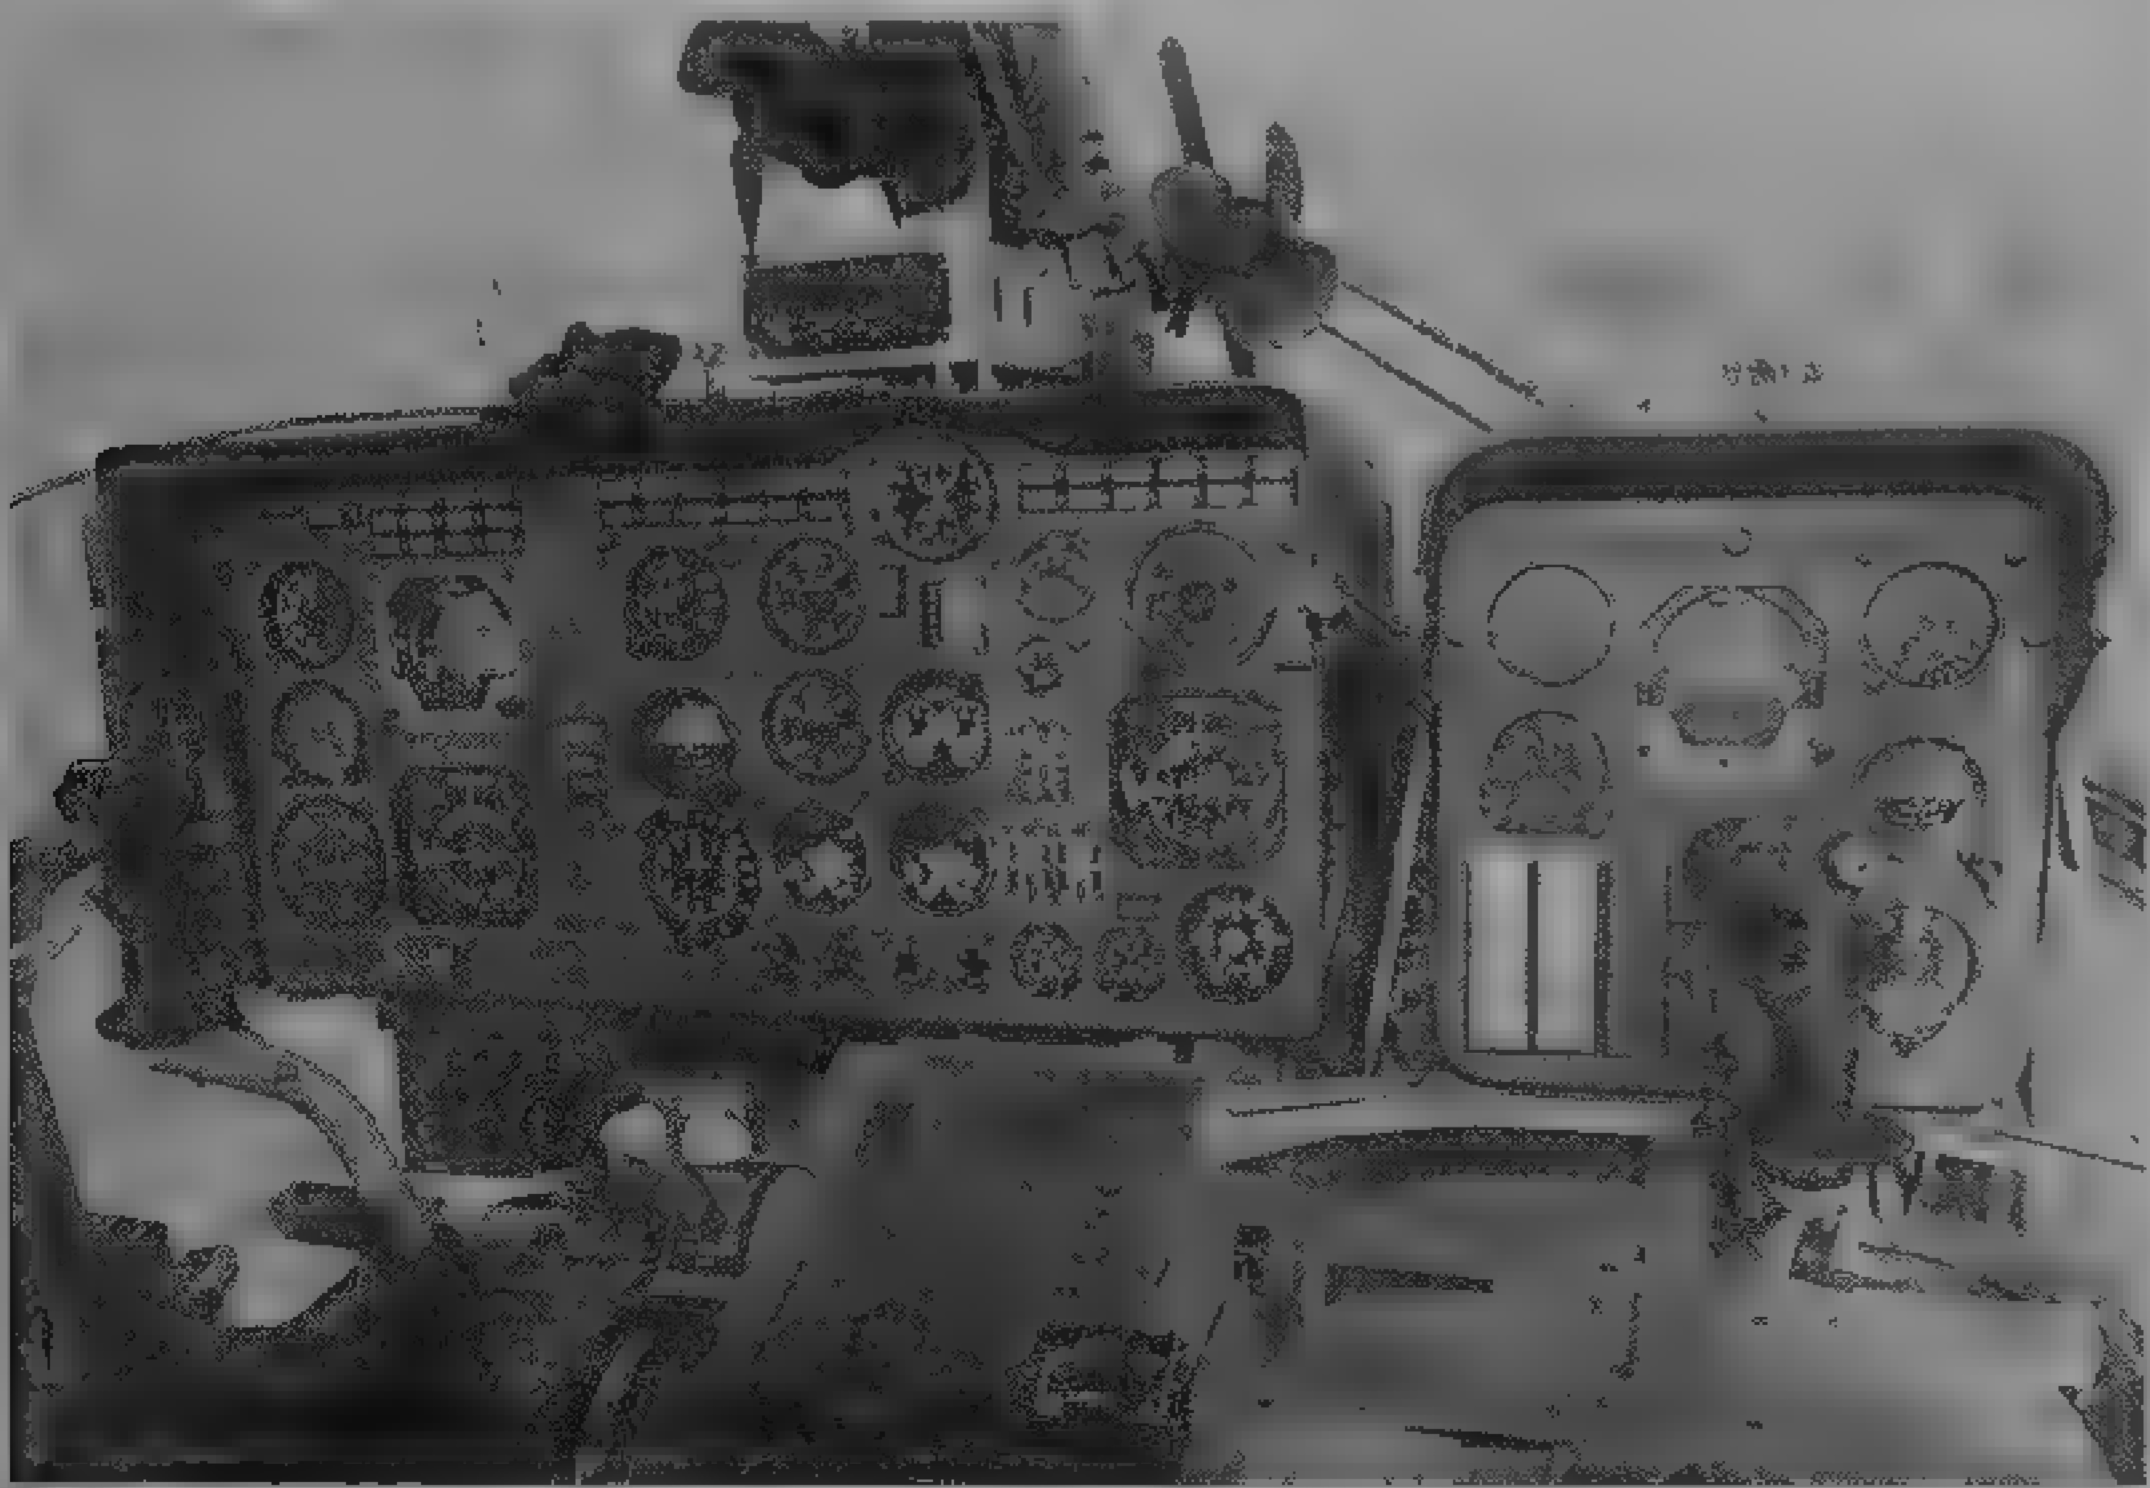
WEIGHTS AND LOADINGS:

Weight empty	6,500 kg (14,330 lb)
Max payload: internal	4,000 kg (8,818 lb)
external	5,000 kg (11,023 lb)
Normal T-O weight	11,000 kg (24,250 lb)
Max flight weight with slung load	12,600 kg (27,775 lb)

PERFORMANCE (Ka-32T at AUW of 11,000 kg; 24,250 lb. Ka-32A similar):

Max level speed	135 kts (250 km/h; 155 mph)
Max cruising speed	124 kts (230 km/h; 143 mph)
Service ceiling	5,000 m (16,400 ft)
Hovering ceiling OGE	3,500 m (11,480 ft)
Hovering ceiling OGE, OEI	1,705 m (5,600 ft)
Range with max fuel	432 n miles (800 km; 497 miles)
Endurance with max fuel	4 h 30 min

VERIFIED



Flight deck of Kamov Ka-32 utility helicopter *(Paul Jackson)* 1995

KAMOV Ka-50

NATO reporting name: Hokum-A

TYPE: Twin-turbine close support helicopter.

PROGRAMME: Project design completed December 1977, as V-80 (Vertolyet-80, helicopter-80); first Ka-50 prototype (010) flew 27 July 1982; first Western report Summer 1984, first photograph published in US Department of Defense's *Soviet Military Power* document 1989, preseries production at Progress plant, Arsenyev, after competitive evaluation with Mi-28, first exhibited at 1992 Farnborough Air Show with Western name **Werewolf**

CURRENT VERSIONS: **Ka-50** ('Hokum-A', V-80Sh1): As described. Basic single-seat close support helicopter; in small-scale production. One seen with undernose sensor ball turret

Ka-52 ('Hokum B'; V-80Sh2): Side by side two-seat training and combat version, first flight scheduled 1996; described separately

CUSTOMERS: Twelve prototype and preseries Ka-50s (010-021, at least seven of which for flight trials) completed by 1995 for Russian Army Aviation. Reported requirement for 60 per cent Ka-50s, 40 per cent Ka-52s

DESIGN FEATURES: World's first single-seat close-support helicopter. Coaxial, contrarotating and widely separated semi-rigid three-blade rotors, with swept blade tip, attached to hub by steel plates; small fuselage cross-section, with nose sensors; flat-screen cockpit, heavily armour protected with rearview mirror above windscreen; small sweptback tailfin, with inset rudder and large tab; high set tailplane on rear fuselage, with endplate auxiliary fins; retractable landing gear; mid-set unswept wings, carrying ECM pods at tips, four underwing weapon pylons, engines above wingroots, with prominent exhaust heat suppressors, high agility for fast, low flying, close-range attack role, partially dismantled can be air-ferried in Il-76 freighter. Much of fuselage skin formed by large hinged door panels, providing access to interior equipment from ground level

STRUCTURE: Fuselage built around torsion box beam, of 1.0 m (3 ft 3½ in) square section. Wing centre-section passes

Kamov Ka-50 ('Hokum-A') close support helicopter *(Paul Jackson)*

1995

through beam. Cockpit mounted at front of beam, gearbox above and engines to sides. Composite materials constitute 35 per cent by weight of structure, including rotors. Approximately 350 kg (770 lb) of armour protects pilot and critical airframe parts, canopy and windscreen panels are heavy bulletproof glass.

LANDING GEAR: Hydraulically retractable tricycle type: twin-wheel steerable nose unit and single mainwheels all semi-exposed when up; all wheels retract rearward, low-pressure tyres.

POWER PLANT: Two 1,633 kW (2,190 shp) Klimov TV3-117VK turboshafts, with air intake dust filters. Fuel tanks, filled with reticulated foam, inside fuselage box beam. Provision for four 500 litre (132 US gallon; 110 Imp gallon) underwing auxiliary fuel tanks.

ACCOMMODATION: Double-wall steel armoured cockpit, able to protect pilot from hits by 20 and 23 mm gunfire over ranges as close as 100 m (330 ft). Specially designed Zvezda K-37 ejection system for safe ejection at any altitude; following explosive separation of rotor blades and cockpit roof, pilot is extracted from cockpit by large rocket; alternatively, he can jettison doors and stores before rolling out of cockpit sideways. Associated equipment includes automatic radio beacon, activated during ejection, inflatable liferaft and NAZ-7M survival kit.

SYSTEMS: All systems configured for operational deployment away from base for at least two weeks without need for maintenance ground equipment; refuelling, avionics and weapon servicing performed from ground level. APU for engine starting, and ground supply of hydraulic and electrical power, in top of centre-fuselage.

AVIONICS: Integrated by NPO Elektro Avtomatika, four Orbita computers to meet navigation, mission control and display demands.

Comms: VHF/UHF and HF com/nav; IFF ('Slap Shot').

Radar: Terrain-following radar in nose.

Flight: INS, autopilot, Doppler box under tailboom.

Instrumentation: Conventional instruments; MiG-29 type HUD; moving map display, small CRT beneath HUD with rubber hood, to display only FLIR and LLLTV imagery. Pilot has MiG-29 type helmet sight; when pilot has target centred on HUD, he pushes button to lock sighting and four-channel digital autopilot into one unit.

Mission: To reduce pilot workload and introduce a degree of low observability, target location and designation is assigned to other aircraft; equipment behind windows in nose includes laser marked target seeker and rangefinder; other equipment includes FLIR turret and LLLTV. Signal flare launchers in sides of rear fuselage.

Self defence: RWR in tailcone, at rear of each wingtip EW pod and under nose; total of 128 chaff/flare cartridges in wingtip pods.

ARMAMENT: Up to 80 S-8 80 mm air-to-surface rockets in four underwing B-8 packs, or up to 12 Vikhr-M (AT-12) tube-launched laser-guided air-to-surface missiles with range of 8 to 10 km (5 to 6.2 miles) capable of penetrating 900 mm of reactive armour; or mix of both. Single-barrel 30 mm 2A42 gun on starboard side of fuselage, with 280 rounds, can be depressed up to 30° and traversed 5 to 6° hydraulically and is kept on target in azimuth by tracker which turns helicopter on its axis; two ammunition boxes in centre-fuselage. Provision for alternative weapons, including 23 mm gun pods, R-60 (AA-8 'Aphid') or R-73 (AA-11 'Archer') air-to-air missiles, UB-32-57 rocket packs, FAB-500 bombs or dispenser weapons.

DIMENSIONS, EXTERNAL:

Rotor diameter (each)	14.5 m (47 ft 7 in)
Length overall, rotors turning	16.0 m (52 ft 6 in)
Height overall	4.93 m (16 ft 2 in)

AREAS:

Rotor disc (each)	165.13 m² (1,777.4 sq ft)

WEIGHTS AND LOADINGS:

Max external stores	3,000 kg (6,610 lb)
Normal T-O weight	9,800 kg (21,605 lb)
Max T-O weight	10,800 kg (23,810 lb)

PERFORMANCE:

Max speed:	
in shallow dive	189 kts (350 km/h; 217 mph)
in level flight	167 kts (310 km/h; 193 mph)
Vertical rate of climb at 2,500 m (8,200 ft)	600 m (1,970 ft)/min
Hovering ceiling OGE	4,000 m (13,125 ft)

Ka-50 ('Hokum-A') single-seat combat helicopter with scrap view of gun installation on starboard side *(Jane's/Mike Keep)*

1993

Combat radius (estimated) 135 n miles (250 km, 155 miles)
Endurance: standard fuel, 10 min reserve 1 h 40 min
with auxiliary tanks 4 h
g limit +3

UPDATED

KAMOV Ka-52

NATO reporting name: Hokum-B

TYPE: Two-seat all weather day/night combat and training helicopter

PROGRAMME: Revealed at 1995 Paris Air Show; first flight scheduled 1996

DESIGN FEATURES: See accompanying official illustration, 85 per cent similar to single-seat Ka-50, but front fuselage redesigned to accommodate two crew side by side, upward-hinged and bulged gull-wing type transparent canopy door over each seat

POWER PLANT: Klimov TV3-117 turboshafts uprated

ACCOMMODATION: Pilot and pupil or navigator/weapons operator have Zvezda ejection system, for simultaneous emergency escape, similar to that of Ka-50. Full dual controls standard

AVIONICS: Night vision systems in cockpit; Schkval electro-optical system for precision attacks on armour added beside FLIR imager in nose. All Ka-50 equipment retained. French avionics and nav/attack systems optional for export

ARMAMENT: As Ka-50. Igla V air-to-air missiles optional for export

PERFORMANCE (estimated):

Max level speed	162 kts (300 km/h, 186 mph)
Hovering ceiling OGE	3,600 m (11,810 ft)
Range with max fuel	248 n miles (460 km, 285 miles)

NEW ENTRY

KAMOV Ka-62

TYPE: Medium-sized twin-turbine multipurpose helicopter

PROGRAMME: Construction of prototype Ka-62 (then known as V-62) began early 1990; first flight scheduled Summer 1995, proposed development and marketing collaboration with Israel Aircraft Industries. Funded under Russian programme for development of civil aviation for year 2000

CURRENT VERSIONS: **Ka-62**: Basic model for domestic market *as described in detail*, production to begin at Ulan-Ude and certification 1996

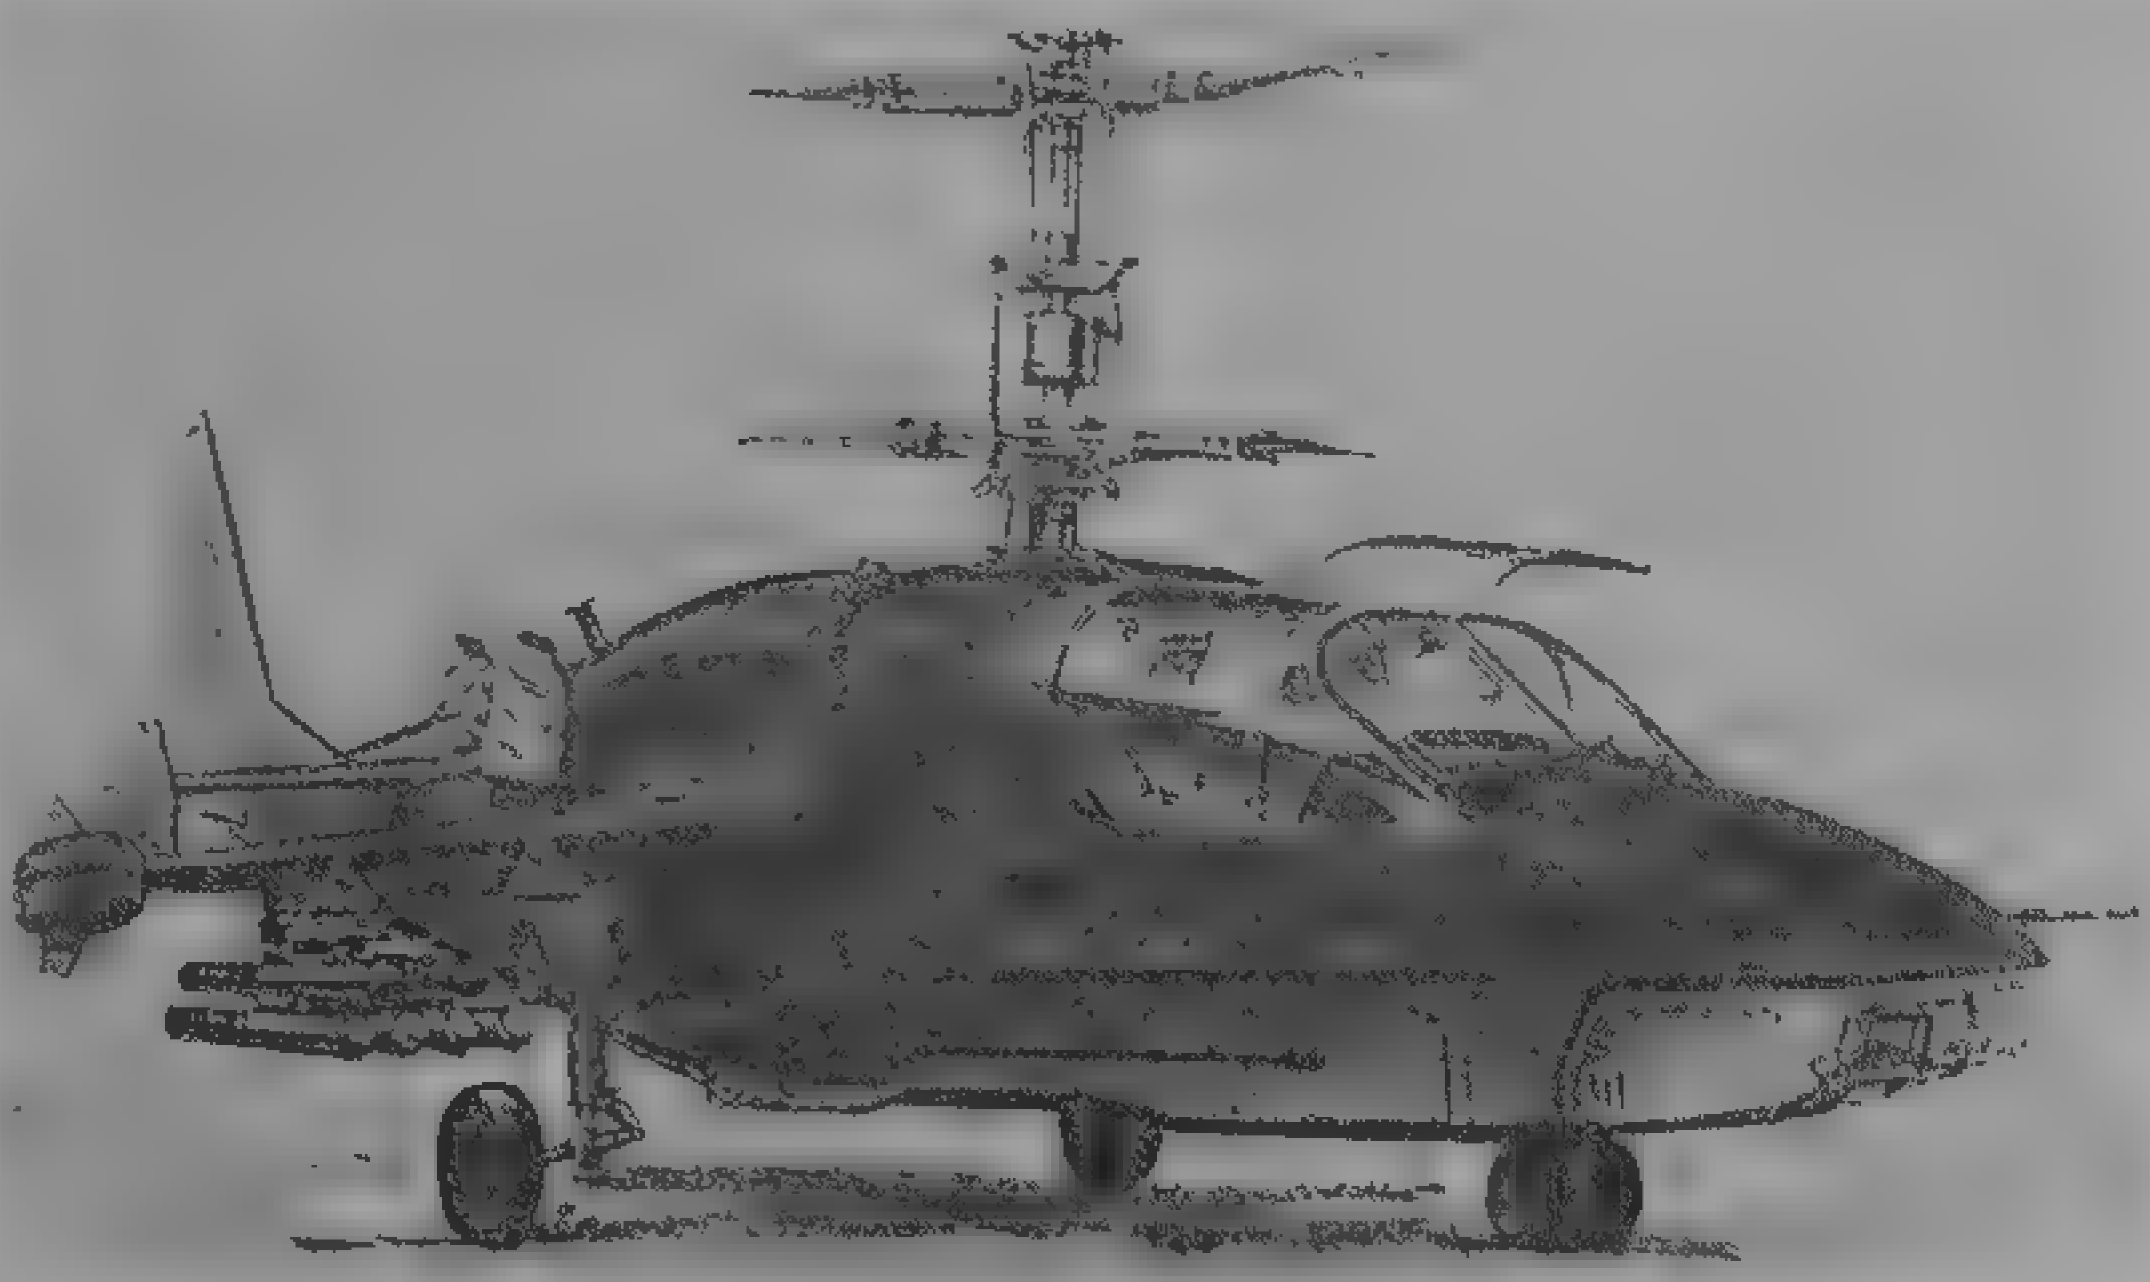
Ka-62M: Second and third prototypes, to be certificated to Western standards, for sale outside CIS, two 1,212 kW (1,625 shp) General Electric T700/CT7-2D turboshafts, five-blade main rotor; avionics to be developed jointly by Aviapribor and DASA, Germany

DESIGN FEATURES: Configuration resembles such Western types as Eurocopter Dauphin, with single main rotor and fan-in-fin similar to latter's Fenestron, retractable tailwheel landing gear

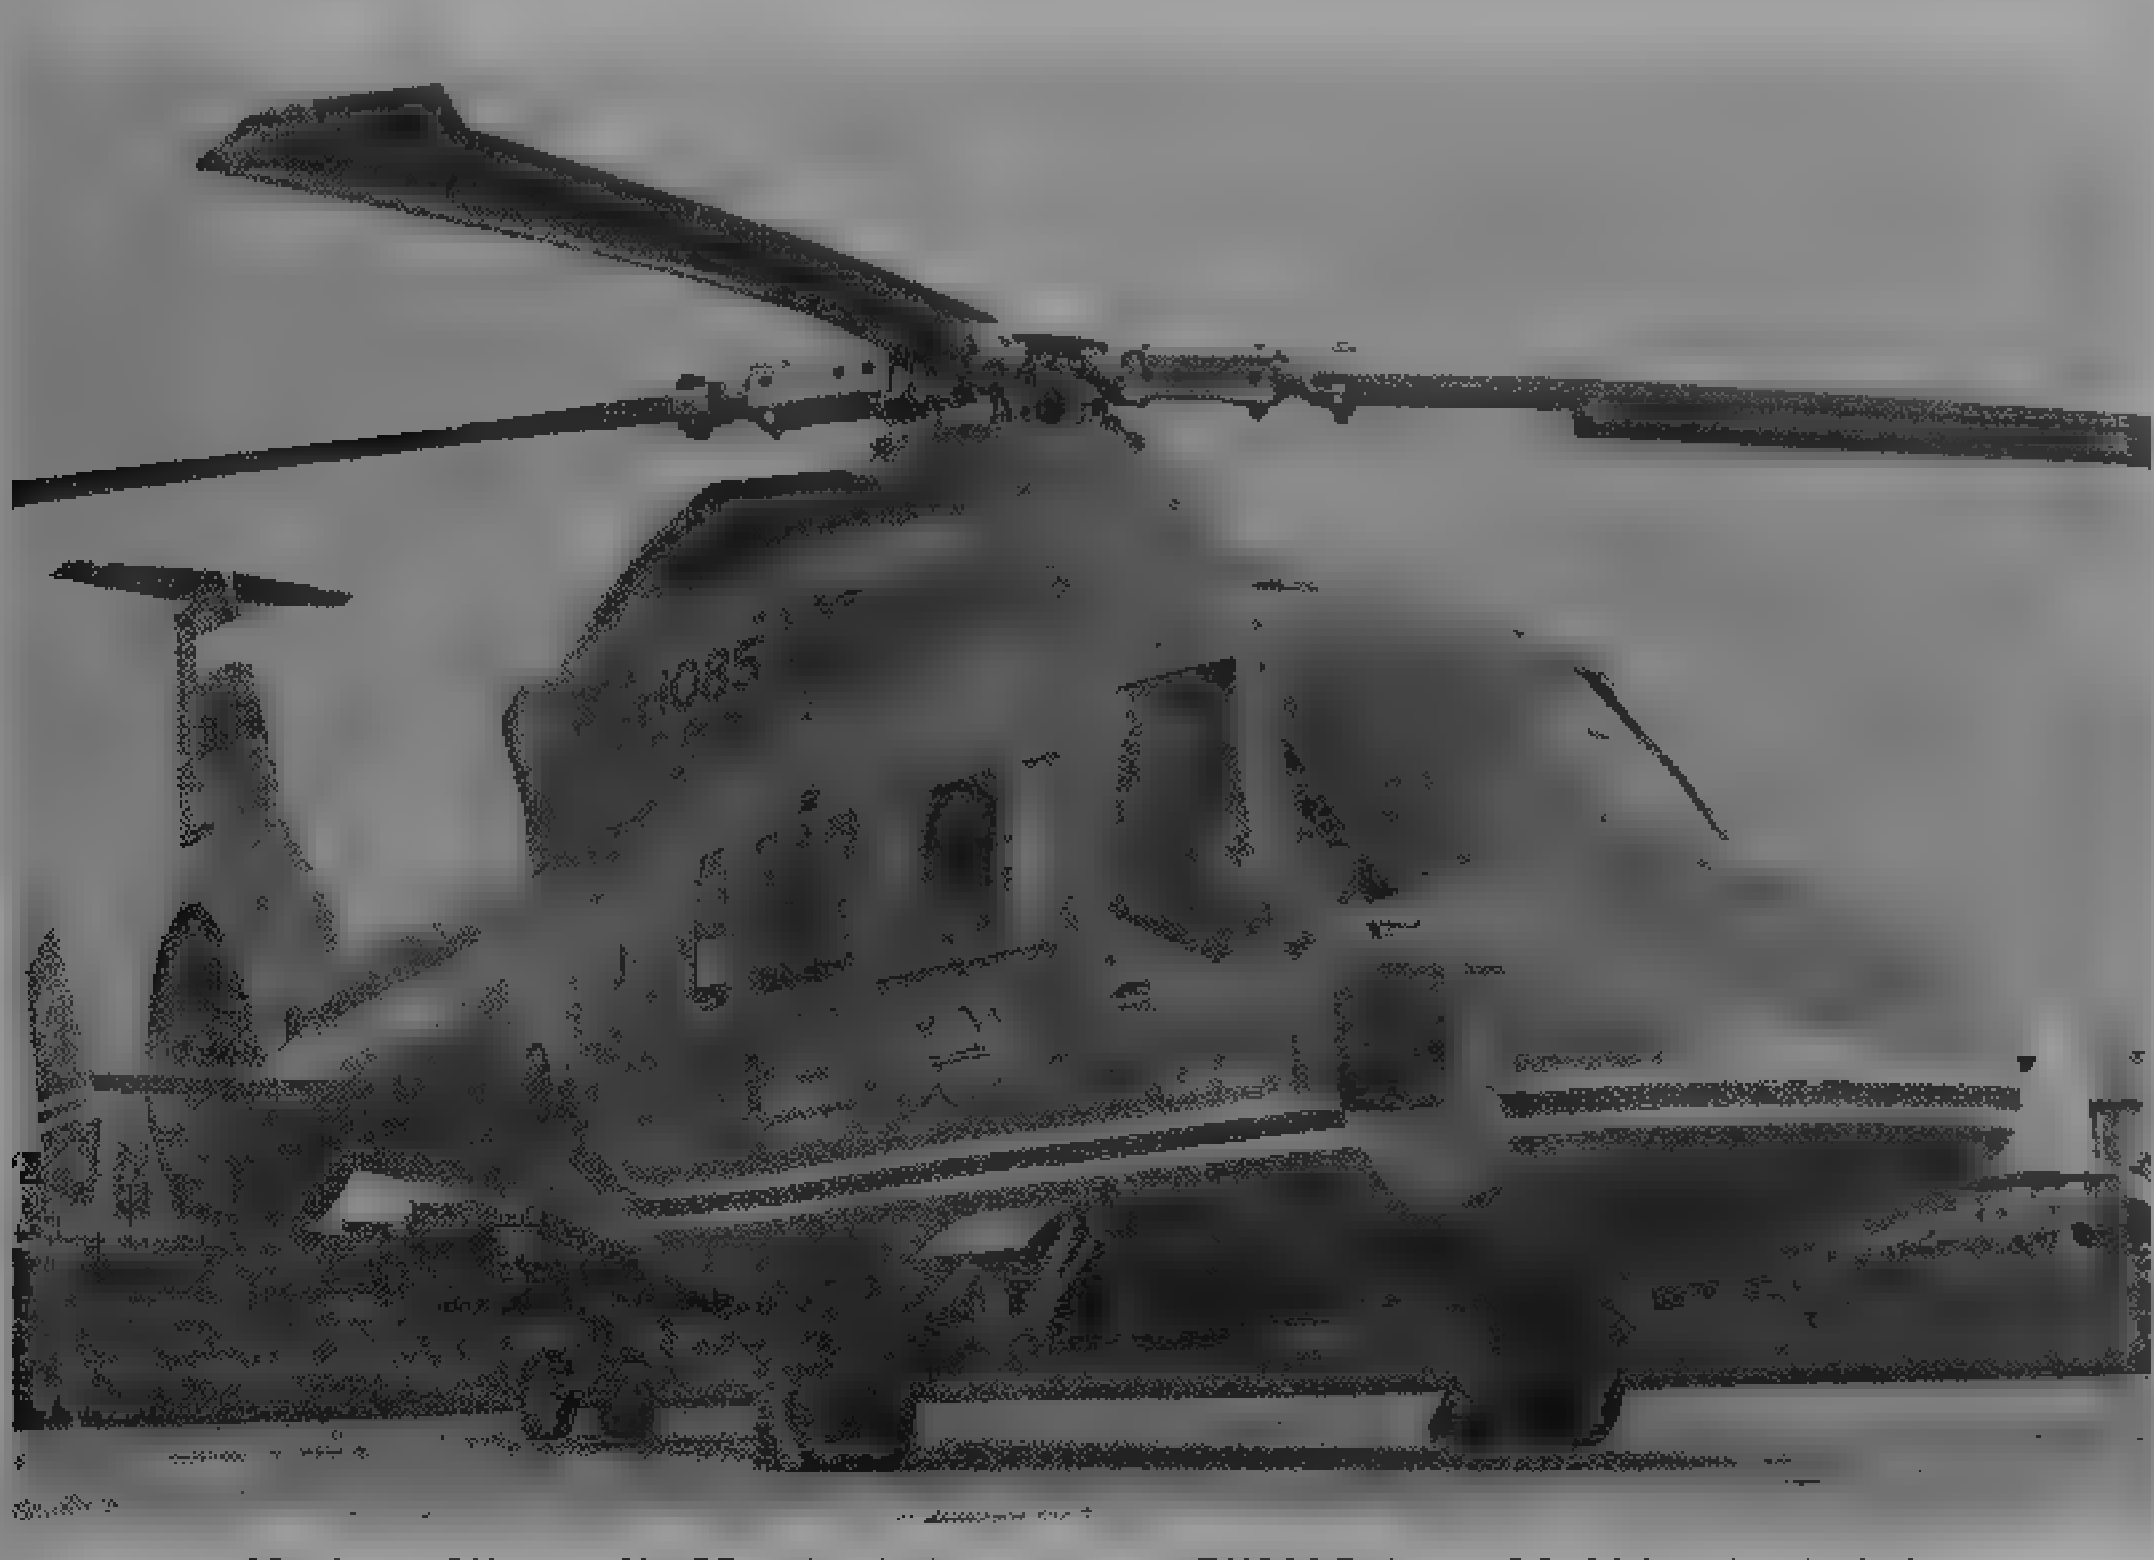
STRUCTURE: Between 50 and 55 per cent of structure made of composites, including four blades of main rotor; fuselage sides, doors, floor and roof, tailboom, fin, vertical stabilisers, and fan blades of carbon-reinforced Kevlar

LANDING GEAR: Retractable tailwheel type; single mainwheels retract inward and upward into bottom of fuselage; twin tailwheels retract into tailboom, shock-absorber in each unit. Optional inflatable pontoons for emergency use on water

2A42 gun installation on Kamov Ka-50 *(Paul Jackson)* 1995



Official Kamov drawing of Ka-52 two-seat all-weather combat and training helicopter 1995



Mockup of Kamov Ka-62 utility helicopter (two RKBM Rybinsk RD-600 turboshafts) 1994

POWER PLANT (basic Ka-62): Two RKBM Rybinsk RD-600 turboshafts, each 956 kW (1,282 shp); fuel tanks under floor, capacity 1,450 litres (383 US gallons, 319 Imp gallons). APU standard

ACCOMMODATION: Crew of one or two; optional bulkhead divider between flight deck and cabin, up to 16 passengers in four rows; forward-hinged door each side of flight deck, large forward-sliding door and small rearward hinged door each side of cabin, baggage hold to rear of cabin. VIP configuration to be available, with five to nine seats and refreshment bar

SYSTEMS: Interior heated and air conditioned

EQUIPMENT: Stretchers, hoist above port cabin door, cargo tie-downs, and other items as necessary for variety of roles including transport of slung freight, air ambulance/operating theatre, search and rescue, patrol of highways, forests, electric power lines, gas and oil pipelines, survey of ice areas, surveillance of territorial waters, economic areas and fisheries, mineral prospecting, and servicing of offshore gas and oil rigs

DIMENSIONS, EXTERNAL:

Main rotor diameter	13.50 m (44 ft 3½ in)
Length overall, rotors turning	15.60 m (51 ft 2¼ in)
Fuselage length	13.25 m (43 ft 5¾ in)
Height overall	4.20 m (13 ft 9⅜ in)
Width: over endplate fins	3.10 m (10 ft 2 in)
over mainwheels	2.50 m (8 ft 2½ in)
Wheelbase	4.725 m (15 ft 6 in)

AREAS:

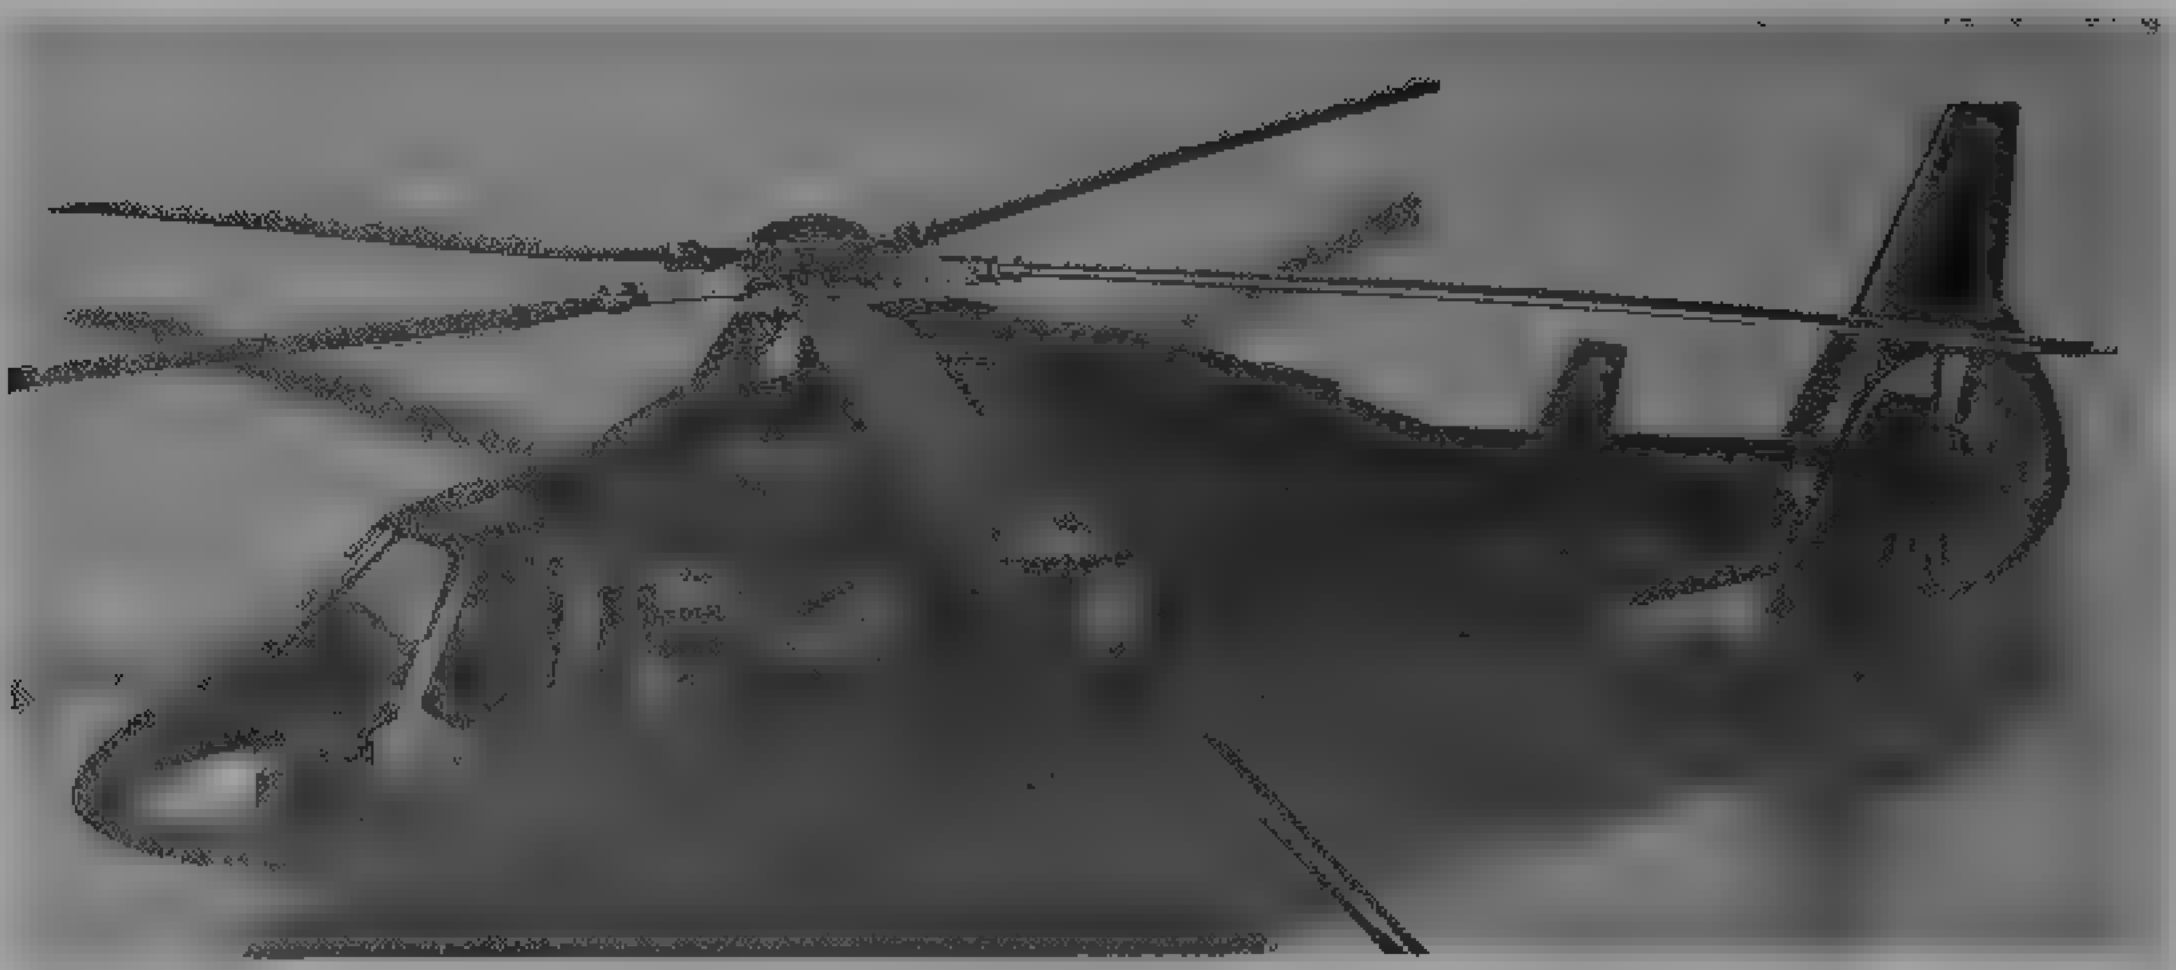
Main rotor disc	143.2 m² (1,541 sq ft)

WEIGHTS AND LOADINGS:

Max payload: internal: 62, 62M	2,000 kg (4,409 lb)
external: 62, 62M	2,500 kg (5,510 lb)
Max T-O weight:	
62, 62M, internal load	6,500 kg (14,330 lb)
62, 62M, external load	6,750 kg (14,880 lb)
Max disc loading: 62, 62M	47.13 kg/m² (9.66 lb/sq ft)

PERFORMANCE (estimated, at max T-O weight with internal load):

Max level speed:	
62, 62M	162 kts (300 km/h, 186 mph)
Cruising speed: 62, 62M	140 kts (260 km/h, 161 mph)
Max rate of climb at S/L: 62	624 m (2,047 ft)/min
62M	690 m (2,263 ft)/min
Rate of climb at S/L, OEI: 62, 62M	123 m (403 ft)/min
Service ceiling: 62, 62M	above 5,000 m (16,400 ft)
Hovering ceiling OGE: 62	2,100 m (6,890 ft)
62M	2,500 m (8,200 ft)
Range with max standard fuel at 500 m (1,640 ft), no reserves: 62	377 n miles (700 km, 435 miles)
62M	353 n miles (655 km, 407 miles)



Model of Ka-62M, with five-blade main rotor *(Piotr Butowski)*

1995

Range with auxiliary fuel at 500 m (1,640 ft), no reserves

62	628 n miles (1,165 km, 724 miles)
62M	553 n miles (1,025 km, 637 miles)

UPDATED

KAMOV Ka-126

NATO reporting name: Hoodlum-B

TYPE: General purpose light helicopter, turboshaft version of Ka-26.

PROGRAMME: Development began 1984, early mockup had two small turboshafts above cabin, single turboshaft adopted subsequently, ground test vehicle completed early 1986; first flight of prototype (SSSR-01963) later 1986; first flight of first of four Soviet built preproduction Ka-126s 19 October 1988.

DESIGN FEATURES: Compared with Ka-26 has turboshaft engine, significant increase in payload/endurance/range and greater year-round utilisation, updated equipment includes new low-volume spraygear.

Contrarotating coaxial three-blade rotors; hinge rotor head with 'rake' type blade attachment, to be succeeded eventually by hingeless head made of titanium and composites. Ka-26 blades of initial series to be succeeded by GFRP and CFRP blades with twin-contour spar, load-carrying rear section and electrothermal anti-icing; rotor brake standard; non-folding blades. Three-stage gearbox with planetary gear trains, of alloy steel and aluminium casting, flange mounted with four load-carrying bolts. Accessories include cooling fan, hydraulic pump and AC generator, engine input 6,000 rpm.

FLYING CONTROLS: Mechanical with irreversible hydraulic actuators. Automatic rotor constant-speed control, conventional four-channel control (longitudinal, lateral, cyclic and differential pitch). Two endplate fins and rudders, toed inward 15°, non-controllable horizontal stabiliser.

STRUCTURE: Airframe materials primarily aluminium alloys, steel alloys and composite sandwich panels of GFRP with honeycomb filler.

LANDING GEAR: Non-retractable four-wheel type. Main units, at rear, carried by stub-wings. All four units embody oleo-pneumatic shock-absorber. Forward wheels of castoring type, self centring, no brakes. Rear wheels have pneumatic brakes. Mainwheel tyres size 595 × 185 mm, pressure 2.45 bars (35.5 lb/sq in); forward wheel tyres size 300 × 125 mm, pressure 3.43 bars (50 lb/sq in). Skis optional. Provision for large inflatable pontoons, across front of aircraft forward of front wheels and under each mainwheel.

POWER PLANT: One 522 kW (700 shp) Mars (Omsk) TV-O-100 turboshaft, installed centrally in streamline fairing above cabin. Electronic-hydraulic automatic two-channel control system, with manual control in case of electronic governor failure. Front driveshaft with plate coupling to gearbox. Fuel in two forward and one aft tank, total capacity 800 litres (211.3 US gallons; 176 Imp gallons). Provision for two external tanks, on sides of fuselage, total capacity 320 litres (84.5 US gallons, 70.4 Imp gallons). Single-point main tank refuelling, on port side of aft tank.

ACCOMMODATION: Fully enclosed cabin, with rearward-sliding door each side, normal operation by single pilot, second seat and dual controls optional. Cabin ventilated, and warmed and demisted by air from combustion heater, which also heats passenger cabin when fitted. Air filter on nose of agricultural version. Space aft of cabin, between main landing gear legs and under transmission, can accommodate variety of interchangeable payloads. Cargo/passenger pod accommodates four or six persons on folding sidewall seats, with provision for seventh passenger beside pilot, two clamshell doors at rear of pod, emergency exit each side and hatch in floor. Ambulance pod accommodates two stretcher patients, two seated casualties and medical attendant. For agricultural work, chemical hopper (capacity 1,000 litres, 264 US gallons, 220 Imp gallons) and dust spreader or spraybars are fitted in this position, on aircraft's CG. Aircraft can also be operated with either an open platform for hauling freight or hook for slinging loads at end of a cable or in a cargo net.

SYSTEMS: Single hydraulic system, with manual override, for control actuators. Main electrical system 27 V 3 kW DC, with back up 40 Ah battery; secondary system 36/115 V AC with two static inverters; 115/200 V AC system with 16 kVA generator (6 kVA to power agricultural equipment and rotor anti-icing). Electrothermal rotor blade de-icing, hot air engine air intake anti-icing; alcohol windscreen anti-icing, electrically heated pitot. Pneumatic system for mainwheel brakes, tyre inflation, agricultural equipment control, pressure 39 to 49 bars (570 to 710 lb/sq in). Oxygen system optional.

AVIONICS: *Comms:* VHF and HF radio, intercom, ADF, emergency locator beacon.

Instrumentation: Radar altimeter, main and back-up artificial horizons.

DIMENSIONS, EXTERNAL:

Rotor diameter (each)	13.00 m (42 ft 7¾ in)
Rotor blade chord	0.25 m (9.84 in)
Length overall, rotors turning	13.00 m (42 ft 7¾ in)
Length of fuselage	7.78 m (25 ft 6 in)
Width, excl rotors	3.22 m (10 ft 7 in)
Height to top of rotor head	4.16 m (13 ft 7½ in)
Wheel track: mainwheels	2.56 m (8 ft 4¾ in)
front wheels	0.90 m (2 ft 11½ in)
Wheelbase	3.48 m (11 ft 5 in)
Crew cabin doors (each): Height	1.06 m (3 ft 5¾ in)
Width	0.83 m (2 ft 8½ in)
Height to sill	0.60 m (1 ft 11¾ in)
Passenger pod doorway: Height	1.40 m (4 ft 7 in)
Width	1.40 m (4 ft 7 in)
Emergency exits (each): Height	0.86 m (2 ft 9¾ in)
Width	0.66 m (2 ft 2 in)
Floor hatch: Length	0.74 m (2 ft 5¼ in)
Width	0.54 m (1 ft 9¼ in)

DIMENSIONS, INTERNAL:

Passenger pod: Length	2.04 m (6 ft 8¼ in)
Max width, at floor	1.21 m (3 ft 11½ in)
Height	1.38 m (4 ft 6¼ in)
Volume	2.47 m³ (87.2 cu ft)

WEIGHTS AND LOADINGS

Weight empty	1,915 kg (4,222 lb)
Max slung payload	1,000 kg (2,205 lb)
Max internal fuel	640 kg (1,411 lb)
Auxiliary fuel	256 kg (564 lb)
Max T-O weight	3,250 kg (7,165 lb)

PERFORMANCE

Never-exceed speed (VNE)	97 kts (180 km/h 112 mph)
Econ cruising speed at S/L	86 kts (160 km/h, 99 mph)
Max rate of climb at S/L	396 m (1,300 ft)/min
Vertical rate of climb at S/L	15 m (49 ft)/min
Service ceiling	3,850 m (12,630 ft)
Hovering ceiling IGE: ISA	970 m (3,180 ft)
ISA + 20°C	100 m (320 ft)
Hovering ceiling OGE: ISA	80 m (260 ft)
Range:	
with max payload	136 n miles (253 km, 157 miles)
with max internal fuel	384 n miles (713 km; 443 miles)
with auxiliary fuel, no reserves	547 n miles (1,015 km, 630 miles)
Max endurance, internal fuel, no reserves	5 h 36 min

UPDATED

Agricultural cropspraying version of Kamov Ka-126 general purpose light helicopter

1994

KAMOV Ka-128

TYPE: General purpose light helicopter: differs from Ka-126 only in power plant and addition of an intermediate gearbox.

PROGRAMME: Development began 1992. Apparently failed to achieve planned 1994 first flight.

POWER PLANT: One 531 kW (712 shp) Turbomeca Arriel 1D1 turboshaft, with similarly rated transmission.

WEIGHTS AND LOADINGS

Weight empty	1,820 kg (4,013 lb)
Max slung payload	1,000 kg (2,205 lb)
Max internal fuel	640 kg (1,411 lb)
Auxiliary fuel	256 kg (564 lb)
Max T-O weight	3,250 kg (7,165 lb)

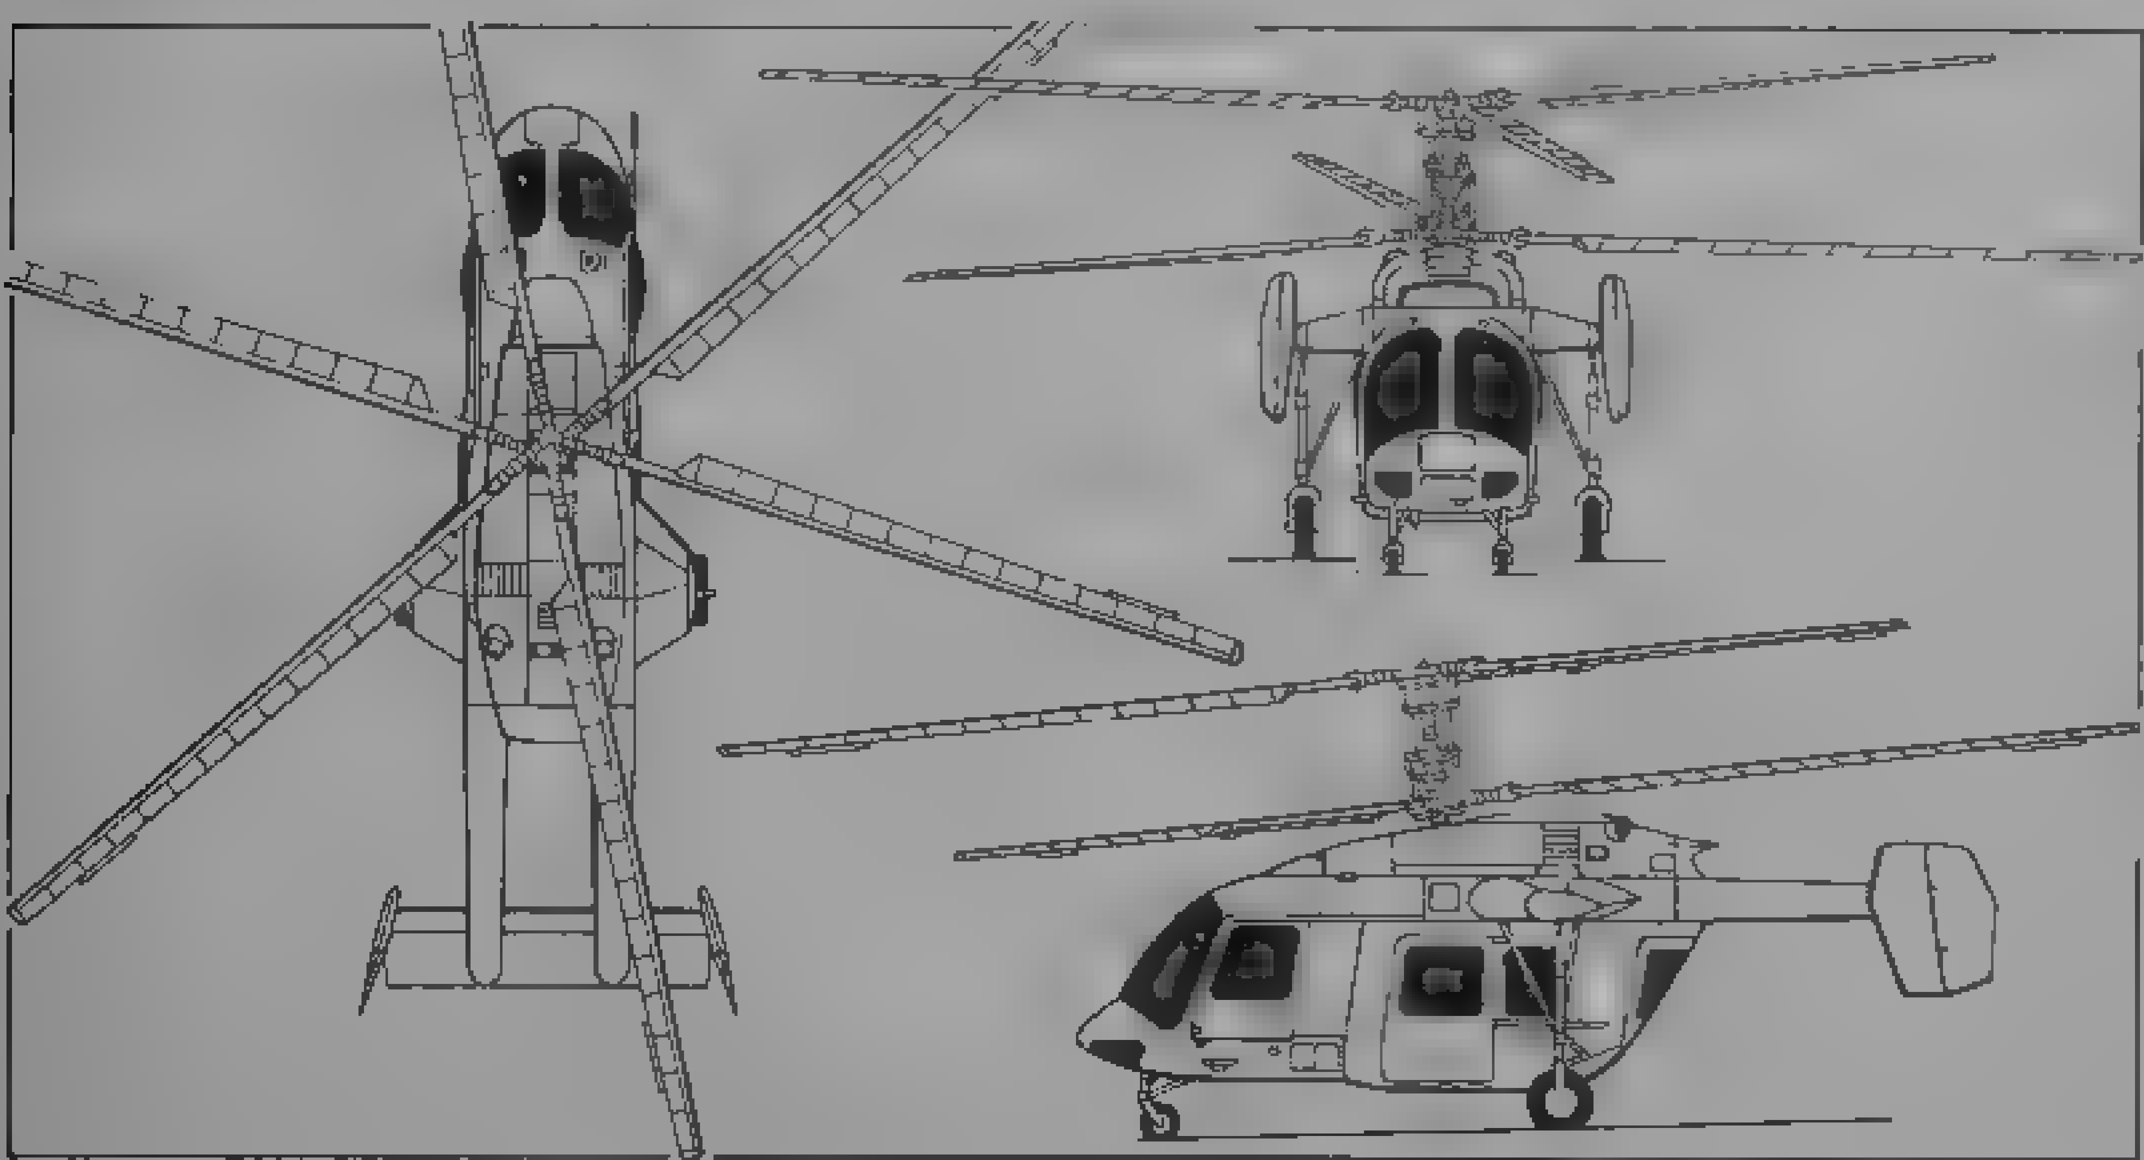
PERFORMANCE (estimated)

Never-exceed speed (VNE)	105 kts (195 km/h, 121 mph)
Econ cruising speed at S/L	86 kts (160 km/h, 99 mph)
Max rate of climb at S/L	468 m (1,535 ft)/min
Vertical rate of climb at S/L	90 m (295 ft)/min
Service ceiling	5,200 m (17,060 ft)
Hovering ceiling IGE: ISA	1,600 m (5,250 ft)
ISA + 20°C	850 m (2,785 ft)
Hovering ceiling OGE: ISA	750 m (2,460 ft)
Range:	
with max payload	198 n miles (367 km, 228 miles)
with max internal fuel	383 n miles (710 km, 441 miles)
with auxiliary fuel, no reserves	570 n miles (1,057 km, 656 miles)
Max endurance, internal fuel, no reserves	5 h 39 min

VERIFIED

Kamov Ka-226 twin-turbine utility and agricultural helicopter

1994



Kamov Ka-226, a refined development of the Ka-126 utility helicopter *(Jane's/Mike Keep)*

1994

KAMOV Ka-226

TYPE: Twin-turbine utility and agricultural helicopter.

PROGRAMME: Announced at 1990 Helicopter Association International convention, Dallas, USA. Apparently failed to achieve planned 1994 first flight. FAA certification to be sought; production will be in Russia.

DESIGN FEATURES: Refined development of Ka-26/126, changes to shape of nose, twin tailfins and rudders, and passenger pod; passenger cabin has much larger windows and remains interchangeable with variety of payload modules including agricultural systems with hopper capacity of 1,000 litres (264 US gallons; 220 Imp gallons); new rotor system, interchangeable with standard coaxial system, will become available later.

LANDING GEAR: Non-retractable four-wheel type. Main units at rear, carried by stub-wings. All units embody oleo-pneumatic shock absorber. Mainwheel tyres size 595 × 185 mm, pressure 2.5 bars + 0.5 (36.25 lb/sq in + 7.25); forward tyres size 300 × 125 mm, pressure 3.5 bars + 0.5 (50.75 lb/sq in + 7.25). Forward units of castoring type, without brakes. Rear wheels have pneumatic brakes.

POWER PLANT: Two 313 kW (420 shp) Allison 250-C20B turboshafts, side by side aft of rotor mast, in same position as single turboshaft of Ka-126, with individual driveshafts to rotor gearbox. Transmission rating 616 kW (840 shp). Standard fuel capacity 750 litres (198 US gallons, 165 Imp gallons), in tanks above and forward of payload module area. Provision for two external tanks, on sides of fuselage, total capacity 320 litres (84.5 US gallons, 70.4 Imp gallons).

ACCOMMODATION: Cabin module has two three-place rearward- and forward-facing bench seats; baggage compartment behind rear wall. Seventh passenger beside pilot on flight deck.

AVIONICS: Cockpit instrumentation and avionics to customer's choice, including Bendix/King equipment for IFR flight.

EQUIPMENT: Specially equipped payload modules available for variety of roles.

DIMENSIONS, EXTERNAL

Rotor diameter (each)	13.00 m (42 ft 7¾ in)
Length overall, excl rotors	8.10 m (26 ft 7 in)
Width over stub-wings	3.22 m (10 ft 6¾ in)
Height to top of rotor head	4.15 m (13 ft 7½ in)
Wheel track: nosewheels	0.90 m (2 ft 11½ in)
mainwheels	2.56 m (8 ft 4¾ in)
Wheelbase	3.48 m (11 ft 5 in)
Passenger pod: Length	2.04 m (6 ft 8¼ in)
Width	1.28 m (4 ft 2¼ in)
Depth	1.40 m (4 ft 7⅛ in)

AREAS

Rotor disc (each)	132.7 m² (1,430 sq ft)

WEIGHTS AND LOADINGS

Weight empty	1,952 kg (4,304 lb)
Max payload	1,300 kg (2,865 lb)
Max internal fuel	600 kg (1,322 lb)
Auxiliary fuel	256 kg (564 lb)
Normal T-O weight	3,100 kg (6,835 lb)
Max T-O weight	3,400 kg (7,500 lb)

PERFORMANCE (estimated):
Never exceed speed (VNE) 110 kts (205 km/h; 127 mph)
Econ cruising speed 100 kts (185 km/h; 115 mph)
Max rate of climb at S/L 540 m (1,770 ft)/min
Vertical rate of climb at S/L 168 m (550 ft)/min
Service ceiling 5,050 m (16,565 ft)
Hovering ceiling IGE, ISA 2,020 m (6,625 ft)
ISA + 20°C 1,200 m (3,935 ft)
Hovering ceiling OGE, ISA 1,280 m (4,200 ft)
ISA + 20°C 600 m (1,970 ft)
Range: with max payload 20 n miles (37 km, 23 miles)
with max internal fuel 325 n miles (602 km, 374 miles)
with auxiliary fuel, no reserves 470 n miles (873 km, 542 miles)
Max endurance, internal fuel, no reserves 4 h 38 min

KAZAN (KVPO)

KAZAN HELICOPTER PRODUCTION ASSOCIATION

Tetsevskaya Street 13/30, 420085 Kazan, Tatarstan
Telephone: 7 (8432) 54 46 91
Fax: 7 (8432) 54 52 52
Telex: 224848 AGAT SU
GENERAL DIRECTOR: Vladimir A Samoilov

For many years, Kazan has marketed and built Mil helicopters including Mi-4, Mi-8, Mi-14 and Mi-17/172 series. At the 1995 Paris Air Show, it exhibited the Mi-17MD upgraded 40-passenger version of the Mi-17 and a mockup of the first product of its design office, the Ansat light multipurpose helicopter, designed in association with Mil.

NEW ENTRY

Kazan/Mil Mi-17MD 40-passenger upgraded version of Mi-17 *(Paul Jackson)*

1995

KAZAN/MIL Mi-17MD

TYPE: Twin-turbine multipurpose helicopter.
PROGRAMME: Prototype (RA-70937 converted from Mi-8MTV) displayed at 1995 Paris Air Show; in production.
DESIGN FEATURES: Generally similar to latest versions of Mi-17 (which see). Accommodation increased to 40 passengers; improved clamshell rear-loading doors and new hinged built-in ramp forming rear floor of fuselage pod, improved side doors, new avionics and cockpit displays, and extended-range fuel tanks.

NEW ENTRY

KAZAN/MIL ANSAT

TYPE: Twin-turbine light multipurpose helicopter.
PROGRAMME: Joint project of Kazan and Mil OKB; fuselage mockup exhibited at 1995 Paris Air Show, at initial design stage.
DESIGN FEATURES: See accompanying illustration. Conventional pod-and-boom fuselage; skid landing gear.
POWER PLANT: Two P&WC Klimov PK-206A turboshafts, each 470 kW (631 shp).
ACCOMMODATION: Two seats on flight deck, five or seven seats in cabin, or two stretcher patients and two attendants, or internal or externally slung freight.
DIMENSIONS, EXTERNAL:
Main rotor diameter 11.5 m (37 ft 9 in)
WEIGHTS AND LOADINGS:
Max freight: internal 1,000 kg (2,204 lb)
external 1,200 kg (2,645 lb)
Max T-O weight 3,300 kg (7,275 lb)
PERFORMANCE (estimated):
Max cruising speed 143 kts (265 km/h; 165 mph)
Service ceiling 5,000 m (16,400 ft)
Hovering ceiling OGE 3,000 m (9,840 ft)
Range with max fuel 313 n miles (580 km; 360 miles)
Endurance with max fuel 3 h 18 min

KHRUNICHEV

KHRUNICHEV STATE RESEARCH AND PRODUCTION SPACE CENTRE

Novozavodskaya Street 18, 121309 Moscow
Telephone: 7 (095) 145 83 43
Fax: 7 (095) 142 59 00
GENERAL DIRECTOR: Anatoly I Kiselyov
DEPUTY GENERAL DIRECTORS:
Alexander V Lebedev, Anatoly A Kalinin
Aviation Department
Telephone: 7 (095) 145 88 60
Fax: 7 (095) 145 94 77
CHIEF DESIGNER: Evgeny P Grunin
DEPUTY CHIEF DESIGNER: Arnold I Andrianov
AVIATION DEPARTMENT MANAGER: Sergei M Zhiganov
RESEARCH AND DEVELOPMENT DIVISION MANAGER:
Yuri I Polavsky
DESIGN DIVISION MANAGER: Mikhail M. Vasyuk

The Aviation Department of this State Research Centre was formed in August 1994 to develop and manufacture general purpose aircraft. It comprises a design bureau, experimental facilities and operational and maintenance services. The main task of the Aviation Department is to develop to the series production stage aircraft designed on the basis of foreign and domestic components, and then to market them worldwide.

NEW ENTRY

KHRUNICHEV T-201 STERH

TYPE: Turboprop-powered general utility aircraft.
PROGRAMME: Under development by Khrunichev as re-engined version of Aeroprogress/ROKS-Aero T-101 Grach.
DESIGN FEATURES: As described for Aeroprogress/ROKS-Aero T-201 Aist (which see), except as follows.
POWER PLANT: One 917 kW (1,230 shp) P&WC PT6A-65AR turboprop.
WEIGHTS AND LOADINGS:
Max fuel 1,400 kg (3,086 lb)
Max zero-fuel weight 5,200 kg (11,464 lb)
PERFORMANCE (estimated):
T-O run 350 m (1,150 ft)
T-O to 15 m (50 ft) 565 m (1,854 ft)
Landing from 15 m (50 ft) 500 m (1,641 ft)
Range, 45 min reserve, at 3,000 m (9,850 ft):
with max payload 259 n miles (480 km, 298 miles)
with max fuel 890 n miles (1,650 km, 1,025 miles)

NEW ENTRY

KHRUNICHEV T-411 WOLVERINE

TYPE: Four/five seat multipurpose light aircraft with STOL capability.
PROGRAMME: Programme started in 1994, production began simultaneously; available also from Washington Aeroprogress Inc (see US section).
DESIGN FEATURES: Configuration generally similar to Aeroprogress/ROKS-Aero T-411 Aist-2 (which see), slightly stretched airframe and more roomy cabin; different landing gear and power plant.
FLYING CONTROLS: As for Aist-2.
STRUCTURE: Primary structure of aluminium alloy and alloy steel, part covered with Dacron synthetic fabric. Two-spar wings, metal skin on leading-edge and over fuel tanks at root, Dacron covered between spars. Welded tube truss fuselage, covered with metal sheet and Dacron. Metal tail surfaces, Dacron covered.
LANDING GEAR: Non-retractable tailwheel type, single wheel on each unit, with fairings on mainwheels. Arched cantilever tubular spring main legs. Self-centring steerable tailwheel. Mainwheel tyres size 6.00-6. Brakes on mainwheels.
POWER PLANT: One 261 kW (350 hp) Teledyne Continental TSIO-550-B flat-six engine; Hartzell three-blade variable-pitch propeller. Two main and two auxiliary fuel tanks in wingroots.
ACCOMMODATION: Pilot and three or four passengers, on side by side front seats and rear bench seat, starboard front seat and rear bench removable, or bench seat foldable, for carrying equivalent freight; convertible into ambulance for one stretcher patient, one seated casualty and medical attendant in addition to pilot. Dual controls standard. Baggage compartment aft of rear seats, with large upward opening door on port side, used also for loading freight or

stretcher. Forward-hinged jettisonable door each side of cabin. Ventilation and heating standard.

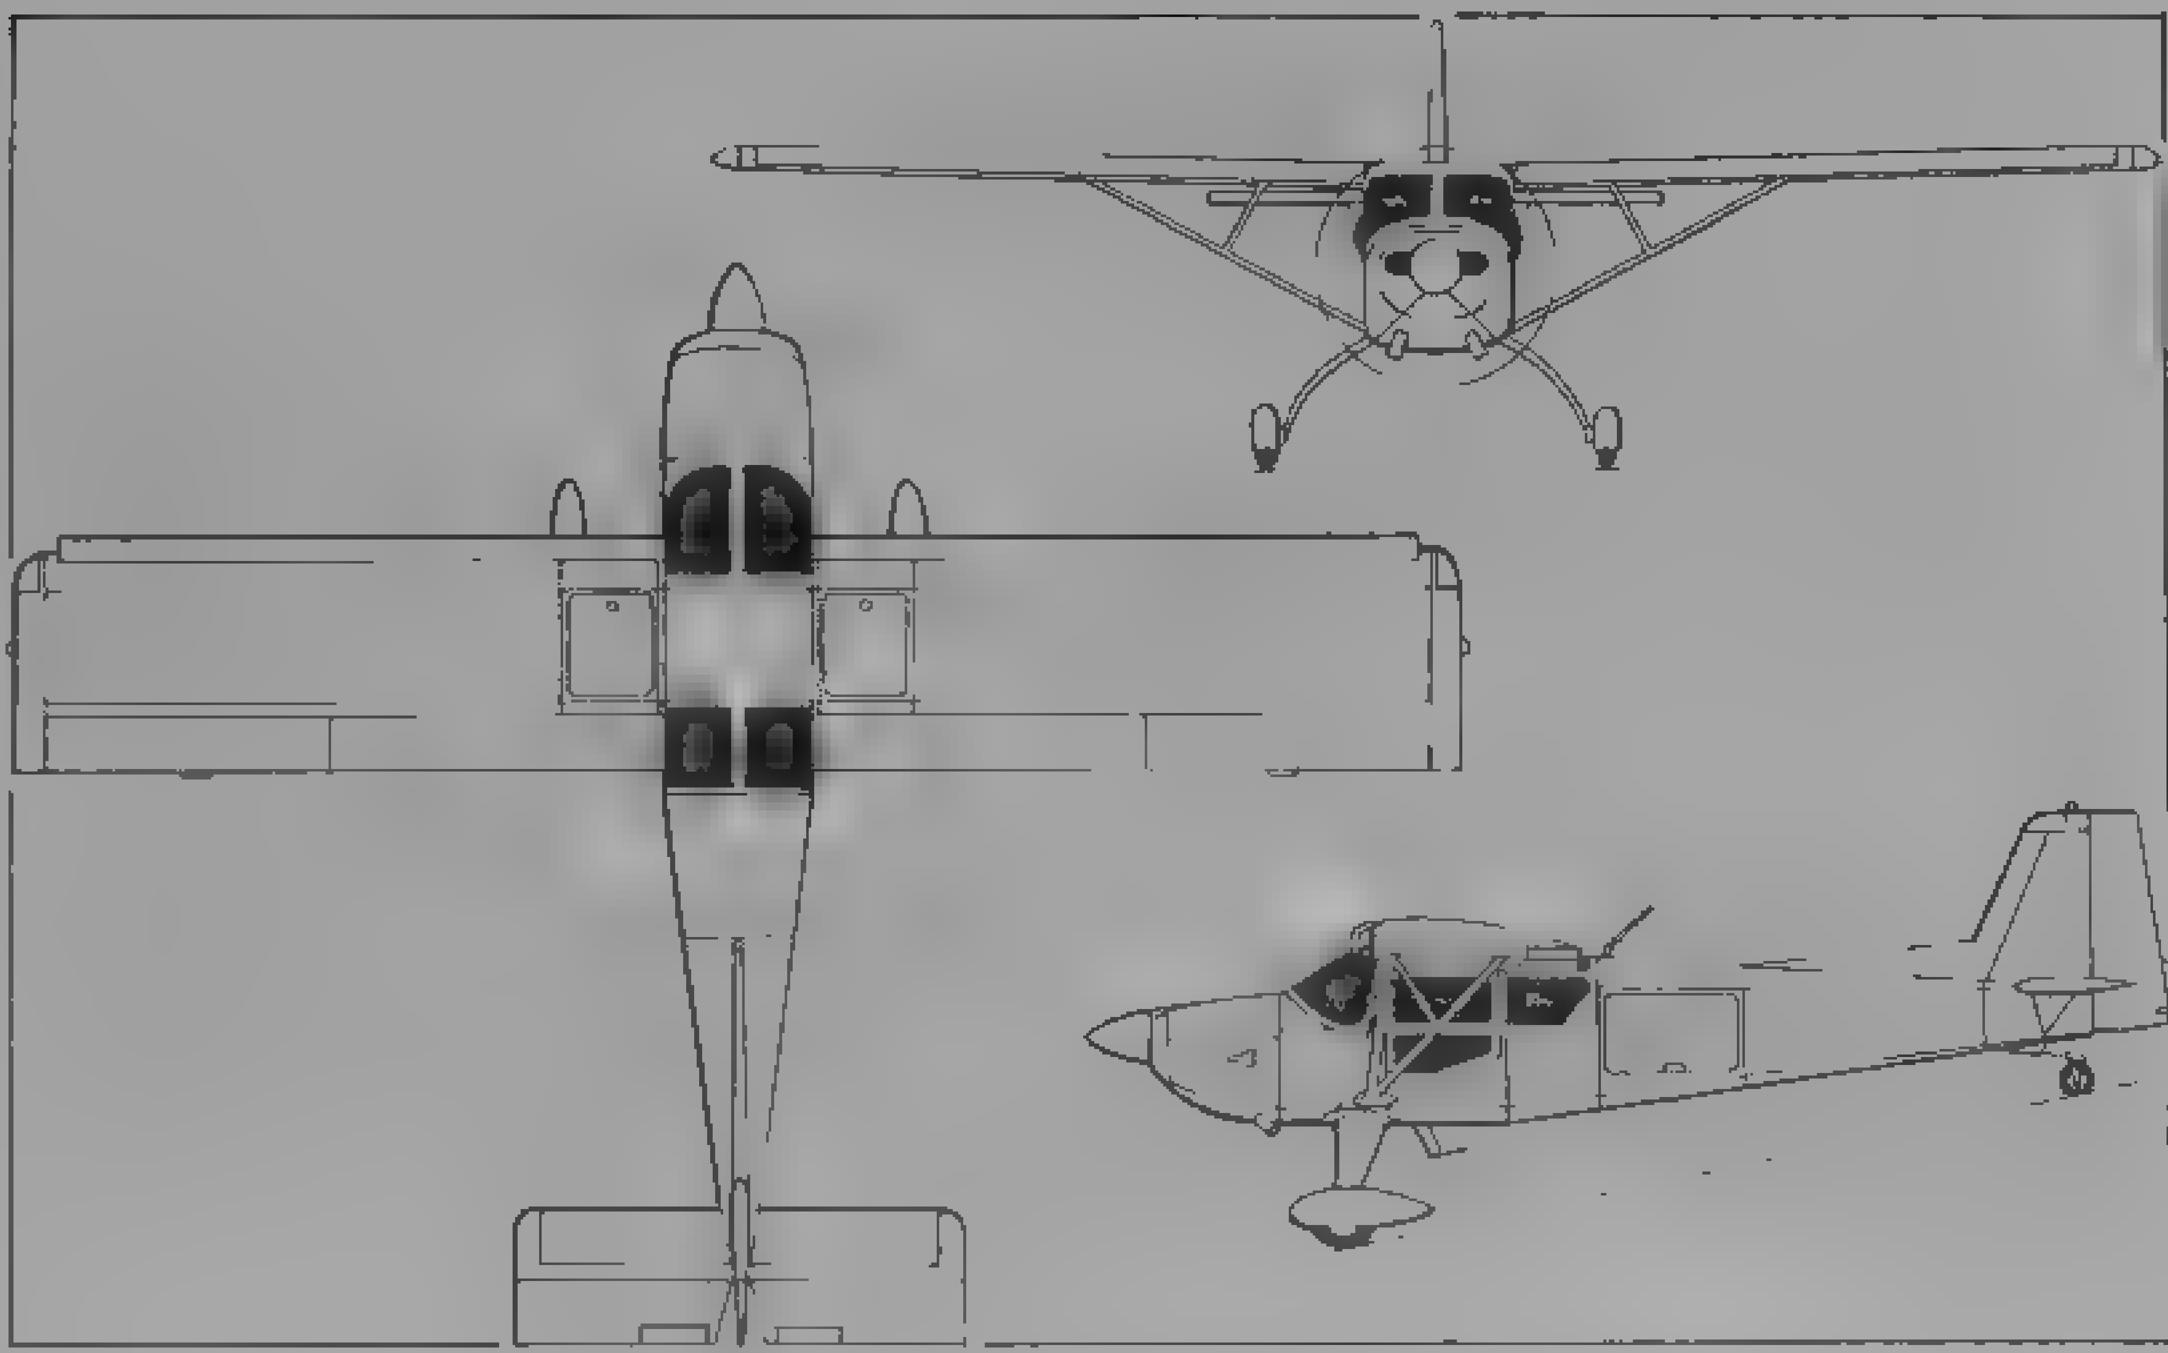
SYSTEMS: Generator on engine supplies 24 V DC electrical power; 25 Ah battery.

AVIONICS: *Comms*: Bendix/King nav/com for VFR flight, including radio survival beacon.

Flight: Marker beacon receiver.

DIMENSIONS, EXTERNAL:	
Wing span	12.73 m (41 ft 9¼ in)
Length overall	9.40 m (30 ft 10 in)
Height overall	2.80 m (9 ft 2¼ in)
Wheel track	3.13 m (10 ft 3¼ in)
Wheelbase	6.50 m (21 ft 4 in)
Propeller diameter	2.03 m (6 ft 8 in)
Baggage door: Max height	0.65 m (2 ft 1½ in)
Width	1.22 m (4 ft 0 in)
DIMENSIONS, INTERNAL:	
Cabin: Length	2.94 m (9 ft 7¾ in)
Max width	1.27 m (4 ft 2 in)
Max height	1.30 m (4 ft 3 in)
AREAS:	
Wings, gross	24.3 m² (261.6 sq ft)
WEIGHTS AND LOADINGS:	
Max payload	360 kg (794 lb)
Normal fuel	150 kg (330 lb)
Max fuel	300 kg (661 lb)
Max T-O weight	1,550 kg (3,417 lb)
Max wing loading	63.8 kg/m² (13.1 lb/sq ft)
Max power loading	5.94 kg/kW (9.76 lb/hp)
PERFORMANCE (estimated):	
Max cruising speed	108 kts (200 km/h; 124 mph)
Stalling speed	43 kts (80 km/h; 50 mph)
Max rate of climb at S/L	288 m (945 ft)/min
Service ceiling	3,000 m (9,840 ft)
T-O to 15 m (50 ft)	225 m (738 ft)
Landing from 15 m (50 ft)	350 m (1,149 ft)
Range:	
with normal fuel	324 n miles (600 km; 372 miles)
with max fuel	593 n miles (1,100 km; 683 miles)

NEW ENTRY



Khrunichev T-411 Wolverine four/five-seat light aircraft *(Jane's/James Goulding)*

1995

KHRUNICHEV T-417 PEGASUS

TYPE: Single-engined light freight transport.

PROGRAMME: Design started 1994.

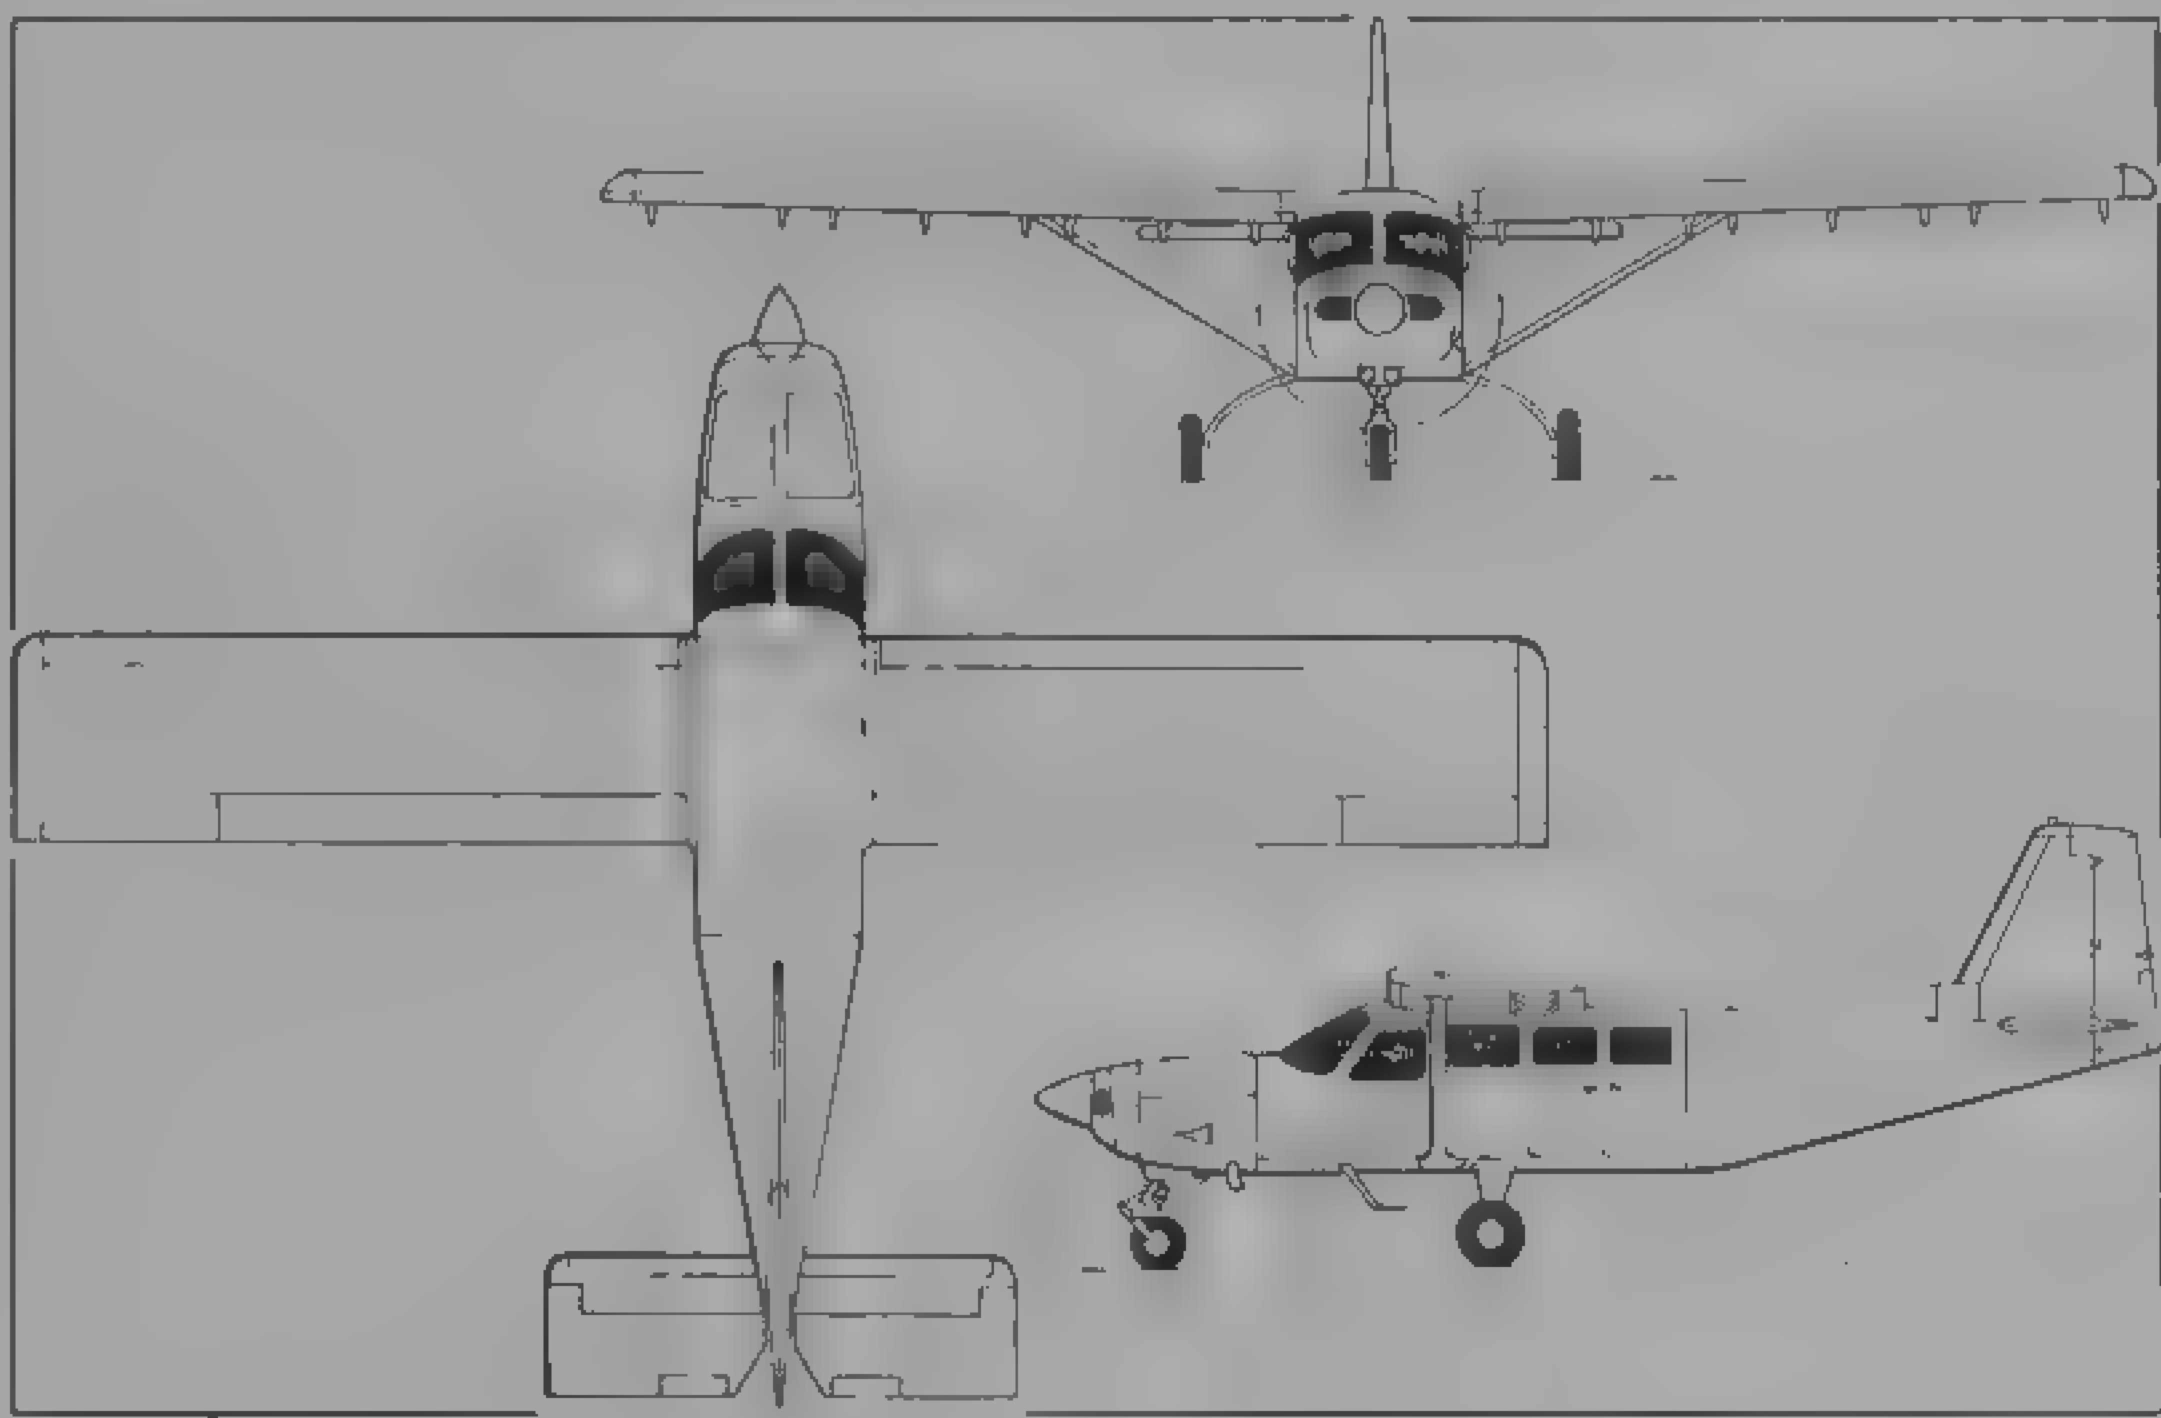
DESIGN FEATURES: Conventional strut-braced high-wing monoplane, with non-retractable tricycle landing gear (see three-view).

LANDING GEAR: Mainwheel tyres size 550 × 200 mm, nosewheel tyre size 450 × 150 mm.

POWER PLANT: One 261 kW (350 hp) Teledyne Continental TSIO-550 flat-six engine.

ACCOMMODATION: Side by side seats for two persons on flight deck, with jettisonable forward-hinged door each side. Dual controls standard. Normally flown by pilot only as freighter, but provision for pilot and up to six passengers. Large double freight door on port side of cabin, vertically split to open forward and rearward for unrestricted access.

AVIONICS: Bendix/King equipment standard.

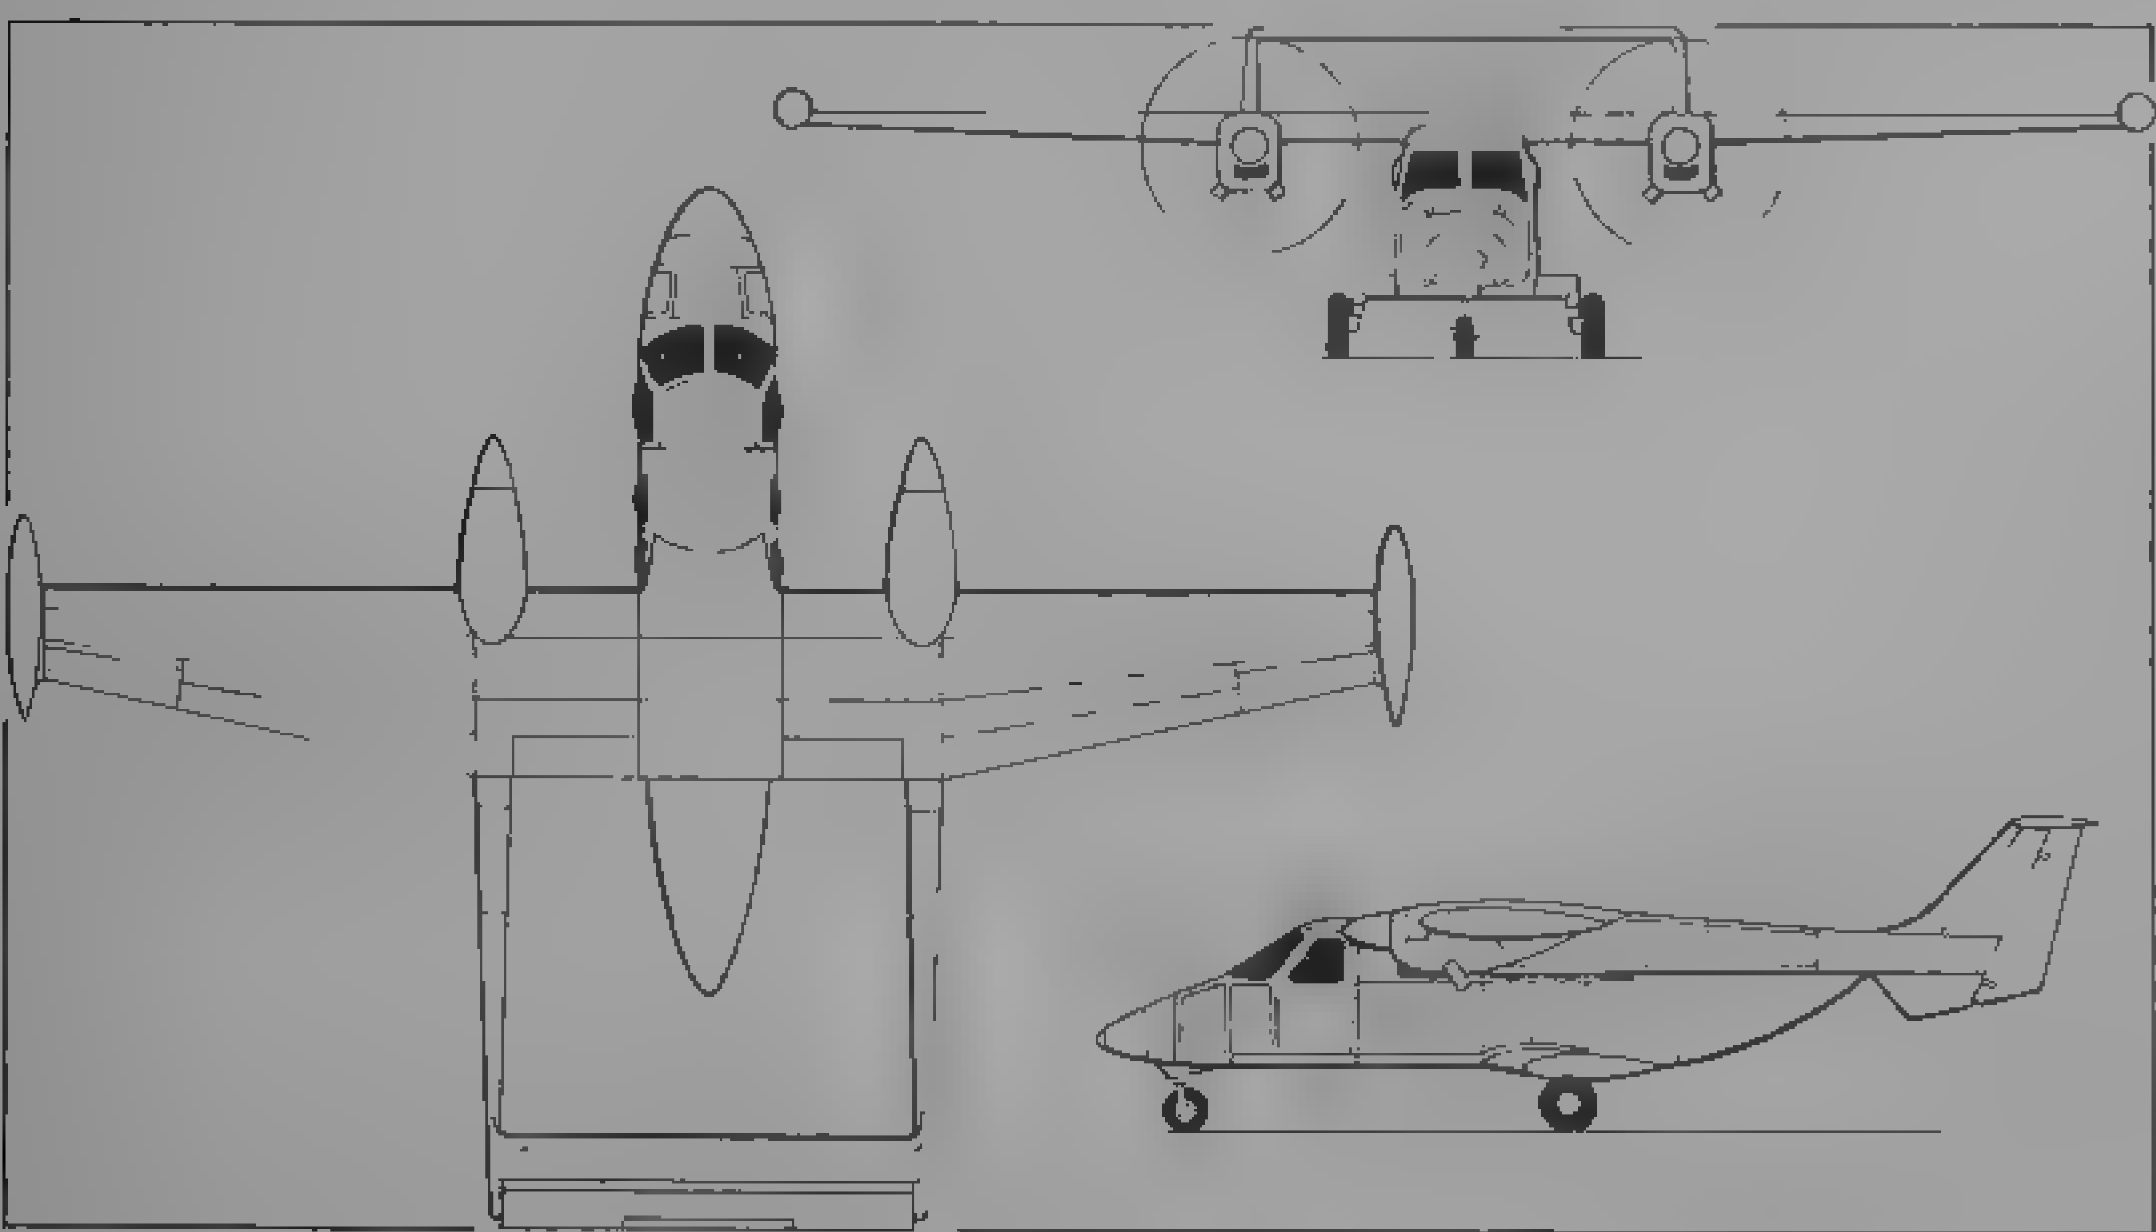


Khrunichev T-417 Pegasus light freight transport *(Jane's/James Goulding)*

1995

DIMENSIONS, INTERNAL:	
Cabin, incl flight deck: Length	3.60 m (11 ft 9¾ in)
Width	1.30 m (4 ft 3 in)
Height	1.25 m (4 ft 1 in)
WEIGHTS AND LOADINGS:	
Max fuel	300 kg (661 lb)
Max payload	600 kg (1,323 lb)
Max T-O weight	1,980 kg (4,365 lb)
Max power loading	7.59 kg/kW (12.47 lb/hp)
PERFORMANCE (estimated):	
Max level speed	165 kts (305 km/h; 190 mph)
T-O to 15 m (50 ft)	340 m (1,115 ft)
Landing from 15 m (50 ft)	490 m (1,608 ft)
Range:	
with max payload	458 n miles (850 km; 528 miles)
with max fuel	1,074 n miles (1,990 km; 1,236 miles)

NEW ENTRY



Khrunichev T-420A Strizh-A twin-engined passenger/freighter *(Jane's/James Goulding)*

1995

KHRUNICHEV T-420A STRIZH (SWIFT)

TYPE: Twin-engined passenger/freight transport.

PROGRAMME: Design started August 1994, first flight 1996.

CURRENT VERSIONS: **T-420A Strizh-A**: *Detailed description applies to this version.*

T-420: With two 265 kW (355 hp) VOKBM M-14P piston engines.

T-420C: With two 261 kW (350 hp) Teledyne Continental TSIO-550-B piston engines.

Light freighter: Alternative version, revealed June 1995, has 'beaver tail' rear door, conventional wingtips, two 157 kW (210 hp) Teledyne Continental TSIO-360 piston engines and wider track, cantilever self-sprung landing gear with spats. Maximum payload 500 kg (1,102 lb), maximum T-O weight 1,990 kg (4,387 lb).

COSTS: Estimated $470,000.

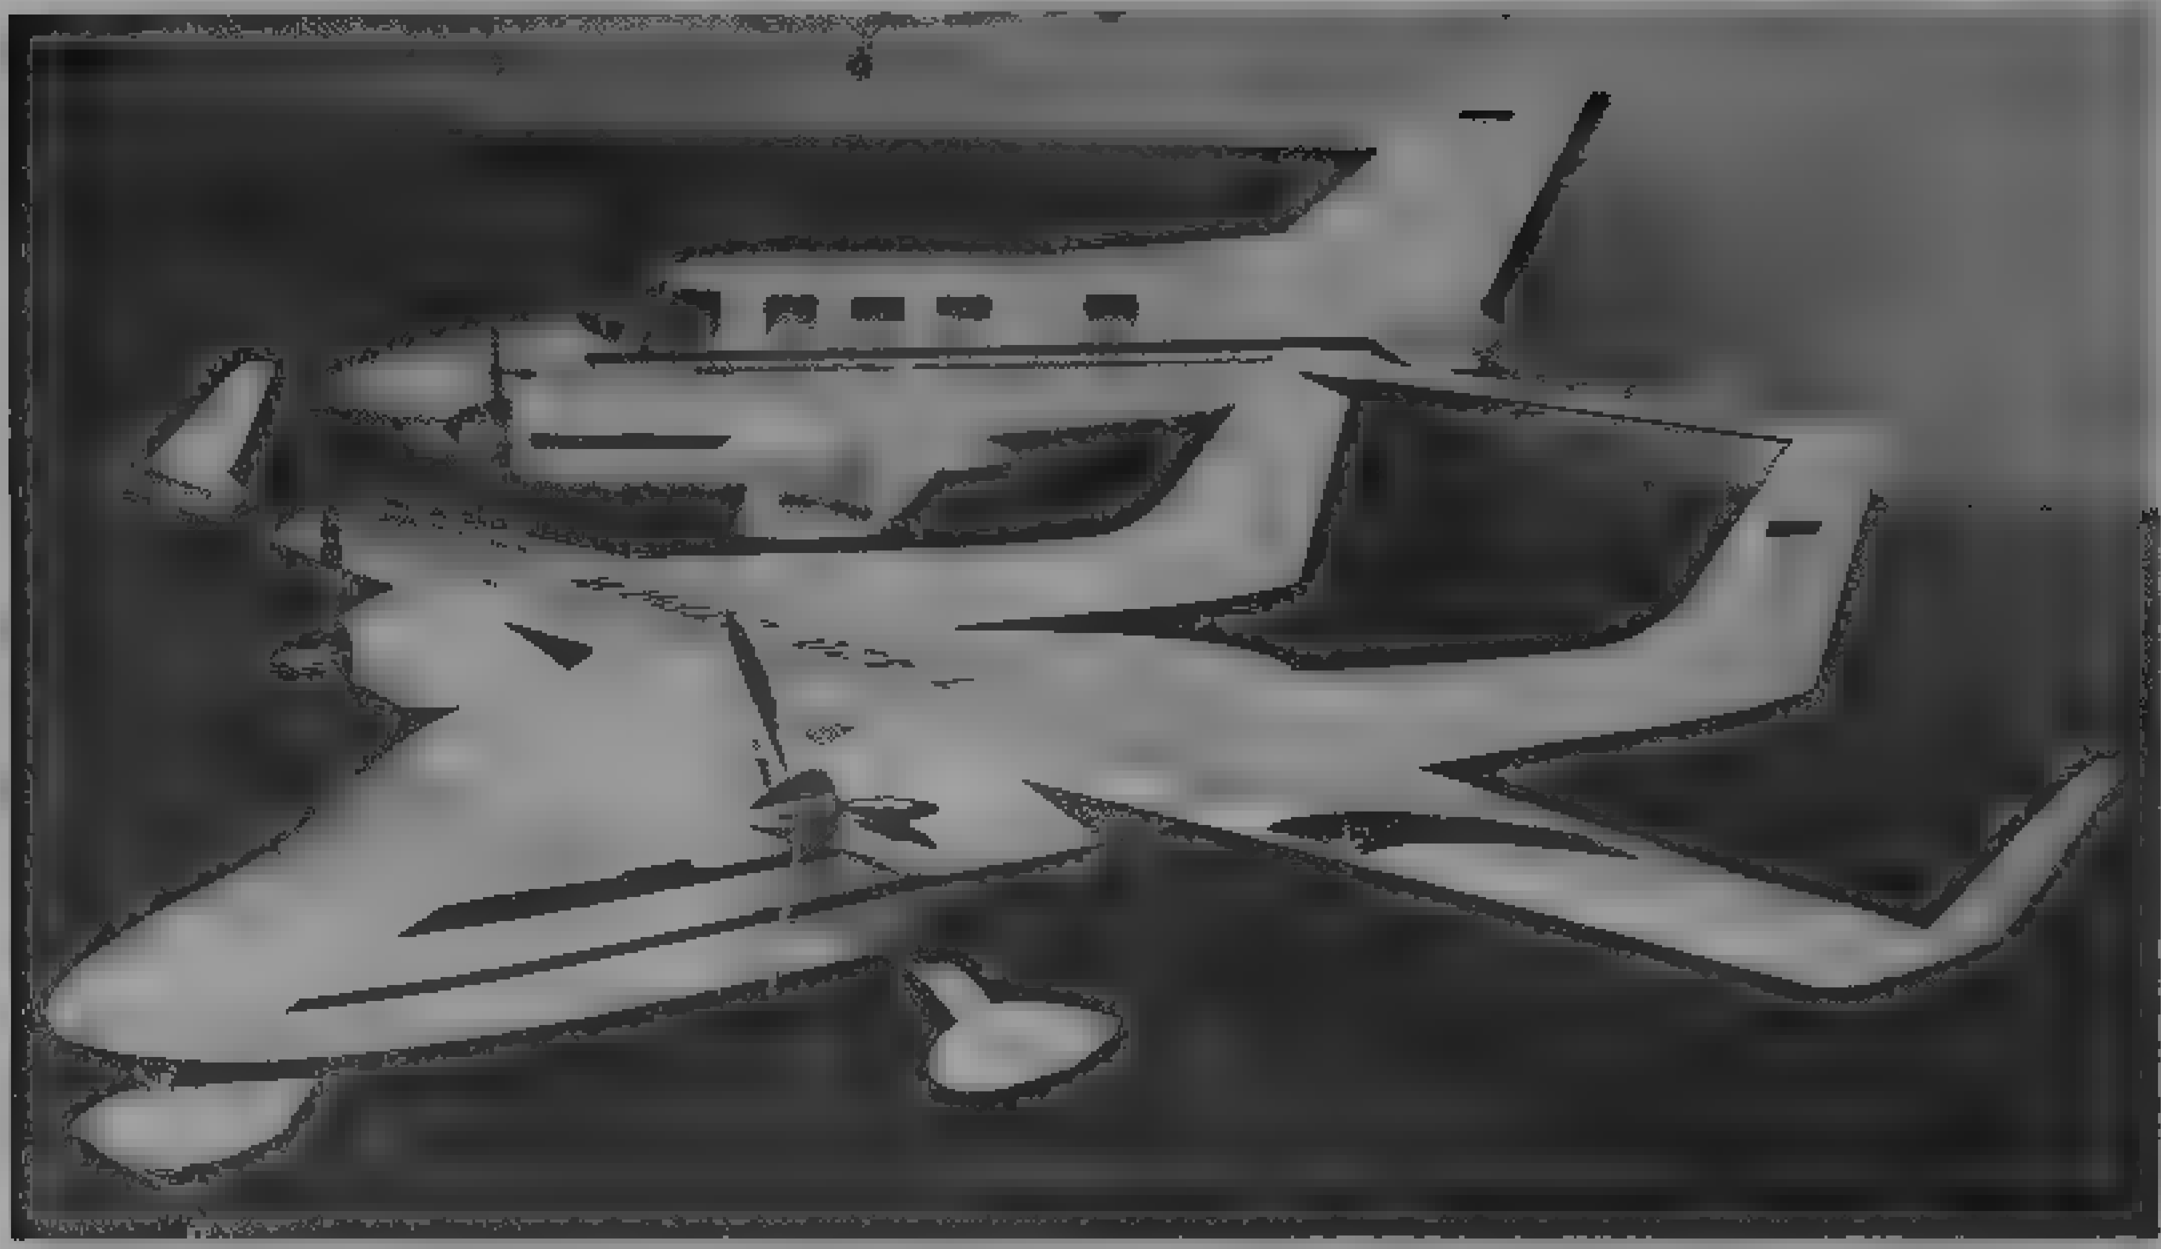
DESIGN FEATURES: High-wing monoplane with twin tail booms, providing easy access to upward hinged door forming rear of fuselage pod. Wingtip fuel tanks form aerodynamic fences, but alternative version has winglets. High-mounted tailplane is above turbulent air flow from propellers.

FLYING CONTROLS: Conventional three-axis, elevator trim tab.

STRUCTURE: All-metal construction, semi-monocoque fuselage pod, two-spar wings with duralumin skin.

LANDING GEAR: Non-retractable tricycle type, single wheel on each unit, oleo-pneumatic shock-absorbers. Mainwheel tyre size 6.50-10, pressure 4.8 bars (70 lb/sq in); nosewheel tyre size 6.00-6, pressure 2.45 bars (35.5 lb/sq in). Skis and floats optional.

POWER PLANT: Two 313 kW (420 shp) Allison 250-B17C turboprops, each driving Hartzell three-blade constant-speed propeller. Integral fuel tanks in wings, total capacity 950 litres (251 US gallons, 209 Imp gallons); wingtip tanks, total capacity 175 litres (46.2 US gallons, 38.5 Imp



Model of T-420 variant with winglets and wider track, spatted landing gear *(Paul Jackson)*

1995

gallons). Cross-feed allows refuelling via point above either main tank. Total oil capacity 22.8 litres (6 US gallons, 5 Imp gallons).

ACCOMMODATION: One or two pilots on flight deck, with door each side, eight passengers in pairs, or equivalent freight, in main cabin standard, six passengers in business version with galley and toilet. Hand baggage hold at rear of cabin, main baggage compartment forward of flight deck. Passenger and freight access via upward-hinged rear door. Heating and ventilation standard.

SYSTEMS: Hydraulic mainwheel brakes. Two 28 V 150 A starter-generators and two voltage regulators in main electrical system, 24 V 29 Ah battery for engine starting and emergency use. Electric anti-icing of propeller blades, pitot tubes and windscreen, pneumatic de-icing of wing and tail unit leading-edges.

AVIONICS: *Comms:* Com/nav radio and transponder.
Radar: Weather radar in nose.
Flight: ADF, ILS and radio altimeter for IFR operation.

DIMENSIONS, EXTERNAL:

Wing span: without tiptanks	13.04 m (42 ft 9½ in)
with tiptanks	13.72 m (45 ft 0¼ in)
Wing chord: at root	1.80 m (5 ft 10¾ in)
at tip	0.87 m (2 ft 10¼ in)
Length overall	9.95 m (32 ft 7¾ in)
Length of fuselage pod	7.64 m (25 ft 0¾ in)
Width of fuselage	1.35 m (4 ft 5¼ in)
Height overall	3.99 m (13 ft 1 in)
Tailplane span	4.20 m (13 ft 9½ in)
Wheel track	2.60 m (8 ft 6½ in)
Wheelbase	3.95 m (12 ft 11½ in)
Propeller diameter	2.03 m (6 ft 8 in)
Propeller ground clearance	0.90 m (2 ft 11½ in)
Distance between propeller centres	4.20 m (13 ft 9½ in)
Rear-loading door: Height	1.20 m (3 ft 11¼ in)
Width	1.10 m (3 ft 7¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length, incl flight deck	4.46 m (14 ft 7½ in)
Max width and height	1.25 m (4 ft 1¼ in)

AREAS:

Wings, gross	20.78 m² (223.7 sq ft)
Fins (total)	3.40 m² (36.60 sq ft)
Rudders (total)	1.48 m² (15.93 sq ft)
Tailplane	2.23 m² (24.00 sq ft)
Elevator	1.55 m² (16.68 sq ft)

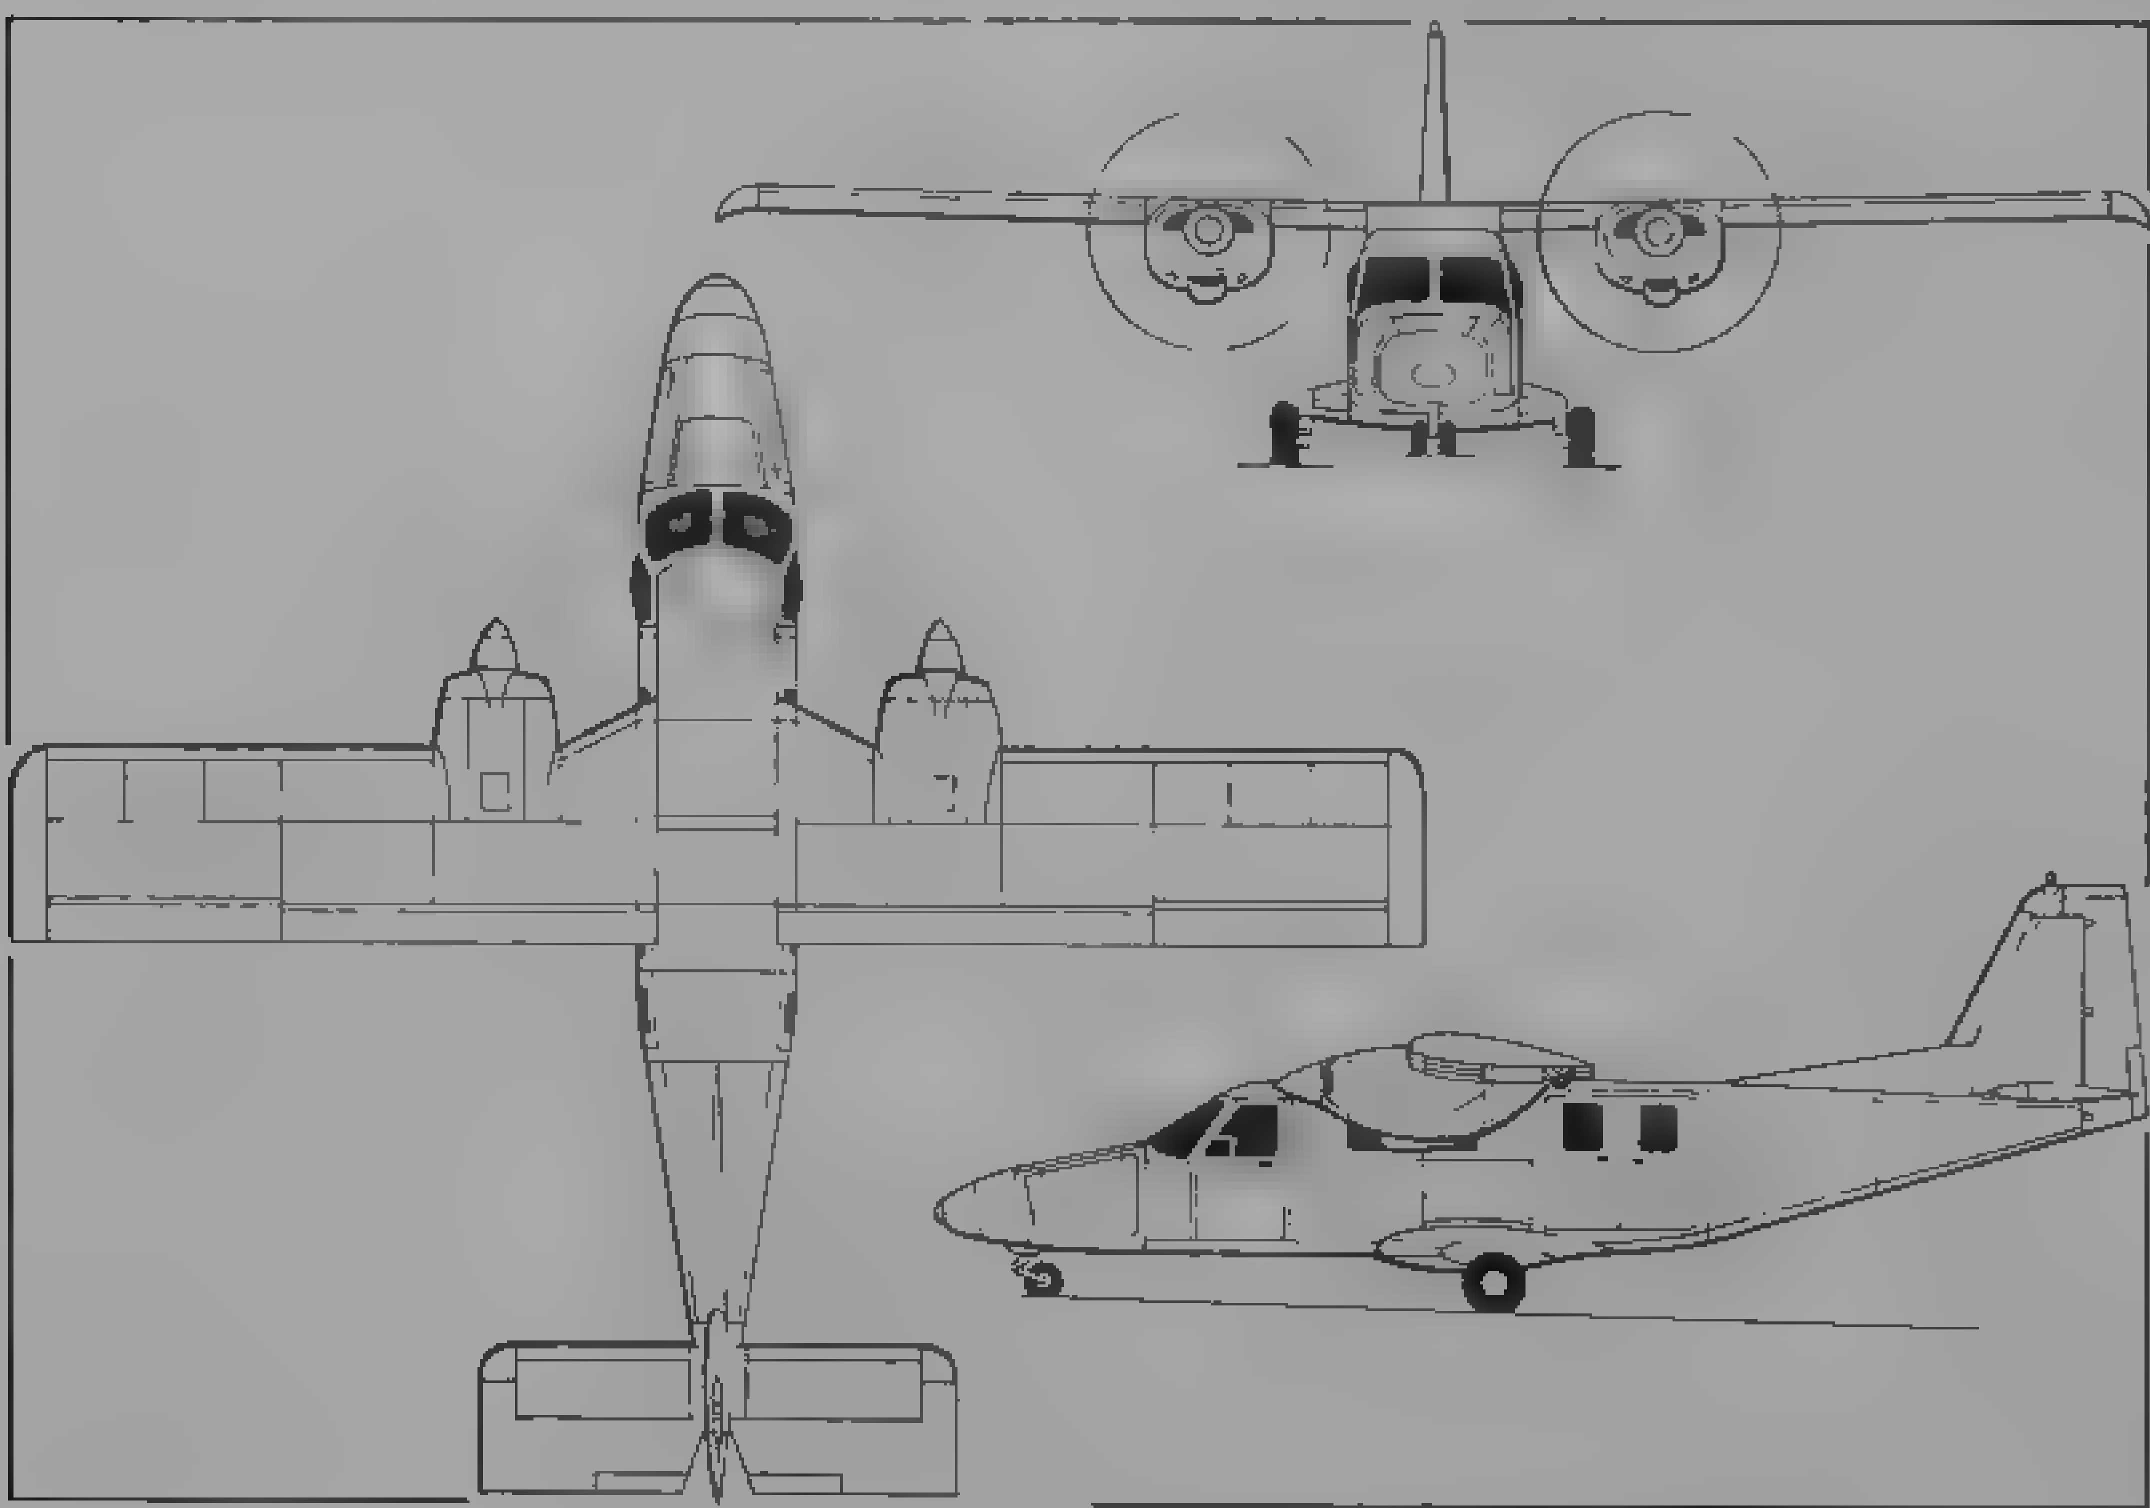
WEIGHTS AND LOADINGS:

Weight empty, equipped	2,000 kg (4,409 lb)
Max payload	1,500 kg (3,306 lb)
Max fuel: internal	700 kg (1,543 lb)
tiptanks	130 kg (287 lb)
Max T-O weight	3,100 kg (6,835 lb)
Max landing weight	3,050 kg (6,724 lb)
Max zero-fuel weight	2,800 kg (6,172 lb)
Max wing loading	149.2 kg/m² (30.6 lb/sq ft)
Max power loading	4.95 kg/kW (8.13 lb/shp)

PERFORMANCE (estimated):

Never-exceed speed (V_{NE})	202 kts (375 km/h; 233 mph)
Max level speed and max cruising speed	194 kts (360 km/h; 223 mph)
Econ cruising speed	165 kts (305 km/h; 190 mph)
Stalling speed, flaps down, engines on	59 kts (108 km/h; 68 mph)
Max rate of climb at S/L	468 m (1,535 ft)/min
Service ceiling	6,000 m (19,685 ft)
T-O run	360 m (1,182 ft)
T-O to 15 m (50 ft)	575 m (1,887 ft)
Landing from 15 m (50 ft)	475 m (1,559 ft)
Landing run	270 m (886 ft)
Range, 45 min reserve: with max payload	302 n miles (560 km; 348 miles)
with max fuel	863 n miles (1,600 km; 994 miles)

NEW ENTRY



Khrunichev T-422 Yastreb passenger/freight transport *(Jane's/James Goulding)*

1995

KHRUNICHEV T-422 YASTREB (HAWK)

TYPE: Twin-engined light passenger/freight transport.

PROGRAMME: Design started August 1994.

CURRENT VERSIONS: **T-422**: *Detailed description applies to this version.*

T-422M: With two 265 kW (355 hp) VOKBM M-14P piston engines.

T-422A: With two 313 kW (420 shp) Allison 250-B17 turboprops.

COSTS: Estimated $470,000.

DESIGN FEATURES: Conventional cantilever high-wing monoplane (see three-view).

FLYING CONTROLS: Manually operated three-axis.

STRUCTURE: Conventional light alloy construction, single spar wings, semi-monocoque fuselage; two-spar fin and tailplane.

LANDING GEAR: Non-retractable tricycle type, with single wheel on each unit. Oleo-pneumatic shock-absorbers. Mainwheel tyre size 6.50-10, pressure 4.8 bars (70 lb/sq in); nosewheel tyre size 6.00-6, pressure 2.45 bars (35.5 lb/sq in). Skis and floats optional.

POWER PLANT: Two 261 kW (350 hp) Teledyne Continental TSIO-550-B piston engines, each driving Hartzell three-blade constant-speed propeller. Integral fuel tanks in wings, total capacity 950 litres (251 US gallons, 209 Imp gallons). Crossfeed allows fuelling via point above either tank. Total oil capacity 24.6 litres (6.5 US gallons, 5.4 Imp gallons).

ACCOMMODATION: One or two pilots on flight deck, with door each side. Standard configuration has eight passenger seats in main cabin, with three rows of two seats and two single seats to rear. Business variant has three rows of two seats, with optional galley and toilet. Hand baggage hold at rear of cabin, main baggage compartment forward of flight deck. Two-piece sideways-opening passenger/cargo door at rear of cabin on port side, emergency exit opposite. Heating and ventilation standard.

SYSTEMS: Hydraulic mainwheel brakes. Two 28 V 150 A starter-generators and two voltage regulators in main electrical system, 24 V 29 Ah battery for engine starting and emergency use. Electric anti-icing of propeller blades, pitot tubes and windscreen, pneumatic de-icing of wing and tail unit leading-edges.

AVIONICS: *Comms:* Com/nav radio and transponder.
Radar: Weather radar in nose.
Flight: ADF, ILS and radio altimeter for IFR operation.

DIMENSIONS, EXTERNAL:

Wing span	11.85 m (38 ft 10½ in)
Wing chord (constant)	1.96 m (6 ft 5¼ in)
Length overall	10.10 m (33 ft 1¾ in)
Width of fuselage	1.35 m (4 ft 5¼ in)
Height overall	4.00 m (13 ft 1½ in)
Wheel track	2.48 m (8 ft 1¾ in)
Wheelbase	3.78 m (12 ft 5 in)
Propeller diameter	2.03 m (6 ft 8 in)
Propeller ground clearance	0.84 m (2 ft 9 in)
Distance between propeller centres	3.78 m (12 ft 5 in)
Passenger/freight door: Height	1.10 m (3 ft 7¼ in)
Width	1.30 m (4 ft 3¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length, incl flight deck	4.70 m (15 ft 5 in)
Max width	1.25 m (4 ft 1¼ in)
Max height	1.30 m (4 ft 3¼ in)

AREAS:

Wings, gross	21.84 m² (235.1 sq ft)
Fin, incl dorsal fin	1.53 m² (16.47 sq ft)
Rudder	0.86 m² (9.26 sq ft)
Tailplane	2.40 m² (25.83 sq ft)
Elevators (total)	2.40 m² (25.83 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	2,000 kg (4,410 lb)
Max fuel	700 kg (1,543 lb)
Max T-O weight	3,000 kg (6,615 lb)
Max landing weight	2,950 kg (6,503 lb)
Max zero-fuel weight	2,800 kg (6,170 lb)
Max wing loading	137.4 kg/m² (28.1 lb/sq ft)
Max power loading	5.75 kg/kW (9.44 lb/hp)

PERFORMANCE (estimated):

Never-exceed speed (V_{NE})	205 kts (380 km/h; 236 mph)
Max level speed and max cruising speed	194 kts (360 km/h; 223 mph)
Econ cruising speed	151 kts (280 km/h; 174 mph)
Min stalling speed, flaps down, engine on	62 kts (115 km/h; 72 mph)
Max rate of climb at S/L	390 m (1,279 ft)/min
Service ceiling	3,000 m (9,840 ft)
T-O run	320 m (1,050 ft)
T-O to 15 m (50 ft)	450 m (1,477 ft)
Landing from 15 m (50 ft)	475 m (1,560 ft)
Landing run	295 m (970 ft)
Range, with 45 min reserve: with max payload	593 n miles (1,100 km; 683 miles)
with max fuel	1,241 n miles (2,300 km; 1,429 miles)

NEW ENTRY

KHRUNICHEV T-430 SPRINTER

TYPE: Twin-engined light business aircraft.

PROGRAMME: Intended production of Aeroprogress/ROKS Aero T-602 Orel (which see for detailed description).

NEW ENTRY

KHRUNICHEV T-2402 DINOSAUR

TYPE: Twin-turboprop medium/long-range cargo/passenger STOL transport

PROGRAMME: Design started 1995

COSTS: Estimated cost of production aircraft $8,500,000

DESIGN FEATURES: High-mounted tandem-wing configuration, high-lift devices on each wing ensure STOL performance, with exceptional CG range. Twin tailbooms provide easy access to rear loading ramp/door on fuselage pod. See three-view for detailed information

POWER PLANT: Two 2,237 kW (3,000 shp) Klimov TV7-117 turboprops, each driving SV-34 six-blade CFRP propeller

ACCOMMODATION: Three crew on flight deck, with provision for fourth person, payload handler and up to 56 passengers, equivalent freight or combined passenger/freight payload in cabin

DIMENSIONS, EXTERNAL (provisional):

Wing span (rear wing)	27.2 m (89 ft 3 in)
Length overall	22.7 m (74 ft 6 in)
Height overall	6.0 m (19 ft 9 in)

WEIGHTS AND LOADINGS (provisional):

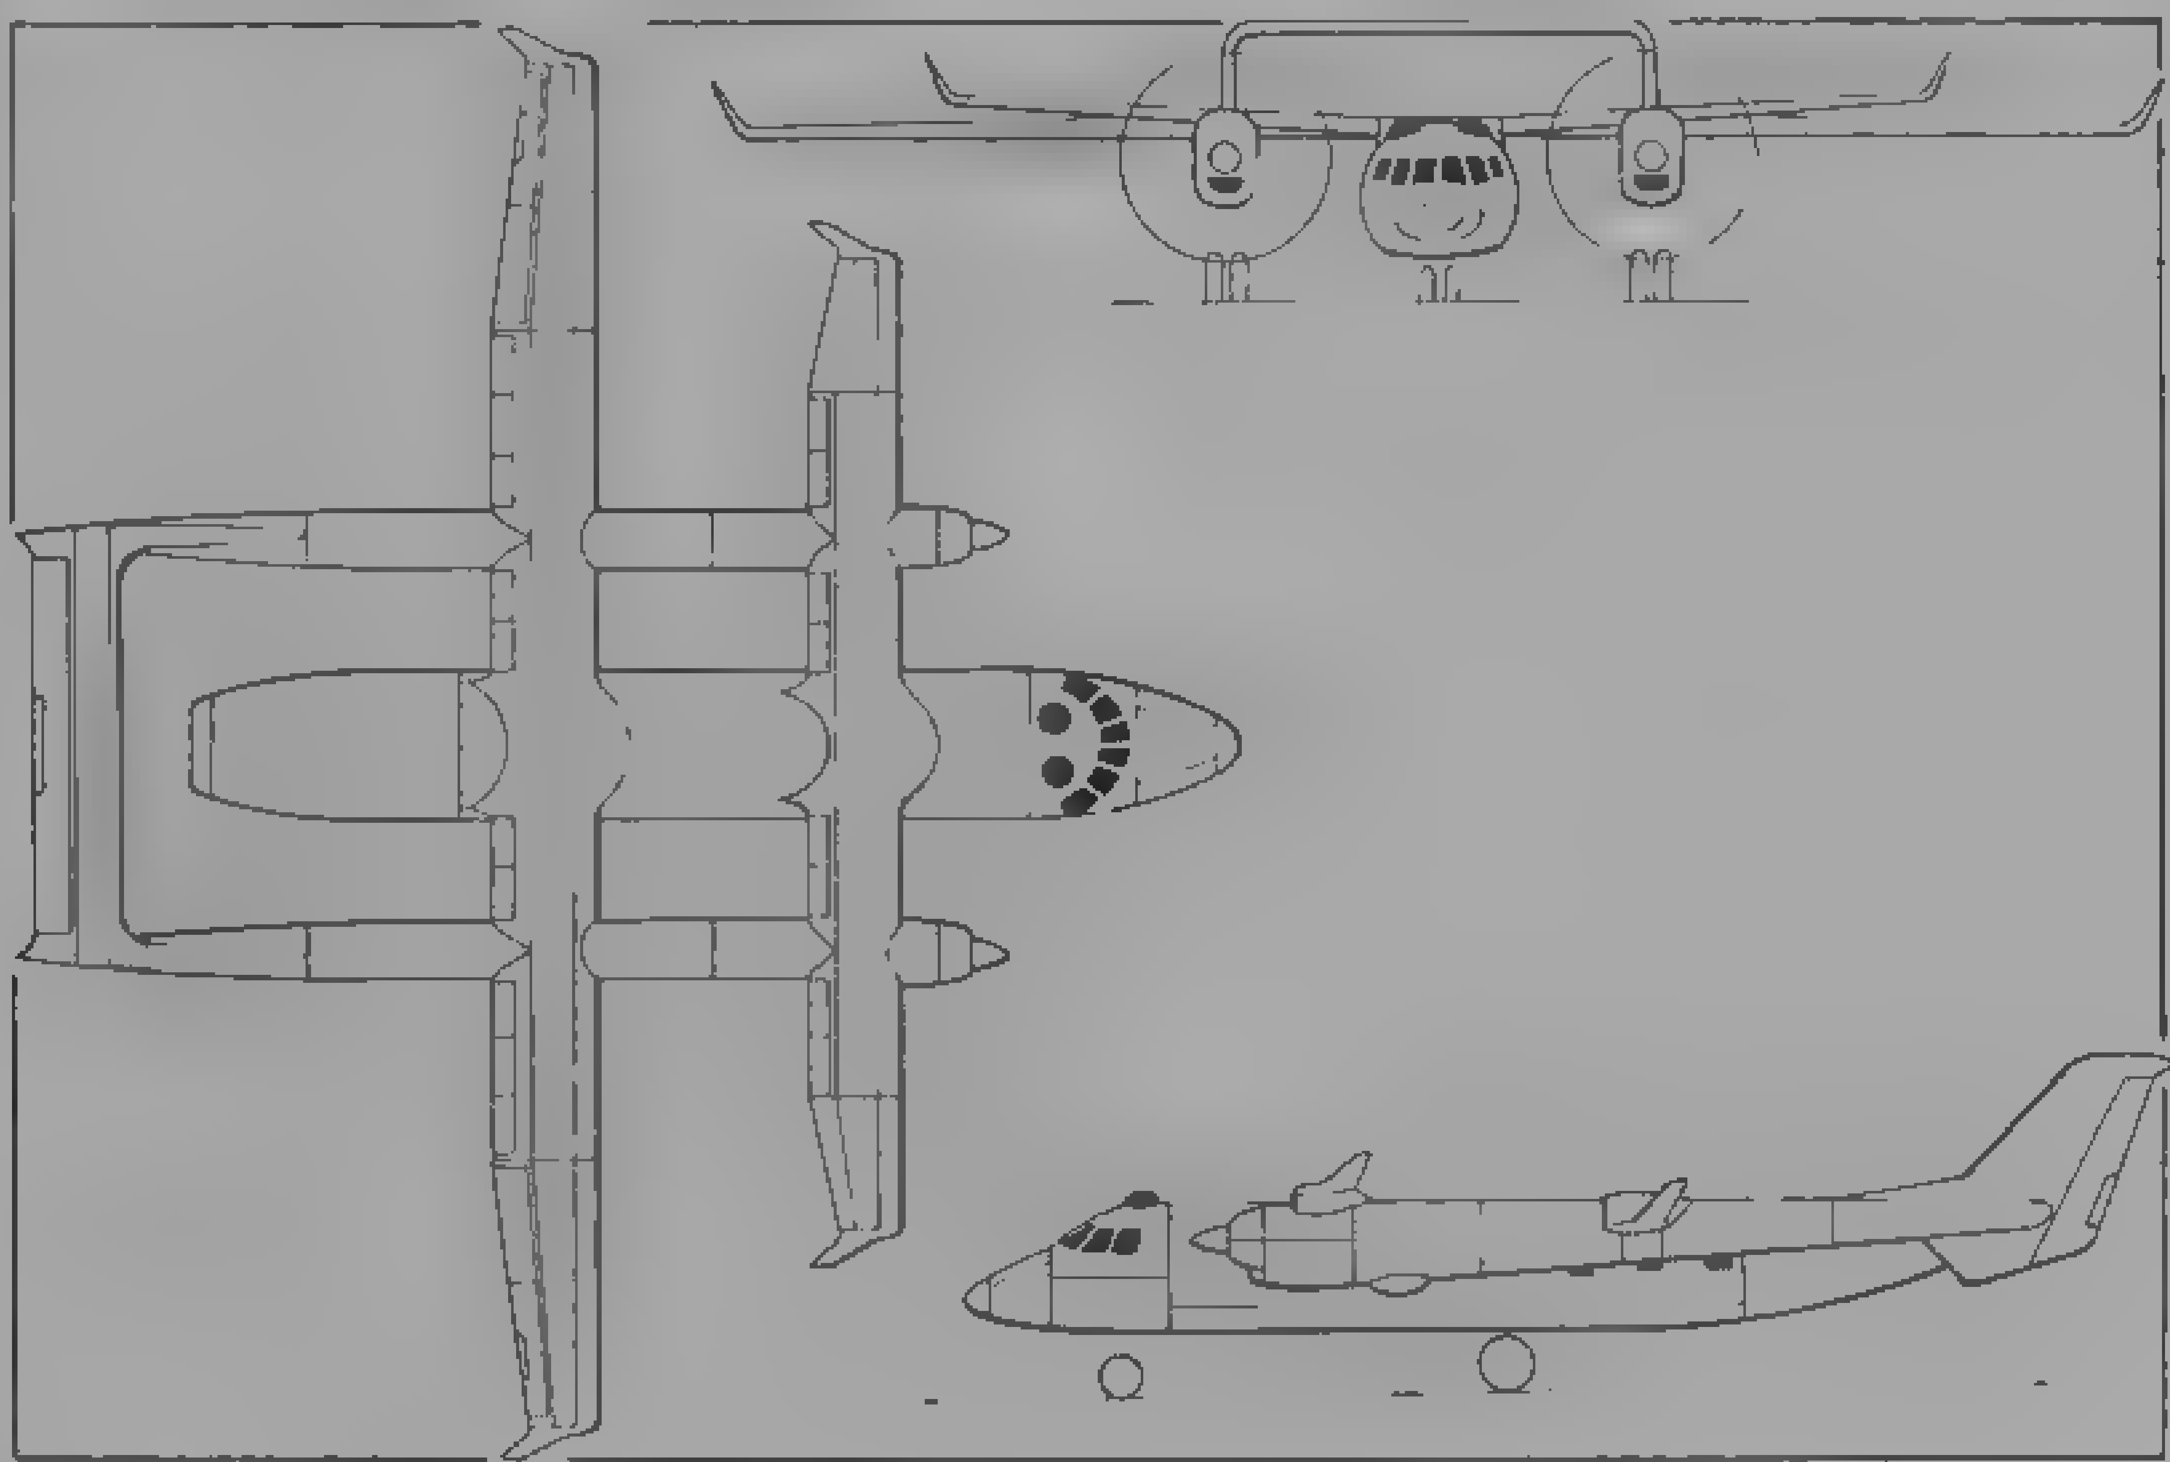
Max payload	6,000 kg (13,225 lb)
Max fuel	5,500 kg (12,125 lb)
Max T-O weight	24,500 kg (54,000 lb)

PERFORMANCE (estimated):

Max level speed	292 kts (540 km/h; 336 mph)
Nominal cruising speed	270 kts (500 km/h; 311 mph)
T-O to 15 m (50 ft)	800 m (2,625 ft)
Landing from 15 m (50 ft)	600 m (1,969 ft)
Range:	
with max payload	863 n miles (1,600 km; 994 miles)
with max fuel	2,429 n miles (4,500 km; 2,796 miles)

NEW ENTRY

Model of Khrunichev T-430 Sprinter (two VOKBM M-14 engines) *(Paul Jackson)* 1995



Khrunichev T-2402 Dinosaur cargo/passenger STOL transport *(Jane's/James Goulding)* 1995

KNAAPO

KOMSOMOLSK-ON-AMUR AIRCRAFT PRODUCTION ASSOCIATION

3 Sovetskaya Street, 681018 Komsomolsk-on-Amur, Khabarovskiy District

Telephone: 7 (09352) 6 32 00 or 6 32 30

Fax: 7 (09352) 2 98 51 TSENTR

Telex: 141149 BURAN SU

A major production centre for Sukhoi aircraft at the present time, KNAAPO manufactures combat aircraft of the Su-27 series, including the naval Su-33, and will also be responsible for the new S-80 STOL transport. Formerly known as GAZ 416, it shared with Novosibirsk production of the Su-24 combat aircraft.

NEW ENTRY

KUMERTAU

KUMERTAU AIRCRAFT PRODUCTION ENTERPRISE

15A Novozarinskaya, 453350 Kumertau, Bashkortostan

Telephone: 7 (34761) 2 23 00

Fax: 7 (34761) 2 39 13

GENERAL DIRECTOR: Boris S. Malyshev

EXPORT DEPARTMENT: R. M. Rafikov

Current activities at Kumertau include manufacture of the Kamov Ka-27/28/29/32 helicopter series.

NEW ENTRY

MAPO-MiG

MOSCOW AIRCRAFT SCIENTIFIC-PRODUCTION ORGANISATION 'MiG' (MAPO-MiG)

7 1st Botkinsky Drive, 125040 Moscow

Telephone: 7 (095) 252 81 41

Fax: 7 (095) 250 88 19

GENERAL DIRECTOR: Vladimir V. Kouzmin

GENERAL DESIGNER: Rostislav A. Belyakov

FIRST DEPUTY GENERAL DIRECTOR/CHIEF ENGINEER: Victor M. Pouzanov

FIRST DEPUTY GENERAL DIRECTOR, COMMERCIAL DIRECTOR: Alexander N. Bezroukov

In May 1995 the Russian government approved the amalgamation of the Mikoyan OKB and Moscow Aircraft Production Organisation (MAPO).

MAPO had its origin in a company founded in 1893, has produced 25,000 aircraft of more than 40 types, including Nieuport (1913), Farman (1916-21), P-1 reconnaissance aircraft (1923), I-1 fighter (1924), U-2/Po-2 trainer and utility aircraft (1927), P-5 reconnaissance aircraft (1927), I-5, I-16 and I-153 Chaika fighters (1930s), Il-2 Shturmovik (8,652 built 1941-45), Il-12 passenger transport (646 built 1946-49), Il-28 bomber (2,490 built 1950-56), Il-14 transport (687 built, exported to nine countries, 1956-58), Il-18 turboprop transport (560 built, exported to 13 countries, 1957-69), Su-9 interceptor (1958-62), front fuselage and engine control unit of Buran space shuttle (1979-86), MiG-21 (more than 3,000 built, exported to 28 countries, 1962-74), MiG-23 (more than 4,000 built, exported to 16 countries, 1968-85), MiG-29 (more than 1,200 built from 1983 to date, for 21 operators). Other current products include MiG-AT advanced trainer, Aeroprogress/ROKS-Aero T-101 Gratch, MAI (Aviatika) 890 and Ilyushin Il-103 light aircraft. Service activities include complete maintenance support and pilot training.

NEW ENTRY

In 1971 Artem I. Mikoyan, the original head of MiG OKB, was succeeded as General Designer by Academician Rostislav A. Belyakov. He supervised completion of production of the MiG-23 and 25, designed under A. I. Mikoyan, while later aircraft such as MiG 27 and 29 (both in many versions) and MiG-31 were developed and put into service.

In addition to new combat aircraft, MiG OKB is developing training and light transport aircraft, and others with air cushion landing gear. It is also manufacturing horizontal tail surfaces for Dassault Falcon 900 business jets and participating in development of the Chengdu FC-1 fighter (see Addenda).

VERIFIED

MiG-25PU ('Foxbat-C') of the Indian Air Force *(Peter Steinemann)*

1993

MIKOYAN MiG-25

NATO reporting name: Foxbat

TYPE: Single-seat interceptor, reconnaissance aircraft and two-seat conversion trainer.

PROGRAMME: Design started 1959 as Ye 155P supersonic high-altitude interceptor to counter all potential threats, from low flying cruise missiles to A-11 (SR-71A reconnaissance aircraft) under US development; programme launched officially February 1962; Ye-155R reconnaissance version designed and built 1961-62, Ye-155R-1 first to fly 6 March 1964; Ye-155P-1 interceptor prototype flew 9 September 1964, early history in previous editions of *Jane's*; production, as MiG-25/25R series, completed mid-1980s.

CURRENT VERSIONS (general): Produced in five main families, as below:

Type 02: MiG-25R, RB, RBV and RBT plus RBK (02K), RBS (02S), RBF (02F) and BM (02M).
Type 22: MiG-25RU
Type 39: MiG-25PU
Type 84: MiG-25P, PD and PDS
Type 99. Ye-155M (experimental)

CURRENT VERSIONS (specific): **MiG-25RB** ('Foxbat-B'): Single-seat high altitude reconnaissance-bomber, derived from Ye-155R-1 prototype; production began as MiG-25R for reconnaissance only, in 1969, bombing capability added and redesignated RB in 1970; no guns or air-to-air missiles, R-15BD-300 turbojets, any one of three interchangeable photographic/elint modules, with five camera windows and flush dielectric panels, carried aft of small dielectric nosecap, instead of interceptor's Smerch radar; slightly reduced wing span; wing leading-edge sweep constant 41° from root to tip, first aircraft produced in former USSR with INS updated by Doppler; specially developed automatic bombing system makes possible all-weather day/night precision attacks at supersonic speed from heights above 20 000 m (65,600 ft) against targets with known geographic co-ordinates, carrying four 500 kg bombs under wings, two under fuselage, SRS-4B elint equipment; fuel tank in each fin, providing additional 700 litres (185 US gallons, 154 Imp gallons) capacity, provision for 5,300 litre (1,400 US gallon; 1,165 Imp gallon) underbelly tank, able to fly long distances at cruising speed of Mach 2.35, maximum speed of Mach 2.83 with full bomb load.

MiG-25RBV and RBT ('Foxbat-B'): As MiG-25RB, with different equipment, including SRS-9 elint on RBV (V for Virazh SLAR). Produced 1978-82.

MiG-25PU ('Foxbat-C'): Training version of original MiG-25P interceptor, redesigned nose section containing separate cockpit with individual canopy for instructor forward of standard cockpit and at lower level, no armament, weapon release simulation standard, some systems modified and updated, permitting simulation of failures, no radar in nose, first roll-out 1968, maximum speed limited to Mach 2.65.

MiG-25RU ('Foxbat-C'): Training version of MiG-25R, identical to MiG-25PU except for absence of combat simulation system, no reconnaissance sensors; first roll-out 1972.

MiG-25RBK ('Foxbat-D'): Produced simultaneously with RB series in 1971-80, reconnaissance modules contain different elint (K of designation for Kub SLAR) and other avionics and no cameras, modified cockpit, electrical and air conditioning systems; bombing capability retained.

MiG-25RBS ('Foxbat-D'): As MiG-25RBK but with different sensors, in production 1971-77; all RBSs upgraded to **MiG-25RBSh** during servicing from 1981.

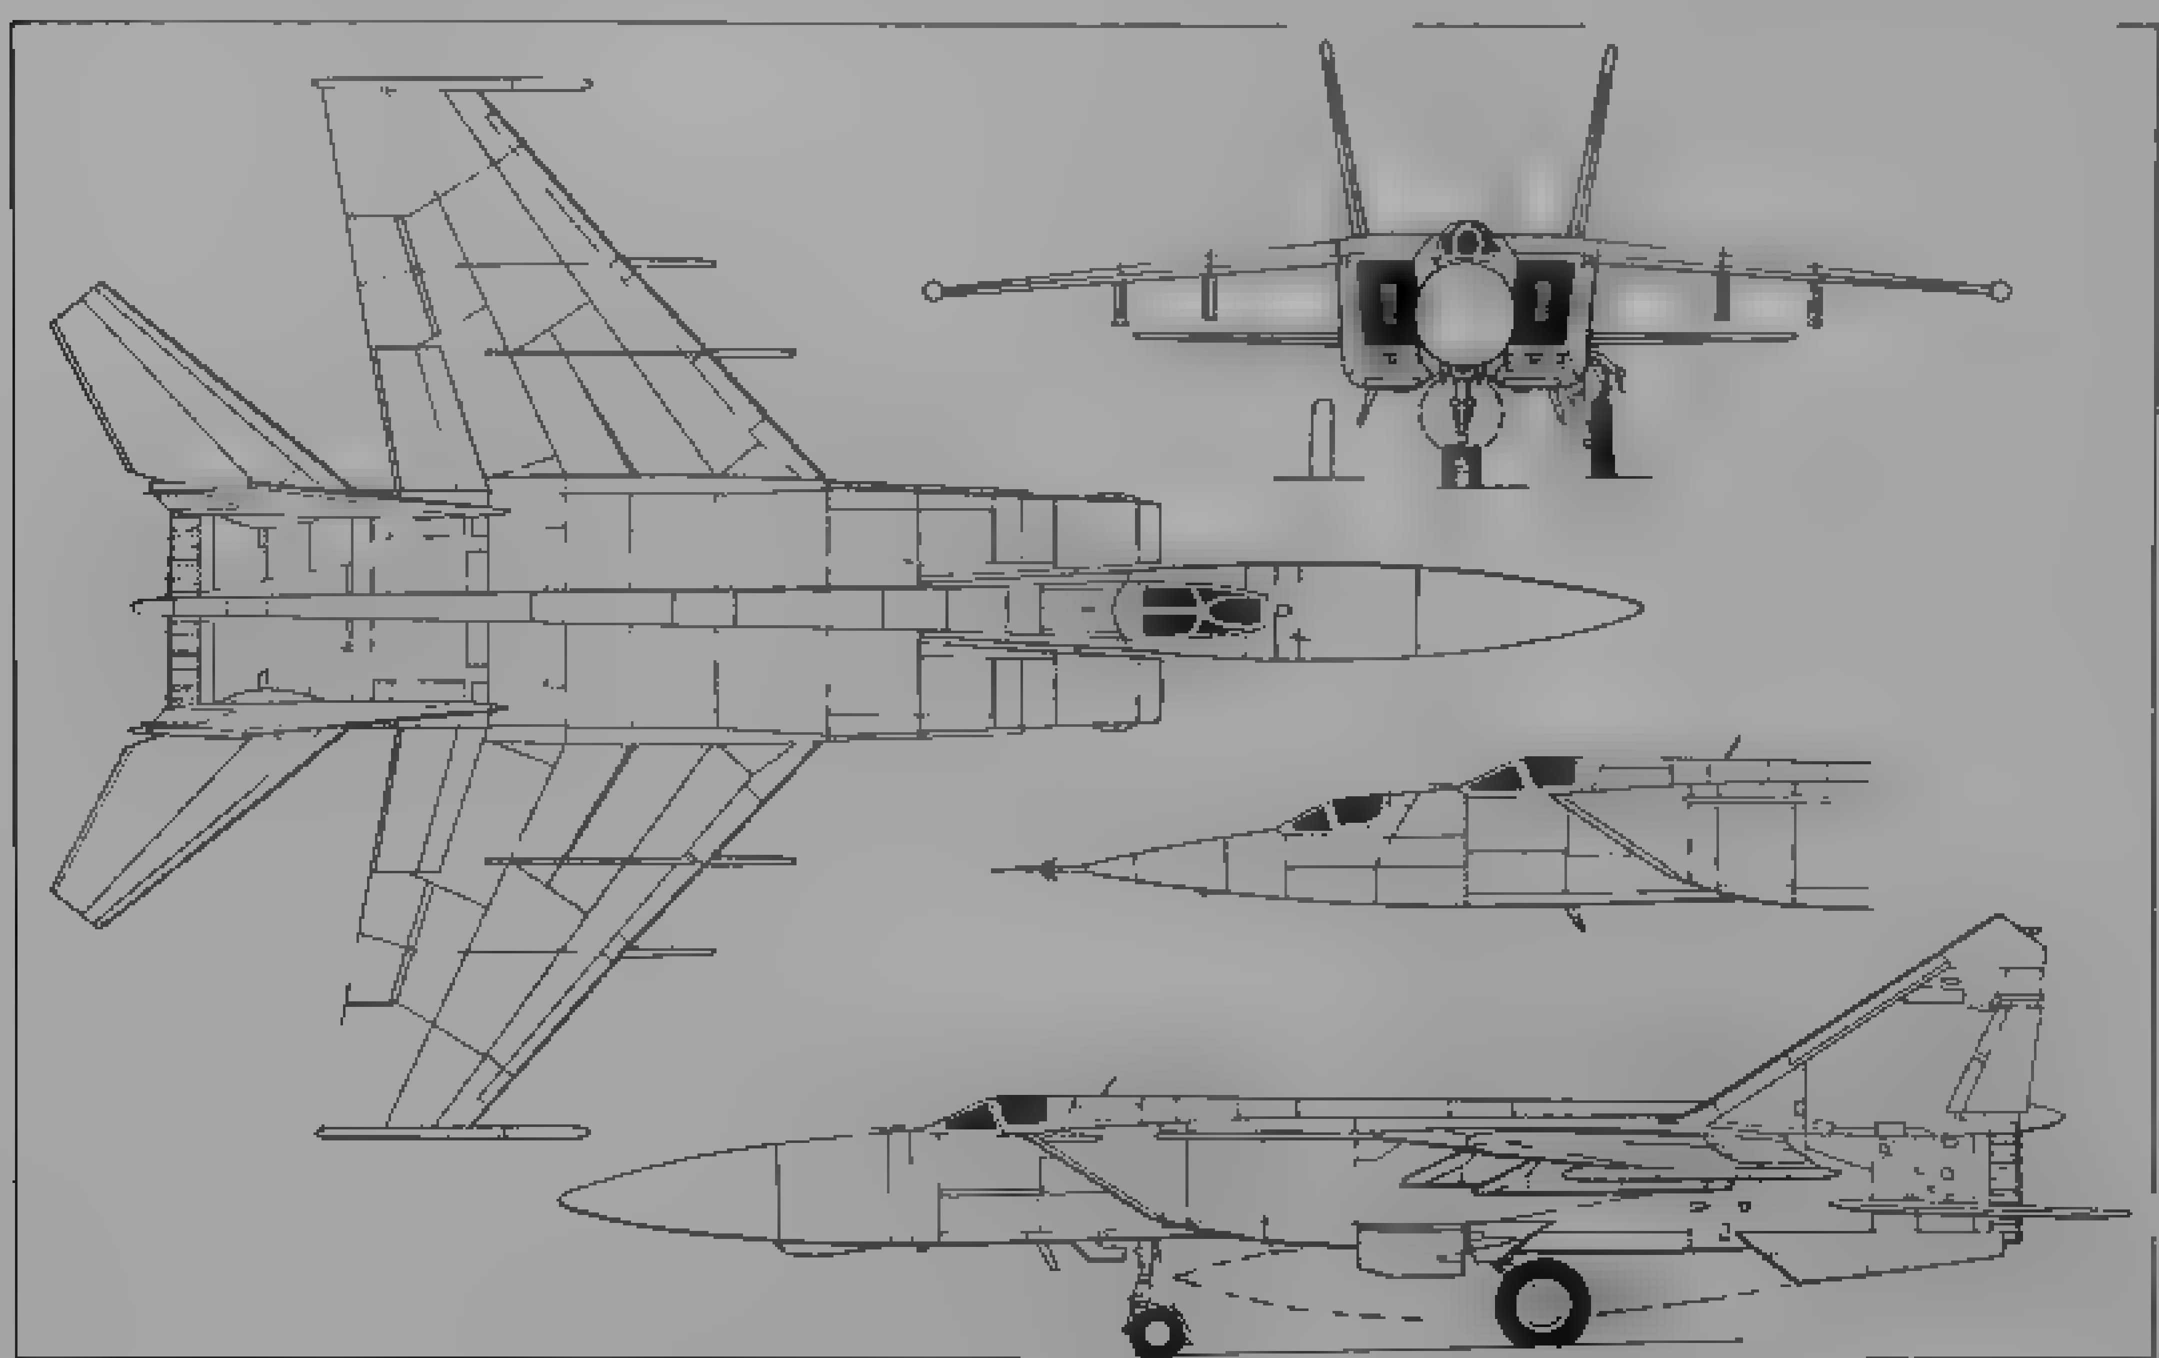
MiG-25RBF: Updated MiG-25RB, conversions from 1981. Generally to MiG-25RBK standard, but panoramic cameras retained and different active/passive countermeasures.

MiG-25PD ('Foxbat-E'): Development of original MiG-25P interceptor, produced 1978-82; uprated R-15BD-300 turbojets with life of 1,000 hours instead of former 150 hours; Saphir-25 radar and IRST, giving look-down/shoot-down capability comparable with MiG-23M; two R-40 (K-40; NATO AA-6 'Acrid') and four R-60 (K-60, NATO AA-8 'Aphid') missiles, provision for same underbelly tank as on MiG-25R series.

MiG-25PDS ('Foxbat-E'): All operational MiG-25Ps upgraded to PDS from 1979. As MiG-25PD; front fuselage lengthened by 250 mm (10 in) to accommodate flight refuelling equipment on some aircraft. *Detailed description applies to MiG 25PDS, except where indicated.*

MiG-25BM ('Foxbat-F'): Defence suppression aircraft derived from MiG-25RB, development started 1972, produced 1982-85, ECM in place of reconnaissance module in lengthened nose, with dielectric panel each side; small blister each side at rear of radome, dielectric panel at front of each outboard weapon pylon, underbelly auxiliary fuel tank as MiG-25R series, four Kh-58 (NATO AS-11 'Kilter') anti-radiation missiles underwing to attack surface-to-air missile radars over standoff ranges. Weights and performance almost identical to RB.

CUSTOMERS: Russia retains 85 for reconnaissance and ECM, Algeria ('Foxbat-A/B'); India ('Foxbat-B/C'); Iraq ('Foxbat A'); Libya ('Foxbat-A/B/D/E'), Syria ('Foxbat A/B').



Mikoyan MiG 25PDS single-seat fighter (NATO 'Foxbat E'), with scrap view of front fuselage of two-seat MiG-25PU ('Foxbat-C') *(Jane's/Dennis Punnett)*

1993

DESIGN FEATURES: With MiG 31 derivative, is fastest combat aircraft yet identified in squadron service, original role demanded high-speed high-altitude capability and weapon system for attack over considerable range; high swept wings with anti-flutter body (maximum diameter 30 cm, 11.8 in) at each tip, slim front fuselage, with ogival nosecone, blended into rectangular air intake trunks with wedge intakes, inner wall of intakes curved at top and not parallel with outer wall, hinged panel forms lower intake lip, which, with internal door, enables area to be varied electronically, spill door in top of each trunk, fuselage undersurface dished between engines, all-swept tail surfaces, twin 11° outward canted fins and twin outward canted ventral fins, all with large flush antennae, wing anhedral 5° from roots, leading-edge sweepback 42° 30′ inboard, 41° outboard of each outer missile pylon, sweepback at quarter-chord 32°; sweepback on tailplane leading-edge 50°, fins 60°. Two shallow upper surface fences on each wing, in line with weapon pylons.

FLYING CONTROLS: Two-section aileron at centre of each wing trailing-edge; plain flap on inboard 37 per cent, all-moving horizontal tail surfaces able to operate differentially at high speeds. inset rudders, no tabs, airbrakes above and below jetpipes at rear of fuselage.

STRUCTURE: Airframe 80 per cent welded tempered steel, 8 per cent titanium in areas subject to extreme heating, such as wing and tail unit leading-edges, 11 per cent D19 heat-resistant aluminium alloy, by weight, two main wing spars forming torsion box, auxiliary front spar and two auxiliary rear spars; 14 primary fuselage frames, many intermediate frames and stringers.

LANDING GEAR: Retractable tricycle type. Single wheel, with tyre size 1,300 × 360 mm, pressure 11.75 + 0.5 bars (170 + 7 lb/sq in), on each forward-retracting main unit, wheel stows vertically between air intake duct and outer skin of each trunk. Twin-wheel forward-retracting nose unit, tyre size 700 × 200 mm, pressure 9.8 + 0.5 bars (142 + 7 lb/sq in). Probe for brake-chute on port ventral fin. Twin circular (60 m²; 645 sq ft) or cruciform (50 m²; 538 sq ft) brake-chutes in fairing above and between jet nozzles.

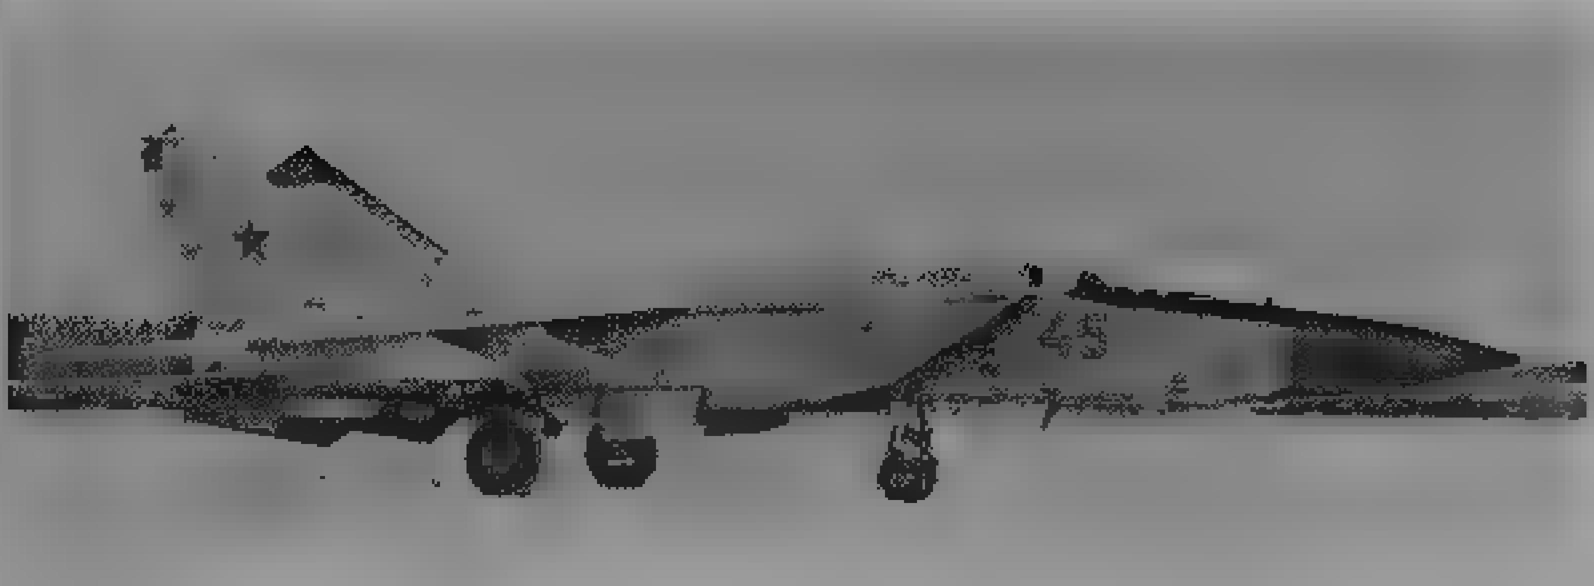
POWER PLANT: Two Soyuz/Tumansky R-15BD-300 turbojets, each rated at 86.30 kN (19,400 lb st) dry, 109.75 kN (24 675 lb st) with afterburning, in compartment of silver-coated steel. Fuel in two welded structural tanks occupying 70 per cent of volume of fuselage, between cockpit and engine bay, in saddle tanks around intake ducts, and in integral tank in each wing, filling almost entire volume inboard of outer fence, total capacity 17,660 litres (4,665 US gallons, 3,885 Imp gallons); single-point fuelling, provision for 5,300 litre (1,400 US gallon; 1,165 Imp gallon) underbelly tank.

ACCOMMODATION: Pilot only, on KM-1 zero-height/70 to 675 knots (130 to 1,250 km/h; 80 to 775 mph) ejection seat. Canopy hinged to open sideways, to starboard.

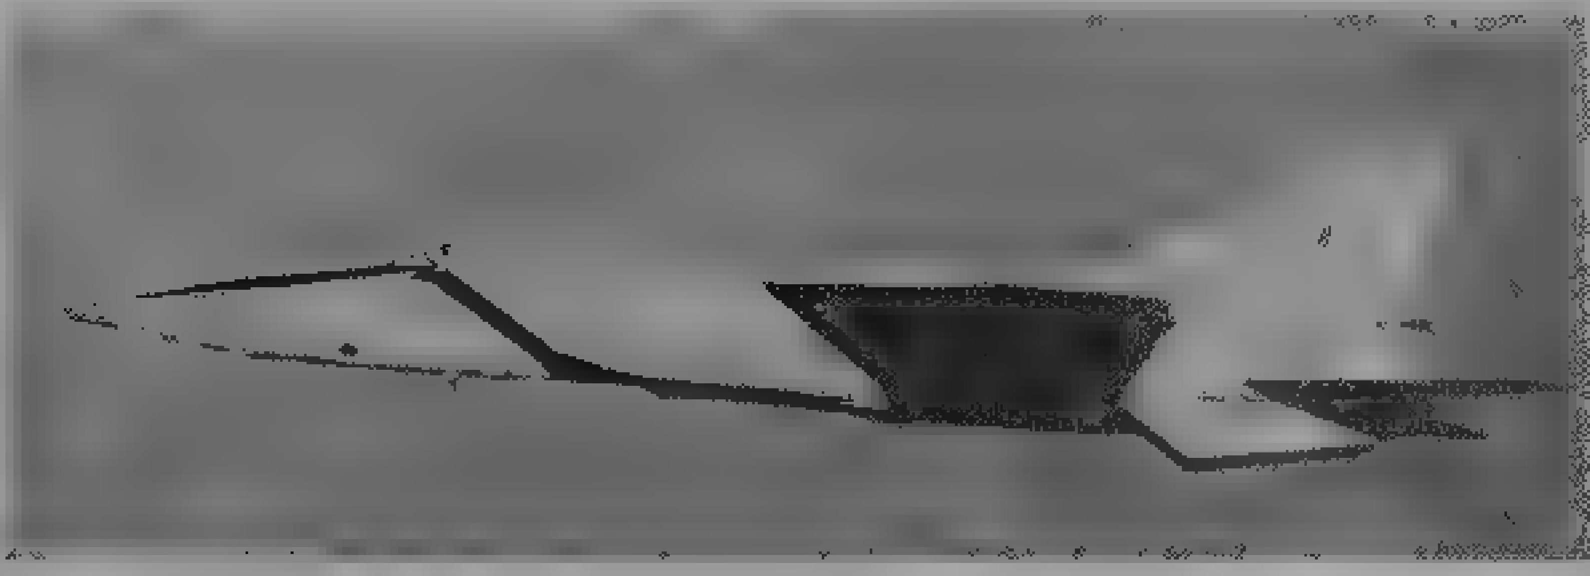
SYSTEMS: Autonomous main and booster hydraulic systems, main system supplies one chamber of twin-chamber flight control power units, landing gear, air inlet system, airbrakes, nosewheel steering and main and emergency wheel brakes; booster system supplies second chamber of each flight control power unit and emergency wheel brakes. Systems include two tanks, four engine-driven pumps and gas/oil accumulator. Main system utilises same flow restrictors and cut-offs triggered by falling pressure as booster system. Tanks are automatically pressurised by nitrogen to ensure adequate system pressure in event of pump failure. Electrical system of MiG-25PD/PDS includes constant-speed generators at nominal 27 V and variable three-phase generator for 200/115 V 400 Hz stabilised frequency driven by each engine, two batteries and rotary transformers give variable and constant frequency in emergency. MiG-25RB has variable-frequency electric supply from two combined variable-speed generators giving 115 and 36 V with 400 Hz stabilised frequency. Electronic fuel control system.

AVIONICS: *Comms:* RSB 70/RPS HF, R 832M VHF-UHF transceiver; R-831 UHF; SRO-2M/SRZO-2 ('Odd Rods') IFF; SOD 57M ATC/SIF with antennae in starboard fin tip, SOD-63 transponder.

Radar: Saphir-25 (RP-25, 'Fox Fire') fire-control radar in nose, search range 54 n miles (100 km, 62 miles), tracking range 40 n miles (75 km; 46 miles), forward of



Lengthened nose distinguishes the MiG-25PDS *1991*



MiG-25R ('Foxbat-B') of the Indian Air Force *(Peter Steinemann)* *1993*

avionics compartment housing navigation radar; K 10T radar scope

Flight: SAU-155 automatic flight control system. SP-50 ('Swift Rod') ILS, MRP-56P marker beacon receiver; RSBN-6S short-range nav, RV-UM or RV-4 radio altimeter; ARK 10 radio compass

Mission: Infra-red search/track sensor pod under front fuselage.

Self-defence: Sirena-3 360° radar warning system with receivers in centre of each wingtip anti-flutter body and starboard fin tip, ECCM, decoys and jammers

EQUIPMENT: Retractable landing light under front of each intake trunk. Back-up optical weapon sight.

ARMAMENT: No gun. Air-to-air missiles on four underwing attachments, originally one radar guided R-40R (K-40R, NATO AA-6 'Acrid') and one infra-red R-40T (K-40T; NATO AA-6 'Acrid') under each wing, alternatively, one R-40 and two R-60s under each wing and, later, one R-23 (K-23, NATO AA-7 'Apex') and two R-73A (NATO AA-11 'Archer') or R-60T (NATO AA-8 'Aphid') under each wing

DIMENSIONS, EXTERNAL:
Wing span: MiG-25P 14.015 m (45 ft 11¾ in)
MiG-25RB 13.42 m (44 ft 0¼ in)
Wing aspect ratio: MiG-25P 3.4
Length overall: MiG-25R 21.55 m (70 ft 8½ in)
Length of fuselage, excl probe
MiG-25P 19.75 m (64 ft 9½ in)
Height overall: MiG-25P 6.10 m (20 ft 0¼ in)
MiG-25R 6.50 m (21 ft 4 in)
Tailplane span: MiG-25R 8.74 m (28 ft 8 in)
Wheel track 3.85 m (12 ft 7½ in)
Wheelbase 5.14 m (16 ft 10½ in)

AREAS:
Wings, gross: MiG-25P 61.40 m² (660.9 sq ft)
Ailerons (total): MiG-25R 2.72 m² (29.28 sq ft)
Trailing-edge flaps (total):
MiG-25R 4.30 m² (46.29 sq ft)
Vertical tail surfaces (total) 16.00 m² (172.2 sq ft)
Rudders (total): MiG-25R 2.12 m² (22.82 sq ft)
Horizontal tail surfaces (total) 9.81 m² (105.6 sq ft)

WEIGHTS AND LOADINGS:
Max internal fuel: P 14,570 kg (32,120 lb)
R series 15,245 kg (33,609 lb)
Max fuel with underbelly tank: P 18,940 kg (41,755 lb)
Take-off weight:
P, clean, max internal fuel 34,920 kg (76,985 lb)
P, four R-40 missiles, max internal fuel
36,720 kg (80,950 lb)
R series, normal 37,000 kg (81,570 lb)
R series, max 41,200 kg (90,830 lb)
Max landing weight: R series 24,000 kg (52,910 lb)
Max wing loading: P 598 kg/m² (122.5 lb/sq ft)
R series 671 kg/m² (137.4 lb/sq ft)
Max power loading: P 166.9 kg/kN (1.64 lb/lb st)
R series 187.3 kg/kN (1.84 lb/lb st)

PERFORMANCE:
Max permitted Mach number at height: P, R series 2.83
Max level speed: at 13,000 m (42,650 ft)
P, R series 1,620 kts (3,000 km/h; 1,865 mph)
at S/L, P, R series
Mach 0.98 (647 kts; 1,200 km/h; 745 mph)
T-O speed: P 195 kts (360 km/h; 224 mph)
Landing speed: P 157 kts (290 km/h; 180 mph)
R series 140-151 kts (260-280 km/h; 161-174 mph)
Time to 20,000 m (65,600 ft) at Mach 2.35: P 8.9 min
Time to 19,000 m (62,335 ft): R series, clean 6.6 min
R series, with 2,000 kg (4,410 lb) of bombs 8.2 min
Service ceiling: P 20,700 m (67,900 ft)
R series, clean 21,000 m (68,900 ft)
T-O run: P 1,250 m (4,100 ft)
Landing run, with brake-chute: P 800 m (2,625 ft)
Range with max internal fuel:
P, supersonic 675 n miles (1,250 km; 776 miles)
P, subsonic 933 n miles (1,730 km; 1,075 miles)
R series, supersonic
882 n miles (1,635 km; 1,015 miles)
R series, subsonic
1,006 n miles (1,865 km; 1,158 miles)
Range with 5,300 l external tank: R series, supersonic
1,150 n miles (2,130 km; 1,323 miles)
R series, subsonic
1,295 n miles (2,400 km; 1,491 miles)
Endurance: P 2 h 5 min
g limit: P, supersonic +4.5

UPDATED

MIKOYAN MiG-29

NATO reporting name: Fulcrum
Indian Air Force name: Baaz (Eagle)

TYPE: All-weather single-seat counter-air fighter, with attack capability, and two-seat combat trainer

PROGRAMME: Technical assignment (operational requirement) for LFI (legkiy frontovoy istrebitel: light frontline fighter) issued 1972, to replace MiG-21, MiG-23, Su-15 and Su-17, initial order placed simultaneously; detail design began 1974, first of 11 prototypes and eight preseries aircraft built for factory and State testing (Factory index 9.01) flew 6 October 1977, photographed by US satellite, Ramenskoye flight test centre, November 1977 and given interim Western designation 'Ram-L'; second prototype flew June 1978, second and fourth prototypes lost through engine failures; after major design changes (see previous editions of *Jane's*) production began 1982, deliveries to Frontal Aviation 1983, operational early 1985, first detailed Western study possible after visit of demonstration team to Finland July 1986, production of basic MiG-29 combat aircraft by Moscow Aircraft Production Organisation (MAPO), and of MiG-29UB combat trainers at Nizhny Novgorod, for CIS air forces completed, but manufacture of MiG-29SE for export continues

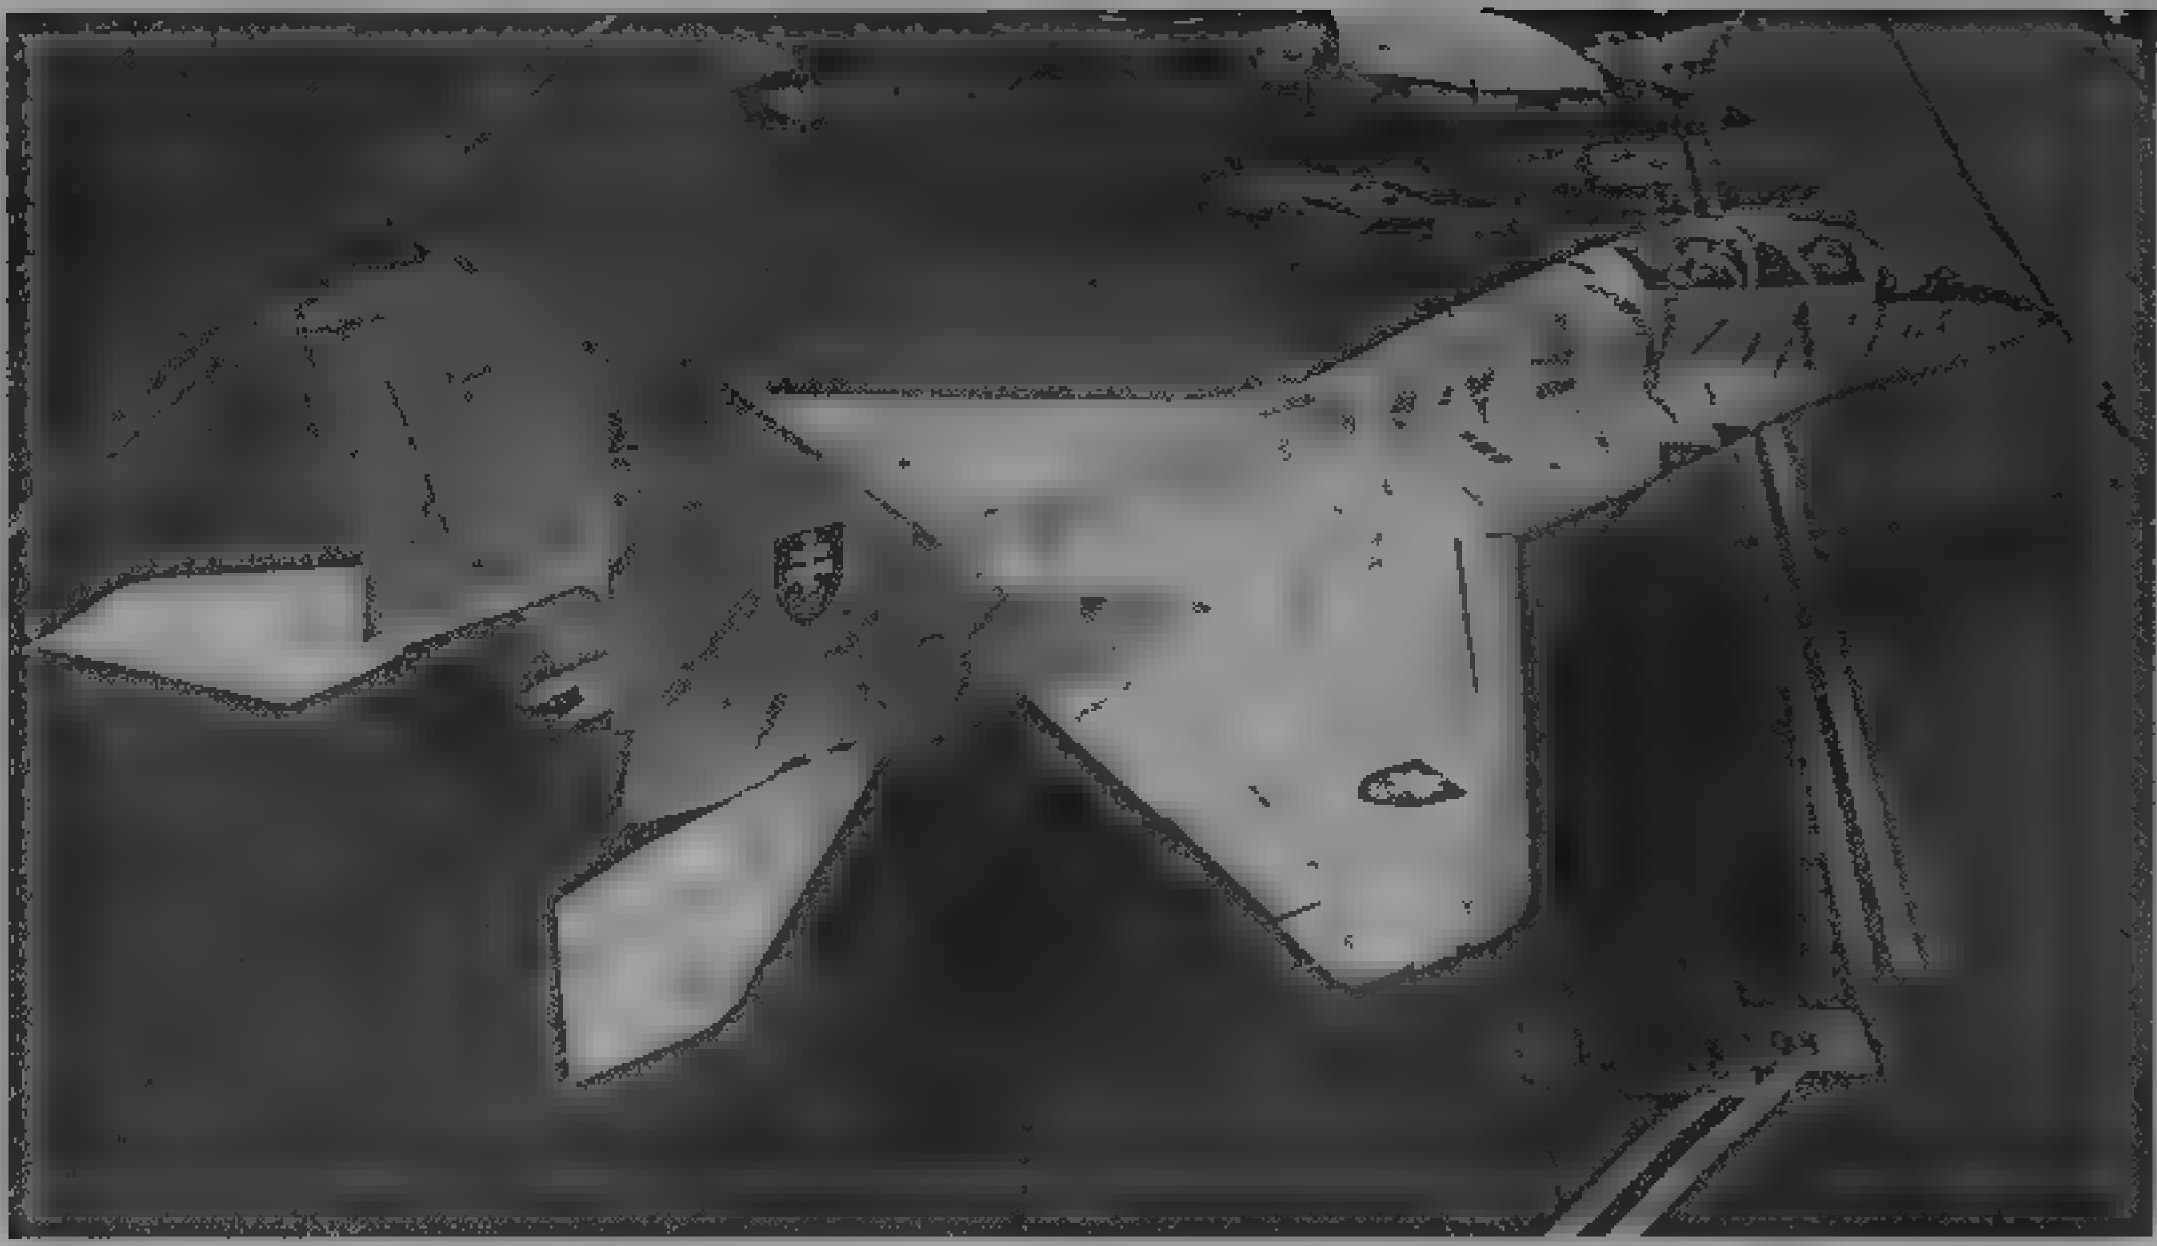
CURRENT VERSIONS: **MiG-29** (Factory index 9.12 'Fulcrum-A'). Land-based single-seat counter-air tactical fighter. First 100 aircraft with anti-spin ventral fins that were optionally removable after further spin tests. Control surface deflection range increased and rudder chord extended for improved control at extreme angles of attack. To meet air force requirements, dorsal fins extended forward to house chaff/flare dispensers, so extending keel area without impairing flight stability. Aircraft for export known as 9.12B.

MiG-29UB (Factory index 9.5, 'Fulcrum-B'): Combat trainer; second K-36DM ejector seat forward of normal cockpit under continuous canopy, with periscope for rear occupant, no radar, gun, IRST sensor, laser rangefinder and underwing stores pylons retained. Length 17.42 m (57 ft 2 in). First flown 29 April 1981, production began 1982.

MiG-29 (Factory index 9.13, 'Fulcrum-C'): First flown 23 December 1980, generally as 'Fulcrum-A', but introduced deeply curved top to fuselage aft of cockpit to house

Fully armed second prototype of MiG-29K with wings folded *(Piotr Butowski)* *1994*

Three-view drawing of MiG-29S 'Fulcrum-C' fighter. Additional side views at top show late-model 'Fulcrum-A' and two-seat 'Fulcrum-B' *(Jane's/Mike Keep)* *1992*



MiG-29UB ('Fulcrum-B') two-seat combat trainer of Slovak Air Force in special 'tiger' colour scheme *(Paul Jackson)*

1995

More deeply curved spine identifies the MiG 29 type 9 13 'Fulcrum-C' *(F G. Rozendaal)*

1995

additional avionics, including active jammers; two 1,150 litre (304 US gallon, 253 Imp gallon) underwing fuel tanks, a 1,450 litre (383 US gallon; 319 Imp gallon) underbelly fuel tank and weapons load increase to 3,000 kg (6,615 lb). Ammunition shellcase disposal was modified to avoid centreline tank, auxiliary antennas added to wingtips, and weapon control system improved. No 'Fulcrum-C' exports. *Detailed description refers to this version*

MiG-29S (Factory index 9 13S, 'Fulcrum-C'): Multistage upgrade of type 9 13; internal fuel capacity increased by 75 litres (20 US gallons, 17 Imp gallons); maximum total fuel capacity 8,240 litres (2,177 US gallons; 1,813 Imp gallons), for maximum range of 1,565 n miles (2,900 km, 1 800 miles) Optional non-retractable, detachable, flight refuelling probe on starboard side. Five-section leading-edge flaps, increased rudder deflection AOA operating range increased to 28°; N019M Topaz radar detection range 54 n miles (100 km; 62 miles) against fighter-size targets, able to track 10 targets and engage two simultaneously. Able to carry R-27R1, R-27RE1, R-27T1, R-27TE1 and R-73E AAMs, R 77 (AA 12 'Adder') AAMs after radar upgrade, or up to 4,000 kg (8,820 lb) of bombs, S-24B rockets, B-8M1 packs of S-8 rockets, ZAB-500 napalm tanks or BKF cluster bombs First flown 1984. Approximately two squadrons only Maximum T-O weight 19,700 kg (43 430 lb) Provision for anti-submarine, ARM and TV and laser guided missiles added 1995 with further AoA increase to 30

MiG-29SE ('Fulcrum-C'). Export version of MiG-29S. Phazotron NIIR N019ME Topaz radar, six R 77 AAMs, maximum T-O weight 20,000 kg (44,090 lb), service ceiling 18,000 m (59,055 ft)

MiG-29SD ('Fulcrum-A'). Export upgrade of basic MiG 29 (9 12), with most SE improvements. Locally designated **MiG-29N** for Malaysia has Western IFF, cockpit placards in English, voice warning system, instruments and displays calibrated in feet, knots, feet/minute and nautical miles, AN/ARN 139 Tacan, GPS and ILS Malaysian aircraft delivered with, or reworked, to latest standards, with 3,000 kg (6,615 lb) weapon load, two-target engagement, active radar homing missile compatibility, and so on

MiG-29M/MiG-33 (Factory index 9 15): Advanced tactical fighter for control of upper airspace, ground attack and naval high-altitude precision weapons control; greatly redesigned airframe, two 86.3 kN (19,400 lb st) Klimov RD-33K turbofans; quadruplex analog fly-by-wire controls and 'glass' cockpit with two monochrome (green) multifunction CRTs (not push-button, but HOTAS), modifications to extend aft centre of gravity limit for relaxed stability. First of six prototypes flown 25 April 1986 with RD-33 engines, first flight with RD-33K engines late 1989, first exhibited at Machulishche airfield, February 1992, enlarged engine air intakes with movable lower lip to increase mass flow on take-off Original FOD doors in air intakes replaced by lighter retractable grids, permitting deletion of overwing louvres and internal ducting in lightweight aluminium lithium alloy centre-section, providing increased fuel tankage, total internal fuel capacity 6,000 to 6,250 litres (1,585 to 1,651 US gallons, 1,320 to 1,375 Imp gallons). New wing section, with sharp leading-edge Increased-span ailerons; bulged wingtips with fore and aft RWRs; more rounded wingtip trailing-edge; sharp-edge slightly raised LERX, increased-chord horizontal tail surfaces, with dogtooth leading-edge. Welded aluminium-lithium front fuselage, welded steel behind, nose lengthened by approximately 20 cm (7½ in), 40 mm (1½ in) higher and longer canopy; pilot's seat raised, wider and longer dorsal spine, having new Gardeniya active jammer and terminating in 'beaver tail' structure, containing twin 13 m² (140 sq ft) brake-chutes, that extends beyond jet nozzles; single larger honeycomb composite over-fuselage airbrake

Phazotron NIIR N010 Zhuk terrain-following and ground mapping radar with 680 mm (26.77 in) dish antenna in larger diameter radome, able to track 10 targets and engage four simultaneously; new OLS-M longer-range IRST; added TV and laser designator/marked target seeker Chaff/flare dispensers relocated in dorsal spine. New IFF and Gardeniya active jammer Claimed more comfortable to fly, with increased permissible angle of attack, better manoeuvrability, improved cruise efficiency, eight underwing hardpoints for 4,500 kg (9,920 lb) stores, including four laser-guided Kh-25ML (AS-10 'Karen') or Kh-29L (AS-14 'Kedge'), anti-radiation Kh-25MP (AS-12 'Kegler') and Kh-31P (AS-17 'Krypton') or TV guided Kh 29T (AS-14 'Kedge') air-to-surface missiles, eight R 77 (AA-12) AMRAAM class air-to-air missiles, R-73A (AA-11 'Archer') air-to-air missiles or KAB-500KR 500 kg TV guided bombs. Rounds for gun reduced to 100. Performance as for MiG-29S, except range on internal fuel 1,079 n miles (2,000 km; 1,242 miles), with three external tanks 1,726 n miles (3,200 km; 1,988 miles) Redesignated MiG-33 (which see), 1995

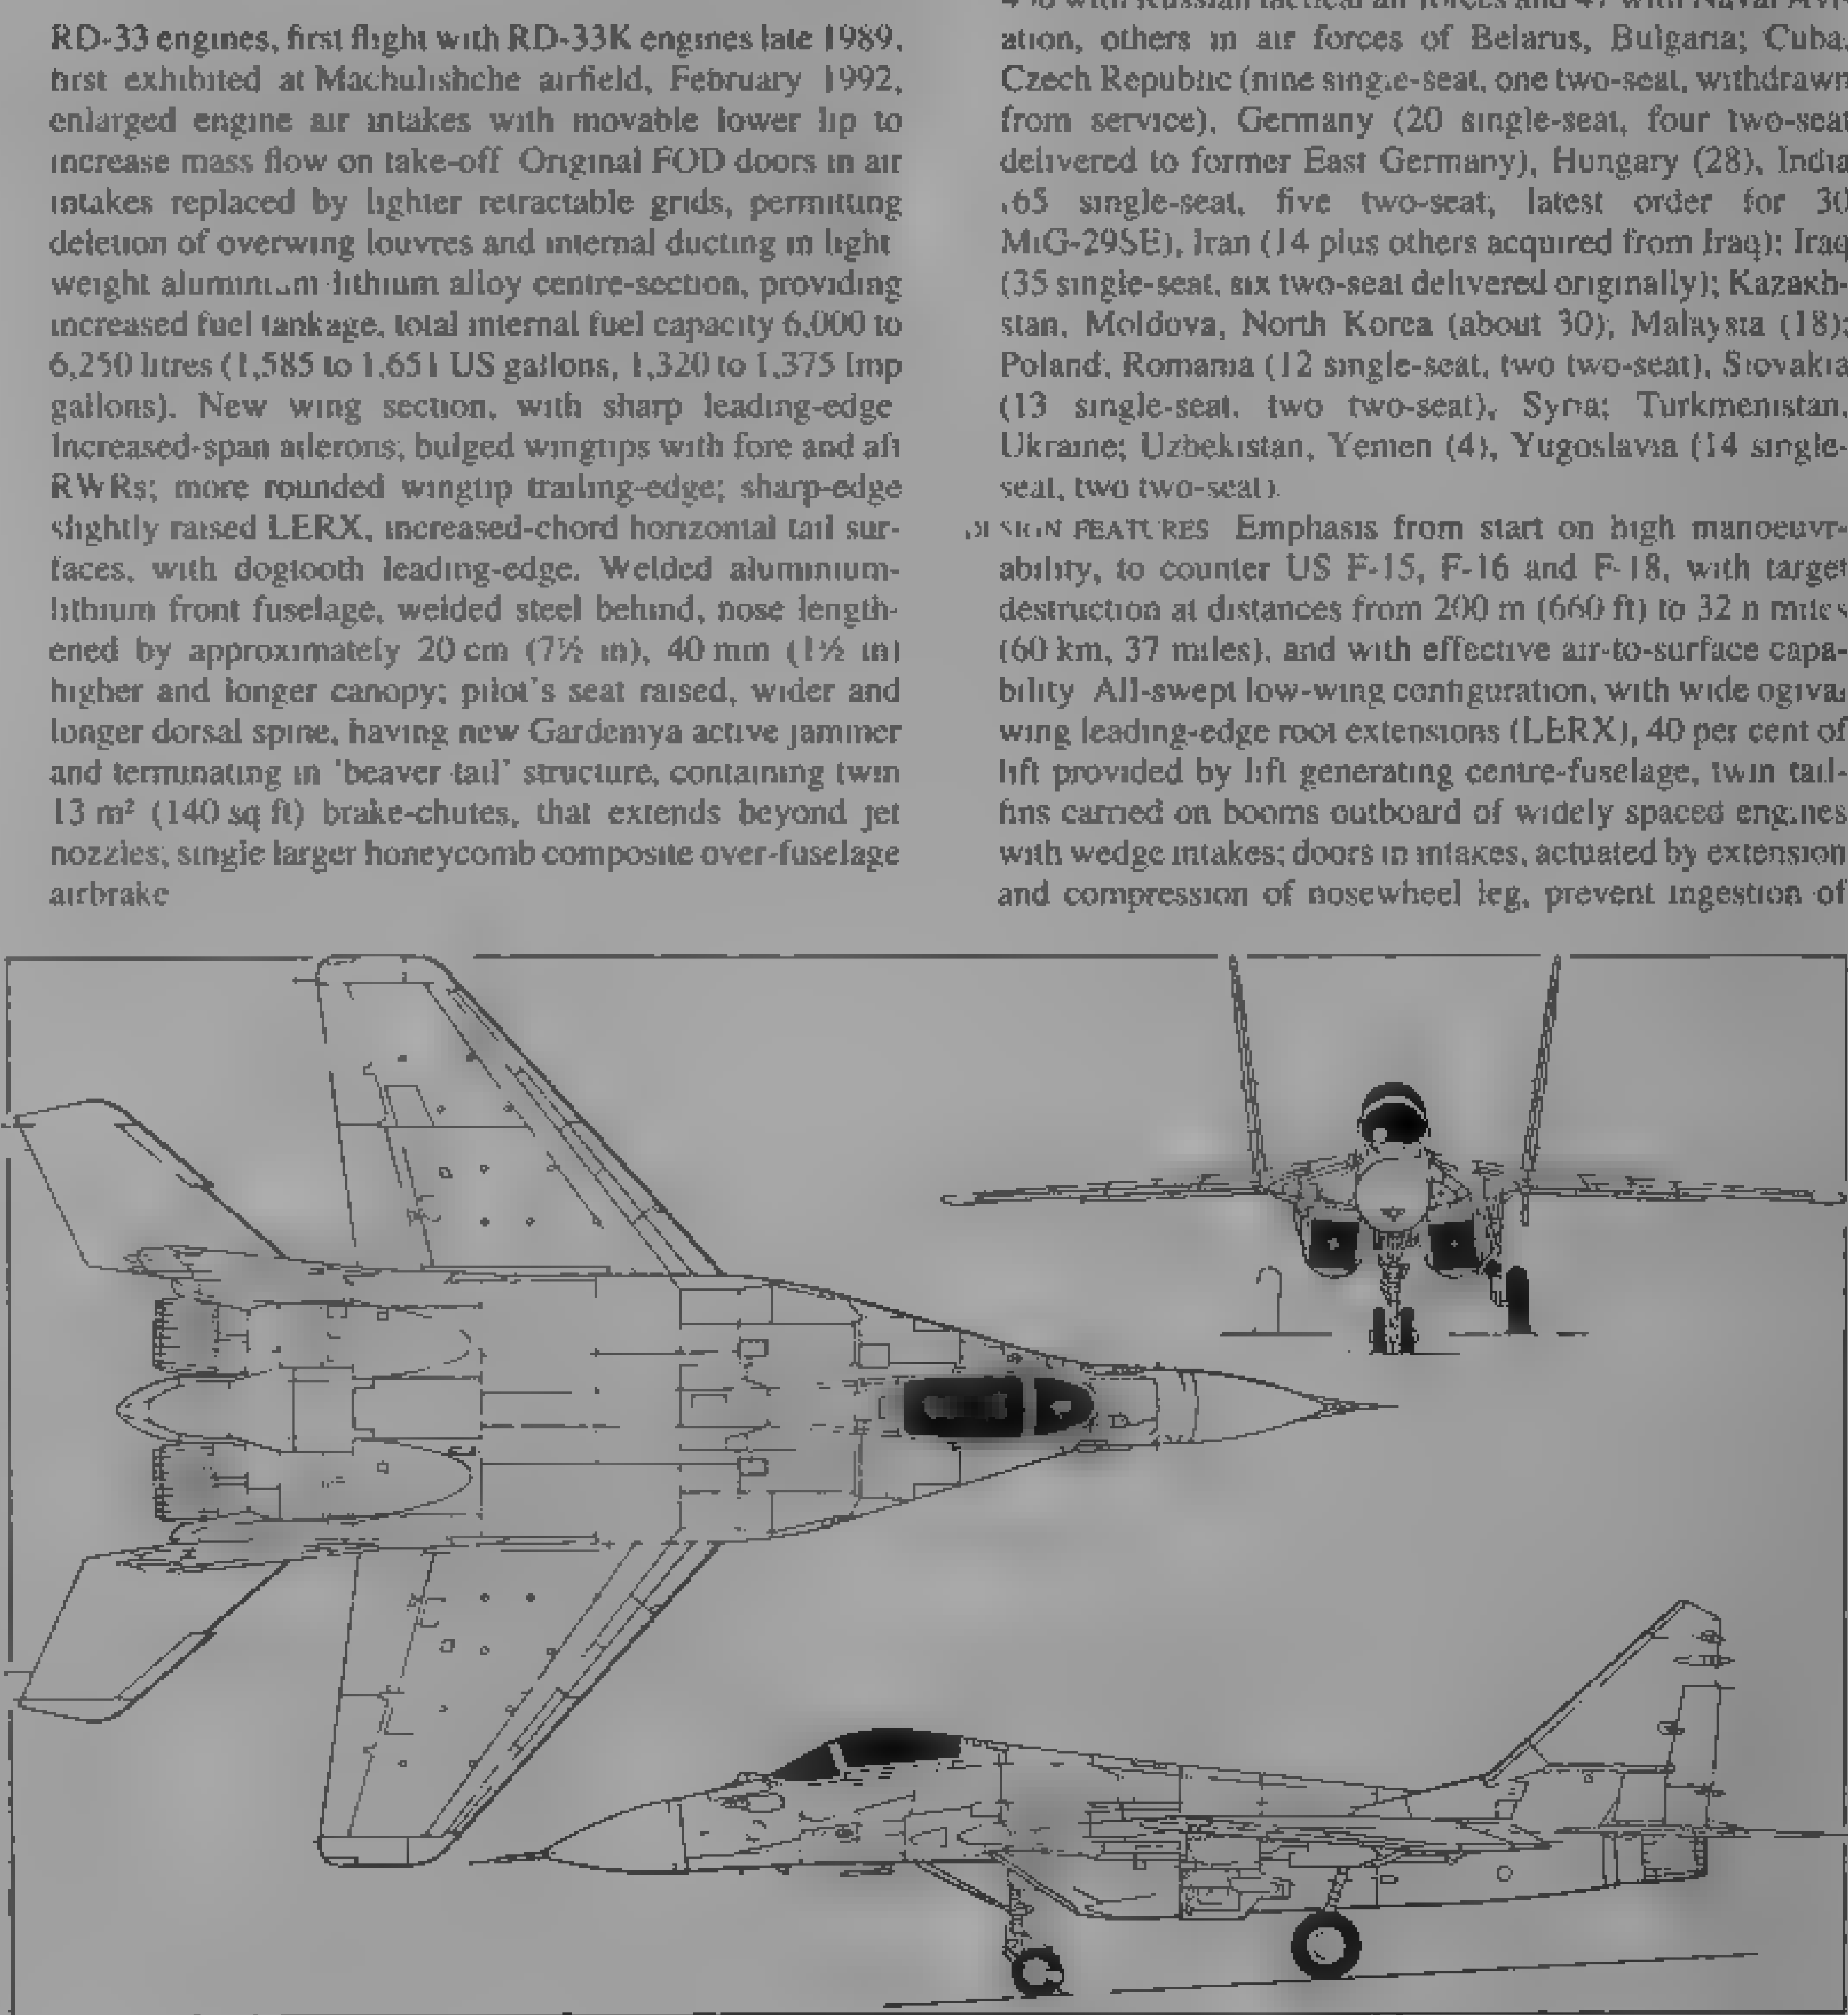
MiG-29ME Export version of MiG-29M, airframe and power plant of 29M, N019M radar and weapons of MiG 29 Redesignated **MiG-33** (which see), 1994

MiG-29K (Factory index 9 31; K for korabelnyy; ship-based)· Maritime version, used for ski-jump take-off and deck landing trials on carrier *Admiral of the Fleet Kuznetsov* (formerly *Tbilisi*), beginning 1 November 1989, two new-build prototypes, using MiG-29M structure; wing of increased area, new centre-section without overwing louvres (see MiG-29M); upward-folding outer wing panels, RD-33K turbofans. First flown 23 June 1988 (16188). Exhibited at Machulishche airfield, Minsk February 1992 with typical anti-ship armament of four Kh 31P/A (AS-17 'Krypton') air-to-surface missiles and four R-73A (AA-11 'Archer') air-to-air missiles. Production MiG-29K was intended to use same basic airframe, power plant, avionics and equipment as MiG-29M, with added wing folding, strengthened landing gear, arrester hook, retractable flight refuelling probe, and other naval requirements. Further development officially ended when not selected for deployment on *Admiral of the Fleet Kuznetsov*. (More details in 1993 94 *Jane's*)

MiG-29KVP· Refined for STOL operations; fitted with arrester hook and tested at land base as demonstrators for MiG-29K. Approximately five converted from early 'Fulcrum-A' airframes

CUSTOMERS More than 1,200 built by MAPO by April 1995, 430 with Russian tactical air forces and 47 with Naval Aviation, others in air forces of Belarus, Bulgaria; Cuba, Czech Republic (nine single-seat, one two-seat, withdrawn from service), Germany (20 single-seat, four two-seat delivered to former East Germany), Hungary (28), India (65 single-seat, five two-seat; latest order for 30 MiG-29SE), Iran (14 plus others acquired from Iraq); Iraq (35 single-seat, six two-seat delivered originally); Kazakhstan, Moldova, North Korea (about 30), Malaysia (18); Poland, Romania (12 single-seat, two two-seat), Slovakia (13 single-seat, two two-seat), Syria; Turkmenistan, Ukraine; Uzbekistan, Yemen (4), Yugoslavia (14 single-seat, two two-seat).

DESIGN FEATURES Emphasis from start on high manoeuvrability, to counter US F-15, F-16 and F-18, with target destruction at distances from 200 m (660 ft) to 32 n miles (60 km, 37 miles), and with effective air-to-surface capability All-swept low-wing configuration, with wide ogival wing leading-edge root extensions (LERX), 40 per cent of lift provided by lift generating centre-fuselage, twin tailfins carried on booms outboard of widely spaced engines with wedge intakes; doors in intakes, actuated by extension and compression of nosewheel leg, prevent ingestion of



Mikoyan MiG-29M advanced counter-air fighter *(Jane's/Mike Keep)*

1995

foreign objects during take-off and landing, gap between roof of each intake and skin of wingroot extension for boundary layer bleed.

Fire control and mission computers link radar with laser rangefinder and infra-red search/track sensor, in conjunction with helmet-mounted target designator; radar able to track 10 targets simultaneously; targets can be approached and engaged without emission of detectable radar or radio signals, sustained turn rate much improved over earlier Soviet fighters; thrust/weight ratio better than one; allowable angles of attack at least 70 per cent higher than previous fighters, difficult to get into stable flat spin, reluctant to enter normal spin, recovers as soon as controls released wing leading-edge sweepback 73° 30′ on LERX, 42° on outer panels, anhedral approximately 2°; aspect ratio 3.5 tailfins canted outward 6°; leading-edge sweep 47° 50′ on fins, 50° on horizontal surfaces. Design flying life 2,500 hours

FLYING CONTROLS: Mechanical controls, hydraulically powered, with autopilot and rate dampers. AOA limiter set at 26° (30° permitted in symmetrical manoeuvres without banking), computer-controlled four-section leading-edge manoeuvring flaps over full span of each wing, except tip, and plain trailing-edge flaps, inset ailerons, each with manually adjustable trim tab, inset rudders and all-moving (+15°/−35° collectively and differentially) horizontal tail surfaces, without tabs, interconnect allows rudders to augment roll rate, mechanical yaw stability augmentation system; hydraulically actuated forward-hinged airbrakes above and below rear fuselage between jetpipes

STRUCTURE: Approximately 7 per cent of airframe, by weight, of composites; remainder metal, including aluminium-lithium alloy for wing carry-through structure housing fuel tanks, three-spar wings, trailing-edge wing flaps, ailerons and vertical tail surfaces of carbonfibre honeycomb, approximately 65 per cent of horizontal tail surfaces aluminium alloy, remainder carbonfibre; semi-monocoque all metal fuselage, sharply tapered and downswept aft of flat-sided cockpit area, with ogival dielectric nosecone; small vortex generator each side of nose helps to overcome early tendency to aileron reversal at angles of attack above 25° tail surfaces carried on slim booms alongside engine nacelles

LANDING GEAR: Retractable tricycle type, made by Hydromash, with single wheel on each main unit and twin nose wheels. Mainwheels retract forward into wingroots turning through 90° to lie flat above leg, nosewheels, on trailing-link oleo, retract rearward between engine air intakes. Hydraulic retraction and extension, with mechanical emergency release. Nosewheels steerable ±8° for taxying, T-O and landings, ±30° for slow speed manoeuvring in confined areas (selector in cockpit). Mainwheel tyres size 840 × 290 mm, nosewheel tyres size 570 × 140 mm Pneumatic steel brakes. Mudguard to rear of nosewheels Container for 17 m² (183 sq ft) cruciform brake-chute in centre of boat-tail between engine nozzles

POWER PLANT: Two Klimov/Sarkisov RD-33 turbofans, each 49.4 kN (11,110 lb st) dry and 54.9 to 81.4 kN (12,345 to 18,300 lb st) with afterburning. Engine ducts canted at approximately 9°, with wedge intakes, sweptback at approximately 35°, under wingroot leading-edge extensions. Multisegment ramp system, including top-hinged forward door (containing a very large number of small holes) inside each intake that closes the duct while aircraft is taking off or landing, to prevent ingestion of foreign objects, ice or snow. Air is then fed to each engine through five louvres in top of each wingroot leading-edge extension and perforations in duct closure door. Doors are opened by extension of nose gear oleo when T-O speed reaches 108 knots (200 km/h, 124 mph) and closed by oleo compression at touchdown. Louvres also have air inlet control function, sometimes asymmetrical with three lattice spill doors aft of each. Basic 'Fulcrum-A' has integral fuel tank in inboard portion of each wing, capacity 350 litres (92.5 US gallons, 77 Imp gallons); four tanks in fuselage, respectively 705 litres (186 US gallons, 155 Imp gallons), 875 litres (231 US gallons, 192.5 Imp gallons), 1,800 litres (476 US gallons, 396 Imp gallons) and 285 litres (75 US gallons, 62.5 Imp gallons), total fuel capacity 4,365 litres (1,153 US gallons, 960 Imp gallons). Attachment for 1,500 litre (396 US gallon, 330 Imp gallon) non-conformal external fuel tank under fuselage, between ducts. Some aircraft piped to carry 1,150 litre (304 US gallon, 253 Imp gallon) external tank under each wing. Single-point pressure refuelling through receptacle in port wheel well. Overwing receptacles for manual fuelling. Airscoop for GTDE-117 turboshaft APU, rated at 73 kW (98 eshp), for engine starting, above rear fuselage on port side, exhaust passes through underbelly fuel tank when fitted

ACCOMMODATION: Pilot only, on 10° inclined K-36DM zero/zero ejection seat, under hydraulically actuated rearward hinged transparent blister canopy in high-set cockpit. Sharply inclined one-piece curved windscreen. Three internal mirrors provide rearward view

SYSTEMS: Hydraulic system pressure 207 bars (3,000 lb/sq in), with 80 litres (21 US gallons; 17.5 Imp gallons) fluid

AVIONICS: Integrated by NPO Elektro Avtomatika

Comms: R 862 com radio; SRO-2 ('Odd Rods') IFF transponder and SRZ-15 interrogator. Optional V/UHF radios.

Radar: RLS RP-29 (N019 Sapfir-29) coherent pulse Doppler look-down/shoot-down engagement radar (NATO 'Slot Back'; able to track 10 targets simultaneously; search range 54 n miles, 100 km, 62 miles, tracking range 38 n miles; 70 km, 43 miles), target tracking limits 60° up, 38° down, 67° each side, collimated with laser rangefinder

Flight: ARK-19 DF. Optional INS, Tacan, VOR/ILS and/or GPS equipment

Instrumentation: HUD; infra-red search/track sensor (fighter detection range 8 n miles, 15 km, 9.25 miles) forward of windscreen (protected by removable fairing on

Afterburner take-off by sixth MiG-29M prototype 05556 *(Paul Jackson)* *1995*

non-operational flights), and helmet-mounted target designation system for off-axis aiming of air-to-air missiles.

Self-defence: Sirena-3 360° radar warning system, with sensors on wingroot extensions, wingtips and port fin. Two SO-69 ECM antennae under conformal dielectric fairings in leading-edge of each wingroot extension. BVP 30-26M flare dispenser, with thirty 26 mm cartridges, in each fin root extension.

ARMAMENT: Six close-range R-60T or R-60MK (NATO AA-8 'Aphid') infra-red air-to-air missiles, or four R-60TMK and two medium-range radar guided R-27R1 (AA-10A 'Alamo-A'), on three pylons under each wing; alternative air combat weapons include R-73A or R-73E (AA-11 'Archer') close-range infra-red missiles. Able to carry eight FAB-250 or four FAB-500 bombs, KMGU-2 submunitions dispensers, 3B-500 napalm tanks, B-8M1 (20 × 80 mm) rocket packs and 130 mm and 240 mm rockets in attack role. One 30 mm GSh-301 gun in port wingroot leading-edge extension, with 150 rounds.

DIMENSIONS, EXTERNAL:

Wing span	11.36 m (37 ft 3¼ in)
Wing chord, at c/l	5.60 m (18 ft 4½ in)
at tip	1.27 m (4 ft 2 in)
Wing aspect ratio	3.5
Length overall: incl noseprobe	17.32 m (56 ft 10 in)
excl noseprobe	16.28 m (53 ft 5 in)
Length of fuselage, excl noseprobe	14.875 m (48 ft 9¾ in)
Height overall	4.73 m (15 ft 6¼ in)
Tailplane span	7.78 m (25 ft 6¼ in)
Wheel track	3.09 m (10 ft 1¾ in)
Wheelbase	3.645 m (11 ft 11½ in)

AREAS:

Wings, gross	38.0 m² (409.0 sq ft)

WEIGHTS AND LOADINGS (A, MiG-29; B, MiG-29S):

Operating weight empty: A	10,900 kg (24,030 lb)
Max weapon load: A	3,000 kg (6,615 lb)
Max fuel load: A	4,640 kg (10,230 lb)
B	6,670 kg (14,705 lb)
Normal T-O weight (interceptor):	
A	15,240 kg (33,600 lb)
B	15,300 kg (33,730 lb)
Max T-O weight: A	18,500 kg (40,785 lb)
B	19,700 kg (43,430 lb)
Max wing loading	486.8 kg/m² (99.7 lb/sq ft)
Max power loading	113.6 kg/kN (1.11 lb/lb st)

PERFORMANCE:

Max level speed: at height: A, B	Mach 2.3 (1,320 kts; 2,445 km/h; 1,520 mph)
at S/L: A, B	Mach 1.225 (810 kts; 1,500 km/h; 932 mph)
T-O speed: A	119 kts (220 km/h; 137 mph)
B	140-151 kts (260-280 km/h; 162-174 mph)
Acceleration: A, B at 1,000 m (3,280 ft):	
325-595 kts (600-1,100 km/h; 373-683 mph)	13.5 s
595-700 kts (1,100-1,300 km/h; 683-805 mph)	8.7 s
Approach speed: A	140 kts (260 km/h; 162 mph)
Landing speed: A	127 kts (235 km/h; 146 mph)
B	135-140 kts (250-260 km/h; 155-162 mph)
Max rate of climb at S/L: A, B	19,800 m (65,000 ft)/min
Service ceiling: A	17,000 m (55,775 ft)
B	18,000 m (59,050 ft)
T-O run: A, B with afterburning	250 m (820 ft)
B without afterburning	600-700 m (1,970-2,300 ft)
Landing run, with brake-chute:	
A, B	600-700 m (1,970-2,300 ft)
Radius of turn at 3.8g:	
A at 432 kts (800 km/h; 497 mph)	350 m (1,150 ft)
A at over 216 kts (400 km/h; 249 mph)	225 m (740 ft)
Range: A with max internal fuel	810 n miles (1,500 km; 932 miles)
A with underbelly auxiliary tank	1,133 n miles (2,100 km; 1,305 miles)
B with three external tanks	1,565 n miles (2,900 km; 1,800 miles)
g limits: above Mach 0.85: A	+7
below Mach 0.85: A, B	+9

UPDATED

MIKOYAN MiG-31

NATO reporting name: Foxhound

TYPE: Two-seat twin-engined strategic interceptor.

PROGRAMME: First flown, as Ye-155MP (originally Type 83 MiG-25MP), 16 September 1975; production started 1979; first regiments operational 1982, replacing MiG-23s and Su-15s; production continues at Sokol production plant, Nizhny Novgorod.

CURRENT VERSIONS: **MiG-31** (Type 01; 'Foxhound-A'): Two-seat, all-weather, all-altitude interceptor, able to be guided automatically, and to engage targets, under ground control.

Detailed description applies to this version.

MiG-31M (Type 05; 'Foxhound-B'): Improved interceptor, under development since 1984, first shown publicly February 1992; upgraded engines, with modified nozzles, one-piece rounded windscreen, small side windows only for rear cockpit; wider and deeper dorsal spine, containing additional fuel, more rounded wingtips, with flush dielectric areas at front and rear; taller fins with larger, curved root extensions; modified and extended wingroot leading-edge extensions, smaller wing upper-surface fences, all systems upgraded, digital flight controls, multifunction CRT cockpit displays; new Phazotron phased-array radar, with 1.40 m (55 in) diameter antenna, in 3° 30′ downward-inclined nose; semi-retractable flight refuelling probe transferred to starboard side of nose; non-retractable IRST pod, no gun; number of fuselage weapon stations increased to six, by addition of two centreline pylons, with R-37 AAMs instead of R-33s, four new-type underwing pylons for R-77 (AA-12) AMRAAM class active radar-guided missiles. Prototype lost on 9 August 1991, seven more prototypes, at least one (057) with cylindrical wingtip ECM/ECCM jammer pods carrying upper and lower winglets. Maximum T-O weight 52,000 kg (114,640 lb).

MiG-31B (Type 12): Some basic MiG-31s converted and others built under this designation. Possible hybrid of MiG-31/31M, compatible with R-37 AAMs and with interchangeable wingtips, but retaining original radar. Avionics upgrade includes A-723 long-range navigation system, compatible with Loran/Omega and Chaika ground stations.

Two **MiG-31A** (Type 07) dedicated anti-satellite models were produced, with ballast instead of radar in nose, a flat fuselage undersurface without recesses, and underwing ASAT missiles.

CUSTOMERS: CIS air forces including 300 with Russian air defence forces, 30 with tactical units; others reportedly to China.

DESIGN FEATURES: Initiated to counter threat of USAF B-52 bombers carrying ALCMs. Basic MiG-25 configuration retained, but very different aircraft, strengthened to permit supersonic flight at low altitude; more powerful engines than MiG-25; major requirement increased range, not speed, advanced digital avionics; Zaslon radar was first electronically scanned phased-array type to enter service, enabling MiG-31 to track 10 targets and engage four simultaneously, including targets below and behind its own location; fuselage weapon mountings added, crew increased to two. Wing anhedral 4° from roots; sweepback approximately 40° on leading-edge, 32° at quarter-chord, with small sharply swept wingroot extensions, all-swept tail surfaces, with twin outward canted fins and dihedral horizontal surfaces.

FLYING CONTROLS: Large-span ailerons and flaps, wing leading-edge slats in four sections on each wing, all-moving horizontal tail surfaces, inset rudders.

STRUCTURE: Airframe 50 per cent arc-welded nickel steel, 16 per cent titanium, 33 per cent light alloy, 1 per cent composites, including radome; three-spar wings, no wingtip fairings or mountings; small forward-hinged airbrake under front of each intake trunk, undersurface of centre-fuselage not dished between engine ducts like MiG-25, much enlarged air intakes, jet nozzles extended rearward, shallow fairing extends forward from base of each fin leading-edge; fence above each wing in line with stores pylon.

Development MiG-31M 21496 with original refuelling probe and windscreen *(Paul Jackson)* *1995*

LANDING GEAR: Retractable tricycle type, offset tandem twin wheels on each main unit, retracting forward into air intake trunk, facilitate operation from unprepared ground and gravel, rearward retracting twin nosewheel unit with mudguard.

POWER PLANT: Two Aviadvigatel D-30F6 turbofans, each 93.1 kN (20,930 lb st) dry, 151.9 kN (34,170 lb st) with afterburning, internal fuel capacity approximately 20,250 litres (5,350 US gallons; 4,455 Imp gallons), provision for two underwing tanks, each 2,500 litres (660 US gallons; 550 Imp gallons), semi-retractable flight refuelling probe on port side of front fuselage.

ACCOMMODATION: Pilot and weapon systems operator in tandem under individual rearward hinged canopies; rear canopy has only limited side glazing and blends into shallow dorsal spine fairing which extends to forward edge of jet nozzles.

AVIONICS: *Radar:* NIIP N007 S-800 Zaslon electronically scanned phased-array fire control radar (NATO 'Flash Dance') in nose; search range of 108 n miles (200 km; 124 miles) in clutter-free forward sector, 65 n miles (120 km; 75 miles) in look-down mode; ranges in rear sector 48 n miles (90 km; 56 miles) and 37 n miles (70 km; 43 miles), respectively; capable of tracking 10 targets and attacking four simultaneously.

Flight: Marshrut long-range and Tropik medium-range nav systems.

Mission: In four-aircraft group interception mission, only lead MiG-31 is linked to AK RLDN automatic guidance network on ground; other three MiG-31s have APD-518 digital datalink to lead aircraft, permitting line-abreast radar sweep of zone 430 to 485 n miles (800 to 900 km; 495 to 560 miles) wide by 140° sector scanning angles. Semi-retractable infra-red search/track sensor under cockpit, tactical situation display.

Self-defence: Radar warning receivers.

EQUIPMENT: Active infra-red and electronic countermeasures.

ARMAMENT: Four R-33 (NATO AA-9 'Amos') semi-active radar homing long-range air-to-air missiles in pairs on AKU ejector pylons under fuselage, plus two R-40T (AA-6 'Acrid') medium-range infra-red missiles on inner underwing pylons, four infra-red R-60 (K-60, AA-8 'Aphid') air-to-air missiles on outer underwing pylons, in pairs. Front pair of R-33s is semi-recessed in fuselage. GSh-6-23 six-barrel Gatling-type 23 mm gun inside fairing on starboard side of lower fuselage, adjacent main landing gear, with 260 rounds.

DIMENSIONS, EXTERNAL:

Wing span	13.464 m (44 ft 2 in)
Wing aspect ratio	2.94
Length overall	22.688 m (74 ft 5¼ in)
Height overall	6.15 m (20 ft 2¼ in)

AREAS:

Wings, gross	61.6 m² (663.0 sq ft)

MiG-31B ('Foxhound-A') all-weather interceptor *(Piotr Butowski)*

1993

WEIGHTS AND LOADINGS
- Weight empty: 21,820 kg (48,105 lb)
- Internal fuel: 16,350 kg (36,045 lb)
- Max T-O weight:
  - with max internal fuel: 41,000 kg (90,390 lb)
  - with max internal fuel and two underwing tanks: 46,200 kg (101,850 lb)
- Max wing loading: 750.0 kg/m² (153.6 lb/sq ft)
- Max power loading: 152.0 kg/kN (1.49 lb/lb st)

PERFORMANCE
- Max permitted Mach number at height: Mach 2.83
- Max level speed at 17,500 m (57,400 ft): 1,620 kts (3,000 km/h; 1,865 mph)
  - at S/L: 810 kts (1,500 km/h; 932 mph)
- Max cruising speed at height: Mach 2.35
- Econ cruising speed: Mach 0.85
- Landing speed: 151 kts (280 km/h; 174 mph)
- Time to 10,000 m (32,800 ft): 7 min 54 s
- Service ceiling: 20,600 m (67,600 ft)
- T-O run at max T-O weight: 1,200 m (3,940 ft)
- Landing run: 800 m (2,625 ft)
- Radius of action with max internal fuel and four R-33 missiles: at Mach 2.35: 388 n miles (720 km; 447 miles)
  - at Mach 0.85: 647 n miles (1,200 km; 745 miles)
  - at Mach 0.85 with two underwing tanks: 755 n miles (1,400 km; 870 miles)
  - at Mach 0.85 with two underwing tanks and one flight refuelling: 1,185 n miles (2,200 km; 1,365 miles)
- Ferry range, max internal and external fuel, no missiles: 1,780 n miles (3,300 km; 2,050 miles)
- Max endurance with underwing tanks:
  - unrefuelled: 3 h 36 min
  - refuelled in flight: 6-7 h
- g limit: supersonic: +5

Front cockpit of MiG-31 ('Foxhound-A') *(Piotr Butowski)*

1994

MIKOYAN MiG-33

TYPE: Redesignated MiG-29M/ME (which see), brief data follow.

WEIGHTS AND LOADINGS
- Max weapons load: 5,500 kg (12,125 lb)
- Normal T-O weight: 16,800 kg (37,037 lb)

PERFORMANCE
- Max level speed at height: above Mach 2.2
- Max rate of climb at S/L: 19,800 m (64,960 ft)/min
- Max stabilised turn rate at 3,000 m (9,840 ft): 23°/s
- Combat radius:
  - with six air-to-air missiles and three external tanks: 755 n miles (1,400 km; 870 miles)
  - with 3,000 kg (6,615 lb) of bombs and three external tanks: 647 n miles (1,200 km; 745 miles)
- Max range:
  - internal fuel: 1,079 n miles (2,000 km; 1,242 miles)
  - with three external tanks: 1,726 n miles (3,200 km; 1,988 miles)

NEW ENTRY

MIKOYAN 1-42

TYPE: Single-seat multirole combat aircraft (mnogofunktsionalnyy-istrebityel MFI).

PROGRAMME: Intended as next generation fighter; two prototypes reported to be completed in advance of engine availability 1994; first flight possible with Lyulka engines as in Su-27/35 series; high-speed taxi trials began late 1994, but first flight still awaited (mid-1995), reportedly because of funding shortage.

DESIGN FEATURES: Accompanying illustration suggests possible main features of configuration. Twin-fin delta with large canards and possible thrust-vectoring engine nozzles with aim of improving on agility of Su-27. A degree of 'stealth' can be assumed, through use of RAM (radar absorbent materials) rather than RAS (radar absorbent structure). Emphasis on true multirole capability from start, with possible internal stowage for some air-to-air missiles and heavy reliance on countermeasures. Wing span similar to that of Su-27; unconfirmed reports of weight in 35,000 kg (77,160 lb) class.

POWER PLANT: Two Saturn/Lyulka AL-41F afterburning turbofans.

AVIONICS: *Radar:* New Phazotron-developed phased-array fire control radar.

UPDATED

MIKOYAN MiG-AT

TYPE: Two-seat advanced jet trainer and light attack aircraft.

PROGRAMME: Selected as one of two finalists in Russian competition to replace Aero L-29 and L-39 Albatros; under October 1992 agreement, two prototypes are powered by Larzac engines supplied by SNECMA of France; production aircraft will have Larzacs licence-built by Chernyshov of Moscow; prototype rolled out 18 May 1995, production of first series of 15 under way at MAPO Dementyev plant. Russian requirement for 200 to 250 trainers in this category, whether or not MiG-AT wins competition, will be offered for export.

CURRENT VERSIONS: **MiG-ATF:** Prototype, equipped with French avionics.

MiG-ATR: Second prototype, Russian avionics.

MiG-ATB (Boyevoy, combat): Light attack version, intended to compete in international market with BAe Hawk 200.

DESIGN FEATURES: Conventional low-wing monoplane, wing-root leading-edges sweptforward, with engine air intakes overwing; sweptback vertical tail surfaces, unswept tailplane, tailcone comprises two front-hinged door type

Representative MiG-33 (fifth prototype MiG-29M 05555) with AAM and ASM armament *(Peter J. Cooper)*

1995

MiG-ATF two-seat advanced jet trainer on display at Paris before first flight *(Paul Jackson)* 1995

airbrakes. Designed for manoeuvrability comparable with front-line combat aircraft, and service life of 15,000 flying hours or 30 years, with not fewer than 30,000 landings; maximum angle of attack of 25°, and sustained 5.4 *g* turn in 4 km (2.5 m le) radius at Mach 0.7. Onboard simulation of manoeuvring target, meteorological conditions and system failures via HUD, as well as all operational modes of the most modern combat aircraft.

FLYING CONTROLS: Fly-by-wire system.

STRUCTURE: Three-panel wings of aluminium alloy honeycomb; CFRP ailerons and flaps; 40 per cent of fuselage skin CFRP and GFRP; fin integral with rear fuselage. Production aircraft expected to have composites wings made in South Korea.

LANDING GEAR: Retractable tricycle type; single wheel on each unit; wide-track main units retract inward, nosewheel forward; mainwheel tyre size 660 × 200 mm, pressure 8.8 ± 0.5 bars (128 ± 7 lb/sq in); nosewheel tyre size 500 × 150 mm, pressure 4.9 ± 0.5 bars (71 ± 7 lb/sq in); high efficiency brakes; operation practicable from unpaved surfaces of bearing ratio 6 kg/cm² (85.3 lb/sq in).

POWER PLANT: Two Turbomeca-SNECMA Larzac 04-R20 turbofans; each 14.12 kN (3,175 lb st), mounted above wingroots. One fuselage fuel tank, capacity 850 kg (1,874 lb), and one in wing, capacity 200 kg (441 lb). Tanks pressurised with engine bleed air to ensure high-altitude supply.

ACCOMMODATION: Two crew in tandem, on zero/zero ejection seats, rear seat raised by 400 mm (15.75 in) to improve occupant's forward view; one-piece birdproof canopy.

AVIONICS: Integrated by Russian GosNIIAS avionics research institute and Sextant Avionique, France. Multifunctional central computer, with all data integrated through MIL-STD-1553B databus.

Flight: Automatic control system, air data system, INS, Tacan, ILS, IFF.

Instrumentation: Two multifunctional CRT displays with buttons, HUD with input from colour video and TV camera. HSI/ADI.

Self-defence: Radar warning receivers.

ARMAMENT (optional): Seven hardpoints for up to 2,000 kg (4,410 lb) of guided and unguided missiles, guns and bombs.

DIMENSIONS, EXTERNAL:	
Wing span	10.16 m (33 ft 4 in)
Wing aspect ratio	5.66
Length overall	12.01 m (39 ft 4¾ in)
Height overall	4.62 m (15 ft 2 in)
Wheel track	3.80 m (12 ft 5½ in)
Wheelbase	4.48 m (14 ft 8½ in)
AREAS:	
Wings, gross	17.67 m² (190.2 sq ft)
WEIGHTS AND LOADINGS:	
Normal T-O weight	4,610 kg (10,163 lb)
Max T-O weight	7,000 kg (15,430 lb)
Max wing loading	260-396 kg/m² (53.25-81.1 lb/sq ft)
Max power loading	193.3 kg/kN (1.90 lb/lb st)
PERFORMANCE (estimated):	
Max level speed	460 kts (850 km/h; 528 mph)
T-O speed	97 kts (180 km/h; 112 mph)
Landing speed	92 kts (170 km/h; 106 mph)
Service ceiling	15,500 m (50,850 ft)
Ferry range	1,620 n miles (3,000 km; 1,865 miles)
g limits	+8.0/−3.0

UPDATED

MIKOYAN MiG-110

TYPE: Projected twin-turboprop multipurpose transport.

PROGRAMME: Announced during 1993, shown in model form at MosAeroshow '93; development received government approval January 1994.

CURRENT VERSIONS: Cabin can be equipped for passenger, combined cargo/passenger or cargo operations.

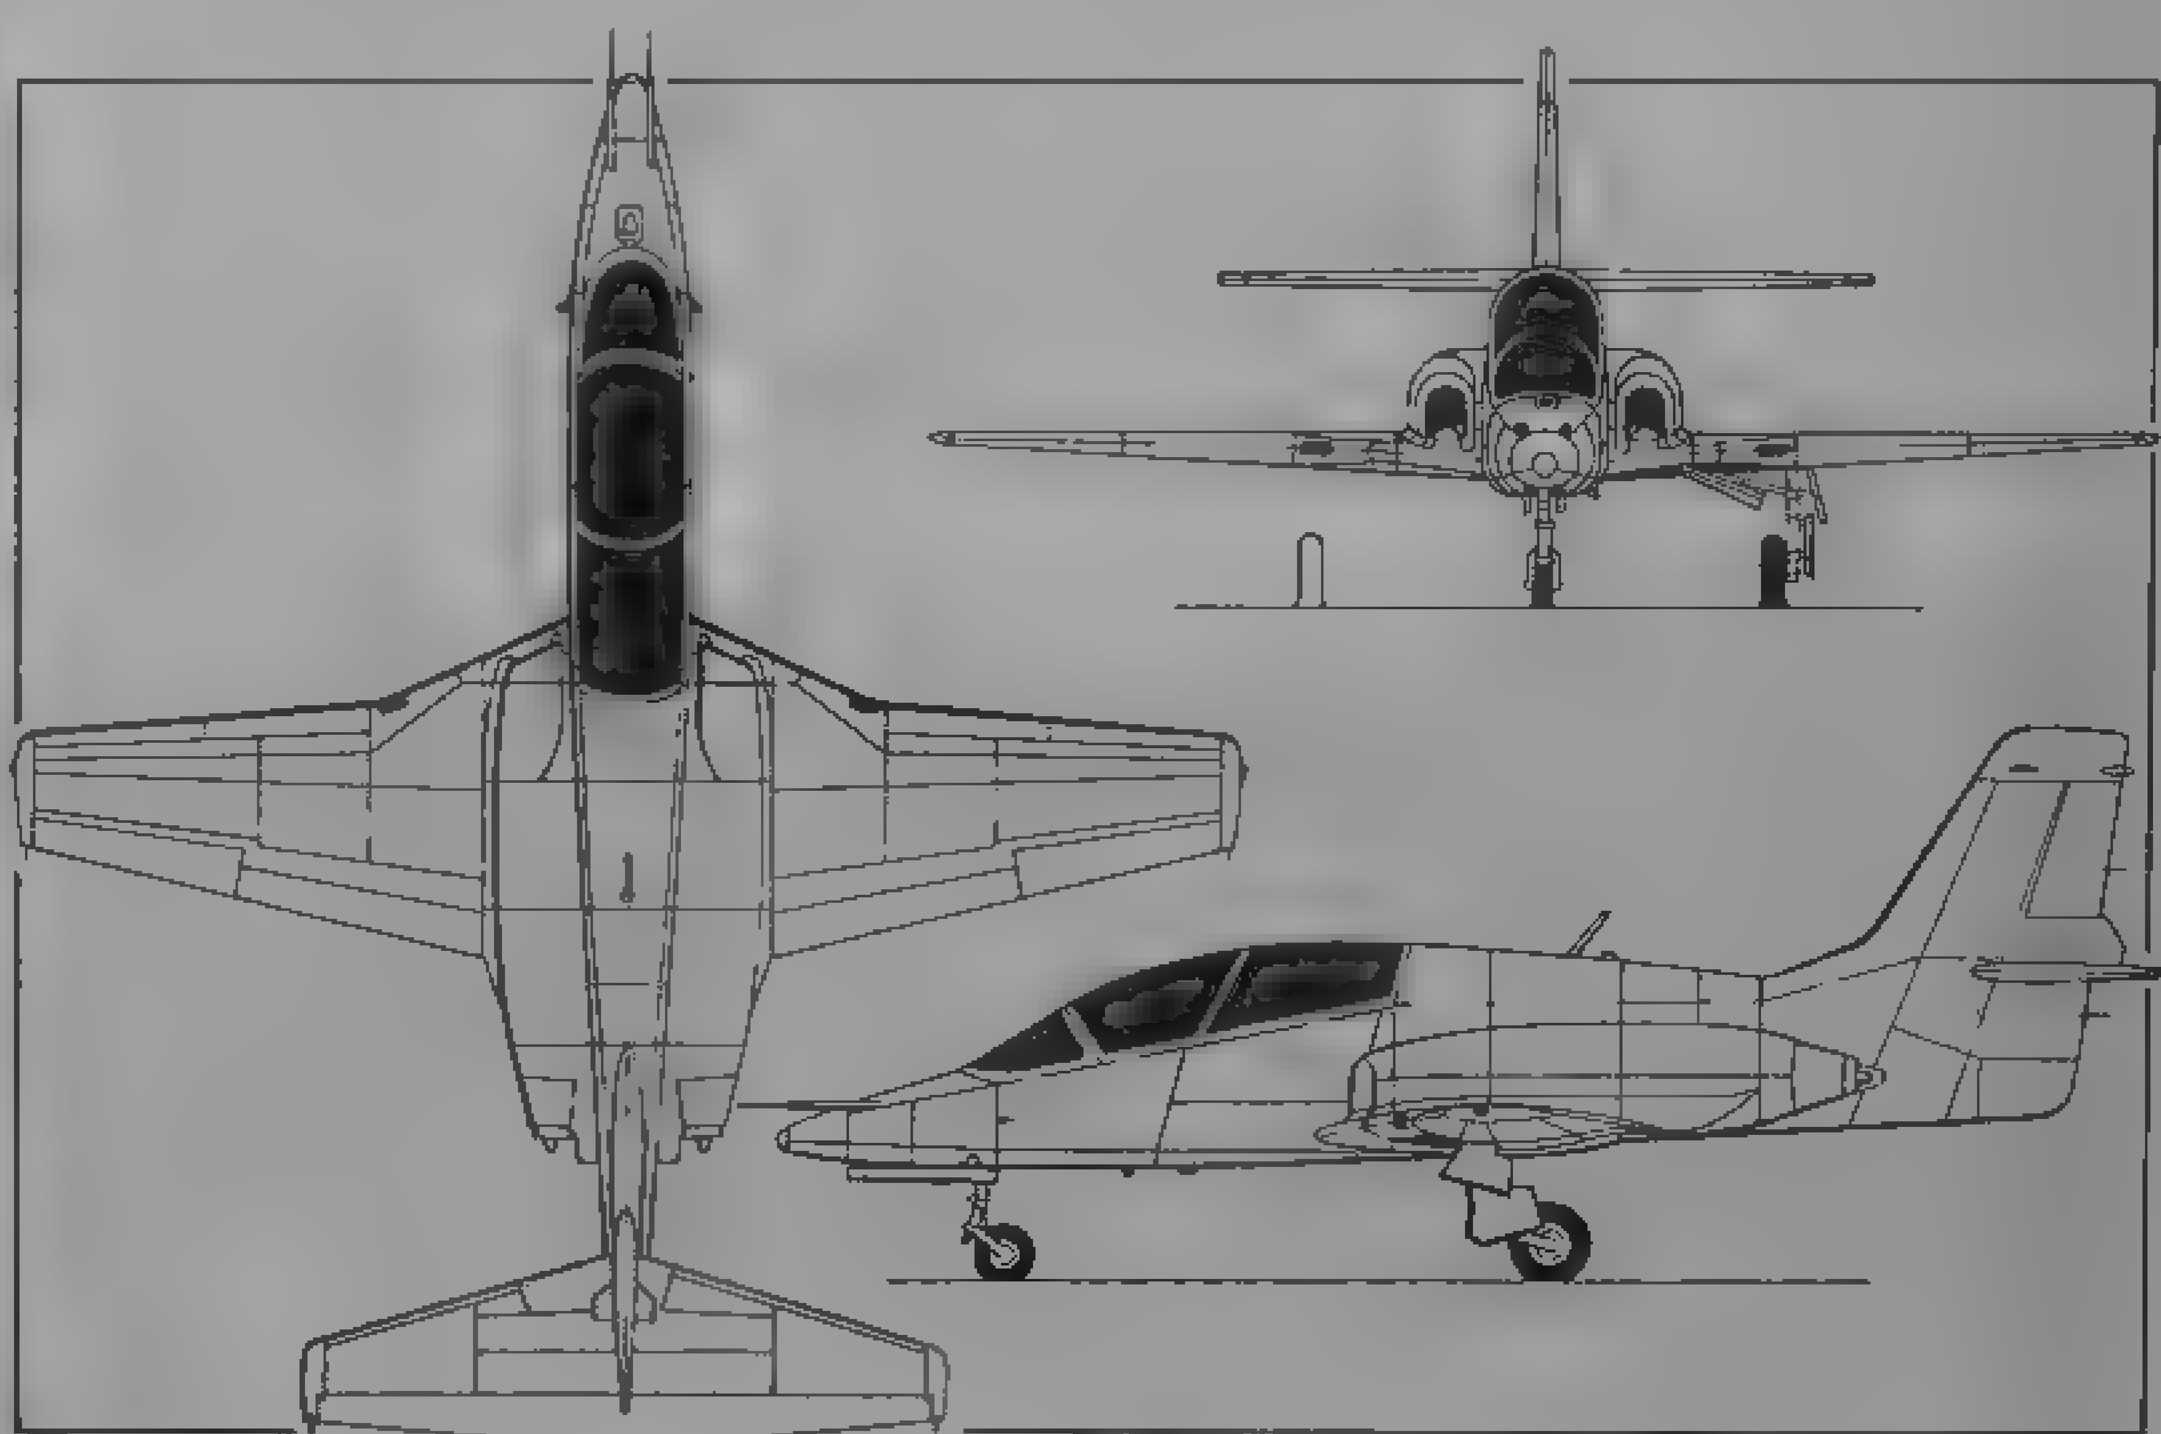
DESIGN FEATURES: High-wing monoplane; anhedral centre-section between twin booms carrying engines at front and twin fins at rear; horizontal tail surfaces between fin tips; retractable tricycle landing gear, suitable for use on paved or unpaved surfaces; twin wheels on each unit; mainwheels retract into booms to rear of engines; fuselage pod slung from centre-section, with upward-hinged rear fuselage section and loading ramp. Intended service life 25,000 hours.

FLYING CONTROLS: Conventional ailerons, elevator and twin rudders.

POWER PLANT: Two 1,838 kW (2,465 shp) Klimov TV7-117SV turboprops, six-blade propellers.

ACCOMMODATION: Seats for 35 passengers; or provisions for 15 passengers and 3,500 kg (7,715 lb) of freight, or

Front cockpit of MiG-ATF (French avionics) *(Paul Jackson)* 1995



Provisional three-view of Mikoyan MiG-AT advanced trainer *(Jane's/Mike Keep)* 1995

5,000 kg (11,025 lb) freight. Cargo hold can be refrigerated. To be available with equipment for ambulance, patrol, firefighting, rescue and agricultural duties

DIMENSIONS, EXTERNAL:

Wing span	22.12 m (72 ft 7 in)
Length overall	18.295 m (60 ft 0¼ in)
Height overall	5.385 m (17 ft 8 in)

DIMENSIONS, INTERNAL:

Cargo cabin: Length	7.40 m (24 ft 3¼ in)
Max width	2.20 m (7 ft 2½ in)
Max height	2.20 m (7 ft 2½ in)

WEIGHTS AND LOADINGS:

Max T-O weight	15,300 kg (33,730 lb)

PERFORMANCE (estimated):

Nominal cruising speed at 11,000 m (36,000 ft)	270 kts (500 km/h, 310 mph)
T-O run	600 m (1,970 ft)
Range, 30 min reserve: with max payload	836 n miles (1,550 km, 963 miles)
with max fuel	2,185 n miles (4,050 km, 2,515 miles)

MIL

MOSKOVSKY VERTOLYOTNY ZAVOD (MVZ) IMIENI M. L. MILYA (Moscow Helicopter Plant named after M. L. Mil)

2 Sokolnichyesky Val, 107113 Moscow
Telephone: 7 (095) 264 90 83
Fax: 7 (095) 264 55 71
Telex: 412144 MIL SU

CHIEF DIRECTOR, GENERAL DESIGNER: Mark V. Vineberg

OKB founded 1947 by Mikhail Leontyevich Mil, who was involved with Soviet gyroplane and helicopter development from 1929 until his death on 31 January 1970, aged 60. His original Mi-1, first flown September 1948 and introduced into service 1951, was first series production helicopter built in former USSR. More than 25,000 helicopters of Mil design built, representing 95 per cent of all helicopters in CIS.

Mil design and production facilities to be integrated into group comprising Mil Moscow, Kazan and Rostov plants, a helicopter operating company, financial and insurance interests. Associates will include Ulan-Ude production centre, Arsenyev and Viatka factories.

VERIFIED

MIL Mi-6 and Mi-22

NATO reporting name: Hook

TYPE: Twin-turbine heavy transport helicopter.

PROGRAMME: Joint military/civil requirement issued 1954, prototype flew 5 June 1957 as, by far, world's largest helicopter of that time; five built for development testing, initial preseries of 30, more than 860 built for civil/military use, ending 1981, developments included Mi-10 and Mi-10K flying cranes, Mi-6 dynamic components used in duplicated form on V-12 (Mi-12) of 1967, which remains largest helicopter yet flown.

CURRENT VERSIONS: **Mi-6** ('Hook A'): Basic transport. *Description applies to this version.* Full description last appeared in 1983-84 *Jane's*.

Mi-6VKP (vozduzhnyi komandnii punkt: airborne command post) ('Hook B'): Command support helicopter, flat bottom U-shape antenna under tailboom; X configuration blade antennae forward of horizontal stabilisers, large heat exchanger on starboard side of cabin, small cylindrical container aft of starboard rear cabin door.

Mi-6AYa/Mi-22 ('Hook C'): Developed command support version with sweptback plate antenna above forward part of tailboom instead of 'Hook-B's' U-shape antenna, small antennae under fuselage, pole antenna on starboard main landing gear of some aircraft.

CUSTOMERS: CIS ground forces, primarily to haul guns, armour, vehicles, supplies, freight and troops in combat areas, but also in command support roles, air forces of Algeria, Iraq, Peru and Vietnam, Peruvian Army Aviation. More than 60 exported by Aviaexport.

DESIGN FEATURES: Two small shoulder wings offload rotor by providing some 20 per cent of total lift in cruising flight. Removed when aircraft is operated as flying crane.

POWER PLANT: Two 4,045 kW (5,425 shp) Aviadvigatel/Soloviev D-25V (TV-2BM) turboshafts, mounted side by side above cabin, forward of main rotor shaft. Eleven internal fuel tanks, capacity 6,315 kg (13,922 lb); two external tanks, on each side of cabin, capacity 3,490 kg (7,695 lb); provision for two ferry tanks inside cabin, capacity 3,490 kg (7,695 lb).

ACCOMMODATION: Crew of five: two pilots, navigator, flight engineer and radio operator. Four jettisonable doors and overhead hatch on flight deck. Electrothermal anti-icing system for glazing of flight deck and navigator's compartment. Equipped normally for cargo operation, with easily removable tip-up seats along sidewalls; when these seats are supplemented by additional seats in centre of cabin, 65 to 90 passengers can be carried, with cargo or baggage in aisles. Normal military seating for 70 combat equipped troops. As ambulance, 41 stretcher cases and two medical attendants on tip-up seats can be carried, one attendant's station, provided with intercom to flight deck; provision for portable oxygen installations for patients. Cabin floor stressed for loadings of 2,000 kg/m² (410 lb/sq ft), provision for cargo tiedown rings. Rear clamshell doors and ramps operated hydraulically. Standard equipment includes electric winch of 800 kg (1,765 lb) capacity and pulley block system. Central hatch in cabin floor for cargo sling for bulky loads. Three jettisonable doors, fore and aft of main landing gear on port side and aft of landing gear on starboard side.

AVIONICS: *Comms:* VHF and HF communications radio, intercom.

Flight: Radio altimeter, radio compass, three-channel autopilot, marker beacon receiver, directional gyro.

ARMAMENT: Some military Mi-6s have a 12.7 mm machine gun in nose.

DIMENSIONS, EXTERNAL:

Main rotor diameter	35.00 m (114 ft 10 in)
Tail rotor diameter	6.30 m (20 ft 8 in)
Length overall, rotors turning	41.74 m (136 ft 11½ in)
fuselage, excl nose gun and tail rotor	33.18 m (108 ft 10½ in)
Height overall	9.86 m (32 ft 4 in)
Wing span	15.30 m (50 ft 2½ in)
Wheel track	7.50 m (24 ft 7¼ in)
Wheelbase	9.09 m (29 ft 9¾ in)
Rear-loading doors: Height	2.70 m (8 ft 10¼ in)
Width	2.65 m (8 ft 8¼ in)
Passenger doors: Height: front door	1.70 m (5 ft 7 in)
rear doors	1.61 m (5 ft 3½ in)
Width	0.80 m (2 ft 7½ in)
Sill height: front door	1.40 m (4 ft 7¼ in)
rear doors	1.30 m (4 ft 3¼ in)
Central hatch in floor	1.44 m (4 ft 9 in) × 1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin: Length	12.00 m (39 ft 4½ in)
Max width	2.65 m (8 ft 8¼ in)
Max height: at front	2.01 m (6 ft 7 in)
at rear	2.50 m (8 ft 2½ in)
Cabin volume	80 m³ (2,825 cu ft)

AREAS:

Main rotor disc	962.1 m² (10,356 sq ft)
Tail rotor disc	31.17 m² (335.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	27,240 kg (60,055 lb)
Max internal payload	12,000 kg (26,450 lb)
Max slung cargo	8,000 kg (17,637 lb)
Fuel load: internal	6,315 kg (13,922 lb)
with external tanks	9,805 kg (21,617 lb)
Max T-O weight with slung cargo at altitudes below 1,000 m (3,280 ft)	38,400 kg (84,657 lb)
Normal T-O weight	40,500 kg (89,285 lb)
Max T-O weight for VTO	42,500 kg (93,700 lb)
Max disc loading	44.17 kg/m² (9.05 lb/sq ft)

PERFORMANCE (at max T-O weight for VTO):

Max level speed	162 kts (300 km/h, 186 mph)
Max cruising speed	135 kts (250 km/h, 155 mph)
Service ceiling	4,500 m (14,750 ft)
Range with 8,000 kg (17,637 lb) payload	334 n miles (620 km, 385 miles)
Range with external tanks and 4,500 kg (9,920 lb) payload	540 n miles (1,000 km, 621 miles)
Max ferry range (tanks in cabin)	781 n miles (1,450 km, 900 miles)

VERIFIED

Mi-6VKP ('Hook-B') command support helicopter *(Mark Wagner/Flight International)*

1995

MIL Mi-8 (V-8)

NATO reporting name: Hip

TYPE: Twin-turbine multipurpose helicopter.

PROGRAMME: Development began May 1960, to replace piston-engined Mi-4; first prototype, with single AI-24V turboshaft and four-blade main rotor, flew June 1961, given NATO reporting name 'Hip-A'; second prototype ('Hip-B'), with two production standard TV2-117 engines and five-blade main rotor, flew August 1962; more than 10,000 Mi-8s, Mi-17s and Mi-171s (which see) marketed and delivered from Kazan (Mi-8, Mi-17) and Ulan-Ude (Mi-171) plants (see separate entries for addresses) for civil and military use, including 2,800 exported; many Mi-8s converted to Mi-17 standard.

CURRENT VERSIONS: **Mi-8** ('Hip-C'): Civil passenger helicopter, standard seating for 28 to 32 persons in main cabin with large square windows. *Detailed description applies to this version, except where indicated.*

Mil Mi-8MTV on humanitarian service in Cambodia with the UN *(Jean-Louis Gaynecoetche)*

1995

Mi-8T ('Hip-C'): Civil utility version; normal payload internal or external freight, but 24 tip-up passenger seats along cabin sidewalls optional, square cabin windows

Mi-8TG: Modified TV2-117TG engines permit operation on liquefied petroleum gas (LPG) and kerosene. LPG contained in large tanks, on each side of cabin, under low pressure. Engines switch to kerosene for take-off and landing. Reduced harmful exhaust emissions in flight offer anti pollution benefits. Modification to operate on LPG requires no special equipment and can be effected on in-service Mi-8s at normal maintenance centre. Weights unchanged. Large external tanks, each side of cabin, reduce payload by 100 to 150 kg (220 to 330 lb) over comparable ranges, with little effect on performance. First flight on LPG made 1987

Mi 8 Salon ('Hip-C'). De luxe version of standard Mi-8, normally 11 passengers, on eight-place inward-facing couch on port side, two chairs and swivelling seat on starboard side, with table, square windows, air-to-ground radiotelephone and removable ventilation fans; compartment for attendant, with buffet and crew wardrobe, forward of cabin, toilet (port) and passenger wardrobe (starboard) to each side of cabin rear entrance, alternative nine-passenger configuration; maximum T-O weight 10,400 kg (22,928 lb); range 205 n miles (380 km, 236 miles) with 30 minutes fuel reserve

Military versions, with smaller circular cabin windows, are

Mi-8T ('Hip-C'): Standard assault transport of CIS army support forces; twin-rack for stores each side, to carry 64 × 57 mm S-5 rockets in four UV-16-57 packs, or other weapons; more than 1,500 in service with CIS armies; some uprated to Mi-17 ('Hip-H') standard as **Mi-8MT** and **Mi-8MTV** (visotnii high-altitude, engines further uprated for 'hot and high' operation), identified by port-side tail rotor; twin or triple stores racks, but normal armament only 40 × 80 mm S-8 rockets in two B8V 8-20A packs

Mi-8PS ('Hip-C'): Military VIP transport, basically as civil Mi-8 Salon

Mi-8VZPU (vozdushnyi zapasnoi punkt upravlenya airborne reserve command post) ('Hip-D'): As 'Hip-C' but rectangular-section canisters on outer stores racks; two large dorsal antennae above forward part of tailboom; no armament

Mi-8TBK ('Hip-E'): Development of 'Hip-C'; KV-4 flexibly mounted 12.7 mm machine gun, with 700 rounds, in nose; triple stores rack each side, to carry total 192 S-5 rockets in six UV-32-57 packs, plus four 9M17P Falanga M (AT-2 'Swatter') anti-tank missiles (semi-automatic command to line of sight) on rails above racks, about 250 in CIS ground forces, some uprated to Mi-17 standard as **Mi-8MTV**, with port-side tail rotor

Mi-8TV ('Hip-F'): Export 'Hip-E', missiles changed to six 9M14 Malyutka (NATO AT-3 'Saggers', manual command to line of sight)

'Hip-G'. See separate entry on Mi-9

'Hip-H': See separate entry on Mi-17

Mi-8SMV ('Hip-J'): ECM version, additional small boxes each side of fuselage, fore and aft of main landing gear legs

Mi-8PPA ('Hip-K'): Active communications jammer, rectangular container and array of six cruciform dipole antennae each side of cabin; no Doppler box under tail boom, heat exchangers under front fuselage; some uprated to Mi-17 standard, with port-side tail rotor. See also Mi-17 'Hip-K derivative'

CUSTOMERS. CIS ground forces (estimated 2,400 Mi-8/17s), CIS air forces, at least 40 other air forces, civil operators worldwide

DESIGN FEATURES: Conventional pod and boom configuration, five-blade main rotor, inclined forward 4° 30′ from vertical interchangeable blades of basic NACA 230 section, solidity 0.0777, spar failure warning system, drag and flapping hinges a few inches apart, blades carried on machined spider; pendulum vibration damper; three-blade starboard tail rotor, transmission comprises VR-8 two-stage planetary main reduction gearbox giving main rotor shaft/engine rpm ratio of 0.016:1, intermediate and tail rotor gearboxes, main rotor brake, and drives off main gearbox for tail rotor, fan, AC generator, hydraulic pumps and tachometer generators, tail rotor pylon forms small vertical stabiliser; horizontal stabiliser near end of tailboom, clamshell rear-loading freight doors

FLYING CONTROLS: Mechanical system, with irreversible hydraulic boosters; main rotor collective pitch control linked to throttles.

STRUCTURE: All-metal, main rotor blades each have extruded light alloy spar carrying root fitting, 21 honeycomb-filled trailing edge pockets and blade tip; balance tab on each blade, each tail rotor blade made of spar and honeycomb filled trailing-edge; semi-monocoque fuselage

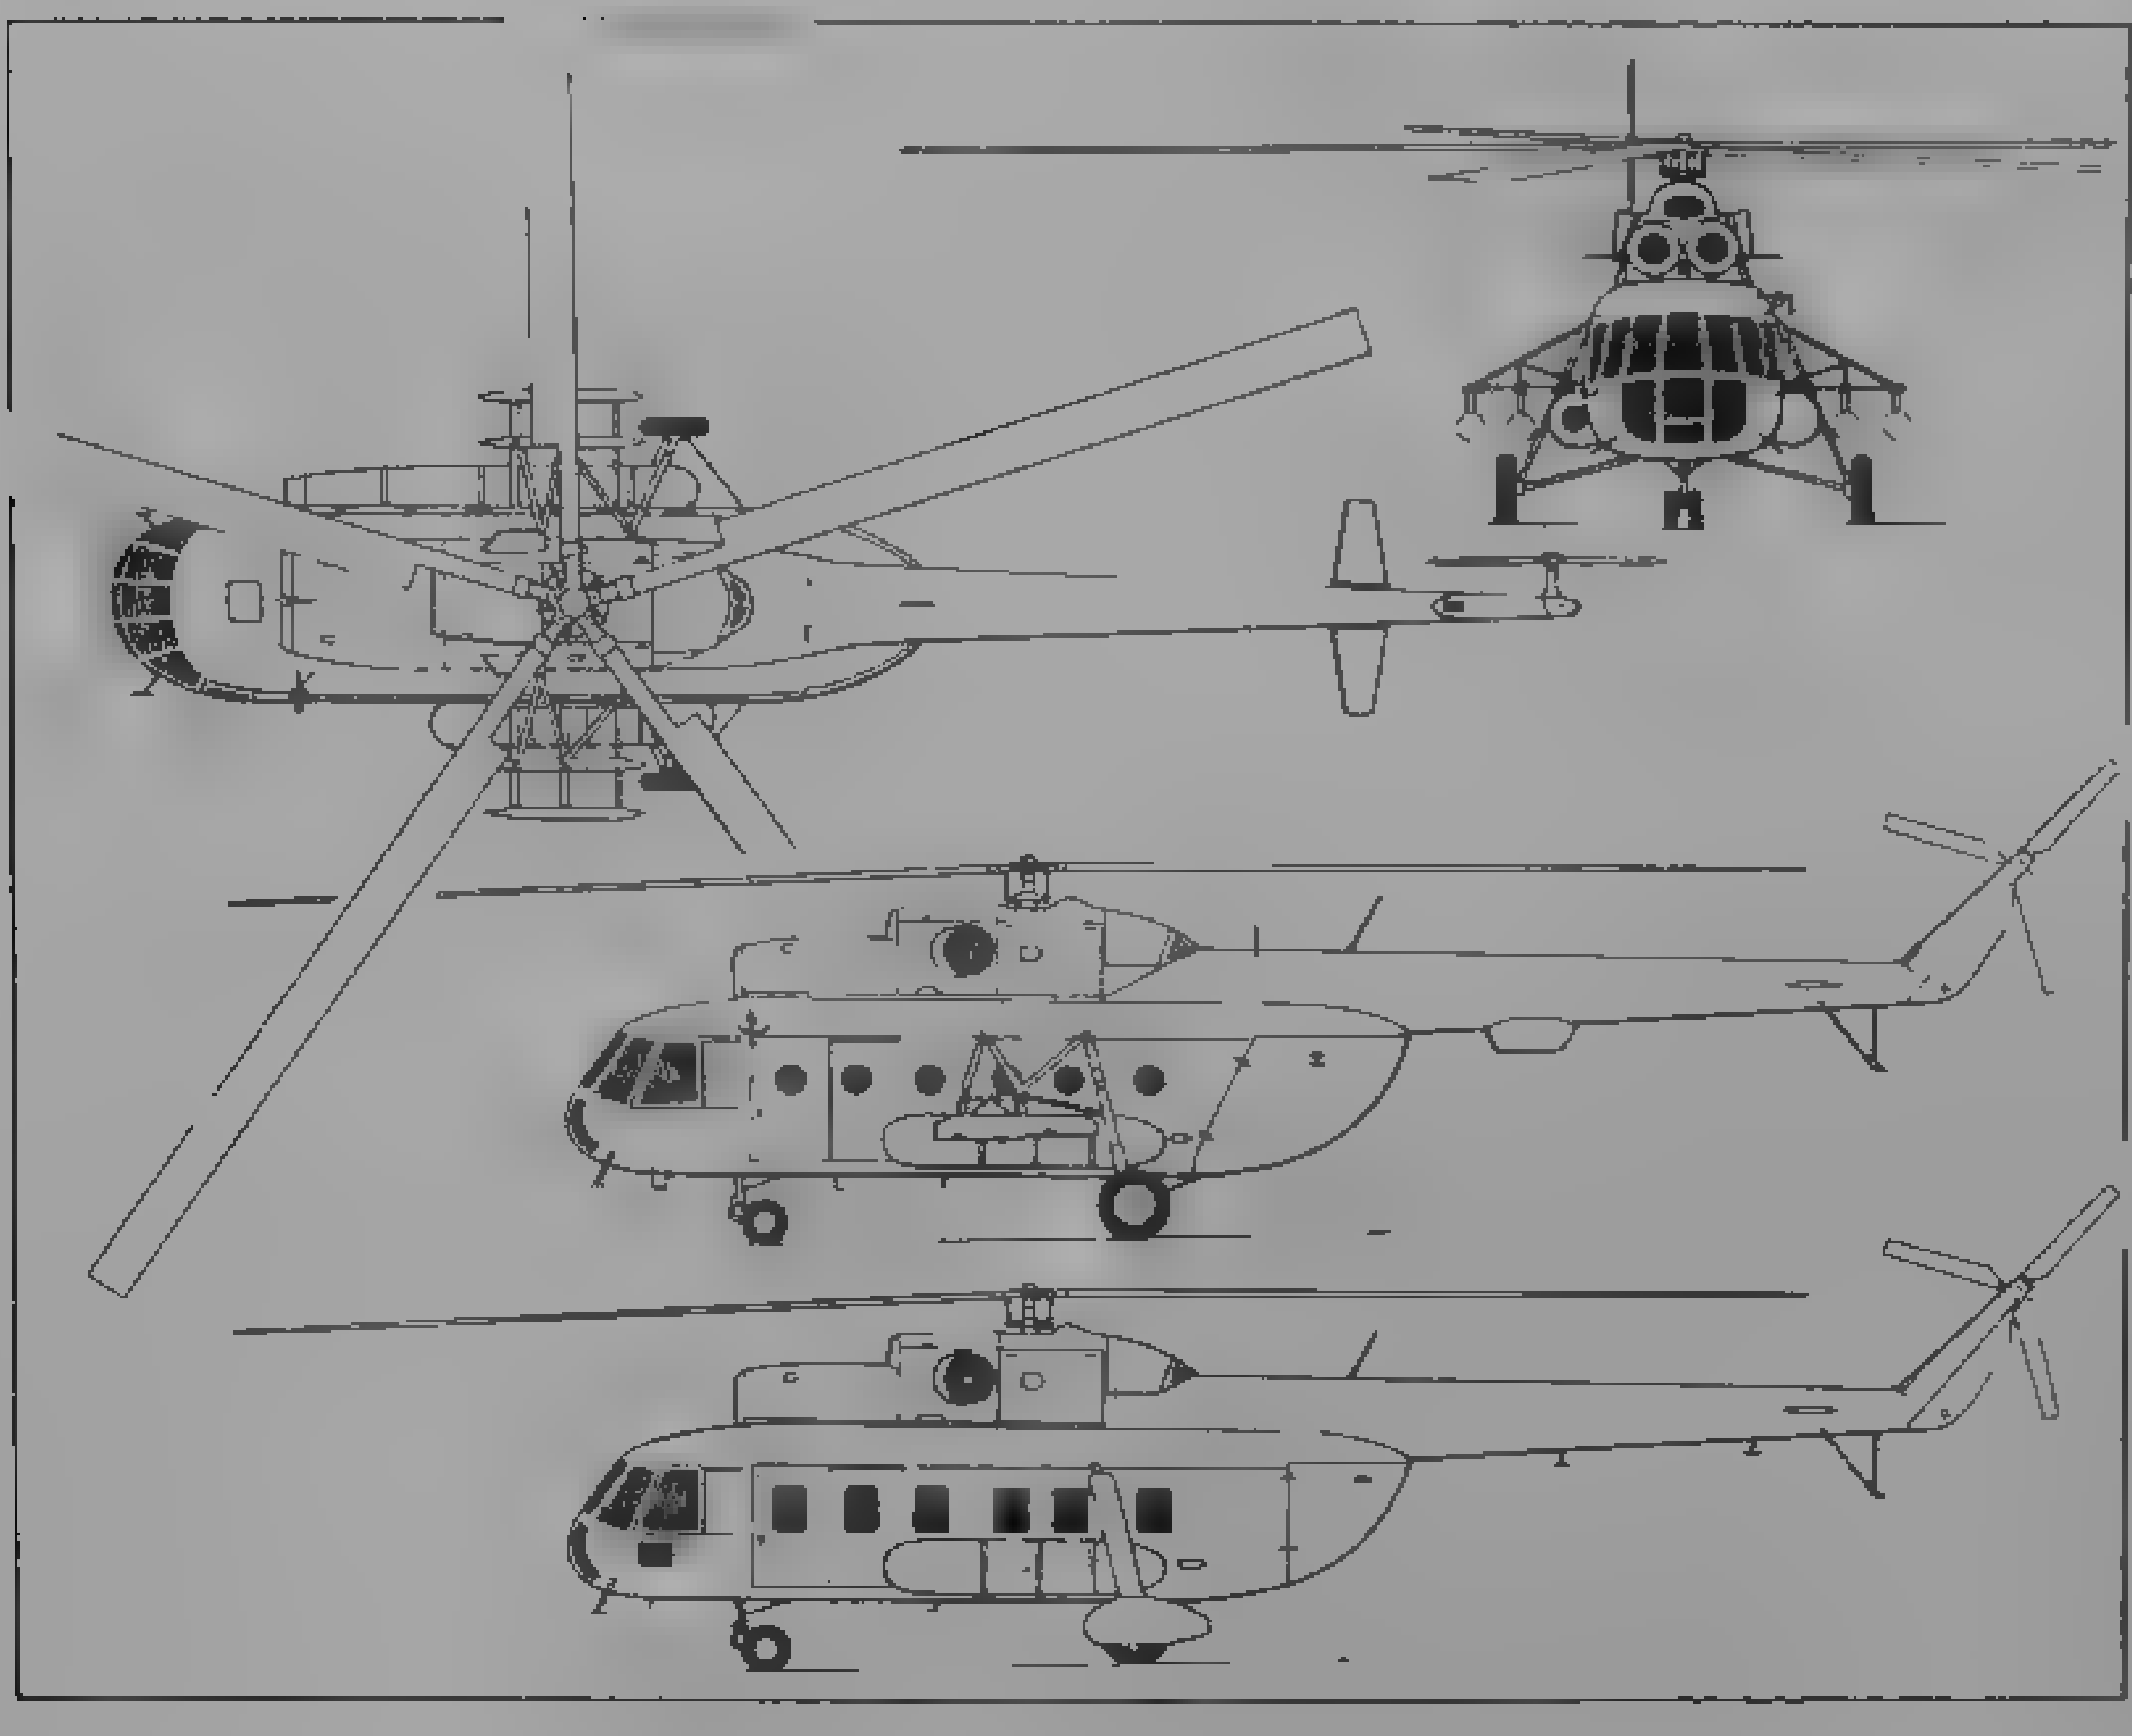
LANDING GEAR: Non-retractable tricycle type, steerable twin-wheel nose unit, locked in flight, single wheel on each main unit, oleo-pneumatic (gas) shock-absorbers. Mainwheel tyres 865 × 280 mm, nosewheel tyres 595 × 185 mm. Pneumatic brakes on mainwheels; pneumatic system can also recharge tyres in the field, using air stored in main landing gear struts. Optional mainwheel fairings.

POWER PLANT: Two 1,250 kW (1,677 shp) Klimov TV2-117A turboshafts (1,434 kW, 1,923 shp TV3-117MTs in Mi-8MT). Main rotor speed governed automatically, with manual override. Single flexible internal fuel tank, capacity 445 litres (117.5 US gallons, 98 Imp gallons), two external tanks, each side of cabin, capacity 745 litres (197 US gallons, 164 Imp gallons) in port tank, 680 litres (179.5 US gallons, 149.5 Imp gallons) in starboard tank, total standard fuel capacity 1,870 litres (494 US gallons; 411.5 Imp gallons). Provision for one or two ferry tanks in cabin raising maximum total capacity to 3,700 litres (977 US gallons; 814 Imp gallons). Fairing over starboard external tank houses optional cabin air conditioning equipment at front. Engine cowling side panels form maintenance platforms when open, with access via hatch on flight deck. Total oil capacity 60 kg (132 lb).

ACCOMMODATION: Two pilots side by side on flight deck, with provision for flight engineer's station. Military versions can be fitted with external flight deck armour. Windscreen de-icing standard. Basic passenger version furnished with 24 to 26 four-abreast track-mounted tip-up seats at pitch of 72 to 75 cm (28 to 29.5 in), with centre aisle 32 cm

Mil Mi-8MT, the uprated version of 'Hip-C' *(Piotr Butowski)*

1994



'Hip-C' military version of Mil Mi-8 twin-turbine helicopter, with additional side view (bottom) of commercial version *(Jane's/Dennis Punnett)*

1975

(12.5 in) wide removable bar, wardrobe and baggage compartment. Seats and bulkheads of basic version quickly removable for cargo carrying. Mi-8T and standard military versions have cargo tiedown rings in floor, winch of 150 kg (330 lb) capacity and pulley block system to facilitate loading of heavy freight, an external cargo sling system (capacity 3,000 kg, 6,614 lb), and 24 tip-up seats along sidewalls of cabin. All versions can be converted for air ambulance duties, with accommodation for 12 stretchers and tip-up seat for medical attendant. Large windows on each side of flight deck slide rearward. Sliding, jettisonable main passenger door at front of cabin on port side; electrically operated rescue hoist (capacity 150 kg, 330 lb) can be installed at this doorway. Rear of cabin made up of clamshell freight-loading doors, which are smaller on commercial versions, with downward-hinged passenger airstair door centrally at rear. Hook-on ramps used for vehicle loading.

SYSTEMS: Standard heating system can be replaced by full air conditioning system; heating of main cabin cut out when carrying refrigerated cargoes. Two independent hydraulic systems, each with own pump; operating pressure 44 to 64 bars (640 to 925 lb/sq in). DC electrical supply from two 27 V 18 kW starter/generators and six 28 Ah storage batteries, AC supply for automatically controlled electrothermal de-icing system and some radio equipment supplied by 208/115/36/7.5 V 400 Hz generator, with 36 V three-phase standby system. Engine air intake de-icing standard. Provision for oxygen system for crew and, in ambulance version, for patients. Freon fire extinguishing system in power plant bays and service fuel tank compartments, actuated automatically or manually. Two portable fire extinguishers in cabin.

AVIONICS: *Comms:* R-842 HF transceiver, frequency range 2 to 8 MHz and range up to 540 n miles (1,000 km, 620 miles), R-860 VHF transceiver on 118 to 135.9 MHz effective up to 54 n miles (100 km, 62 miles), intercom, radiotelephone.

Flight: Four-axis autopilot to give yaw, roll and pitch stabilisation under any flight conditions, stabilisation of altitude in level flight or hover, and stabilisation of preset flying speed. Doppler radar box under tailboom.

Instrumentation: For all-weather flying by day and night: two gyro horizons, two airspeed indicators, two main rotor speed indicators, turn indicator, two altimeters, two rate of climb indicators, magnetic compass, astrocompass for Polar flying, ARK-9 automatic radio compass, RV-3 radio altimeter with 'dangerous height' warning.

Self-defence (optional): Infra-red jammer ('Hot Brick') above forward end of tailboom, three ASO-2V flare dispensers above rear cabin window on each side.

ARMAMENT: See individual model descriptions of military versions.

DIMENSIONS, EXTERNAL:

Main rotor diameter	21.29 m (69 ft 10¼ in)
Tail rotor diameter	3.91 m (12 ft 9¾ in)
Distance between rotor centres	12.65 m (41 ft 6 in)
Length, overall, rotors turning	25.24 m (82 ft 9¾ in)
fuselage, excl tail rotor	18.17 m (59 ft 7⅜ in)
Width of fuselage	2.50 m (8 ft 2½ in)
Height overall	5.65 m (18 ft 6½ in)
Height to top of rotor head	4.38 m (14 ft 4½ in)
Wheel track	4.80 m (15 ft 9 in)
Wheelbase	4.26 m (13 ft 11¾ in)
Fwd passenger door: Height	1.41 m (4 ft 7½ in)
Width	0.82 m (2 ft 8¼ in)
Rear passenger door: Height	1.70 m (5 ft 7 in)
Width	0.84 m (2 ft 9 in)
Rear cargo door: Height	1.82 m (5 ft 11¾ in)
Width	2.34 m (7 ft 8¼ in)

DIMENSIONS, INTERNAL:

Passenger cabin: Length	6.36 m (20 ft 10½ in)
Width	2.34 m (7 ft 8¼ in)
Height	1.80 m (5 ft 10¾ in)
Cargo hold (freighter)	
Length at floor	5.34 m (17 ft 6¼ in)
Width	2.34 m (7 ft 8¼ in)
Height	1.80 m (5 ft 10¾ in)
Volume	23 m³ (812 cu ft)

Mil Mi-8T 'civil' utility helicopter in German Navy communications colour scheme *(Paul Jackson)* 1995

Mil Mi-8MTV-GA upgraded version of 'Hip C' *(Paul Jackson)* 1995

AREAS:

Main rotor disc	356 m² (3,832 sq ft)
Tail rotor disc	12.01 m² (129.2 sq ft)

WEIGHTS AND LOADINGS:

Weight empty:	
civil passenger version	6,799 kg (14,990 lb)
civil cargo version	6,624 kg (14,603 lb)
military versions (typical)	7,260 kg (16,007 lb)
Max payload, internal	4,000 kg (8,820 lb)
external	3,000 kg (6,614 lb)
Fuel: standard tanks	1,450 kg (3,197 lb)
with two auxiliary tanks	2,870 kg (6,327 lb)
Normal T-O weight	11,100 kg (24,470 lb)
T-O weight, with 28 passengers, each with 15 kg (33 lb) of baggage	11,570 kg (25,508 lb)
with 2,500 kg (5,510 lb) of slung cargo	11,428 kg (25,195 lb)
Max T-O weight for VTO	12,000 kg (26,455 lb)
Max disc loading	33.7 kg/m² (6.90 lb/sq ft)

PERFORMANCE (civil Mi-8T):

Max level speed at 1,000 m (3,280 ft):	
normal AUW	140 kts (260 km/h, 161 mph)
Max level speed at S/L:	
normal AUW	135 kts (250 km/h, 155 mph)
max AUW	124 kts (230 km/h, 142 mph)
with 2,500 kg (5,510 lb) of slung cargo	97 kts (180 km/h, 112 mph)
Max cruising speed:	
normal AUW	121 kts (225 km/h, 140 mph)
max AUW	97 kts (180 km/h, 112 mph)
Service ceiling: normal AUW	4,500 m (14,765 ft)
max AUW	4,000 m (13,125 ft)
Hovering ceiling at normal AUW:	
IGE	1,800 m (5,905 ft)
OGE	850 m (2,785 ft)
Ranges: cargo version at 1,000 m (3,280 ft), with standard fuel, 5% reserves	248-259 n miles (460-480 km, 286-298 miles)
with 24 passengers at 1,000 m (3,280 ft), with 20 min fuel reserves	229 n miles (425 km, 264 miles)
cargo version, with auxiliary fuel, 5% reserves	518 n miles (960 km, 596 miles)

UPDATED

Model of Mil Mi-8TG with large external tanks for LPG fuel *(Mark Lambert)* 1994

MIL Mi-9

NATO reporting name: Hip-G

Designation Mi-9 applies to airborne command post variant of Mi-8, 'hockey stick' antennae projecting from rear of cabin and from undersurface of tailboom, aft of Doppler radar box, rearward inclined short whip antenna above forward end of tailboom, strakes on fuselage undersurface. Crew of three to six.

VERIFIED

MIL Mi-14

NATO reporting name: Haze

TYPE: Twin-turbine shore-based amphibious helicopter.

PROGRAMME: Development of Mi-8; first flew September 1969, under designation V-14 and with Mi-8 power plant; changed to Mi-17 engines for production, which continues.

CURRENT VERSIONS: **Mi-14PL** ('Haze-A'): Basic ASW version; four crew; large undernose radome, OKA-2 retractable sonar in starboard rear of planing bottom, forward of two probable sonobuoy or signal flare chutes, APM-60 towed magnetic anomaly detection (MAD) bird stowed against rear of fuselage pod (moved to lower position on some aircraft); weapons include torpedoes, bombs and depth charges in enclosed bay in bottom of hull. VAS-5M-3 liferaft (in all versions).

Mi-14PW: Polish designation of Mi-14PL.

Mi-14BT ('Haze-B'): Mine countermeasures version, fuselage strake, for hydraulic tubing, and air conditioning pod on starboard side of cabin, no MAD; container for searchlight, to observe MCM gear during deployment and retrieval, under tailboom forward of Doppler box.

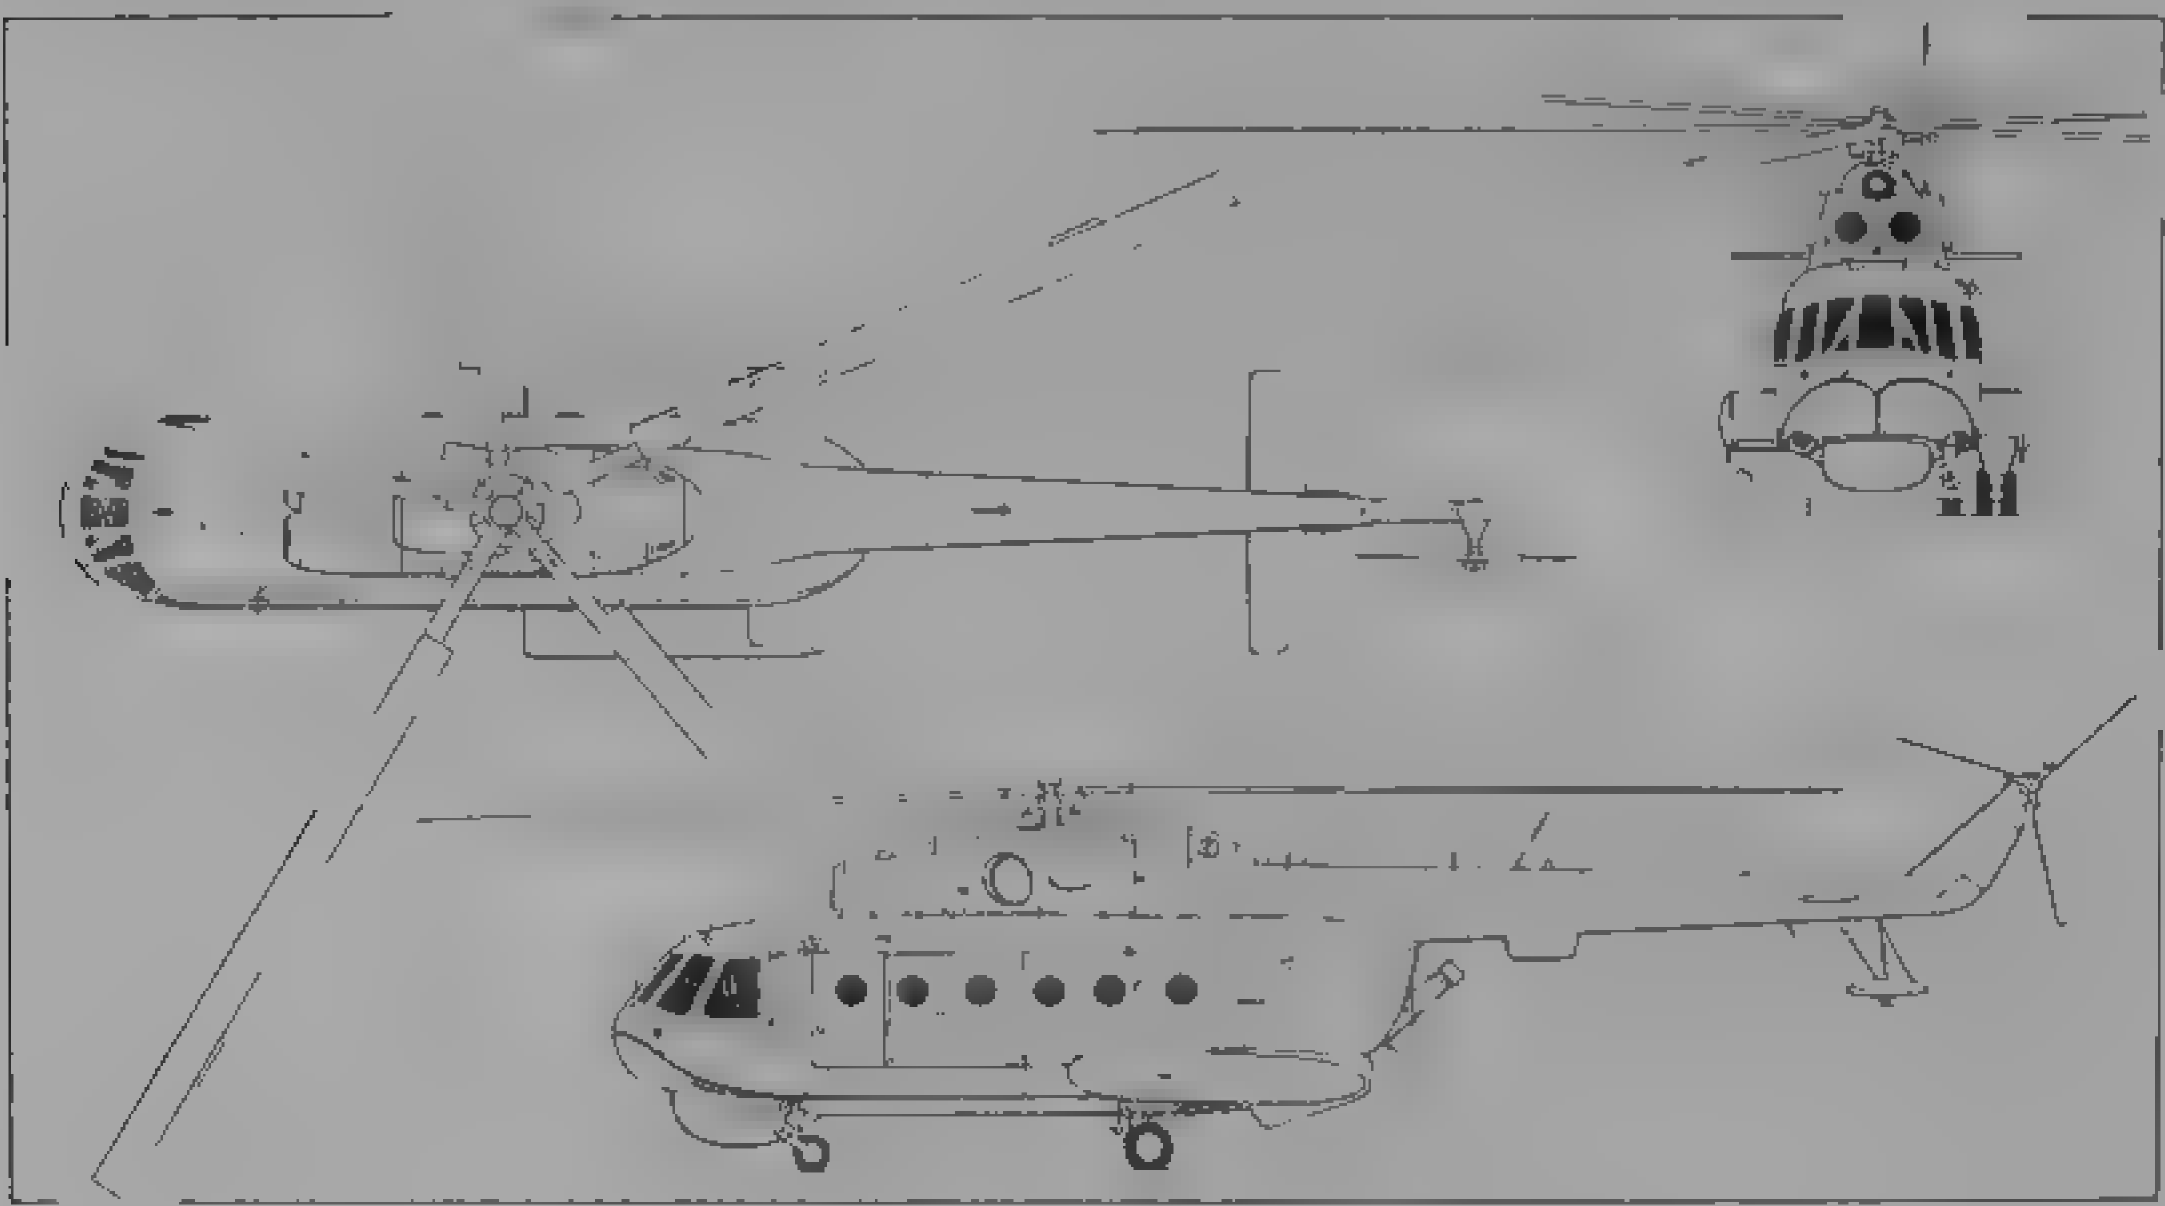
Mi-14PS ('Haze-C'): Search and rescue version, carrying ten 20-place liferafts, room for 10 survivors in cabin including two on stretchers, provision for towing many more survivors in liferafts, fuselage strake and air conditioning pod as Mi-14BT; double-width sliding door at front of cabin on port side, with retractable rescue hoist able to lift up to three persons in basket; searchlight each side of nose and under tailboom; three crew.

Details of a firefighting conversion of the Mi-14, known as the Terminator II, can be found under the Isolair entry in the US section of *Jane's Aircraft Upgrades*.

CUSTOMERS: At least 230 delivered. Russian Naval Aviation has 63, Bulgaria (10), Cuba (14), the former East Germany (eight, including Mi-14BT now withdrawn), North Korea, Libya (12), Poland (12 Mi-14PW, five Mi-14PS), Romania (six), Syria (12), Yugoslavia.

DESIGN FEATURES: Developed from Mi-8; power plant and dynamic components as Mi-17; new features include boat hull, sponson carrying inflatable flotation bag each side at rear and small float under tailboom; fully retractable

Mil Mi-14PL ('Haze-A') with MAD bird mounted in low position *(Piotr Butowski)*
1991



Mil Mi-14PL ASW helicopter (NATO 'Haze-A') *(Jane's/Dennis Punnett)*
1990

landing gear with two forward-retracting single-wheel nose units and two rearward-retracting twin-wheel main units.

AVIONICS (Mi-14PL): *Comms*: R-842-M HF transceiver, R-860 VHF transceiver, SBU-7 intercom.

Radar: Type 12-M undernose radar.

Instrumentation: RW3 radio altimeter, ARK-9 and ARK-U2 ADFs, DISS-15 Doppler, Chrom Nikel IFF, AP34-B autopilot/autohover system and SAU-14 autocontrol system.

DIMENSIONS, EXTERNAL:

Main rotor diameter	21.29 m (69 ft 10¼ in)
Main rotor blade chord	0.52 m (1 ft 8½ in)
Tail rotor diameter	3.91 m (12 ft 9¾ in)
Length overall, rotors turning	25.30 m (83 ft 0 in)
fuselage: Mi-14PL	18.38 m (60 ft 3½ in)
Mi-14PS	18.78 m (61 ft 7½ in)
Height overall	6.93 m (22 ft 9 in)
Wheelbase	4.13 m (13 ft 6½ in)

AREAS:

Main rotor disc	356 m² (3,832 sq ft)
Tail rotor disc	12.01 m² (129.2 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: Mi-14PL	11,750 kg (25,900 lb)
Max T-O weight	14,000 kg (30,865 lb)
Max disc loading	39.3 kg/m² (8.05 lb/sq ft)

PERFORMANCE:

Max level speed	124 kts (230 km/h; 143 mph)
Max cruising speed	116 kts (215 km/h; 133 mph)
Normal cruising speed	110 kts (205 km/h; 127 mph)
Service ceiling	3,500 m (11,500 ft)
Range with max fuel	612 n miles (1,135 km; 705 miles)
Endurance with max fuel	5 h 56 min

UPDATED

MIL Mi-17, Mi-171 and Mi-172

NATO reporting names: Hip-H and K derivative

TYPE: Twin-turbine multipurpose helicopter.

PROGRAMME: First displayed at 1981 Paris Air Show, successor to Mi-8 for civil use and export; exports began (to Cuba) 1983. Mi-17M/V and Mi-172 production continues at Kazan and Mi-171 at Ulan-Ude plants, from where they are marketed (see these entries for addresses).

CURRENT VERSIONS: **Mi-17** ('Hip-H'): Mid-life update of Mi-8 with more powerful turboshafts, giving overall performance improvement, particularly hover ceiling; in CIS military service, as Mi-8MT and Mi-8MTV. *Detailed description applies to basic Mi-17, except where indicated.*

Mi-17P ('Hip-K derivative'): ECM communications jammer; two observed in Hungarian service in 1990; antenna array much more advanced than that of Mi-8 ('Hip-K'), large 32-element array, resembling vertically segmented panel, aft of main landing gear each side, four-element array to rear on tailboom each side, large radome each side of cabin below jet nozzle, triangular container in place of rear cabin window each side; six heat exchangers under front fuselage.

Mi-171 ('Hip-H'): First displayed 1989 Paris Air Show; more powerful TV3-117VM turboshafts, each 1,545 kW (2,070 shp); improved rates of climb and hover ceilings; other weights and performance generally unchanged.

Mi-17 1VA: Version produced for Ministry of Health of former USSR as flying hospital equipped to highest practicable standards for relatively small helicopter; interior, with equipment developed in Hungary, had provision for three stretchers, operating table, extensive surgical and medical equipment, accommodation for doctor/surgeon and three nursing attendants.

Mi-17M/17V ('Hip-H'): Current production versions from Kazan Helicopter Production Association; TV3-117VM engines as Mi-171; optional nose radar, flotation gear and firefighting equipment.

Mi-17MD: Described under Kazan heading in this section.

Mi-172: As Mi-17M/17V, also from Kazan, but with equipment changes and planned for certification to FAR Pt 29 standards; TV3-117VM Srs 2 engines, giving maximum cruising speed of 118 knots (218 km/h; 135 mph) and service ceiling of 6,000 m (19,685 ft); air conditioning and heating systems, main and tail rotor blade de-icing, canopy demisting and heating of engine air intakes standard; options include flotation gear, Doppler, weather radar, DME, GPS, VOR, ILS, transponder and VIP interiors for seven, nine and 11 passengers. Standard seating for up to 26 passengers. First exhibited at 1994 Singapore Air Show. Seven ordered by Mesco, India, Spring 1995.

A **further military variant**, presumably with electronic warfare role, first seen in Czech Air Force service at Dobrany-Line air base, near Plzen, 1991; each of two examples had a tandem pair of large cylindrical containers mounted each side of cabin; assumed that containers made of dielectric material and contain receivers to locate and analyse hostile electronic emissions; each of two operator's stations in main cabin has large screens, computer-type keyboards and oscilloscope; several blade antennae project from tailboom.

An upgraded version of the Mi-172, known as the **MK 30**, is being developed by Daewoo Heavy Industries of South Korea (see *Jane's Aircraft Upgrades*).

CUSTOMERS: Many operational side by side with Mi-8s in CIS armed forces, Angola, Cuba (16), Czech Republic, Hungary, India, North Korea, Nicaragua, Papua New Guinea, Peru, Poland, Slovakia. More than 810 exported by Aviaexport. Up to 60 operated on international projects by SkyLink Aviation and Transportation Services, Canada.

DESIGN FEATURES: Distinguished from basic Mi-8 by port-side tail rotor; shorter engine nacelles, with air intakes extending forward only to mid-point of door on port side at front of cabin; small orifice each side forward of jetpipe; correct rotor speed maintained automatically by system that also synchronises output of the two engines. For operation in 'hot and high' conditions, Kazan commercial versions can be supplied with TV3-117MT engines and tail rotor with wider-chord blades.

POWER PLANT (basic Mi-17): Two 1,434 kW (1,923 shp) Klimov TV3-117MT turboshafts; should one engine stop, output of the other increased automatically to contingency rating of 1,637 kW (2,195 shp), enabling flight to continue. APU for pneumatic engine starting; deflectors on engine air intakes prevent ingestion of sand, dust and foreign objects.

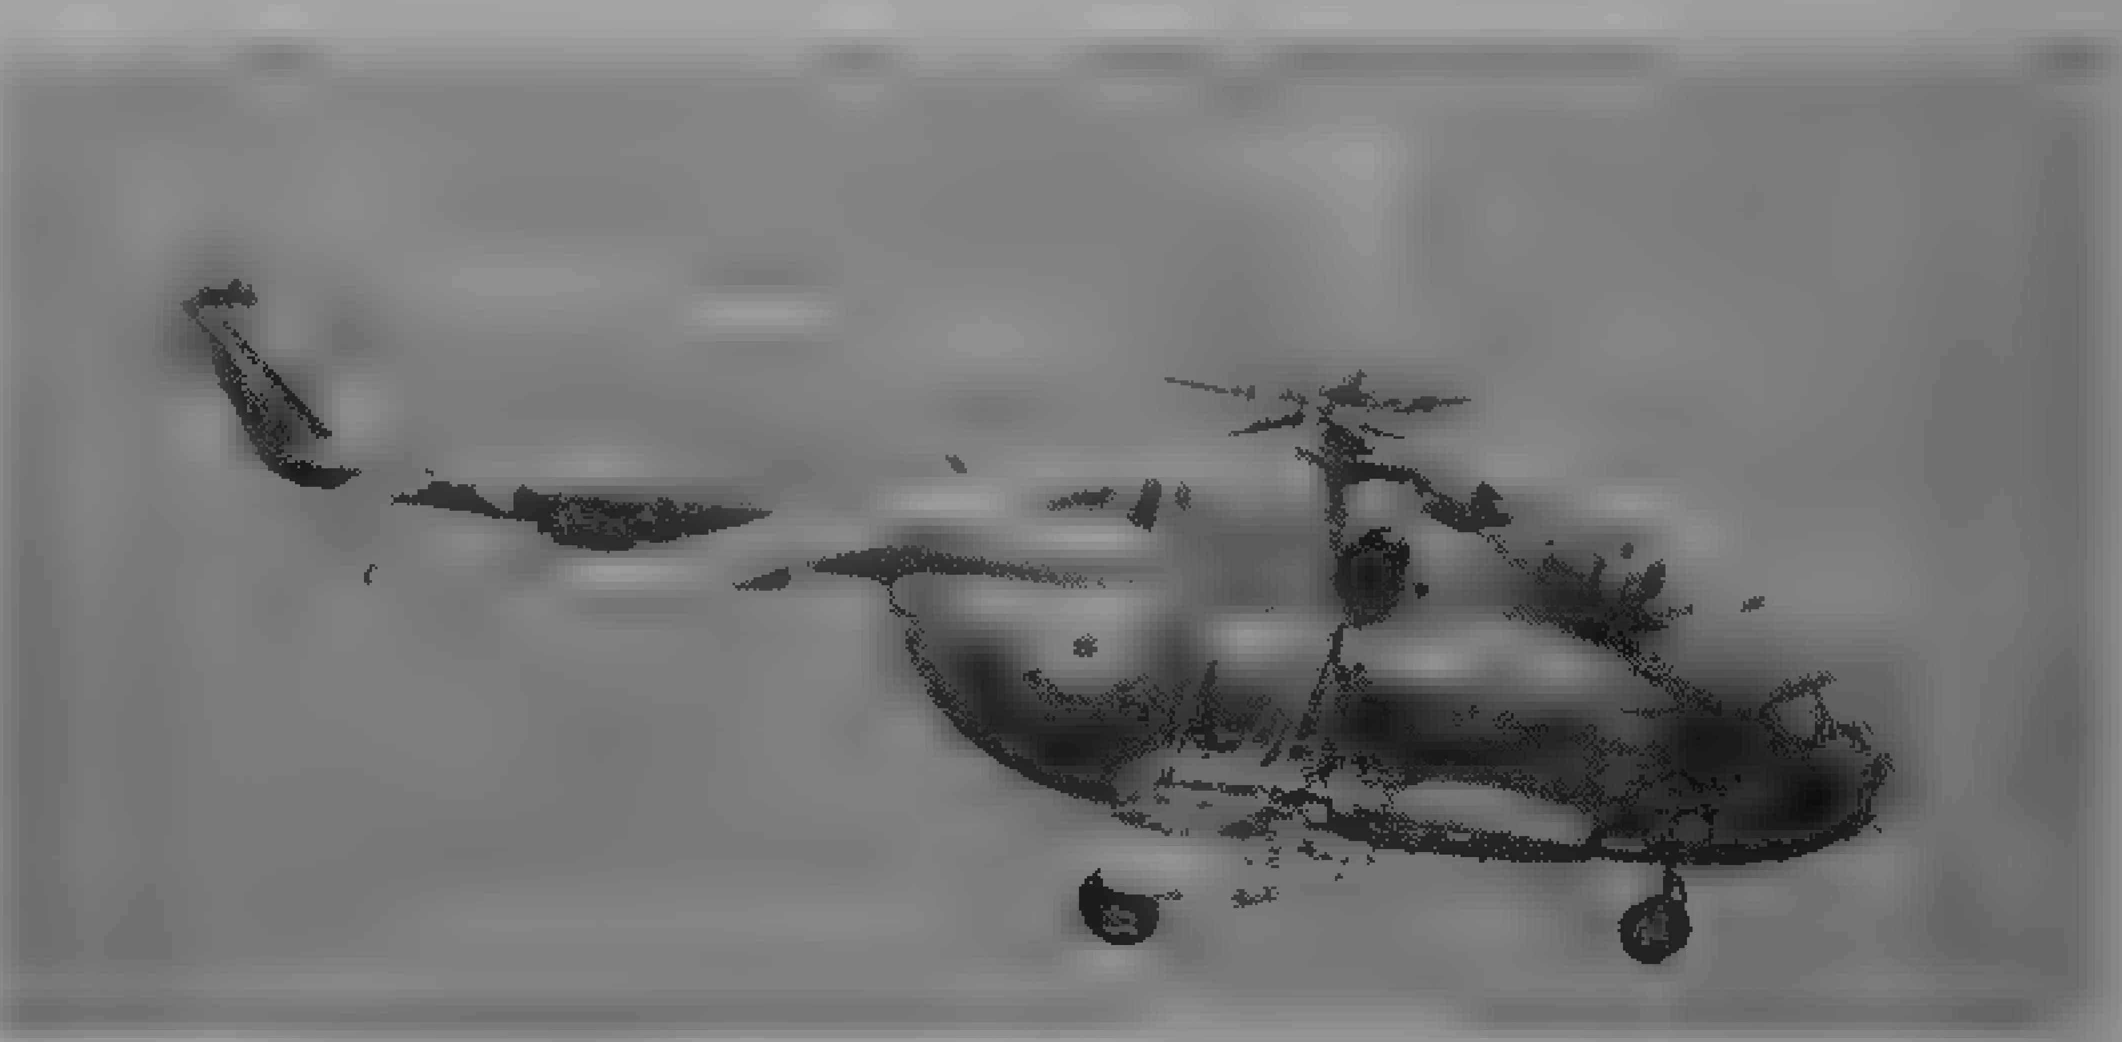
ACCOMMODATION: Configuration and payloads generally as Mi-8, but civilian Mi-17 promoted as essentially a cargo carrying helicopter, with secondary passenger transport role.

SYSTEMS (Mi-17V/171): AC electrical supply from two 40 kW three-phase 115/220 V 400 Hz GT40/P-48 V generators.

AVIONICS (Mi-17V/171): *Comms*: Baklan-20 and Yadro-1G1 com radio.

Radar: Type 8A 813 weather radar.

Flight: Type A-723 long-range nav



Mil Mi-17 ('Hip-H') in Indian Air Force service *(Peter Steinemann)*
1993

Instrumentation: ARK-15M radio compass, ARK-UD radio compass, DISS-32-90 Doppler; AGK-77 and AGR-74V automatic horizons, BKK-18 attitude monitor, ZPU-24 course selector; A 037 radio altimeter.
Self defence (optional): ASO-2 chaff/flare dispenser under tailboom and IR jammer (NATO 'Hot Brick') at forward end of tailboom.

EQUIPMENT: AI 9V APU for engine starting, options as for Mi-8, plus, on military versions, external cockpit armour.

ARMAMENT: Options as for Mi-8, plus 23 mm GSh-23 gun packs.

DIMENSIONS, EXTERNAL: As for Mi 8, except
Distance between rotor centres 12.661 m (41 ft 6½ in)
Length overall, rotors turning 25.352 m (83 ft 2 in)
fuselage, excl tail rotor 18.424 m (60 ft 5⅜ in)
Height to top of main rotor head 4.755 m (15 ft 7¼ in)
Wheel track 4.510 m (14 ft 9½ in)
Wheelbase 4.281 m (14 ft 0½ in)

DIMENSIONS, INTERNAL: As for Mi-8

AREAS: As for Mi 8

WEIGHTS AND LOADINGS:
Weight empty, equipped: Mi-17 7,100 kg (15,653 lb)
Mi-17V/171 7,055 kg (15,555 lb)
Internal fuel: Mi 17V/171 2,027 kg (4,469 lb)
Internal fuel plus one aux tank
Mi 17V/171 2,737 kg (6,034 lb)
Internal fuel plus two aux tanks
Mi-17V/171 3,447 kg (7,600 lb)
Max payload
internal: Mi-17, Mi-17V/171/172 4,000 kg (8,820 lb)
external, on sling
Mi-17, Mi-17V/171/172 3,000 kg (6,614 lb)
Normal T-O weight
Mi-17, Mi-17V/171 11,100 kg (24,470 lb)
Max T-O weight
Mi-17, Mi-17V/171/172 13,000 kg (28,660 lb)
Max disc loading
Mi-17, Mi-17V/171/172 36.5 kg/m² (7.48 lb/sq ft)

PERFORMANCE:
Max level speed
Mi-17, max AUW 135 kts (250 km/h, 155 mph)
Mi-17V/171, normal AUW
135 kts (250 km/h, 155 mph)
Mi-17V/171, max AUW 124 kts (230 km/h, 143 mph)
Max cruising speed
Mi-17, max AUW 129 kts (240 km/h, 149 mph)
Mi 17V/171, normal AUW
124 kts (230 km/h, 143 mph)
Mi-17V/171, max AUW
113 kts (210 km/h, 130 mph)
Service ceiling: Mi-17, normal AUW 5,000 m (16,400 ft)
Mi-17, max AUW 3,600 m (11,800 ft)
Mi-17V/171, normal AUW 5,700 m (18,700 ft)
Mi-17V/171, max AUW 4,500 m (14,760 ft)
Hovering ceiling OGE
Mi-17, max AUW 1,760 m (5,775 ft)
Mi-17V/171, normal AUW 3,980 m (13,055 ft)
Mi 17V/171, max AUW 1,700 m (5,575 ft)
Range with max standard fuel, 5% reserves
Mi-17, normal AUW 267 n miles (495 km, 307 miles)
Mi-17, max AUW 251 n miles (465 km, 289 miles)
Range at 500 m (1,640 ft), max AUW, 30 min reserves
Mi-17V/171, internal fuel
307 n miles (570 km, 354 miles)
Mi-17V/171, internal fuel plus one aux tank
440 n miles (815 km, 506 miles)
Mi-17V/171, internal fuel plus two aux tanks
575 n miles (1,065 km, 661 miles)

MIL Mi-22

See Mi-6 entry earlier in this section

VERIFIED

MIL Mi-24

NATO reporting name: Hind

TYPE: Twin-turbine gunship helicopter, with transport capability.

PROGRAMME: Development began second half of 1960s, as first fire support helicopter in former USSR, with accommodation for eight armed troops; 12 prototypes built, first flight 19 September 1969; first reported in West 1972; photographs became available 1974, when two units of approximately squadron strength based in East Germany; reconfiguration of front fuselage changed primary role to gunship, new version first observed 1977; used operationally in Chad, Nicaragua, Ceylon (Sri Lanka), Angola, Afghanistan, Chechnya and Iran/Iraq war, when at least one Iranian F-4 Phantom II destroyed by AT-6 (NATO 'Spiral') anti-tank missile from Mi-24; low-rate production continued, for export, until 1994.

CURRENT VERSIONS: **Mi-24A** ('Hind-A, B and C'): Early versions with pilot and co-pilot/gunner in tandem under large-area continuous glazing, large flight deck, about 250 built, including **Mi-24U** unarmed dual-control trainers (first flight 1972); last described in 1989-90 *Jane's*.

Mi-24D (Type 24-6, 'Hind D'): Interim gunship version, design began 1971, entered production at Arsenyev and Rostov plants 1973, about 350 built 1973-77. Basically as late model 'Hind A' with TV3-117 engines and port-side tail rotor, but entire front fuselage redesigned above floor forward of engine air intakes; heavily armoured separate cockpits for weapon operator and pilot in tandem, flight mechanic optional, in main cabin; transport capability retained; USUP 24 gun system, with rangefinding, undernose JakB-12.7 four-barrel 12.7 mm machine gun in turret, slaved to adjacent KPS-53A electro-optical sighting pod, for air-to-air and air-to-surface use; Falanga P (Phalanx) anti-tank missile system, nosewheel leg extended to increase ground clearance of sensor pods, nosewheels semi-exposed when retracted. **Mi-24DU** dual-control training version has no gun turret. (See also Mi-25.)
Detailed description applies to Mi-24D, except where indicated.

Mi-24V (Types 20-1 and 24-2, 'Hind E'): As Mi-24D, but modified wingtip launchers and four underwing pylons; weapons include up to eight 9M114 (NATO AT-6 'Spiral') radio guided tube-launched anti-tank missiles in pairs in Shturm V (Attack) missile system, ASP-17V enlarged undernose automatic missile guidance pod on port side, with fixed searchlight to rear; R-60 (K-60, NATO AA-8 'Aphid') air-to-air missiles optional on underwing pylons; pilot's HUD replaces former reflector gunsight. Deliveries to Soviet Air Force began 29 March 1976; about 1,000 built at Arsenyev and Rostov 1976-86. (See also Mi-35.)

Mi-24VP: Variant of Mi-24V with twin-barrel 23 mm GSh-23 gun, with 450 rds, in place of four-barrel 12.7 mm gun in nose, photographed 1992; small production series built at Rostov.

Mi-24P (Type 24-3; 'Hind-F'): Development started 1974, about 620 built 1981-90; first shown in service in

Mil Mi-24P ('Hind-F') helicopter gunship, with twin-barrel 30 mm gun, of the 'Berkut' (Golden Eagles) formation team *(Piotr Butowski)*

1995

982 photographs, P of designation refers to pushka = cannon, as Mi-24V, but nose gun turret replaced by GSh-30-2 twin-barrel 30 mm gun (with 750 rounds) in semi cylindrical pack on starboard side of nose, bottom of nose smoothly faired above and forward of sensors

Mi-24R (Type 46-2, 'Hind-G1') Identified at Chernobyl after April 1986 accident at nuclear power station, no undernose electro-optical and RF missile guidance pods, instead of wingtip weapon mounts, has 'clutching hand' mechanisms on lengthened pylons, to obtain six soil samples per sortie, for NBC (nuclear/biological/chemical) warfare analysis; air samples sucked in via pipe on port side, aft of doors, datalink to pass findings to ground, lozenge shape housing with exhaust pipe of air filtering system under port side of cabin, bubble window on starboard side of main cabin small rearward-firing marker flare pack on tailskid, crew of four wear NBC suits, deployed six per helicopter regiment throughout CIS ground forces Designation (also appearing as Mi-24RCh) indicates Razvedchik reconnaissance/chemical About 150 built 1983-89

Mi-24K (korrektirovchik corrector) ('Hind-G2'): As Mi-24R, but with large camera in cabin, f8/1,300 mm lens on starboard side, six per helicopter regiment for reconnaissance and artillery fire correction; gun and B-8V-20 rocket pods retained No target designator pod under nose upward hinging cover for IR sensor About 150 built 1983 to 1989

Mi-24BMT: Modified 1973 for minesweeping

Mi-24 Ecological Survey Version: Modification by Polyot industria, research organisation, to assess oil pollution on water and seasonal changes of water level First seen 1991 with large flat sensor 'tongue' projecting from nose in place of gun turret, large rectangular sensor pod on outer starboard underwing pylon, unidentified modification replaces rear cabin window on starboard side

Mi-25: Export Mi-24D, including those for Afghanistan Cuba and India

Mi-35: Export Mi-24V Unarmed, dual control trainer version also produced for India

Mi-35P: Export Mi-24P

Mi-35M: Upgraded Mi-24/35 designed to meet the latest air mobility requirements of the Russian Army Features include Mi-28 main and tail rotors and transmission more powerful engines, new avionics, twin 23 mm nose guns in turret, and 9K114-9 Attacka laser beam-riding developments of the tube launched AT-6 'Spiral' anti-tank missile Empty weight reduced to 8,050 kg (17,747 lb). normal T-O weight 10,900 kg (24,030 lb); hovering ceiling OGE 3,000 m (9,840 ft), service ceiling 5,750 m (18,860 ft)

CUSTOMERS: More than 2,500 produced at Arsenyev and Rostov, about 1,250 in CIS army service, most with helicopter attack regiments of Mi-8/17s and Mi-24s; air forces of Afghanistan, Algeria, Angola, Bulgaria, Croatia, Cuba, Czech Republic, the former East Germany, Hungary, India, Iraq, North Korea Libya, Mozambique, Nicaragua, Peru, Poland, Vietnam, Yemen

DESIGN FEATURES: Typical helicopter gunship configuration, with stepped tandem seating for two crew and heavy weapon load on stub-wings; fuselage unusually wide for role, due to requirement for carrying eight troops, dynamic components and power plant originally as Mi-8, but soon upgraded to Mi-17-type power plant and port side tail rotor Main rotor blade section NACA 230, thickness/chord ratio 11 to 12 per cent, tail rotor blade section NACA 230M, stub-wing anhedral 12°, incidence 19°, wings contribute approximately 25 per cent of lift in cruising flight fin offset 3°

STRUCTURE: Five-blade constant-chord main rotor, forged and machined steel head, with conventional flapping, drag and pitch change articulation, each blade has aluminium alloy spar, skin and honeycomb core; spars nitrogen pressurised for crack detection, hydraulic lead/lag dampers, balance tab on each blade, aluminium alloy three-blade tail rotor, main rotor brake, all-metal semi-monocoque fuselage pod and boom; 5 mm hardened steel integral side armour on front fuselage; all-metal shoulder wings with no movable surfaces, swept fin/tail rotor mounting; variable incidence horizontal stabiliser

LANDING GEAR: Tricycle type, rearward-retracting steerable twin-wheel nose unit, single-wheel main units with oleo-pneumatic shock-absorbers and low-pressure tyres, size 720 × 320 mm on mainwheels 480 × 200 mm on nosewheels Main units retract rearward and inward into aft end of fuselage pod, turning through 90° to stow almost vertically, discwise to longitudinal axis of fuselage, under prominent blister fairings Tubular tripod skid assembly, with shock-strut, protects tail rotor in tail-down take-off or landing

POWER PLANT: Two Klimov TV3-117 turboshafts, each with maximum rating of 1,633 kW (2,190 shp), side by side above cabin, with output shafts driving rearward to main rotor shaft through combining gearbox There is 5 mm hardened steel armour protection for engines Main fuel tank in fuselage to rear of cabin, with bag tanks behind main gearbox Internal fuel capacity 1,500 kg (3,307 lb), can be supplemented by 1,000 kg (2,205 lb) auxiliary tank in cabin (Mi-24D), provision for carrying (instead of auxiliary tank) up to four external tanks, each 500 litres (132 US gallons; 110 Imp gallons), on two inner pylons under each wing Optional deflectors and separators for foreign objects and dust in air intakes, and infra-red suppression exhaust mixer boxes over exhaust ducts

ACCOMMODATION: Pilot (at rear) and weapon operator on armoured seats in tandem cockpits under individual canopies, dual flying controls with retractable pedals in front cockpit if required, flight mechanic on jump-seat in cabin, with narrow passage between flight deck and cabin Front canopy hinged to open sideways to starboard, footstep under starboard side of fuselage for access to pilot's rearward-hinged door, rear seat raised to give pilot unobstructed forward view; anti-fragment shield between cockpits Main cabin can accommodate eight persons on folding seats, or four stretchers, at front of cabin on each side is a door, divided horizontally into two sections hinged to open upward and downward respectively, with integral step on lower portion Optically flat bulletproof glass windscreen, with wiper, for each crew member.

SYSTEMS: Cockpits and cabin heated and ventilated Dual electrical system, with three generators, giving 36, 115 and 208 V AC at 400 Hz, and 27 V DC Retractable landing/taxying light under nose, navigation lights, anti-collision light above tailboom Stability augmentation system

Electrothermal de-icing system for main and tail rotor blades. AI-9 V APU mounted transversely inside fairing aft of rotor head

AVIONICS: *Comms:* Include VHF and UHF radio

Flight: Autopilot, ARK 15M radio compass, ARK-U2 radio compass, RV-5 radio altimeter

Instrumentation: Blind-flying instrumentation, and ADF navigation system with Doppler-fed mechanical map display. Air data sensor boom forward of top starboard corner of bulletproof windscreen at extreme nose

Mission: Undernose pods for electro-optics (starboard) and Raduga-F semi-automatic missile guidance (port). Many small antennae and blisters, including SRO-2 Khrom (NATO 'Odd Rods') IFF transponder

Self-defence: Sirena-3M radar warning antennae on each side of front fuselage and on trailing-edge of tail rotor pylon. Infra-red jammer (L-166V-11E Ispanka microwave pulse lamp; 'Hot Brick') in 'flower pot' container above forward end of tailboom. ASO-2V flare dispensers under tailboom forward of tailskid assembly initially; later triple racks (total of 192 flares) on sides of centre-fuselage.

EQUIPMENT: Gun camera on port wingtip. Colour-coded identification flare system

ARMAMENT: One remotely controlled YakB 12.7 four-barrel Gatling type 12.7 mm machine gun, with 1,470 rounds, in VSPU-24 undernose turret with field of fire 60° to each side, 20° up, 60° down, gun slaved to KPS-53AV undernose sighting system with reflector sight in front cockpit, four 9M17P Skorpion (NATO AT-2 'Swatter') anti-tank missiles on 2P32M twin rails under endplate pylons at wingtips; four underwing pylons for UB-32 rocket pods (each 32 S-5 type 57 mm rockets), B-8V-20 pods each containing twenty 80 mm S-8 rockets, 130 mm S-13 and 250 mm S-24 rockets, UPK-23-250 pods each containing a GSh-23L twin-barrel 23 mm gun, GUV pods each containing either one four-barrel 12.7 mm YakB-12.7 machine gun with 750 rds and two four barrel 7.62 mm 9-A-622 machine guns with total 1,100 rds or an AGS-17 Plamia 30 mm grenade launcher, up to 1,500 kg (3,300 lb) of conventional bombs, mine dispensers, night flares or other stores. R-60 (AA-8 'Aphid'), R-73 (AA-11 'Archer') and Igla air-to-air missiles fitted experimentally. Helicopter can be landed to install reload weapons carried in cabin. PKV reflector gunsight for pilot. Provisions for firing AKMS guns from cabin windows

GSh-30-2 cannon and weapon sighting sensor of Mil Mi-24P *(Paul Jackson)*

Front (weapon operator's) cockpit of Mil Mi-35 gunship helicopter *(Mark Wagner/Flight International)*
1994

DIMENSIONS, EXTERNAL (Mi-24P):

Main rotor diameter	17.30 m (56 ft 9¼ in)
Main rotor blade chord	0.58 m (1 ft 10¾ in)
Tail rotor diameter	3.91 m (12 ft 10 in)
Wing span	6.54 m (21 ft 5½ in)
Width of fuselage	1.70 m (5 ft 7 in)
Length overall	
excl rotors and gun	7.51 m (57 ft 5¼ in)
rotors turning	21.35 m (70 ft 0 in)
Height: to top of rotor head	3.97 m (13 ft 0¼ in)
overall, rotors turning	6.50 m (21 ft 4 in)
Span of horizontal stabiliser	3.27 m (10 ft 9 in)
Wheel track	3.03 m (9 ft 11¼ in)
Wheelbase	4.39 m (14 ft 5 in)

DIMENSIONS, INTERNAL:

Main cabin: Length	2.825 m (9 ft 3¼ in)
Width	1.46 m (4 ft 9½ in)
Height	1.20 m (3 ft 11¼ in)

AREAS:

Main rotor disc	235.06 m² (2,530.2 sq ft)
Tail rotor disc	11.99 m² (129.1 sq ft)

WEIGHTS AND LOADINGS (Mi-24P):

Weight empty	8,200 kg (18,078 lb)
Max external stores	2,400 kg (5,290 lb)
Normal T-O weight	11,200 kg (24,690 lb)
Max T-O weight	12,000 kg (26,455 lb)
Max disc loading	51.1 kg/m² (10.5 lb/sq ft)

PERFORMANCE (Mi-24P):

Max level speed	180 kts (335 km/h, 208 mph)
Cruising speed	145 kts (270 km/h, 168 mph)
Econ cruising speed	117 kts (217 km/h, 135 mph)
Max rate of climb at S/L	750 m (2,460 ft)/min
Service ceiling	4,500 m (14,750 ft)
Hovering ceiling OGE	1,500 m (4,920 ft)
Combat radius	
with max military load	86 n miles (160 km, 99 miles)
with two external fuel tanks	121 n miles (224 km, 139 miles)
with four external fuel tanks	155 n miles (288 km, 179 miles)
Range: standard internal fuel	270 n miles (500 km, 310 miles)
with auxiliary tanks	540 n miles (1,000 km, 620 miles)
Max endurance	4 h

UPDATED

MIL Mi-25

NATO reporting name: Hind-D

Some export variants of Mi-24D, including those for Angola, India and Peru, are designated Mi-25; change presumably signifies different equipment standards

VERIFIED

MIL Mi-26

NATO reporting name: Halo

TYPE: Twin-turbine multipurpose heavy-lift helicopter

PROGRAMME: Development started early 1970s; aim was payload capability 1½ to 2 times greater than that of any previous production helicopter; first prototype flew 14 December 1977, one of several prototype or preproduction Mi-26s (SSSR-06141) displayed at 1981 Paris Air Show; in field evaluation, probably with military development squadron, began early 1982, fully operational 1983; export deliveries started (to India), June 1986, more than 300 built; production continues, with **manufacture and marketing by Rostov Helicopter Manufacturing Association (Rostvertol), 5 Novatorov Street, 344038 Rostov-on-Don, Russia**. FAA certification scheduled 1995

CURRENT VERSIONS: **Mi-26**: Basic military transport

Mi-26A: With PNK-90 integrated flight/nav systems for

Mil Mi-26 heavy lift helicopter (two ZMKB Progress D-136 turboshafts) *(Mark Wagner/Flight International)*

1995

automatic approach and descent to critical decision point and other tasks

Mi-26T Basic civil transport, generally as military Mi-26. Variants include **Firefighting Mi-26**, able to dispense 7,500 litres (1,980 US gallons, 1,650 Imp gallons) fire retardant from one or two vents. **Geological Survey Mi-26** towing seismic gear, with tractive force of 10,000 kg (22,045 lb) or more, at 97 to 108 knots (180 to 200 km/h, 112 to 124 mph) at 55 to 100 m (180 to 330 ft) for up to 3 hours

Mi-26MS. Medical evacuation version, with life support section for four casualties and two medics, surgical section for one casualty and three medics, pre-operating section for two casualties and two medics, ambulance section for five stretcher patients, three seated casualties and two attendants, laboratory, and amenities section with toilet, washing facilities, food storage and recreation unit

Mi-26P: Transport for 63 passengers, basically four abreast in airline type seating, with centre aisle, toilet, galley and cloakroom aft of flight deck

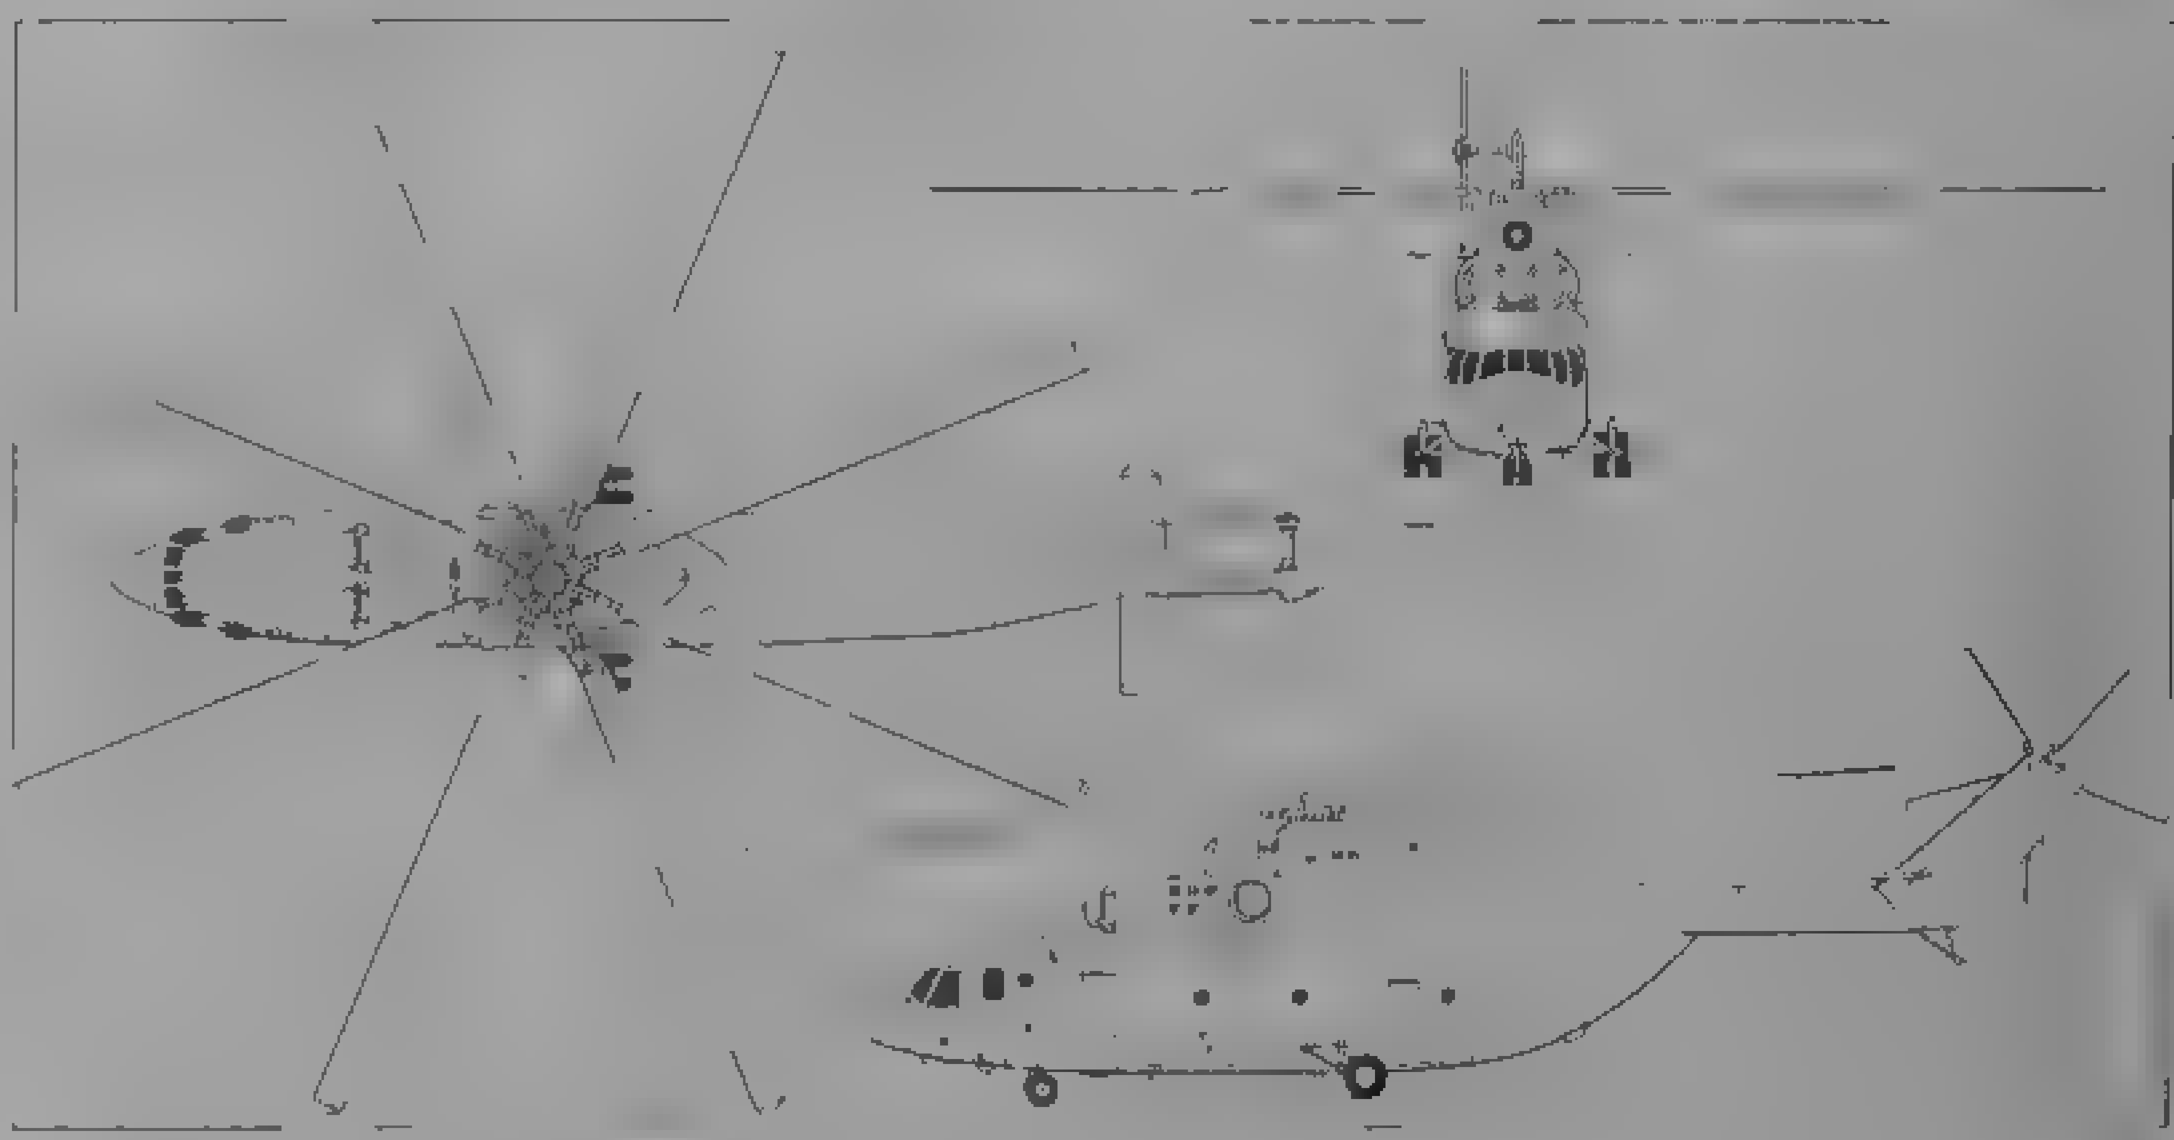
Mi-26TM Flying crane, with gondola for pilot/sling supervisor under fuselage aft of nosewheels or under rear loading ramp, rear gondola can accommodate pilot and trainee

Mi-26TZ. Tanker with 14 040 litres (3,710 US gallons, 3,088 Imp gallons) additional fuel and 1,040 litres (275 US gallons, 228 Imp gallons) lubricants, dispensed through four hoses for aircraft, 10 hoses for ground vehicles.

Mi-26M Upgrade under development in 1994; all-GFRP main rotor blades of new aerodynamic configuration, new ZMKB Progress D-127 turboshafts (each approximately 10,440 kW, 14,000 shp), and modified integrated flight/nav system with EFIS. Transmission rating unchanged, but full payload capability maintained under 'hot and high' conditions, OEI safety improved, hovering and service ceilings increased, and greater maximum payload (25,000 kg, 55,115 lb) for crane operations

The 1990 edition of US Department of Defense's *Soviet Military Power* stated "New variants of 'Halo' are likely in the early 1990s to begin to replace 'Hooks' specialised for command support" *Detailed description applies to basic Mi-26, except where indicated*

CUSTOMERS CIS armed forces (more than 60), India (10) More than 12 operated by SkyLink Aviation and Transportation Services, Canada



Mil Mi-26, first helicopter to operate successfully with an eight-blade main rotor *(Jane's/Dennis Punnett)*

1981

DESIGN FEATURES: Largest production helicopter, empty weight comparable to that of Mi-6 and, as specified, is approximately 50 per cent of maximum T-O weight, weight saved by in house design of main gearbox providing multiple torque paths, GFRP tail rotor blades, titanium main and tail rotor heads, main rotor blades of mixed metal and GFRP, use of aluminium-lithium alloys in airframe; conventional pod and boom configuration, but first successful use of eight-blade main rotor, of smaller diameter than Mi-6 rotor, payload and cargo hold size similar to those of Lockheed C 130 Hercules; auxiliary wings not required, rear-loading ramp/doors, main rotor rpm 132

FLYING CONTROLS. Hydraulically powered cyclic and collective pitch controls actuated by small parallel jacks, with redundant autopilot and stability augmentation system inputs. Fly-by-wire system flight tested 1994

STRUCTURE: Eight blade constant chord main rotor; flapping and drag hinges, droop stops and hydraulic drag dampers, no elastomeric bearings or hinges, each blade has one-piece tubular steel spar and 26 GFRP aerofoil shape full-chord pockets, honeycomb filled, with ribs and stiffeners and non-removable titanium leading-edge abrasion strip, blades have moderate twist, taper in thickness toward tip, and are attached to small forged titanium head of unconventional design, each has ground adjustable trailing-edge tab, five-blade constant-chord tail rotor, starboard side, has GFRP blades, forged titanium head, conventional transmission, with tail rotor shaft inside cabin roof; all-metal riveted semi monocoque fuselage with clamshell rear doors, flattened tailboom undersurface, engine bay of titanium for fire protection, all metal tail surfaces, swept vertical stabiliser/tail rotor support profiled to produce sideways lift, ground adjustable variable incidence horizontal stabiliser

LANDING GEAR Non-retractable tricycle type, twin wheels on each unit; steerable nosewheels; mainwheel tyres size 1,120 × 450 mm. Retractable tailskid at end of tailboom to permit unrestricted approach to rear cargo doors. Length of main legs adjusted hydraulically to facilitate loading through rear doors and to permit landing on varying surfaces. Device on main gear indicates take-off weight to flight engineer at lift-off, on panel on shelf to rear of his seat

POWER PLANT: Two 7,460 kW (10 000 shp) ZMKB Progress D-136 free-turbine turboshafts, side by side above cabin, forward of main rotor driveshaft. Air intakes fitted with particle separators to prevent foreign object ingestion, and have both electrical and bleed air anti icing systems. Above and behind is central oil cooler intake. VR-26 fan-cooled main transmission, rated at 14,710 kW (19,725 shp), with air intake above rear of engine cowlings. System for synchronising output of engines and maintaining constant rotor rpm; if one engine fails, output of other is increased to maximum power automatically. Independent fuel system for each engine; fuel in eight underfloor rubber tanks, feeding into two header tanks above engines, which permit gravity feed for a period in emergencies, maximum

1995

Cockpit of Mil Mi-26 *(Mark Wagner/Flight International)*

1994

standard internal fuel capacity 12,000 litres (3,170 US gallons, 2,640 Imp gallons), provision for four auxiliary tanks. Two large panels on each side of main rotor mast fairing, aft of engine exhaust outlet, hinge downward as work platforms.

ACCOMMODATION: Crew of four on flight deck: pilot (on port side) and co-pilot side by side, tip-up seat between pilots, and seats for flight engineer (port) and navigator (starboard) to rear. Four-seat passenger compartment aft of flight deck. Loads in hold include two airborne infantry combat vehicles and a standard 20,000 kg (44,090 lb) ISO container; about 20 tip-up seats along each sidewall of hold; maximum military seating for 80 combat equipped troops, alternative provisions for 60 litter patients and four/five attendants. Heated windscreen, with wipers, four large blistered side windows on flight deck, forward pair swing open slightly outward and rearward. Downward-hinged doors, with integral airstairs, at front of hold on port side, and each side of hold aft of main landing gear units. Hold loaded via downward-hinged lower door, with integral folding ramp, and two clamshell upper doors forming rear wall of hold when closed; doors opened and closed hydraulically, with back-up hand pump for emergency use. Two electric hoists on overhead rails, each with capacity of 2,500 kg (5,511 lb), enable loads to be transported along cabin; winch for hauling loads, capacity 500 kg (1,100 lb); roller conveyor in floor and load lashing points throughout hold. Flight deck and hold fully air conditioned.

SYSTEMS: Two hydraulic systems, operating pressure 207 bars (3,000 lb/sq in). Electrical system 28 V DC. APU under flight deck, with intake louvres (forming fuselage skin when closed) and exhaust on starboard side, for engine starting and to supply hydraulic, electrical and air conditioning systems on ground. Electrically heated leading-edge of main and tail rotor blades for anti-icing. Only flight deck pressurised.

AVIONICS: All items necessary for day and night operations in all weathers are standard.

Radar: Weather radar in hinged (to starboard) nosecone.

Flight: Integrated flight/nav system and automatic flight control system, Doppler, map display, HSI, and automatic hover system.

Self-defence: Military versions can have infra-red jammers and suppressors, infra-red decoy dispensers and colour-coded identification flare system.

EQUIPMENT: Hatch for load sling in bottom of fuselage, in line with main rotor shaft, sling cable attached to internal winching gear. Closed circuit TV cameras to observe slung payloads.

ARMAMENT: None.

DIMENSIONS, EXTERNAL:

Main rotor diameter	32.00 m (105 ft 0 in)
Tail rotor diameter	7.61 m (24 ft 11½ in)
Length: overall, rotors turning	40.025 m (131 ft 3¾ in)
fuselage, excl tail rotor	33.73 m (110 ft 8 in)
Height to top of rotor head	8.145 m (26 ft 8¾ in)
Width over mainwheels	8.15 m (26 ft 9 in)
Wheel track	7.17 m (23 ft 6¼ in)
Wheelbase	8.95 m (29 ft 4½ in)

DIMENSIONS, INTERNAL:

Freight hold:	
Length: ramp trailed	15.00 m (49 ft 2½ in)
excl ramp	12.00 m (39 ft 4½ in)
Width	3.20 m (10 ft 6 in)
Height	2.95-3.17 m (9 ft 8 in-10 ft 4¾ in)
Volume	121 m³ (4,273 cu ft)

AREAS:

Main rotor disc	804.25 m² (8,657 sq ft)
Tail rotor disc	45.48 m² (489.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	28,200 kg (62,170 lb)
Max payload, internal or external	20,000 kg (44,090 lb)
Normal T-O weight	49,600 kg (109,350 lb)
Max T-O weight	56,000 kg (123,450 lb)
Max disc loading	69.6 kg/m² (14.26 lb/sq ft)
Max transmission power loading	3.81 kg/kW (6.26 lb/shp)

PERFORMANCE (A, Mi-26, B, Mi-26M):

Max level speed: A	159 kts (295 km/h; 183 mph)
Normal cruising speed: A	137 kts (255 km/h; 158 mph)
Service ceiling: A	4,600 m (15,100 ft)
B	5,900 m (19,350 ft)
Hovering ceiling IGE:	
A, ISA, with 5,100 kg (11,240 lb) payload	1,000 m (3,280 ft)
B, ISA + 15°C, with 12,300 kg (27,115 lb) payload	1,000 m (3,280 ft)
Hovering ceiling OGE, ISA: A	1,800 m (5,900 ft)
B	2,800 m (9,185 ft)
Range: A at 2,500 m (8,200 ft) ISA + 15°C, with 7,700 kg (16,975 lb) payload	270 n miles (500 km; 310 miles)
B at 2,500 m (8,200 ft) ISA + 15°C, with 13,700 kg (30,200 lb) payload	270 n miles (500 km; 310 miles)
A, S/L ISA, with max internal fuel at max T-O weight, 5% reserves	432 n miles (800 km; 497 miles)
A, S/L ISA, with four aux tanks	1,036 n miles (1,920 km; 1,190 miles)

UPDATED

MIL Mi-28

NATO reporting name: Havoc

TYPE: Two-seat twin-turbine combat helicopter.

PROGRAMME: Design started 1980; first of four prototypes flew 10 November 1982; fourth prototype demonstrated at Asian Aerospace '94; small-scale preseries production by Rostvertol, Rostov.

CURRENT VERSIONS: **Mi-28**: Basic version, *as described in detail*. Few only to be built, for service evaluation.

Mi-28N: Added night/all weather operating capability. Russian Army funding announced January 1994, first flight scheduled mid-1995, possible service entry 1997. Multiwindow chin fairing in place of nose sensor turret; armament to include 9M114 Shturm (AT-6 'Spiral') ASMs and Igla (SA-16 'Gimlet') AAMs, with 360° scan mast-mounted millimetre wave radar, a FLIR ball instead of two fixed IR sensors of basic version, and low-light-level TV. Weights and performance generally unchanged.

Versions for naval amphibious assault support and air-to-air missions projected.

DESIGN FEATURES: Conventional gunship configuration, with two crew in stepped cockpits, original three-blade tail rotor superseded by 'scissors' type comprising two independent two-blade rotors set as narrow X (35°/145°) on same shaft, known in USA as (delta 3) type, resulting flapping freedom relieves flight loads, agility enhanced by doubling hinge offset of main rotor blades compared with Mi-24, survivability emphasised, crew compartments protected by titanium and ceramic armour and armoured glass transparencies, vital structural elements shielded by less vital, single hit will not knock out both engines, vital units and parts are redundant and widely separated, multiple self-sealing fuel tanks in centre-fuselage enclosed in composites second skin, outside metal fuselage skin, no explosion, fire or fuel leakage results if tanks hit by bullet or shell fragment; energy absorbing seats and landing gear protect crew in crash landing at descent rate of 12 m (40 ft)/s, crew doors are rearward-hinged, to open quickly and remain open in emergency; parachutes are mandatory for CIS military helicopter aircrew, if Mi-28 crew had to parachute, emergency system would jettison doors, blast away stub-wings, and inflate bladder beneath each door sill: as crew jumped, they would bounce off bladders and clear main landing gear, no provision for rotor separation, port-side door, aft of wing, provides access to avionics compartment large enough to permit combat rescue of two or three persons on ground, although it lacks windows, heating and ventilation, handcrank, inserted into end of each stub-wing, enables stores of up to 500 kg (1,100 lb) to be winched on to pylons without hoists or ground equipment; current 30 mm gun is identical with that of CIS army ground vehicles and uses same ammunition, jamming averted by attaching twin ammunition boxes to sides of gun mounting, so that they turn, elevate and depress with gun; main rotor shaft has 5° forward tilt, providing tail rotor clearance; transmission capable of running without oil for 20 to 30 minutes; main rotor rpm 242, with main rotor blades and wings removed, helicopter is air transportable in An-22 or Il-76 freighter.

FLYING CONTROLS: Hydraulically powered mechanical type, horizontal stabiliser linked to collective; controls for pilot only.

STRUCTURE: Five-blade main rotor, blades have very cambered high-lift section and sweptback tip leading-edge, full-span upswept tab on trailing-edge of each blade, structure comprises numerically controlled, spirally wound glassfibre D-spar, blade pockets of Kevlar-like material with Nomex-like honeycomb core, and titanium erosion strip on leading-edge; each blade has single elastomeric root bearing, mechanical droop stop and hydraulic drag damper; four-blade GFRP tail rotor with elastomeric

Fourth prototype of Mil Mi-28 ('Havoc') combat helicopter (*Paul Jackson*)

1995

bearings for flapping rotor brake lever on starboard side of cockpit strong and simple machined titanium main rotor head with elastomeric bearings, requiring no lubrication, power output shafts from engines drive main gearbox from each side, tail rotor gearbox, at base of tail pylon, driven by aluminium alloy shaft inside composite duct on top of tail boom; sweptback mid-mounted wings have light alloy primary box structure, leading- and trailing-edges of composites, no wing movable surfaces, provision for countermeasures pod on each wingtip, housing chaff/flare dispensers and sensors, probably RWR, light alloy semi-monocoque fuselage, with titanium armour around cockpits and vulnerable areas, composites access door aft of wing on port side; swept fin has light alloy primary box structure, composites leading- and trailing-edges; cooling air intake at base of fin leading-edge, exhaust at top of trailing-edge; two-position composites horizontal stabiliser

LANDING GEAR. Non-retractable tailwheel type, with single wheel on each unit, mainwheel tyres size 720 × 320 mm, pressure 5.4 bars (78 lb/sq in), castoring tailwheel with tyre size 480 × 200 mm

POWER PLANT: Two Klimov TV3 117VM turboshafts, each 1,545 kW (2,070 shp), in pod above each wingroot, three jetpipes inside downward deflected composites nozzle fairing on each side of third prototype shown in Paris 1989 upward deflecting type also tested. Ivchenko AI 9V APU in rear of main pylon structure supplies compressed air for engine starting and to drive small turbine for preflight ground checks. Deflectors for dust and foreign objects forward of air intakes, which are de-iced by engine bleed air Provision for four external fuel tanks on underwing pylons.

ACCOMMODATION. Navigator/gunner in front cockpit, pilot behind, on elevated seat, transverse armoured bulkhead between; flat non-glint tinted transparencies of armoured glass, navigator/gunner's door on port side, pilot's door on starboard side

SYSTEMS: Cockpits air conditioned and pressurised by engine bleed air Duplicated hydraulic systems, pressure 152 bars (2,200 lb/sq in). 208 V AC electrical system supplied by two generators on accessory section of main gearbox, ensuring continued supply during autorotation. Low air speed system standard, giving speed and drift via main rotor blade-tip pitot tubes at −50 to +70 km/h (−27 to +38 knots; -31 to +43 mph) in forward flight, and ±70 km/h (±38 knots, ±43 mph) in sideways flight. Main and tail rotor blades electrically de-iced.

AVIONICS: *Comms:* UHF/VHF nav/com; small IFF fairing each side of nose and tail

Instrumentation: Conventional IFR instrumentation. with autostabilisation, autohover, and hover/heading hold lock in attack mode, pilot has HUD and centrally mounted CRT for basic TV, aircraft designed for use with night vision goggles.

Mission: Radio for missile guidance in nose radome; radar warning receivers. Daylight optical weapons sight and laser ranger/designator in double-glazed nose turret above gun, with which it rotates through ±110°; wiper on outer glass protects inner optically flat panel. Cylindrical container each side of this turret for FLIR and low light level TV night vision systems on prototype shown in Paris, 1989 (systems not fitted Containers deleted on fourth prototype)

Self-defence: Two fixed IR sensors on initial basic production Mi-28; IR suppressors, radar and laser warning receivers standard, optional countermeasures pod on each wingtip, housing chaff/flare dispensers and sensors.

EQUIPMENT: Two slots, one above the other on port side of tail-boom, for colour-coded identification flares. Three pairs of rectangular formation-keeping lights in top of tailboom further pair in top of main rotor pylon fairing

ARMAMENT: One NPPU-28 30 mm turret-mounted gun (with 250 rounds) at nose, able to rotate ±110°, elevate 13° and depress 40°; maximum rate of fire 900 rds/min air-to-air and air-to-ground. (New specially designed gun under development.) Two pylons under each stub-wing, each with capacity of 480 kg (1,058 lb), typically for total of sixteen 9M114 Shturm C (AT-6 'Spiral') radio-guided tube-launched anti-tank missiles and two UB-20 pods of twenty 80 mm C-8 or 130 mm C-13 rockets. Gun fired and guided weapons launched normally only from front cockpit, unguided rockets fired from both cockpits. (When fixed, gun can be fired also from rear cockpit.)

DIMENSIONS, EXTERNAL

Main rotor diameter	17.20 m (56 ft 5 in)
Main rotor blade chord	0.67 m (2 ft 2⅜ in)
Tail rotor diameter	3.84 m (12 ft 7¼ in)
Tail rotor blade chord	0.24 m (9½ in)
Length overall, excl rotors	17.01 m (55 ft 9¾ in)
Fuselage max width	1.85 m (6 ft 1 in)
Width over stub-wings	4.88 m (16 ft 0¼ in)

Close-up of Mi-28 armament *(Piotr Butowski)*

1995

Height to top of rotor head 3.82 m (12 ft 6½ in)
Height overall 4.70 m (15 ft 5 in)
Wheel track 2.29 m (7 ft 6¼ in)
Wheelbase 11.00 m (36 ft 1 in)

AREAS:
Main rotor disc 232.3 m² (2,501 sq ft)
Tail rotor disc 11.58 m² (124.7 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, equipped 8,095 kg (17,846 lb)
Internal fuel: standard 1,337 kg (2,947 lb)
with added tanks 1,782 kg (3,928 lb)
Normal T-O weight 10,400 kg (22,928 lb)
Max T-O weight 11,660 kg (25,705 lb)
Max disc loading 50.19 kg/m² (10.28 lb/sq ft)

PERFORMANCE:
Max level speed 162 kts (300 km/h, 186 mph)
Max cruising speed 145 kts (270 km/h, 167 mph)
Max rate of climb at S/L 816 m (2,677 ft)/min
Service ceiling 5,800 m (19,025 ft)
Hovering ceiling OGE 3,600 m (11,810 ft)
Radius of action, standard fuel, 10 min loiter at target, 5% reserves 108 n miles (200 km; 124 miles)
Range, max standard fuel 248 n miles (460 km; 285 miles)
Ferry range, 5% reserves 593 n miles (1,100 km; 683 miles)
Endurance with max fuel 2 h
g limits +3/–0.5

UPDATED

MIL Mi-34

NATO reporting name: Hermit

TYPE: Lightweight two/four-seat multipurpose helicopter.

PROGRAMME: First flight 1986; two prototypes and structure test airframe completed by mid-1987, when exhibited for first time at Paris Air Show; first helicopter built in former USSR to perform normal loop and roll; series production began at Progress Plant, Arsenyev, 1993; marketed by Mil Light Helicopters, planned completion of 30 in 1994-95.

CURRENT VERSIONS: Basic **Mi-34** as described, may be available with 261 kW (350 hp) Textron Lycoming TIO-540-J engine as alternative to M-14V; projected **Mi-34A** would have 335 kW (450 shp) Allison 250-C20R turboshaft.

CUSTOMERS: First three for Mayor's office, Moscow, others for police and ambulance duties.

DESIGN FEATURES: Intended primarily for training and international competition flying, Mil claims Mi-34 is aerobatic; conventional pod and boom configuration, piston engine of same basic type as that in widely used Yakovlev fixed-wing training aircraft and Kamov Ka-26 helicopters; suitable also for light utility, mail delivery, observation and liaison duties, and border patrol.

FLYING CONTROLS: Mechanical, with no hydraulic boost.

STRUCTURE: Semi-articulated four-blade main rotor with flapping and cyclic pitch hinges, but natural flexing in lead/lag plane; blades of GFRP with CFRP reinforcement, attached by flexible steel straps to head like that of McDonnell Douglas MD 500; two-blade tail rotor of similar composites construction, on starboard side; riveted light alloy fuselage, sweptback tailfin with small unswept T tailplane.

LANDING GEAR: Conventional non-retractable skids on arched support tubes; small tailskid to protect tail rotor.

POWER PLANT: One 243 kW (325 hp) VOKBM M-14V-26 nine-cylinder radial air-cooled engine mounted sideways in centre-fuselage. Fuel system for inverted flight.

ACCOMMODATION: Normally one or two pilots, side by side, in enclosed cabin, with optional dual controls. Rear of cabin contains low bench seat, available for two passengers and offering flat floor for cargo carrying. Forward-hinged door on each side of flight deck and on each side of rear cabin.

AVIONICS: *Comms:* VHF radio.
Flight: ADF and radio altimeter.
Instrumentation: Magnetically slaved compass system incorporating radio magnetic indicator.

EQUIPMENT: Gyro horizon.

DIMENSIONS, EXTERNAL:
Main rotor diameter 10.00 m (32 ft 9¾ in)
Main rotor blade chord 0.22 m (8⅔ in)
Tail rotor diameter 1.48 m (4 ft 10¼ in)
Tail rotor blade chord 0.16 m (6¼ in)
Length of fuselage 8.75 m (28 ft 8½ in)
Width of fuselage 1.40 m (4 ft 7¼ in)
Skid track 2.24 m (7 ft 4¼ in)

AREAS:
Main rotor disc 78.5 m² (845 sq ft)
Tail rotor disc 1.72 m² (18.52 sq ft)

WEIGHTS AND LOADINGS:
Fuel weight 128 kg (282 lb)
T-O weight, training and aerobatic missions
Aerobatic 1,100 kg (2,425 lb)
Normal 1,280 kg (2,822 lb)
Max 1,350 kg (2,976 lb)
Max disc loading 17.2 kg/m² (3.52 lb/sq ft)

PERFORMANCE (at normal T-O weight, except where indicated):
Max level speed 118 kts (220 km/h; 136 mph)
Max cruising speed 97 kts (180 km/h; 112 mph)
Normal cruising speed 86 kts (160 km/h; 99 mph)
Service ceiling 4,500 m (14,765 ft)
Hovering ceiling 1,500 m (4,920 ft)
Range at T-O weight of 1,350 kg (2,976 lb)
with 165 kg (363 lb) payload 97 n miles (180 km; 112 miles)
with 145 kg (320 lb) payload 194 n miles (360 km; 224 miles)

UPDATED

MIL Mi-34 VAZ

TYPE: Lightweight two/four-seat twin-engined helicopter.

PROGRAMME: Now in development; powered by two rotary engines, produced by VAZ motorcar works in Togliatti, prototype exhibited at MosAeroshow '92, IOC expected 1996.

DESIGN FEATURES: Basically as Mi-34 but completely new rotor head based on carbonfibre star plate, anchoring pitch cases that are integral with main blade section (sleeve over starplate arm), droop stops under blade root, no drag dampers, starplate clamped between upper and lower metal forgings attached to main shaft, pitch-change fittings also metal

Cockpit of prototype Mil Mi-34 VAZ *(Mark Lambert)* 1993

forgings. Resultant large apparent hinge offset gives high control response. Main rotor tip speed 205 m (672 ft)/s

POWER PLANT: Two VAZ-430 twin-chamber rotary engines, each 169 kW (227 hp) for T-O, 198.5 kW (266 hp) contingency. Internal fuel capacity 245 litres (64.7 US gallons; 54 Imp gallons), auxiliary fuel capacity 245 litres (64.7 US gallons; 54 Imp gallons). Engines burn Mogas and have power/weight ratio of 0.5 kg (1.1 lb)/hp

ACCOMMODATION: As Mi-34, plus optional stretcher for EMS duties and optional cargo sling

SYSTEMS: Cabin heated, de-icing system for main rotor blades and cabin windows

AVIONICS: *Flight:* Navigation equipment for flying in adverse weather optional

DIMENSIONS, EXTERNAL:
Main rotor diameter 11.40 m (37 ft 5 in)
Tail rotor diameter 1.50 m (4 ft 11 in)
Length of fuselage 9.50 m (31 ft 2 in)
Width of fuselage 1.45 m (4 ft 9 in)

DIMENSIONS, INTERNAL:
Cabin: Length 2.40 m (7 ft 10½ in)
Width 1.60 m (5 ft 3 in)
Height 1.30 m (4 ft 3¼ in)

WEIGHTS AND LOADINGS:
Max payload 550 kg (1,212 lb)
Max T-O weight 1,960 kg (4,320 lb)

PERFORMANCE (estimated):
Max level speed 118 kts (220 km/h; 136 mph)
Nominal cruising speed 97 kts (180 km/h; 112 mph)
Service ceiling 5,000 m (16,400 ft)
Hovering ceiling OGE: ISA 1,500 m (4,920 ft)
ISA + 15°C 800 m (2,625 ft)
Range: with max payload, 30 min reserves
43 n miles (80 km; 50 miles)
with max standard fuel, 340 kg (750 lb) payload, 30 min reserves 323 n miles (600 km; 372 miles)
Endurance with max standard fuel, 320 kg (705 lb) payload 5 h to 5 h 30 min

Mi-35 is export version of Mi-24V, **Mi-35P** is export version of Mi-24P; Mi-35M is proposed upgrade (see Mi-24 entry)

UPDATED

MIL Mi-38

TYPE: Twin-turbine multirole medium-range helicopter

PROGRAMME: Model shown at 1989 Paris Air Show, when aircraft at mockup stage; first of initial batch of 10 scheduled to fly 1997, production planned in Kazan, certification to FAR Pt 29 standards and first deliveries 1999. Under December 1992 agreement, Eurocopter will integrate cockpit, avionics and passenger systems, and will adapt Mi-38 for international market. Euromil joint stock company established September 1994 to advance collaboration, now to include Kazan production plant and Klimov engine manufacturer, each with 25 per cent interest. Modifications in evidence by 1993 included fixed landing gear with wider track and reduced base

COSTS: Civil export price about $30 million

DESIGN FEATURES: Conventional pod and boom configuration, power plant above cabin, six-blade main rotor with considerable non-linear twist and swept tips, two independent two-blade tail rotors, set as narrow X on same shaft; port side door at front of cabin, clamshell rear-loading doors and ramp, hatch in cabin floor, under main rotor driveshaft, for tactical/emergency cargo airdrop and for cargo sling attachment; optional windows for survey cameras in place of hatch, sweptback fin/tail rotor mounting, small horizontal stabiliser. Mi-38 planned as Mi-8/17 series replacement, designed to FAR Pt 29 standards, for day/night operation over temperature range −60 to +50°C; Western engines optional

FLYING CONTROLS: Fly-by-wire, with manual back-up

STRUCTURE: Composites main and tail rotors, low-profile titanium main rotor head, with elastomeric bearings, main rotor has hydraulic drag dampers; single lubrication point, at driveshaft. fuselage mainly composites

LANDING GEAR: Fixed tricycle type; single wheel on each main unit, twin nosewheels, low pressure tyres, optional pontoons for emergency use in overwater missions

POWER PLANT: Two Klimov TVA-3000 turboshafts, each rated at 1,838 kW (2,465 shp) for T-O, single-engine rating 2,610 kW (3,500 shp) and transmission rated for same power. Power plant above cabin, to rear of main reduction gear; air intakes and filters in sides of cowling. Bag fuel tanks beneath floor of main cabin, provision for external auxiliary fuel tanks. Liquid petroleum gas fuel planned as alternative to aviation kerosene

ACCOMMODATION: Crew of two on flight deck, separated from main cabin by compartment for majority of avionics, single-pilot operation possible for cargo missions. Lightweight seats for 30 passengers as alternative to unobstructed hold for 5,000 kg (11,020 lb) freight. Ambulance and air survey versions planned. Provision for hoist over port-side door, remotely controlled hydraulically actuated rear cargo ramp, powered hoist on overhead rails in cabin, and roller conveyor system in cabin floor and ramp

SYSTEMS: Air conditioning by compressor bleed air, or APU on ground, maintains temperature of not more than 25°C on flight deck in outside temperature of 40°C, and not less than 15°C on flight deck and in main cabin in outside temperature of −50°C. Three independent hydraulic systems, any one able to maintain control of helicopter in emergency. Electrical system has three independent AC generators, two batteries, and transformer/rectifiers for DC supply, electric rotor blade de-icing. Independent fuel system for each engine, with automatic cross-feed, forward part of cowling houses VD-100 APU, hydraulic, air conditioning, electrical and other system components

AVIONICS: *Radar:* Weather/nav radar (range 54 n miles; 100 km; 62 miles)

Flight: Preset flight control system allows full autopilot autohover and automatic landing. Avionics controlled by large central computer, linked also to automatic nav system with Doppler, ILS, satellite nav system, main radar, autostabilisation system and automatic radio compass.

Instrumentation: Six colour CRTs for use in flight and by servicing personnel on ground. Equipment monitoring, failure warning and damage control system. Closed-circuit TV for monitoring cargo loading and slung loads. Options include low-cost electromechanical instrumentation based on that of Mi-8, sensors for weighing and CG positioning of cargo in cabin, and for checking weight of slung loads

DIMENSIONS, EXTERNAL:
Main rotor diameter 21.10 m (69 ft 2¾ in)
Tail rotor diameter 3.84 m (12 ft 7¼ in)
Length overall, excl rotors 19.95 m (65 ft 5½ in)
Height to top of rotor head 5.20 m (17 ft 0¾ in)
Stabiliser span 4.20 m (13 ft 9⅓ in)
Wheel track 4.50 m (14 ft 9¼ in)
Wheelbase 5.17 m (16 ft 11½ in)
Forward freight door: Width 1.50 m (4 ft 11 in)
Height 1.70 m (5 ft 7 in)
Floor hatch: Length 1.15 m (3 ft 9¼ in)
Width 0.75 m (2 ft 5½ in)

DIMENSIONS, INTERNAL:
Main cabin: Length to ramp 6.80 m (22 ft 3½ in)
Length, incl fwd part of tailboom
10.70 m (35 ft 1¼ in)
Max width 2.36 m (7 ft 9 in)
Width at floor 2.20 m (7 ft 2½ in)
Height: centre 1.80 m (5 ft 10¾ in)
rear 1.85 m (6 ft 1 in)

AREAS:
Main rotor disc 349.67 m² (3,763.8 sq ft)
Tail rotor disc 11.58 m² (124.7 sq ft)

WEIGHTS AND LOADINGS (provisional):
Max payload: internal 5,000 kg (11,020 lb)
external 6,000 kg (13,225 lb)
Normal T-O weight 14,200 kg (31,305 lb)
Max T-O weight 15,600 kg (34,392 lb)
Max disc loading 44.61 kg/m² (9.14 lb/sq ft)
Max transmission power loading
5.97 kg/kW (9.82 lb/shp)

PERFORMANCE (estimated, at max T-O weight):
Max level speed 148 kts (275 km/h; 171 mph)
Cruising speed 135 kts (250 km/h; 155 mph)
Service ceiling 6,500 m (21,325 ft)
Hovering ceiling OGE 2,500 m (8,200 ft)

Range, 30 min reserves
- with 5,000 kg (11,020 lb) payload 175 n miles (325 km, 202 miles)
- with 4,500 kg (9,920 lb) payload (30 passengers and baggage) 286 n miles (530 km; 329 miles)
- with 3,500 kg (7,715 lb) payload and standard fuel 430 n miles (800 km, 497 miles)
- with 1,800 kg (3,965 lb) payload and auxiliary fuel 700 n miles (1,300 km, 808 miles)

UPDATED

MIL Mi-40

TYPE: Twin-turboshaft infantry combat helicopter

PROGRAMME: Project announced Summer 1992; redesigned model shown at MosAeroshow '93, at preliminary design stage in early 1994, with initial government funding

DESIGN FEATURES: Development of Mi-24 concept, to deliver seven troops to battlefield in armoured cabin behind flight deck and to provide fire support. Dynamic and avionics systems based on those of Mi-28, for other details see illustration

LANDING GEAR: Retractable nosewheel type, twin-wheel nose unit, single wheel on main units

POWER PLANT: As for Mi-28N

ACCOMMODATION: Pilot and navigator/weapon systems operator side by side, up to seven combat-equipped troops in main cabin, horizontally divided door in upward-opening/downward-opening sections on each side. Compartment at rear of cabin for gunner, with large side and rear windows, and door on starboard side

AVIONICS: *Mission*: Optics in mast-mounted pod, probably similar to those of Mi-28N

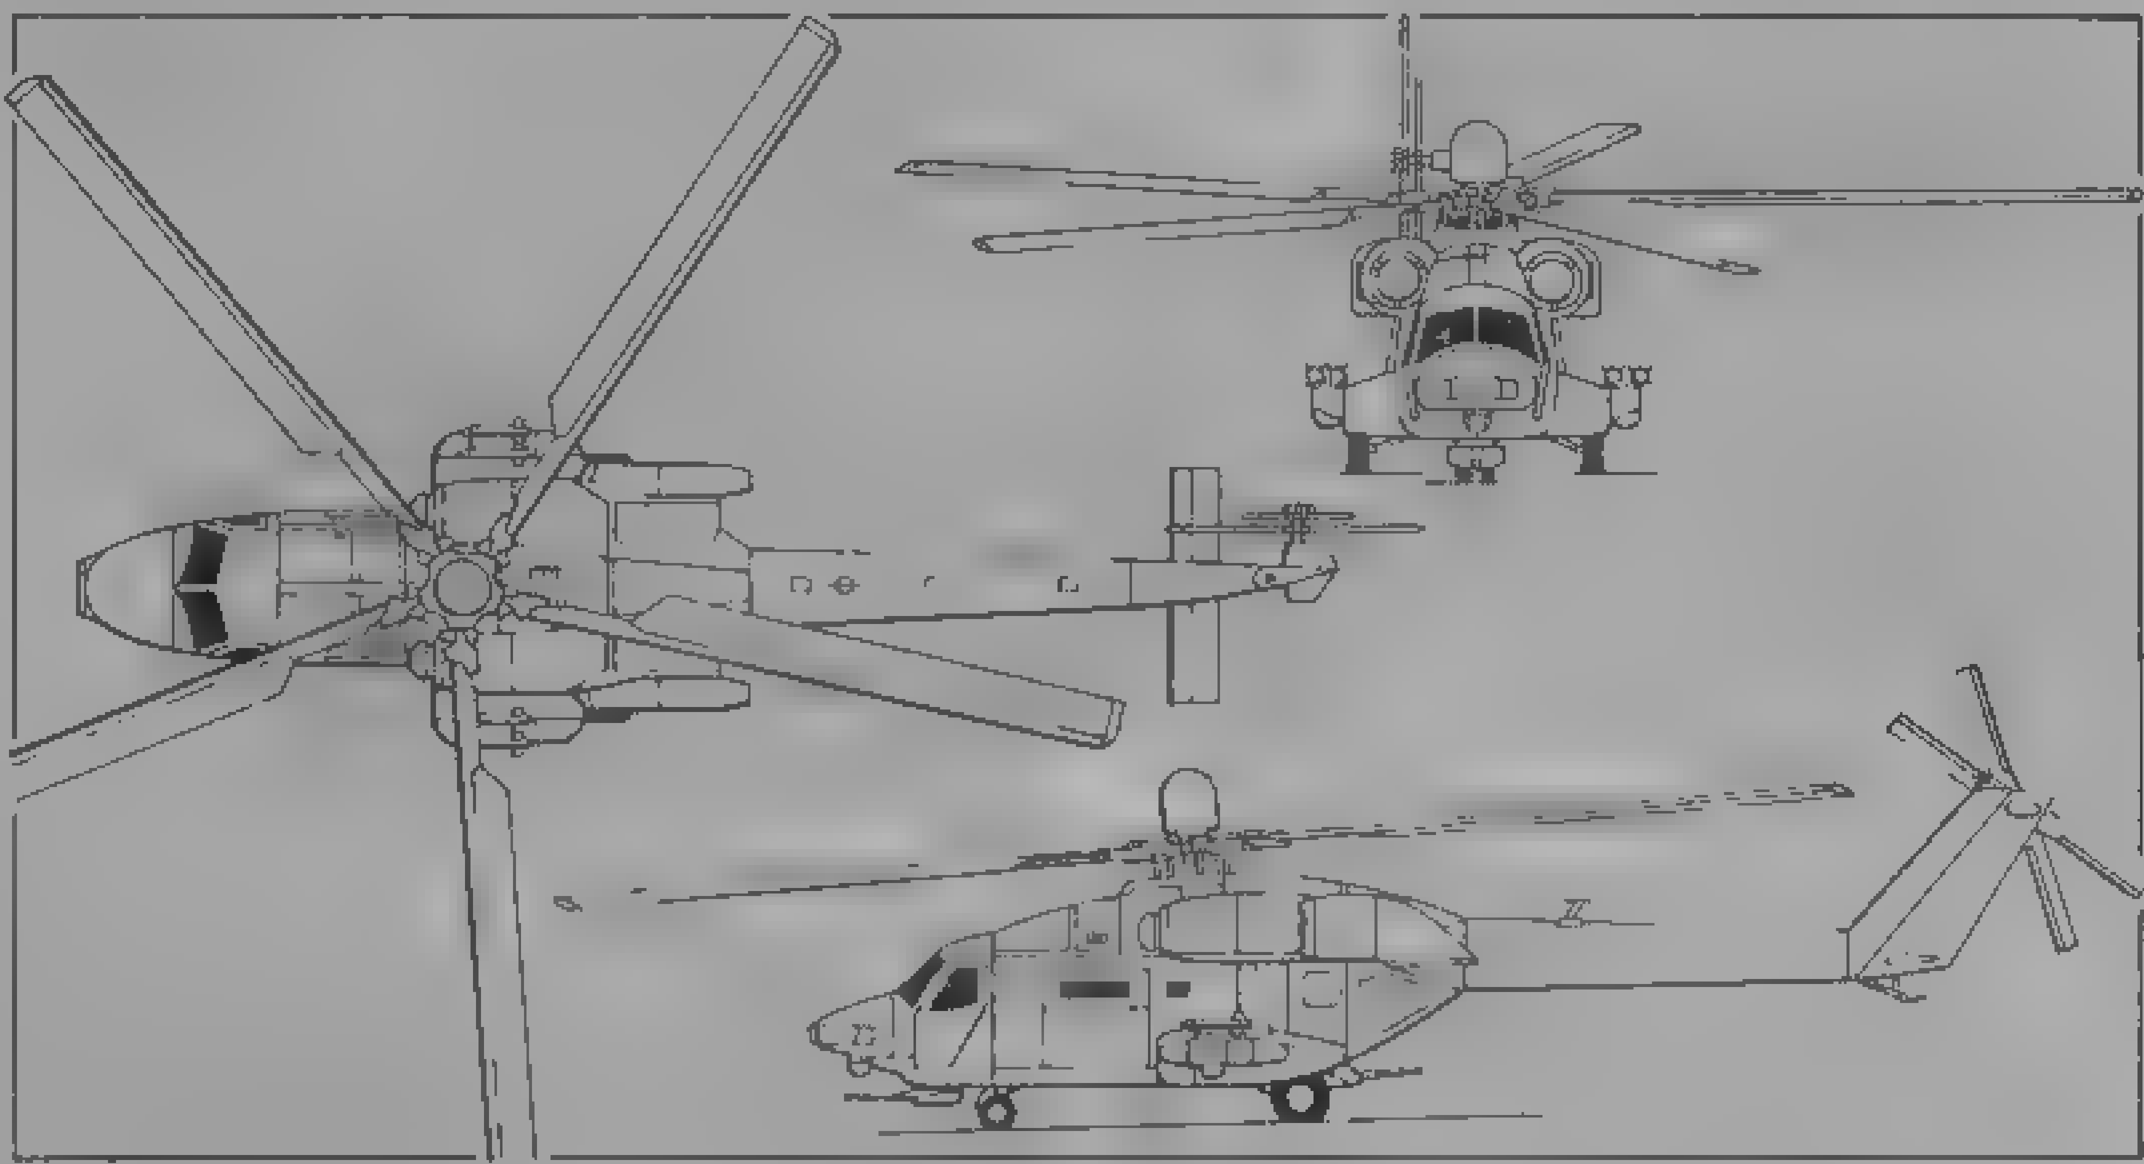
ARMAMENT: Undernose turret for 23 mm multibarrel gun, basic mission specifies up to eight air-to-surface or air-to-air missiles, gun and seven troops, provision for flexibly mounted 12.7 mm gun at rear of cabin pod.

DIMENSIONS, EXTERNAL:

Main rotor diameter	17.20 m (56 ft 5 in)
Tail rotor diameter	3.84 m (12 ft 7¼ in)
Length overall	16.00 m (52 ft 6 in)
Height overall	4.60 m (15 ft 11 in)
Wheel track	3.00 m (9 ft 10¼ in)
Wheelbase	4.15 m (13 ft 7½ in)

WEIGHTS AND LOADINGS:

Weight empty	7,675 kg (16,920 lb)
Max payload	1,800 kg (3,968 lb)
Max internal fuel	1,170 kg (2,580 lb)
Max T-O weight	11,900 kg (26,235 lb)



Mil Mi-40 twin-turboshaft infantry combat helicopter *(Jane's/Mike Keep)*

1994

PERFORMANCE (estimated):

Max level speed	167 kts (310 km/h; 192 mph)
Nominal cruising speed	140 kts (260 km/h, 161 mph)
Service ceiling	5,550 m (18,200 ft)
Hovering ceiling OGE	3,300 m (10,825 ft)
Max range, 5% reserves	215 n miles (400 km; 248 miles)

VERIFIED

MIL Mi-46T

TYPE: Twin-turboshaft passenger/freight transport helicopter

PROGRAMME: Project announced Summer 1992, not yet flown, planned IOC 2000

DESIGN FEATURES: Replacement for Mi-6, with T-O weight just over half that of Mi-26. General configuration similar to Mi-26: seven-blade main rotor; five-blade tail rotor; non-retractable tricycle landing gear with twin wheels on each unit; few windows in hold; rear-loading ramp and doors, engines above hold, forward of main rotor driveshaft

POWER PLANT: Two new-type Aviadvigatel turboshafts, each 5,590 kW (7,495 shp)

ACCOMMODATION: Equipped normally to carry freight

DIMENSIONS, EXTERNAL:

Main rotor diameter	27.6 m (90 ft 6¾ in)
Length overall, excl rotors	26.3 m (86 ft 3½ in)
Wheel track	5.00 m (16 ft 5 in)

WEIGHTS AND LOADINGS:

Weight empty	16,200 kg (35,715 lb)
Max payload	12,000 kg (26,455 lb)
Max T-O weight	30,000 kg (66,137 lb)

PERFORMANCE (estimated):

Nominal cruising speed	145 kts (270 km/h, 168 mph)
Hovering ceiling OGE	2,300 m (7,550 ft)
Normal range with 10,000 kg (22,045 lb) payload	215 n miles (400 km; 248 miles)

1994

MIL Mi-46K

TYPE: Twin-turboshaft flying crane helicopter

PROGRAMME: Project revealed Summer 1992, no subsequent [illegible]

DESIGN FEATURES: Replacement for Mi-10K, of typical large flying crane configuration, utilising fuselage nose, flight deck, power plant and dynamic components of Mi-46T, flat bottomed, shallow centre and rear fuselage, with short stub-wings and long tripod-braced mainwheel units, glazed gondola for second pilot, facing rearward behind front fuselage pod, to control helicopter during loading and unloading. Sling cable directly under main rotor driveshaft for payload.

POWER PLANT: Two unspecified 5,965 kW (8,000 shp) turboshafts

WEIGHTS AND LOADINGS:

Weight empty	19,700 kg (43,430 lb)
Max T-O weight	36,500 kg (80,467 lb)

PERFORMANCE (estimated):

Hovering ceiling at max T-O weight	2,300 m (7,545 ft)
Range with 11,000 kg (24,250 lb) payload at max T-O weight, 30 min reserves	215 n miles (400 km, 248 miles)

UPDATED

MIL Mi-52

TYPE: Three-seat light helicopter

PROGRAMME: Announced, and model displayed, at 1993 Paris Air Show, first flight scheduled 1994 but delayed, production at small plant in Moscow, adjoining OKB, from 1996-97

DESIGN FEATURES: Smallest helicopter yet developed by Mil, configuration shown in accompanying photograph of model. Four-blade main rotor, two-blade tail rotor

LANDING GEAR: Non-retractable tricycle type; single wheel on each unit; cantilever spring legs, fairing over each wheel

POWER PLANT: One rotary (Wankel type) engine, probably related to VAZ-430 in Mi-34 VAZ

ACCOMMODATION: Enclosed cabin for pilot, in front, and two passengers on rear bench seat, two doors on each side

DIMENSIONS, EXTERNAL:

Main rotor diameter	10.00 m (32 ft 9¾ in)
Length overall, excl rotors	8.71 m (28 ft 7 in)
Wheel track	2.00 m (6 ft 6¾ in)

WEIGHTS AND LOADINGS:

Max payload	250 kg (551 lb)
Max T-O weight	1,150 kg (2,535 lb)

PERFORMANCE (estimated):

Nominal cruising speed	86-91 kts (160-170 km/h, 100-105 mph)
Hovering ceiling OGE	1,600 m (5,250 ft)
Range with standard fuel	215 n miles (400 km, 248 miles)

UPDATED

MIL Mi-54

TYPE: Twin-turbine commercial utility helicopter

PROGRAMME: Project announced Summer 1992, at preliminary design stage by 1993, to replace Mi-2 and Mi-8, model displayed at MosAeroshow '92, single-engined version for Asian market also being studied, IOC planned 1998.

DESIGN FEATURES: Configuration shown in accompanying illustrations; four-blade composites main and tail rotors, high excess power will permit operation as Cat. A helicopter from sites of limited size, intended for passenger/cargo, oil rig support, ambulance and executive duties

LANDING GEAR: Non-retractable tricycle type; single wheel on each main unit, carried on short sponsons, twin nosewheels, tailskid

POWER PLANT: Two Saturn/Lyulka AL-32 turboshafts, each 574 kW (770 shp), mounted side by side above cabin

ACCOMMODATION: Normal seating for 10 to 12 passengers

DIMENSIONS, EXTERNAL:

Main rotor diameter	13.50 m (44 ft 3½ in)
Tail rotor diameter	2.60 m (8 ft 6½ in)
Length overall, excl rotors	13.20 m (43 ft 3¾ in)
Height to top of rotor head	3.55 m (11 ft 7¾ in)
Wheel track	3.00 m (9 ft 10¼ in)
Wheelbase	3.90 m (12 ft 9½ in)

WEIGHTS AND LOADINGS:

Payload	1,000-1,300 kg (2,205-2,865 lb)
Max T-O weight	4,000 kg (8,820 lb)

PERFORMANCE (estimated):

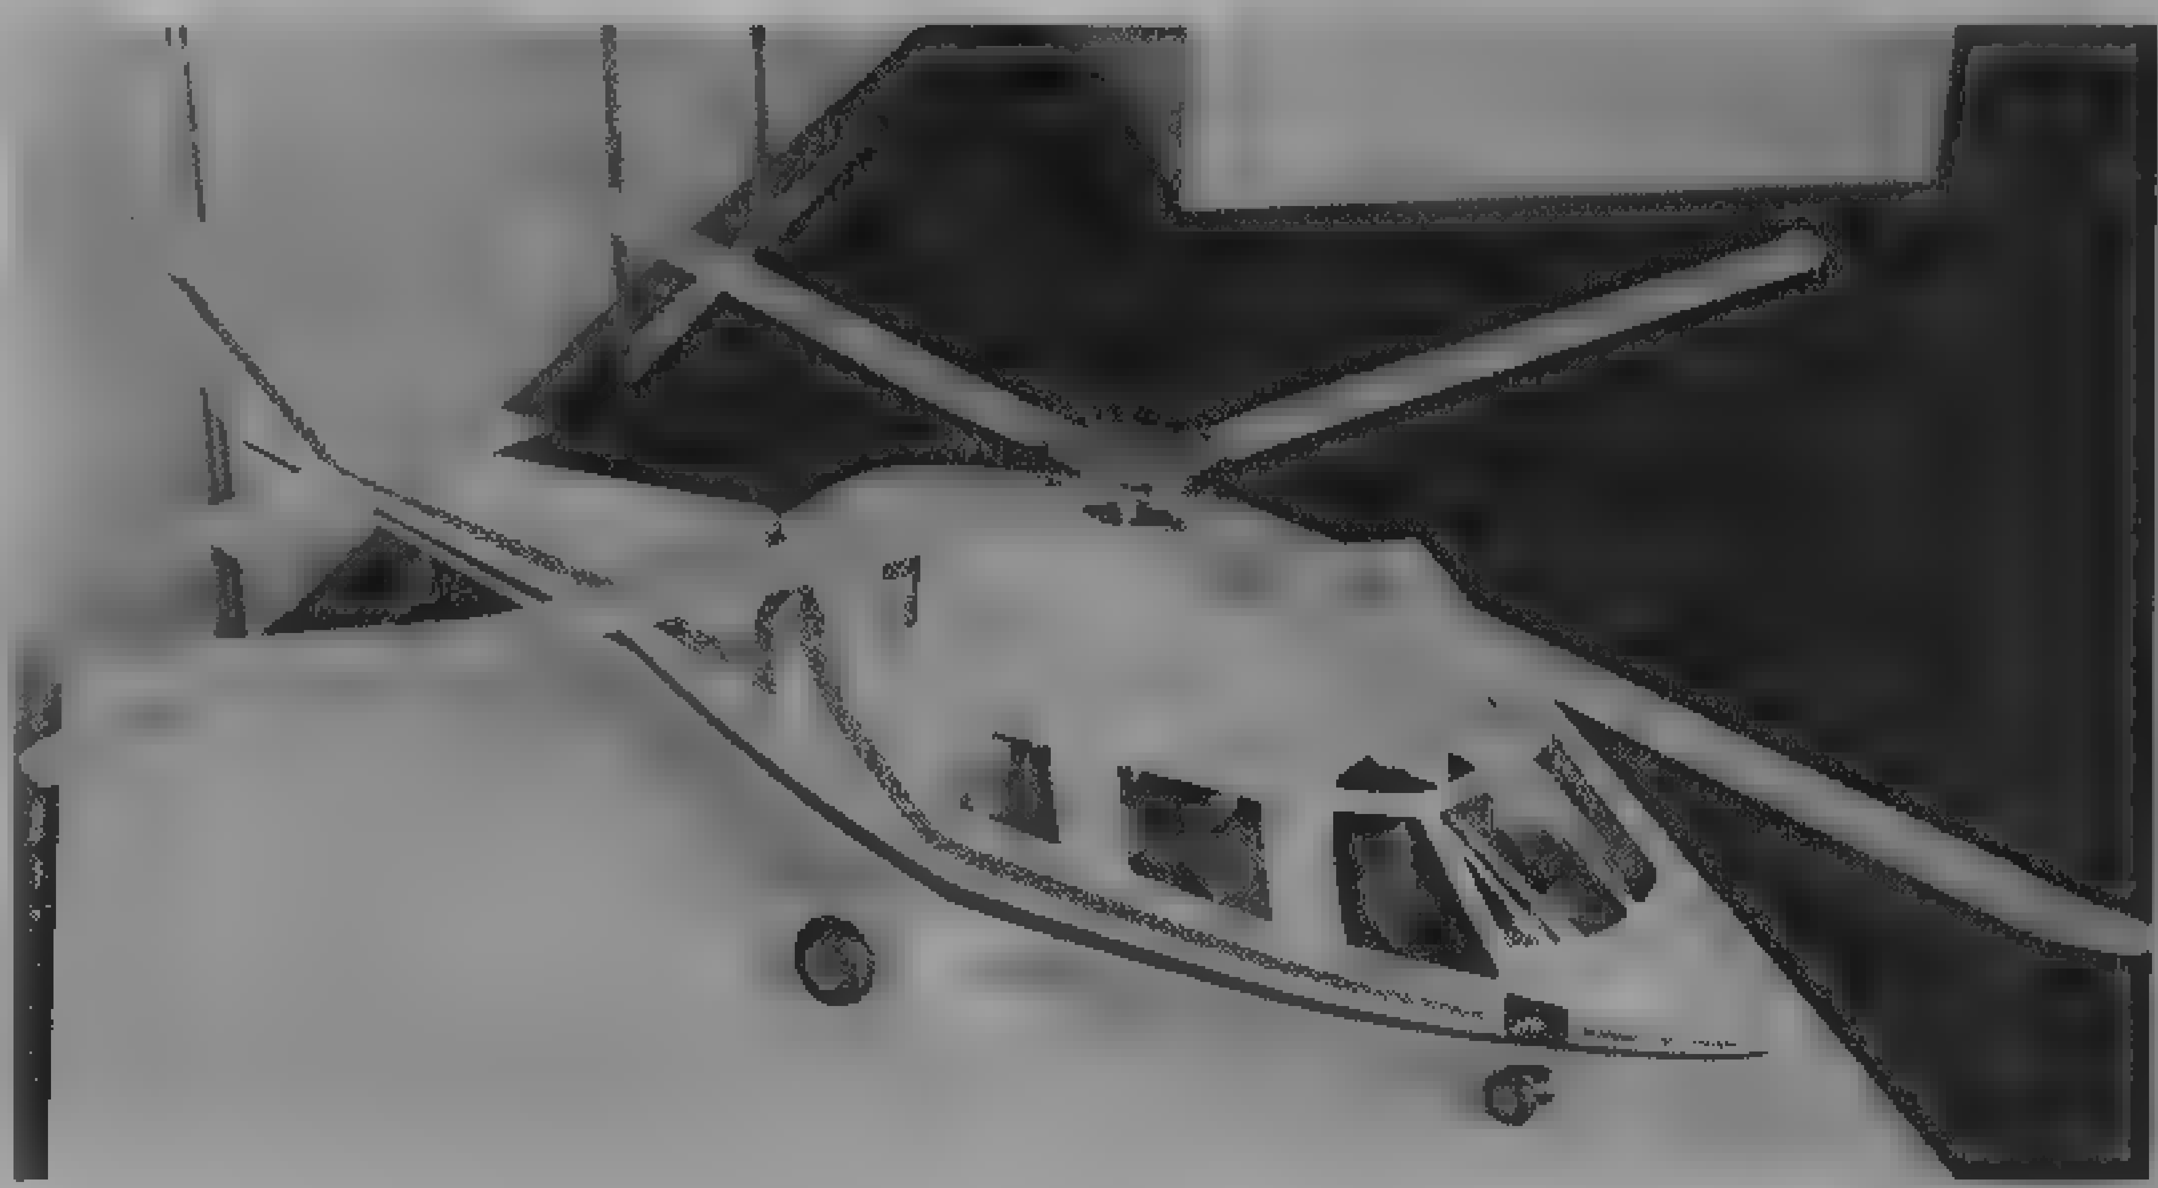
Max level speed	151 kts (280 km/h, 174 mph)
Nominal cruising speed	140 kts (260 km/h, 161 mph)
Hovering ceiling OGE	2,000 m (6,560 ft)
Range, 30 min reserves: with max internal fuel	431 n miles (800 km, 497 miles)
with 1,200 kg (2,645 lb) payload	242 n miles (450 km, 280 miles)

VERIFIED

MIL Mi-58

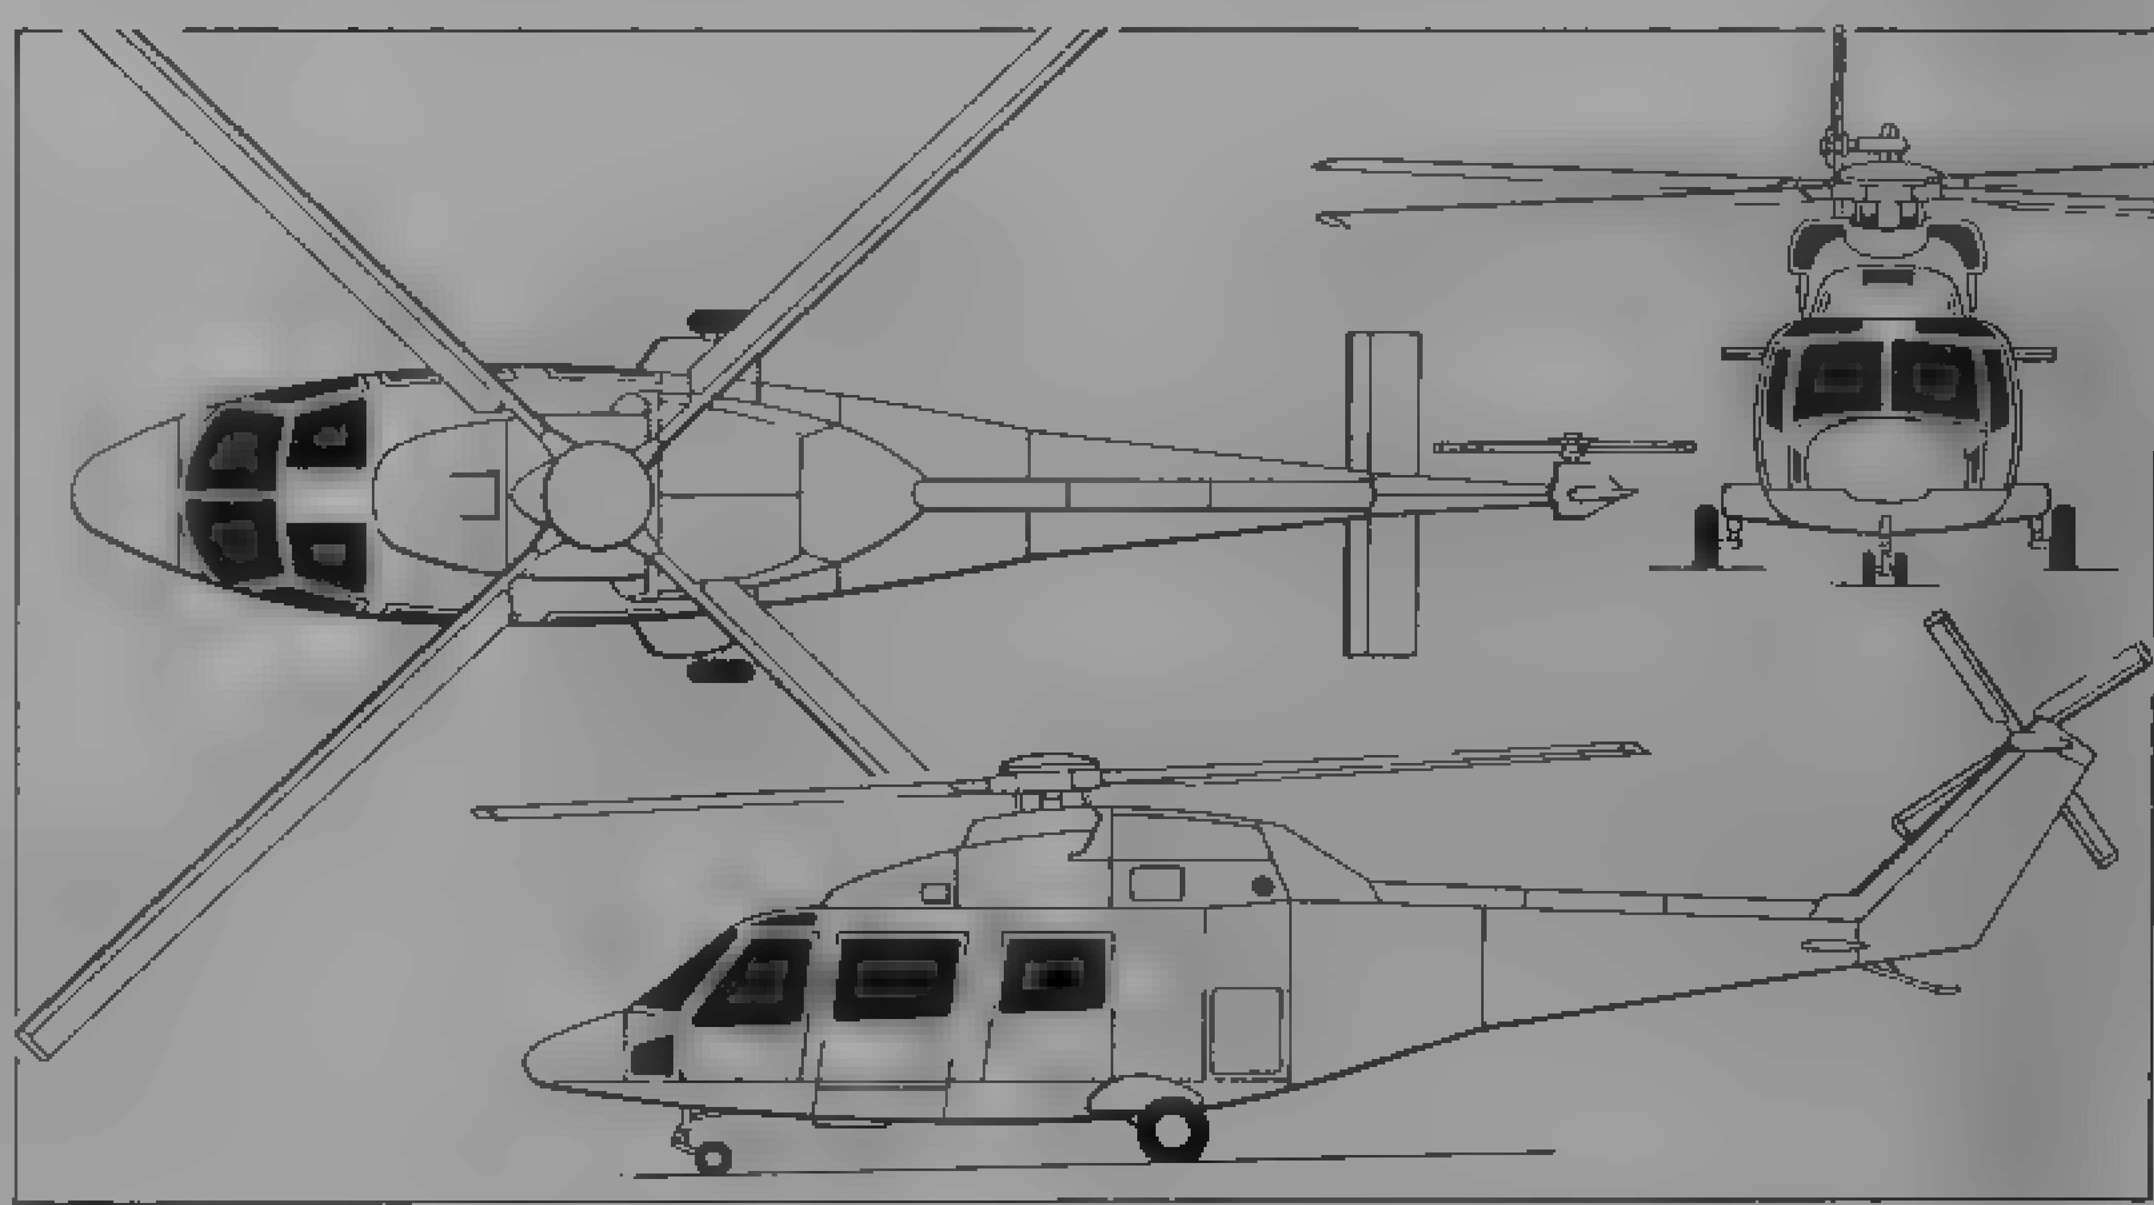
TYPE: Twin-turbine passenger-carrying helicopter

PROGRAMME: Announced 1995 Paris Air Show, planned certification to Russian and FAR Pt 29 requirements, deliveries possible 1998



Model of Mil Mi-54 displayed at MosAeroshow '92 *(Mark Lambert)*

1993



Mil Mi-54 twin-turbine commercial utility helicopter *(Jane's/Mike Keep)*

1993

DESIGN FEATURES: Conventional pod and boom configuration; five-blade main rotor, two independent 'scissors' type tail rotors and dynamic system similar to those of Mi-28.

LANDING GEAR: Non-retractable tricycle type; single wheel on each main unit carried on long sponson on each side of fuselage; twin nosewheels.

POWER PLANT: Two Klimov TV3-117VMA-SB3 turboshafts, each with contingency rating of 2,088 kW (2,762 shp).

ACCOMMODATION: Basic version for 20 passengers, with four rearward-facing seats at front of cabin, 12 seats three abreast with aisle, and four seats at rear. Door on each side of flight deck, main cabin door at front on port side, emergency exit each side over sponson. VIP version projected. No other data yet available.

MOLNIYA

MOLNIYA SCIENTIFIC AND INDUSTRIAL ENTERPRISE

Novoposelkovaya 4, 123459 Moscow
Telephone: 7 (095) 493 33 35, 493 50 93
Fax: 7 (095) 492 93 71
GENERAL DIRECTOR: Alexander Bashilov
GENERAL DESIGNER: Gleb Lozino-Lozinsky

To compensate for reduced funding for Buran space shuttle orbiter programme, in which it was much involved, Molniya has projected a series of civil aircraft. First to fly was six-seat Molniya-1. Others, at various design stages, include Molniya-100, a 15-seat twin-engined airliner; Molniya-300 twin-engined business jet; Molniya-400 twin-engined cargo jet, and six-engined Heracles freighter, which would be world's heaviest aeroplane. Molniya suggests that manufacture of the -300, -400 and Heracles could begin in five to eight years given adequate funding.

UPDATED

MOLNIYA-1

TYPE: Single-engined six-seat light aircraft.

PROGRAMME: Announced at MosAeroshow '92. Prototype (01200.) flew 18 December 1992; initial production series of 20 has been built, certification under way 1995.

DESIGN FEATURES: Low-wing configuration, with three lifting surfaces in tandem, foreplanes mid-mounted on nose, wings at rear of fuselage pod, carrying twin tailbooms with tailplane bridging tips of sweptback vertical tail surfaces; non-retractable tricycle landing gear, with single wheel and low-pressure tyre on each unit, fairing over each wheel, skis optional, engine mounted at rear of fuselage pod. Folding wings optional to permit driving on roads and transportation in container hangar. 'Tandem triplane' configuration prevents spin at high angles of attack. Operation practicable from unpaved 500 m (1,640 ft) fields with bearing strength of 4.5 kg/cm² (64 lb/sq in). Designed to permit flying by pilot of average ability after 8 to 16 hours' instruction.

POWER PLANT: One 265 kW (355 hp) VOKBM M-14PM-1 air-cooled radial piston engine, driving three-blade pusher propeller; or Teledyne Continental TSIOL-550-B horizontally opposed engine. Initially unsupercharged but supercharged later. Allison 250-B17F turboprop also being considered.

ACCOMMODATION: Six persons in pairs, seats quickly removable for freight carrying. Alternative configurations include business version with forward-facing seat beside pilot, two armchairs, table, safe, com equipment and small buffet, ambulance for stretcher patient, two attendants and medical equipment, training version with dual controls. Air conditioning optional.

AVIONICS: *Comms:* Radio standard.
Flight: Navaids standard. Autopilot and satellite nav optional.
Instrumentation: Digital instruments optional.
Mission: Fax optional.

DIMENSIONS, EXTERNAL:

Wing span	8.50 m (27 ft 10¾ in)
Length overall	7.86 m (25 ft 9½ in)
Height overall	2.30 m (7 ft 6½ in)
Width, wings removed or folded	3.60 m (11 ft 9¾ in)
Wheel track	3.02 m (9 ft 11 in)
Wheelbase	3.34 m (10 ft 11½ in)

WEIGHTS AND LOADINGS:

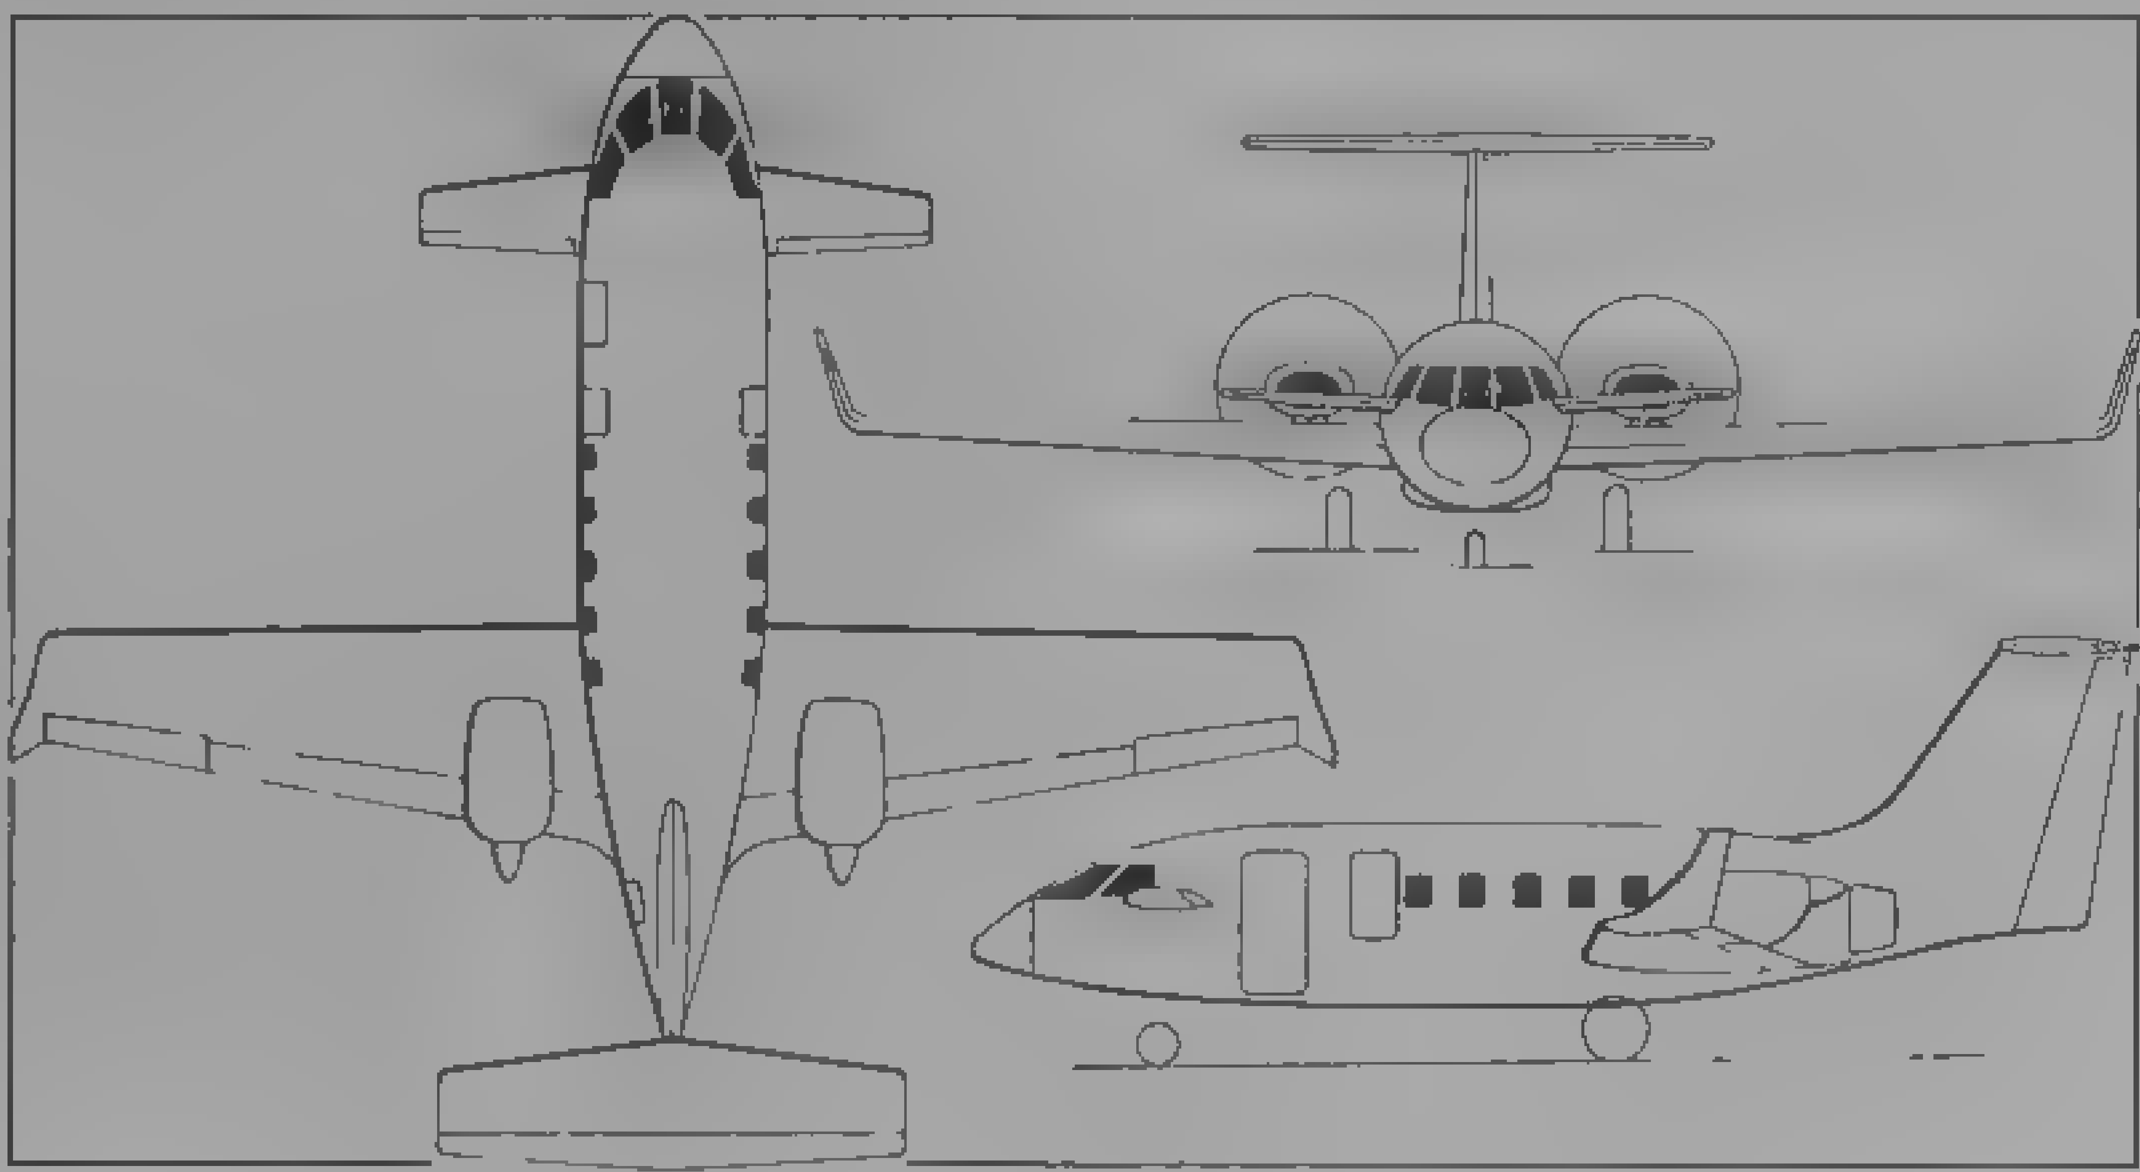
Max payload	505 kg (1,115 lb)
Max fuel	220 kg (485 lb)
Max T-O weight	1,740 kg (3,835 lb)

PERFORMANCE (estimated, with supercharged M-14PM or Continental engine):

Max level speed	216 kts (400 km/h, 248 mph)
Nominal cruising speed	135-172 kts (250-320 km/h, 155-198 mph)
Landing speed	68 kts (125 km/h, 78 mph)
T-O run	350 m (1,150 ft)
* Range: with max payload at 145 kts (270 km/h, 168 mph)	270 n miles (500 km, 310 miles)
with max fuel	648 n miles (1,200 km, 745 miles)

* *Ranges with unsupercharged engine at 195-247 kts (225-285 km/h, 140-177 mph) at 1,500 m (4,920 ft) are close to those listed*

UPDATED



Molniya-100 twin-engined multipurpose light transport *(Jane's/Mike Keep)* *1994*

MOLNIYA-100

TYPE: Twin-engined multipurpose light transport.

PROGRAMME: Design study completed.

DESIGN FEATURES: Unconventional 'tandem triplane' with three unswept lifting surfaces: foreplanes mid-set on nose, main wings mid mounted at rear of fuselage, with winglets, T tailplane at tip of sweptback vertical tail surfaces; circular section wide-body fuselage, engines mounted on upper surface of main wings, driving three-blade pusher propellers.

LANDING GEAR: Retractable tricycle type; single wheel on each unit, nosewheel retracts forward.

POWER PLANT: Two 324 kW (435 hp) Teledyne Continental GTSIO-520-K flat-six engines, version with Allison 250 turboprops being studied.

ACCOMMODATION: Two crew side by side; basic version has 15 seats in cabin three-abreast, with twin seats on starboard side of aisle. Crew wardrobe, compartment for hand baggage and passenger wardrobe, and toilet at front of cabin; door at front of cabin on port side, emergency exit each side forward of front row of seats, baggage compartment in tailcone with door on port side. Business version for up to eight passengers in two-section cabin with table, safe, divan and sideboard. Ambulance configuration for four litter patients, two medical personnel and medical equipment. All seating and furnishings quickly removable for freight transport, cargo moored by nets to floor fittings.

Molniya-1 (VOKBM M-14PM-1 engine) at Samara *1995*

AVIONICS: *Comms:* Nav/com radio for VFR and IFR operations.
Flight: GPS optional.
Instrumentation: Conventional flight instruments.

DIMENSIONS, EXTERNAL:

Wing span	14.30 m (46 ft 11 in)
Length overall	12.48 m (40 ft 11½ in)
Height overall	4.50 m (14 ft 9¼ in)
Cargo door: Max height	1.35 m (4 ft 5 in)
Width	1.20 m (3 ft 11¼ in)

WEIGHTS AND LOADINGS:

Max payload	1,500 kg (3,307 lb)
Max fuel	950 kg (2,095 lb)
Max T-O weight	4,300 kg (9,480 lb)

PERFORMANCE (estimated):

Max level speed	216 kts (400 km/h, 248 mph)
Nominal cruising speed at 3,000 m (9,840 ft)	175-205 kts (325-380 km/h, 202-236 mph)
Landing speed	70 kts (130 km/h, 81 mph)
T-O run	430 m (1,410 ft)
Landing run	350 m (1,150 ft)
Range: with max payload	323 n miles (600 km, 372 miles)
with max fuel	1,080 n miles (2,000 km, 1,242 miles)

UPDATED

MOLNIYA 300

TYPE: Twin turbofan business aircraft.

PROGRAMME: Design study completed, production could begin in six years after allocation of adequate funding.

DESIGN FEATURES: 'Tandem triplane' with three lifting surfaces, all surfaces swept back, T tailplane, engines pod mounted on rear fuselage.

LANDING GEAR: Retractable tricycle type; single wheel on each unit.

POWER PLANT: Two turbofans, each 12.0 kN (2,690 lb st).

ACCOMMODATION: Two crew side by side; six passengers in executive configuration, 15 in economy class (three-abreast).

AVIONICS: State-of-the-art avionics for IFR and ICAO Cat II operations.

DIMENSIONS, EXTERNAL:

Wing span	13.44 m (44 ft 1¼ in)
Length overall	13.20 m (43 ft 3¾ in)
Height overall	4.40 m (14 ft 5¼ in)

WEIGHTS AND LOADINGS:

Max payload	1,350 kg (2,976 lb)
Max fuel	2,100 kg (4,630 lb)
Max T-O weight	6,800 kg (14,991 lb)

PERFORMANCE (estimated):

Max level speed	502 kts (930 km/h, 578 mph)
Nominal cruising speed at 3,000 m (9,840 ft)	432 kts (800 km/h, 497 mph)
T-O run	630 m (2,067 ft)
Landing run	460 m (1,510 ft)
Range: with 15 passengers	1,565 n miles (2,900 km, 1,801 miles)
with max fuel	2,753 n miles (5,100 km, 3,169 miles)

NEW ENTRY

MOLNIYA-400

TYPE: Twin-turbofan freight transport.

PROGRAMME: Feasibility study completed; preliminary design under way 1995, production could begin six years after allocation of adequate funding. Combined passenger/cargo version being considered.

DESIGN FEATURES: 'Tandem triplane' with three lifting surfaces, all surfaces swept back; foreplanes with winglets low-mounted on nose; wings with winglets shoulder-mounted on fuselage; tailplane mid-mounted on fin; engines pylon-mounted underwing.

LANDING GEAR: Retractable tricycle type; twin nosewheels; each main unit comprises three pairs of wheels in tandem.

POWER PLANT: Two Aviadvigatel PS-90A turbofans, each 156.9 kN (35,275 lb st).

ACCOMMODATION: Unrestricted cargo hold, with rear-loading ramp/door.

AVIONICS: State-of-the-art avionics for IFR and ICAO Cat II operations.

DIMENSIONS, EXTERNAL:

Wing span	42.7 m (140 ft 0 in)
Length overall	41.5 m (136 ft 3 in)
Height overall	15.56 m (51 ft 0¾ in)

WEIGHTS AND LOADINGS:
Max payload: Normal 30,000 kg (66,135 lb)
Overload 50,000 kg (110,230 lb)
Max fuel 48,500 kg (106,920 lb)
Max T-O weight: Normal 109,800 kg (242,065 lb)
Overload (load factor limit 2.25) 121,100 kg (266,975 lb)

PERFORMANCE (estimated):
Max level speed 502 kts (930 km/h; 578 mph)
Nominal cruising speed 410-432 kts (760-800 km/h; 472-497 mph)
T-O run: Normal T-O weight 1,230 m (4,035 ft)
Balanced runway length: Overload 2,600 m (8,530 ft)
Range with max payload: Normal T-O weight 2,699 n miles (5,000 km; 3,106 miles)
Overload 1,619 n miles (3,000 km; 1,864 miles)
Range with max fuel:
Normal 6,047 n miles (11,200 km; 6,959 miles)

NEW ENTRY

MOLNIYA-1000 HERACLES

TYPE: Six turbojet super-heavy airlifter.

PROGRAMME: Designed to follow VM-T Atlant and An-225 Mriya; feasibility studies under way 1994, production could begin eight years after allocation of funding.

DESIGN FEATURES: 'Tandem triplane' with three lifting surfaces; twin slender fuselages, each with small cabin in nose; foreplane on pylons above cabins, high wings with inverted-V centre-section, tailplane bridges tips of twin swept fins. Payload suspended from centre-section.

LANDING GEAR: Retractable quadricycle type; twin-wheel nose unit under each cabin; 20-wheel main gear, comprising five rows of four wheels, under each mid-fuselage.

POWER PLANT: Six Samara bypass turbojets, pod-mounted on underwing pylons; alternative General Electric CF6-90VH or Pratt & Whitney PW4084 turbofans.

DIMENSIONS, EXTERNAL:
Wing span 90.40 m (295 ft 3½ in)
Length overall 73.40 m (240 ft 9¾ in)
Height overall 17.50 m (57 ft 5 in)

WEIGHTS AND LOADINGS:
Max payload 450,000 kg (992,065 lb)
Max fuel 358,000 kg (789,250 lb)
Max T-O weight 900,000 kg (1,984,125 lb)

PERFORMANCE (estimated):
Nominal cruising speed 454 kts (840 km/h; 522 mph)
T-O run 2,370 m (7,775 ft)
Range: with max payload 1,242-1,674 n miles (2,300-3,100 km; 1,429-1,925 miles)
with max fuel and 240,000 kg (529,100 lb) payload 4,212-5,562 n miles (7,800-10,300 km; 4,845-6,400 miles)

UPDATED

MYASISHCHEV

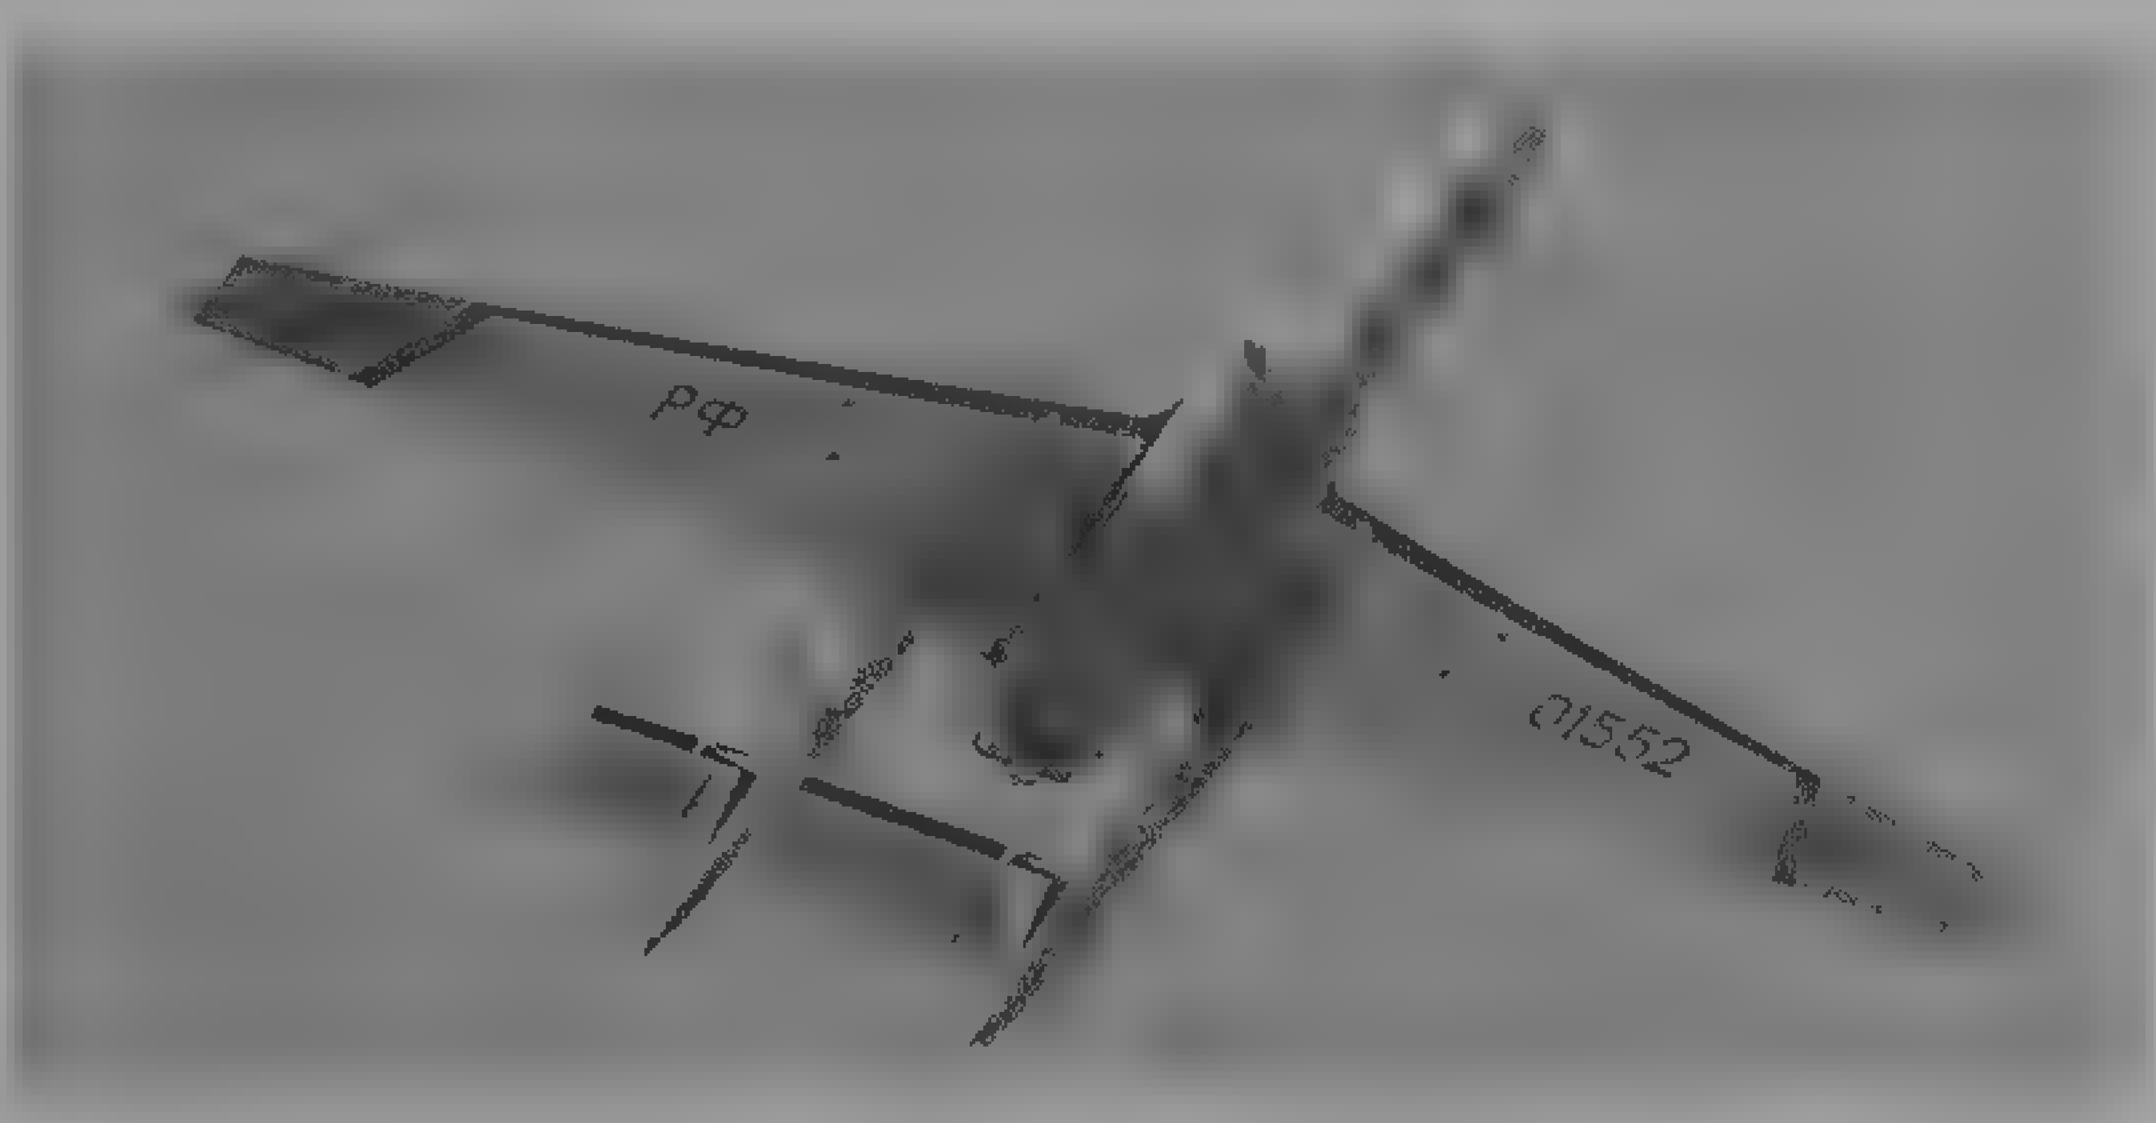
MYASISHCHEV DESIGN BUREAU

140160 Zhukovsky, Moscow Region
Telephone: 7 (095) 272 60 41
Fax: 7 (095) 556 55 83

GENERAL DESIGNER: Valery K. Novikov

CHIEF DESIGNERS:
Alexander Brook
Leonid Sokolov

The Myasishchev OKB was founded in 1951, under the leadership of Prof Vladimir Mikhailovich Myasishchev, who died on 14 October 1978. In the 1950s it developed and built the M-4 and 3M (NATO 'Bison') subsonic strategic bombers and M-50 ('Bounder') supersonic strategic missile carrier. In the 1970s and 1980s the bureau was engaged in development of multi-purpose subsonic high-altitude aircraft, and in modifying two 3M bombers into VM-T Atlant aircraft to transport sections of the Energia rocket launch vehicle and airframe of the Buran space shuttle orbiter. In 1981 the design bureau was named after Prof Myasishchev.



Prototype Myasishchev M-55 ('Mystic-B') high-altitude research aircraft *(David Stephens)*
1995

MYASISHCHEV VM-T ATLANT

TYPE: Special purpose heavy-lift transport.

PROGRAMME: Development began 1977, two Atlants built, first flight 29 April 1981; more than 200 missions flown to transport outsize cargoes from manufacturing plants to Baikonur cosmodrome.

DESIGN FEATURES: Conversion of Myasishchev 3M (NATO 'Bison-C') heavy bomber to transport sections of Energia rocket launch vehicle and airframe of Buran space shuttle orbiter on overfuselage mounts. Fuselage and wing structure considerably strengthened, new tail unit with toed-in rectangular fins and rudders at tips of dihedral tailplane; control system and equipment updated.

POWER PLANT: Four RKBM/Kolesov VD-7MD turbojets, each 105.4 kN (23,700 lb st).

ACCOMMODATION: Unique capability of transporting above fuselage cargoes of four types, with maximum weight 50,000 kg (110,230 lb) and maximum diameter 8.00 m (26 ft 3 in).

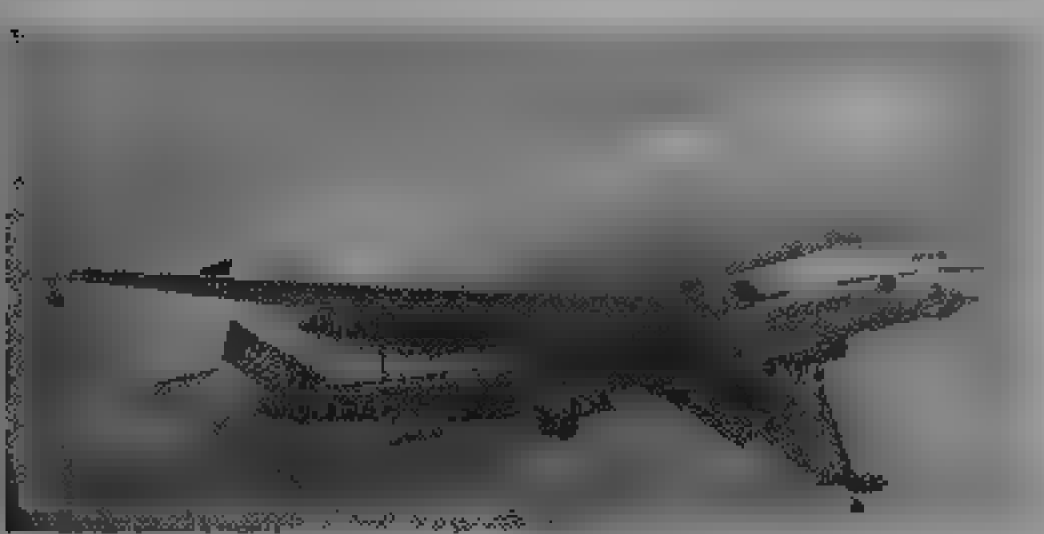
DIMENSIONS, EXTERNAL:
Wing span 53.16 m (174 ft 5 in)
Length overall 51.20 m (167 ft 11¾ in)
Height overall 10.60 m (34 ft 9½ in)
Wheel track (wingtip units) 52.34 m (171 ft 8¾ in)

AREAS:
Wings, gross 351.78 m² (3,786.7 sq ft)

WEIGHTS AND LOADINGS:
Max T-O weight 138,000 kg (304,233 lb)
Max wing loading 392.3 kg/m² (80.34 lb/sq ft)
Max power loading 327.32 kg/kN (3.21 lb/lb st)

PERFORMANCE:
Max cruising speed at 6,000-8,000 m (19,700-26,250 ft) 270-323 kts (500-600 km/h; 310-372 mph)
Balanced runway length 3,500 m (11,500 ft)
Range with max payload 810 n miles (1,500 km; 932 miles)

VERIFIED



Outsize loads transported by VM-T Atlant include sections of Energia launch rocket
1994

MYASISHCHEV M-17 and M-55

NATO reporting name: Mystic

TYPE: Single-seat high-altitude reconnaissance and research aircraft.

PROGRAMME: Development began mid-1970s, intended originally as high-altitude aircraft, with dorsal gun turret, to shoot down unmanned stratospheric balloons flown by USA over USSR for surveillance/sigint/elint purposes, with satellite data relay; this role lapsed when US use of balloons ended.

M-17 Chaika (Seagull) prototype (SSSR-17100) crashed on first flight, December 1978, second airframe for static tests, second prototype (SSSR-17103) flown 26 May 1982, differed substantially in exterior appearance; observed at Ramenskoye flight test centre 1982, given provisional US designation 'Ram-M'; later designated 'Mystic-A'; total three flying prototypes, plus two M-17RM (Razvedchik Modifitsirovannyi: modified reconnaissance) (M-55, 'Mystic-B') prototypes and two preproduction 'Bs', completed by early 1992, M-17RM intended for target location as counterpart of USAF's PLSS-equipped U-2R but later publicised as civilian research aircraft. Production continues.

CURRENT VERSIONS: **M-17** ('Mystic-A'): Three aircraft, each with single RKBM Rybinsk RD-36-51V turbojet, rated at 117.7 kN (26,459 lb st) in non-afterburning form (68.6 kN, 15,430 lb st quoted to FAA after record flights). Two class C1i altitude records of 21,830 m (71,620 ft), set 28 March 1990, unbeaten in 1995. Third flying prototype (SSSR 17401) reallocated to scientific research following trials for M-55 version, named Stratosfera (Stratosphere) December 1989 at start of programme. SSSR 17103 in outdoor display of historic aircraft, Monino since 1989.

M-55/R-17M Geophysica ('Mystic-B'): First flown 16 August 1988 (SSSR 01552, later RF-01552). Basically as M-17, but with two Aviadvigatel D-30-V12 engines (V10s in first two aircraft), each 93.2 kN (20,952 lb st), side by side at rear of fuselage pod; lengthened and more capacious nose, raised cockpit, small underfuselage radome forward of nosewheels. Able to loiter for 4 hours 12 minutes at 20,000 m (65,600 ft) with 1,500 kg (3,305 lb) of sensors, or 5 hours at 17,000 m (55,775 ft); following completion of military trials, 01552 adopted Aeroflot insignia and said to be for environmental research, named Geophysica (Geophysics). Smaller wing span than 'Mystic-A'. Civilian payloads may include SLAR, A-84 optical camera, 'Argos' optical scanner, IR linescan and 'Radius' scanning radiometer. Fifteen international class C1j records set September/October 1993, including height of 21,360 m (70,078 ft) with 2,000 kg payload, unbeaten in 1995. Second M-55 prototype (SSSR-23570) scrapped by 1993, third and fourth are RF-55203 and 55204; Western debut by 55204 in November 1993, within scope of joint Russian/Italian scientific programme of Arctic and Antarctic atmospheric research.

Approximately 12 being built at Smolensk for Russian Air Force, including one or two **M-55U** tandem-seat trainers and, possibly, examples of Geophysica-2.

M-55 Geophysica-2. Described separately.

DESIGN FEATURES: High-aspect ratio high-wing configuration, with central fuselage pod and twin tailbooms with bridging T tailplane, side air ducts for engine(s), mounted at rear of fuselage pod, 2° 30' constant wing anhedral from roots, long and shallow ventral strake under port tailboom, assumed to have similar powered sailplane performance to US Lockheed U-2 series, large compartment in lower fuselage for cameras and other sensors.

FLYING CONTROLS: Aileron, with tab, and three-section deceleration flaps over most of each wing trailing-edge; elevators and twin rudders, with tabs.

LANDING GEAR: Retractable tricycle type, twin wheels on each unit, all units retract rearward, mainwheels into tailbooms. Mainwheel tyre size 660 × 200 mm; nosewheel 520 × 125 mm.

POWER PLANT: See Current Versions. Fuel capacity 10,000 litres (2,640 US gallons, 2,200 Imp gallons) in M-17 and M-55.

ACCOMMODATION: Single seat under rearward-hinged canopy. Severin/Zvezda K-36L ejection seat in both versions.

AVIONICS ('Mystic-A'): *Comms:* R-863 and R-864 radios, 'Parol' IFF.
Flight: 'Korall' short-range nav/ILS.
Mission: PrNK-17 detection and aiming system (including two electro-optical location-finders and rangefinder).

DIMENSIONS, EXTERNAL (A: 'Mystic-A', B: 'Mystic-B'):
Wing span: A 40.32 m (132 ft 3¾ in)
B 37.464 m (122 ft 11 in)

T-O speed at normal AUW:
A, B 95 kts (175 km/h; 109 mph)
Landing speed: A at 16,300 kg (35,935 lb) weight
102 kts (188 km/h; 117 mph)
B at 23,400 kg (51,587 lb) weight
102 kts (188 km/h; 117 mph)

Service ceiling: A	21,550 m (70,705 ft)
B	20,000 m (65,600 ft)
T-O run: A	340 m (1,116 ft)
B	900 m (2,953 ft)
Landing from 15 m (50 ft): B	1,750 m (5,745 ft)
Landing run: A	875 m (2,871 ft)
B	780 m (2,559 ft)

Range:
A (5% reserves) 710 n miles (1,315 km; 817 miles)
B 2,680 n miles (4,965 km; 3,085 miles)
Max endurance at 17,000 m (55,775 ft): A 2 h 14 min
B, without payload 6 h 30 min

UPDATED

MYASISHCHEV M-55 GEOPHYSICA-2

TYPE: Two-seat high-altitude research aircraft.

PROGRAMME: Under development; available for service in 1997.

DESIGN FEATURES: Development of M-55 Geophysica with second crew member as researcher and observer. Fuselage extended 1.50 m (4 ft 11 in) by insertion of plug behind cockpit, extending wheelbase and increasing space for experimental equipment from 9.0 m³ (318 cu ft) (including tailbooms) to 11.3 m³ (399 cu ft); provision for underwing pods, each with 1.5 m³ (53 cu ft) available for measuring equipment. Winglets on increased-span wings; increased fuel volume and maximum T-O weight, endurance extended by 25 per cent.

DIMENSIONS, EXTERNAL:

Wing span	40.00 m (131 ft 2¾ in)
Length overall, excl probes	23.77 m (78 ft 0 in)

WEIGHTS AND LOADINGS:

Max fuel weight	10,100 kg (22,266 lb)
Payload	3,000 kg (6,614 lb)
Max T-O weight	27,000 kg (59,525 lb)

PERFORMANCE:

Max endurance at 19,000-20,000 m (62,325-65,620 ft)
6 h 30 min

NEW ENTRY

MYASISHCHEV M-101 GZHEL

TYPE: Multipurpose eight-seat turboprop light aircraft.

PROGRAMME: First shown in model form at Moscow Aeroshow '90 exhibition; developed full-scale mockup exhibited at MosAeroshow '92 with piston engine and at MosAeroshow '93 with turboprop, latter version in production at Sokol plant, Nizhny Novgorod; prototype (RA-15001) first flew 31 March 1995.

DESIGN FEATURES: Conventional all-metal low-wing monoplane; sweptback vertical tail surfaces. Designed in accordance with Russian AR 23 and US FAR 23 airworthiness requirements.

LANDING GEAR: Retractable tricycle type; single wheel on each unit, nosewheel retracts rearward, mainwheels inward into wingroots and fuselage; levered suspension legs; designed to use unpaved runways.

POWER PLANT: One 580 kW (778 shp) Motorlet M 601F turboprop, driving AV-510 five-blade propeller. Version with P&WC PT6A turboprop envisaged.

ACCOMMODATION: One or two pilots and six or seven passengers, in pairs in pressurised cabin; door to flight deck on port side; large double door for passengers and freight loading aft of wing on port side, emergency exit on starboard side above wing; provision for rapid change to cargo/passenger, freight or ambulance configuration.

DIMENSIONS, EXTERNAL:

Wing span	13.00 m (42 ft 8 in)
Length overall	9.90 m (32 ft 5¾ in)
Height overall	3.72 m (12 ft 2½ in)
Tailplane span	4.32 m (14 ft 2 in)
Propeller diameter	2.30 m (7 ft 6½ in)

WEIGHTS AND LOADINGS:

Max payload	630 kg (1,390 lb)
Max T-O weight	3,000 kg (6,615 lb)

PERFORMANCE (estimated):

Max cruising speed	270 kts (500 km/h; 310 mph)
Min flying speed	61 kts (113 km/h; 71 mph)
Service ceiling	7,600 m (24,935 ft)
Unpaved runway required	500-600 m (1,640-1,970 ft)

Range with max fuel
1,620 n miles (3,000 km; 1,865 miles)

UPDATED

MYASISHCHEV M-112

TYPE: Twin-turboprop light multimission transport.

PROGRAMME: Designed to FAR (JAR) Pt 25 requirements; first shown in model form at ILA-94, Berlin; two prototypes being manufactured at Smolensk, certification initially by Russian Aviaregister, followed by FAA and CAA.

DESIGN FEATURES: Conventional unswept high-wing monoplane for operation from short and unprepared airfields, with complete independence from ground equipment. Wings built in three sections, with advanced wing section for optimum lift/drag ratio; unswept horizontal tail surfaces, swept vertical surfaces with long dorsal fin, widebody fuselage with sharply upswept rear section containing loading ramp for freight and vehicles, mainwheels retract into fuselage-side pods, engines underwing.

FLYING CONTROLS: Conventional three-axis ailerons, elevators and rudder, all manually operated, two hydraulically operated single-slotted Fowler flaps per wing, ailerons droop with flaps. Electric trim for all flight control surfaces.

STRUCTURE: Fail-safe primary structure designed for more than 30,000 one-hour flights without major repair.

LANDING GEAR: Hydraulically retractable tricycle type. Steerable twin nosewheels; single mainwheels retract into fuselage pods, hydraulic brakes.

POWER PLANT: Two 1,235 kW (1,657 shp) Pratt & Whitney Canada PT6A turboprops; five- or six-blade metal constant-speed fully feathering reversible-pitch propellers of advanced design to minimise noise levels. Six integral wing fuel tanks, total capacity 2,500 litres (660 US gallons, 550 Imp gallons); optional external tanks; pressure or gravity fuelling.

ACCOMMODATION: Two adjustable seats side by side on flight deck, provision for single-pilot operation, dual controls and separate crew oxygen system, seat at rear for flight attendant; up to 24 passengers four-abreast at 76 cm (30 in) pitch, with toilet, galley and wardrobe at rear; forward and aft baggage compartments, all accommodation pressurised

1995

and air conditioned. Full provision for ambulance use, freight or vehicle transport. Doors with airstairs at front and rear of cabin; five additional emergency exits.

SYSTEMS: Air conditioning and pressurisation system, maximum pressure differential 0.40 bar (5.8 lb/sq in), ram air for airborne cooling, electric fan for cooling on ground, heating by engine bleed air, optional cooling turbine. Hydraulic system for landing gear actuation, brakes, wing flaps and nosewheel steering, supplied by engine-driven pump, with standby hand pump and accumulator. Two 30 V 400 A engine-driven starter/generators for 115 V 400 Hz and 26 V 400 Hz AC electrical systems, 28 V DC system, four 25 Ah batteries, optional APU. Engine bleed air de-icing of wing, tailplane and fin leading-edges and engine air intakes, electric de-icing of windscreen and propellers, electrically heated pitot; windscreen demisted by hot air.

AVIONICS: Full IFR capability.

Comms: Two VHF, 118 to 136 MHz, 760 channels, two transponders; optional voice recorder, passenger address system and flight ground crew intercom.

Radar: Weather radar in nose.

Flight: Two VOR, DME and ADF with RMI indicator; optional HF com and area nav system. Flight director system, HSI with directional/vertical gyros, three-axis autopilot.

DIMENSIONS, EXTERNAL:	
Wing span	19.20 m (63 ft 0 in)
Length overall	18.2[illegible] m (59 ft [illegible] in)
Height overall	7.20 m (23 ft 7½ in)
Rear-loading ramp: Width	2.00 m (6 ft 6¾ in)
Cabin height at sill	2.00 m (6 ft 6¾ in)
DIMENSIONS, INTERNAL:	
Cabin: Width at floor	2.25 m (7 ft 4½ in)
Aisle width	0.51 m (1 ft 8 in)
Baggage compartments	
Volume (total)	more than 4.0 m³ (141 cu ft)
WEIGHTS AND LOADINGS:	
Operational weight empty	4,800 kg (10,582 lb)
Max payload	2,400 kg (5,290 lb)
Max fuel	2,000 kg (4,410 lb)
Max T-O weight	9,200 kg (20,282 lb)
PERFORMANCE (estimated):	
Max level speed	243 kts (450 km/h, 280 mph)
T-O run	875 m (2,870 ft)
Landing run	620 m (2,035 ft)

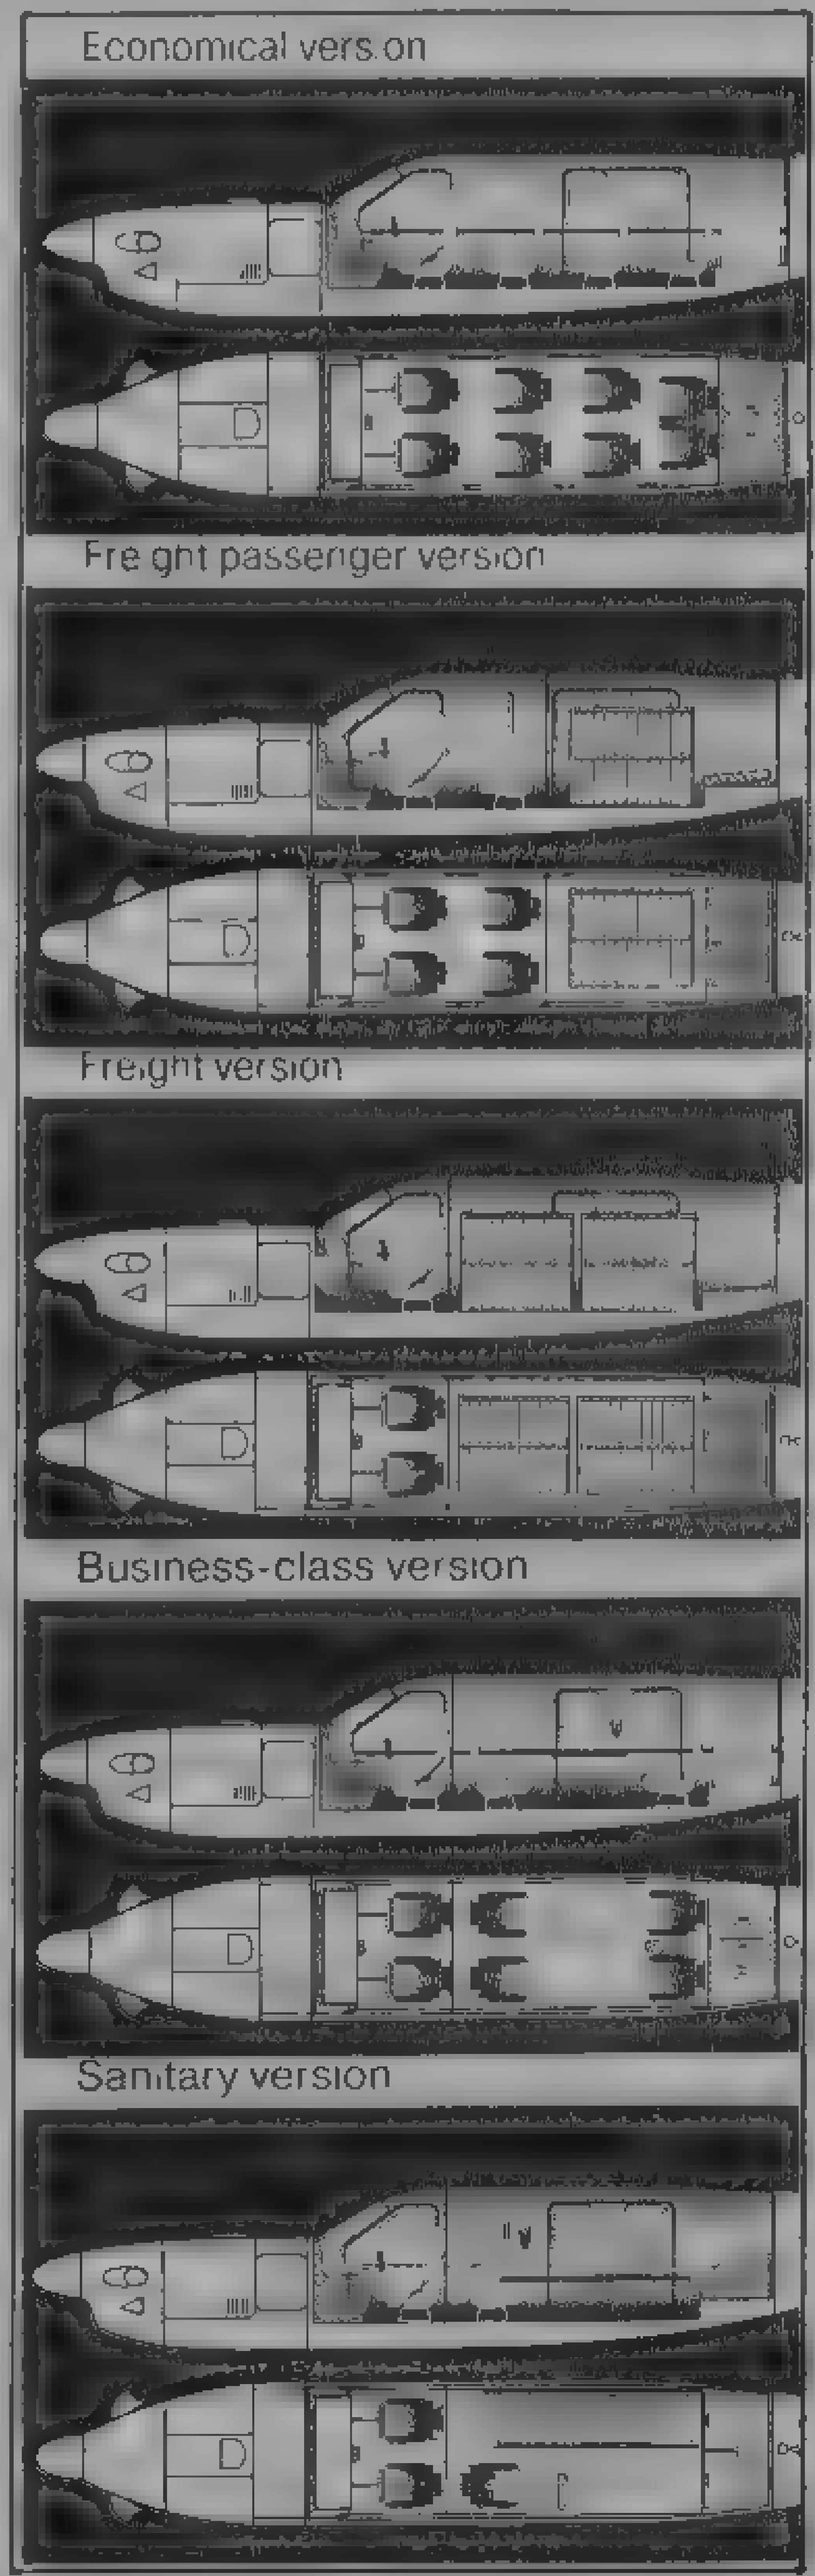
Myasishchev M-101 Gzhel eight-seat light aircraft *(Jane's/Mike Keep)*

1994



Alternative interior configurations for M-101 Gzhel

1995

MYASISHCHEV M-200

TYPE: Two-seat military and civil advanced jet trainer.

PROGRAMME: One of designs by five OKBs to meet Russian official UTS requirement to replace Aero L-29 and L-39 Albatros; details announced and model shown at Mosaeroshow '93. R&D terminated. Details in 1994-95 *Jane's*.

UPDATED

MYASISHCHEV MGS-6

TYPE: Projected six-engined super heavy airlifter.

PROGRAMME: Myasishchev counterpart to Molniya-1000, similar timescale.

DESIGN FEATURES: Smaller of two projects in M-90 Samson programme. Catamaran configuration; twin slender fuselages suspended from wings on large truss structures that extend rearwards as twin supports for tail unit, unswept wings with two large fences in line with outer engines; twin fins and rudders. To operate from unprepared airfields without special loading facilities.

LANDING GEAR: 15 four-wheel bogies under fuselages and load platform.

POWER PLANT: Six KKBM NK-63 ducted propfans; each 294.2 kN (66,138 lb st), pylon-mounted above wing leading-edge.

ACCOMMODATION: Four-person flight deck in nose of starboard fuselage, forward of small passenger compartment. Payload suspended from centre section; typically, bank of standardised containers on trailer platform forming part of aircraft structure, or cylindrical tank 5 m (16 ft 5 in) in diameter and 35 m (115 ft) long for fuel or other contents.

DIMENSIONS, EXTERNAL:

Wing span	96.00 m (315 ft 0 in)
Length overall	64.05 m (210 ft 1¾ in)
Height overall	19.60 m (64 ft 3¾ in)

AREAS:

Wings, gross	1,010 m² (10,872 sq ft)

WEIGHTS AND LOADINGS:

Max payload	250,000 kg (551,150 lb)
Max T-O weight	650,000 kg (1,432,975 lb)

PERFORMANCE (estimated):

Nominal cruising speed	356 kts (660 km/h; 410 mph)
T-O run	2,500 m (8,200 ft)
Range with max payload	2,592 n miles (4,800 km; 2,980 miles)

UPDATED

Myasishchev M-112 (two P&WC PT6A turboprops) *(Jane's/Mike Keep)* *1994*

MYASISHCHEV MGS-8

TYPE: Projected eight-engined super heavy airlifter.

PROGRAMME: As MGS-6.

DESIGN FEATURES: Generally as MGS-6; tail support structure more tapered, endplate fins and rudders, large winglets.

POWER PLANT: Eight KKBM NK-63 ducted propfans, each 294.2 kN (66,138 lb st), pylon-mounted on wing leading-edge; alternative high bypass ratio turbofans being studied.

DIMENSIONS, EXTERNAL: As MGS-6

WEIGHTS AND LOADINGS:

Max payload	400,000 kg (881,825 lb)
Max T-O weight	850,000 kg (1,873,900 lb)

PERFORMANCE (estimated):

Nominal cruising speed	356 kts (660 km/h; 410 mph)
T-O run	3,000 m (9,850 ft)
Range with max payload	2,430 n miles (4,500 km; 2,796 miles)

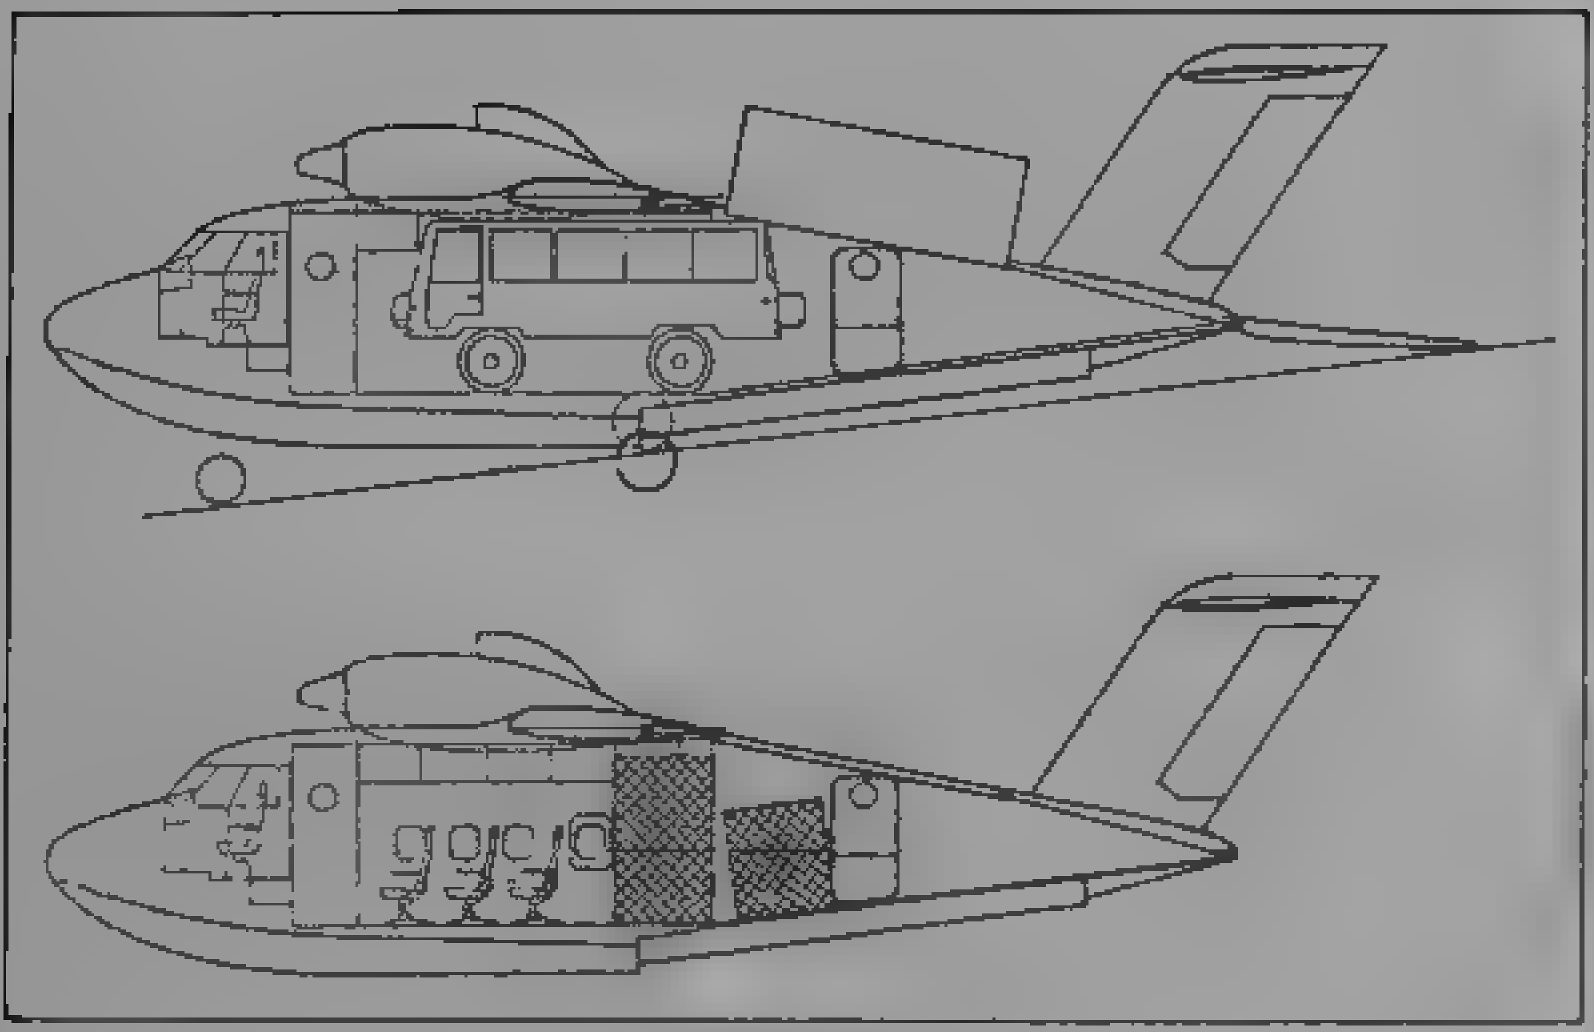
Telex: 411700 PTB SV FOR NIAT

DIRECTOR OF FOREIGN ECONOMIC RELATIONS: Victor P. Pushkov

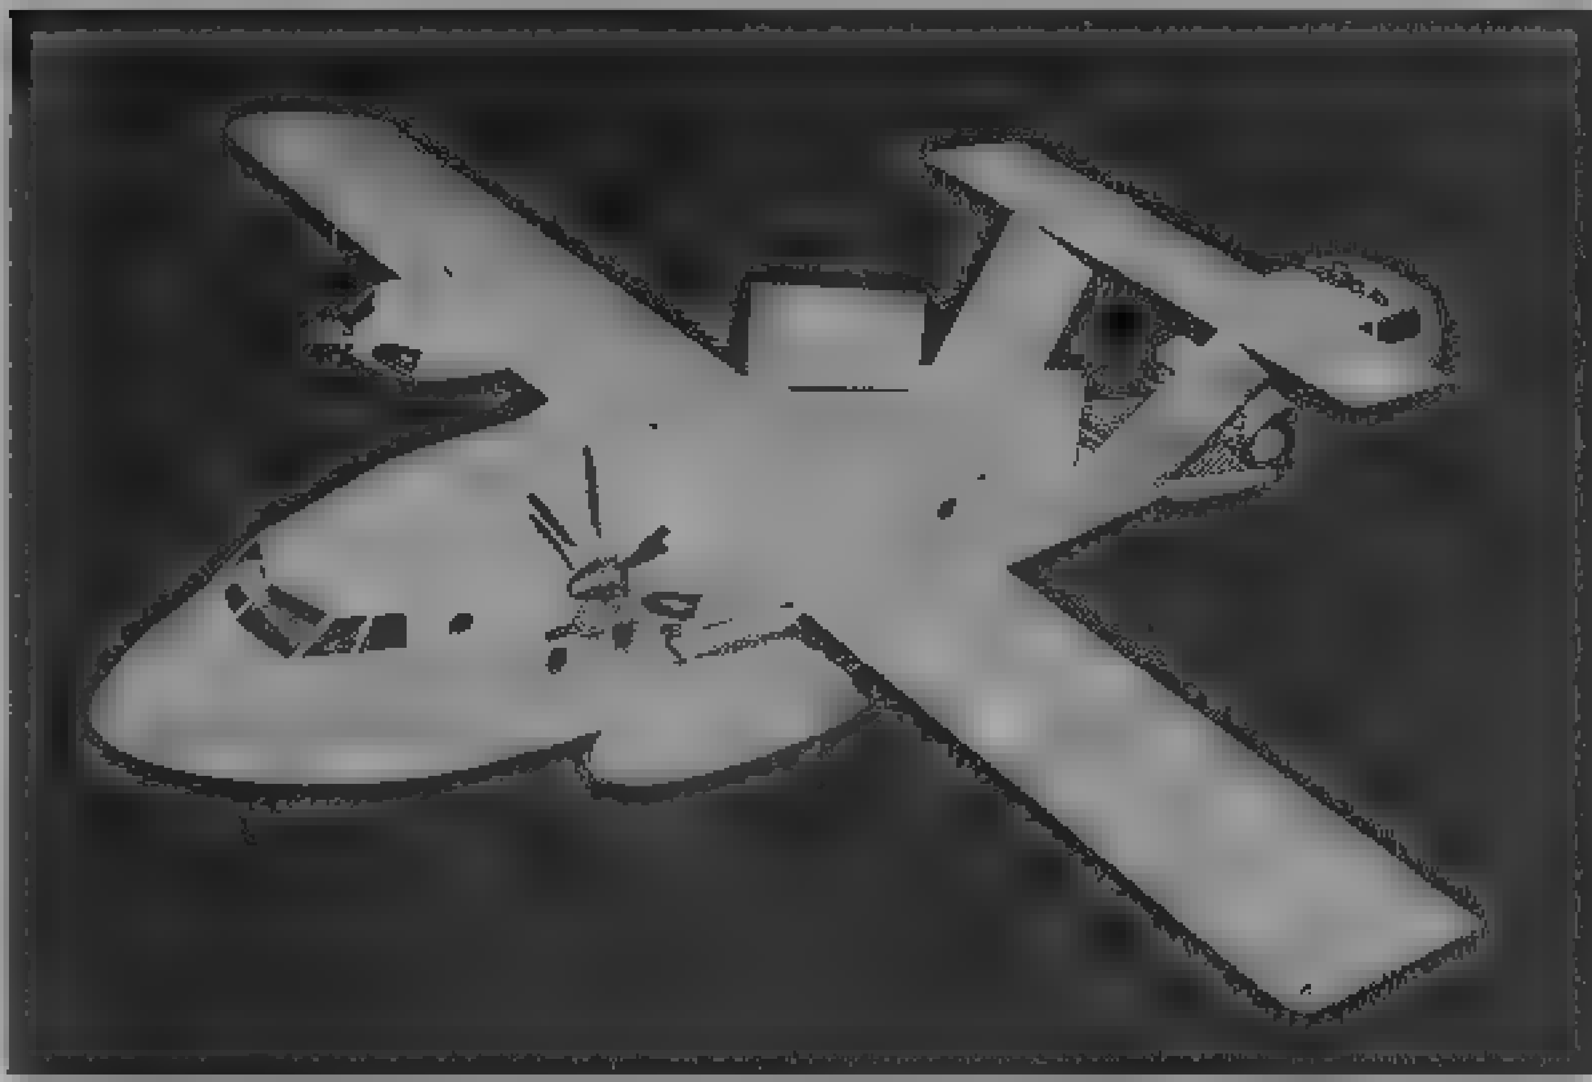
Under the Programme for Development of Russian General Purpose Aviation, NIAT scientific centre has projected a small amphibious transport aircraft suitable for operation in remote areas of Siberia and South-East Asia. TsAGI GOSNITS is involved in the proposal, which is intended to use hi-tec structural materials such as aluminium-lithium, titanium alloys and composites available at Russian aviation plants under the Konversiya policy.

NEW ENTRY



Alternative roles for NIAT Freighty include transporting vehicles (top) and combination of passengers and cargo

1995



Model of NIAT Freighty loading a four-wheel drive vehicle *(Paul Jackson)*

1995

NIAT 2.5 ST FREIGHTY

TYPE: Twin-turboprop light amphibious cargo/passenger transport

PROGRAMME: Initial design and market studies completed beginning June 1995, series production and certification planned for 1997

CUSTOMERS: Estimated domestic market for 350 aircraft, primarily for fuel and power engineering companies, government and local authorities and shipping companies, estimated export market for 300 aircraft. Planned production of seven aircraft in 1997, 30 in 1998 and 60 in 1999

COSTS: Investment of approximately $2.5 million sought for 1995-96; basic aircraft cost estimated at $1 to 3 million

DESIGN FEATURES: Cantilever high-wing monoplane; constant-chord wings without sweep, rectangular-section twin-step flying-boat hull, twin outward-canted and swept back tailfins with tailplane mounted near tips, stabilising float carried on long-chord fairing each side of hull

FLYING CONTROLS: Conventional three-axis, aileron and two-section flaps over full span of each wing, twin rudders and elevators

LANDING GEAR: Retractable tricycle type; twin wheels on each unit; main wheels retract into floats

POWER PLANT: Two 1,029 kW (1,380 shp) Omsk Mars TVD-20 turboprops; other engines optional

ACCOMMODATION: Unobstructed cabin space for such vehicles as minibuses, loaded via rear ramp and side-hinged doors forming top of rear fuselage aft of wings when closed, door on each side of flight deck, horizontally split two-piece main cabin door at rear on port side. Seats at front of cabin in combi version, emergency exit window each side under wing

DIMENSIONS, EXTERNAL:

Wing span	20.00 m (65 ft 7½ in)
Length overall	16.15 m (53 ft 0 in)
Height overall	5.41 m (17 ft 9 in)
Tailplane span	8.00 m (26 ft 3 in)

WEIGHTS AND LOADINGS: Not available

PERFORMANCE (estimated):

Nominal speed in level flight
188-215 kts (350-400 km/h; 217-248 mph)

T-O run: on land	530 m (1,740 ft)
on water	655 m (2,150 ft)
Landing run: on land	620 m (2,035 ft)
on water	700 m (2,297 ft)

Max range: with 2,500 kg (5,511 lb) cargo
323 n miles (600 km; 372 miles)
with 1,000 kg (2,205 lb) cargo
809 n miles (1,500 km; 932 miles)

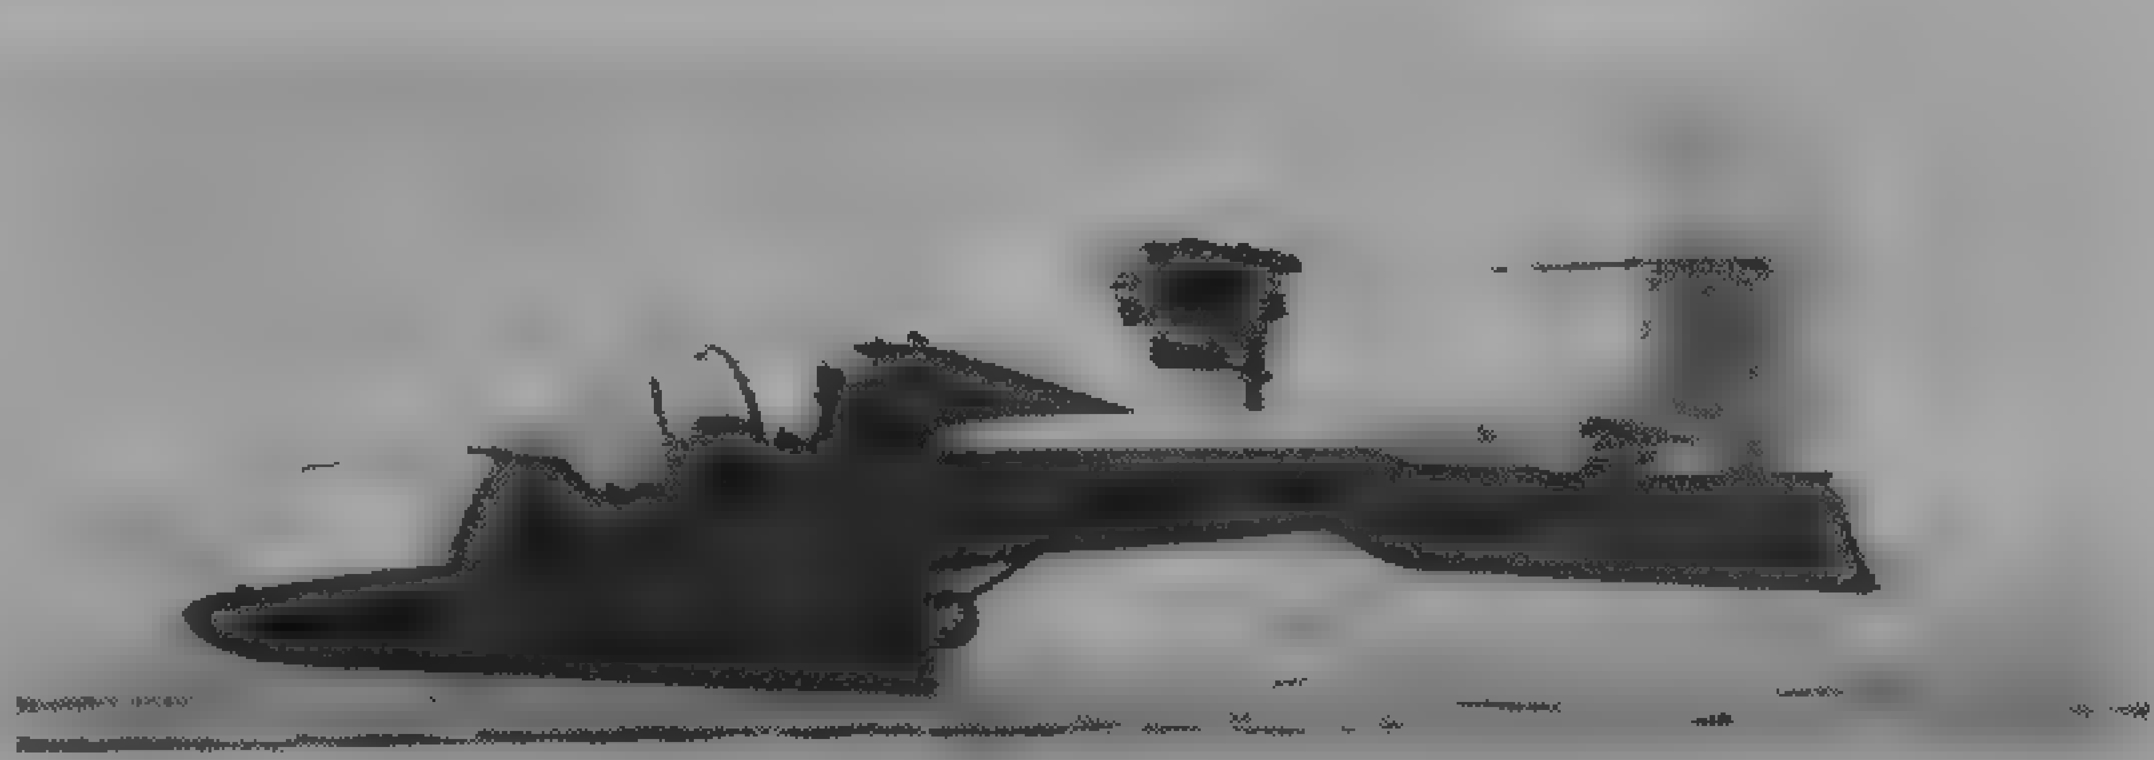
Telephone: 7 (095) 925 62 76
Fax: 7 (095) 928 61 02

This joint-stock company holds all rights in the Pony light two-seat amphibian designed by Reda MDT Ltd and built by MAPO. Under development is a four-seat version known as the **Prize**, with enclosed cabin, and two ducted Teledyne Continental IOL-240 or Textron Lycoming O-235 engines shoulder-mounted aft of the cockpit, with the wings attached outboard of the ducts.

NEW ENTRY



Prototype Reda Pony two-seat light amphibian

1995

REDA PONY

TYPE: Light two-seat amphibian

PROGRAMME: Prototype first flew December 1994; certification planned for Autumn 1996, under JAR VLA requirements

DESIGN FEATURES: Cantilever mid-wing monoplane of constant chord, without dihedral or sweep; pod and boom fuselage; engine with ducted pusher propeller (no duct fitted initially) mounted above rear of pod, wire-braced tailplane mid-mounted on fin, main floats mounted on sides of pod, with third float under tailboom. Able to operate in Sea State 1

FLYING CONTROLS: Conventional three-axis, with ailerons, elevators and rudder; two-section flaps between aileron and fuselage on each wing

STRUCTURE: All-metal airframe, composite floats

LANDING GEAR: Retractable tailwheel type; single wheel on each unit. Three JSC Apatek floats, forward pair projecting forward of fuselage pod

POWER PLANT: One 59 kW (79 hp) Rotax 912A engine

ACCOMMODATION: Two seats side by side in enclosed (initially open) cabin

DIMENSIONS, EXTERNAL:

Wing span	11.00 m (36 ft 1 in)
Length overall	8.40 m (27 ft 6½ in)
Height overall	2.84 m (9 ft 4 in)
Tailplane span	5.00 m (16 ft 5 in)
Wheel track	2.40 m (7 ft 10½ in)
Wheelbase	5.84 m (19 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.10 m (3 ft 7¼ in)
Max width	1.15 m (3 ft 9¼ in)

AREAS
- Wings, gross 16 5 m² (177 6 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty 545 kg (1,201 lb)
- Max T-O weight 750 kg (1,653 lb)

PERFORMANCE
- Max level speed 81 kts (150 km/h, 93 mph)
- Max cruising speed (75% power) 73 kts (135 km/h, 84 mph)
- T-O and landing speed 38 kts (70 km/h, 44 mph)
- Max rate of climb at S/L 78-144 m (256-472 ft)/min
- T-O run: on land 120 m (394 ft)
  - on water 300 m (985 ft)
- T-O to 15 m (50 ft): on land 300 m (985 ft)
  - on water 480 m (1,575 ft)
- Landing from 15 m (50 ft): on land 400 m (1,313 ft)
  - on water 440 m (1,445 ft)
- Landing run: on land 80 m (263 ft)
  - on water 120 m (394 ft)
- Normal range 270 n miles (500 km; 310 miles)
- Range with max fuel 367 n miles (680 km, 422 miles)
- Normal endurance 3 h 30 min

NEW ENTRY

ROMASHKA

ROMASHKA AGROTECHNICAL COMPANY

Kosmonavtov Street 60, 394055 Voronezh

VERIFIED

ROMASHKA BSKhS

TYPE: Single-seat agricultural aircraft

PROGRAMME: First shown in form of full-scale mockup at MosAeroshow '93 Development and production plans not disclosed.

DESIGN FEATURES: Conventional strut-braced low-wing monoplane; unswept constant-chord wings and tailplane; sweptback fin; tailwheel type non-retractable landing gear with cantilever mainwheel legs, high-set enclosed cockpit, for optimum forward view over sloping nose; hopper between engine and windscreen; spraybars aft of wing trailing-edge

FLYING CONTROLS: Ailerons, elevators, rudders and flaps (occupying wing trailing-edge between fuselage and aileron each side) all have ribbed skin; ground adjustable tab on rudder and each elevator

LANDING GEAR: Low-pressure mainwheel tyres, size 700 × 250 mm, tailwheel tyre size 300 × 125 mm

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine, three-blade fixed-pitch propeller

DIMENSIONS, EXTERNAL:
- Wing span 12 56 m (41 ft 2½ in)
- Length overall 8 62 m (28 ft 3½ in)
- Height overall 3 00 m (9 ft 10¼ in)
- Wheel track 2 60 m (8 ft 6½ in)
- Wheelbase 6.44 m (21 ft 1½ in)

DIMENSIONS, INTERNAL:
- Hopper volume 1 18 m³ (41 6 cu ft)

AREAS:
- Wings, gross 22 50 m² (242.2 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty 1,096 kg (2,416 lb)
- Max T-O weight 2,190 kg (4,828 lb)
- Max wing loading 97 3 kg/m² (19 93 lb/sq ft)

PERFORMANCE (estimated at max T-O weight):
- Max level speed 129 kts (240 km/h, 149 mph)
- Nominal cruising speed 92 kts (170 km/h; 105 mph)
- Min flying speed 51 kts (94 km/h, 59 mph)
- T-O speed 58 kts (107 km/h, 67 mph)
- Landing speed 42 kts (77 km/h, 48 mph)
- Max rate of climb at S/L 270 m (885 ft)/min
- Service ceiling 4,050 m (13,285 ft)
- T-O run 166 m (545 ft)
- Landing run 144 m (475 ft)
- Range with max fuel 275 n miles (510 km, 317 miles)

OKB named for Pavel Osipovich Sukhoi, who headed it from 1939 until his death in September 1975. It remains one of two primary Russian centres for development of fighter and attack aircraft, and is widening its activities to include civilian aircraft, under konversiya programme.

Sukhoi also active in design and construction of large ground effect vehicles, including 100/150-passenger A.90.150 Ekranoplan described in *Jane's High Speed Marine Craft 1995-96*

UPDATED

Note: Several current programmes were redesignated early in 1995, type numbers will therefore differ from previous editions of *Jane's*

SUKHOI Su-17, Su-20 and Su-22

NATO reporting names: Fitter-C, -D, -E, -F, -G, -H, -J and -K

TYPE: Single-seat variable geometry ground attack fighter, reconnaissance aircraft and two-seat combat trainer

PROGRAMME: Prototype S-22I or Su-7IG (Izmenyaemaya Geometriya, variable geometry) was minimal conversion of fixed-wing Su-7 (NATO 'Fitter-A'): only 4.2 m (13 ft 9 in) of each wing pivoted, outboard of large fence and deepened inboard glove panel; first flew 2 August 1966, shown at Aviation Day display July 1967, given NATO reporting name 'Fitter B', two squadrons of **Su-17** 'improved Fitter-Bs' in Soviet air forces 1972, AL-21F-3 engine then replaced AL-7 in major Soviet air force production versions, beginning with 'Fitter-C' Production ended 1990

CURRENT VERSIONS: **Su-17M** (S-32M, 'Fitter-C'): Single-seat attack aircraft, AL-21F 3 engine, gun in each wingroot, ranging radar, RWR, eight stores pylons, additional wing fence on each glove panel, curved dorsal fin, operational with CIS air forces and Naval Aviation since 1971 in small numbers

Su-17R: Reconnaissance version of Su 17M

Su-17M-2/M-2D (S 32M2, 'Fitter D'): Generally as Su-17M, but forward fuselage lengthened by 0 38 m (15 in) and drooped 3° to improve pilot's view while keeping intake face vertical; added undernose Doppler navigation radar pod, Klen laser rangefinder in intake centrebody

Su-17UM-3 ('Fitter-G'): Two-seat trainer version of Su-17M-3 with combat capability, drooped forward fuselage like Su 17M 2, deepened dorsal spine fairing for additional fuel tankage, taller vertical tail surfaces, removable ventral fin, starboard wingroot gun only, laser rangefinder in intake centrebody

Su-17M-3 (S-52, 'Fitter-H') Improved single-seater; same deepened spine and tail modifications as Su 17UM 3; Doppler navigation radar internally in deepened undersurface of nose, gun in each wingroot; launcher for R 60 (AA-8 'Aphid') air-to-air missile between each pair of underwing pylons, 'Fitter-H/Ks' equipped for tactical reconnaissance carry, typically, centreline sensor pod, active ECM pod under port wing glove, two underwing fuel tanks

Su-17M-4 (S 54, 'Fitter K'): Single seat version, cooling air intake at front of dorsal fin; otherwise as Su-17M-3 externally Development began 1978, prototype flew June 1980; production started 1980; first production aircraft flew 1981; deliveries began 1982. *Detailed description applies to this version, except where indicated otherwise*

Su-20 (S-32MK, 'Fitter-C'): Export version of Su-17M

Su-20R Reconnaissance version of Su-20

Sukhoi Su-17M-3 ('Fitter-H') with ventral reconnaissance pod

1995

All Su-17s and Su-20s have AL 21F 3 engine, some Su-22 export aircraft have Tumansky R-29BS-300 (112 8 kN, 25,350 lb st with afterburning) in more bulged rear fuselage, with rearranged small external air intakes on rear fuselage and shorter plain metal shroud terminating fuselage, as follows

Su-22U ('Fitter-E'): Tandem two-seat trainer developed from Su-17M-2, with Tumansky engine; no Doppler pod, deepened dorsal spine fairing for additional fuel tankage, port wingroot gun deleted

Su-22 ('Fitter-F') Export Su-17M-2; modified undernose electronics pod, R-29 engine, gun in each wingroot, weapons include R-3 (AA-2 'Atoll') air-to-air missiles, aircraft supplied to Peru had Sirena-2 limited coverage radar warning system and virtually no navigation aids, some basic US-supplied avionics retrofitted

Su-22UM-3K ('Fitter-G'): Export Su-17UM-3, AL-21F-3 or R-29B engine

Su-22M-3 ('Fitter-J'): As Su-17M-3 but R 29 engine, internal fuel tankage 6,270 litres (1,656 US gallons, 1,379 Imp gallons); more angular dorsal fin, AA-2 ('Atoll') air-to-air missiles

Su-22M-4 ('Fitter-K'): As Su-17M 4, AL-21F-3A engine; 78 0 kN (17 535 lb st) dry, 111 5 kN (25,065 lb st) with afterburning

CUSTOMERS: CIS air forces, including 120 for ground attack and 50 for reconnaissance with Russian tactical air forces, 35 with Naval Aviation, 130 in Ukraine; air forces of Afghanistan (Su-20/22M-4), Algeria (Su-20), Angola (Su-20/22), Czech Republic (Su-22M-4), Egypt (Su-20), former East Germany (Su-22M-4), Hungary (Su-22), Iraq (Su-20), North Korea (Su-20/22), Libya (Su-22), Peru (Su-22), Poland (Su-22M-4), Slovakia (Su-22M-4), Syria (Su-20/22), Vietnam (Su-20/22), Yemen (Su-22)

DESIGN FEATURES Modest amount of variable geometry added to original fixed-wing Su-7 permitted doubled external load from strips little more than half as long, and 30 per cent greater combat radius, progressive refinements led to very effective final versions. Conventional mid-wing all-swept monoplane, except for variable geometry outer wings with manually selected positions of 30°, 45°, 63°; wide-span fixed centre-section glove panels, basically circular fuselage with 3° drooped nose and deep dorsal spine, ram intake with fixed shock cone centrebody; pitot on port side of nose, transducer to provide pitch and yaw data for fire control computer starboard, anti flutter bodies near tailplane tips. Wing anhedral 3°, incidence 1°, no twist. Fin sweepback 55°.

FLYING CONTROLS: Slotted ailerons operable at all times, slotted trailing-edge flap on each variable geometry wing panel operable only when wings spread, area-increasing flap on each centre-section glove panel, full-span leading-edge slats on variable geometry wing panels, top and bottom door-type airbrakes each side of rear fuselage, forward of tailplane all moving horizontal tail surfaces, conventional rudder, no tabs.

STRUCTURE. All-metal, semi monocoque fuselage, large main wing fence on each side, at junction of fixed and movable panels, square-cut at front, with attachment for external store; shorter fence above glove panel each side

LANDING GEAR Retractable tricycle type, with single wheel on each unit; nosewheel retracts forward, mainwheels retract inward into centre section KT 117 mainwheel tyres, size 880 × 230 mm, pressure 14 2 bars (206 lb/sq in); K2106 nosewheel tyre, size 660 × 200 mm, pressure 9 1 bars (132 lb/sq in) Nosewheel steerable ±27° Container for single cruciform brake-chute between base of rudder and tailpipe

POWER PLANT: One Saturn/Lyulka AL-21F 3 turbojet, 76.5 kN (17,200 lb st) dry and 110.3 kN (24,800 lb st) with afterburning. Fuel capacity 4,590 litres (1,212 US gallons, 1 010 Imp gallons), with some tankage in dorsal spine fairing, provision for two 800 litre (211 US gallon, 176 Imp gallon) PTB-800 drop tanks and two 1,150 litre (304 US gallon; 253 Imp gallon) drop tanks on outboard wing pylons and under fuselage; when underfuselage tanks carried, only the two inboard wing pylons may be used for ordnance, to total 1,000 kg (2,204 lb). Oil capacity 15 kg (33 lb). Two solid propellant rocket units attached optionally to rear fuselage to shorten T O run

ACCOMMODATION Pilot only, on K-36 ejection seat, under rearward-hinged transparent canopy; rearview mirror above canopy

SYSTEMS. Two independent hydraulic systems, each 207 bars (3,000 lb/sq in). Pneumatic system pressure 150 bars (2,175 lb/sq in). Gaseous oxygen system

AVIONICS. *Comms:* R-862 com radio, SOD-57M ATC/SIF, with transponder housing beneath brake-chute container, SRO-2M ('Odd Rods') IFF with SO-69 transponder

Flight: CVM 20-22 mission computer; PrNK 54 nav system with RSDN Loran and A-312 Tacan, DISS-7 Doppler; IKV-8 inertial platform.

Instrumentation: ASP-5ND fire control system, ARK-22 radio compass

Mission Klen-45 laser rangefinder in intake centrebody, ASP-17BC gunsight

Self defence SPO 15LE Sirena 3 radar warning system providing 360° coverage, with antennae in slim cylindrical housing above brake-chute container and in each centre-section leading-edge, between fences

EQUIPMENT Front and rear pairs of ASO-2 chaff/flare dispensers to each side of dorsal spine fairing. KDS decoy dispensers in forward section of spine fairing.

ARMAMENT Two 30 mm NR-30 guns, each with 80 rounds, in wingroot leading-edges, nine weapon pylons (one on centreline, two tandem pairs under fuselage, one under each centre section leading-edge, one under each main wing fence) for 4,000 kg (8,820 lb) of bombs, including nuclear weapons, rocket pods, S-25 tube-launched rockets with 325 mm head, 23 mm SPPU 22 gun pods, two R 3 or R 13M (AA 2 'Atoll'), R 60 (AA 8 'Aphid') or R-73A (AA-11 'Archer') air-to-air missiles, Kh-25ML (AS-10 'Karen'), Kh-27 (AS-12 'Kegler'), Kh-29 (AS 14 'Kedge') or Kh-58 (AS-11 'Kilter') air-to-surface missiles, or a reconnaissance pod. When four SPPU 22 gun pods are fitted, with downward attack capability, the two underfuselage pods can be mounted to fire rearward

DIMENSIONS, EXTERNAL

Wheelbase	5 25 m (17 ft 2¾ in)

AREAS

Wings, gross, fully spread	38 49 m² (414 3 sq ft)
fully swept	34 85 m² (375 1 sq ft)
Ailerons (total)	1 81 m² (19 48 sq ft)
Trailing-edge flaps (total)	3 91 m² (42 07 sq ft)
Fin	4 61 m² (49 63 sq ft)
Rudder	0.924 m² (9.95 sq ft)
Tailplane	5 58 m² (60 06 sq ft)

WEIGHTS AND LOADINGS (Su 22M 4)

Weight empty, equipped	10,767 kg (23,737 lb)
Max internal fuel	3,770 kg (8,310 lb)
Max external stores	4,000 kg (8,820 lb)
Max T-O weight	19,400 kg (42,770 lb)
Max landing weight	13,000 kg (28,660 lb)
Max wing loading swept	556 7 kg/m² (114 0 lb/sq ft)
Max power loading	174 0 kg/kN (1 71 lb/lb st)

Sukhoi Su 22M 4 ('Fitter K') of Czech Air force *(Paul Jackson)*

1995

Su 17M 3 ('Fitter-H'), single-seat version of the variable geometry 'Fitter' series *(Jane's/Dennis Punnett)*

1993

PERFORMANCE (Su-22M-4):

Max level speed: at height	Mach 1.74 (1,000 kts; 1,850 km/h; 1,150 mph)
at S/L, clean	Mach 1.10 (729 kts; 1,350 km/h; 838 mph)
at S/L, with external stores	Mach 1.02 (675 kts; 1,250 km/h; 777 mph)
T-O speed at max T-O weight	194 kts (360 km/h; 224 mph)
Landing speed	154 kts (285 km/h; 177 mph)
Stalling speed	162 kts (300 km/h; 187 mph)
Max rate of climb at S/L	13,800 m (45,275 ft)/min
Service ceiling	15,200 m (49,865 ft)
T-O run: clean	1,500 m (4,922 ft)
Landing run, with parachute brake	1,100 m (3,609 ft)
Range with max internal and external fuel:	
at high altitude	1,375 n miles (2,550 km; 1,585 miles)
at low altitude	756 n miles (1,400 km; 870 miles)

UPDATED

SUKHOI Su-24

NATO reporting name: Fencer

TYPE: Two-seat variable geometry 'battlefield bomber', reconnaissance and EW aircraft.

PROGRAMME: Design started 1965 under Yevgeniy S Felsner, Pavel Sukhoi's successor, to replace Il-28 and Yak-28 attack aircraft; T-6-1 prototype, first flown 2 July 1967 and now at Monino, had fixed delta wings with downswept tips, and two pairs of RD-36-35 lift-jets mounted at inclined angle in rear fuselage, to exhaust slightly rearward for improved take-off performance; T-6-2IG variable geometry prototype, without lift jets, chosen for production; first flight 17 January 1970; by 1981, delivery rate 60-70 a year; more than 900 delivered from Komsomolsk plant; production of Su-24M/MR/MP continues.

CURRENT VERSIONS: **Su-24** ('Fencer-A'): First flown (seventh prototype) December 1971. Had rectangular rear fuselage box enclosing jet nozzles; few early aircraft only; deployed with trials unit 1974.

Su-24 ('Fencer-B'): First operational version, 1976. Deeply dished bottom skin to rear fuselage box between jet nozzles; larger brake-chute housing at base of rudder.

Su-24 ('Fencer-C'): Introduced 1981; important avionics changes, multiple nose fitting instead of former simple probe, triangular fairing for RWR on side of each engine air intake, forward of fixed wingroot, and each side of fin near tip; chord of fin leading-edge extended forward except at tip, giving kinked profile.

Su-24M ('Fencer-D'): Major attack version. T-6-8M prototype first flew 24 July 1977; entered production 1978; service 1983; believed to have terrain-following radar instead of earlier terrain-avoidance system; added flight refuelling capability, with centrally mounted retractable probe forward of windscreen, nose approximately 0.75 m (2 ft 6 in) longer to accommodate new avionics bay for PNS-24M nav/attack system, including Kaira-24 laser/TV weapon guidance system, large overwing fences integral with extended wingroot glove pylons on all but late production aircraft for domestic use: fences sometimes squared off at front to house chaff/flare dispensers; undernose antennae deleted; laser ranger/designator housing aft of nosewheel bay, single long noseprobe; export version is **Su-24MK**.

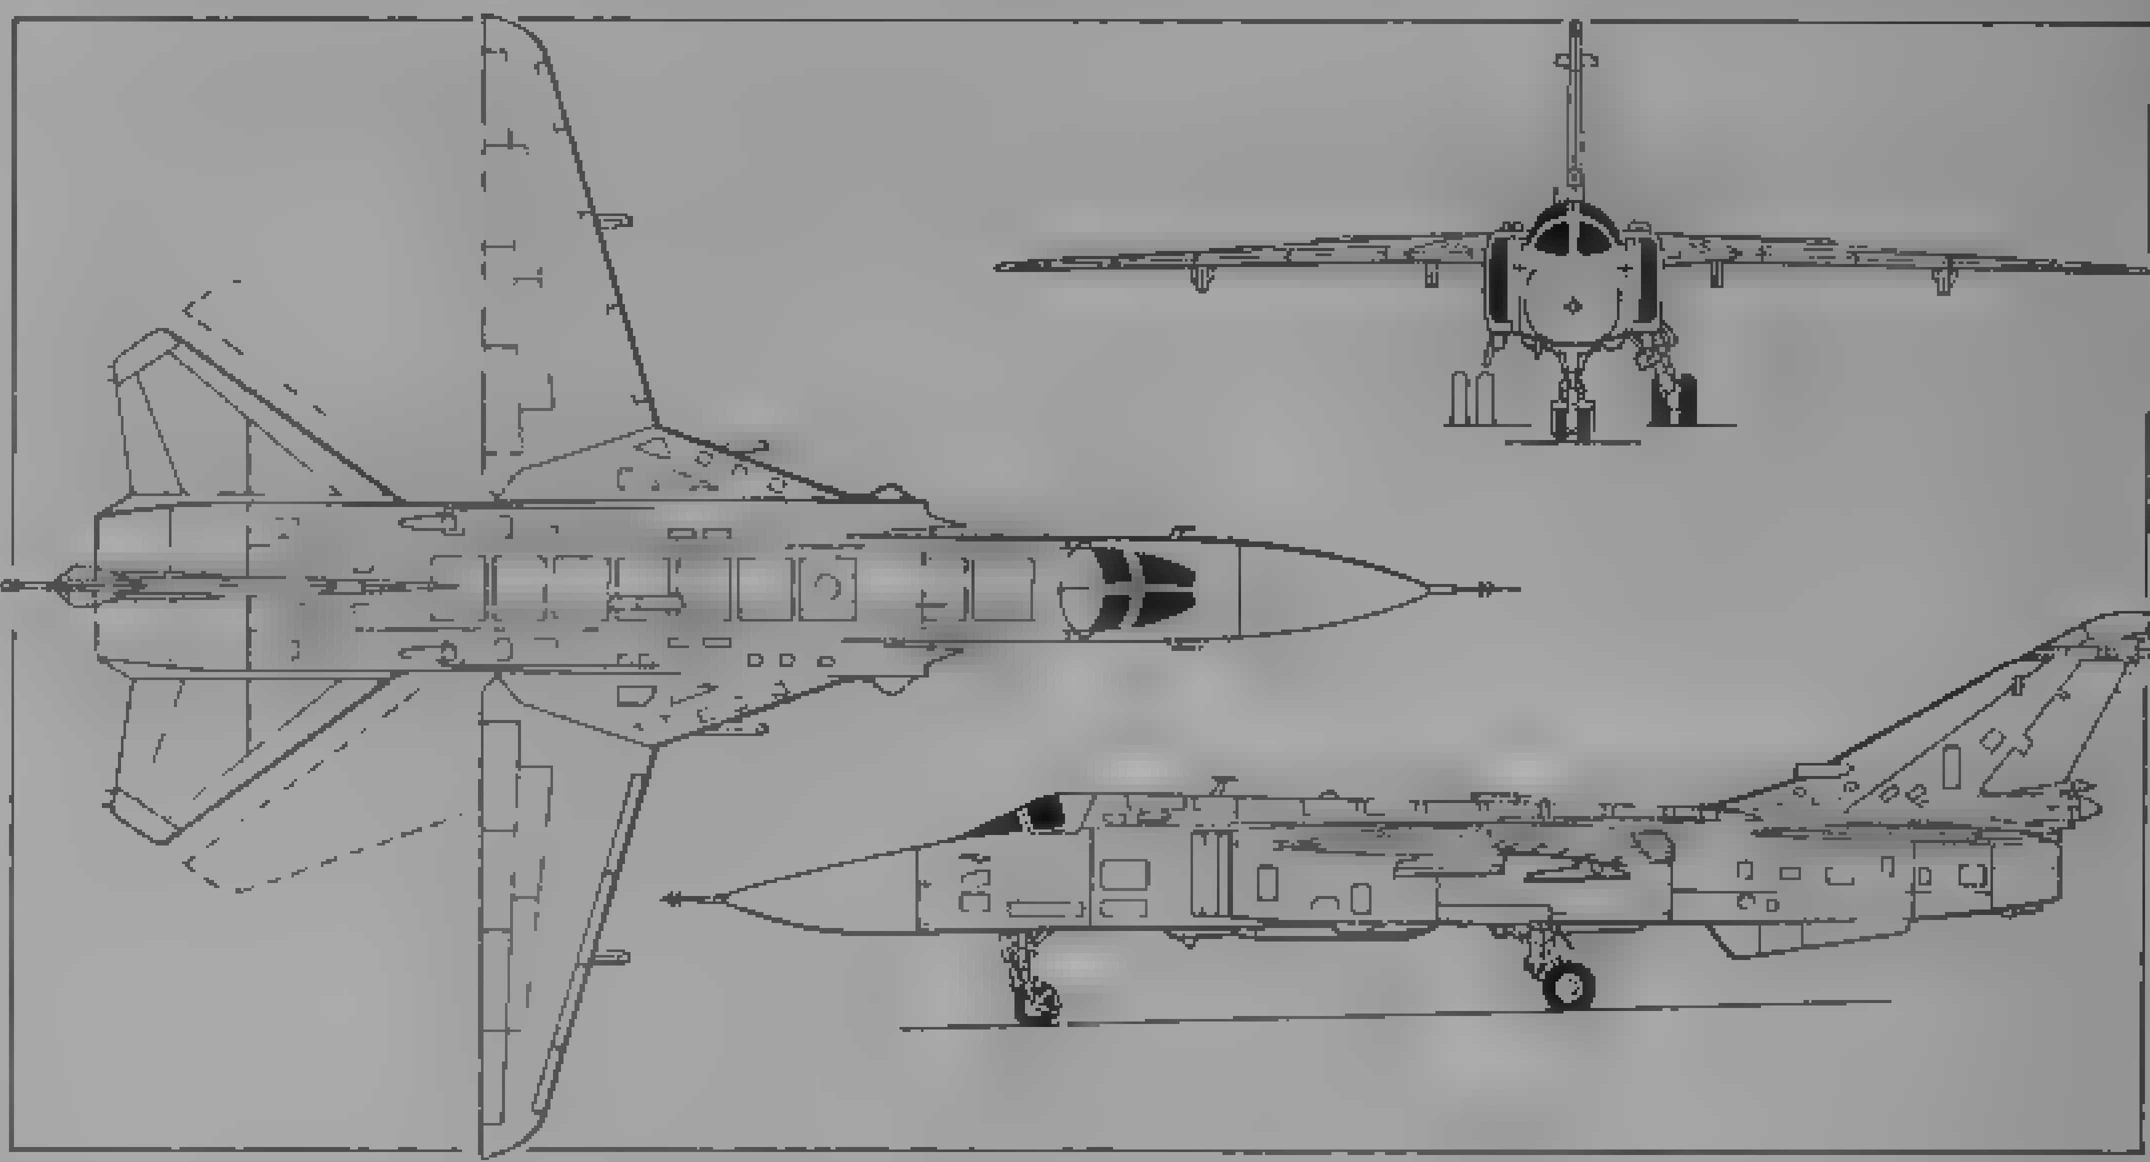
Su-24MR ('Fencer-E'): Reconnaissance version of Su-24M used by tactical and naval air forces; BKR-1 internal equipment includes Shtik side-looking airborne multimission radar in nose, Zima IR reconnaissance system under centre-fuselage, Aist-M TV reconnaissance system, AFA AP-402M panoramic camera in nose and AFA A-100 oblique camera behind crew cabin. A Shpil-2M laser pod can be carried on centreline, with a Tangazh elint pod or Efir-1M radiation detector pod on starboard underwing swivelling pylon and two R-60 air-to-air missiles under port wing. Data can be transmitted to ground by datalink. No overwing fences; shorter nose radome, with flush dielectric side panels on nose, domed centre fuselage air intake for heat exchanger; provision for two 3,000 litre (792 US gallon; 660 Imp gallon) underwing auxiliary fuel tanks, flight refuelling capability retained, but weapons control system and attack capability deleted. First of two prototypes (T6MR-26 and -34) flew September 1980; deliveries to Baltic fleet, replacing Tu-16s, began Summer 1985. Maximum speed at 200 m (660 ft) limited to 648 knots (1,200 km/h; 746 mph) when carrying full external equipment.

Su-24MP ('Fencer-F'): Electronic warfare/jamming/sigint version to replace Yak-28PP 'Brewer-E'. First of T6MP-25 and -35 prototypes flew December 1979; dielectric nose panels differ from those of Su-24MR, added blade antenna under nose; no underside electro-optics; 'hockey stick' communications jamming antenna at bottom of fuselage under nose section of each engine air intake, centreline EW pod. Starboard cockpit display panels replaced by EW console. Armament GSh-6-23M gun and four R-60 (AA-8 'Aphid') air-to-air missiles. Production reportedly limited to 12 aircraft.

CUSTOMERS: Russian air forces have 480 for ground attack and 90 for reconnaissance and ECM. Naval Aviation has 107 for attack and 20 for reconnaissance/electronic warfare; others with air forces of Azerbaijan (16 Su-24MR); Ukraine (250), Algeria (10), Iraq (most of 24 now in Iran), Iran (12 plus ex-Iraqi aircraft), Libya (15), Syria (42). 'Fencer-A/B/C' built at GAZ 153 Novosibirsk, Su-24M versions initially at GAZ 153 (approximately 380), then GAZ 416 Komsomolsk-on-Amur (over 290).

Sukhoi Su-24MR ('Fencer-E') of Russian Air Force *(Swedish Air Force)*

1995



Sukhoi Su-24M ('Fencer-D') variable geometry attack aircraft *(Jane's/Mike Keep)*

1990

DESIGN FEATURES: Variable geometry shoulder wing, wing section SR14S-5.376 on fixed panels, SR14S-9.226 to SR16M-10 on outer panels; 4° 30′ anhedral from roots, incidence 0° at root, −4° at tip; triangular fixed glove box, four-position (16°, 35°, 45°, 69°) pivoted outer panels, each with pivoting stores pylon, slab-sided rectangular section fuselage; integral engine air intake trunks, each with splitter plate and outer lip inclined slightly downward, chord of lower part of tailfin extended forward, giving kinked leading-edge; leading-edge sweepback 59° 30′ on fin, 30° on inset rudder, 50° on horizontal tail surfaces, basic operational task, as designated 'frontal bomber', to deliver wide range of air-to-surface missiles for defence suppression, with some hard target kill potential, specially developed long range navigation system and electro-optical weapons systems make possible penetration of hostile airspace at night or in adverse weather with great precision, to deliver ordnance within 55 m (180 ft) of target.

FLYING CONTROLS: Full-span leading-edge slats, drooping aileron and two-section double-slotted trailing-edge flaps on each outer wing panel, differential spoilers forward of flaps for roll control at low speeds and use as lift dumpers on landing, airbrake under each side of centre-fuselage; inset rudder; all-moving horizontal tail surfaces operate collectively for pitch control, differentially for roll control, assisted by wing spoilers except when wings fully swept. Artificial feel system. Automatic flight control system.

STRUCTURE: All-metal, semi-monocoque fuselage, two slightly splayed ventral fins.

LANDING GEAR: Hydraulically retractable tricycle type, with twin wheels on each unit; main units retract forward and inward into air intake duct fairings; steerable nose unit retracts rearward. Oleo-pneumatic shock-absorbers. Trailing-link main units, KT-172 mainwheel tyres size 950 × 300 mm, pressure 12.15 bars (176 lb/sq in); KN-21 nosewheel tyres size 600 × 200 mm, pressure 9.1 bars (132 lb/sq in); KT-69/430 brakes on mainwheels, with IA-58 anti-skid units, mudguard on nosewheels, two cruciform brake-chutes, each 25 m² (269 sq ft).

POWER PLANT: Two Saturn/Lyulka AL-21F-3A turbojets, each 75.0 kN (16,865 lb st) dry and 109.8 kN (24,690 lb st) with afterburning, fixed engine air intakes. Four internal fuel tanks, capacity 11,700 litres (3,090 US gallons; 2,574 Imp gallons), can be supplemented by two 2,000 litre (528 US gallon, 440 Imp gallon) external tanks under fuselage and two 3,000 litre (792 US gallon; 660 Imp gallon) tanks under wing gloves. Pressure and gravity fuelling. Probe-and-drogue flight refuelling capability, including operation as buddy tanker using UPAZ-A underbelly pod. Oil capacity 24 litres (6.35 US gallons; 5.25 Imp gallons).

ACCOMMODATION: Crew of two (pilot and weapon systems officer) side by side on K-36DM ejection seats; cockpit width 1.65 m (5 ft 5 in), jettisonable canopy, hinged to open upward and rearward in two panels, split on centreline.

SYSTEMS: Cockpit air conditioned, with automatic pressure and temperature control. Three independent hydraulic systems. Main and emergency pneumatic systems, each with 18 litre bottle, pressure 152 bars (2,200 lb/sq in). Two electrical generators for 200/115 V AC supply and two for 28.5 V DC supply. Gaseous oxygen system. Hot-air de-icing system.

AVIONICS: *Radar:* Two superimposed radar scanners in nose, for nav/attack and terrain clearance and ranging to airborne target.

Mission: Laser ranger/designator under front fuselage.

Self-defence: SPO-15 radar warning receivers on sides of engine air intakes and tailfin; LO-82 Mak UL missile warning receivers above centre-fuselage and below front fuselage, Geran-F active jamming system. Aircraft supplied to Iran have 54 chaff/flares in wing fence dispensers, in addition to standard 24 on sides of rear fuselage.

ARMAMENT (Su-24M): Nine pylons under fuselage, each wingroot glove and outer wings for guided and unguided air-to-surface weapons, including TN-1000 and TN-1200 nuclear weapons, up to four TV or laser-guided bombs, missiles such as Kh-23 (NATO AS-7 'Kerry'), Kh-25ML (AS-10 'Karen'), Kh-58 (AS-11 'Kilter'), Kh-25MP (AS-12 'Kegler'), Kh-59 (AS-13 'Kingbolt'), Kh-29 (AS-14 'Kedge') and Kh-31A/P (AS-17 'Krypton'), rockets of 57 mm to 330 mm calibre, bombs (typically 38 × 100 kg FAB-100), 23 mm gun pods or external fuel tanks; two R-60 (AA-8 'Aphid') air-to-air missiles can be carried for self defence. No internal weapons bay. One GSh-6-23M six-barrel 23 mm Gatling type gun inside fairing on starboard side of fuselage undersurface, fairing for recording camera on other side.

DIMENSIONS, EXTERNAL:

Wing span: 16° sweep	17.64 m (57 ft 10½ in)
69° sweep	10.365 m (34 ft 0 in)
Wing aspect ratio: 16° sweep	5.63
69° sweep	2.10
Length overall, incl probe:	
Su-24	22.67 m (74 ft 4½ in)
Su-24M	24.595 m (80 ft 8⅜ in)
Height overall: Su-24	5.92 m (19 ft 5 in)
Su-24M	6.19 m (20 ft 3¾ in)

Sukhoi Su-24MP ('Fencer-F') electronic warfare/jamming/sigint aircraft *(F. G. Rozendaal)* 1995

Tailplane span	8 39 m (27 ft 6½ in)
Wheel track	3 31 m (10 ft 10½ in)
Wheelbase	8 51 m (27 ft 11 in)
AREAS	
Wings, gross 16° sweep	55 17 m² (593 8 sq ft)
69° sweep	51 02 m² (549 2 sq ft)
Leading-edge flaps (total)	3 035 m² (32.68 sq ft)
Trailing edge flaps (total)	10.21 m² (109 90 sq ft)
Spoilers (total)	2 06 m² (22.17 sq ft)
Fin	9 47 m² (101.94 sq ft)
Rudder	1 37 m² (14.75 sq ft)
Horizontal tail surfaces (total)	13.705 m² (147 55 sq ft)
WEIGHTS AND LOADINGS (Su-24M)	
Weight empty, equipped	22,300 kg (49,163 lb)
Max internal fuel	9,764 kg (21,526 lb)
Max external stores	8,100 kg (17,857 lb)
Normal T-O weight	35,970 kg (79,300 lb)
Max T-O weight	39,570 kg (87,235 lb)
Max landing weight	24,500 kg (54,012 lb)
Max wing loading	775.6 kg/m² (158.8 lb/sq ft)
Max power loading	180.2 kg/kN (1.77 lb/lb st)
PERFORMANCE (Su-24MK)	
Max level speed, clean at height	Mach 1 35
at S/L	Mach 1 08 (712 kts, 1,320 km/h, 820 mph)
Stalling speed, flaps and wheels down	151 kts (280 km/h, 174 mph)
Max rate of climb at S/L	9,000 m (29,525 ft)/min
Service ceiling	17,500 m (57,400 ft)
T-O run	1,300 m (4,265 ft)
T-O to 15 m (50 ft)	1,500 m (4,920 ft)
Landing from 15 m (50 ft)	1 600 m (5,250 ft)
Landing run	950 m (3,120 ft)
Combat radius:	
lo-lo-lo	over 174 n miles (322 km, 200 miles)
lo-lo-hi with 2,500 kg (5,500 lb) of weapons	515 n miles (950 km, 590 miles)
hi-lo-hi, with 3,000 kg (6,615 lb) of weapons and two external tanks	565 n miles (1,050 km, 650 miles)
g limit	+6.5

UPDATED

Cockpit of Sukhoi Su-24MR ('Fencer-E') *(Brian M. Service)* 1997

SUKHOI Su-25 and Su-28

NATO reporting name: Frogfoot

TYPE: Single-seat close support aircraft and two-seat trainer

PROGRAMME: Development began 1968, prototype, known as T 8-1, flew 22 February 1975, with two 25.5 kN (5 732 lb st) non-afterburning versions of Tumansky RD-9 turbojet and underbelly twin-barrel AO-17A 30 mm gun in fairing in eventual developed form, second prototype, T-8-2, had more powerful non afterburning versions of R 13, designated R 95Sh, wingtip avionics/speed brake pods, under wing weapon pylons, and internal gun, observed by satellite at Ramenskoye flight test centre 1977, given provisional US designation 'Ram-J'; entered production 1978 with R-95 turbojets, trials unit, followed by squadron of 12, sent to Afghanistan for co-ordinated low-level close support of Soviet ground forces in mountain terrain, with Mi 24 helicopter gunships, fully operational 1984, attack versions built initially at Tbilisi, Georgia, production at Tbilisi ended 1989 (approximately 330 built), production now at Ulan-Ude; all production for CIS completed 1991 92: see separate entry on Su 25T

CURRENT VERSIONS: **Su-25** ('Frogfoot A'). Single-seat close support aircraft. Export version **Su-25K** (kommercheskiy; commercial) *Detailed description applies basically to late production Su-25K.*

Su-25UB ('Frogfoot B'). Tandem two-seat operational conversion and weapons trainer; first photographs Spring 1989, rear seat raised considerably, giving humpback appearance, separate hinged portion of continuous framed canopy over each cockpit, taller tailfin, increasing overall height to 5 20 m (17 ft 0¾ in); new IFF blade antenna forward of windscreen instead of SRO-2 (NATO 'Odd Rods'); weapons pylons and gun retained Export version **Su-25UBK**.

Su-25UT ('Frogfoot-B'): As Su-25UB, but without weapons, prototype first flew 6 August 1985, demonstrated 1989 Paris Air Show as **Su-28**, overall length 15 36 m (50 ft 4¾ in), few only

Su-25UTG (G for gak; hook) ('Frogfoot-B'): As Su 25UT, with added arrester hook under tail, used initially for deck landing training on dummy flight deck marked on runway at Saki naval airfield, Ukraine, on 1 November 1989 was third aircraft to land for trials on carrier *Admiral of the Fleet Kuznetsov*, after Su-27K and MiG 29K, 10 built in 1989 90, five in Ukrainian use at Saki; one lost, four at Severomorsk, Kola Peninsula, for service individually on *Kuznetsov*

Su-25UBP: Ten standard Su-25UBs were to be converted to Su 25UBP (Palubnyi shipborne) for service on *Admiral of the Fleet Kuznetsov* to supplement Su-25UTGs Reportedly cancelled

Su-25T: See separate entry

Su-25BM (BM for buksir misheney, target towing aircraft) As Su-25 attack aircraft, with added underwing pylons for rocket-propelled targets released for missile training by fighter pilots

CUSTOMERS: Russian tactical air forces have 192, Naval Aviation has 55, exports to Afghanistan, Angola (10), Bulgaria (24), Czech Republic (30), Hungary (38), Iraq (45) and Slovakia (eight).

DESIGN FEATURES: Shoulder mounted wings; approximately 20° sweepback; anhedral from roots; extended chord leading-edge dogtooth on outer 50 per cent each wing, wingtip pods each split at rear to form airbrakes that project above and below pod when extended, retractable landing light in base of each pod, outboard of small glareshield and aft of dielectric nosecap for ECM, semi-monocoque fuselage, with 24 mm (0 94 in) welded titanium armoured cockpit, pitot on port side of nose, transducer to provide data for fire control computer on starboard side, conventional tail unit; variable incidence tailplane, with slight dihedral

Emphasis on survivability led to features accounting for 7 5 per cent of normal T-O weight, including armoured cockpit, pushrods instead of cables to actuate flying control surfaces (duplicated for elevators), damage-resistant main load-bearing members, widely separated engines in stainless steel bays fuel tanks filled with reticulated foam for protection against explosion

Maintenance system packaged into four pods for carriage on underwing pylons, covers onboard systems checks, environmental protection, ground electrical power supply for engine starting and other needs, and pressure refuelling from all likely sources of supply in front line areas, engines can operate on any fuel likely to be found in combat area, including MT petrol and diesel oil.

FLYING CONTROLS: Hydraulically actuated ailerons, with manual back-up, multiple tabs in each aileron, double slotted two-section wing trailing-edge flaps; full span leading-edge slats, two segments per wing, manually operated elevators and two-section inset rudder, upper rudder section operated through sensor vanes and transducers on nose probe and automatic electromechanical yaw damping system, tabs in lower rudder segment and each elevator

STRUCTURE: All-metal; three spar wings, semi monocoque slab-sided fuselage

LANDING GEAR: Hydraulically retractable tricycle type, mainwheels retract to lie horizontally in bottom of engine air intake trunks. Single wheel with low-pressure tyre on each

levered suspension unit, with oleo-pneumatic shock absorber; mudguard on forward-retracting steerable nosewheel, which is offset to port. Mainwheel tyres size 840 × 360 mm, pressure 9.3 bars (135 lb/sq in); nosewheel tyre size 660 × 200 mm, pressure 7.35 bars (106 lb/sq in). Brakes on mainwheels. Twin cruciform brake-chutes housed in tailcone.

POWER PLANT: Two Soyuz/Tumansky R-195 turbojets in long nacelles at wingroots, each 44.18 kN (9,921 lb st); 5 mm thick armour firewall between engines, current upgraded R-195 turbojets have pipe-like fitment at end of tailcone, from which air is expelled to lower exhaust temperature and so reduce infra-red signature; non-waisted undersurface to rear cowlings, which have additional small air-scoops (as three-view). Fuel tanks in fuselage between cockpit and wing front spar, and between rear spar and fin leading-edge, and in wing centre-section, provision for four PTB-1500 external fuel tanks on underwing pylons.

ACCOMMODATION: Single K-36L zero/zero ejection seat under sideways-hinged (to starboard) canopy, with small rear-view mirror on top; flat bulletproof windscreen. Folding ladder for access to cockpit built into port side of fuselage.

SYSTEMS: 28 V DC electrical system, supplied by two engine-driven generators.

AVIONICS: *Comms*: SRO-1P (NATO 'Odd Rods') or (later) SRO-2 IFF transponder, with antennae forward of windscreen and under tail.

Mission: Laser rangefinder and target designator under flat sloping window in nose, strike camera in top of nosecone.

Self-defence: Sirena-3 radar warning system antenna above fuselage tailcone; ASO-2V chaff/flare dispensers (total of 256 flares) can be carried above root of tailplane and above rear of engine ducts.

ARMAMENT: One twin-barrel AO-17A 30 mm gun with rate of fire of 3,000 rds/min in bottom of front fuselage on port side, with 250 rounds (sufficient for a one second burst during each of five attacks). Eight large pylons under wings for 4,400 kg (9,700 lb) of air-to-ground weapons, including UB-32A rocket pods (each 32 × 57 mm S-5), B-8M1 rocket pods (each 20 × 80 mm S-8), 240 mm S-24 and 330 mm S-25 guided rockets, Kh-23 (NATO AS-7 'Kerry'), Kh-25 (AS-10 'Karen') and Kh-29 (AS-14 'Kedge') air-to-surface missiles, laser-guided rocket-boosted 350 kg, 490 kg and 670 kg bombs, 500 kg incendiary, anti-personnel and other cluster bombs, and SPPU-22 pods each containing a 23 mm GSh-23 gun with twin barrels that can pivot downward for attacking ground targets, and 260 rounds. Two small outboard pylons for R-3S (K-13T; NATO AA-2D 'Atoll') or R-60 (AA-8 'Aphid') air-to-air self-defence missiles.

Sukhoi Su-25 ('Frogfoot-A') close support aircraft of Czech Air Force (*Paul Jackson*) *1995*

DIMENSIONS, EXTERNAL (Su-25K):

Wing span	14.36 m (47 ft 1½ in)
Wing aspect ratio	6.12
Length overall	15.53 m (50 ft 11½ in)
Height overall	4.80 m (15 ft 9 in)

AREAS:

Wings, gross	33.7 m² (362.75 sq ft)

WEIGHTS AND LOADINGS:

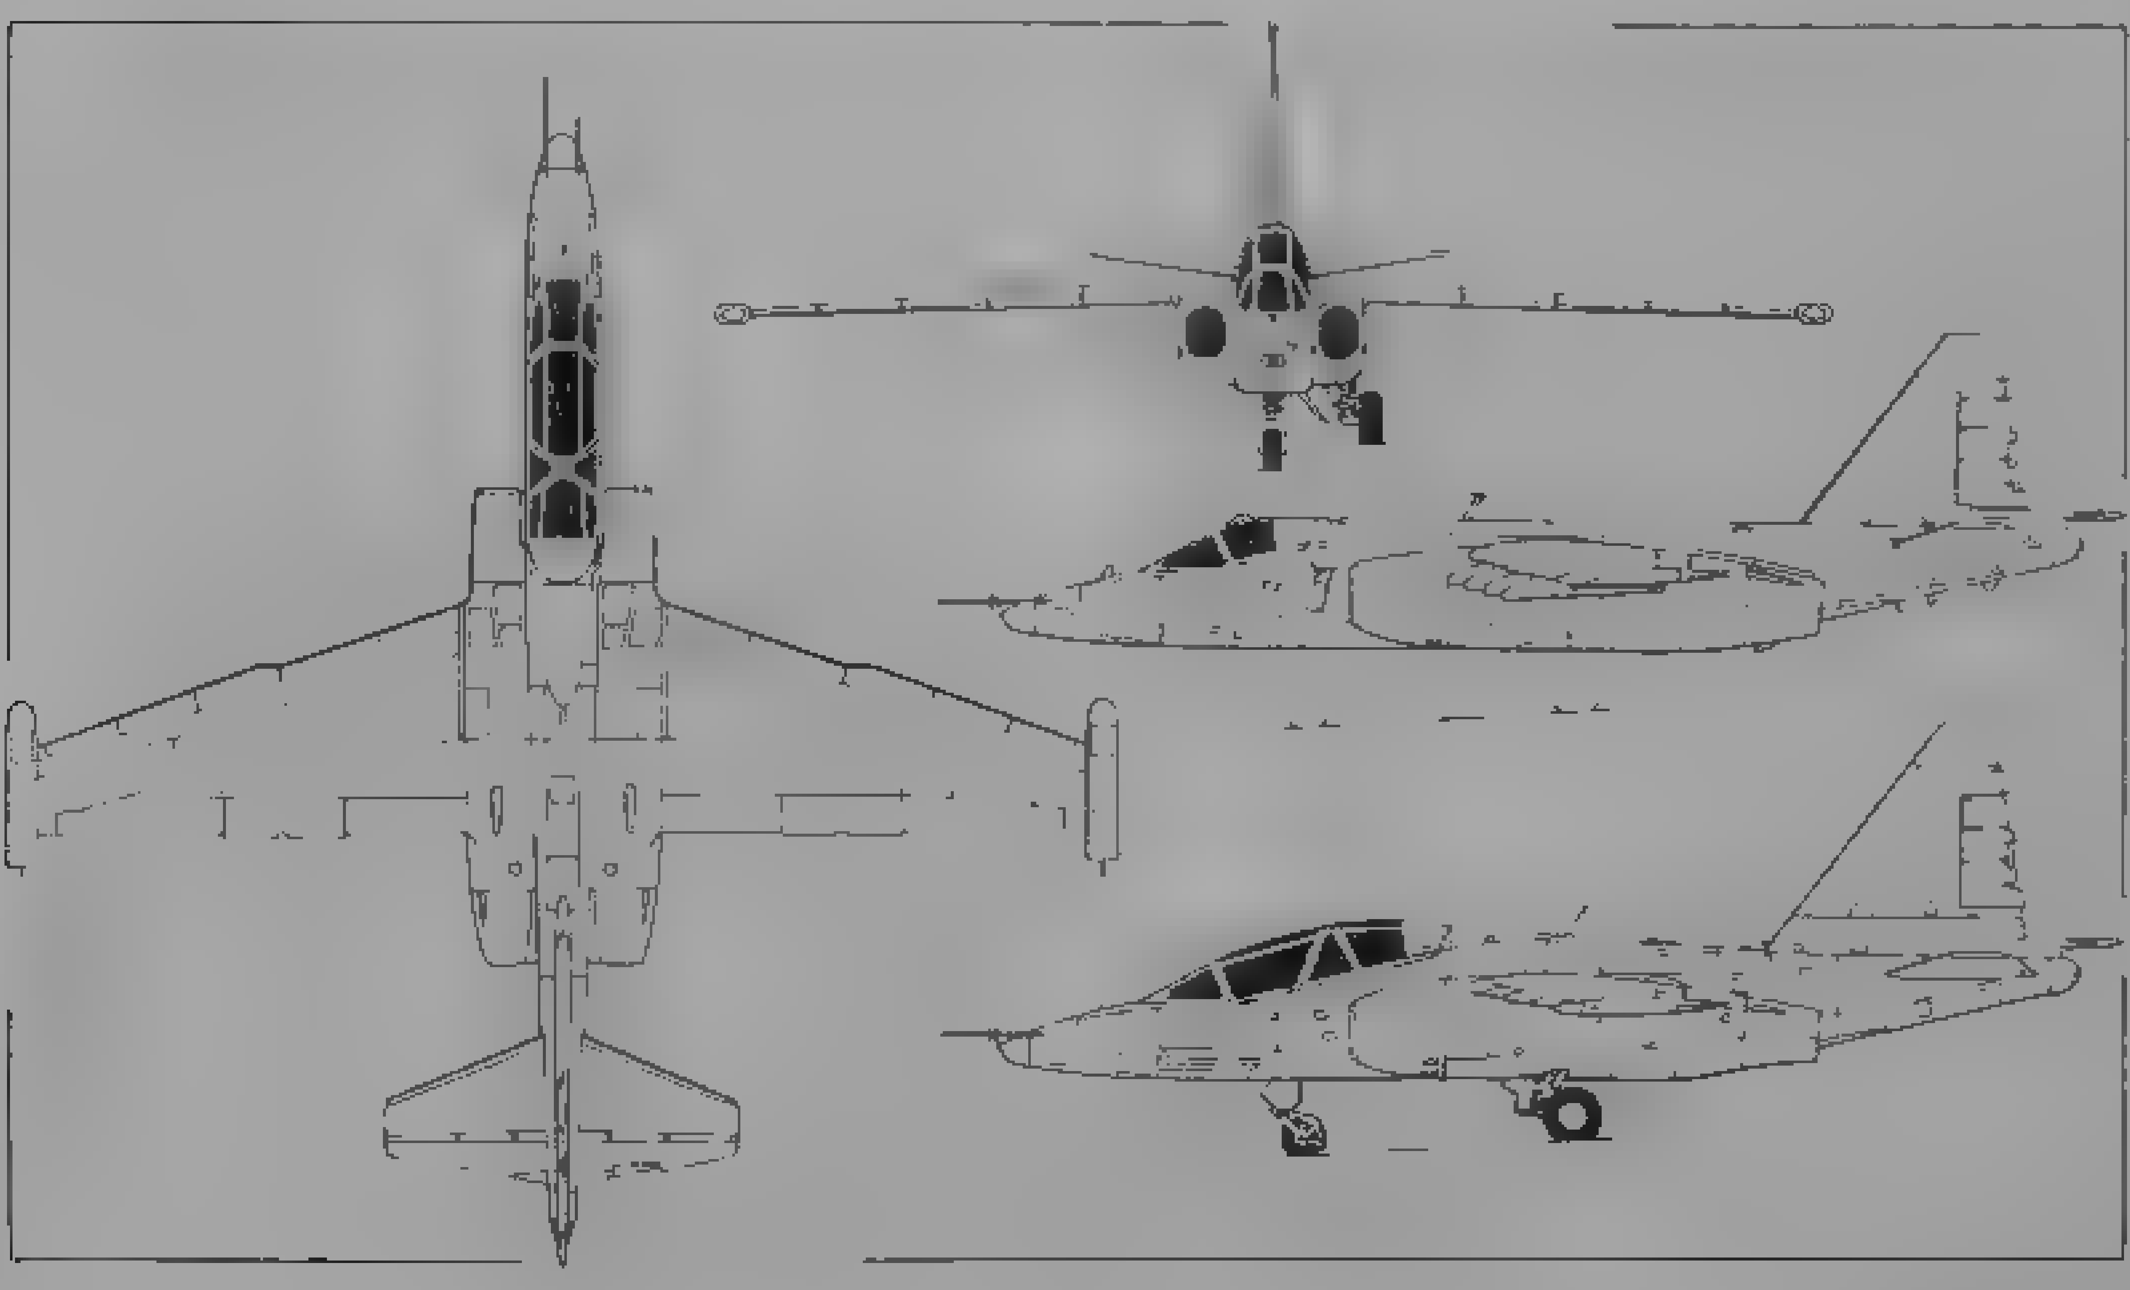
Weight empty	9,500 kg (20,950 lb)
Max T-O weight	14,600-17,600 kg (32,187-38,800 lb)
Max landing weight	13,300 kg (29,320 lb)
Max wing loading	522.2 kg/m² (107.0 lb/sq ft)
Max power loading	199.2 kg/kW (1.96 lb/lb st)

PERFORMANCE:

Max level speed at S/L	Mach 0.8 (526 kts; 975 km/h, 606 mph)
Max attack speed, airbrakes open	372 kts (690 km/h, 428 mph)
Landing speed (typical)	108 kts (200 km/h, 124 mph)
Service ceiling: clean	7,000 m (22,965 ft)
with max weapons	5,000 m (16,400 ft)
T-O run: typical	600 m (1,970 ft)
with max weapon load from unpaved surface	under 1,200 m (3,935 ft)
Landing run: normal	600 m (1,970 ft)
with brake-chutes	400 m (1,312 ft)
Range with 4,400 kg (9,700 lb) weapon load and two external tanks: at S/L	405 n miles (750 km; 466 miles)
at height	675 n miles (1,250 km; 776 miles)
g limits, with 1,500 kg (3,306 lb) of weapons	+6.5
with 4,400 kg (9,700 lb) of weapons	+5.2

UPDATED

Sukhoi Su-25UB ('Frogfoot-B') operational conversion and weapons trainer (*F. G. Rozendaal*) *1995*



Sukhoi Su-28 (Su-25UT), with added side elevation (centre) of Su-25K (*Jane's/Dennis Punnett*) *1990*

SUKHOI Su-25T

TYPE: Single-seat anti-tank aircraft.

PROGRAMME: Three **Su-25T** development aircraft (Sukhoi T-8M) were converted Su-25UB airframes, with humped rear cockpit faired over and internal space used to house new avionics and extra tonne of fuel; conversions began 1976, first flight 17 August 1984, construction of initial batch of 10 preseries aircraft for air force acceptance testing began 1979; first one flew 1989, redesignated **Su-25TM** after equipment changes, first exhibited at Dubai '91 Air Show as export **Su-25TK**, deliveries began 1991, with initial operational capability 1993, total of 20 delivered by 1 January 1994, former designation Su-39 now reallocated.

DESIGN FEATURES: Basically as Su-25 (which see), but embodies lessons learned during war in Afghanistan, particularly survival in intense anti-aircraft defence environment. New nav system makes possible flights to and from combat areas under largely automatic control; equipment in widened nose includes TV activated some 5 n miles (10 km, 6 miles) from target, subsequent target tracking, weapon selection and release automatic; wingtip countermeasures pods introduced, gun transferred to underbelly position, on starboard side of farther-offset nosewheel. Wing leading-edge sweepback 19° 54′, aspect ratio 6.0, dihedral 2° 30′, incidence 0° 43′.

FLYING CONTROLS: Basically as Su-25. Trim only on rudder; artificial feel in lateral and longitudinal channels. SAU-8 automatic control system.

LANDING GEAR: KT-163D mainwheels, with tyre size 840 × 360 mm, pressure 9.3 bars (135 lb/sq in). KH-27A nosewheel, with tyre size 680 × 260 mm, pressure 7.35 bars (106 lb/sq in), metal and ceramic disc brakes, with anti-skid units. Two PTK-25 cruciform brake-chutes, each 13.0 m² (140 sq ft).

POWER PLANT: As Su-25. Ten internal fuel tanks, total capacity 4,890 litres (1,292 US gallons; 1,076 Imp gallons). Provision for four 800 litre (211 US gallon; 176 Imp gallon) or two 1,150 litre (304 US gallon; 253 Imp gallon) underwing tanks. Single-point pressure fuelling in starboard engine air intake duct, optional gravity fuelling.

ACCOMMODATION: As Su-25.

SYSTEMS: Pressurised cockpit, maximum differential 0.25 bar (3.55 lb/sq in). Hydraulic system using AMG-10 fluid, flow rate 76 litres (20 US gallons; 17.7 Imp gallons)/min, pressure 207 bars (3,000 lb/sq in). AC and DC electrical systems. Gaseous oxygen system.

AVIONICS: *Radar*: Kinzhal (dagger) radar.

Flight: Nav system has two digital computers and inertial platform.

Instrumentation: HUD, Voskhod nav/attack system and Schkval electro-optical system for precision attacks on armour.

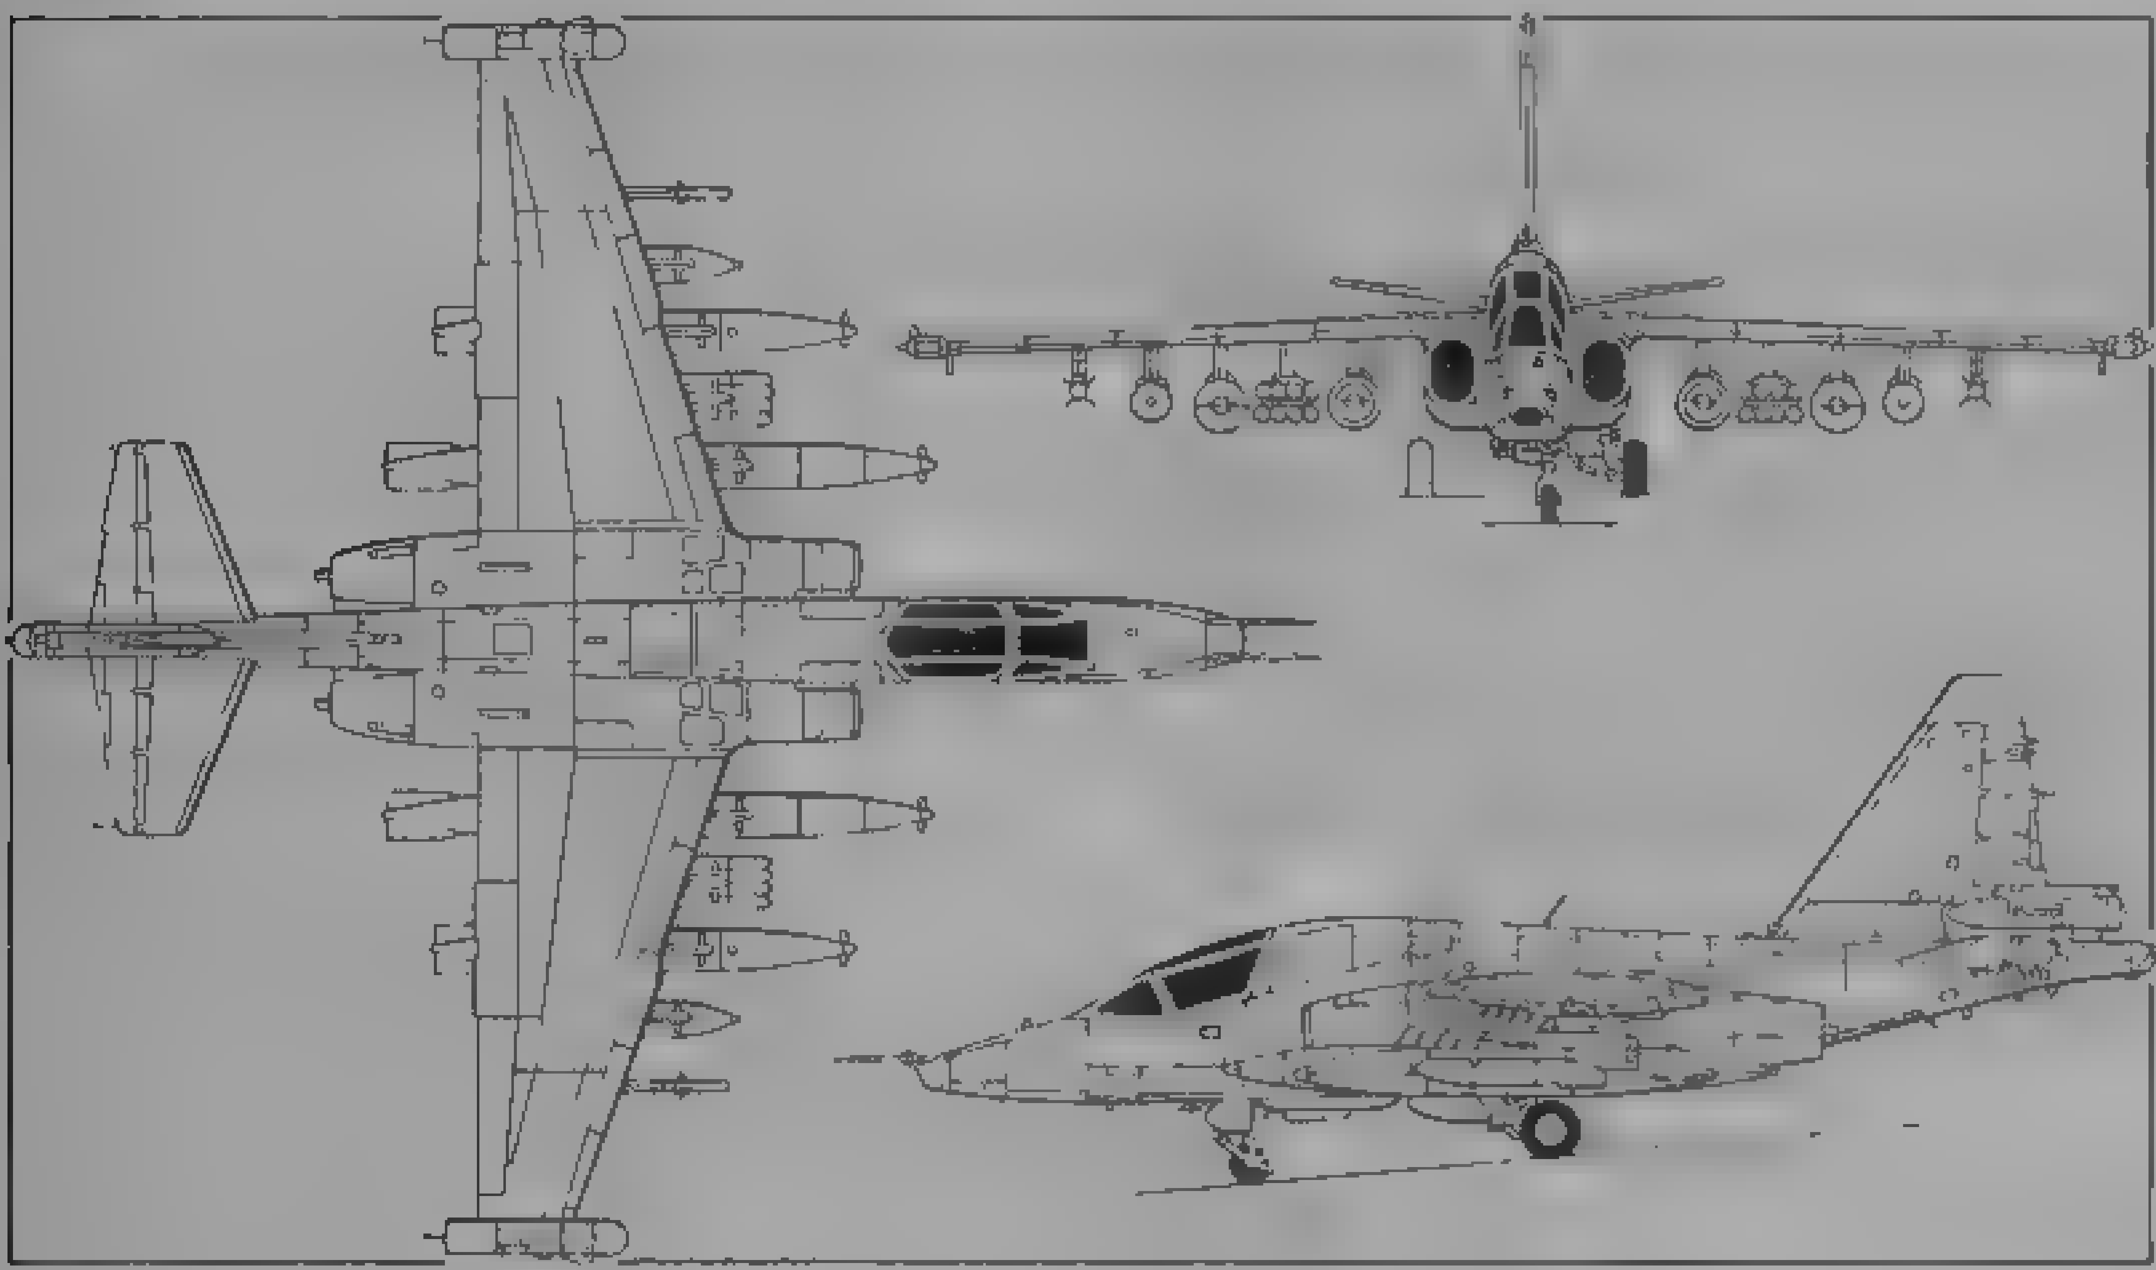
Mission: Larger window in nose for TV, laser rangefinder and target designator of improved capability, all using same stabilised mirror, 23× magnification lens and cockpit CRT, Khod (motion) centreline IR pack.

Self-defence: Radar warning/emitter location system, chaff/flare dispensers in top of fuselage tailcone and in large cylindrical housing at base of rudder that also contains IR jammer optimised against Stinger and Redeye missile frequencies.

ARMAMENT: One NNPU-8M twin-barrel 30 mm gun with 200 rounds, 10 external stores attachments; two eight-round underwing clusters of Vikhr (AT-9) tube-launched primary attack missiles able to penetrate 900 mm of reactive armour; other weapons include laser-guided Kh-25ML (AS-10 'Karen') and Kh-29L (AS-14 'Kedge'),

Sukhoi Su-25T adaptation of Su-25 ('Frogfoot') *(Paul Jackson)*

1995



Sukhoi Su-25T single-seat anti-tank aircraft *(Jane's/Mike Keep)*

1992

rocket/ramjet Kh-31A/P (AS-17 'Krypton') and anti-radiation Kh-58 (AS-11 'Kilter') air-to-surface missiles, KAB-500 laser-guided bombs, S-25L laser-guided rockets and R-60 (AA-8 'Aphid') air-to-air missiles.

DIMENSIONS, EXTERNAL:

Wing span	14.52 m (47 ft 7¾ in)
Wing chord: at root	3.00 m (9 ft 10¼ in)
at tip	1.025 m (3 ft 4¼ in)
Length overall	15.35 m (50 ft 4½ in)
Height overall	5.20 m (17 ft 0¾ in)
Tailplane span	4.58 m (15 ft 0½ in)
Wheel track	2.505 m (8 ft 2¾ in)

AREAS:

Wings, gross	30.10 m² (324.00 sq ft)
Ailerons (total)	1.51 m² (16.25 sq ft)
Trailing-edge flaps (total)	4.44 m² (47.79 sq ft)
Leading-edge slats (total)	3.16 m² (34.02 sq ft)
Fin	5.28 m² (56.84 sq ft)
Rudder	0.75 m² (8.07 sq ft)
Tailplane	5.61 m² (60.39 sq ft)
Elevators (total)	1.88 m² (20.24 sq ft)

WEIGHTS AND LOADINGS:

Max combat load	4,360 kg (9,612 lb)
Max fuel: internal	3,840 kg (8,465 lb)
external	3,070 kg (6,768 lb)
Max T-O weight	19,500 kg (42,990 lb)
Max landing weight	13,200 kg (29,100 lb)
Max wing loading	648.0 kg/m² (132.7 lb/sq ft)
Max power loading	220.7 kg/kN (2.17 lb/lb st)

PERFORMANCE:

Never-exceed speed (VNE)	Mach 0.82
Max level speed at S/L	Mach 0.77 (512 kts; 950 km/h; 590 mph)
Max cruising speed at 200 m (650 ft)	378 kts (700 km/h; 435 mph)
Econ cruising speed	350 kts (650 km/h; 404 mph)
Max rate of climb at S/L	3,480 m (11,415 ft)/min
Rate of climb at S/L, OEI	1,020 m (3,345 ft)/min
Service ceiling	10,000 m (32,800 ft)
Service ceiling, OEI	9,000 m (29,525 ft)
T-O run: normal	600 m (1,970 ft)
unpaved runway	700 m (2,300 ft)
Landing run	700 m (2,300 ft)
Combat radius with 2,000 kg (4,410 lb) weapon load: at S/L	215 n miles (400 km; 248 miles)
at height	378 n miles (700 km; 435 miles)
Ferry range	1,350 n miles (2,500 km; 1,550 miles)
g limits	+6.5

UPDATED

SUKHOI Su-26M

TYPE: Single-seat aerobatic competition aircraft.

PROGRAMME: Su-26 prototype first flew June 1984, took part in World Aerobatic Championships, Hungary, August 1984 (details in 1985-86 *Jane's*); modified Su-26Ms identified by sharp-cornered (rather than rounded) rudder and reduced fuselage side glazing, gained both men's and women's team prizes 1986 Championships, UK; further refined **Su-26M** shown 1989 Paris Air Show; pilots of former USSR had won 61 gold medals in competitions when **Su-26MX** (X for export) appeared at Farnborough Air Show 1990; in production.

CUSTOMERS: Marketed worldwide; approximately 70 built by early 1995, exported principally to USA, but also UK, Switzerland and elsewhere.

DESIGN FEATURES: Typical aerobatic competition aircraft, mid-wing of specially developed symmetrical section, variable along span, slightly concave in region of ailerons to increase their effectiveness, leading-edge somewhat sharper than usual to improve responsiveness to control surface movement; thickness/chord ratio 18 per cent at root, 12 per cent at tip; no dihedral, incidence or sweep at quarter-chord.

FLYING CONTROLS: Mechanical actuation: ailerons and elevators by pushrods, rudder by cables; each aileron has ground adjustable tab on trailing-edge and two suspended triangular balance tabs; no flaps; horn balanced rudder and elevators, each with ground adjustable tab.

STRUCTURE: Composites comprise more than 50 per cent of airframe weight; one-piece wing, covered with honeycomb composite panels; foam filled front box spar with CFRP booms and wound glassfibre webs; channel section rear spar of CFRP; titanium truss ribs; plain ailerons have CFRP box spar, GFRP skin and foam filling; fuselage has basic welded truss structure of VNS-2 high strength stainless steel tubing, lower nose section of truss removable for wing detachment, quickly removable honeycomb composite skin panels, light alloy engine cowlings; integral fin and tailplane construction same as wings; rudder and elevator construction same as ailerons.

LANDING GEAR: Non-retractable tailwheel type, arched cantilever mainwheel legs of titanium alloy; mainwheels size 400 × 150 mm, with hydraulic disc brakes; steerable tail wheel, on titanium spring, connected to rudder.

POWER PLANT: One 294 kW (394 hp) VOKBM M-14PF nine-cylinder radial engine, three-blade Gerd Muhlbauer variable-pitch metal propeller; optional V-530TA-D35

Cockpit of Sukhoi Su-25T *(Piotr Butowski)*

1995

two-blade variable-pitch propeller Steel tube engine mounting. Fuel tank in fuselage forward of front spar, capacity 63 litres (16 6 US gallons, 13 8 Imp gallons); tank in each wing leading-edge, total 200 litres (53 US gallons, 44 Imp gallons), for ferry flights, oil capacity 22.6 litres (6 US gallons, 5 Imp gallons), fuel and oil systems adapted for inverted flight, pneumatic engine starting system

ACCOMMODATION One-piece pilot's seat of GFRP, inclined at 45° and designed for use with PLP 60 backpack parachute, rearward-hinged jettisonable canopy; safety harness anchored to fuselage structure

SYSTEMS Electrical system 24/28 V, with 3 kW generator, batteries and external supply socket

AVIONICS: *Comms* Briz VHF radio

DIMENSIONS, EXTERNAL

Wing span	7 80 m (25 ft 7 in)
Wing chord, at root	1 95 m (6 ft 4¾ in)
at tip	1.10 m (3 ft 7¼ in)
Wing aspect ratio	5 6
Length overall	6.845 m (22 ft 5½ in)
Height overall	2 78 m (9 ft 1½ in)
Tailplane span	2 95 m (9 ft 8¼ in)
Wheel track	2.20 m (7 ft 2½ in)
Wheelbase	5 05 m (16 ft 6¾ in)
Propeller diameter	2.40 m (7 ft 10½ in)

AREAS

Wings, gross	11 80 m² (127 0 sq ft)
Ailerons (total)	1 18 m² (12 70 sq ft)
Fin	0 34 m² (3 66 sq ft)
Rudder	0 89 m² (9 58 sq ft)
Tailplane	1 10 m² (11 84 sq ft)
Elevators (total)	1 53 m² (16.47 sq ft)

WEIGHTS AND LOADINGS

Weight empty	705 kg (1,554 lb)
Max T-O weight	1,000 kg (2,205 lb)
Max wing loading	84 75 kg/m² (17 36 lb/sq ft)
Max power loading	3 73 kg/kW (6 13 lb/hp)

PERFORMANCE

Never-exceed speed (VNE)	243 kts (450 km/h, 280 mph)
Max level speed at S/L	167 kts (310 km/h, 192 mph)
Normal cruising speed	140 kts (260 km/h, 161 mph)
T O speed	65 kts (120 km/h; 75 mph)
Landing speed	62 kts (115 km/h; 72 mph)
Stalling speed	60 kts (110 km/h, 69 mph)
Max rate of climb at S/L	1 080 m (3 540 ft)/min
Service ceiling	4,000 m (13,125 ft)
Rate of roll	more than 360°/s
T-O run	160 m (525 ft)
Landing run	250 m (820 ft)
Ferry range at 1,000 m (3,280 ft)	432 n miles (800 km, 497 miles)
g limits	+12/−10 (operating) +23 (ultimate)

UPDATED

SUKHOI Su-27

NATO reporting name Flanker

TYPE: Single-seat all-weather air superiority fighter and single/two-seat ground attack aircraft, two-seat combat trainer

PROGRAMME: Development began 1969 under leadership of Pavel Sukhoi, construction of T 10-1 prototype (first of 15 **Su-27** 'Flanker-As'), under Mikhail Simonov's supervision, began 1974 and it was flown 20 May 1977 by Vladimir Ilyushin. Prototypes had curved wingtips rearward-retracting nosewheel, tailfins mounted centrally above engine housings, development was not easy, two pilots lost their lives before major airframe redesign resulted in T-10S production configuration, production began 1979 with first flight of production aircraft 1981 and entry into service 1985, current production, for export only, centred in plant at Komsomolsk-on-Amur, Khabarovsk Territory, ground attack role observed in 1991

CURRENT VERSIONS: **Su-27P** ('Flanker-B'): Single-seat land based production version for air defence force, square wingtips, carrying air-to-air missile launchers; tailfins outboard of engine housings; extended tailcone, forward-retracting nosewheel, first flown 20 April 1981. Standard radar tracks 10 targets simultaneously, engages only one *Detailed description applies to this version, except where indicated*

Su-27S ('Flanker B'): As Su-27P but delivered to tactical air forces for dual role air combat/ground attack operation, distinguished by Sorbtsya active ECM jammer pods, each approximately 4 0 m (13 ft 1½ in) long, on wingtips Armament, totalling up to 4,000 kg (8,818 lb), includes 250 and 500 kg bombs, packs of 80, 130 and 250 mm rockets, KMGU cluster bombs, or podded 30 mm gun with downward-deflecting barrel for air-to-ground and air-to-air use. Export version is **Su-27SK**, with upgraded radar

Su-27PD: Basic Su-27P, specially prepared for demonstration flying by Anatoli Kvotchur. Added in-flight refuelling probe on port side of windscreen. At least one aircraft (27598)

Su-27UB ('Flanker-C'): Tandem two-seat trainer version of 'Flanker-B' with full combat capability (Sukhoi designation T-10U); instructor in raised rear seat, taller fin, overall height 6 357 m (20 ft 10¼ in). Built at Irkutsk (more than 50 aircraft)

Su-27LL-PS: Su-27UB (T-10-16, '08') modified for thrust-vectoring development, first with large two- and three-dimensional box nozzle on port tailpipe and later with similar nozzles on both tailpipes. Trials at Zhukovsky test centre, under direction of TsIAM and Saturn/Lyulka OKB

Su-27K (K for korabelnyy, ship based): Two prototypes for Su-33 (which see)

Su-27KU (**Su-27IB**: Istrebitel Bombardirovschik fighter-bomber): Side by side two-seat Su-27 variant, first flown ('42') 13 April 1990; first seen in *Tass* photograph showing this aircraft approaching (but not necessarily landing on) the carrier *Admiral of the Fleet Kuznetsov*; described as **Su-27KU** deck landing trainer, but no wing folding or deck arrester hook, foreplanes and twin nosewheels like Su-27K, completely new and wider front fuselage, with wing extensions taken forward as chines to tip of nose: shallow nose, without radar, reminiscent of US Lockheed SR-71 and source of Russian unofficial name 'Platypus', deep fairing behind wide curved canopy, no IRST. Nosewheel leg moved forward to retract rearward, four nosewheel doors replace usual single door; no ventral fins, K 36 ejection seats staggered and splayed to separate pilots after ejection; 30 mm gun retained. Under designation **Su-27IB**, '42' exhibited to CIS leaders at Machulishche airfield, Minsk, February 1992, with simulated attack armament on 10 external stores pylons (under each intake duct, on each wingtip, three under each wing); Kh-31A/P (AS 17 'Krypton') air-to-surface missiles under ducts, R 73A (AA 11 'Archer') air to-air missiles on wingtips; a 500 kg laser guided bomb inboard, TV/laser-guided Kh 29 (AS 14 'Kedge') on central pylon and R 77 (AA 12 'Adder') air to-air missile outboard under each wing, retractable flight refuelling probe. Further development as **Su-32FN/Su-34** (which see)

Su-27PU: Two prototypes only, described in 1993 94 *Jane's* In production as Su 30 (which see)

P-42: Specially prepared Su-27, set 31 official world records, including climb to 12,000 m (39,370 ft) in 55,542 seconds, and to 22,250 m (73,000 ft) with 1,000 kg (2,205 lb) payload, some records are in FAI category for STOL aircraft

Su-30: See separate entry.

Su-33: See separate entry

Su-35: See separate entry

CUSTOMERS: More than 200 delivered to Russian home defence interceptor force and 150 to fighter components of tactical air forces, China received 26 (24 single-seat, two two-seat) in 1991-92, 24 more (22 single-seat, two two-seat) ordered 1995, licence manufacture being negotiated, Vietnam has first batch of about six; Syria has requested 14

DESIGN FEATURES: Developed to replace Yak 28P, Su 15 and Tu 28P/128 interceptors in APVO, for dual role ground attack/air combat and to escort Su 24 deep penetration strike missions; basic requirement was effective engagement of F-15 and F-16 and other future aircraft and cruise missiles; exceptional range on internal fuel made flight refuelling unnecessary until Su-24s received probes, external fuel tanks still not considered necessary, all swept integrated mid-wing configuration, with long curved wing leading-edge root extensions, lift-generating fuselage, twin tailfins and widely spaced engines with wedge intakes; rear-hinged doors in intakes hinge up to prevent ingestion of foreign objects during take-off and landing, integrated fire control system with pilot's helmet-mounted target designator; exceptional high-Alpha performance, basic wing leading-edge sweepback 42°, no dihedral or incidence

FLYING CONTROLS: Four-channel analog fly-by-wire, no mechanical back-up; artificial feel, inherently unstable, no ailerons; full-span leading-edge flaps and plain half-span inboard flaperons controlled manually for take-off and landing, computer-controlled in flight, differential/collective tailerons operate in conjunction with flaperons and rudders for pitch and roll control, flight control system limits *g* loading to +9 and normally limits angle of attack to 30 to 35°; angle of attack limiter can be overruled manually for certain flight manoeuvres, large door-type airbrake in top of centre-fuselage

STRUCTURE: All metal, with extensive use of aluminium-lithium alloys and many titanium components but no composites; comparatively conventional three-spar wings basically circular section semi-monocoque fuselage, sloping down sharply aft of canopy; cockpit high-set behind drooped nose, large ogival dielectric nosecone, long rectangular blast panel forward of gun on starboard side, above wingroot extension, two-spar fins and horizontal tail surfaces, uncanted vertical surfaces on narrow decks outboard of engine housings, fin extensions beneath decks form parallel, widely separated ventral fins.

LANDING GEAR: Hydraulically retractable tricycle type, made by Hydromash, with single wheel on each unit; main wheels retract forward into wingroots; steerable

Sukhoi Su-27PD single-seat air defence fighter modified for aerobatic displays *(Paul Jackson)*

1995

nosewheel, with mudguard, also retracts forward, mainwheel tyres 1300 × 350 mm; pressure 12.25 to 15.7 bars (178 to 227 lb/sq in), nosewheel tyre 680 × 260 mm, pressure 9.3 bars (135 lb/sq in); hydraulic brakes with two-signal anti-skid system, brake-chute housed in fuselage tailcone

POWER PLANT: Two Saturn/Lyulka AL-31F turbofans, each 122.6 kN (27,557 lb st) with afterburning. Large auxiliary air intake louvres in bottom of each three-ramp engine duct near primary wedge intake, two rows of small vertical louvres in each sidewall of wedge, and others in top face; fine grille screen hinges up from bottom of each duct to shield engine from foreign object ingestion during take-off and landing. Pressure or gravity fuelling

ACCOMMODATION: Pilot only, on Zvezda K-36MD zero/zero ejection seat, under large rearward-opening transparent blister canopy, with low sill

SYSTEMS: Automatically regulated cockpit air conditioning. Two independent hydraulic systems, pressure 275 bars (4,000 lb/sq in), for nosewheel steering, landing gear and wing flaps. Pneumatic system pressure 210 bars (3,045 lb/sq in) for back-up landing gear extension. DC and AC electrical supply. Gaseous oxygen for four flight hours

AVIONICS: Systems integrated by NPO Elektro Avtomatika.

Radar: Phazotron N001 Zhuk ('Slot Back') track-while-scan coherent pulse Doppler look-down/shoot-down radar (antenna diameter approximately 1.0 m; 3 ft 4 in) with search range of up to 54 n miles (100 km, 62 miles) against MiG-21 size target (ability to track 10 targets and engage two simultaneously in current Su-27SK).

Instrumentation: Integrated fire control system enables radar, IRST and laser rangefinder to be slaved to pilot's helmet-mounted target designator and displayed on wide-angle HUD, autopilot able to restore aircraft to right side-up level flight from any attitude when 'panic button' depressed

Mission: Infra-red search/track (IRST) sensor, range 27 n miles (50 km, 31 miles), and laser rangefinder, range 4.3 n miles (8 km, 5 miles), functioning through common optics in transparent housing forward of windscreen. Provision for reconnaissance pod on centreline pylon

Self-defence: Sirena-3 360° radar warning receivers outboard of each bottom air intake lip and at tail. Three banks of chaff/flare dispensers in bottom of long tailcone extension

ARMAMENT: One 30 mm GSh-301 gun in starboard wingroot extension, with 150 rounds. Up to 10 air-to-air missiles in air combat role, on tandem pylons under fuselage between engine ducts, beneath each duct, under each centre-wing and outer-wing, and at each wingtip. Typically, two short-burn semi-active radar homing R-27R (NATO AA-10A 'Alamo-A') in tandem under fuselage, two short-burn infra-red homing R-27T (AA-10B 'Alamo-B') missiles on centre-wing pylons, and long burn semi-active radar homing R-27ER (AA-10C 'Alamo-C') or infra-red R-27ET (AA-10D 'Alamo-D') beneath each engine duct. The four outer pylons carry either R-73A (AA-11 'Archer') or R-60 (AA-8 'Aphid') close-range infra-red missiles. R-33 (AA-9 'Amos') missiles optional in place of AA-10s

DIMENSIONS, EXTERNAL (Su-27P):
Wing span 14.70 m (48 ft 2¾ in)
Length overall, excl nose probe 21.935 m (71 ft 11½ in)
Height overall 5.932 m (19 ft 5½ in)
Fuselage: Max width 1.50 m (4 ft 11 in)
Tailplane span 9.90 m (32 ft 6 in)
Distance between fin tips 4.30 m (14 ft 1¼ in)
Wheel track 4.36 m (14 ft 3¾ in)
Wheelbase 5.88 m (19 ft 3½ in)

AREAS:
Wings, gross 62.0 m² (667.4 sq ft)
Vertical tail surfaces (total) 15.4 m² (165.75 sq ft)
Horizontal tail surfaces (total) 12.3 m² (132.4 sq ft)

WEIGHTS AND LOADINGS (B: Su-27P, C: Su-27UB):
Max T-O weight:
B 23,000-33,000 kg (50,705-72,750 lb)
C 22,500 kg (49,600 lb)
Max wing loading: B 491.9 kg/m² (100.75 lb/sq ft)
C 362.9 kg/m² (74.32 lb/sq ft)
Max power loading: B 124.4 kg/kN (1.22 lb/lb st)
C 91.8 kg/kN (0.90 lb/lb st)

PERFORMANCE:
Max level speed at height: B, C
Mach 2.35 (1,350 kts, 2,500 km/h, 1,550 mph)

g limit (operational): B, C	+9

UPDATED

SUKHOI Su-29

TYPE: Tandem two-seat training/single-seat aerobatic aircraft.

PROGRAMME: Announced at Moscow Aerospace '90 Air Show; design started 1990; construction of first of three prototypes and two static test airframes began 1991; prototype first flew 1991; first production aircraft May 1992; entered service July 1992.

CURRENT VERSIONS: **Su-29**: Basic two-seat training/aerobatic aircraft, as described.

Su-29KS: Development vehicle for Zvezda KS-38 lightweight ejection system. Exhibited at 1994 Farnborough Air Show.

Su-29M: Production version with KS-38 ejection seats.

CUSTOMERS: Over 35 basic Su-29s built and sold by late 1994; most exported to USA (eight in 1992, 10 in 1993; seven in 1994); others to Australia, South Africa and UK.

DESIGN FEATURES: Basically two-seat development of Su-26M; wing span and overall length increased; improved aerodynamics and reduced stability margin for enhanced manoeuvrability. Wing leading-edge sweepback 3° 28'; symmetrical section, thickness/chord ratio 16 per cent at root, 12 per cent at tip; aspect ratio 5.51; dihedral 0°; incidence 0°. Service life 1,250 hours.

FLYING CONTROLS: Mechanically actuated ailerons, elevators and rudder; elevators and rudder horn balanced; elevator trim; two suspended triangular balance tabs under each aileron. No flaps.

STRUCTURE: Generally as Su-26M, but proportion of composites increased by 60 per cent, limiting increase in empty weight.

LANDING GEAR: As Su-26M. Composites fairings optional for mainwheels.

POWER PLANT: Generally as Su-26M, but MTV-3 8-S-L250-21 three-blade propeller. Capacity of each wing fuel tank 106.5 litres (28.15 US gallons; 23.4 Imp gallons); total fuel capacity 276 litres (72.9 US gallons; 60.6 Imp gallons); gravity fuelling. Oil capacity 20 litres (5.3 US gallons; 4.4 Imp gallons).

ACCOMMODATION: Pilot only for aerobatic competition, two persons in tandem for training. Canopy opens normally sideways to starboard, upward and rearward in emergency to jettison. Dual controls standard. Space for 5 kg (11 lb) baggage in rear fuselage.

SYSTEMS: As Su-26M.

AVIONICS: As Su-26M, plus optional Bekker and Bendix/King nav and Garmin GPS.

DIMENSIONS, EXTERNAL:	
Wing span	8.20 m (26 ft 10¾ in)
Wing chord: at root	1.985 m (6 ft 6¼ in)
at tip	1.04 m (3 ft 4¾ in)
Length overall	7.285 m (23 ft 10¾ in)
Height overall	2.885 m (9 ft 5¾ in)
Tailplane span	2.90 m (9 ft 6¼ in)
Wheel track	2.40 m (7 ft 10½ in)
Wheelbase	5.08 m (16 ft 8 in)
Propeller diameter	2.50 m (8 ft 2½ in)
Propeller ground clearance	0.425 m (1 ft 4¾ in)
DIMENSIONS, INTERNAL:	
Cockpit: Length	2.60 m (8 ft 6¼ in)
Max width	0.82 m (2 ft 8¼ in)
Max height	1.05 m (3 ft 5¼ in)
Volume	4.42 m³ (156 cu ft)
AREAS:	
Wings, gross	12.203 m² (131.35 sq ft)
Ailerons (total)	2.32 m² (24.97 sq ft)
Fin	0.28 m² (3.01 sq ft)
Rudder	0.90 m² (9.69 sq ft)
Tailplane	0.98 m² (10.55 sq ft)
Elevators (total)	1.56 m² (16.79 sq ft)
WEIGHTS AND LOADINGS (two persons):	
Weight empty	735 kg (1,620 lb)
Max fuel	207 kg (456 lb)
Max T-O weight: pilot only	860 kg (1,896 lb)
two persons	1,204 kg (2,655 lb)
Max wing loading	98.7 kg/m² (20.2 lb/sq ft)
Max power loading	4.54 kg/kW (7.48 lb/hp)
PERFORMANCE:	
Never-exceed speed (V_{NE})	242 kts (450 km/h, 279 mph)
Max level speed	175 kts (325 km/h, 202 mph)
Stalling speed	62 kts (115 km/h, 72 mph)

UPDATED

SUKHOI Su-30

TYPE: Two-seat long-range combat trainer.

PROGRAMME: Design started 1986; construction of two prototypes began at Irkutsk in 1987 as Su-27PU, first flown 1988; prototype flew 7,252 n miles (13,440 km; 8,351 miles) in 15 hours 42 minutes non-stop during round trips Moscow-Novaya Zemlia-Moscow and Moscow-Komsomolsk-Moscow; first two production Su-30s, without military equipment, sold to aerobatic team at Zhukovsky flight test centre; in preseries production, small number built.

CURRENT VERSIONS: **Su-30** (Sukhoi T-10PU): Basic long-range fighter for PVO; designed for mission of 10 hours or more, including group missions with four Su-27s; only Su-30 would operate radar, enabling it to assign targets to Su-27s by radio datalink; can carry bombs and rockets but not guided air-to-surface weapons. Su-27UB training capability retained.

Su-30MK (Sukhoi T-10PMK): Multirole version, described separately.

DESIGN FEATURES: Development of Su-27/27UB, with latter's tandem seating and new avionics, but without Su-35's advanced radar, foreplanes, advanced control system and new power plant. Designed for effective engagement of fighters at long distances from base, and to destroy bombers and intercept cruise missiles. Integral configuration similar to Su-27UB, with unstable aerodynamic characteristics. Automatic control system standard.

FLYING CONTROLS: As Su-27.

STRUCTURE: As Su-27.

LANDING GEAR: As Su-27.

POWER PLANT: As Su-27, but flight refuelling probe and buddy refuelling capability standard.

ACCOMMODATION: Two crew in tandem in identical cockpits on K-36 zero/zero ejection seats, with rear seat raised.

SYSTEMS: As Su-27, except gaseous oxygen for 10 hours flight.

AVIONICS: *Radar*: Phazotron Topaz coherent pulse Doppler look-down/shoot-down radar, detection range 43 n miles (80 km; 50 miles), tracking range 30 n miles (55 km; 34 miles); able to track 10 targets and engage two simultaneously.

Flight: New navigation system based on Loran and Omega.

Mission: Provision for fitting foreign-made airborne and weapon systems at customer's request.

ARMAMENT: One 30 mm GSh-301 gun, with 150 rounds; up to six R-27R1E and R-27T1E (AA-10 'Alamo') radar homing and IR long-range air-to-air missiles, and six R-73E (AA-11 'Archer') IR close-range air-to-air missiles; unguided bombs or rockets as Su-27.

DIMENSIONS, EXTERNAL: As Su-27

WEIGHTS AND LOADINGS:	
Normal T-O weight	24,000 kg (52,910 lb)
Max T-O weight	33,000 kg (72,750 lb)
PERFORMANCE:	
Max level speed at height	Mach 2
T-O run	550 m (1,805 ft)
Landing run	670 m (2,200 ft)
Combat range, with max internal fuel	1,619 n miles (3,000 km, 1,865 miles)
with one flight refuelling	2,805 n miles (5,200 km, 3,230 miles)

UPDATED

SUKHOI Su-30MK

TYPE: Two-seat multirole fighter.

PROGRAMME: Design started 1991, demonstration and development work by Su-27UB 1040806 '321' and 04003 '56'; conversion of first prototype began 1993, 1010101 '603' (ex-Su-27UB prototype) demonstrated at Berlin and Farnborough 1994.

CURRENT VERSIONS: Basic **two-seat version** as described; **single-seat version** reportedly ordered for Russian Air Force 1993.

CUSTOMERS: Indian Air Force initial requirement for 20 reported Summer 1995.

DESIGN FEATURES: Improvement on combat capabilities of Su-30 by compatibility with high-precision guided air-to-surface weapons with standoff launch range up to 65 n miles (120 km, 75 miles), in addition to Su-30's ability to engage two airborne targets simultaneously.

In other details, identical with Su-30 except as follows.

AVIONICS: In addition to standard Su-30 systems, Su-30MK has more accurate navigation system, a TV command guidance system, a guidance system for anti-radiation missiles, a display system in rear cockpit for air-to-surface missile guidance, and ability to carry one or two pods, typically for laser designation or ARM guidance in association with Pastel RWR and APK-9 datalink. Western avionics, guidance pods and weapons can be fitted optionally.

Sukhoi Su-30MK multirole combat aircraft *(Paul Jackson)*

1995

ARMAMENT: One 30 mm GSh-301 gun, with 150 rounds; 12 external stations for more than 8,000 kg (17,635 lb) of stores, including bombs up to 1,500 kg each; unguided rockets of various calibres; up to six medium-range air-to-air missiles with active or semi-active radar homing, up to two IR homing medium-range and six IR homing close-range air-to-air missiles, and a variety of air-to-surface weapons such as four ARMs, six guided bombs or short-range missiles with TV homing, six laser homing short-range missiles, or two long-range missiles with TV command guidance; these include Kh-31 (AS-17 'Krypton'), Kh-59 (AS-13 'Kingbolt') and Kh-59M (AS-18 'Kazoo').

DIMENSIONS, EXTERNAL: As Su-27 except:

Height overall	6.357 m (20 ft 10¼ in)
WEIGHTS AND LOADINGS:	
Normal T-O weight	25,000 kg (55,115 lb)
Max T-O weight	34,000 kg (74,955 lb)
PERFORMANCE:	
Max level speed at height	Mach 2.0
T-O run	550 m (1,805 ft)
Landing run	670 m (2,200 ft)
Combat range: internal fuel	1,620 n miles (3,000 km, 1,865 miles)
with one in-flight refuelling	2,805 n miles (5,200 km; 3,230 miles)

UPDATED

SUKHOI Su-31

TYPE: Single-seat aerobatic competition and training aircraft.

PROGRAMME: Design started 1991, prototype construction began 1992, flew June 1992 as Su-29T, demonstrated at 1992 Farnborough Air Show, followed by two more prototypes and two static test airframes; first production aircraft by Sukhoi Advanced Technologies (RA-01405) flown 1994.

CURRENT VERSIONS: **Su-31T**: Basic version, non-retractable landing gear; *described in detail*.

Su-31M: As Su-31T but with Zvezda KS-38 ejection system.

Su-31X: Export version of Su-31T.

Su-31U: As Su-31T but retractable landing gear.

DESIGN FEATURES: Basically single-seat version of Su-29 with uprated engine, new landing gear; 35° inclination of seat enables pilot to employ repeatedly a g load of +12/−10, giving advantages in controlling aircraft within limited flying area and to perform very complicated manoeuvres; improved field of view; two baggage compartments.

STRUCTURE: More than 70 per cent composites by weight; centre-fuselage is welded truss of high-strength stainless steel tube, with detachable skin panels of honeycomb filled composite sandwich; rear fuselage is semi-monocoque of composites with honeycomb filler; one-piece two-spar wing is of carbonfibre and organic composites, covered with honeycomb sandwich skin; tail unit is all-composites.

POWER PLANT: One 294 kW (395 hp) VOKBM M-14PF nine-cylinder radial engine, MTV-9 three-blade propeller. Basic fuel capacity 78 litres (20.6 US gallons, 17.2 Imp gallons), in fuselage tank, provision for 210 litre (55.5 US gallon, 46.2 Imp gallon) centreline drop tank for ferrying, or two tanks in wings, total capacity 200 litres (53 US gallons, 44 Imp gallons).

DIMENSIONS, EXTERNAL (Su-31T):	
Wing span	7.80 m (25 ft 7 in)
Wing chord: at root	1.99 m (6 ft 6¼ in)
at tip	1.04 m (3 ft 4¾ in)
Length overall	6.90 m (22 ft 7¾ in)
Height overall	2.76 m (9 ft 0¾ in)
Tailplane span	2.90 m (9 ft 6¼ in)
Wheel track	2.40 m (7 ft 10½ in)
Wheelbase	4.90 m (16 ft 1 in)
Propeller diameter	2.50 m (8 ft 2½ in)
Propeller ground clearance	0.425 m (1 ft 4¾ in)
AREAS (Su-31T): As Su-29 except:	
Wings, gross	11.8 m² (127.0 sq ft)
WEIGHTS AND LOADINGS (Su-31T):	
Weight empty, equipped	650 kg (1,433 lb)
Max fuel: internal	53 kg (117 lb)
external	209 kg (461 lb)
Normal T-O weight	780 kg (1,720 lb)

Sukhoi Su-31M single-seat aerobatic competition aircraft *(Paul Jackson)*

1995

Max T-O weight	968 kg (2,134 lb)
Max wing loading	82.0 kg/m² (16.8 lb/sq ft)
Max power loading	3.29 kg/kW (5.40 lb/hp)

PERFORMANCE (Su-31T):

Max never-exceed speed (VNE)	243 kts (450 km/h; 280 mph)
Max level speed	178 kts (330 km/h; 205 mph)
Stalling speed	61 kts (113 km/h; 71 mph)
T-O speed	60 kts (110 km/h; 69 mph)
Landing speed	62 kts (115 km/h; 72 mph)
Max rate of climb at S/L	1,440 m (4,725 ft)/min
Service ceiling	4,000 m (13,125 ft)
Rate of roll	400°/s
T-O run	110 m (360 ft)
Landing run	300 m (985 ft)
Range, internal fuel	156 n miles (290 km; 180 miles)
Max ferry range	400-645 n miles (740-1,200 km; 460-745 miles)
g limits	+12/−10

UPDATED

Sukhoi Su-32FN exhibited at Paris (*Paul Jackson*)

1995

SUKHOI Su-32FN/Su-34

TYPE: Long-range theatre bomber

PROGRAMME: Production development of Su-27KU/Su-27IB ('42', which see), to replace MiG-27, Su-17 and some Su-24s from 1996. First preseries example ('43'), described as Su-34, built at Novosibirsk, flew 18 December 1993; at Zhukovsky flight test centre early 1994. Aircraft '45' exhibited as Su-32FN at 1995 Paris Air Show. Fourth and fifth aircraft (excluding two static test airframes '41' and '44') under assembly May 1995; 12 scheduled for delivery by 1998; electronic warfare version reportedly under development.

CURRENT VERSIONS: **Su-34**: Designation of preseries aircraft '43', as described in detail.

Su-32FN: Designation of aircraft '45', first flight 28 December 1994; displayed 1995 Paris Air Show. Described as two-seat specialised strike aircraft for day/night all-weather attack on surface vessel, submarine and ground targets, at all altitudes and speeds, with terrain following capability and high level of automatic operation. Major weapons include Kh-31 (AS-17 'Krypton') anti-ship missiles.

DESIGN FEATURES: Airframe basically as Su-27, completely new and wider front fuselage containing two seats side by side; wing extensions taken forward as chines to blend with dielectric nose housing nav/attack and terrain following/avoidance radar; deep fairing behind wide humped canopy, small foreplanes, louvres on engine air intake ducts reconfigured, new landing gear; broader-chord and thicker tailfins, containing fuel, no ventral fins, and a longer, larger diameter tailcone. This has been raised and now extends as a spine above the rear fuselage to blend into the rear of the cockpit fairing. It houses at its tip a rearward-facing radar to detect aircraft approaching from the rear.

LANDING GEAR: Retractable tricycle type, strengthened twin nosewheel unit, tyre size 680 × 260 mm, farther forward than on Su-27 and retracting rearward; main units have smaller tandem wheels with tyres size 950 × 400 mm. Brake-chute repositioned in spine to rear of spine/fairing juncture.

POWER PLANT: Two Saturn/Lyulka AL-35F (AL-31FM) turbofans, each 137.3 kN (30,865 lb st) with afterburning. Additional fuel in tailfins. Retractable flight refuelling probe beneath port windscreen.

ACCOMMODATION: Two crew side by side on K-36 zero/zero ejection seats. Access to cockpit via built-in ladder to door in nosewheel bay; area protected with 17 mm (0⅔ in) thick titanium; toilet and galley inside deep fuselage section aft of cockpit.

AVIONICS: *Radar:* Multifunction radar with high-resolution, rearward-facing radar in tailcone.

Instrumentation: Multifunction displays.

Mission: No IRST sensor. Sorbtsya active ECM jamming pods under test on Su-27IB prototype 1995.

Self-defence: Internal ECM.

ARMAMENT: One 30 mm GSh-301 gun, as Su-27. High-precision self-homing and guided air-to-surface missiles and KAB-500 laser-guided bombs with ranges of 0 to 135 n miles (250 km; 155 miles), R-73 (AA-11 'Archer') and R-77 (AA-12 'Adder') air-to-air missiles.

DIMENSIONS, EXTERNAL: Not available

WEIGHTS AND LOADINGS: Not available, except:

Max T-O weight	44,360 kg (97,800 lb)

PERFORMANCE:

Max level speed: at 11,000 m (36,000 ft)	Mach 1.8
at S/L	Mach 1.15 (755 kts; 1,400 km/h; 870 mph)
Range with max internal fuel	2,160 n miles (4,000 km; 2,485 miles)

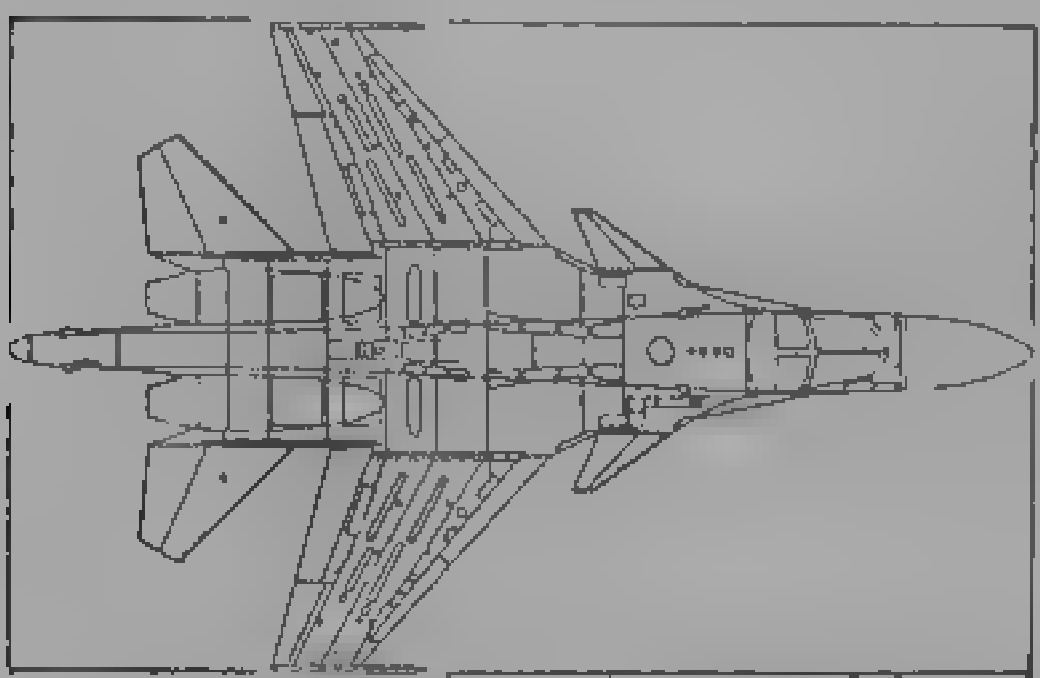
UPDATED

SUKHOI Su-33

NATO reporting name: Flanker-D

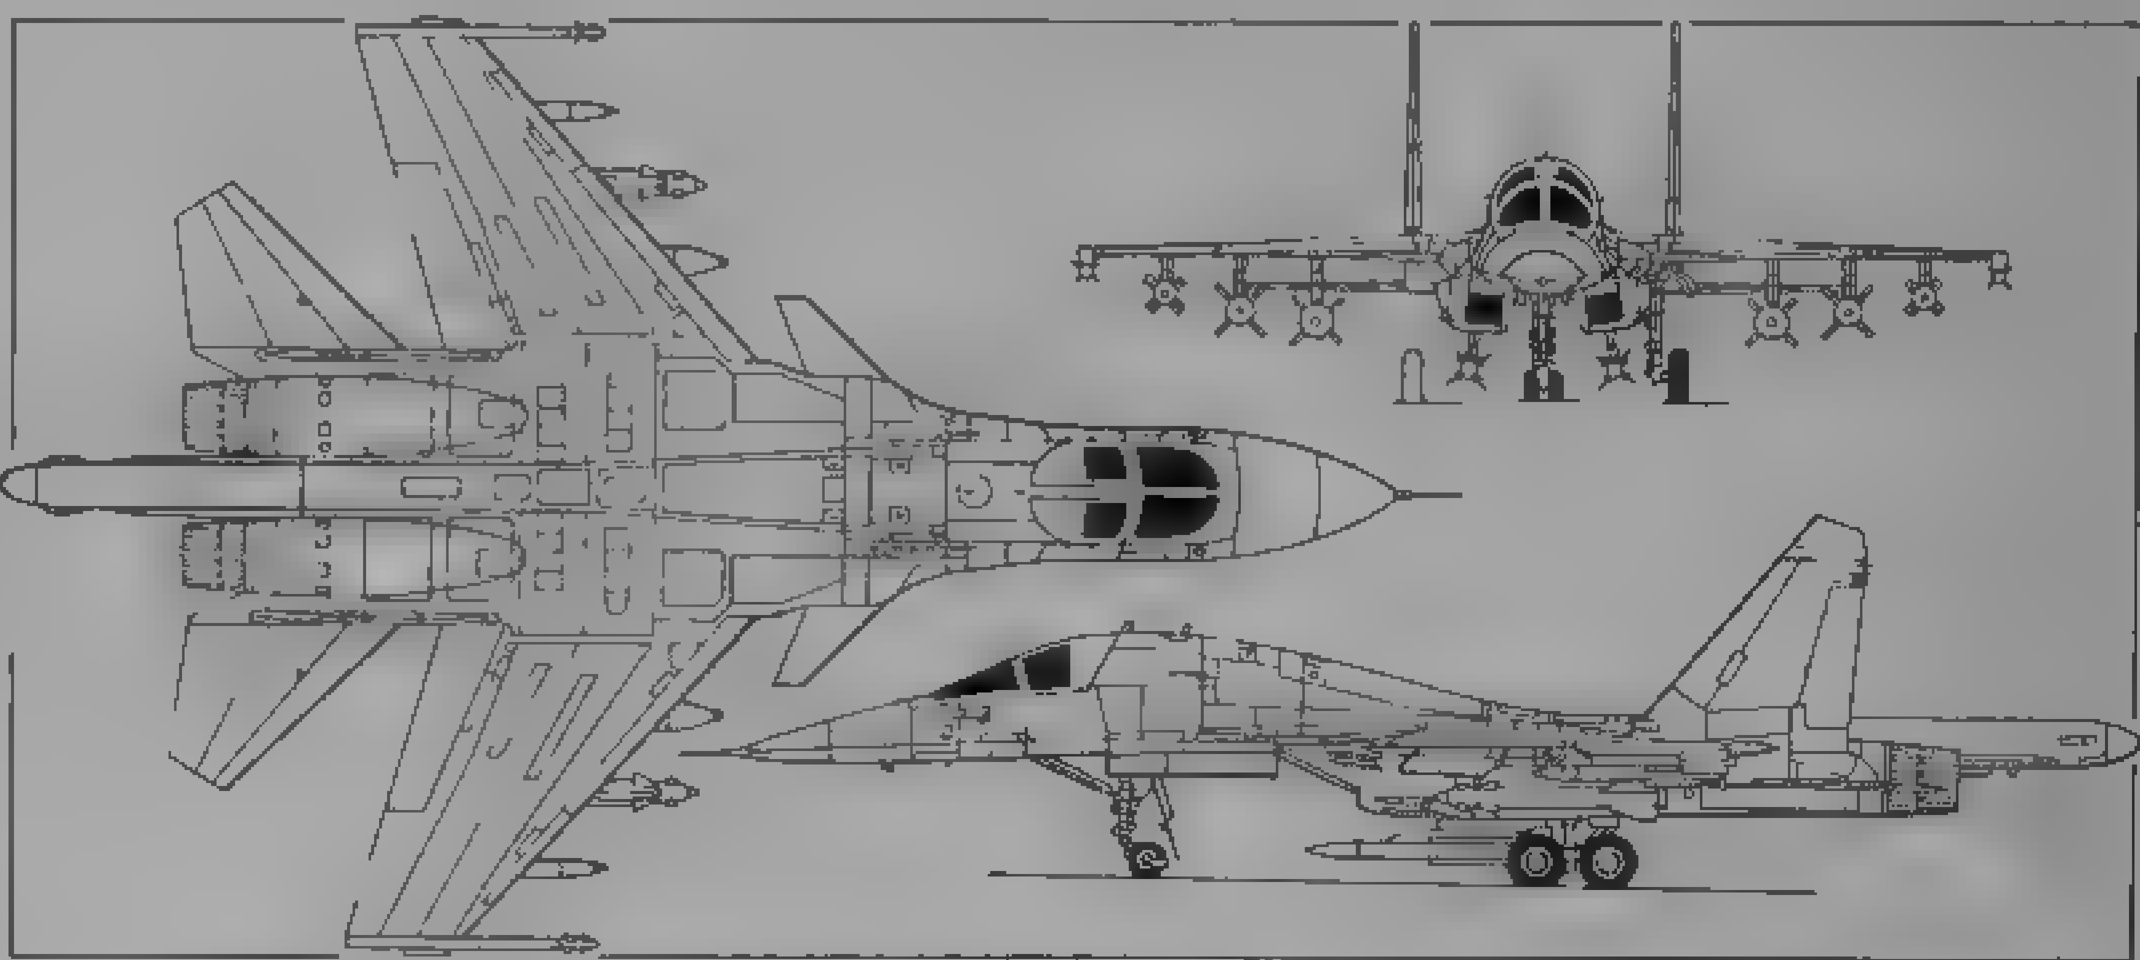
TYPE: Single-seat ship-based air defence fighter.

PROGRAMME: Development began 1976; based on production Su-27, but embodying folding wings, other features for shipboard operation, and movable foreplanes. Navalised Su-27 (T-10-25), with arrester hook, flew 1984; first **Su-27K** (K for korabelnyy: ship-based) prototype (T-10K-1 '29') flew 17 August 1987; second (T-10K-2) made first conventional (non-V/STOL) landing by Soviet aircraft on ship, the *Admiral of the Fleet Kuznetsov* (then *Tbilisi*), 1 November 1989; production at Komsomolsk-on-Amur began 1990; first production **Su-33** (T-10K-3) flew 1990; deliveries began 1991, initial operational capability 1992; 20 delivered and shore-based on Kola



Plan view of Sukhoi Su-32FN showing revised nose contours

1995



Three-view drawing of Sukhoi Su-34 twin-turbofan theatre bomber (*Jane's/Mike Keep*)

1994

Sukhoi Su-34 at Zhukovsky flight test centre (*Yefim Gordon via Mark Wagner*)

1994

Preseries Sukhoi Su-33 ship-based air defence fighter during deck trials

1994

Peninsula mid-1994, five months of intensive flying from *Kuznetsov*, in Barents Sea, in second half 1994

DESIGN FEATURES: Airframe generally similar to Su-27, but with folding wings and tailplane, added foreplanes, arrester hook and other features for carrierborne operations, strengthened landing gear with twin nosewheels, long tailcone of land-based versions shortened to prevent tailscrapes during take-off and landing on ship, IRST with wider angle of view

FLYING CONTROLS: Basically as Su-27, but with sweptback (52°) foreplanes that operate at all speeds and only collectively, not differentially (7° up/70° down). Fly-by-wire, automatic control system and central control column. Broader-chord slotted Fowler-type flaps

STRUCTURE: Generally as Su-27, but hydraulically folding outer wings (through 135°) and upward folding horizontal tail surfaces. Riveted and welded structure of aluminium and titanium alloys and steel

LANDING GEAR: Generally as Su-27, but mainwheel tyres size 1030 × 350 mm, twin nosewheel tyres size 620 × 180; nosewheels steerable through ±60°. Arrester hook under tailcone

POWER PLANT: As Su-27, but with retractable flight refuelling probe beneath windscreen on port side; provision for centreline buddy refuelling pack

ACCOMMODATION: As Su-27

SYSTEMS: As Su-27

AVIONICS: *Flight*: Nav systems specialised for use over sea

ARMAMENT: Basically as Su-27, plus ability to carry Kh-31 (AS-17 'Krypton') air-to-surface missiles underwing. Exhibited with inert 4,500 kg (9,920 lb) Kh-41 (3M80 Moskit 'mosquito') anti-ship missile on centreline, but this considered as impracticable operational load

DIMENSIONS, EXTERNAL:

Wing span	14.70 m (48 ft 2¾ in)
Length overall, incl nose probe	21.185 m (69 ft 6 in)
Width, wings folded	7.40 m (24 ft 3½ in)
Height overall	5.90 m (19 ft 4¼ in)
Tailplane span	9.90 m (32 ft 6 in)
Wheel track	4.40 m (14 ft 5¼ in)
Wheelbase	5.89 m (19 ft 4 in)

AREAS:

Wings, gross	67.80 m² (729.82 sq ft)
Foreplanes (total)	3.00 m² (32.29 sq ft)
Ailerons (total)	2.40 m² (25.83 sq ft)
Trailing-edge flaps (total)	6.60 m² (71.04 sq ft)
Leading-edge flaps (total)	5.40 m² (58.13 sq ft)
Fins (total)	11.60 m² (124.87 sq ft)
Rudders (total)	3.50 m² (37.67 sq ft)
Horizontal tail surfaces (total)	12.30 m² (132.40 sq ft)

WEIGHTS AND LOADINGS: Not available

PERFORMANCE:

Never-exceed speed (VNE) at 11,000 m (36,000 ft)
Mach 2.165 (1,240 kts, 2,300 km/h, 1,430 mph)

Min flying speed	130 kts (240 km/h, 150 mph)
T-O run on carrier with 14° ramp	120 m (395 ft)

Range with max internal fuel
1,620 n miles (3,000 km, 1,865 miles)

g limit	+8

UPDATED

SUKHOI Su-35

TYPE: Single-seat all-weather counter-air fighter and ground attack aircraft

PROGRAMME: Experimental version of Su-27 with foreplanes (T-10-24) flew May 1985, first of six prototypes (successively T-10S-70, Su-27M, Su-35) flew 28 June 1988; another was exhibited at 1992 Farnborough Air Show, in final stages of flight testing early 1993. 11 prototype and preseries aircraft ('701' to '711') built by September 1994, of which '711' modified for thrust-vectoring experiments (photograph in Addenda); in production at Komsomolsk-on-Amur

CUSTOMERS: Scheduled entry into Russian Air Force service mid-1990s, for effective operation until 2015-2020

DESIGN FEATURES: Advanced development of Su-27; airframe, power plant, avionics and armament all upgraded; quadruplex digital fly-by-wire controls under development, claimed to be first series-built fighter with static instability and tandem 'triplane' layout, with foreplanes; double-slotted flaperons, taller, square-tip twin tailfins with integral fuel tanks; reprofiled front fuselage for larger-diameter radar antenna; enlarged tailcone for rearward-facing radar; twin-wheel nose landing gear; three-dimensional thrust vectoring nozzles under development for use on production aircraft

STRUCTURE: Higher proportion of carbonfibre and aluminium-lithium alloy in fuselage; composites used for components such as leading-edge flaps, nosewheel door and radomes

POWER PLANT: Two Saturn/Lyulka AL-35F (AL-31MF) turbofans; each 137.3 kN (30,865 lb st) with afterburning. Retractable flight refuelling probe on port side of nose

ACCOMMODATION: Pilot only, on Zvezda K-36MD zero/zero ejection seat

AVIONICS: *Radar*: Phazotron N011 Zhuk 27 multimode low-altitude terrain-following/avoidance radar, search range 54 n miles (100 km, 62 miles) in forward sector, 30 n miles (55 km, 34 miles) rearward, able to track 10 targets and engage four simultaneously. Phazotron Zhuk PH phased array radar under development for later use, search range 89 to 132 n miles (165 to 245 km, 102 to 152 miles) in forward sector, 32 n miles (60 km, 37 miles) rearward, with simultaneous tracking of 24 air targets and ripple fire engagement of six. N014 rearward facing radar, range approximately 2 n miles (4 km, 2.5 miles), may enable firing of rearward-facing IR homing air-to-air missiles.

Flight: Fully automatic flight modes and armament control against ground, maritime and air targets, including automatic low-altitude flight and automatic target designation.

Instrumentation: EFIS, with three colour CRTs. HUD.

Mission: New-type IRST moved to starboard, all combat flight phases computerised. Shown at Farnborough with GEC Ferranti TIALD (thermal imaging airborne laser designator) night/adverse visibility pod fitted for possible future use.

Self defence: Enhanced ECM, including wingtip jammer pods, RWR

ARMAMENT: One 30 mm GSh-30 gun in starboard wingroot extension, with 150 rounds. Mountings for up to 14 stores, including R-27 (AA-10 'Alamo-A/B/C/D'), R-40 (AA-6 'Acrid'), R-60 (AA-8 'Aphid'), R-73A (AA-11 'Archer') and R-77 (AA-12 'Adder') air-to-air missiles, Kh-25ML (AS-10 'Karen'), Kh-25MP (AS-12 'Kegler'), Kh-29T (AS-14 'Kedge'), Kh-31 (AS-17 'Krypton') and Kh-59 (AS-18) air-to-surface missiles, KAB-500 bombs and rocket packs. Maximum weapon load 8,000 kg (17,635 lb)

DIMENSIONS, EXTERNAL:

Wing span, over ECM pods	15.00 m (49 ft 2½ in)
Length overall	22.20 m (72 ft 10 in)
Height overall	6.36 m (20 ft 10½ in)

PERFORMANCE:

Max level speed: at height
Mach 2.35 (1,350 kts, 2,500 km/h, 1,555 mph)
at S/L Mach 1.14 (755 kts, 1,400 km/h, 870 mph)

Service ceiling	18,000 m (59,055 ft)
Balanced runway length	1,200 m (3,940 ft)

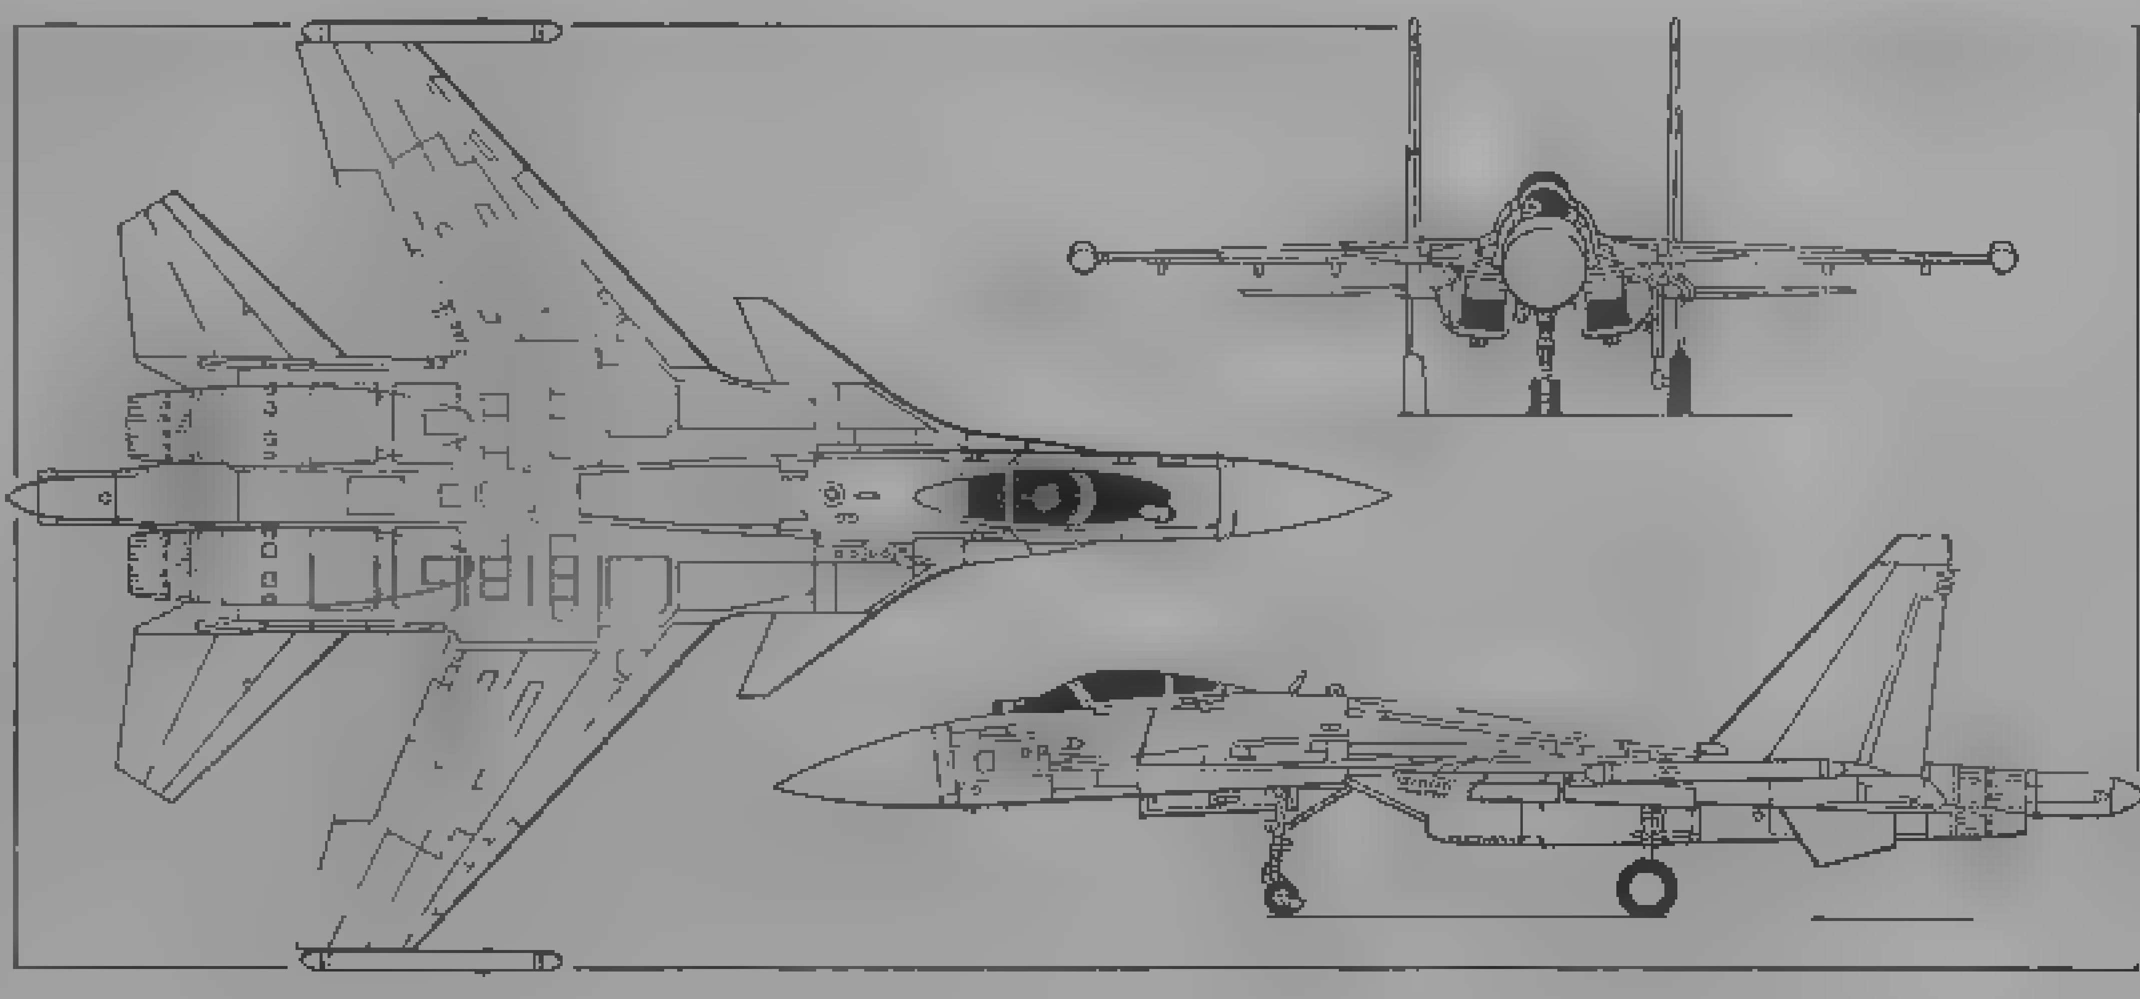
Range: with max internal fuel
more than 2,160 n miles (4,000 km, 2,485 miles)
with flight refuelling
more than 3,510 n miles (6,500 km, 4,040 miles)

g limit	+10

UPDATED

Sukhoi Su-35 advanced development of the Su-27 series (*Paul Jackson*)

1995



Sukhoi Su-35 single-seat counter-air and ground attack fighter (*Jane's/Mike Keep*)

1993

SUKHOI Su-38

TYPE: Single/two-seat agricultural aircraft.

PROGRAMME: Design started August 1993, construction of prototype began January 1994, scheduled for Russian and Western certification.

COST: $100,000.

DESIGN FEATURES: Conventional low-wing monoplane, with non-retractable landing gear, based on airframe and power plant of Su-29 two-seat aerobatic aircraft. Wing span extended and winglets added; tailplane enlarged, cockpit revised; and landing gear strengthened for rough field operation. Constant chord wings without sweep, except for root fairings, P 31Y wing section, thickness/chord ratio 16 per cent, aspect ratio 5.71, dihedral 3°, incidence 2°. Airframe life 10,000 hours.

FLYING CONTROLS: Mechanically actuated ailerons, horn balanced elevators, and rudder; trim tab in starboard elevator trailing-edge flaps.

LANDING GEAR: Non-retractable tailwheel type, as Su-29 but strengthened, mainwheel tyre diameter 500 mm, tailwheel 250 mm.

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder radial engine; MTV 9 three-blade variable-pitch propeller. Fuel tank in each wing; total capacity 200 litres (53 US gallons, 44 Imp gallons). Oil capacity 20 litres (5.3 US gallons, 4.4 Imp gallons).

ACCOMMODATION: Normally pilot only, on raised rear seat, but provision for passenger.

SYSTEMS: Cockpit air conditioning and air filter. Hydraulic system pressure 24.5 bars (355 lb/sq in). Pneumatic system pressure 49 –5 bars (710 –71 lb/sq in). Electrical system 28.5 V, with 28 Ah battery.

AVIONICS: *Comms:* Briz VHF radio.
Flight: Loran, Tacan and GPS optional.

EQUIPMENT: Underwing spraybars, chemicals in either ventral pod or fuselage hopper, replacing passenger seat. Alternative equipment for firefighting, aerial photography and patrol duties.

DIMENSIONS, EXTERNAL:

Wing span	11.344 m (37 ft 2¾ in)
Wing chord: at root	2.056 m (6 ft 9 in)
at tip	1.75 m (5 ft 9 in)
Length overall	7.235 m (23 ft 9 in)
Height overall	2.97 m (9 ft 9 in)
Tailplane span	4.20 m (13 ft 9½ in)
Wheel track	2.40 m (7 ft 10½ in)
Wheelbase	5.08 m (16 ft 8 in)
Propeller diameter	2.50 m (8 ft 2½ in)
Propeller ground clearance	0.50 m (1 ft 7½ in)

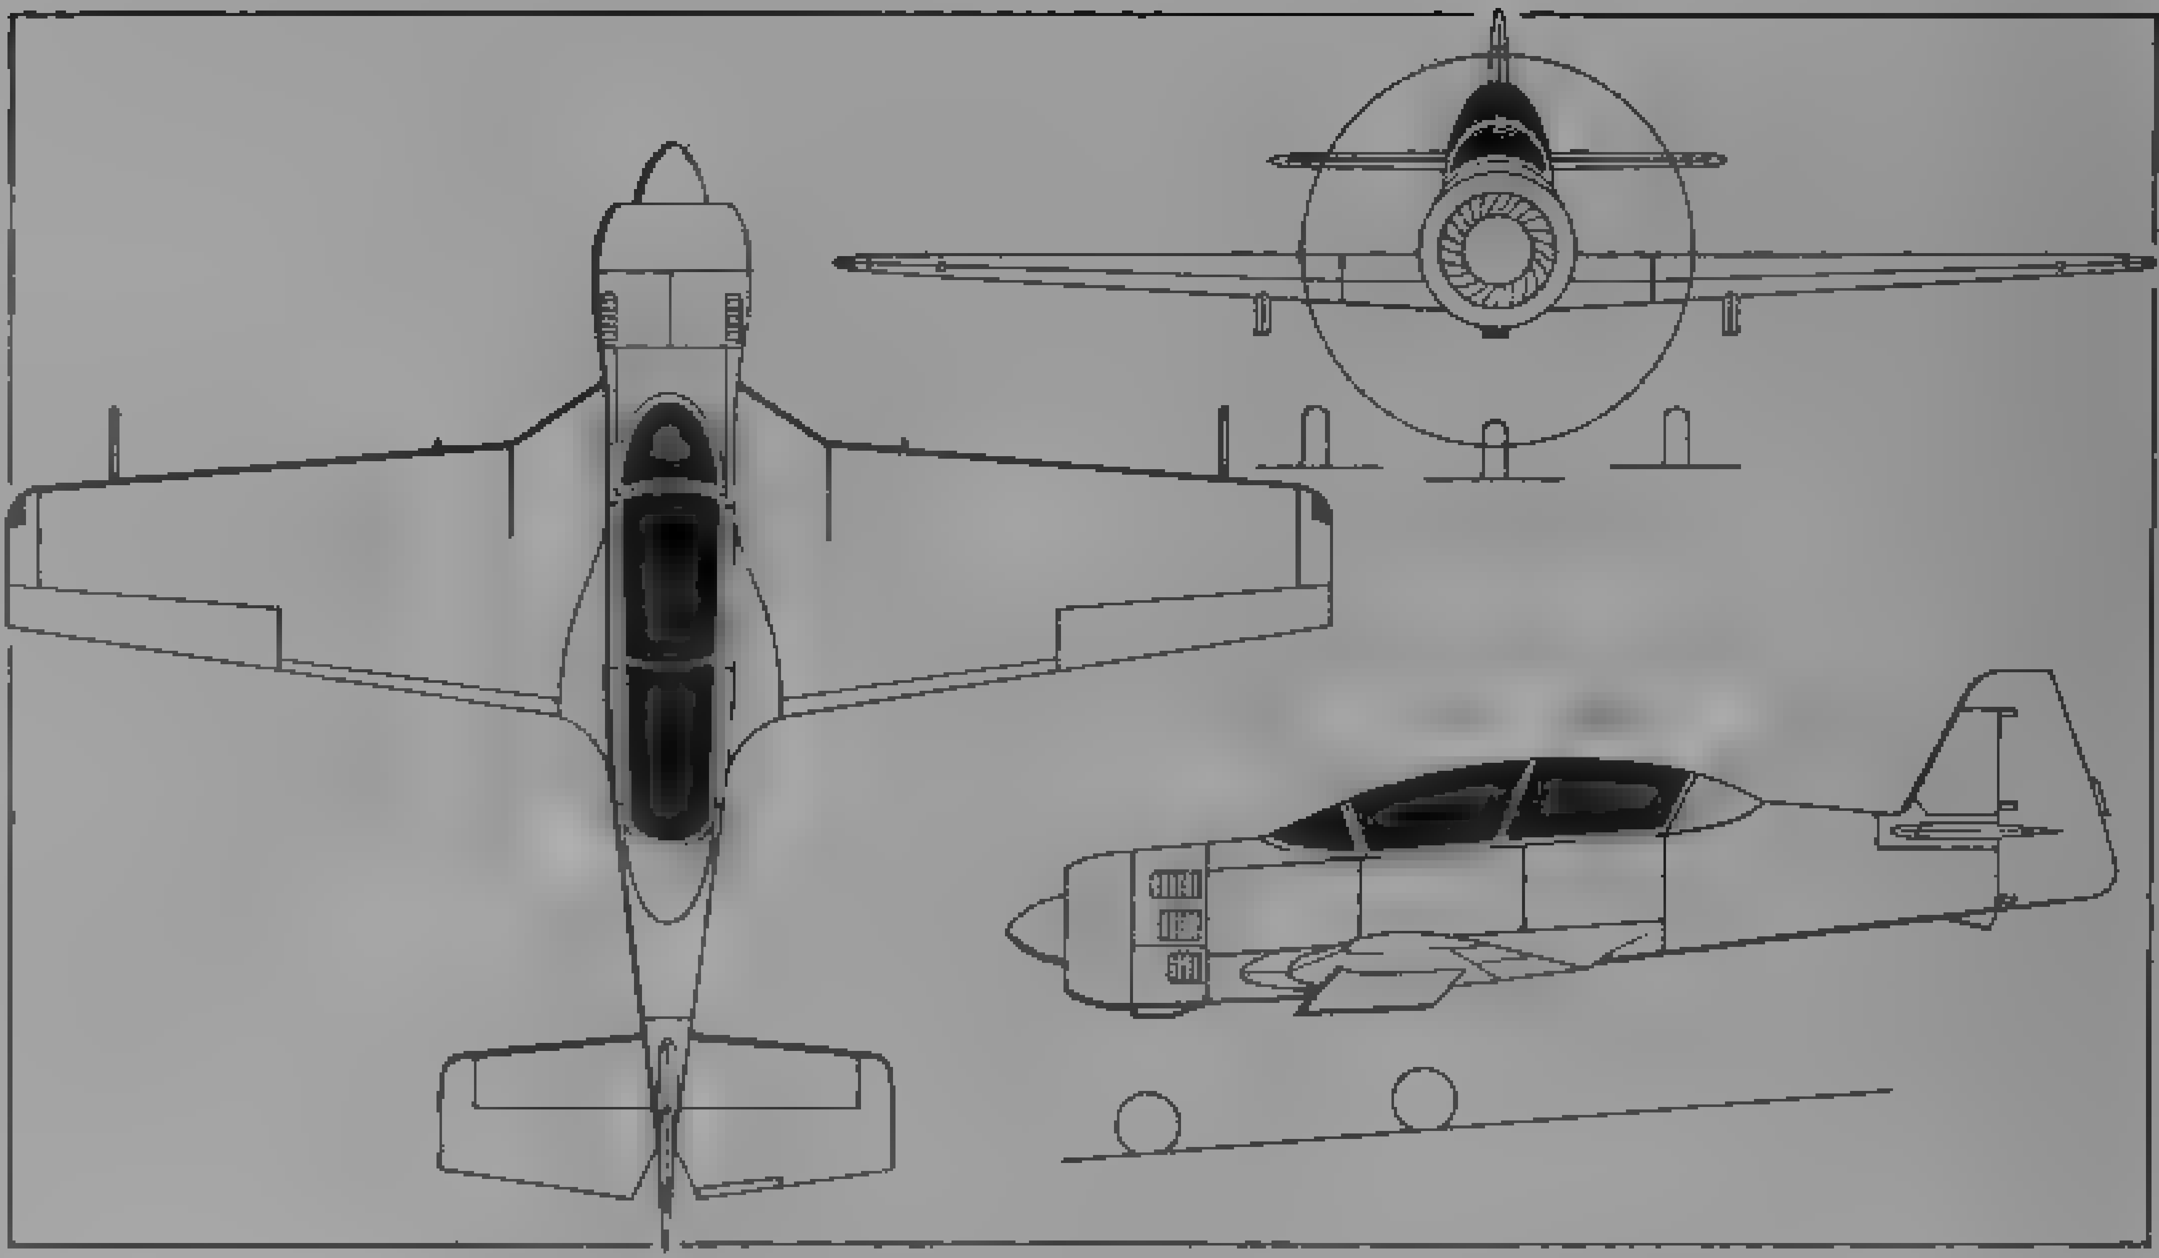
WEIGHTS AND LOADINGS:

Weight empty, equipped	1,000 kg (2,205 lb)
Max payload	700 kg (1,543 lb)
Max fuel	150 kg (330 lb)
Normal T-O and landing weight	1,650 kg (3,637 lb)
Max T-O weight	1,800 kg (3,968 lb)
Max power loading	6.79 kg/kW (11.18 lb/hp)

PERFORMANCE (estimated):

Never-exceed speed (VNE)	175 kts (325 km/h, 202 mph)
Max level speed at S/L	162 kts (300 km/h, 186 mph)
Max cruising speed at S/L	119 kts (220 km/h; 137 mph)
T-O speed	76 kts (140 km/h, 87 mph)
Landing speed	81 kts (150 km/h, 94 mph)
Max rate of climb at S/L	360 m (1,180 ft)/min
Service ceiling	3,600 m (11,800 ft)
T-O run	120 m (395 ft)
T-O to 15 m (50 ft)	300 m (985 ft)
Landing from 15 m (50 ft)	500 m (1,640 ft)
Landing run	280 m (920 ft)
Service range	431 n miles (800 km; 497 miles)

UPDATED

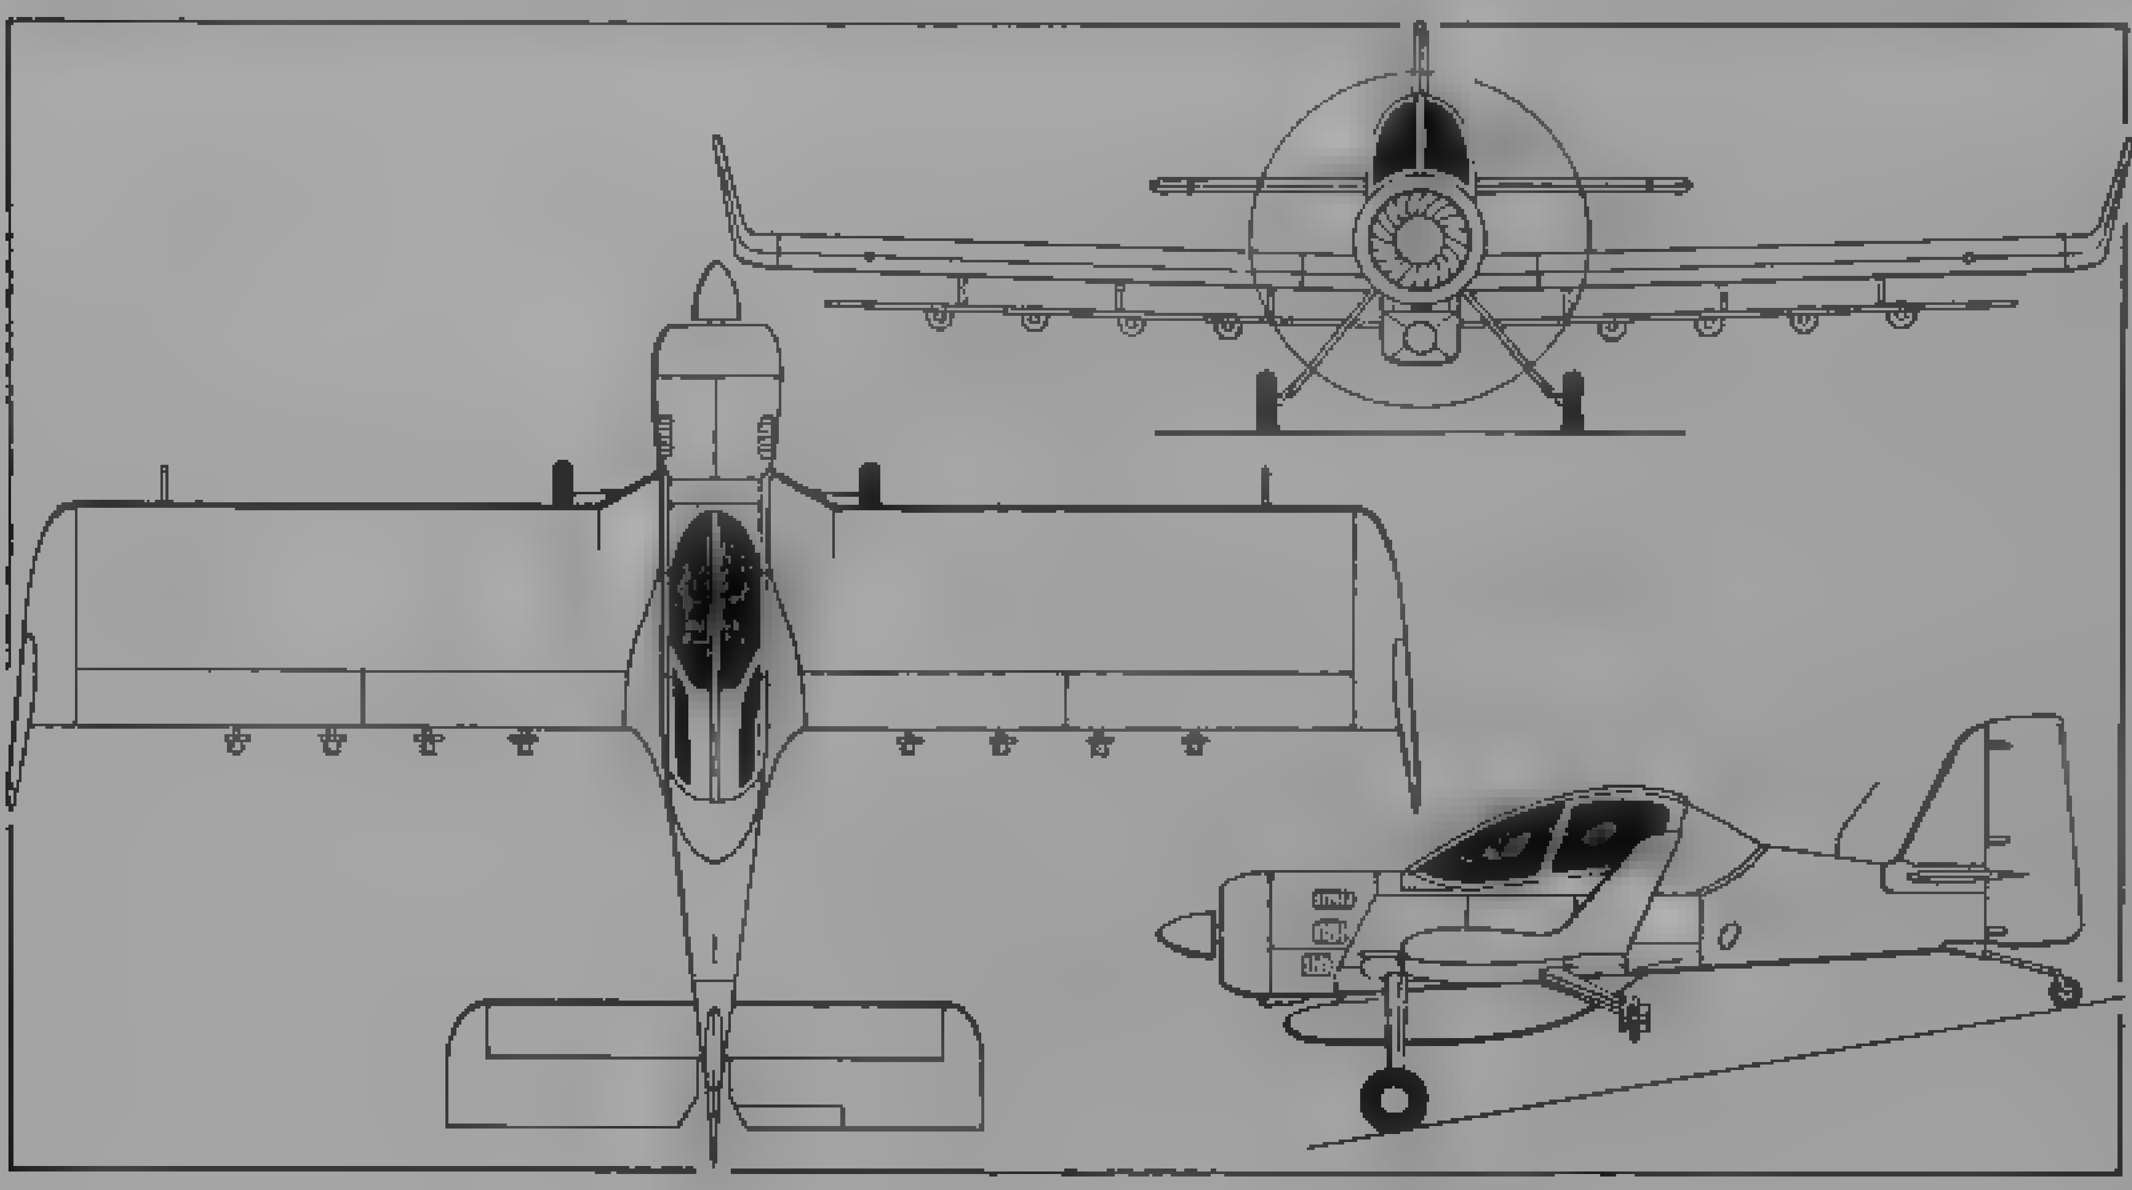


Sukhoi Su-39 civil and military primary trainer *(Jane's/Mike Keep)*

1994

Mockup of Sukhoi Su-38 (VOKBM M-14P engine)

1995



Sukhoi Su-38 agricultural aircraft, based on Su-29 *(Jane's/Mike Keep)*

1994

SUKHOI Su-39

TYPE: Tandem two-seat primary trainer and general purpose aircraft.

PROGRAMME: Design started July 1992, under former designation Su-32, construction of prototype began 1994; first flight of prototype scheduled second half 1996. P&WC/Klimov PK6A 25 turboprop under negotiation as replacement for M-14F piston engine in at least proportion of production aircraft.

CUSTOMERS: Orders for 1,500 for Russian Air Force flying schools and DOSAAF, Air Force version has more complex equipment.

COSTS: Standard aircraft $500,000.

DESIGN FEATURES: Based on Su-26 and Su-29 aerobatic aircraft, with objectives of short take-off and landing and high manoeuvrability, plus optional carriage of guided and unguided weapons and suitability for counter-insurgency, patrol and coastal protection missions. Wing leading-edge sweepback 5° 30', wing section NACA 23012, aspect ratio 5.9, dihedral 1° 30', incidence 0°. Service life 10,000 hours.

FLYING CONTROLS: Mechanically actuated ailerons, elevators and rudder; elevators and rudder horn balanced, pneumatically operated wing trailing-edge slotted area-increasing flaps and ventral airbrake. Provision for autopilot.

STRUCTURE: Two-spar wings; single-spar fin and tailplane. Fuselage longerons and wing spars of CFRP, wing, fuselage and tail unit skin panels of Kevlar type composites and GFRP.

LANDING GEAR: Pneumatically retractable tricycle type, single wheel on each unit, main units retract inward, nosewheel rearward, oleo-pneumatic shock-absorbers, Rubin mainwheels type KT-214, nosewheel type K-214, all three tyres size 400 × 150-140, pressure 3 to 3.5 bars (43.5 to 50.75 lb/sq in), hydraulic brakes on mainwheels.

POWER PLANT: One 294 kW (395 hp) VOKBM M-14PF nine-cylinder radial engine; three-blade MTV-9 propeller. Alternative PK6A-25 turboprop. Fuel tank in each wing, capacity 150 litres (39.6 US gallons, 33 Imp gallons), header tank in fuselage, capacity 20 litres (5.3 US gallons, 4.4 Imp gallons); total internal fuel capacity 320 litres (84.5 US gallons; 70.4 Imp gallons), provision for two 100 litre (26.4 US gallon, 22 Imp gallon) underwing tanks, gravity fuelling, oil capacity 20 litres (5.3 US gallons, 4.4 Imp gallons).

ACCOMMODATION: Two seats in tandem; rear (instructor's) seat raised. Zvezda SKS-94 ejection system (54 to 215 knots; 100 to 400 km/h, 62 to 248 mph/10 m, 33 ft), crew ejected through canopy on diverging trajectories in emergency, without seats; canopy hinged to starboard. Baggage space behind cockpits, capacity 0.2 m³ (7.0 cu ft).

SYSTEMS: Cockpit air conditioning and pressurisation standard. Brake hydraulic system pressure 24.5 bars (355 lb/sq in). Pneumatic system pressure 50.6 bars (735 lb/sq in). One 3.5 kW generator for 27 V DC electrical system. Propeller anti-iced and windscreen demisted by hot air.

AVIONICS: *Comms:* KX 165 VHF com/nav, KT 46A transponder, KR-87 ADF, GO3 area nav and KLN-90.
Radar: Provision for external radar pod.
Flight: Optional automatic approach and satellite nav.
Self-defence: RWR and IR warning system in military versions.

ARMAMENT: Provision for integral gun, bombs, air-to-air and anti-tank missiles in combat versions.

DIMENSIONS, EXTERNAL:

Wing span	8.50 m (27 ft 10¾ in)
Wing chord, at root	1.88 m (6 ft 2 in)
at tip	0.885 m (2 ft 10¾ in)
Length overall	7.285 m (23 ft 10¾ in)
Height overall	2.60 m (8 ft 6⅜ in)
Tailplane span	2.90 m (9 ft 6¼ in)
Wheel track	2.00 m (6 ft 6¾ in)
Wheelbase	1.78 m (5 ft 10 in)
Propeller diameter	2.50 m (8 ft 2½ in)
Propeller ground clearance	0.24 m (9½ in)

Model of Sukhoi Su-39 shown at MosAeroshow '93 *(Piotr Butowski)*

1994

DIMENSIONS, INTERNAL:
Cockpit: Length 2.70 m (8 ft 10¼ in)
Max width 0.60 m (1 ft 11½ in)
Max height 1.10 m (3 ft 7¼ in)
Floor area 2.50 m² (26.9 sq ft)

AREAS:
Wings, gross 12.20 m² (131.32 sq ft)
Ailerons (total) 2.24 m² (24.11 sq ft)
Trailing-edge flaps (total) 3.30 m² (35.52 sq ft)
Fin 0.30 m² (3.23 sq ft)
Rudder 0.90 m² (9.69 sq ft)
Tailplane 0.98 m² (10.55 sq ft)
Elevators (total) 1.56 m² (16.79 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, equipped 850 kg (1,874 lb)
Max fuel: internal 260 kg (573 lb)
external 200 kg (441 lb)
Normal T-O weight 1,300 kg (2,866 lb)
Max T-O and landing weight 1,500 kg (3,307 lb)
Max wing loading 122.95 kg/m² (25.18 lb/sq ft)
Max power loading 5.66 kg/kW (9.31 lb/hp)

PERFORMANCE (estimated, at 1,300 kg, 2,865 lb AUW):
Never-exceed speed (VNE) 286 kts (530 km/h, 329 mph)
Max level speed 200 kts (370 km/h, 230 mph)
Max cruising speed 178 kts (330 km/h, 205 mph)
Econ cruising speed 151 kts (280 km/h, 174 mph)
Landing speed 60 kts (110 km/h, 69 mph)
Stalling speed: flaps down 49 kts (90 km/h, 56 mph)
flaps up 54 kts (100 km/h, 62 mph)
Max rate of climb at S/L 810 m (2,655 ft)/min
Service ceiling 7,000 m (22,965 ft)
T-O run 230 m (755 ft)
Landing run 250 m (820 ft)
Range:
with max payload 647 n miles (1,200 km, 745 miles)
with max internal fuel 809 n miles (1,500 km, 932 miles)
with max internal and external fuel 1,080 n miles (2,000 km, 1,242 miles)
g limits +11/-8

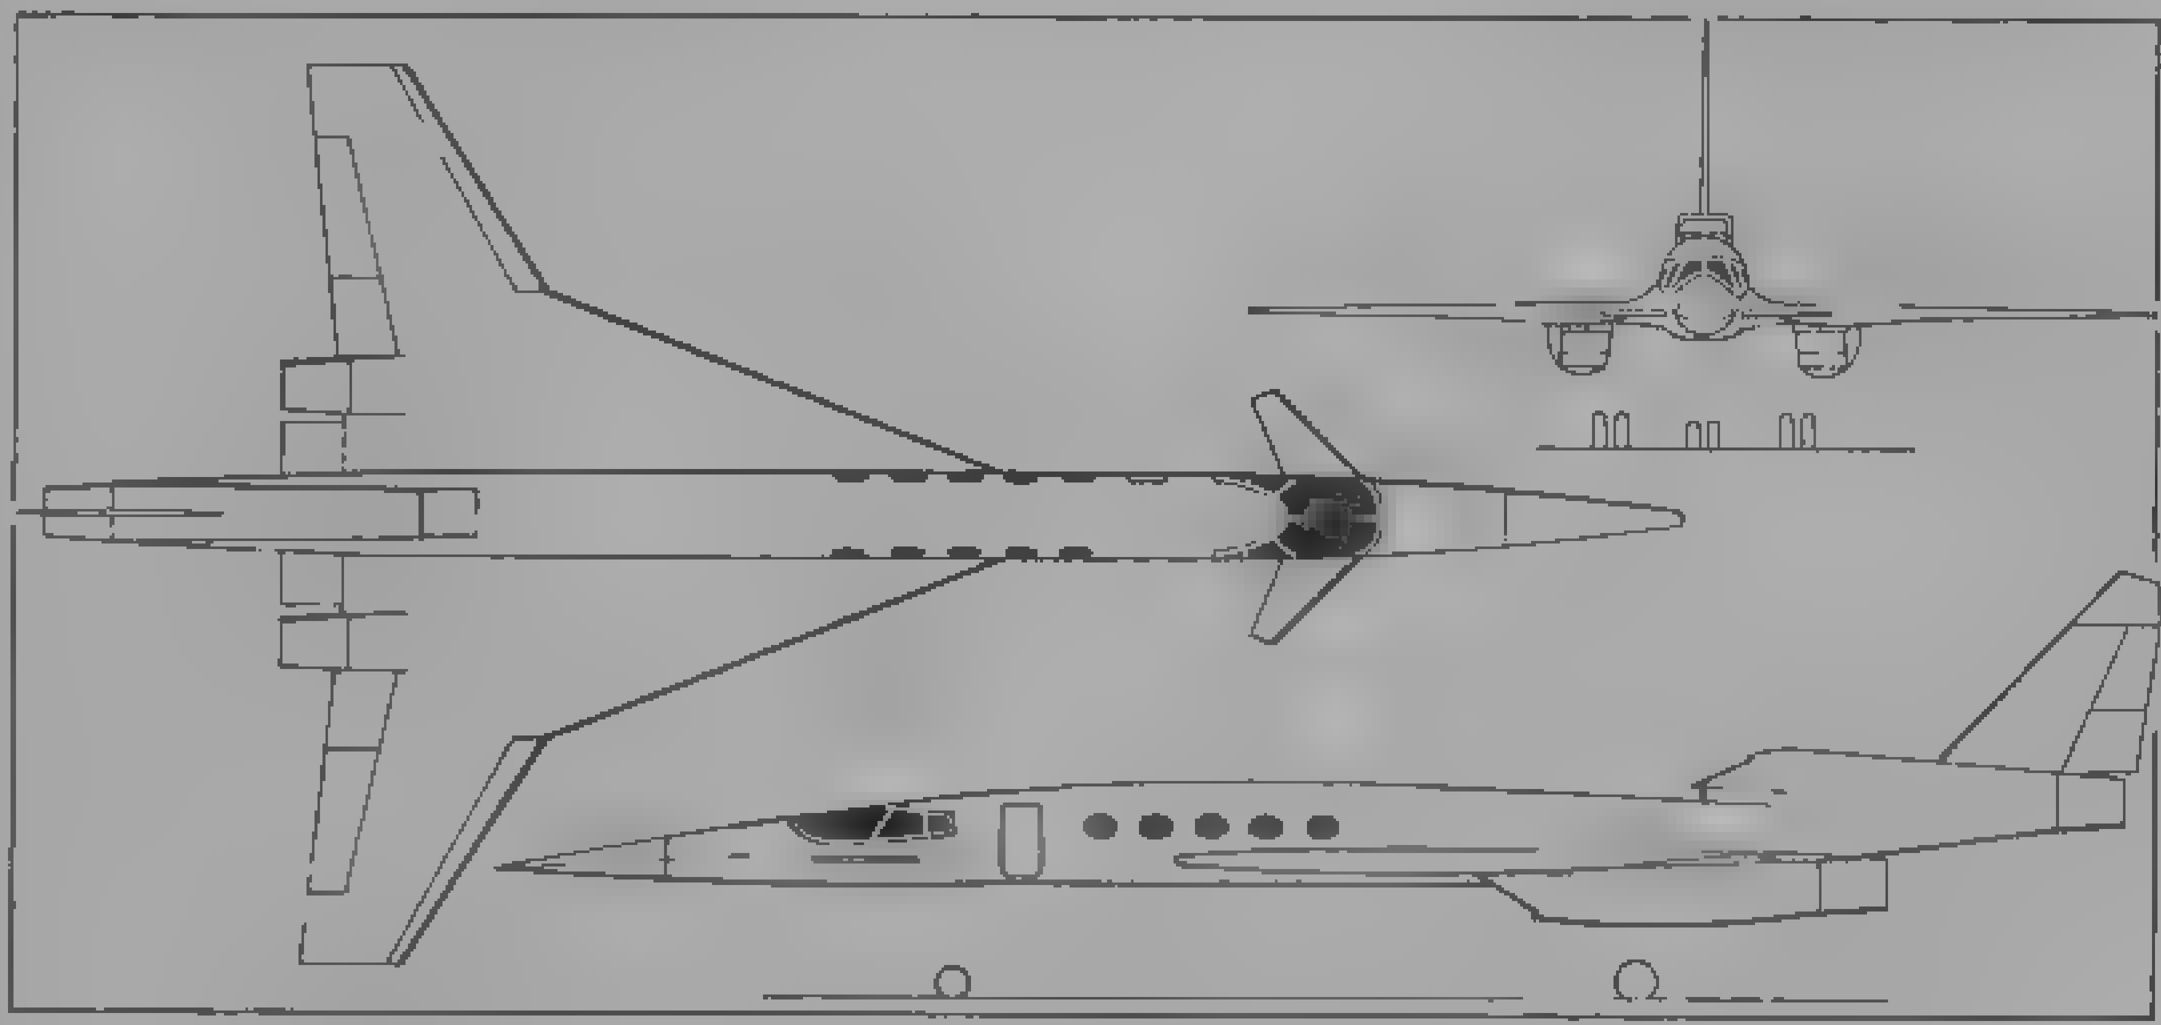
UPDATED

SUKHOI T-60S

The Sukhoi OKB is reported to be developing an intermediate-range bomber, under project designation T-60S, to replace Tu-16s, Tu-22s and some Su-24s. No details yet available. Accompanying artist's impression illustrates possible configuration.

Model of projected Sukhoi S-21 six/10-passenger supersonic transport

1994



Provisional drawing of Sukhoi S-21 supersonic business jet *(Jane's/Mike Keep)*

1994

SUKHOI S-21

TYPE: Supersonic business aircraft.

PROGRAMME: Projected originally as joint programme by Sukhoi and Gulfstream Aerospace of USA, separate studies for aircraft of this type started by Sukhoi 1987, Gulfstream 1988, and recorded subsequently in International section of *Jane's*; first draft of detailed specification of current redesign submitted by Sukhoi October 1991, Gulfstream withdrew from programme 1992, first flight expected originally 1994, now deferred until late 1990s. Series production planned for 2000; claimed current requirement for 150 aircraft.

DESIGN FEATURES: Three-engined low/mid-wing aircraft; wings have compound sweep, with highly swept inner panels, oval section fuselage, all-moving swept foreplanes. Designed supersonic shockwave level 3 to 4 times lower than Concorde, resembling remote thunder at S/L.

FLYING CONTROLS: Digital fly-by-wire AFCS.

LANDING GEAR: Retractable tricycle type with twin wheels on each unit.

POWER PLANT: Three Aviadvigatel D-21A1 turbofans, each 73.5 kN (16,535 lb st).

ACCOMMODATION: Crew of two and six to 10 passengers.

AVIONICS: Development in association with Honeywell.

DIMENSIONS, EXTERNAL:
Wing span 19.92 m (65 ft 4¼ in)
Length overall 37.86 m (124 ft 2½ in)

DIMENSIONS, INTERNAL:
Passenger cabin: Length 5.41 m (17 ft 9 in)
Max width 1.80 m (5 ft 10¾ in)
Max height 1.85 m (6 ft 0¾ in)
Volume 19.90 m³ (702.75 cu ft)

AREAS:
Wings, gross 40.00 m² (1,507.0 sq ft)

WEIGHTS AND LOADINGS (estimated):
Operating weight empty 24,570 kg (54,167 lb)
Normal payload 460 kg (1,015 lb)
Max payload 910 kg (2,006 lb)
Max fuel 26,520 kg (58,465 lb)
Max T-O weight 51,800 kg (114,200 lb)
Max wing loading 370 kg/m² (75.8 lb/sq ft)
Max power loading 235 kg/kN (2.3 lb/lb st)

PERFORMANCE (estimated):
Max cruising speed: supersonic Mach 2.0 (1,150 kts, 2,125 km/h, 1,320 mph)
subsonic Mach 0.95 (547 kts, 1,015 km/h, 630 mph)
Cruising altitude 15,500-19,500 m (50,850-63,975 ft)
T-O and landing run 1,980 m (6,500 ft)
Range, NBAA IFR reserves: supersonic or subsonic 4,000 n miles (7,400 km, 4,600 miles)

OPERATIONAL NOISE LEVELS: Designed to meet FAR Pt 36 standards, with sonic boom intensity less than 5 kg/m² (71 lb/sq in).

VERIFIED

SUKHOI S-51

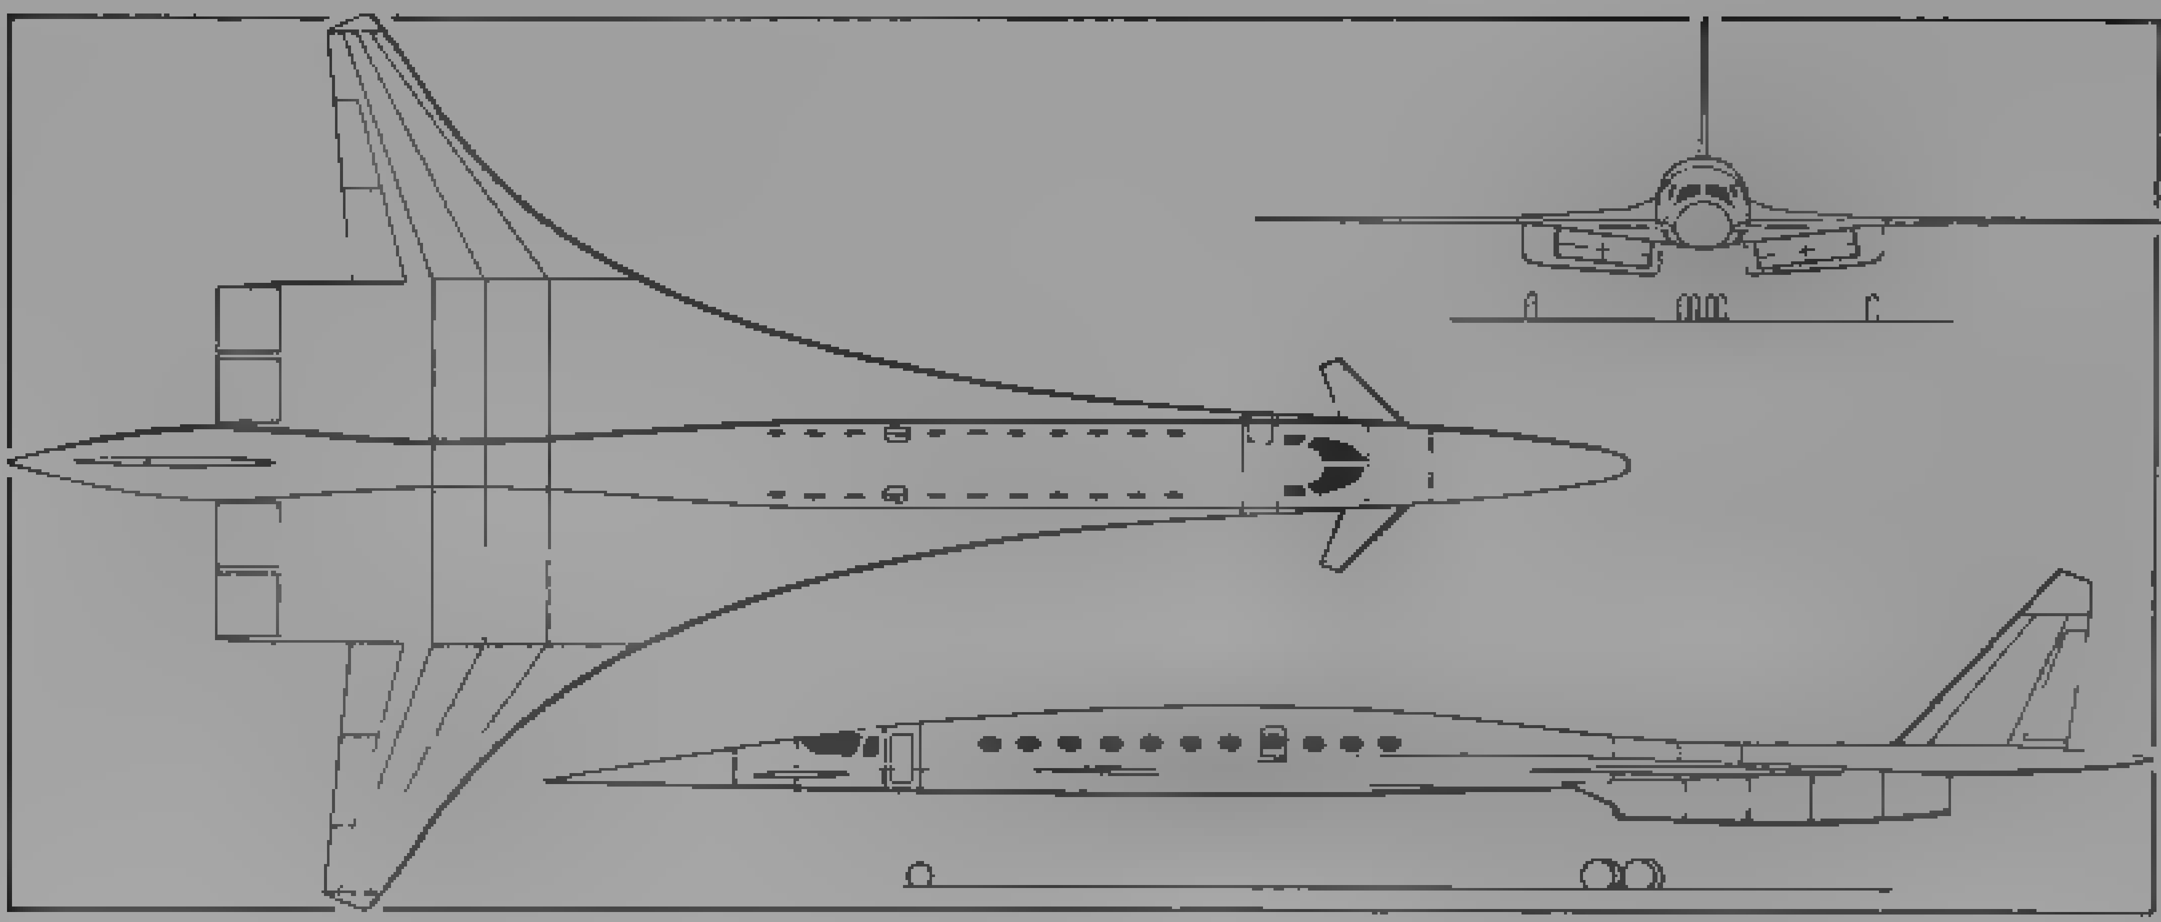
TYPE: Medium-size long-range supersonic transport.

PROGRAMME: At design study stage; projected date of prototype completion 2005, service entry 2010.

DESIGN FEATURES: Rear mounted sweptback low wings, with very long curved root extensions, carrying engine ducts on wide rearward extension of inboard semi-span, sweptback foreplanes, small diameter, long fuselage, with flush windscreen in conical nose; swept vertical tail surfaces. Intended to fly non-stop from Moscow to any airport in Europe and Asian continent, or one-stop to any world capital, range similar when flying supersonic or high subsonic, permitting operation over highly populated areas.

Artist's impression of possible configuration of Sukhoi T-60S supersonic intermediate-range bomber *(Jane's/Keith Fretwell)*

1994



Sukhoi S-51 four-engined supersonic passenger airliner (*Jane's/Mike Keep*)

1994

POWER PLANT: Four R 51 turbojets, each rated at 93.17 kN (20,945 lb st)

ACCOMMODATION: Crew of two, from 50 to 68 passengers

SYSTEMS: Based on experience with S-21 aircraft

DIMENSIONS, EXTERNAL:

Wing span	28.30 m (92 ft 10¼ in)
Length overall	50.50 m (165 ft 8¼ in)

DIMENSIONS, INTERNAL:

Passenger cabin: Length	14.80 m (48 ft 6¾ in)
Max width	2.64 m (8 ft 8 in)
Max height	1.95 m (6 ft 4¾ in)
Volume	62.40 m³ (2,204 cu ft)

AREAS:

Wings, gross	300.00 m² (3,230 sq ft)

WEIGHTS AND LOADINGS:

Operating weight empty	39,036 kg (86,060 lb)
Max payload	6,200 kg (13,670 lb)
Max fuel	47,160 kg (103,970 lb)
Max T-O weight	90,700 kg (199,955 lb)
Max wing loading	302.33 kg/m² (61.9 lb/sq ft)
Max power loading	243.4 kg/kN (2.39 lb/lb st)

PERFORMANCE (estimated):

Max supersonic speed	Mach 2.0 (1,145 kts; 2,125 km/h, 1,320 mph)
Max subsonic speed	Mach 0.95 (547 kts, 1,015 km/h, 630 mph)
Service ceiling	17,000-19,000 m (55,775-62,335 ft)
Balanced runway length	2,500 m (8,200 ft)
Max range: Mach 1.4, reduced fuel	2,930 n miles (5,430 km; 3,375 miles)
Mach 2.0 or 0.95	4,965 n miles (9,200 km; 5,715 miles)

OPERATIONAL NOISE LEVELS: Designed to meet FAR Pt 36 standards, with sonic boom intensity less than 5 kg/m² (1.71 lb/sq in)

VERIFIED

SUKHOI S-54

TYPE: Two-seat advanced jet trainer and light combat aircraft

PROGRAMME: Began as one of designs by five OKBs to meet official Russian requirement to replace Aero L-29 and L-39 Albatros; programme launched 1990; configuration refined 1992; avionics and systems units being tested on modified Su-25 and Su-27

DESIGN FEATURES: Described by Sukhoi as scaled-down development of Su-27, with speed, operating altitude and manoeuvrability commensurate with combat aircraft; unconventional all-swept mid-wing configuration, twin outward-canted fins mounted at wing trailing-edges; engine air intakes under wingroots; retractable tricycle landing gear

FLYING CONTROLS: Fly-by-wire as Su-27, via flaperons, all-moving tailplane and rudders; leading-edge flaps, airbrake; preprogrammable to make aircraft easier or harder to fly dependent on pupil's ability; optional 'panic button' to return aircraft to straight and level flight from any attitude and push button spin recovery; optional playback system to record student's every move in flight

LANDING GEAR: Retractable tricycle type, single wheel on each unit; mainwheels retract inward, nosewheel forward; no brake-chute

POWER PLANT: One Soyuz/Tumansky R-195FS turbojet modified from Su-25 power plant, rated at 41.2 kN (9,260 lb st) dry and 60.8 kN (13,670 lb st) with afterburning; optional alternatives could include F404, RB199 and PD33, with minimal airframe modification. Two internal fuel tanks, total capacity 1,660 kg (3,660 lb). Single-point pressure fueling

ACCOMMODATION: Two crew in tandem on K-36 zero/zero ejection seats, under blister canopy, rear seat raised

AVIONICS: Avionics and cockpit interior same as for current and advanced tactical aircraft. Automatic flight control system. Weather radar standard

ARMAMENT: Wingtip mounts for two close-range IR homing air-to-air missiles, two hardpoints under each wing for air-to-air and air-to-surface guided weapons

DIMENSIONS, EXTERNAL:

Wing span	9.08 m (29 ft 9½ in)
Wing chord: at root	4.64 m (15 ft 2¾ in)
at tip	1.18 m (3 ft 10½ in)
Length overall	12.30 m (40 ft 4¼ in)
Height overall	4.47 m (14 ft 8 in)
Tailplane span	5.49 m (18 ft 0¼ in)
Wheel track	2.52 m (8 ft 3¼ in)
Wheelbase	3.45 m (11 ft 4 in)

AREAS:

Wings, gross	26.42 m² (284.4 sq ft)
Flaperons (total)	2.94 m² (31.65 sq ft)
Leading-edge flaps (total)	2.36 m² (25.40 sq ft)
Fins (total)	6.46 m² (69.54 sq ft)
Rudders (total)	1.54 m² (16.58 sq ft)
Tailplane	4.46 m² (48.01 sq ft)

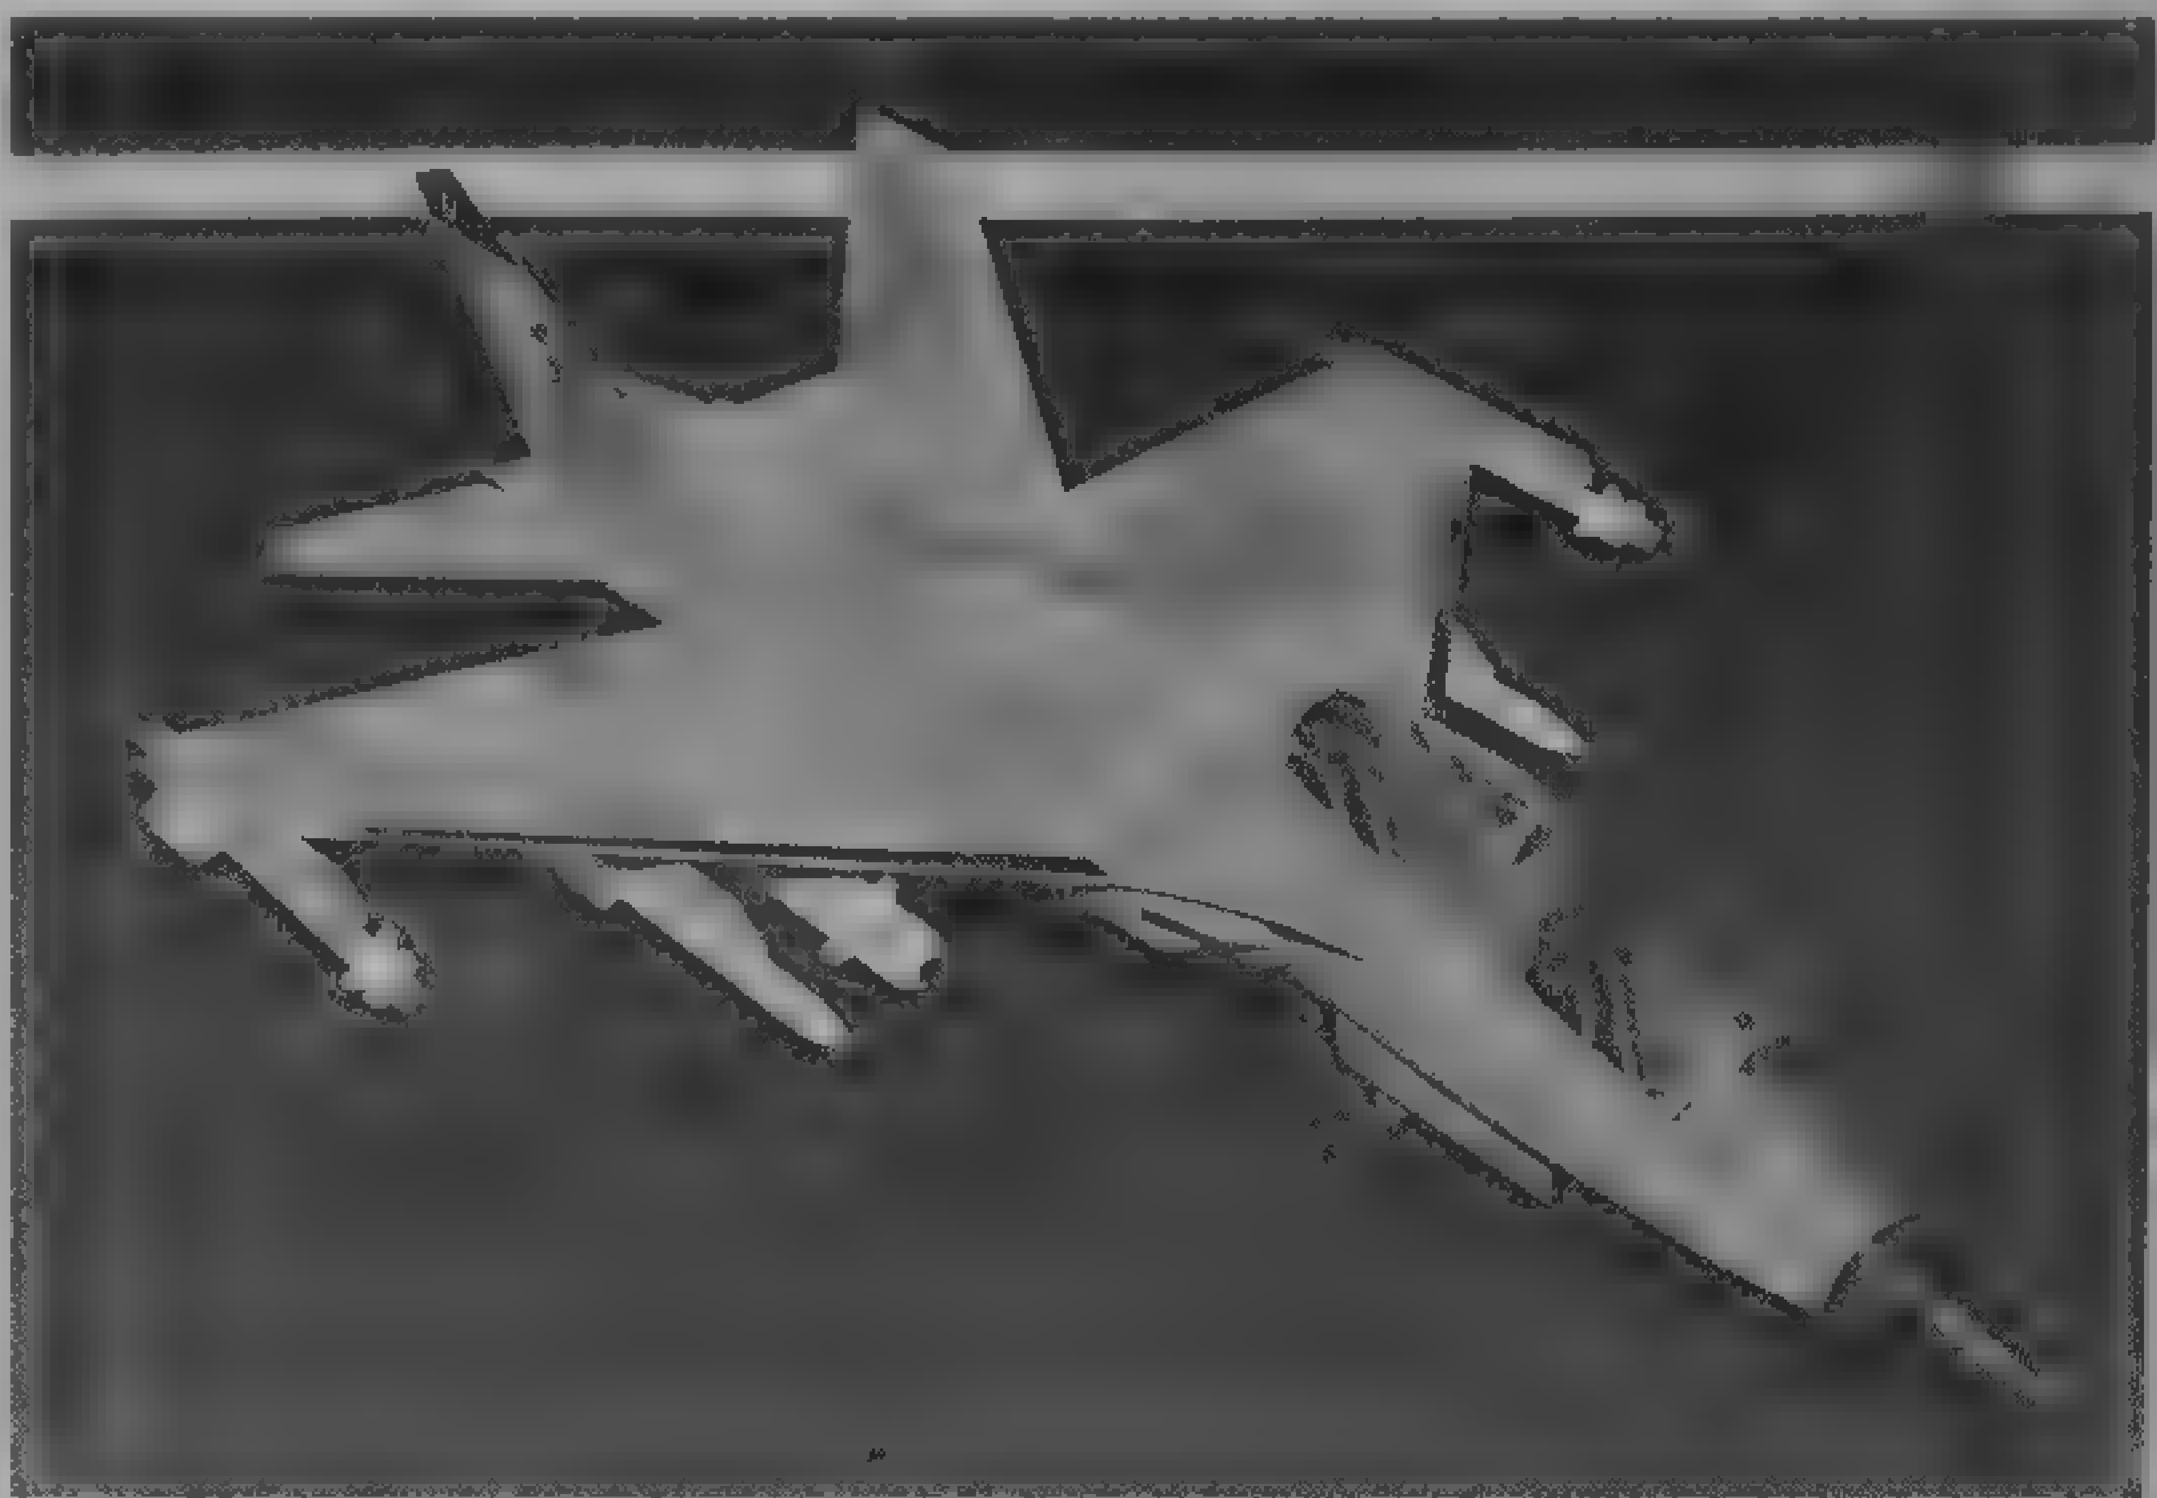
WEIGHTS AND LOADINGS:

Weight empty, equipped	4,790 kg (10,560 lb)
Max T-O weight	9,410 kg (20,745 lb)
Max landing weight	7,130 kg (15,718 lb)
Max wing loading	356.2 kg/m² (72.94 lb/sq ft)
Max power loading	154.75 kg/kN (1.52 lb/lb st)

PERFORMANCE (estimated):

Max level speed: at height	Mach 1.55 (890 kts; 1,650 km/h, 1,025 mph)
at S/L	Mach 0.98 (645 kts; 1,200 km/h; 745 mph)
T-O speed	98 kts (180 km/h, 112 mph)
Landing speed	92 kts (170 km/h, 106 mph)
Service ceiling	18,000 m (59,050 ft)
T-O run	380 m (1,250 ft)
Landing run	500 m (1,640 ft)
Range with max fuel: at S/L	440 n miles (820 km, 510 miles)
at height	1,080 n miles (2,000 km, 1,240 miles)
g limits	+9/−3

VERIFIED



Model of Sukhoi S-54 in fully armed combat configuration (*Piotr Butowski*)

1994

SUKHOI S-80

TYPE: Twin turboprop multipurpose STOL transport

PROGRAMME: First, largest and most advanced design by Sukhoi under konversiya programme of former Soviet industry. Work began 1989 by Sukhoi Europe/Asia joint stock company, with founder members Sukhoi Design Bureau, ASIC, Komsomolsk-on-Amur Aviation Production Association, Rybinsk Motor Engineering Design Bureau, Ramenskoye Instrument Engineering Design Bureau, and Instrument Engineering R&D Institute. Manufacture of five airframes of cargo/passenger version under way at Komsomolsk-on-Amur plant 1993; agreement with General Electric to fit CT7-9B turboprops early 1995; first flight of prototype scheduled 1996, series production to begin 1997

CURRENT VERSIONS: **S-80P**: Basic passenger version

S-80GP: Passenger/cargo transport

S-80A: For service in Arctic

S-80GR: Adapted to carry geological exploration equipment

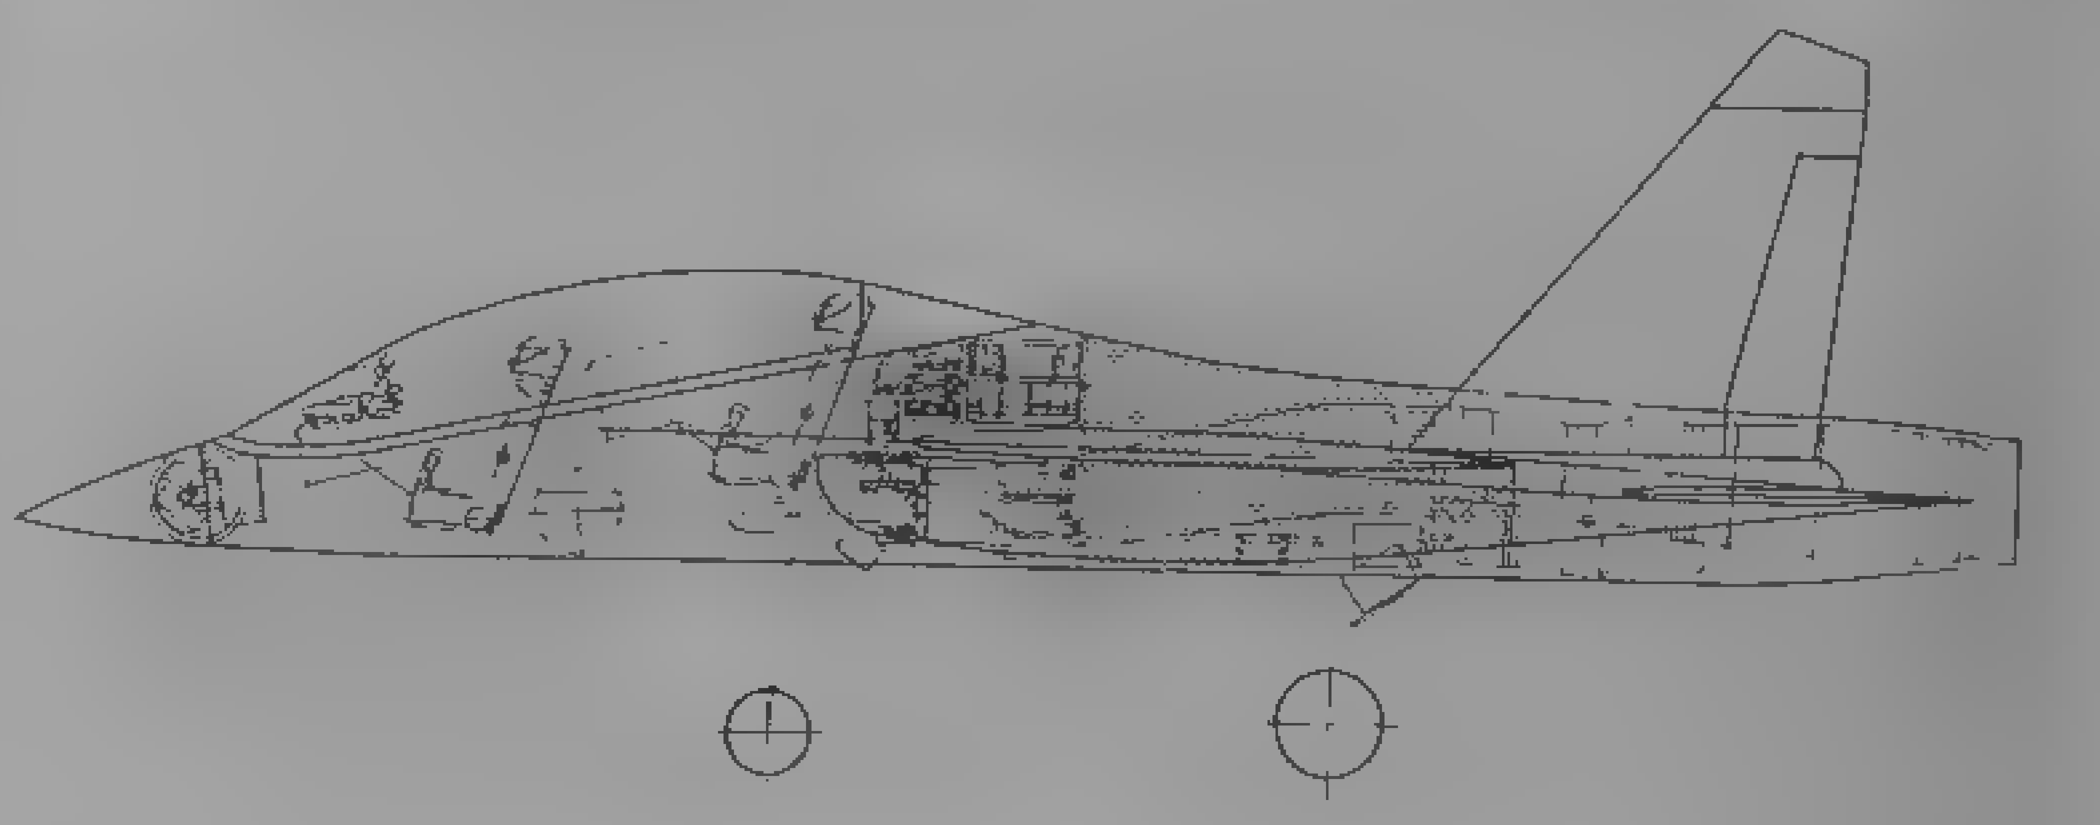
S-80M: Ambulance for 10 stretcher patients and attendant

S-80PT: Patrol/transport version

S-80TD: Military light assault transport

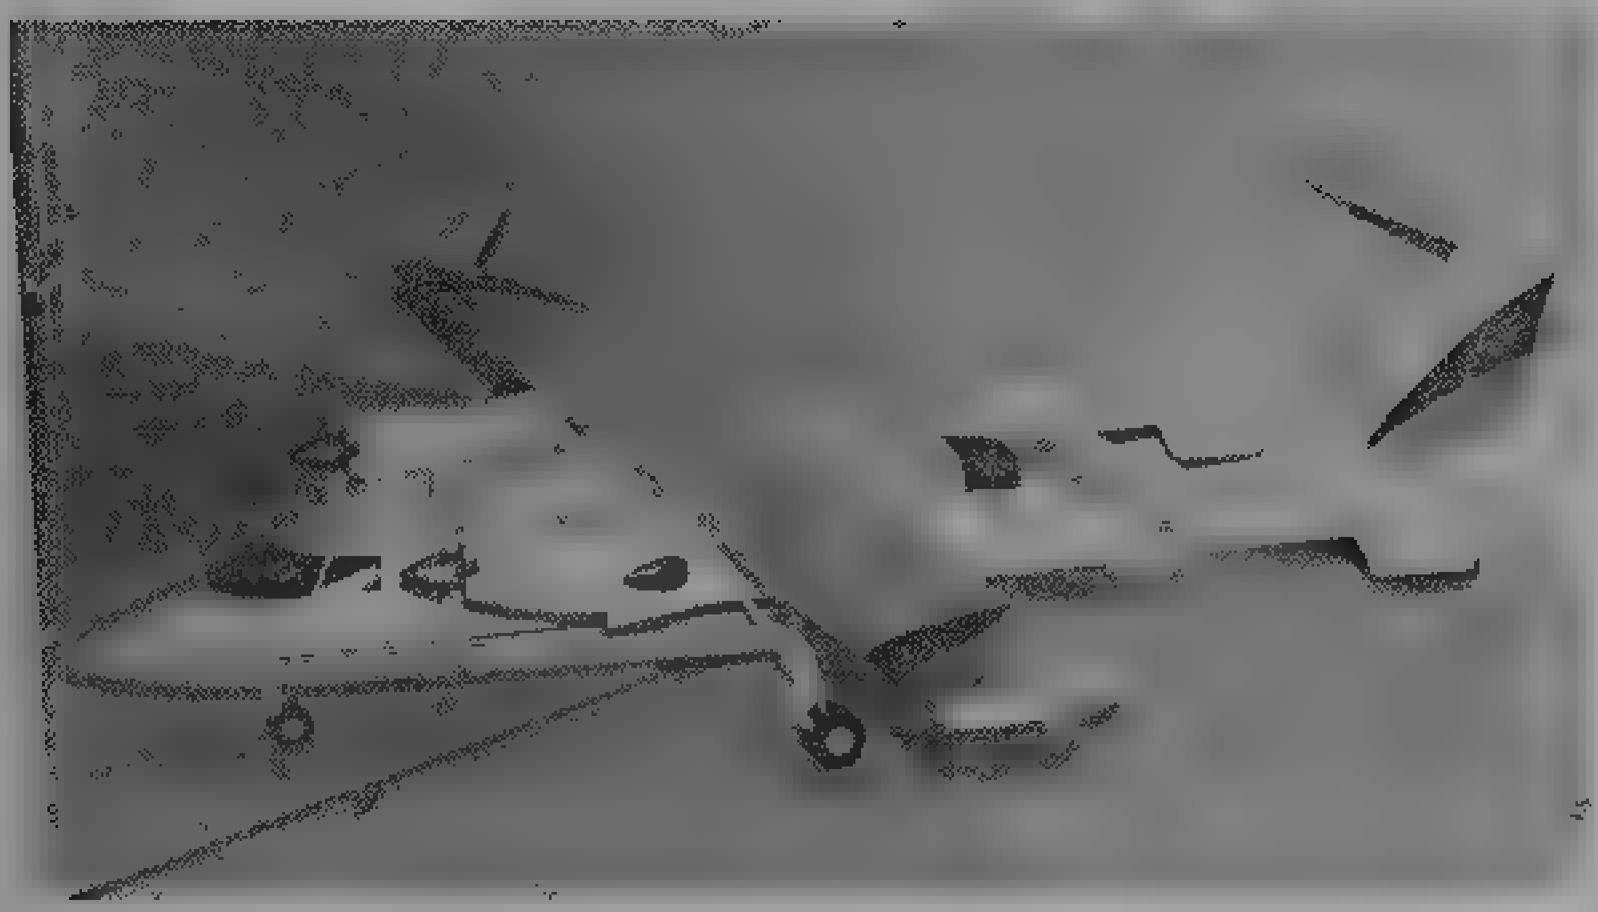
CUSTOMERS: Planned to produce approximately 1,800 to 2,000 S-80s for Russia and former USSR states by 2005

DESIGN FEATURES: Basically conventional high-wing, podded fuselage, twin-boom, rear-loading configuration, but with short tandem-wing surfaces between each tailboom and

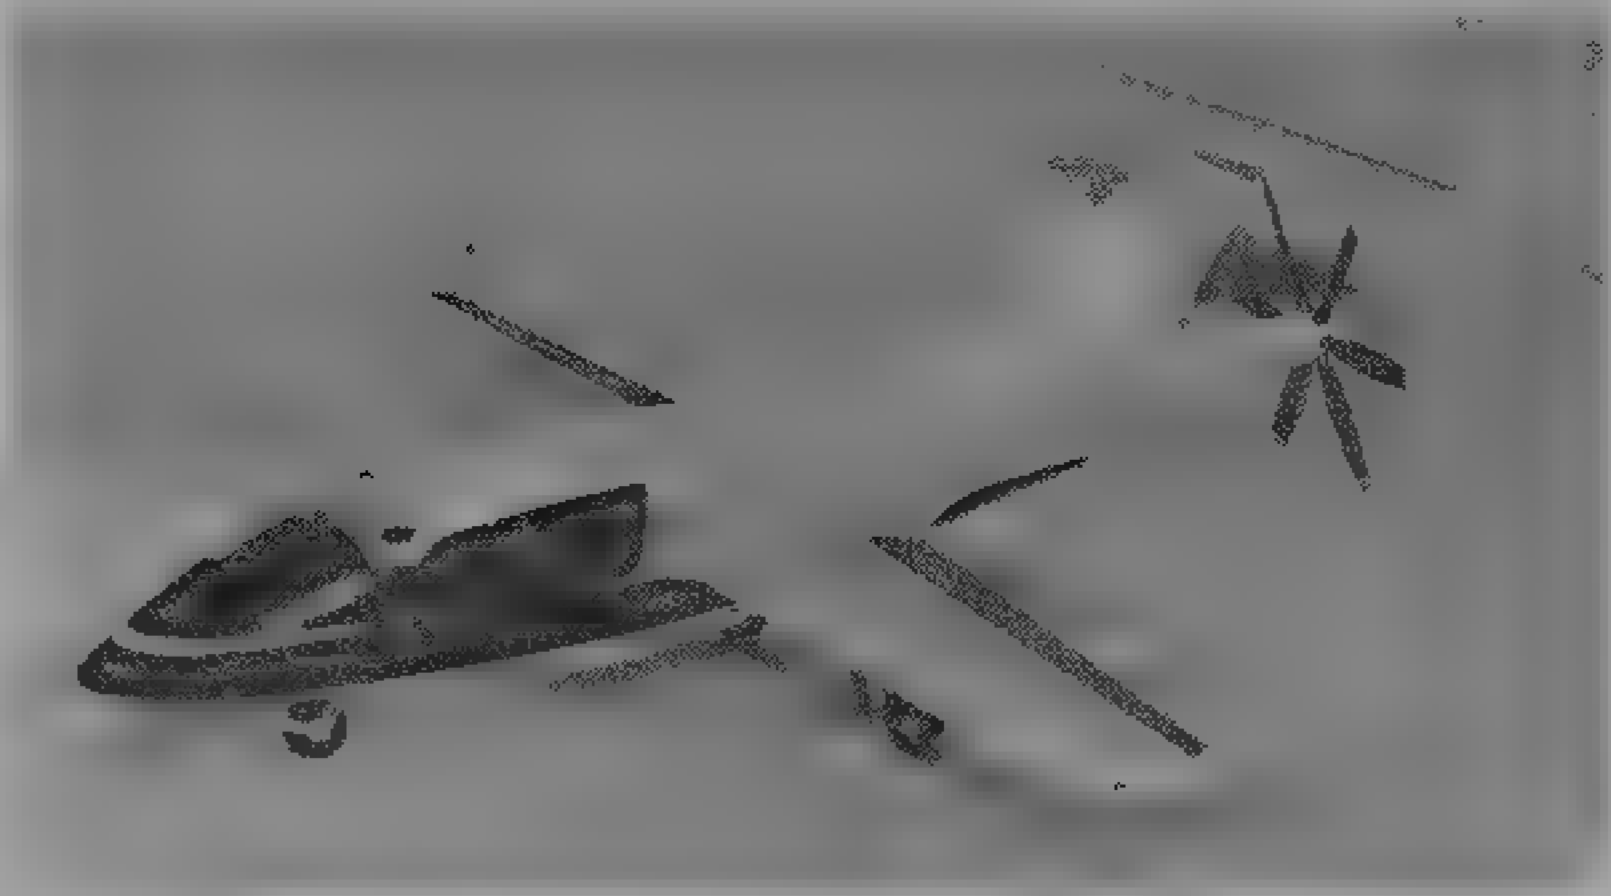


Fuselage cross-section of S-54 advanced trainer/combat aircraft

1994



Model of Sukhoi S-80 in current redesigned configuration *(Brian M. Service)* *1994*



Model of Sukhoi S-84, now with winglets *(Piotr Butowski)* *1994*

rear fuselage, unswept wings with no dihedral or anhedral on large-span inner panels, anhedral and small sweptback winglets on outer panels; sweptback vertical tail surfaces, toed slightly inward, with bridging horizontal surfaces. Systems, accessories and components of Su-25, Su-27 and Su-35 aircraft embodied in S-80. Automatic built-in systems testing.

FLYING CONTROLS: Basic three-axis control; three-view suggests complex wing leading-edge and trailing-edge surfaces to ensure STOL capability.

STRUCTURE: No details, but said to employ "advanced and high technology".

LANDING GEAR: Retractable tricycle type, twin wheels on each unit; main units retract into tailbooms, mainwheel tyre size 660 × 200 mm, nosewheel tyre size 500 × 180 mm, nosewheels steerable ±38°.

POWER PLANT: Two 1,104 kW (1,480 shp) Rybinsk TVD-1500S turboprops, each driving an AV-36 six-blade reversible-thrust propeller, or two 1,395 kW (1,870 shp) General Electric CT7-9B turboprops. Two fuel tanks, total capacity 2,500 litres (660 US gallons; 550 Imp gallons). APU for autonomous operation at remote, unprepared sites.

ACCOMMODATION: Pilot only, or two crew side by side on flight deck, 19 to 26 passengers at 75 cm (29.5 in) seat pitch or 10 stretcher patients in main cabin, or 2,500 kg (5,511 lb) freight or role equipment (use of CT7-9B engines increases maximum payload to 3,500 kg; 7,716 lb). Typical S-80P carries seven passengers in single seats on port side of cabin and 12 in double seats on starboard side, with baggage space, toilet, wardrobe or galley at front, as specified by customer. Available in 'Salon' configuration with nine, 12 or 16 passenger seats. Typical freighter has a row of seats behind flight deck and unobstructed main hold for a small vehicle or cargo. Door at centre of cabin on port side; rear-loading doors and ramp.

SYSTEMS: Electrical system developed by Lucas Aerospace and Avibtec.

AVIONICS: Based on Rockwell Collins and Litton equipment. New airborne radar, advanced flight deck equipment.

EQUIPMENT: Options include equipment for air photography.

DIMENSIONS, EXTERNAL:

Wing span	23.175 m (76 ft 0½ in)
Wing chord: at root	2.16 m (7 ft 1 in)
at tip	1.20 m (3 ft 11¼ in)
Length overall	16.68 m (54 ft 8¾ in)
Height overall	5.56 m (18 ft 3 in)
Tailplane span	4.88 m (16 ft 0¼ in)
Wheel track	5.60 m (18 ft 4½ in)
Wheelbase	6.50 m (21 ft 4 in)
Propeller diameter (each)	2.65 m (8 ft 8⅓ in)
Propeller ground clearance	1.10 m (3 ft 7¼ in)
Distance between propeller centres	5.60 m (18 ft 4½ in)
Passenger door: Height	1.75 m (5 ft 9 in)
Width	0.90 m (2 ft 11½ in)
Service door: Height	1.34 m (4 ft 4¾ in)
Width	0.64 m (2 ft 1¼ in)
Type III emergency exits (each):	
Height	0.905 m (2 ft 11½ in)
Width	0.54 m (1 ft 9¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length	6.30 m (20 ft 8 in)
Max width	2.15 m (7 ft 0¾ in)
Max height	1.90 m (6 ft 2¾ in)
Volume, approx	27.00 m³ (953 cu ft)

AREAS:

Wings, gross	44.00 m² (473.63 sq ft)
Ailerons (total)	3.27 m² (35.20 sq ft)
Trailing-edge flaps (total)	7.051 m² (75.90 sq ft)
Leading-edge slats (total)	4.68 m² (50.38 sq ft)
Fins (total)	6.64 m² (71.47 sq ft)
Rudders (total)	6.22 m² (66.95 sq ft)
Horizontal tail surfaces	5.86 m² (63.08 sq ft)

WEIGHTS AND LOADINGS (A: TVD-1500S engines, B: CT7-9B engines):

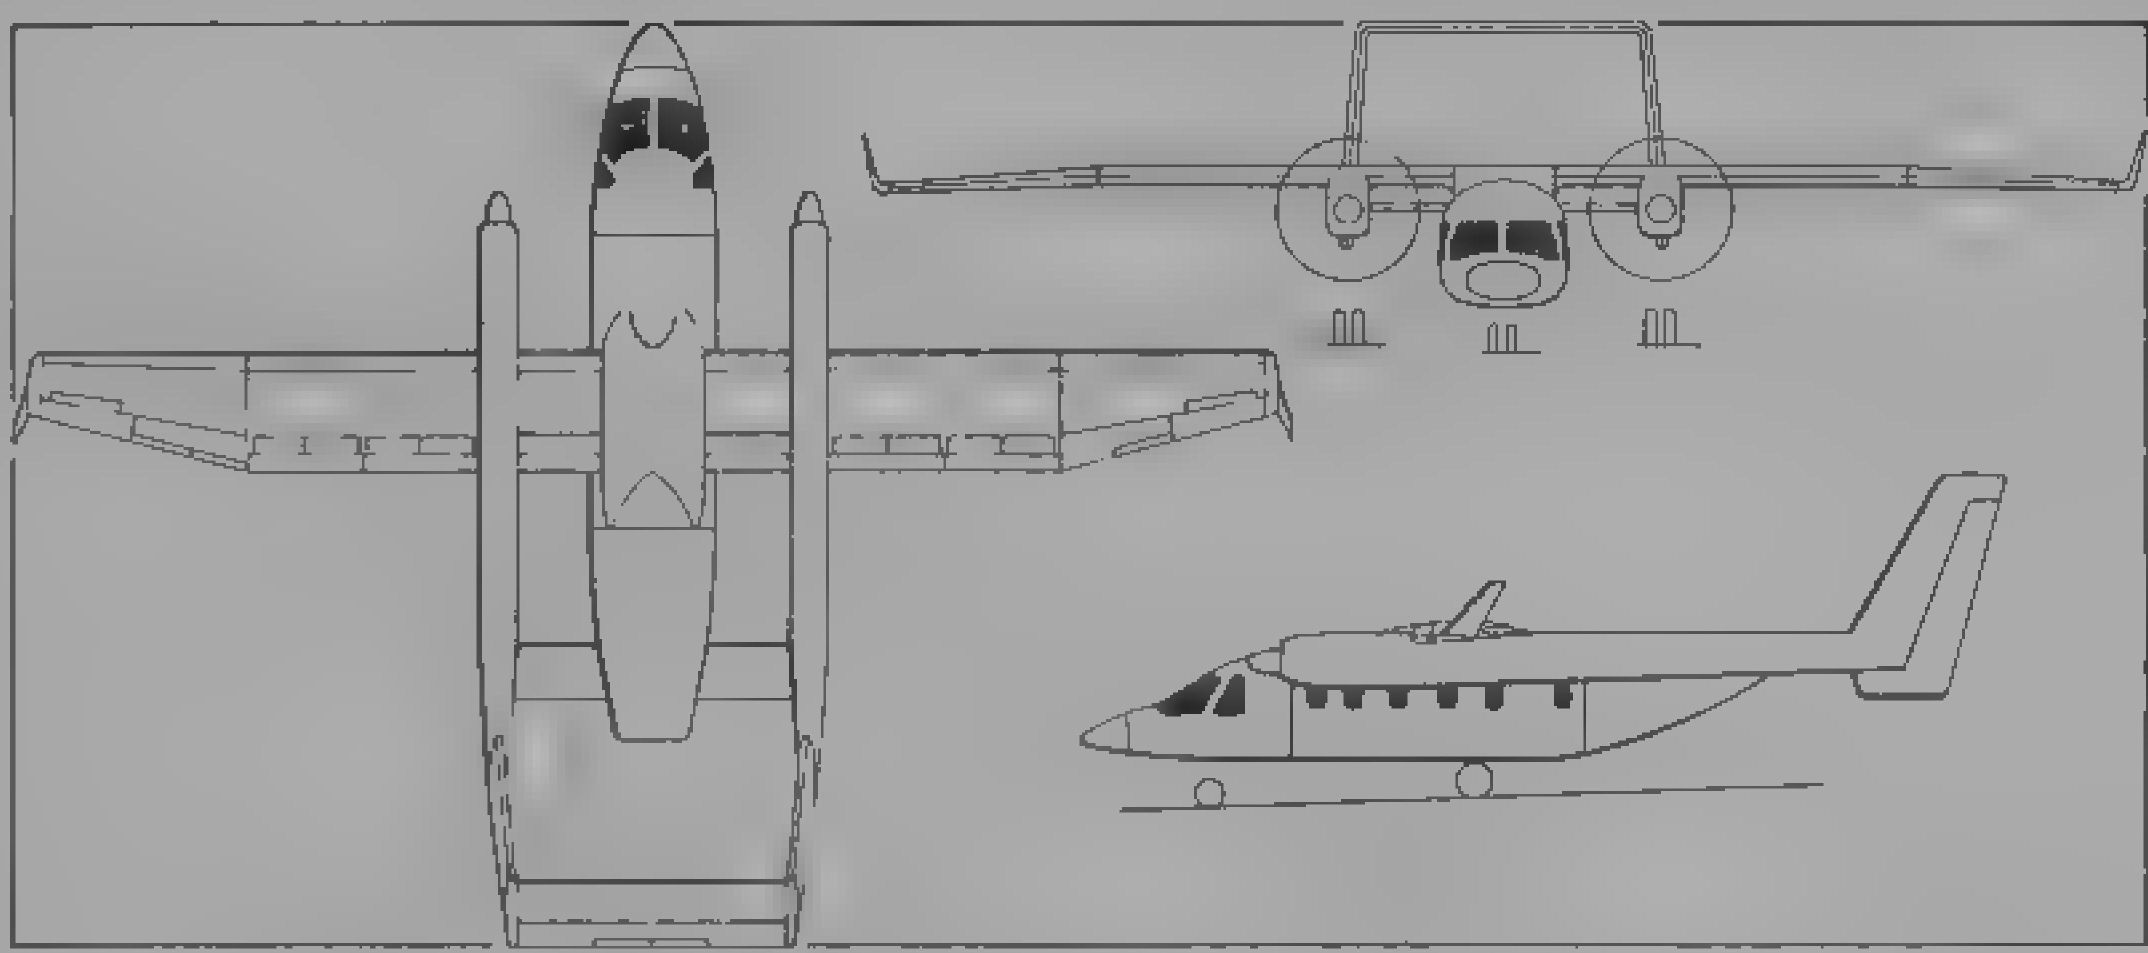
Weight empty, equipped: A	6,230 kg (13,735 lb)
Operating weight empty: A	6,500 kg (14,330 lb)
Max payload: A	2,500 kg (5,511 lb)
B	3,500 kg (7,716 lb)
Max fuel: A	2,370 kg (5,225 lb)
Max T-O weight: A	11,000 kg (24,250 lb)
B	12,500 kg (27,555 lb)
Max landing weight: A	10,400 kg (22,925 lb)
Max wing loading: A	250.0 kg/m² (51.20 lb/sq ft)
B	284.1 kg/m² (58.18 lb/sq ft)
Max power loading: A	4.98 kg/kW (8.19 lb/shp)
B	4.48 kg/kW (7.37 lb/shp)

PERFORMANCE (estimated):

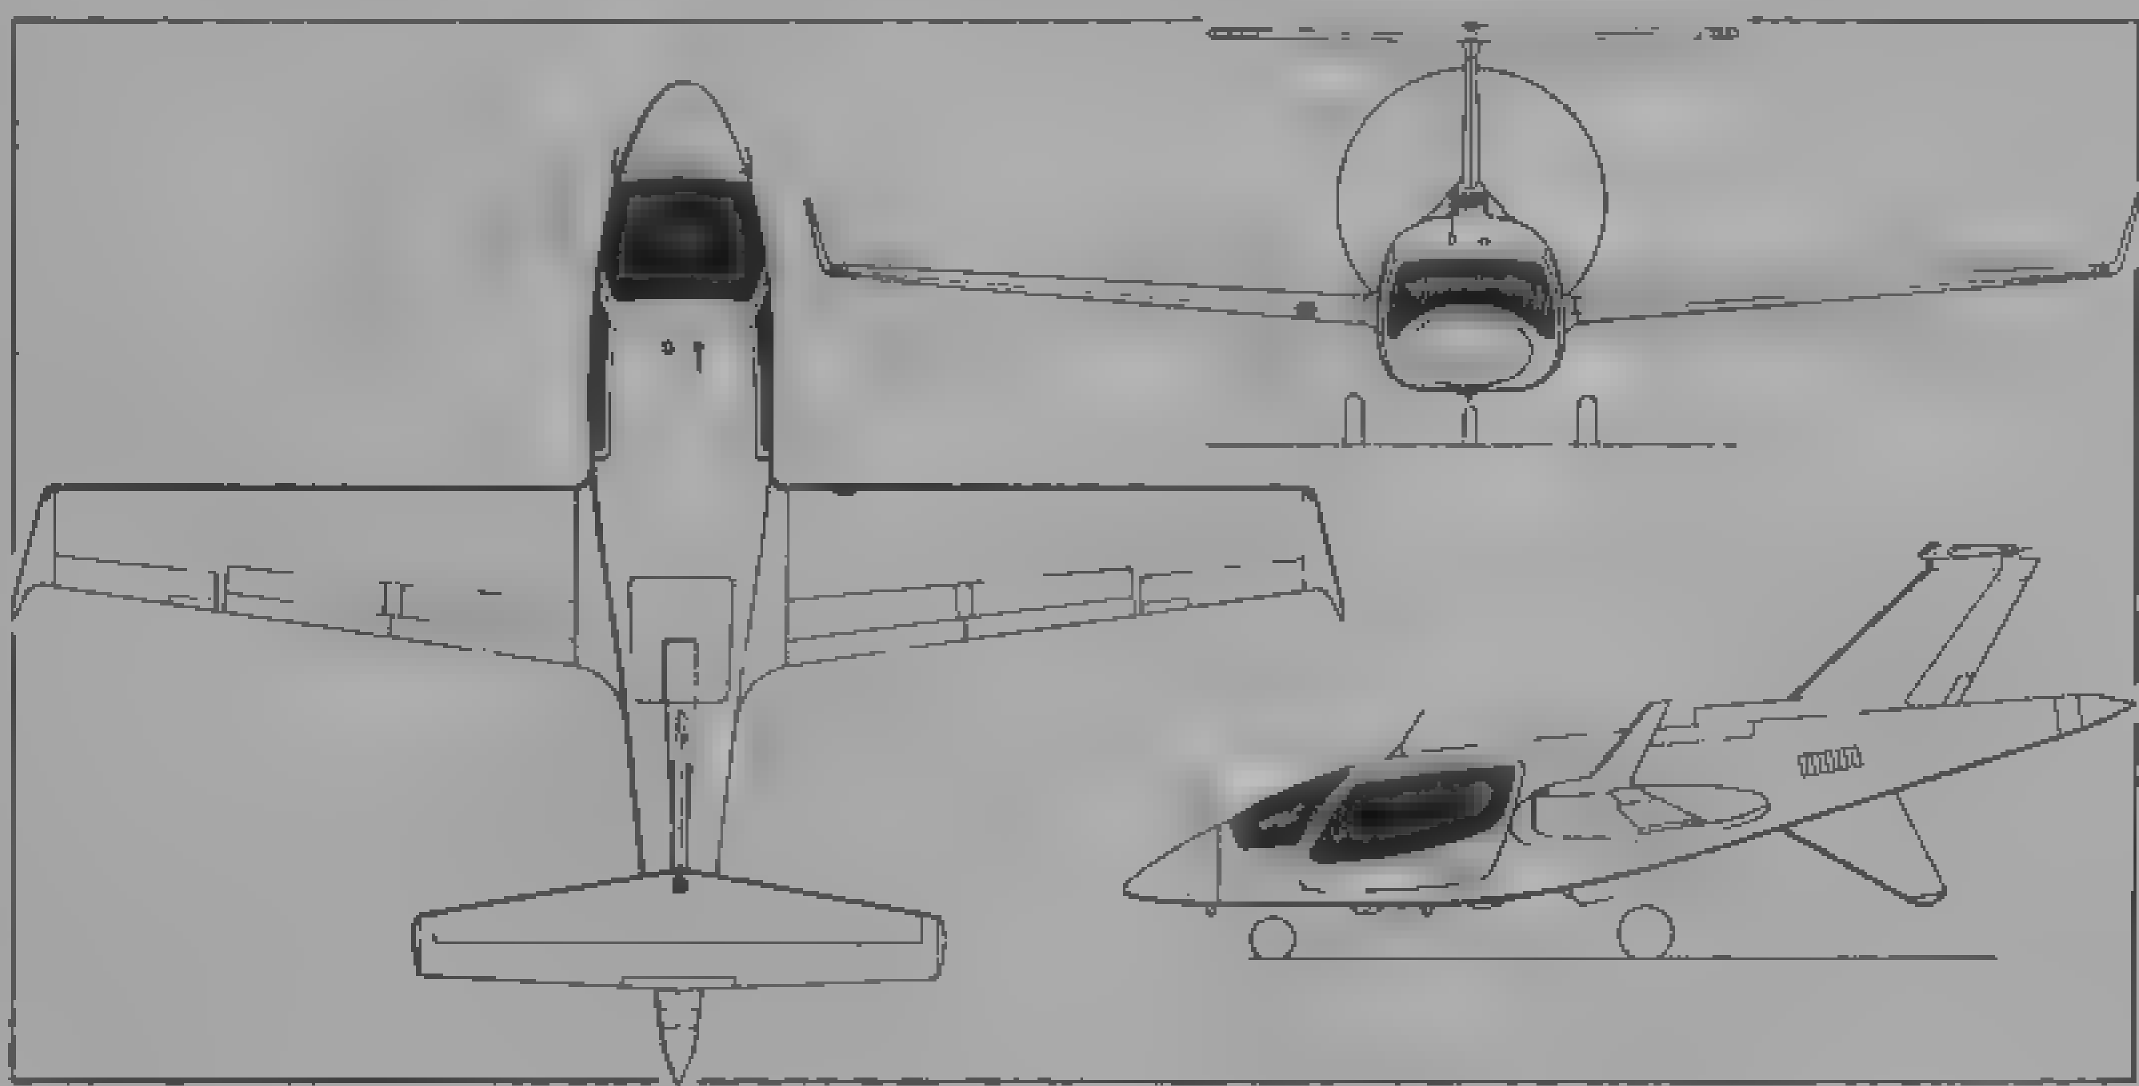
Never-exceed speed (V_{NE})	
A	296 kts (550 km/h; 341 mph)
Max level speed at 6,000 m (19,685 ft)	
A	270 kts (500 km/h; 310 mph)
Max cruising speed at 6,000 m (19,685 ft)	
A	259 kts (480 km/h; 298 mph)
B	288 kts (535 km/h; 332 mph)
Econ cruising speed at 6,000 m (19,685 ft)	
A	194 kts (360 km/h; 223 mph)
Stalling speed, flaps down	
A	65 kts (120 km/h; 75 mph)
Max rate of climb at S/L: A	900 m (2,950 ft)/min
Rate of climb at S/L, OEI: A	420 m (1,375 ft)/min
Service ceiling: A	8,000 m (26,250 ft)
T-O run: A	360 m (1,180 ft)
B	600 m (1,970 ft)
T-O to 15 m (50 ft): A	830 m (2,725 ft)
Landing from 15 m (50 ft): A	760 m (2,495 ft)
Landing run with reverse thrust: A	180 m (590 ft)
B	400 m (1,313 ft)
Range: with max payload	
A	675 n miles (1,250 km; 776 miles)
B	1,349 n miles (2,500 km; 1,553 miles)
with max fuel	
A	2,425 n miles (4,500 km; 2,795 miles)

OPERATIONAL NOISE LEVELS: Designed to conform with FAR Pt 36 standards.

UPDATED



Sukhoi S-80 twin-turboprop multipurpose STOL transport *(Jane's/Mike Keep)* *1994*



Sukhoi S-84 four-seat light multipurpose aircraft *(Jane's/Mike Keep)* *1994*

SUKHOI S-84

TYPE: Four-seat light multipurpose STOL aircraft.

PROGRAMME: Development started June 1993, model of current redesign shown at MosAeroshow '93; production could begin 1996, with certification to AR-23 standards.

DESIGN FEATURES: Cantilever mid-wing monoplane, laminar flow wing section, high-lift trailing-edge surfaces, winglets added 1994; streamline fuselage, with flush canopy, upswept at rear, sweptback fin and T tailplane, clear of propeller arc; sweptback ventral fin protects propeller in tail-down attitude on ground. Pusher propeller at tip of tailcone ensures low cabin noise levels and optimum forward view. Wing sweepback 0°, except for modest sweepforward at roots, thickness/chord ratio 16 per cent at root, 12 per cent at tip, aspect ratio 8.5, dihedral 4° from roots, incidence –2°.

FLYING CONTROLS: Three-axis manual operation; ailerons with spoilers; unswept tailplane carries one-piece horn balanced elevator; electromechanical two-section trailing-edge flaps; trim tab in elevator.

STRUCTURE: All-composites airframe (GFRP and CFRP). Two-spar wings with few ribs, fuselage with longerons and honeycomb skin.

LANDING GEAR: Retractable tricycle type, single wheel on each levered-suspension unit, oleo-pneumatic shock-absorbers, mainwheel tyres size 500 × 170 mm, pressure 3.9 bars (57 lb/sq in); nosewheel tyre size 400 × 150 mm, pressure 2.95 bars (43 lb/sq in); nosewheel steerable ±40°, anti-skid brakes on mainwheels. Designed for operation from grass airfields.

POWER PLANT: One 261 kW (350 hp) Teledyne Continental TSIOL-550-B flat-six piston engine, buried in centre-fuselage behind wings, five-blade propeller. Oil capacity 12 litres (3.2 US gallons; 2.6 Imp gallons).

ACCOMMODATION: Pilot and passenger on individual front seats, two persons on 1.14 m (3 ft 8¾ in) wide rear bench seat. Provision for carrying 400 kg (882 lb) freight instead of passengers, or for ambulance, search and rescue and other missions. Interior air conditioned. Large door with automatically retractable airstairs on each side.

SYSTEMS: Hydraulic system for landing gear actuation, nosewheel steering and spoilers, pressure 148 bars (2,150 lb/sq in). Servo assisted brakes. Electric anti-icing system. Oxygen system standard. Nitrogen system for emergency landing gear extension.

AVIONICS: Designed for AlliedSignal Silver Crown avionics, for day/night VFR/IFR operation, into paved or unpaved fields, including those without ILS aids.

EQUIPMENT: Safety features include quick-response parachute. Options include bar, audio-visual system, TV camera and satcom.

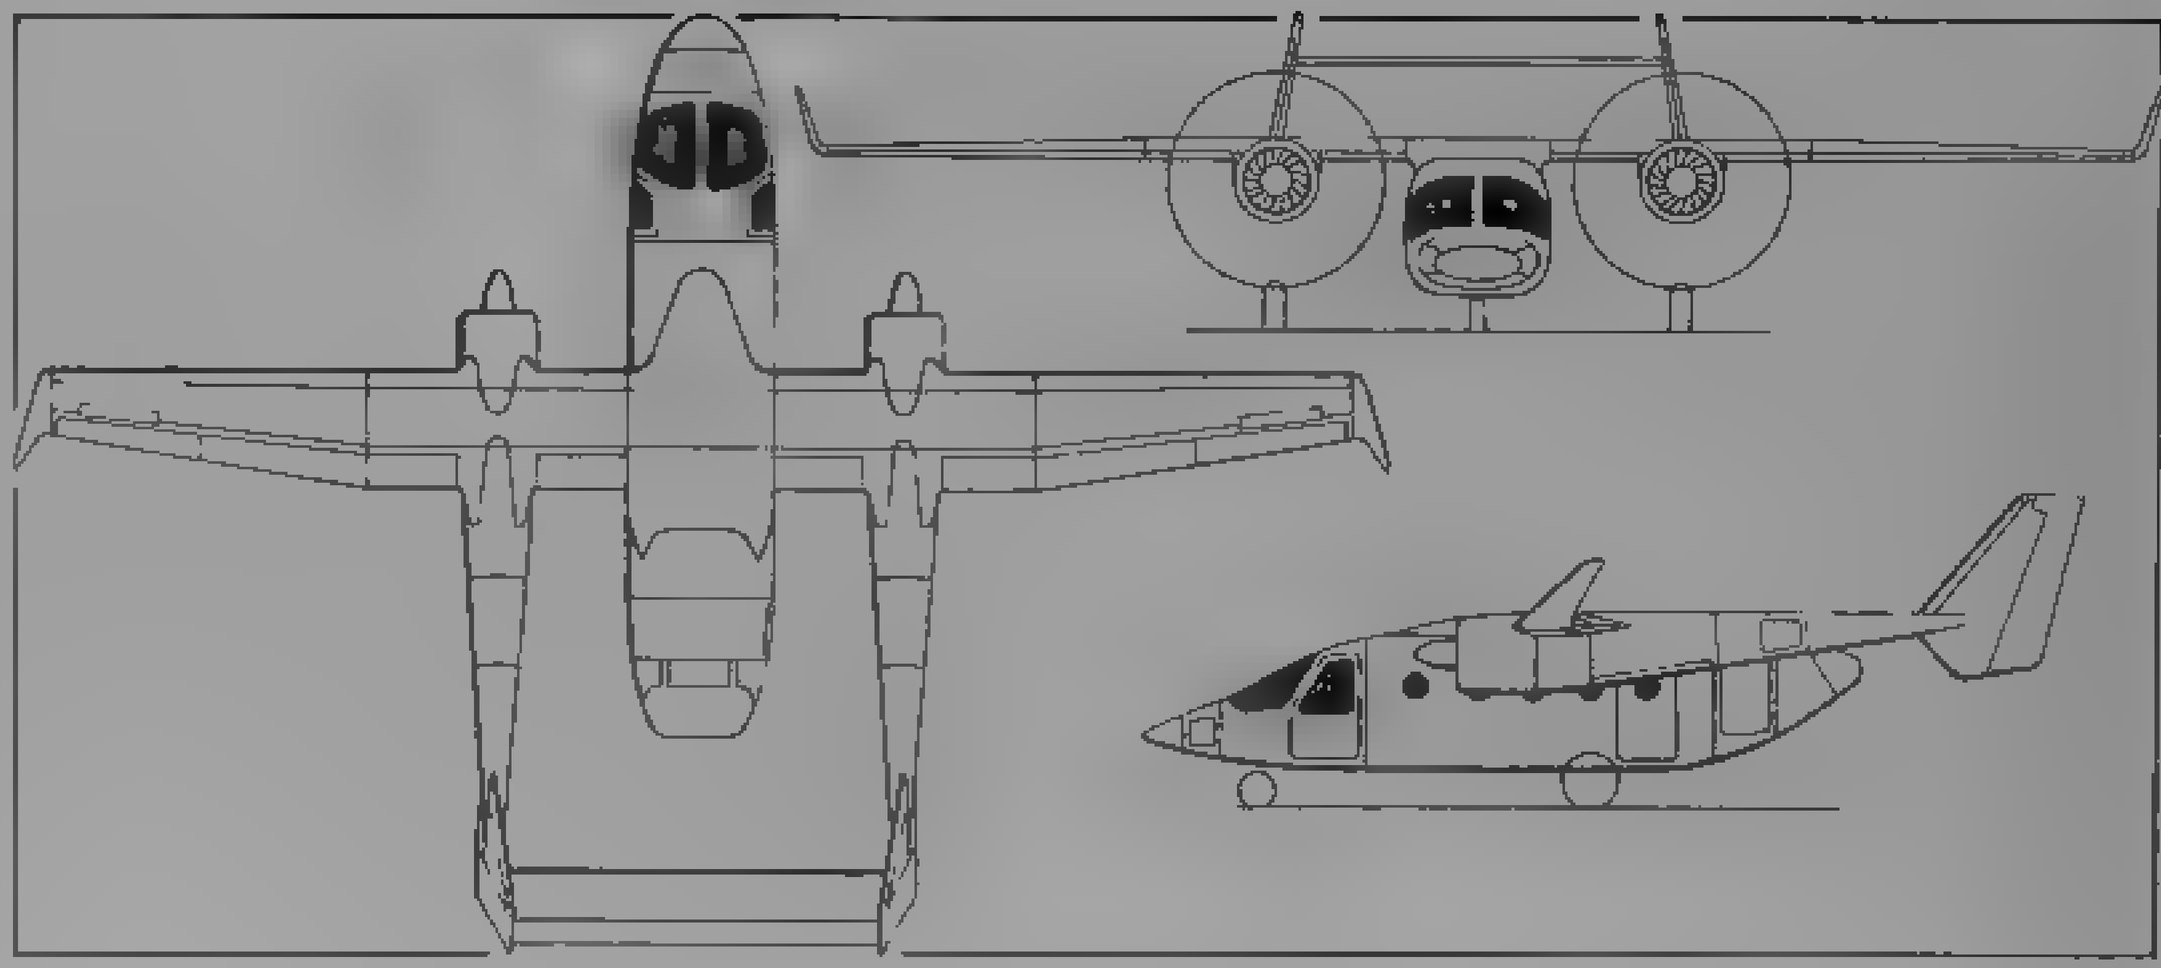
DIMENSIONS, EXTERNAL:
Wing span — 12.55 m (41 ft 2¼ in)
Wing chord: at root — 1.70 m (5 ft 7 in)
at tip — 0.98 m (3 ft 2½ in)
Length overall — 9.71 m (31 ft 10¼ in)
Height overall — 3.94 m (12 ft 11¼ in)
Tailplane span — 5.00 m (16 ft 5 in)
Wheel track — 2.24 m (7 ft 4¼ in)
Wheelbase — 3.57 m (11 ft 8½ in)
Propeller diameter — 2.60 m (8 ft 6½ in)
Propeller ground clearance — 1.06 m (3 ft 5¾ in)
Doors (each): Height — 1.20 m (3 ft 11¼ in)
Width — 1.80 m (5 ft 10¾ in)

AREAS:
Wings, gross — 16.83 m² (181.16 sq ft)
Ailerons (total) — 1.03 m² (11.09 sq ft)
Trailing-edge flaps (total) — 3.60 m² (38.75 sq ft)
Spoilers (total) — 1.28 m² (13.79 sq ft)
Fins (total) — 2.24 m² (24.11 sq ft)
Rudder — 0.48 m² (5.17 sq ft)
Tailplane — 2.28 m² (24.54 sq ft)
Elevator — 2.01 m² (21.64 sq ft)
Winglets — 0.38 m² (4.09 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, equipped — 1,105 kg (2,436 lb)
Max payload — 500 kg (1,102 lb)
Max T-O and landing weight — 1,900 kg (4,188 lb)
Normal T-O weight — 1,700 kg (3,748 lb)
Max zero-fuel weight — 1,615 kg (3,560 lb)
Max wing loading — 112.9 kg/m² (23.12 lb/sq ft)
Max power loading — 7.28 kg/kW (11.97 lb/hp)

PERFORMANCE (estimated):
Never-exceed speed — 235 kts (435 km/h; 270 mph)
Max cruising speed at 3,000 m (9,840 ft) — 200 kts (370 km/h; 230 mph)
Econ cruising speed — 118 kts (220 km/h; 136 mph)
Stalling speed, flaps down — 51 kts (95 km/h; 59 mph)
Max rate of climb at S/L — 540 m (1,770 ft)/min
Service ceiling — 6,000 m (19,685 ft)
T-O run — 340 m (1,115 ft)
T-O to 15 m (50 ft) — 480 m (1,575 ft)
Landing from 15 m (50 ft) — 420 m (1,380 ft)
Landing run — 180 m (590 ft)
Balanced runway length — 600 m (1,970 ft)
Range: with max payload — 1,370 n miles (2,540 km; 1,578 miles)
with max fuel — 2,536 n miles (4,700 km; 2,920 miles)

UPDATED



Sukhoi S-986 twin-engined multipurpose light transport *(Jane's/Mike Keep)*

1994

SUKHOI S-986

TYPE: Twin-engined multipurpose light transport.

PROGRAMME: Design started 1993.

DESIGN FEATURES: High-wing, podded fuselage, twin-boom configuration, winglets, inward-canted sweptback fins and rudders. Wing thickness/chord ratio 16 per cent at root, 12 per cent at tip; no dihedral. See three-view drawing for further detail.

FLYING CONTROLS: Conventional three-axis; spoilers forward of ailerons, three-section trailing-edge flaps.

LANDING GEAR: Hydraulically retractable tricycle type, single wheel on each unit. Mainwheels retract rearward into booms.

POWER PLANT: Two 265 kW (355 hp) VOKBM M-14P nine-cylinder radial engines, three-blade MTV-3-B/250-21 propellers. Fuel capacity 550 litres (145 US gallons; 121 Imp gallons). Oil capacity 30 litres (8 US gallons; 6.5 Imp gallons).

ACCOMMODATION: Two crew side by side; cabin will seat up to nine passengers or can be equipped for agricultural, forest patrol and firefighting, or emergency rescue missions. Doors on each side of flight deck and at rear of cabin on port side.

DIMENSIONS, EXTERNAL:
Wing span — 16.00 m (52 ft 6 in)
Wing chord: at root — 1.50 m (4 ft 11 in)
at tip — 0.90 m (2 ft 11½ in)
Length overall — 11.60 m (38 ft 0¾ in)
Fuselage: Length — 9.00 m (29 ft 6½ in)
Depth — 1.80 m (5 ft 10¾ in)
Width — 1.80 m (5 ft 10¾ in)
Height overall — 4.00 m (13 ft 1½ in)
Tailplane span — 4.60 m (15 ft 1 in)
Wheel track — 4.90 m (16 ft 1 in)
Wheelbase — 4.20 m (13 ft 9⅓ in)
Propeller diameter — 2.50 m (8 ft 2½ in)
Distance between propeller centres — 4.90 m (16 ft 1 in)
Cabin door: Height — 1.35 m (4 ft 5¼ in)
Width — 0.80 m (2 ft 7½ in)
Rear hatch: Depth — 1.00 m (3 ft 3¼ in)
Width — 1.20 m (3 ft 11¼ in)
Emergency exit: Height — 0.915 m (3 ft 0 in)
Width — 0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:
Cabin: Length — 5.90 m (19 ft 4¼ in)
Max width and height — 1.68 m (5 ft 6 in)
Floor area — 9.00 m² (96.88 sq ft)
Volume — 16.70 m³ (590.00 cu ft)

AREAS:
Wings, gross — 21.20 m² (228.20 sq ft)
Vertical tail surfaces (total) — 5.60 m² (60.28 sq ft)
Horizontal tail surfaces (total) — 3.50 m² (37.67 sq ft)

WEIGHTS AND LOADINGS:
Weight empty — 2,300 kg (5,070 lb)
Max fuel — 550 kg (1,212 lb)
Max T-O weight — 4,000 kg (8,818 lb)
Max wing loading — 188.7 kg/m² (38.64 lb/sq ft)
Max power loading — 7.55 kg/kW (12.42 lb/hp)

PERFORMANCE (estimated):
Never-exceed speed — 242 kts (450 km/h; 280 mph)
Max level speed — 188 kts (350 km/h; 217 mph)
Econ cruising speed — 113 kts (210 km/h; 130 mph)
Max rate of climb at S/L — 420 m (1,375 ft)/min
Rate of climb at S/L, OEI — 90 m (295 ft)/min
Service ceiling — 4,000 m (13,125 ft)
T-O run — 625 m (2,050 ft)
T-O to 15 m (50 ft) — 800 m (2,625 ft)
Landing from 15 m (50 ft) — 525 m (1,725 ft)
Landing run — 350 m (1,150 ft)
Range with max fuel — 810 n miles (1,500 km; 932 miles)

UPDATED

OTHER AIRCRAFT

There has been no recent news of the **S-86** project for a seven-seat twin-turboprop multipurpose transport, described in the 1994-95 *Jane's*.

NEW ENTRY

TECHNOAVIA

JOINT STOCK COMPANY TECHNOAVIA

7A Kronshtadsky Boulevard, 125212 Moscow
Telephone: 7 (095) 452 58 22, 452 56 03
Fax: 7 (095) 452 56 94
GENERAL DIRECTOR: Viatcheslav Kondratiev
PUBLIC RELATIONS OFFICER: Alexander Lyagushkin

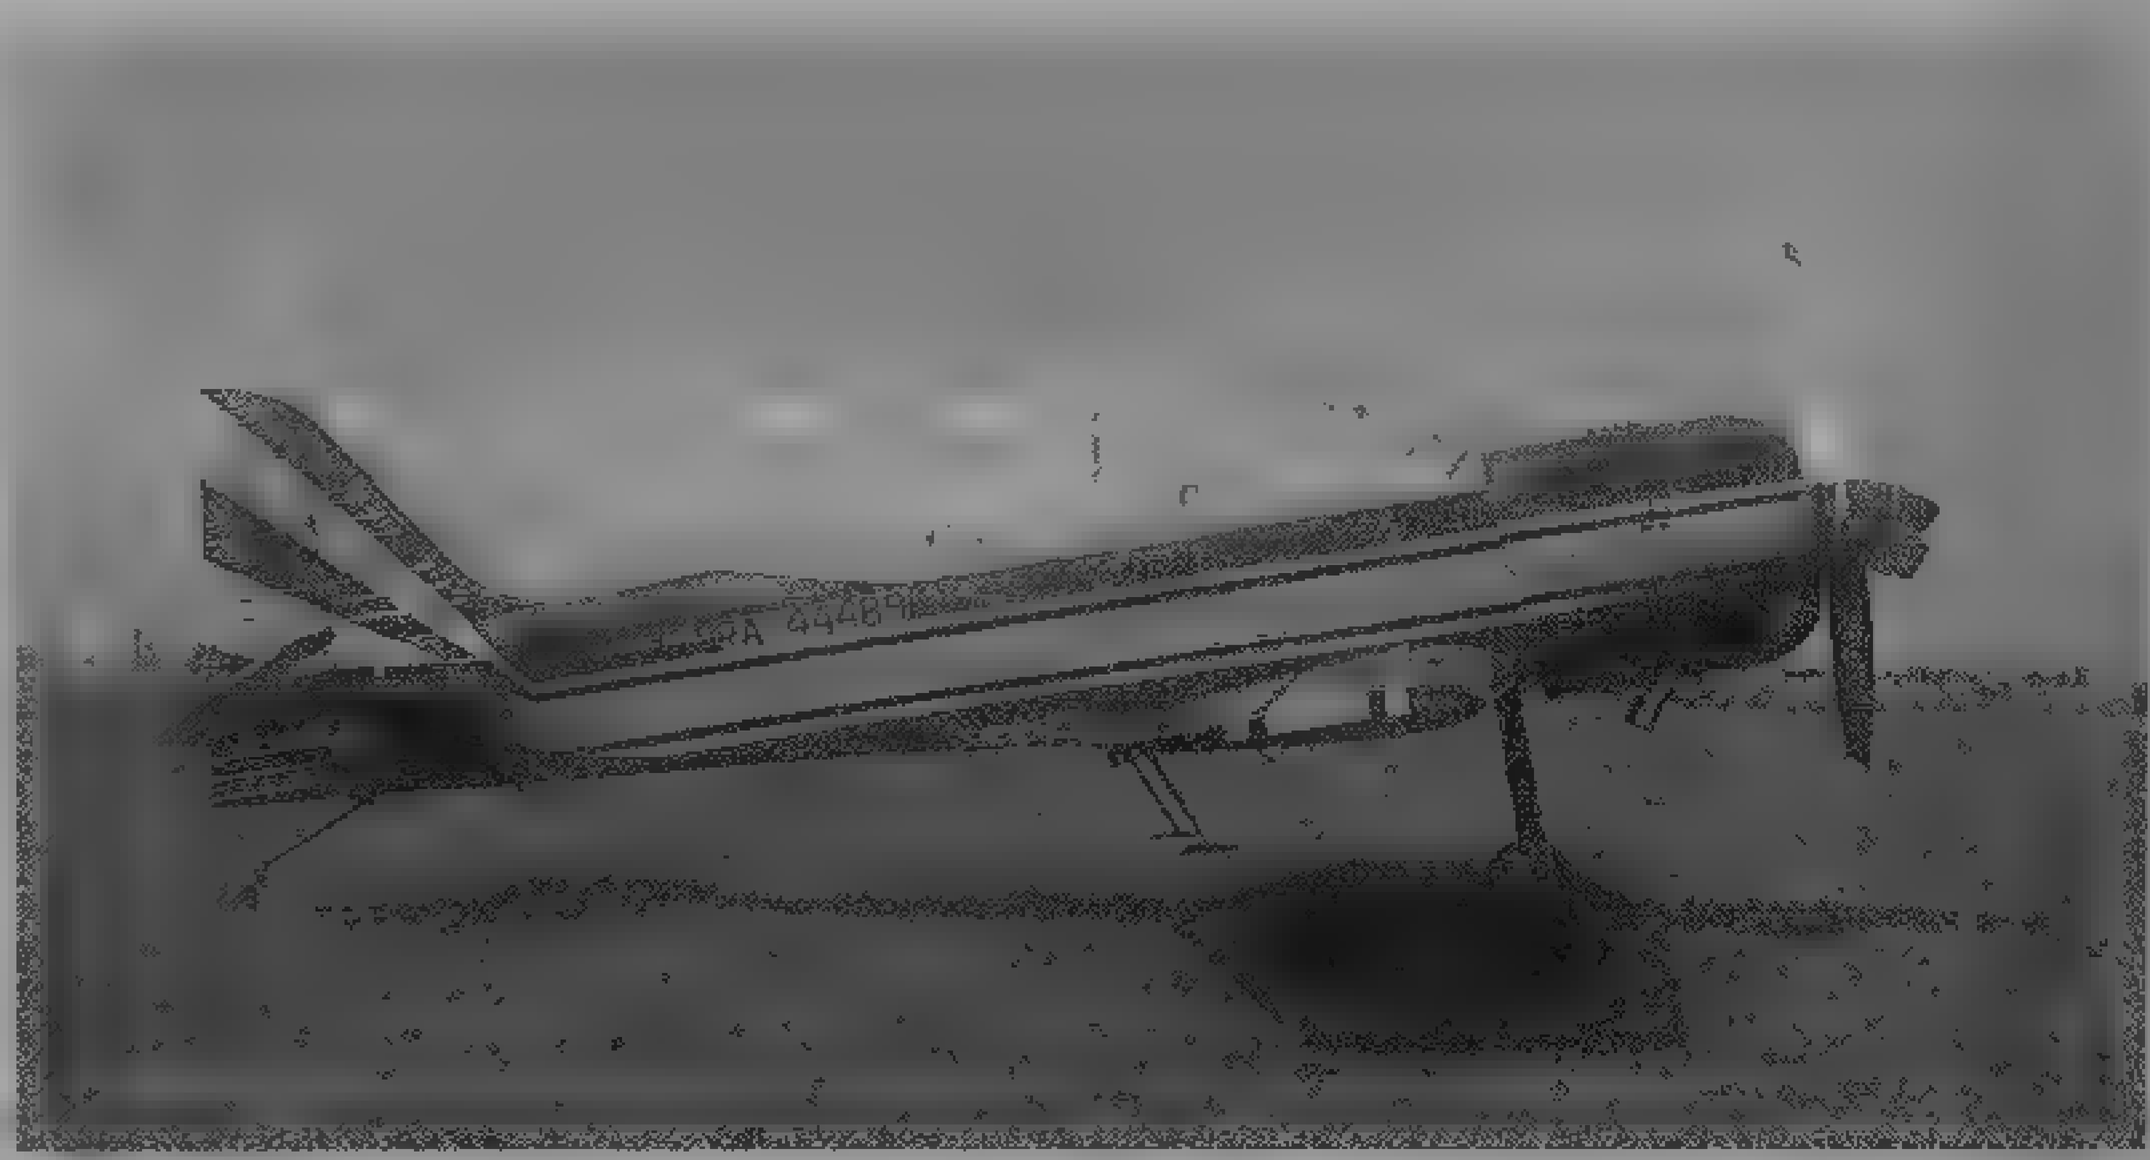
Technoavia formed 1991, acquired rights to Yakovlev Yak-18T and resumed production. Chief Designer Viatcheslav Kondratiev was earlier responsible for Sukhoi Su-26, Su-29 and Su-31 aerobatic light aircraft.

UPDATED

TECHNOAVIA SP-91 SLAVA

TYPE: Two-seat aerobatic training and competition aircraft.

PROGRAMME: Fifty aircraft of this basic design ordered by secessionist Chechnya were embargoed by Russian government; five were taken over and completed in modified form by Technoavia; renamed SP-91 Slava, one of these was undergoing flight testing and development in Moscow in early 1995, one (RA-44489) delivered to Bar Belle Aviation in the UK and three to USA for operational testing in the field. Series production version to be marketed as SP-95, listed separately.



Technoavia SP-91 Slava unlimited aerobatic aircraft *(Austin J. Brown)*

1995

DESIGN FEATURES: Conventional low wing monoplane, capable of unlimited aerobatics, tapered multispar wings of symmetrical section without dihedral or anhedral, damage to one spar or one of four wing attachments in flight would not result in wing failure, unswept horizontal tail surfaces with strut braced tailplane; sweptback vertical surfaces

FLYING CONTROLS: Three-axis, long-span drooping ailerons, horn balanced rudder and elevators Ground-adjustable tab on rudder Two suspended balance tabs on each aileron

STRUCTURE: All metal, with no expensive materials; semi-monocoque fuselage, fluted skin on rear portion of wings and all control surfaces

LANDING GEAR Non-retractable tailwheel type, cantilever mainwheel legs

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine, three-blade wooden controllable-pitch propeller

ACCOMMODATION Two seats in tandem

WEIGHTS AND LOADINGS

Weight empty	737 kg (1,625 lb)
Max T-O weight	950 kg (2,094 lb)

PERFORMANCE

Never-exceed speed (VNE)	242 kts (450 km/h, 280 mph)
Max level speed	162 kts (300 km/h, 186 mph)
Stalling speed, erect and inverted flight	57 kts (105 km/h, 66 mph)
Max rate of climb at S/L, pilot only	960 m (3,150 ft)/min
T-O run	70 m (230 ft)
Landing run	150 m (495 ft)
Range with max fuel	377 n miles (700 km, 435 miles)
g limits, pilot only	+12/−10
two persons	+11/−9

NEW ENTRY

TECHNOAVIA SM-92 FINIST

TYPE: Light multipurpose STOL aircraft.

PROGRAMME: Design, to FAR Pt 23 and JAR 23 standards, started July 1992, construction of first of two prototypes (RA-44482) began January 1993; first flight, as SM-92 Finist (name of a bird), made 28 December 1993; production at Smolensk, four and static test airframe built by January 1995 PT6 turboprop version under consideration, with possible assembly in Canada

CURRENT VERSIONS: Basic version for up to seven persons with baggage Convertible under field conditions to transport 600 kg (1,322 lb) freight, two stretcher patients and attendant with medical equipment, to drop six trainee parachutists or four firefighters with parachutes and firefighting equipment. Can carry hopper for 600 kg (1,322 lb) agricultural chemicals in cabin, or cameras for forest surveillance, patrolling electric power lines, gas pipeline inspection and similar duties

CUSTOMERS First delivery (aircraft No. 3, RA-44485) to Mike Crymble in UK, 21 January 1995, when orders totalled 214

COSTS $150,000 excluding radios

DESIGN FEATURES In approximate class of out-of-production DHC-2 Beaver, but less powerful and lower in cost than most used Beavers. General configuration similar to Beaver, including high wings braced by single strut each side, and non-retractable tailwheel landing gear Sweptback fin and rudder; small dorsal fin, tailplane mounted on fin, with single bracing strut each side. Special wing section by Technoavia and TsAGI No sweep, thickness/chord ratio 15 per cent; aspect ratio 10 4, dihedral 2°, incidence 3° at root, 1° at tip Wide CG range

FLYING CONTROLS Conventional three-axis, Frise-type ailerons, electrically operated, three-position (0°, 20°, 40°), two-section Fowler-type flaps on each wing, horn balanced rudder and elevators, with fluted skin, large trim tab in starboard elevator; ground-adjustable tab on ailerons and rudder Ailerons and elevators rod actuated, rudder cable-actuated

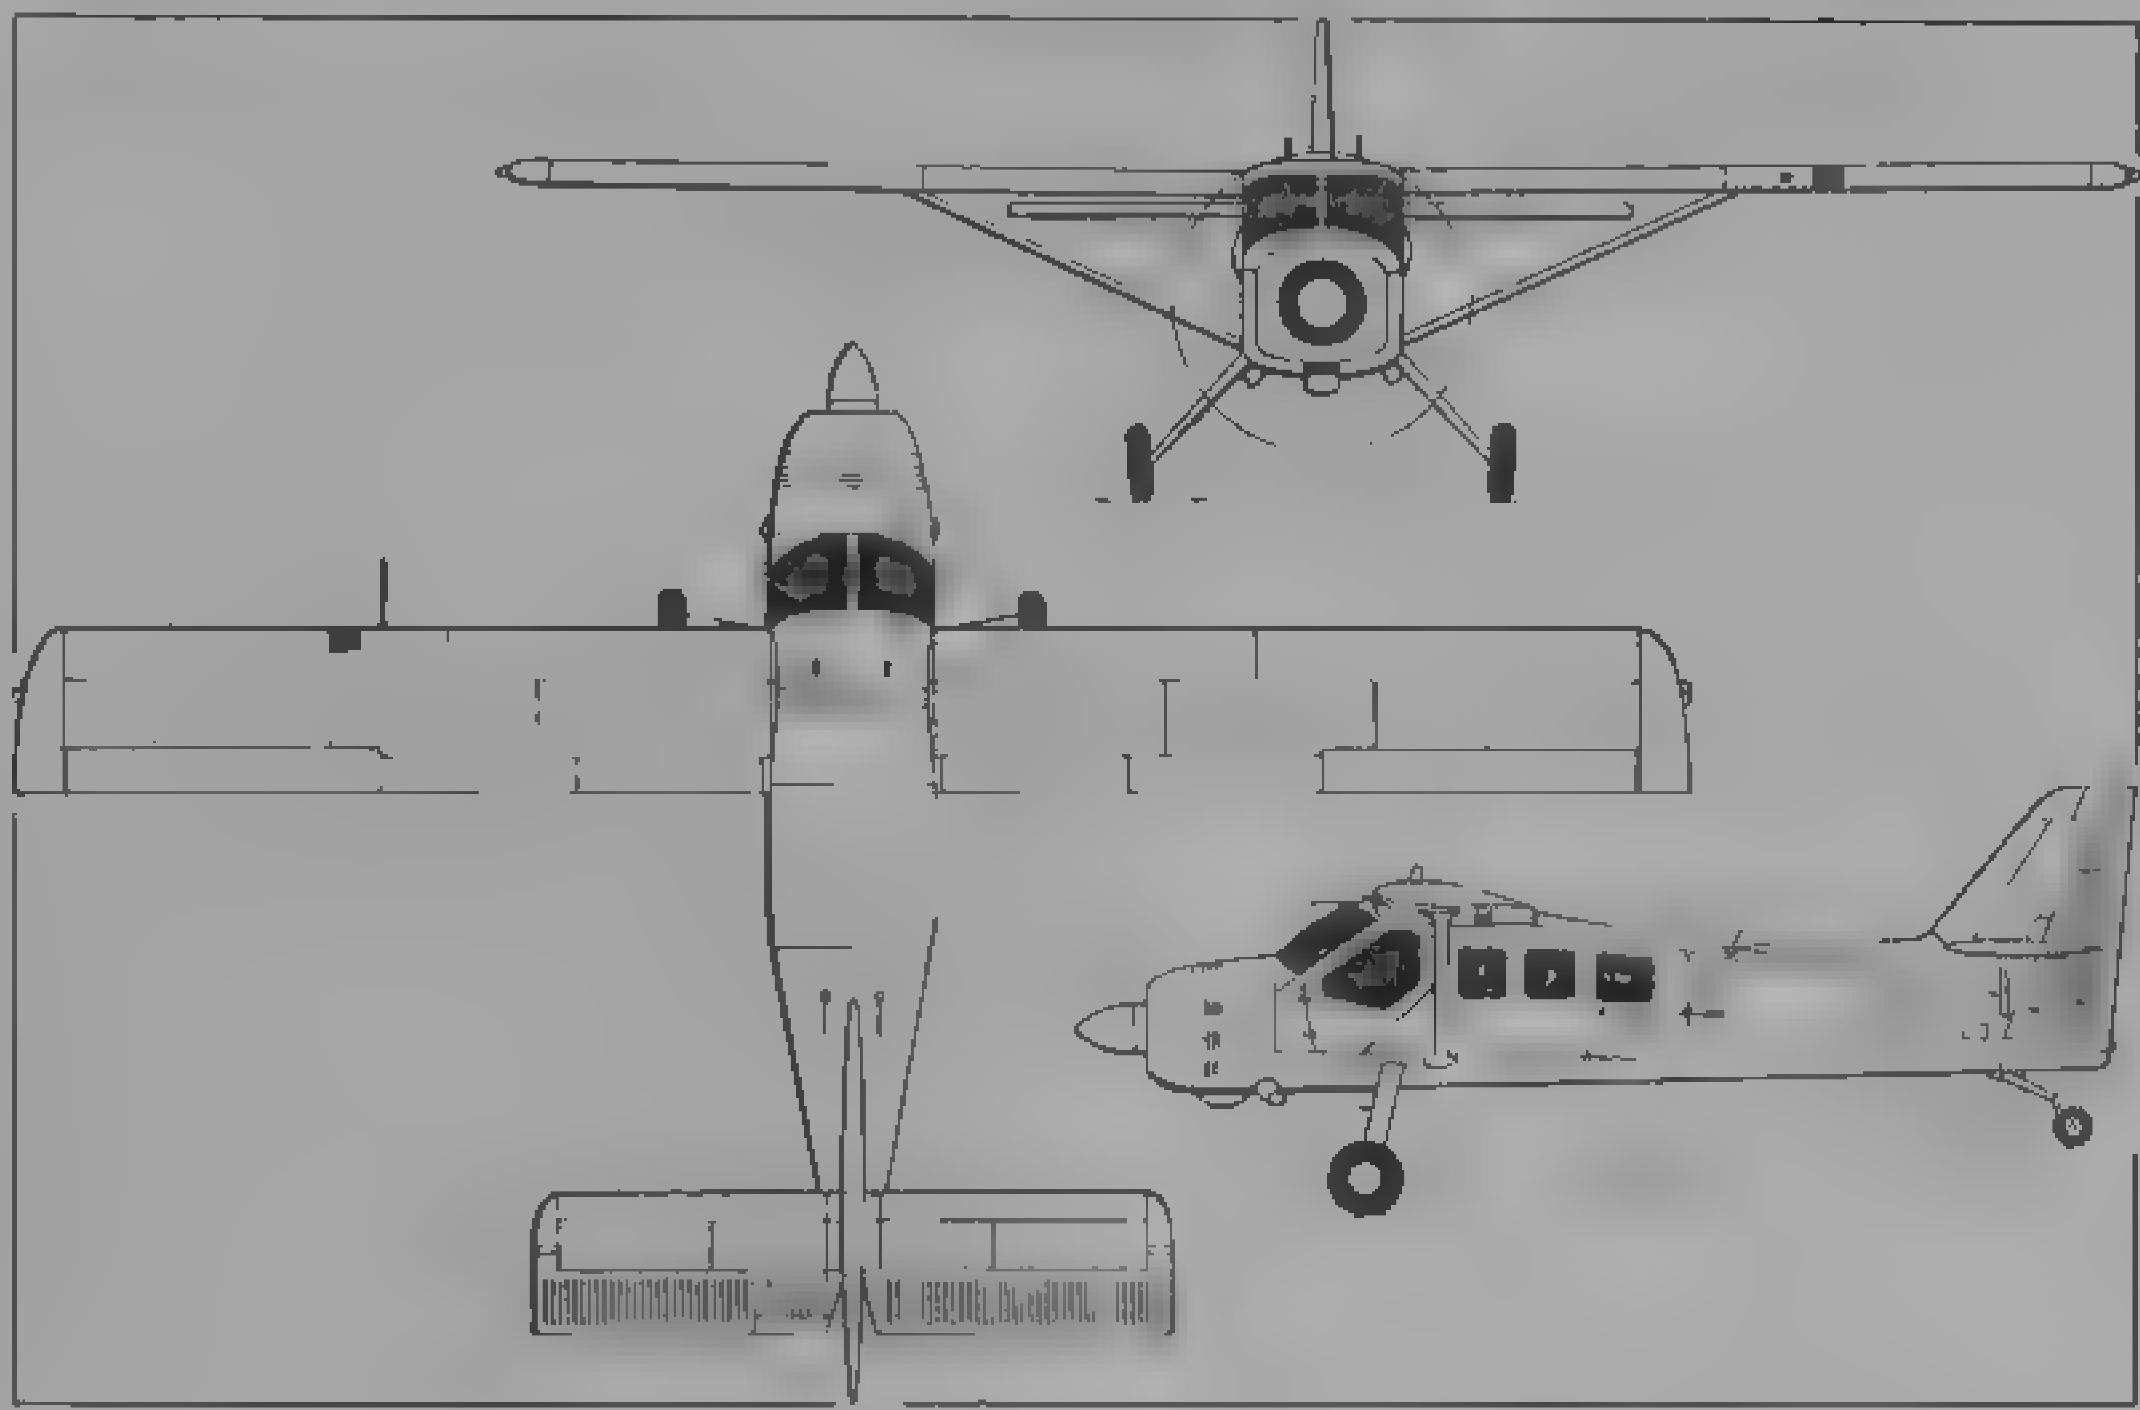
STRUCTURE All-aluminium, stressed-skin semi-monocoque construction. Simple, reliable structure, with no expensive or exotic materials; repair possible under field conditions Airframe life 10,000 hours or 20,000 landings, with "on condition" extension

LANDING GEAR Non-retractable tailwheel type with medium-pressure mainwheel tyres, size 600 × 180 mm Cantilever faired tubular steel main legs; steerable, semi-castoring tailwheel on tubular steel strut Wheel skis and floats optional Pedal-operated wheel brakes, with parking lock.

POWER PLANT: One 265 kW (355 hp) VOKBM M 14P air-cooled nine-cylinder radial engine; Mühlbauer MTV 3 three-blade variable-pitch propeller. Two fuel tanks in wing leading-edge; total capacity 380 litres (100.4 US gallons, 83.5 Imp gallons). Oil capacity 30 litres (8 US gallons, 6.6 Imp gallons)

ACCOMMODATION Pilot and six passengers, in pairs, quickly removable seats with folding armrests and back; dual controls standard for pilot training; adjustable rudder pedals Small baggage container (or medical equipment stowage for ambulance version) on port side at rear of cabin. Forward-hinged, jettisonable door each side of flight deck, large rearward-sliding passenger/freight door on port side of cabin, openable in flight. Blister windows to flight deck and cabin. Steps on mainwheel legs and cable handholds for access to flight deck, removable tubular steel ladder

First production Technoavia SM 92 Finist (*Paul Jackson*) *1995*



Technoavia SM-92 Finist seven-seat STOL aircraft (*Jane's/James Goulding*) *1995*

beneath cabin door Convertible in field to transport 600 kg (1,322 lb) of freight, two stretcher patients and two attendants, six trainee parachutists or four smokejumpers with parachutes and firefighting equipment Provision for carrying hopper for 600 kg (1,322 lb) of agricultural chemicals in cabin, or cameras for forest surveillance, patrolling electric power lines, gas pipeline inspection and similar duties Clearance adequate for underbelly pannier. Cabin heated and ventilated.

SYSTEMS. Pneumatic system for engine starting, pressure 49 bars (710 lb/sq in) 27 V DC electrical system

AVIONICS: *Comms:* AlliedSignal standard two KY96A VHF radios, GPS 150, KR87 ADF and transponder

DIMENSIONS, EXTERNAL

Wing span	14.60 m (47 ft 10¾ in)
Wing chord (constant)	1 40 m (4 ft 7¼ in)
Length overall	9 20 m (30 ft 2¼ in)
Height overall	approx 3.15 m (10 ft 4 in)
fuselage horizontal	3 94 m (12 ft 11 in)
Tailplane span	5 50 m (18 ft 0½ in)
Wheel track	3 20 m (10 ft 6 in)
Propeller diameter	2 60 m (8 ft 6½ in)
Propeller ground clearance (tail up)	0 24 m (9½ in)
Freight door: Width	1.20 m (3 ft 11¼ in)
Height	1.12 m (3 ft 8 in)

DIMENSIONS, INTERNAL

Cabin Width	1 27 m (4 ft 2 in)

WEIGHTS AND LOADINGS

Operating weight empty	1,500 kg (3,307 lb)
Max payload	600 kg (1,322 lb)
Max T-O weight	2,350 kg (5,180 lb)
Max power loading	8.87 kg/kW (14 59 lb/hp)

PERFORMANCE

Never-exceed speed (VNE)	140 kts (260 km/h, 161 mph)
Max cruising speed at S/L	124 kts (230 km/h, 143 mph)
Econ cruising speed at S/L	108 kts (200 km/h, 124 mph)
Stalling speed, flaps 40°, engine idling	54 kts (100 km/h, 62 mph)
Max rate of climb at S/L at max T-O weight	360 m (1,180 ft)/min
Service ceiling	3,000 m (9,840 ft)
T-O and landing run	200 m (660 ft)
Range with max fuel	701 n miles (1,300 km; 807 miles)

UPDATED

TECHNOAVIA SM-94

TYPE: Six-seat light multipurpose aircraft

PROGRAMME: Modification of Yakovlev Yak 18T (which see) in production and service.

DESIGN FEATURES: Generally as Yak-18T but modified to carry six persons, suitable for business, training, liaison, ambulance and other duties, including aerobatics and operation in 'hot and high' environments

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine, operating on low-octane Mogas

AVIONICS: Available with Russian or Western avionics and equipment

DIMENSIONS, EXTERNAL

Wing span	11 16 m (36 ft 7¼ in)
Length overall	8.55 m (28 ft 0¾ in)
Tailplane span	3 60 m (11 ft 9¾ in)
Propeller diameter	2.40 m (7 ft 10½ in)

WEIGHTS AND LOADINGS

Max fuel	250 kg (551 lb)
Max T-O weight	1,870 kg (4,122 lb)
Max wing loading	99 5 kg/m² (20.4 lb/sq ft)
Max power loading	7 06 kg/kW (11 6 lb/hp)

PERFORMANCE

Max level speed	162 kts (300 km/h, 186 mph)
Nominal cruising speed	129-140 kts (240-260 km/h, 149-161 mph)
Max rate of climb at S/L	270 m (885 ft)/min
Service ceiling	5,500 m (18,000 ft)
T-O and landing run	300 m (985 ft)
Range with max fuel	728 n miles (1,350 km, 838 miles)
g limits at 1,500 kg (3,307 lb) T-O weight	+6/−3

NEW ENTRY

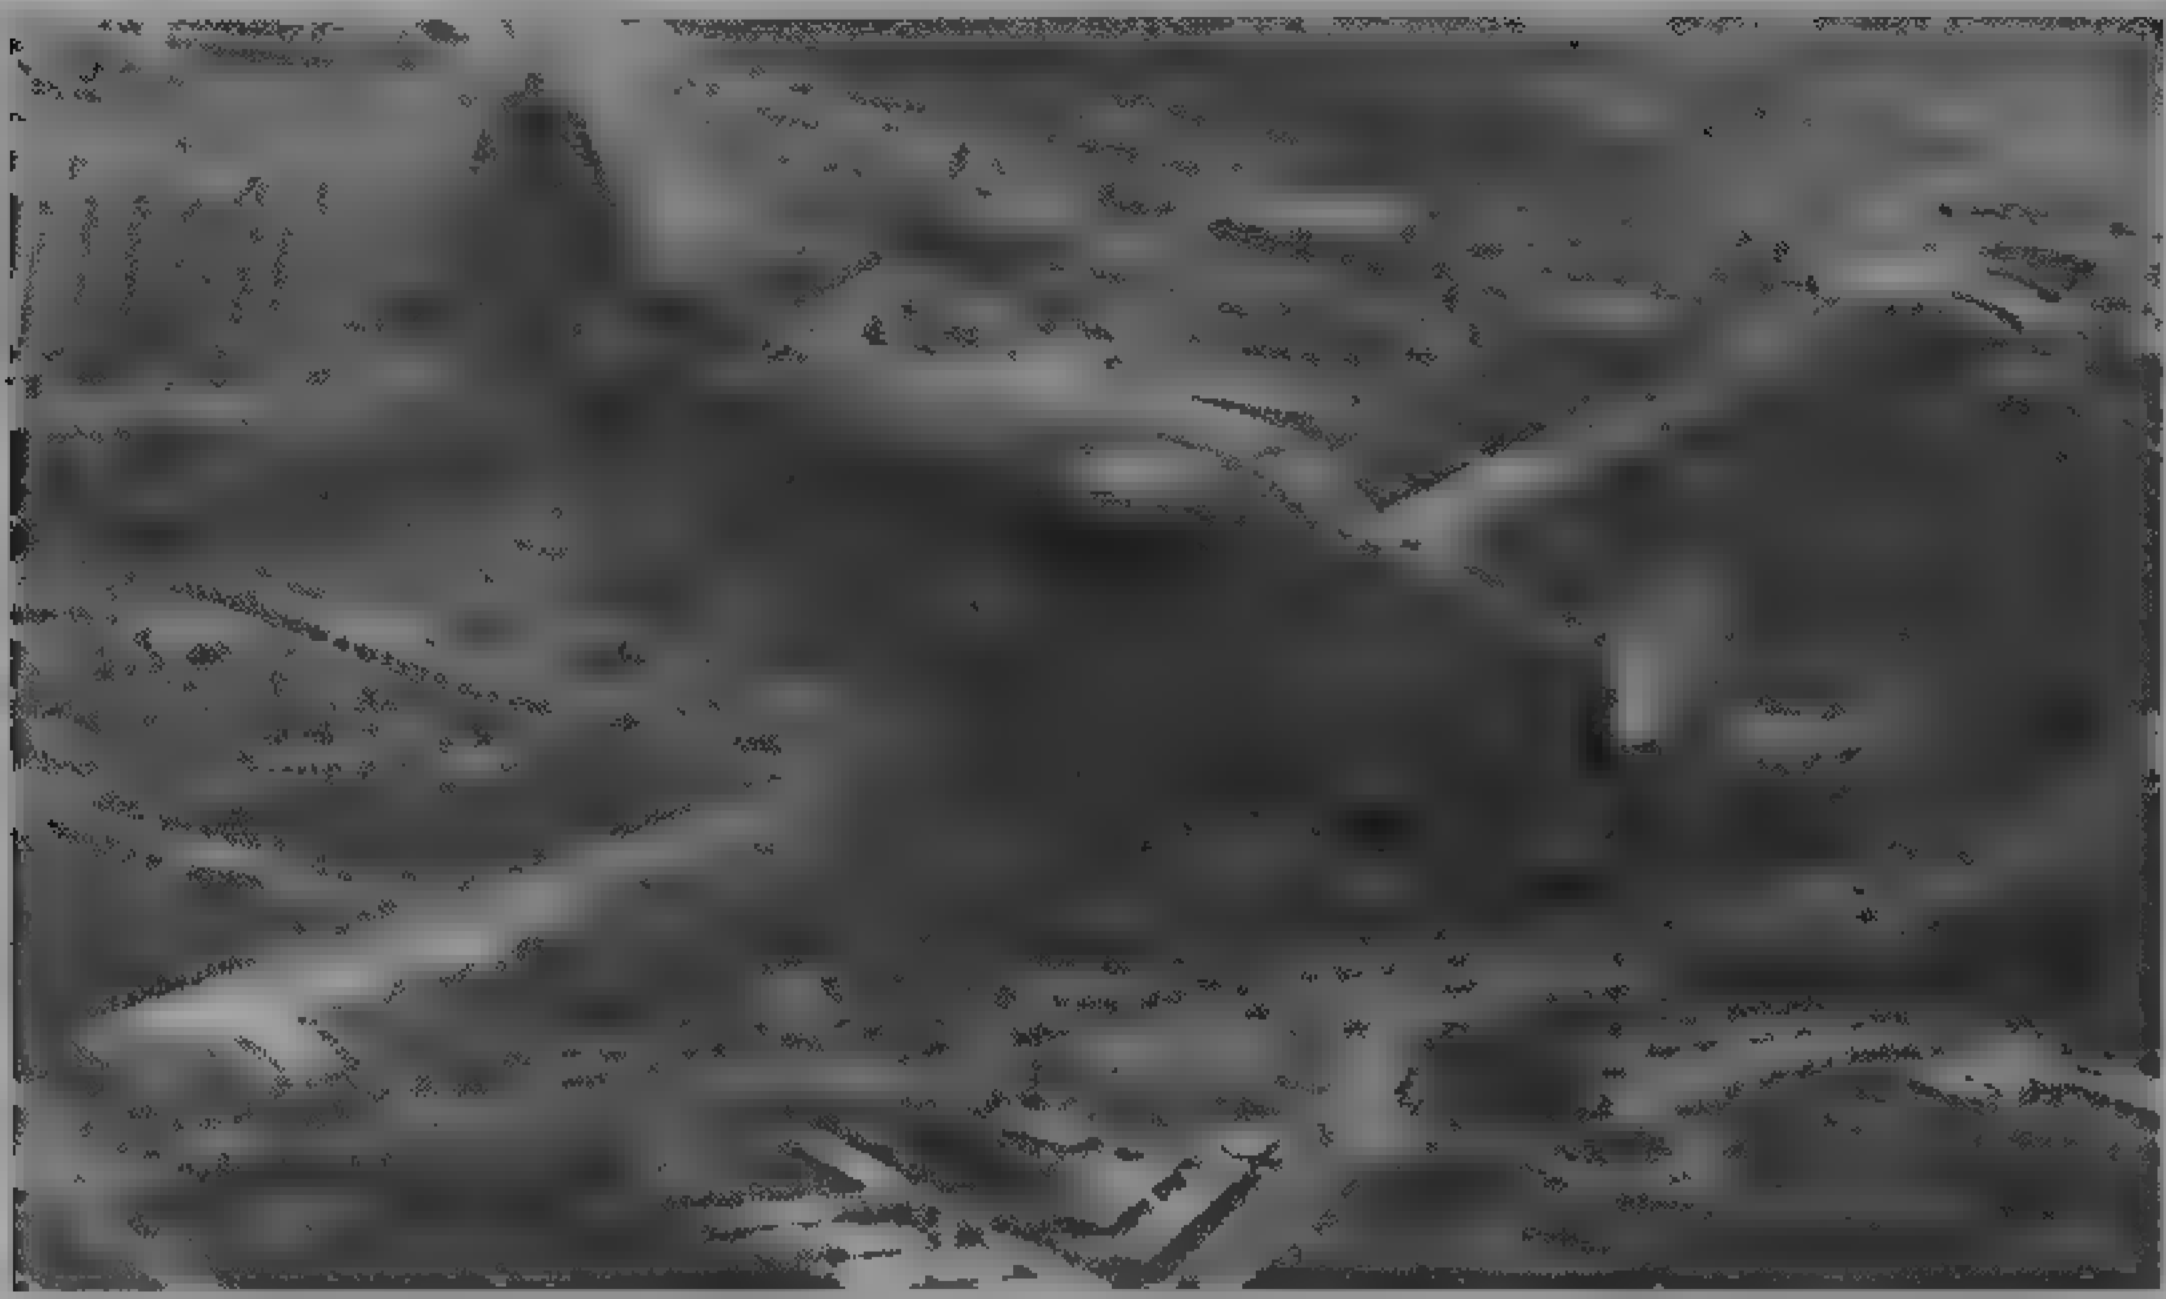
TECHNOAVIA SP-95

TYPE: Two seat aerobatic training and competition aircraft.

PROGRAMME: In 1995, new jigs being built, at Smolensk, for production of this much improved version of SP 91 Slava

DESIGN FEATURES: As SP 91 Conversion from two-seat to single-seat can be done in the field

POWER PLANT One 265 kW (355 hp) VOKBM M 14P nine-cylinder air cooled radial engine, three-blade wooden controllable pitch propeller



Technoavia SM-94 six-seat light multipurpose aircraft

1995

DIMENSIONS, EXTERNAL:
- Wing span: 8.40 m (27 ft 6¾ in)
- Length overall: 7.00 m (22 ft 11¼ in)
- Tailplane span: 3.40 m (11 ft 2 in)
- Propeller diameter: 2.50 m (8 ft 2½ in)

AREAS:
- Wings, gross: 11.70 m² (125.9 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty: 800 kg (1,764 lb)
- Max T-O weight: pilot only: 945 kg (2,083 lb)
  - two persons: 1,080 kg (2,381 lb)
- Max wing loading:
  - pilot only: 80.7 kg/m² (16.5 lb/sq ft)
  - two persons: 92.3 kg/m² (18.9 lb/sq ft)
- Max power loading: pilot only: 3.56 kg/kW (5.87 lb/hp)
  - two persons: 4.07 kg/kW (6.70 lb/hp)

PERFORMANCE (estimated):
- Never-exceed speed (V_{NE}): 242 kts (450 km/h, 280 mph)
- Max level speed: 162 kts (300 km/h, 186 mph)
- Stalling speed, erect and inverted flight: 57 kts (105 km/h, 66 mph)
- Max rate of climb at S/L: 1,020 m (3,346 ft)/min
- T-O run: 70 m (230 ft)
- Landing run: 150 m (495 ft)
- Range with max fuel: 701 n miles (1,300 km, 807 miles)
- g limits: pilot only: +12/−10
  - two persons: +11/−9

NEW ENTRY

TUPOLEV

TUPOLEV JOINT-STOCK COMPANY

15 Akademika Tupoleva, 111250 Moscow
Telephone: 7 (095) 261 24 36, 261 69 80
Fax: 7 (095) 261 71 41

GENERAL DESIGNER: Dr Alexei A. Tupolev
GENERAL DIRECTOR: Valentin T. Klimov
FIRST DEPUTY GENERAL DIRECTOR: Yuri N. Kashtanov
CHIEF DESIGNERS:
- Igor S. Kalygin
- Lev A. Lanovski
- Alexander S. Shengarat
- Yury V. Vorobiev

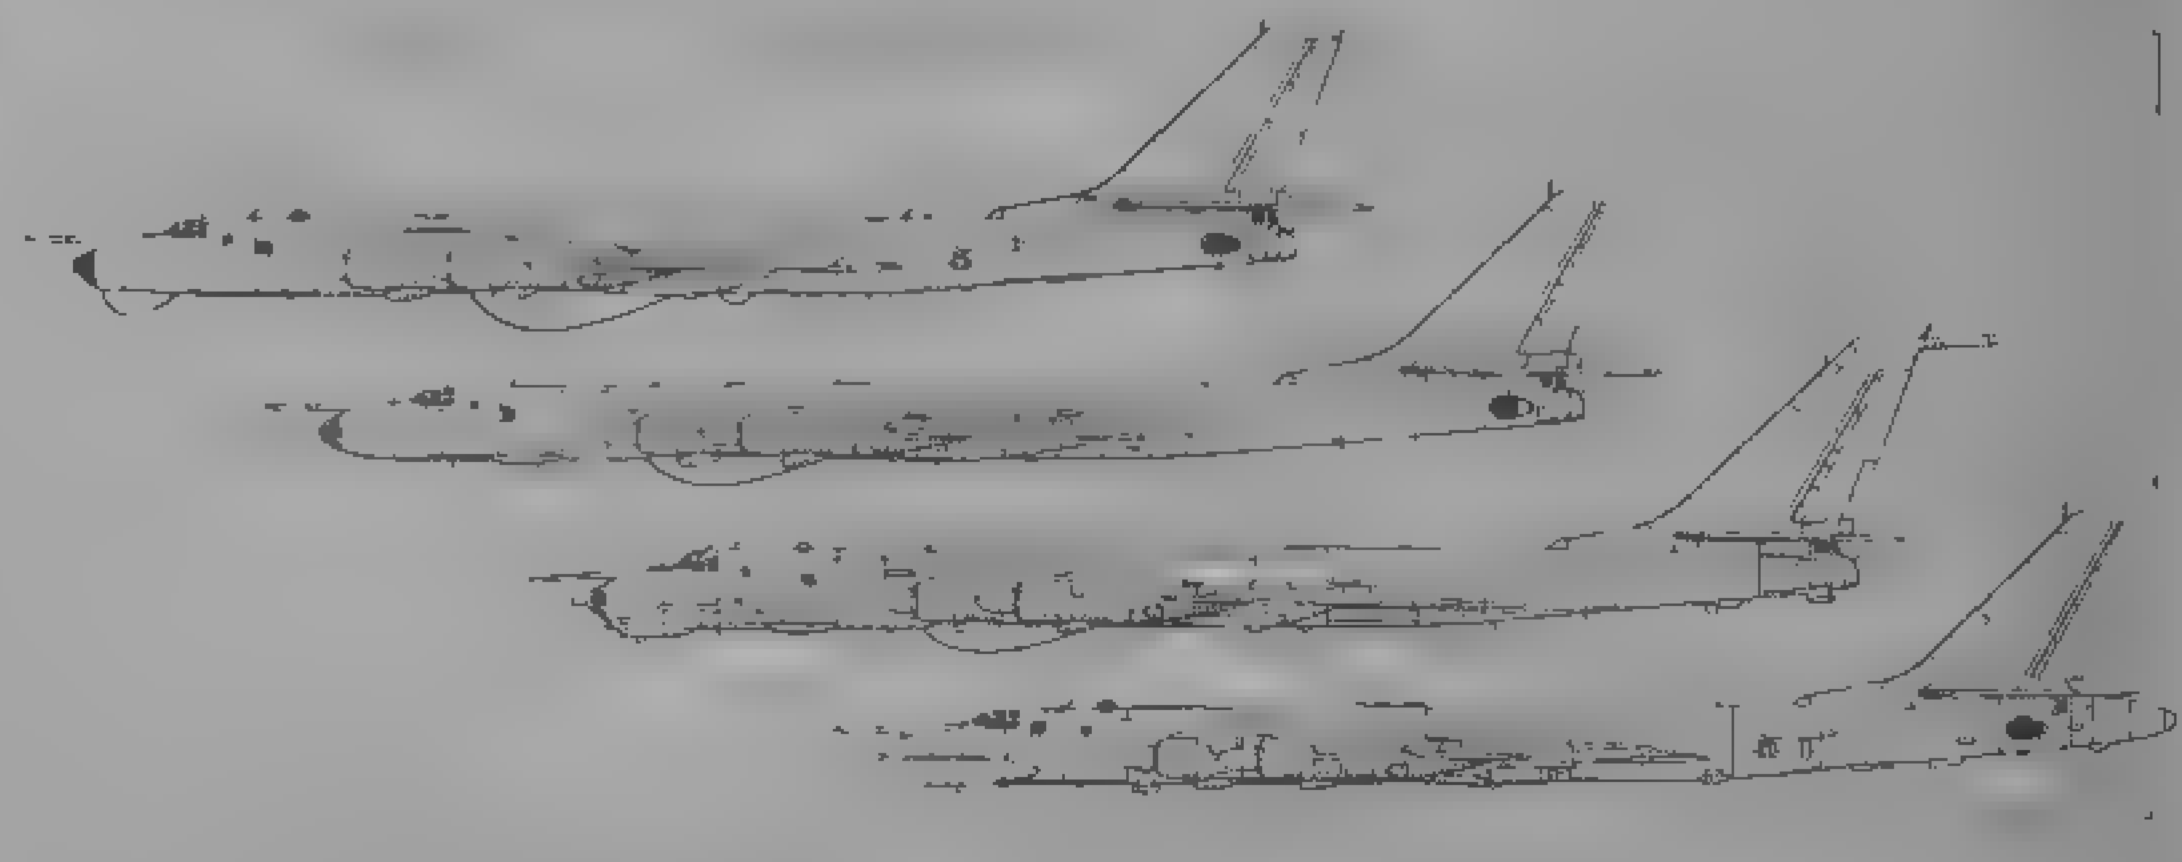
CHIEF ENGINEER: Anatoly V. Sakharov
CHIEF, INFORMATION DEPARTMENT: Valentin I. Shoubine

Andrei Nikolayevich Tupolev was leading figure in Central Aero-Hydrodynamic Institute (TsAGI) in Moscow from when it was founded, in 1918, until his death on 23 December 1972, aged 84. Bureau that bears his name concentrated primarily on large military and civil aircraft until the early 1990s; current effort is 80 per cent civil programmes, with no new military programmes since 1994.

UPDATED

Tupolev Tu-142M ('Bear-F') meets Boeing B-52H Stratofortress at an air display—a situation once seemingly impossible *(Paul Jackson)*

1995



Top to bottom, Tu-95RTs 'Bear-D', Tu-142 'Bear-F' Mod 1, Tu-142M 'Bear-F' Mod 4, Tu-95K-22 'Bear-G' *(Jane's/Dennis Punnett)*

1987

TUPOLEV Tu-95 and Tu-142

NATO reporting name: Bear

TYPE: Four-turboprop long-range bomber and maritime reconnaissance aircraft.

PROGRAMME: **Tu-95/1** prototype, with four 8,950 kW (12,000 ehp) Kuznetsov 2TV-2F turboprops, flew 12 November 1952, was destroyed during testing. **Tu-95/2** with 8,950 kW (12,000 ehp) TV-12 turboprops, flew 16 February 1955. Seven **Tu-95s** (NATO 'Bear-A') took part in 1955 Aviation Day flypast; operational with strategic attack force 1956. **Tu-95M** ('Bear-A') was modernised production version, experimental **Tu-95K** of 1956 air dropped the MiG-19 SM-20 aircraft equipped to test features of the Kh-20 missile system, production **Tu-95K-20** ('Bear-B') of 1959 was armed with a Kh-20 (AS-3 'Kangaroo') air-to-surface missile, **Tu-95KD** of 1961 was similar to Tu-95K-20, with added flight refuelling noseprobe. 'Bear' series remained in almost continuous, latterly small scale, production for 38 years, ending 1992. Variants included **Tu-96** of 1956, a high-altitude high-speed bomber development with NK-16 engines, built but not flown, **Tu-116/114D**, with Tu-95 airframe adapted as civil aircraft. **Tu-119**, a Tu-95M converted but not flown as testbed for a nuclear engine; and production **Tu-126** (NATO 'Moss') AEW&C aircraft (see 1990-91 *Jane's*).

CURRENT VERSIONS: **Tu-95RTs** ('Bear-D'): Maritime reconnaissance aircraft, entered service 1964, glazed nose, undernose radar (NATO 'Short Horn'); large underbelly radome for I band surface search radar ('Big Bulge'); elint blister fairing each side of rear fuselage, nose refuelling probe, variety of blisters and antennae, including streamlined fairing on each tailplane tip. Defensive armament comprises three pairs of 23 mm NR-23 guns in remotely controlled rear dorsal and ventral barbettes and manned tail turret; two glazed blisters on rear fuselage, under tailplane, used for sighting by gunner controlling all these guns; dorsal and ventral barbettes can also be controlled from station aft of flight deck. Housing for I band tail warning radar ('Box Tail') above tail turret is larger than on previous variants; no offensive weapons; tasks include pinpointing of maritime targets for missile launch crews on ships and aircraft that are themselves too distant for precise missile aiming and guidance; about 15 operational, probably converted from 'Bear-A' strategic bombers. A 'Bear-D' was the first Tu-95 seen, 1978, with faired tailcone housing ECM instead of normal tail turret and radome.

Tu-95MR ('Bear-E'): Strategic reconnaissance conversion of Tu-95M ('Bear-A'); armament, refuelling probe and rear fuselage elint fairings as Tu-95RTs, six camera windows in weapons bay, in pairs; seventh window to rear on starboard side.

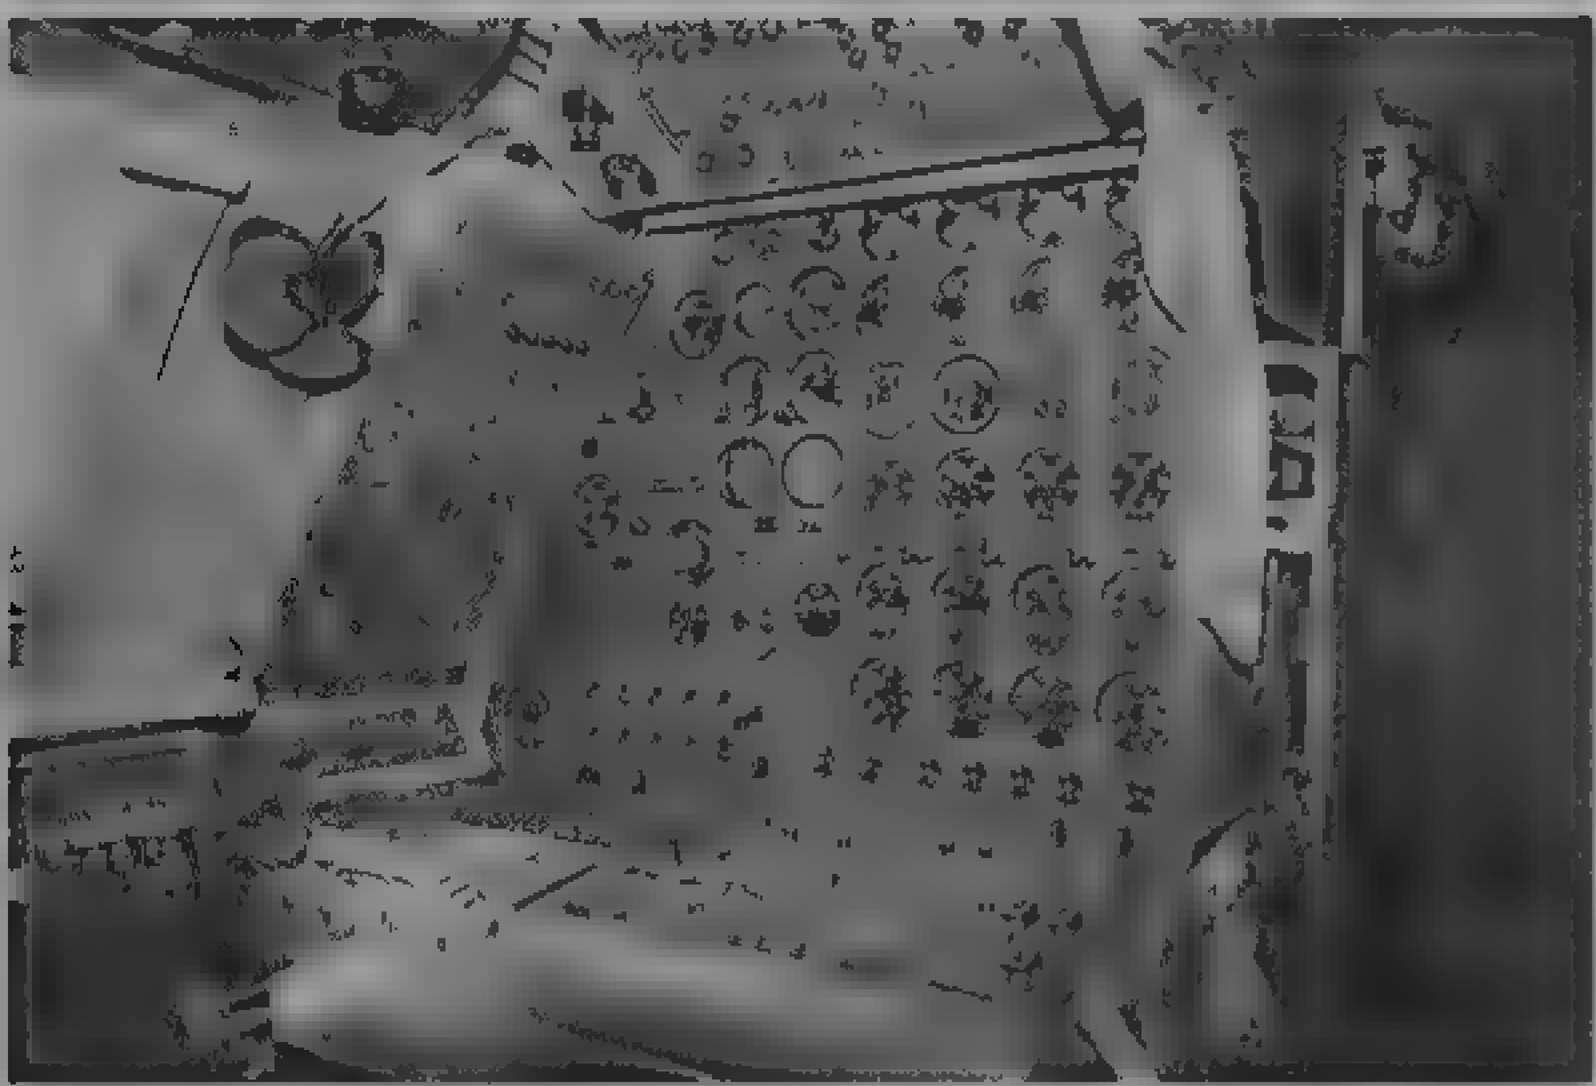
Tu-142 ('Bear-F'): Anti-submarine version, prototype flew 1968; extensively redesigned, with marked wing leading-edge camber and double-slotted flaps, longer fuselage forward of wings, rudder of increased chord. Deployed initially by Naval Aviation 1970, re-entered production mid-1980s. Initial 'Bear-Fs' had 12-wheel main landing gear bogies, retracting into enlarged and lengthened fairings aft of inboard engine nacelles, and undernose radar; main underfuselage J band radar ('Wet Eye') housing considerably farther forward than on 'Bear-D' and smaller; no large blister fairings under and on sides of rear fuselage; two stores bays for sonobuoys, torpedoes, nuclear or conventional depth charges in rear fuselage, approximately 7.5 × 1.85 m (24 ft 6 in × 6 ft) and 3.4 × 1.35 m (11 ft × 4 ft 6 in). Smaller rear bay replaces usual rear ventral gun turret, leaving tail turret as sole defensive gun position, with glazed observation blister each side under tailplane. Later 'Bear-Fs' identified as follows:

Mod 1: Reverted to standard size nacelles and standard four-wheel main landing gear bogies, tyre size 1,500 × 500 mm, pressure 10.35 bars (150 +5/−10 lb/sq in), chin-mounted J band radar deleted, fewer protrusions. Entered service December 1972.

Mod 2 (**Tu-142M**): First flown 4 November 1975, nose lengthened by 2.0 m (6 ft 6¾ in), increasing overall length to approximately 53 m (174 ft), roof of flight deck raised, angle of flight refuelling probe lowered by 4°, inertial navigation system standard. Entered service 1980.

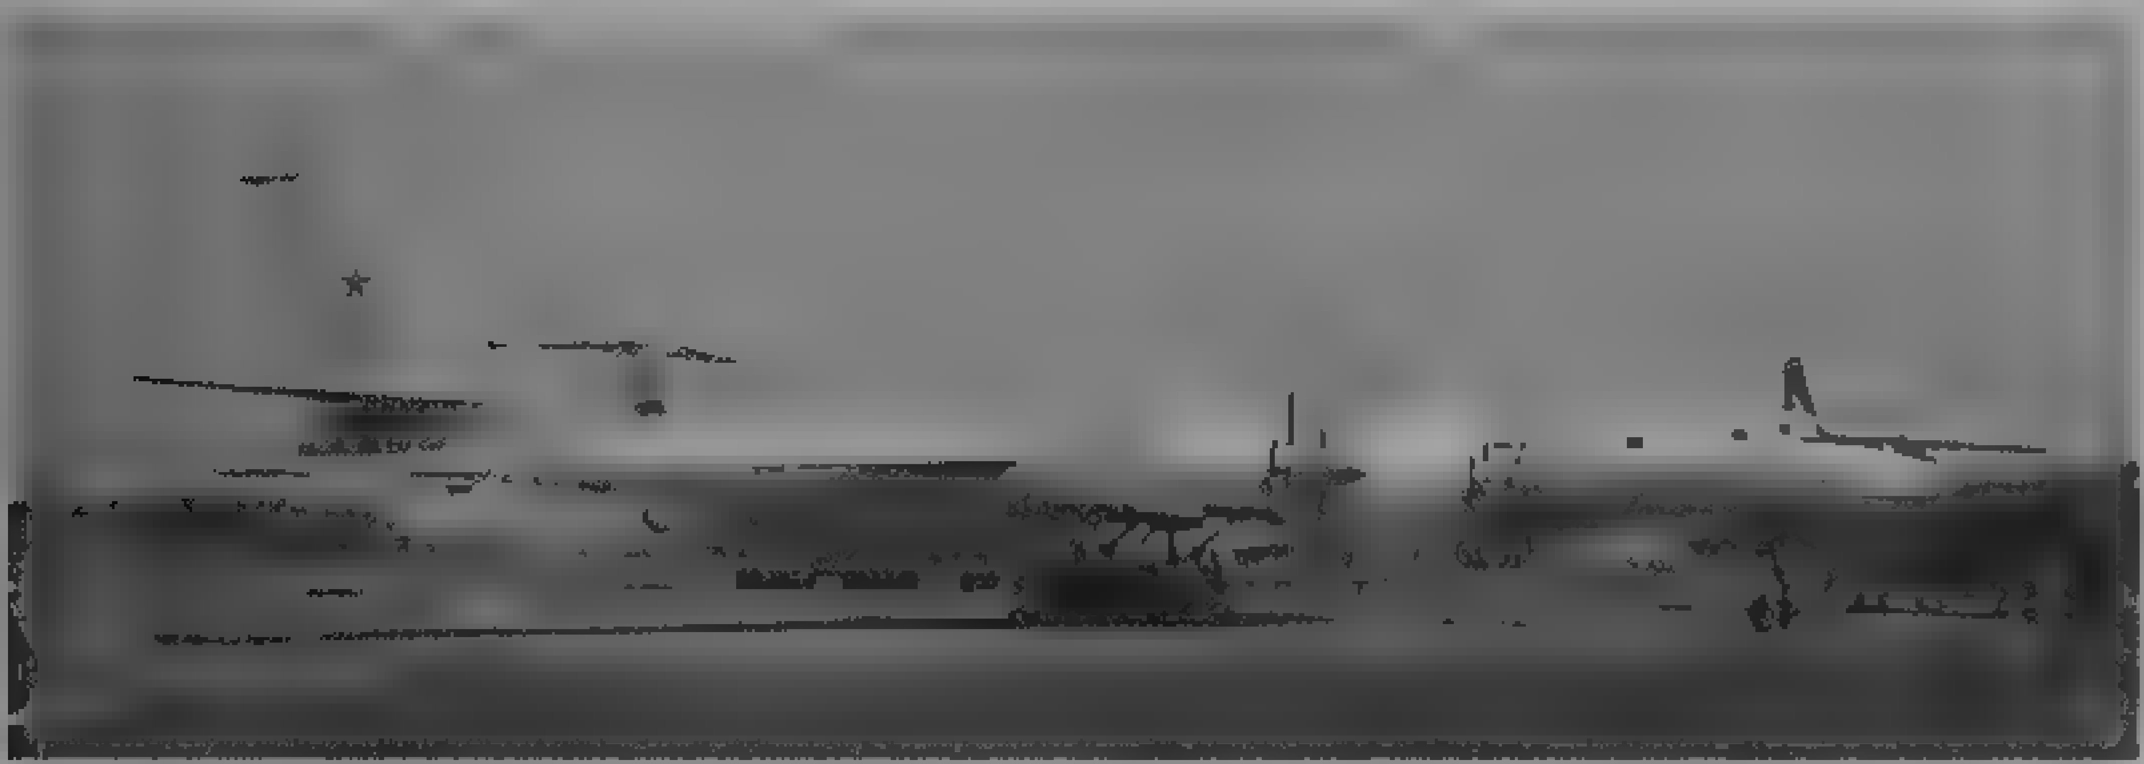
Mod 3 (**Tu-142M**): MAD boom added to fin tip, fairings at tailplane tips deleted. Normal crew of 10.

Mod 4 (**Tu-142M**): Chin radar reinstated, self-protection ECM thimble radome on nose, other fairings added, observation blister each side of rear fuselage deleted, entered service 1985, further deliveries 1991.



Crew positions in the Tu-142M ('Bear-F') include (top left) co-pilot, (above left) flight engineer, facing aft on starboard side, (top right) radio operator, facing aft on port side, and (above right) navigator, starboard side of nose. Additionally, two surveillance equipment operators occupy rearmost positions of the flight deck *(Paul Jackson)*

1995



Tupolev Tu-142M ('Bear-F' Mod 3) of Russian Naval Aviation's Northern Fleet Training Regiment at Pskov *(Paul Jackson)*

1995

The Tu-95K-22 'Bear-G' is a reconfigured 'Bear-B' or 'C' equipped to carry Kh-22 'Kitchen' missiles *(UK Ministry of Defence)*

1986

All versions of Tu-142M can carry eight Kh-35 active radar homing anti-ship missiles in underwing pairs.

Tu-95K-22 ('Bear-G'): Bomber and elint conversion of 'Bear-B/C'; two Kh-22 (AS-4 'Kitchen') air-to-surface missiles, on pylon under each wingroot; new large undernose radome ('Down Beat'); ECM thimble on nose, 'solid' tailcone containing ECM, as on some 'Bear-Ds'; ventral gun turret sole defensive armament.

Tu-95M-5: Missile carrier, with two KSR-5 (AS-6 'Kingfish') missiles, flown 1972.

Tu-95M-55: Flown 1976; carrier for Kh-55 (AS-15A 'Kent') missile.

Tu-95MS ('Bear-H'): Late production version; crew of seven, based on Tu-142 airframe but fuselage approximately same length as Tu-95. Current **Tu-95MS6** ('Bear-H6') version carries six Kh-55 (AS-15A 'Kent') long-range cruise missiles on an internal rotary launcher, the original **Tu-95MS16** ('Bear-H16') carried two more under each wingroot, and a cluster of three between each pair of engines, for a total of 16. Total of 80 built at Kuybyshev; achieved IOC 1984; larger and deeper radome (NATO 'Clam Pipe') built into nose; small fin tip fairing; no elint blister fairings on sides of rear fuselage; ventral gun turret deleted, some aircraft have single twin-barrel 23 mm gun instead of usual pair in tail turret. *Detailed description applies to this version, except where indicated.*

Tu-142MR ('Bear-J'): Identified 1986. Soviet counterpart of US Navy E-6A and EC-130Q Tacamo, with VLF communications avionics to maintain on-station all-ocean link between national command authorities and nuclear missile armed submarines under most operating conditions; large ventral pod for VLF trailing wire antenna several kilometres long, under centre-fuselage in weapons bay area; undernose fairing as 'Bear-F' Mod 4; fintip pod with trailing-edge of kind on some 'Bear-Hs'; satcom dome aft of flight deck canopy; modified 'Bear-F' airframe. With Northern and Pacific Fleets.

Tu-95U: Conversion of Tu-95M for training.

CUSTOMERS: Russia deploys 24 'Bear-G', 28 'Bear-H6' and 37 'Bear-H16'; Ukraine has two 'Bear-A/B', five 'Bear-H6' and 20 'Bear-H16'. Naval Aviation has 24 'Bear-D', 58 'Bear-F' mostly Mod 3/4, few 'Bear-J'. Indian Navy (10 'Bear-F' Mod 3).

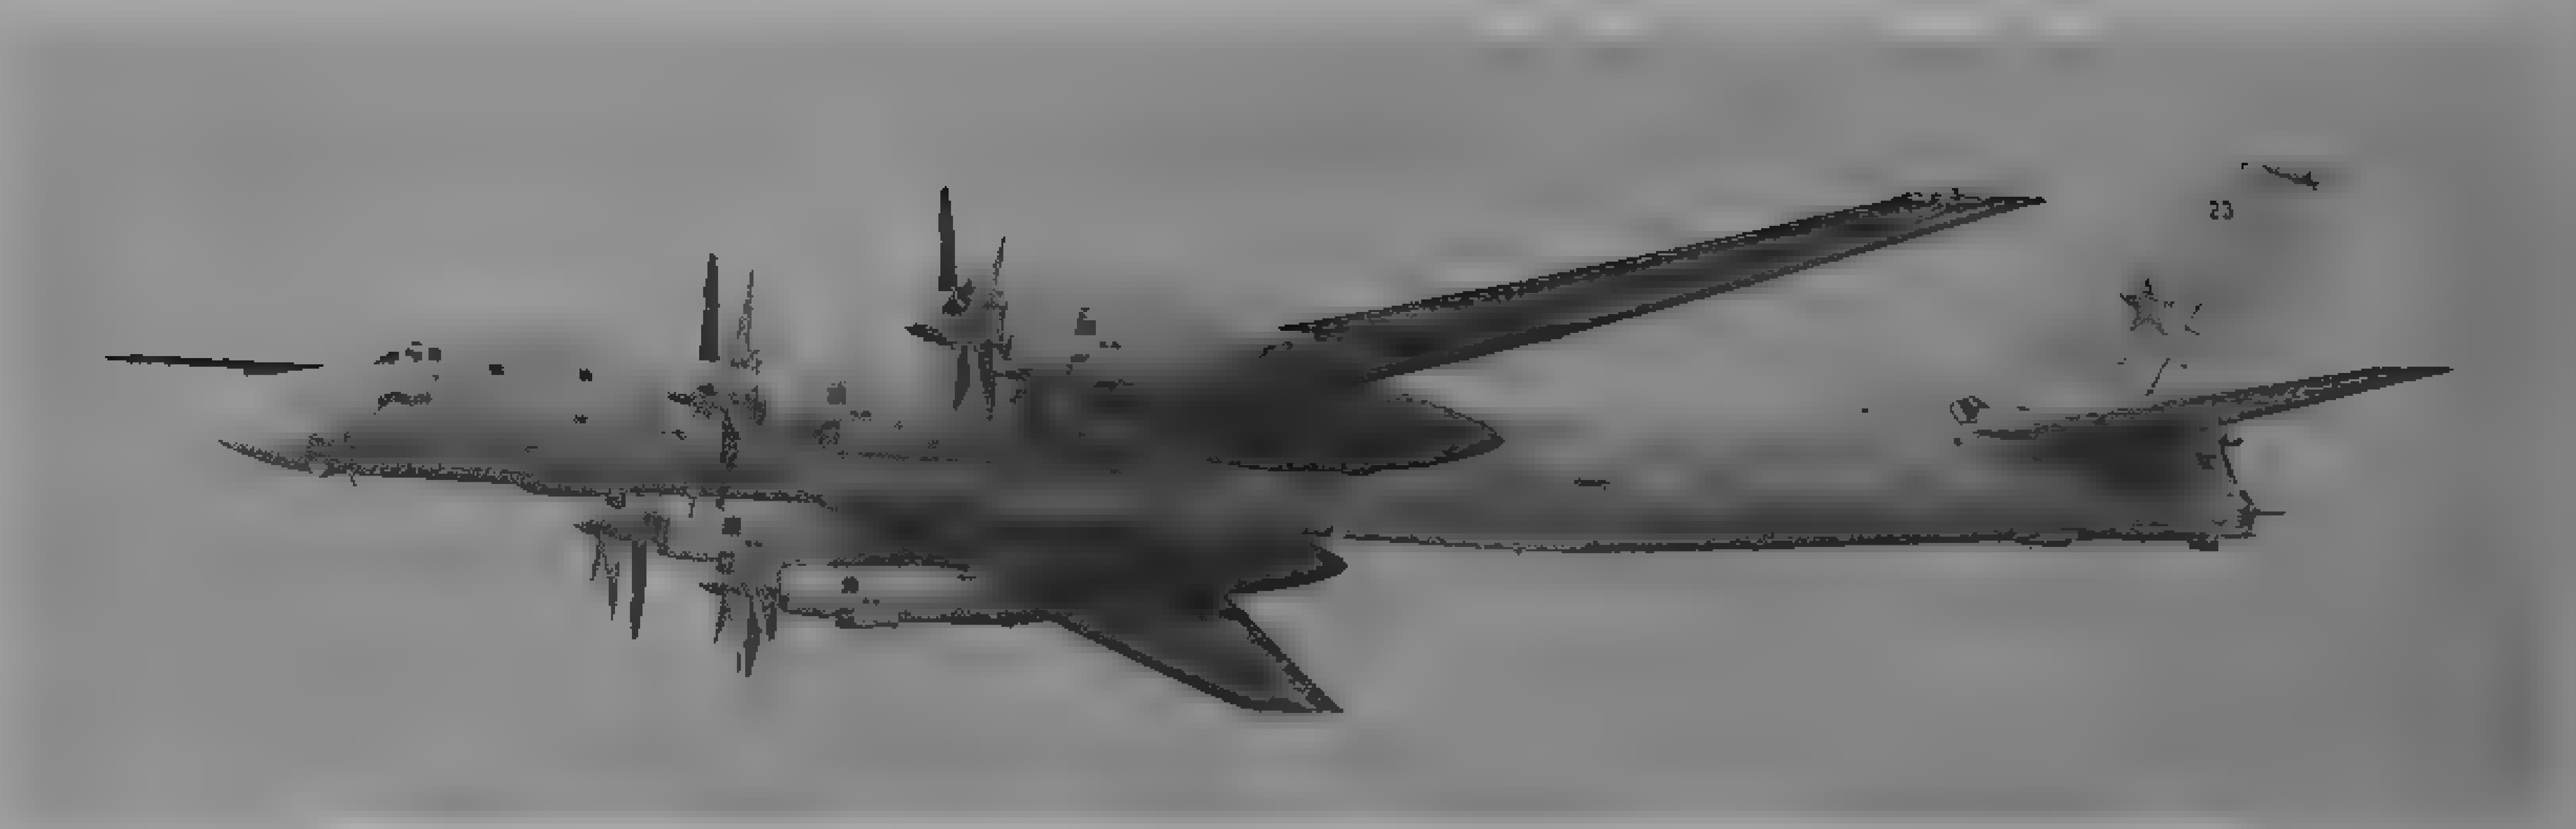
DESIGN FEATURES: Unique large, high-performance, four-turboprop combat aircraft; all-swept high aspect ratio mid-wing configuration, fuselage same diameter as US Boeing B-29/Soviet Tu-4; main landing gear retracts into wing trailing-edge nacelles; contraprops with high tip speeds; slight wing anhedral; sweepback at quarter-chord 37° on inner wings, 35° outer panels.

FLYING CONTROLS: All flying control surfaces hydraulically boosted; three-segment aileron and two-segment area increasing flap each wing; trim tab in each inboard aileron segment; upper-surface spoiler forward of each inboard aileron; adjustable tailplane incidence (3° up/1° down); trim tab in rudder and each elevator.

STRUCTURE: All-metal; four spars in each inner wing, three outboard; three boundary layer fences above each wing; circular section semi-monocoque fuselage containing three pressurised compartments; tail gunner's compartment not accessible from others.

LANDING GEAR: Hydraulically retractable tricycle type; main units consist of four-wheel bogies, tyre size (Tu-95) 1,450 × 450 mm, pressure 10.35 bars (150 +5/−10 lb/sq in) or (Tu-142) 1,500 × 500 mm; twin nosewheels, tyre size 1,140 × 350 mm, pressure 8.27 bars (120 lb/sq in); hydraulic internal expanding brakes; steerable nose unit; all units retract rearward, main units into nacelles built on to wing trailing-edge. No brake-chutes.

POWER PLANT: Four KKBM Kuznetsov NK-12MV turboprops, each 11,033 kW (14,795 ehp), eight-blade contra-rotating Type AV-60N propellers. Fuel in wing tanks, normal capacity 95,000 litres (25,100 US gallons; 20,900 Imp gallons). Single pressure refuelling point under



Tupolev Tu-95MS ('Bear-H') long-range strategic cruise missile carrier of 182 Bomber Regiment at Mozdok *(Paul Jackson)*
1995

Tupolev Tu-95RTs ('Bear-D') maritime reconnaissance variant, equipped with 'Short Horn' radar under nose and belly mounted 'Big Bulge' radar *(Royal Air Force)*
1995

starboard wingtip. Flight refuelling probe above nose extends forward further 0.5 m (1 ft 7 in) as it enters probe, fuel flows through duct on starboard side of front fuselage to main tanks, flush light each side of probe in upper part of nose aids night refuelling

ACCOMMODATION: Crew of seven: pilots side by side on pressurised flight deck, other four crew in forward compartment face rearward, com operator behind pilot, nav/defensive systems operator further aft on port side; flight engineer behind co-pilot, with spare seat for an observer; sixth flight crew member, equivalent to US bombardier/navigator, aft on central seat; gunner in rear turret compartment, with entry via ventral hatch. Remainder of crew enter through hatch in top of nosewheel bay. No ejection seats. Conveyor in flight deck floor carries crew members to hatch in nosewheel bay, with landing gear lowered, in emergency. Astrodome in roof over sixth crew member

SYSTEMS: Flight crew accommodation pressurised. Thermal anti-icing of wing and tailplane leading edges. Gas turbine APU in dorsal fin, with exhaust above tailplane leading edge

AVIONICS ('Bear-D'): *Comms*: SRO-2 IFF ('Odd Rods')

Radar: Four-PRF range J-band circular and sector scan nav radar ('Short Horn'), plus 'Big Bulge'

Flight: A-322Z Doppler radar, A-325Z Tacan, A-321 ADF, A-321B DME and ILS

Mission: Large I-band radar ('Big Bulge') in blister fairing under centre-fuselage, for reconnaissance and to provide data on potential targets for anti-shipping aircraft or surface vessels; in latter mode, PPI presentation is data-linked to missile launch station. I-band tail warning radar (originally 'Bee Hind', later 'Box Tail') in housing at base of rudder

AVIONICS ('Bear-H'): *Comms*: RSBN short-range nav system 'bow and arrow' antenna under 'Box Tail' radome. Triangular D-band IFF antenna on top of nose refuelling probe

Radar: Nav/bombing radar ('Clam Pipe') under nose; weather radar above; duct for cooling air from rear of lower radome to rear fuselage on port side, gun fire control radar ('Box Tail') at base of rudder

Self-defence: ECM fairing each side of weather radar, small pylon-mounted ECM pod each side at base of tail gunner's compartment. IR warning domes, each with about 200 discrete circular windows: under nose and above wings on top of fuselage. 'Ground Bouncer' ECM jamming system with tooth shape antennae to port side of undernose IR warning dome and under rear fuselage; RWR each side of front fuselage and fin. Eight three-tube chaff/flare dispensers in two rows aft of landing gear doors on lower side of each wing pod

ARMAMENT: See notes applicable to individual versions.

EQUIPMENT: Liferaft stowage in front of dorsal fin

DIMENSIONS, EXTERNAL ('Bear-H'):

Wing span	50.04 m (164 ft 2 in)
Wing aspect ratio	8.63
Length overall	49.13 m (161 ft 2¼ in)
Height overall	13.30 m (43 ft 7¾ in)
Wheel track	12.53 m (41 ft 1¼ in)
Propeller diameter	5.60 m (18 ft 4½ in)

AREAS:

Wings, gross	289.9 m² (3,120 sq ft)

WEIGHTS AND LOADINGS (A: 'Bear-H' Mod 3, B: 'Bear-H'):

Weight empty: B	120,000 kg (264,550 lb)
Max fuel: A	87,000 kg (191,800 lb)
Max T-O weight: A	185,000 kg (407,850 lb)
B	187,000 kg (412,258 lb)
Max landing weight: B	135,000 kg (297,620 lb)
Max wing loading: A	594.7 kg/m² (121.8 lb/sq ft)
B	645.1 kg/m² (132.1 lb/sq ft)
Max power loading: A	4.19 kg/kW (6.89 lb/shp)

PERFORMANCE ('Bear-H'):

Max level speed: at S/L	350 kts (650 km/h, 404 mph)
at 7,620 m (25,000 ft)	Mach 0.83 (499 kts, 925 km/h, 575 mph)
at 11,600 m (38,000 ft)	Mach 0.78 (447 kts, 828 km/h; 515 mph)
Nominal cruising speed	384 kts (711 km/h; 442 mph)
T-O speed	162 kts (300 km/h; 187 mph)
Landing speed, approx	146 kts (270 km/h, 168 mph)
Service ceiling: normal	12,000 m (39,370 ft)
with max weapons	9,100 m (29,850 ft)
T-O run	2,540 m (8,335 ft)
Combat radius with 11,340 kg (25,000 lb) payload: unrefuelled	3,455 n miles (6,400 km, 3,975 miles)
with one in-flight refuelling	4,480 n miles (8,300 km, 5,155 miles)

UPDATED

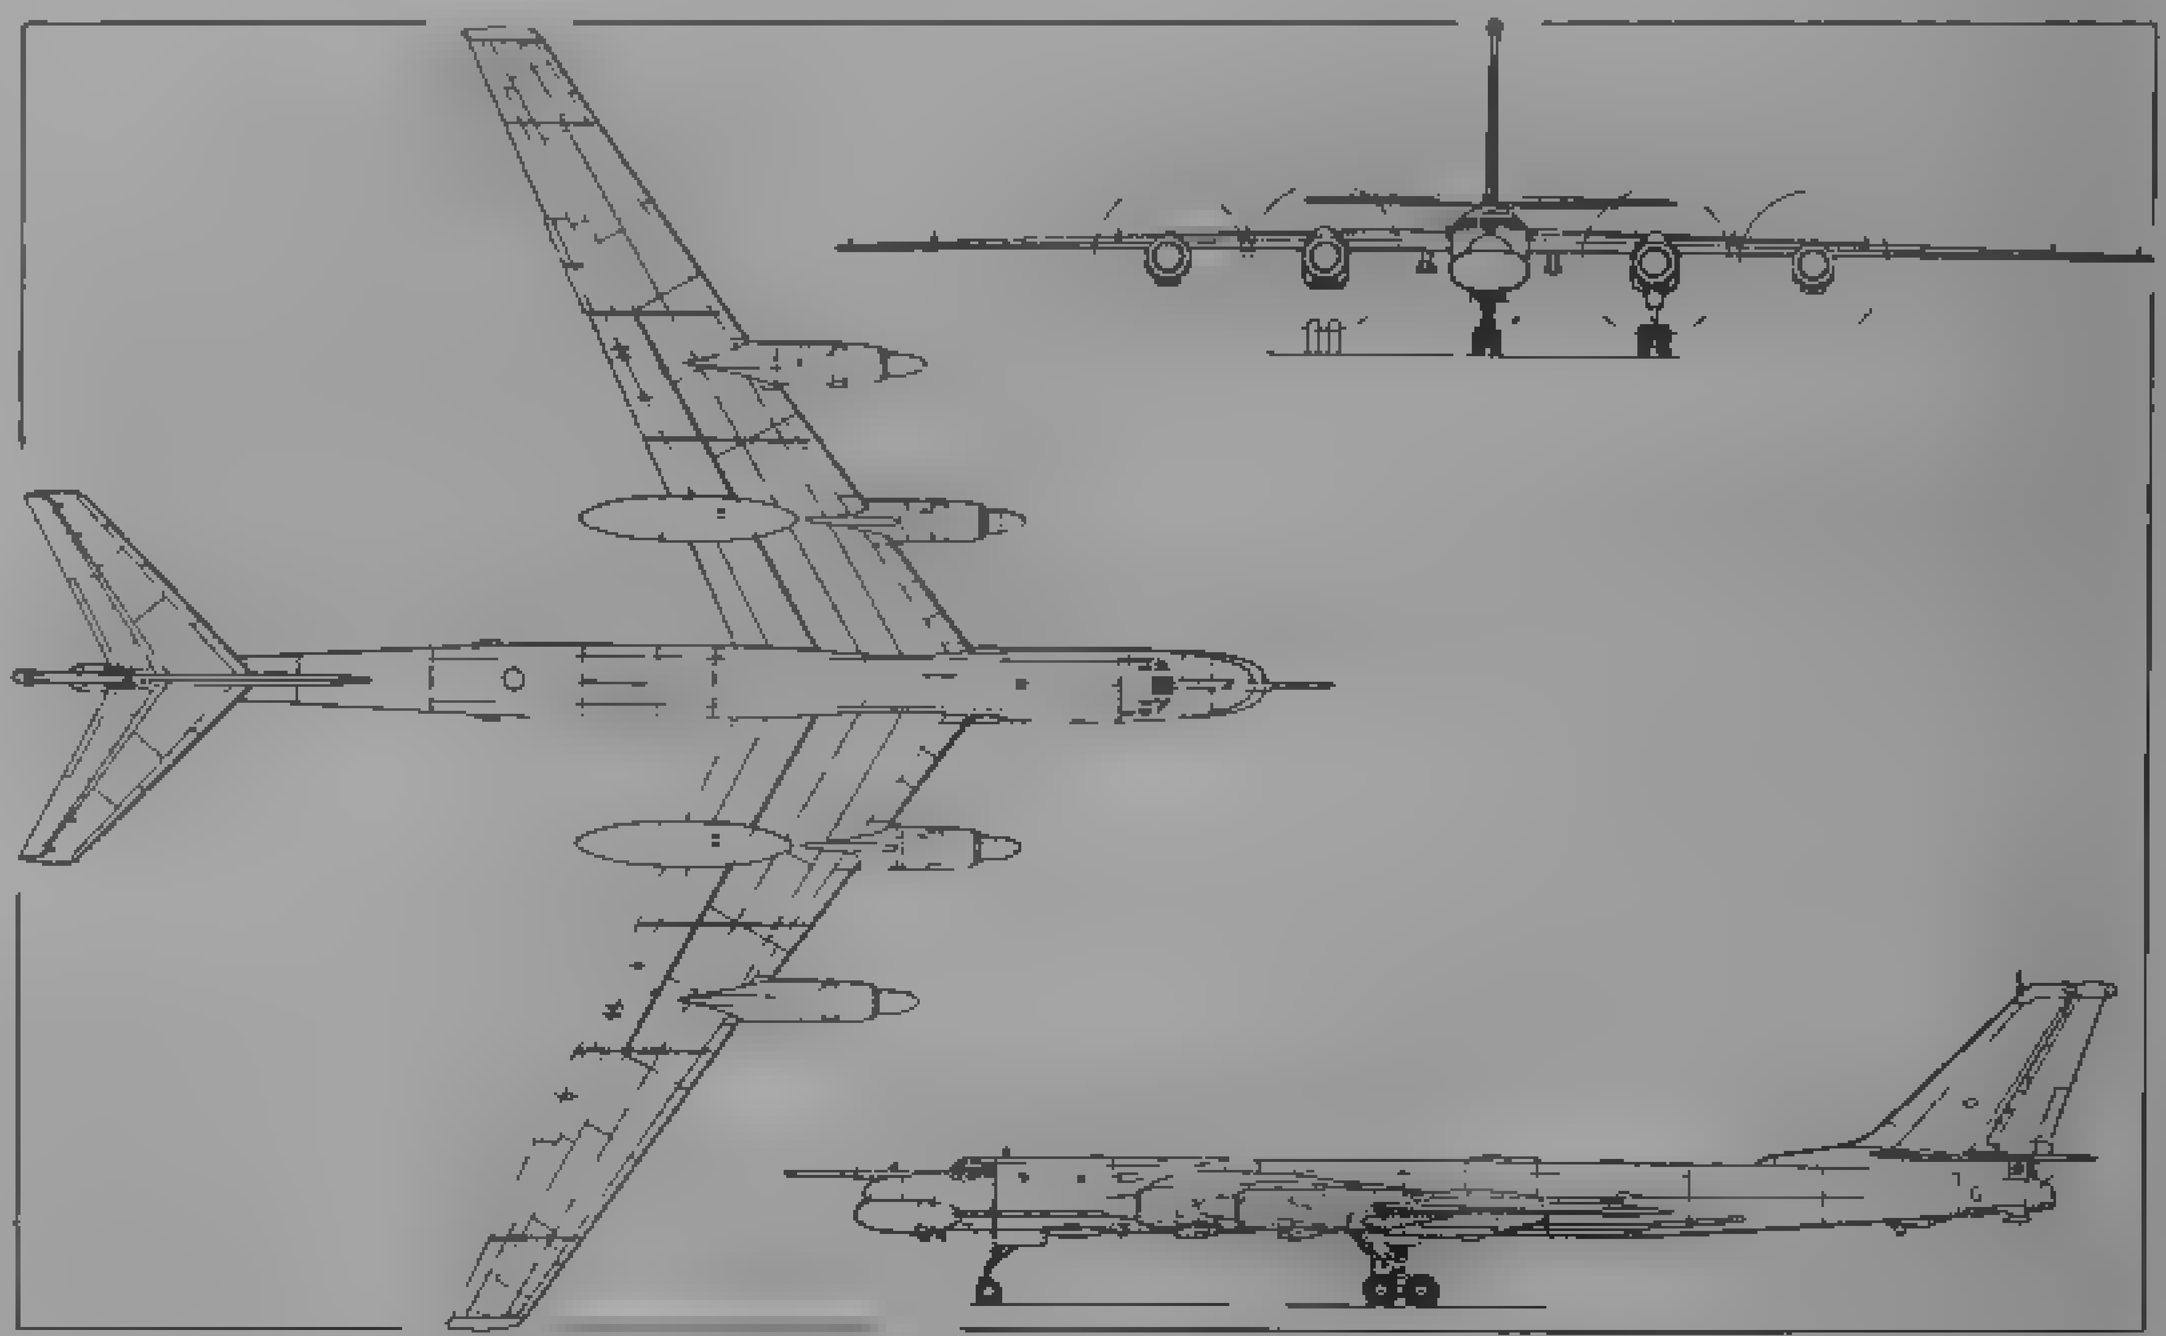
TUPOLEV Tu-22M

NATO reporting name: Backfire

TYPE: Twin-engined variable geometry medium bomber and maritime reconnaissance/attack aircraft

PROGRAMME: NATO revealed existence of a Soviet variable geometry bomber programme Autumn 1969; development had begun 1962, to meet Soviet Air Force requirement, Tu-22MO prototype observed July 1970 on ground near Kazan plant, confirmed subsequently as twin-engined design by Tupolev OKB, first flight Summer 1969, nine Tu-22M-1 preproduction models for development testing, weapons trials and evaluation. First displayed in West at 1992 Farnborough Air Show. Production ended 1993, totalling nine Tu-22MO prototypes, nine Tu-22M-1s, 211 Tu-22M-2s and 268 Tu-22M-3s, or 497 in all

CURRENT VERSIONS: **Tu-22M-2** (Aircraft 45-02; 'Backfire-B'): First series production version, entered service 1976; differs from original Tu-22M-1 ('Backfire-A') in



Tupolev Tu-95MS strategic bomber, known to NATO as 'Bear-H' *(Jane's/Dennis Punnett)*
1987

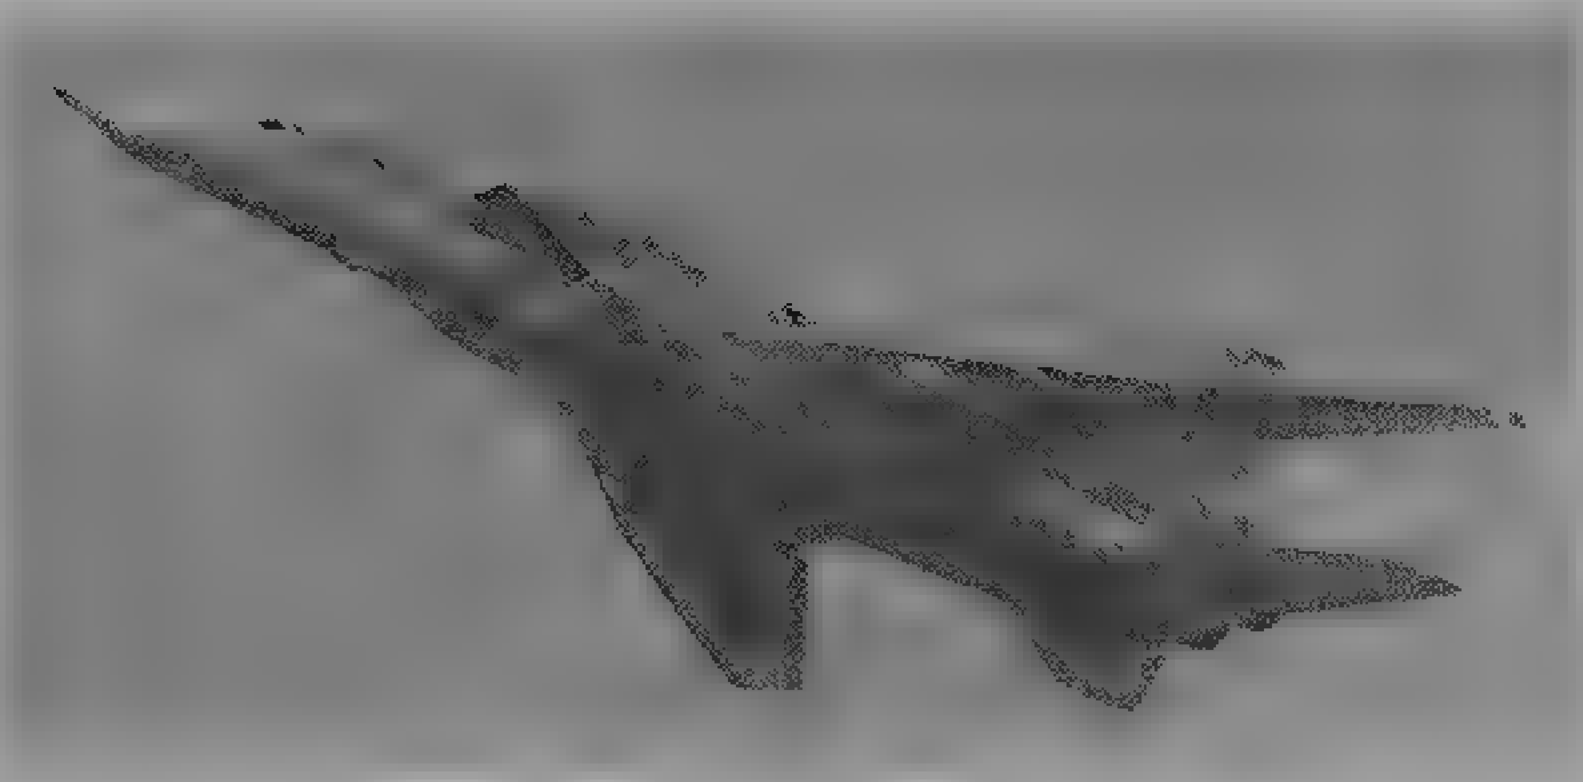
1994



Tupolev Tu-22M-3 with wings fully swept
1993

having increased wing span, and wing trailing-edge pods eliminated except for shallow underwing fairings, no longer protruding beyond trailing edge, wings and tail surfaces changed to almost supercritical section during production, maximum sweep increased from 60° to 65°; slightly inclined lateral air intakes, with large splitter plates, seen usually with optional flight refuelling nose probe removed and its housing replaced by long fairing. Two Kuznetsov/KKBM NK-22 turbofans (each 215.75 kN, 48,500 lb st). Initial armament normally one Kh-22 (NATO AS-4 'Kitchen') air-to-surface missile semi-recessed under fuselage, later aircraft have maximum weapon load of 21,000 kg (46,300 lb), with rack for a Kh-22 under each fixed wing centre-section panel, for a maximum three 'Kitchens', with optional MBDZ-U9-68 external stores racks under engine air intake trunks; two GSh-23 twin-barrel 23 mm guns in UKU 9K-502 tail mounting with barrels side by side horizontally, initially beneath ogival radome, later with drum-shape radome of larger diameter. Two squadrons operational in Afghanistan December 1987 to January 1988.

Tu-22M-3 (Aircraft 45-03; 'Backfire-C'): Advanced long-range bomber and maritime version; entered service with 185th Guards Heavy Bomber Regiment 1983; deployed with Black Sea fleet air force 1985, new engines of approximately 25 per cent higher rating, wedge type engine air intakes, upturned nosecone, no visible flight refuelling probe, weapons load increased, rotary launcher in weapons bay for six Kh-15P (AS-16 'Kickback') short-range attack missiles, provision for four more underwing as alternative to standard two Kh-22 (AS-4 'Kitchens'), single GSh-23 twin-barrel 23 mm gun, with barrels superimposed, in aerodynamically improved tail mounting, beneath large drum-shape radome. Sixteen used to support withdrawal of Soviet forces from Afghanistan October 1988 to January 1989. Modernisation, primarily of bombing and navigation systems, avionics and weapons, is continuing. *Detailed description applies specifically to Tu-22M-3. Cockpit illustration in Addenda.*

A possible **electronic warfare version** has been reported.

CUSTOMERS: Total of 497 built, including prototypes. Russian air forces have 100; Naval Aviation has 165. Estimated 29 in Ukraine (15 Tu-22M with 185 Regiment at Poltava and 14 Tu-22M-3 with 260 Regiment at Stryy).

DESIGN FEATURES: Capable of performing nuclear strike, conventional attack and anti-ship missions; low-level penetration features ensure better survivability than earlier Tupolev bombers, deployment of Kh-15P (AS-16 'Kickback') short-range attack missiles in Tu-22Ms has increased significantly their weapon carrying capability. Low/mid-wing configuration, large-span fixed centre-section and two variable geometry outer wing panels (from 20 to 65° sweepback); no anhedral or dihedral; leading-edge fence towards tip of centre-section each side; basically circular fuselage forward of wings, with ogival dielectric nosecone; centre-fuselage faired into rectangular section air intake trunks, each embodying one fixed and two variable horizontal compression ramps, leading-edge of sidewalls raked at about 65°; 12 auxiliary intake doors in each duct over forward portion of wing, no external area ruling of trunks, all-swept tail surfaces, with large dorsal fin.

FLYING CONTROLS: Automatic high- and low-altitude preprogrammed flight control, with automatic approach. Full-span leading-edge slat, aileron and three-section slotted trailing-edge flaps aft of spoilers/lift dumpers on each outer wing panel, all moving differential horizontal tail surfaces, inset rudder.

LANDING GEAR: Hydraulically retractable tricycle type, rearward-retracting twin nosewheels; each mainwheel bogie comprises three pairs of wheels in tandem, with varying distances between each pair (narrowest track for front pair, widest track for centre pair); mainwheel tyres size 1,030 × 350 mm, pressure 11.75 bars (170 lb/sq in), nosewheel tyres size 1,000 × 280 mm, pressure 9.32 bars (135 lb/sq in), bogies pivot inward from vestigial fairing under centre-section on each side into bottom of fuselage. Brake-chute housed inside large door under rear fuselage.

POWER PLANT: Two Kuznetsov/KKBM NK-25 turbofans, side by side in rear fuselage, each 245.2 kN (55,115 lb st) with afterburning. Integral fuel tanks in centre-fuselage between engine ducts, centre-section carry through structure, forward portion of each fixed wing panel, between spars of variable geometry wing panels and in lower portion of fin. APU in dorsal fin. Provision for JATO rockets.

ACCOMMODATION: Pilot and co-pilot side by side, under upward-opening jettisonable gull-wing doors hinged on centreline, navigator and weapon system officer further aft, with similar doors, as indicated by position of windows between flight deck and air intakes. KT-1 ejection seats for all four crew members.

SYSTEMS: Air conditioning system supplies pressurised crew compartment and specialised equipment compartments; air bled from 12th stage of engine compressors. Three independent hydraulic systems, pressure 207 bars (3,000 lb/sq in), to power flight control system, landing gear actuation, wheelbrakes and wing sweep actuators. Pneumatic system supplied by bottles, pressure 147 bars (2,130 lb/sq in). Three independent electrical systems: 27 V DC system supplied by four GSR-20BK generators (two on each engine), with two storage batteries, 200/115 V three-phase 400 Hz AC system supplied by two GT 60 NZHCH12P generators, 36 V three-phase 400 Hz AC system supplied by two TS 350S04A transformers. Gaseous oxygen system supplied from bottles, pressure 147 bars (2,130 lb/sq in). Electrothermal anti-icing of air intakes, flight deck windows and strike sight window; hot air anti-icing of inlet guide vanes; radioactive ice detector.

AVIONICS: *Comms:* Secure com. Equipment for accurate autonomous nav.

Radar: Large missile targeting and nav radar (NATO 'Down Beat') inside dielectric nosecone, radar ('Box Tail') for tail turret, above guns.

Mission: Strike sight fairing with flat glazed front panel under front fuselage, for video camera to provide visual assistance for weapon aiming from high altitude.

Self-defence: Infra-red missile approach warning sensor above fuselage aft of cockpit, eight chaff/flare multiple dispensers in bottom of each engine duct between wingroot and tailplane, another in each tailplane root fairing.

ARMAMENT: Maximum offensive weapon load three Kh-22 (NATO AS-4 'Kitchen') air-to-surface missiles, one semi-recessed under centre-fuselage, one under fixed centre-section panel of each wing, or 24,000 kg (52,910 lb) of conventional bombs or mines, half carried internally and half on racks under wings and engine air intake trunks. Internal bombs can be replaced by rotary launcher for six Kh-15P (AS-16 'Kickback') short-range attack missiles, with four more underwing as alternative to Kh-22s. Normal weapon load is single Kh-22 or 12,000 kg (26,455 lb) of bombs. Typical loads two FAB-3000, eight FAB-1500, 42 FAB-500 or 69 FAB-250 or -100 bombs (figures indicate weight in kg), or eight 1,500 kg or eighteen 500 kg mines. One GSh-23 twin-barrel 23 mm gun, with barrels superimposed, in radar directed tail mounting.

DIMENSIONS, EXTERNAL (Tu-22M-3):

Wing span: fully spread	34.28 m (112 ft 5¾ in)
fully swept	23.30 m (76 ft 5½ in)
Wing aspect ratio: fully spread	6.40
fully swept	3.09
Length overall	42.46 m (139 ft 3¼ in)
Height overall	11.05 m (36 ft 3 in)
Weapons bay: Length	approx 7.00 m (22 ft 11½ in)
Width	approx 1.80 m (5 ft 10¾ in)

AREAS:

Wings, gross: 20° sweep	183.58 m² (1,976.1 sq ft)
65° sweep	175.8 m² (1,892.4 sq ft)

WEIGHTS AND LOADINGS (Tu-22M-3):

Max weapon load	24,000 kg (52,910 lb)
Fuel load	approx 50,000 kg (110,230 lb)
Max T-O weight	124,000 kg (273,370 lb)
Max T-O weight with JATO	126,400 kg (278,660 lb)
Normal landing weight	78,000 kg (171,955 lb)
Max landing weight	88,000 kg (194,000 lb)
Max wing loading (without JATO):	
20° sweep	675.45 kg/m² (138.34 lb/sq ft)
65° sweep	705.35 kg/m² (144.45 lb/sq ft)
Max power loading (without JATO)	253 kg/kN (2.48 lb/lb st)

PERFORMANCE (Tu-22M-3):

Max level speed at high altitude	Mach 1.88 (1,080 kts, 2,000 km/h; 1,242 mph)
at low altitude	Mach 0.86 (567 kts, 1,050 km/h; 652 mph)
Nominal cruising speed at height	485 kts (900 km/h; 560 mph)
T-O speed	200 kts (370 km/h; 230 mph)
Normal landing speed	154 kts (285 km/h; 177 mph)
Service ceiling	13,300 m (43,635 ft)
T-O run	2,000-2,100 m (6,560-6,890 ft)
Normal landing run	1,200-1,300 m (3,940-4,265 ft)
Unrefuelled combat radius:	
supersonic, hi-hi-hi, 12,000 kg (26,455 lb) weapons	810-1,000 n miles (1,500-1,850 km; 930-1,150 miles)
subsonic, lo-lo-lo, 12,000 kg (26,455 lb) weapons	810-900 n miles (1,500-1,665 km; 930-1,035 miles)
subsonic, hi-lo-hi, 12,000 kg (26,455 lb) weapons	1,300 n miles (2,410 km; 1,495 miles)
subsonic, hi-hi-hi, max weapons	1,188 n miles (2,200 km; 1,365 miles)
g limit	+2.5

UPDATED

TUPOLEV Tu-160

NATO reporting name: Blackjack

TYPE: Four-engined variable geometry long range strategic bomber.

PROGRAMME: Designed as Aircraft 70 under leadership of V I Bliznyuk; prototype observed by satellite at Ramenskoye flight test centre 25 November 1981 (photograph in 1982-83 *Jane's*); first flew 19 December 1981; first exceeded Mach 1 February 1985; second prototype lost 1987; US Defense Secretary Frank Carlucci invited to inspect 12th aircraft built, at Kubinka airbase, near Moscow, 2 August 1988; deliveries to 184th Regiment, Priluki air base, Ukraine, began May 1987; production at Kazan airframe plant ended 1992.

CURRENT VERSIONS: **Tu-160** ('Blackjack'): Strategic bomber.

Tu-160SK: Launch vehicle for proposed Burlak-Diana two-stage space vehicle, described separately.

CUSTOMERS: Nineteen deployed at Priluki, Ukraine (184 Regiment), with transfer to Russia anticipated; 12 in Russia in January 1995, five of them with 1st Heavy Bomber Regiment, formed at Engels airbase mid-1992; one at Kazan; six test aircraft at Zhukovsky.

DESIGN FEATURES: Intended for high-altitude standoff role carrying ALCMs and for defence suppression, using short-range attack missiles similar to US Air Force SRAMs, along path of bomber making low-altitude penetration to attack primary targets with free-fall nuclear bombs or missiles; this implies capability of subsonic cruise/supersonic dash at almost Mach 2 at 18,300 m (60,000 ft) and transonic flight at low altitude. About 20 per cent longer than USAF B-1B, with greater unrefuelled combat radius and much higher maximum speed; low-mounted variable geometry wings, with very long and sharply swept fixed root panel, small diameter circular fuselage; horizontal tail surfaces mounted high on fin, upper portion of which is pivoted one-piece all-moving surface; large dorsal fin; engines mounted as widely separated pairs in underwing ducts, each with central horizontal V wedge intakes and jetpipes extending well beyond wing centre-section trailing-edge; manually selected outer wing sweepback 20°, 35° and 65°; when wings fully swept, inboard portion of each trailing-edge flap hinges upward and extends above wing as large fence; unswept tailfin, sweptback horizontal surfaces, with conical fairing for brake-chute aft of intersection.

FLYING CONTROLS: Fly-by-wire. Full-span leading-edge flaps, long span double-slotted trailing-edge flap and inset drooping aileron on each wing; five-section spoilers forward of flaps; all-moving vertical and horizontal one-piece tail surfaces.

STRUCTURE: Slim and shallow fuselage blended with wingroots and shaped for maximum hostile radar signal deflection.

LANDING GEAR: Twin nosewheels retract rearward; main gear comprises two bogies, each with three pairs of wheels; retraction very like that on Tu-154 airliner; as each leg pivots rearward, bogie rotates through 90° around axis of centre pair of wheels, to lie parallel with retracted leg; gear retracts into thickest part of wing, between fuselage and inboard engine on each side, so track relatively small. Nosewheel tyres size 1,080 × 400 mm, mainwheel tyres size 1,260 × 425 mm.

POWER PLANT: Four Samara/Trud NK-321 turbofans, each 137.3 kN (30,865 lb st) dry, 245.2 kN (55,115 lb st) with afterburning. In-flight refuelling probe retracts into top of nose.

ACCOMMODATION: Four crew members in pairs, on individual Zvezda K-36D ejection seats; one window each side of flight deck can be moved inward and rearward for ventilation on ground; flying controls use fighter type sticks rather than yokes or wheels; crew enter via nosewheel bay.

AVIONICS: Systems utilise around 100 computers and processors.

Radar: Nav/attack radar in slightly upturned dielectric nosecone claimed to provide terrain-following capability.

Flight: Astro-inertial nav with map display.

Instrumentation: No HUD or CRTs.

Mission: Strike sight fairing with flat glazed front panel, under forward fuselage, for video camera to provide visual assistance for weapon aiming.

Self-defence: Active ECM jamming system.

ARMAMENT: No guns. Internal stowage for free-fall bombs, short-range attack missiles or ALCMs; a rotary launcher can be installed in each of two 12.80 m (42 ft) long weapon bays, carrying 12 Kh-15P (AS-16 'Kickback') SRAMs or six Kh-55MS (AS-15 'Kent') ALCMs.

DIMENSIONS, EXTERNAL:

Wing span: fully spread (20°)	55.70 m (182 ft 9 in)
35° sweep	50.70 m (166 ft 4 in)
fully swept (65°)	35.60 m (116 ft 9¾ in)
Length overall	54.10 m (177 ft 6 in)
Height overall	13.10 m (43 ft 0 in)
Tailplane span	13.25 m (43 ft 5¾ in)
Wheel track	5.40 m (17 ft 8½ in)
Wheelbase	17.88 m (58 ft 8 in)

AREAS:

Wings, gross: fully spread	360.0 m² (3,875 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	118,000 kg (260,140 lb)
Max fuel	160,000 kg (352,735 lb)
Max weapon load	40,000 kg (88,185 lb)
Normal T-O weight	267,600 kg (589,950 lb)
Max T-O weight	275,000 kg (606,260 lb)
Max landing weight	155,000 kg (341,710 lb)
Max power loading	280 kg/kN (2.75 lb/lb st)

PERFORMANCE:

Max level speed at 12,200 m (40,000 ft)	Mach 2.05 (1,200 kts, 2,220 km/h; 1,380 mph)

Cockpit of Tupolev Tu-160 supersonic strategic bomber *1993*

Cruising speed at 13,700 m (45,000 ft)
Mach 0.9 (518 kts, 960 km/h, 596 mph)
Max rate of climb at S/L 4,200 m (13,780 ft)/min
Service ceiling 15,000 m (49,200 ft)
T-O run at max AUW 2,200 m (7,220 ft)
Landing run at max landing weight 1,600 m (5,250 ft)
Radius of action at Mach 1.5
1,080 n miles (2,000 km, 1,240 miles)
Max unrefuelled range
6,640 n miles (12,300 km, 7,640 miles)
g limit +2

UPDATED

TUPOLEV Tu-160SK

TYPE: Conversion of Tu-160 bomber as space launch vehicle.
PROGRAMME: Announced at Asian Aerospace '94, Singapore, proposed by Russian partners MKB Raduga, OKB MEI and Tupolev, with German company OHB System.
COSTS: Payload launch cost $6,000 to 8,000/kg.
DESIGN FEATURES: Commercialised version of Tu-160 bomber (which see), as carrier component of Burlak aviation space launch complex, Burlak Diana two-stage rocket, carrying payload, under fuselage on centreline mount. System utilises Il-76 control aircraft.
ACCOMMODATION: Crew of four.

DIMENSIONS, EXTERNAL: As Tu-160 bomber, except:
Burlak rocket: Length overall 22.50 m (73 ft 10 in)
Fin span 5.0 m (16 ft 5 in)
Diameter 1.60 m (5 ft 3 in)
Burlak payload module: Length 3.50 m (11 ft 5¾ in)
Diameter 1.40 m (4 ft 7 in)

WEIGHTS AND LOADINGS:
Burlak launch weight 28,500 kg (62,830 lb)
Max Burlak payload: 200 km (124 mile) equatorial orbit
1,100 kg (2,425 lb)
200 km (124 mile) polar orbit 775 kg (1,708 lb)
1,000 km (620 mile) equatorial orbit
825 kg (1,818 lb)
1,000 km (620 mile) polar orbit 550 kg (1,212 lb)
Max T-O weight 275,000 kg (606,260 lb)
PERFORMANCE:
Max level speed, clean Mach 2.35
Speed for Burlak launch at 13,500 m (44,300 ft)
Mach 1.7
Nominal cruising speed
Mach 0.77 (459 kts, 850 km/h, 528 mph)
Required runway length 3,500 m (11,500 ft)
Nominal range:
with Burlak 2,968 n miles (5,500 km; 3,418 miles)
clean 5,936 n miles (11,000 km; 6,836 miles)

UPDATED

TUPOLEV Tu-24

TYPE: Single-engined general purpose monoplane.
PROGRAMME: Design started 1993, full scale mockup first shown at MosAeroshow '93, prototype construction began 1994.
CURRENT VERSIONS: **Tu-24SH**: Basic agricultural version, for chemicals and fertilisers.
Tu-24P: Patrol and surveillance, no external dispensing equipment.
Tu-24R: Fish shoals and sea animal survey.
Tu-24S: Ambulance, for doctor and stretcher patient.
Tu-24ST: Sport and parachutist training.
Tu-24T: Transport for five passengers or up to 800 kg (1,763 lb) freight.
Tu-24U: Trainer, pilot and student side by side.
COSTS: Basic aircraft approximately $100,000.
DESIGN FEATURES: Cantilever low-wing monoplane; unswept constant-chord wings and horizontal tail surfaces; slats on outer wings deploy automatically at angle of attack of 16°;

Mockup of Tu-24SH agricultural aircraft (VOKBM M-14PS radial engine) (*Piotr Butowski*) *1994*

cambered tips, unswept vertical tail surfaces, with dorsal fin, enclosed cabin for one or two persons side by side, with hopper in cabin aft of seats in basic agricultural version; door on port side. Designed for high manoeuvrability in agricultural use. Wing thickness/chord ratio 16 per cent, aspect ratio 6.04, dihedral 4°, incidence 3°

FLYING CONTROLS: Conventional manually operated three-axis, automatic slats on wings, trim tab in port elevator; ailerons droop with flaps

STRUCTURE: All-metal, primarily D16T aluminium alloy

LANDING GEAR: Non-retractable tailwheel type; mainwheels carried on side Vs and half axles, with built-in shock-absorbers

POWER PLANT: One 265 kW (355 hp) VOKBM M-14PS nine-cylinder air-cooled radial engine, three-blade variable-pitch propeller

ACCOMMODATION: See individual versions. Air conditioning available

SYSTEMS: Pneumatic system for engine starting, wheelbrakes and operation of agricultural equipment, pressure 50 bars (735 lb/sq in)

DIMENSIONS, EXTERNAL:

Wing span	13.00 m (42 ft 8 in)
Wing chord (constant)	2.15 m (7 ft 0¼ in)
Length overall, tail up	9.30 m (30 ft 6¼ in)
Height overall, tail up	4.60 m (15 ft 1 in)
Wheel track	3.00 m (9 ft 10¼ in)
Propeller diameter	2.50 m (8 ft 2½ in)

AREAS:

Wings, gross	28.0 m² (301.4 sq ft)

WEIGHTS AND LOADINGS:

Max chemicals, agricultural version	900 kg (1,985 lb)
Max T-O weight	2,100 kg (4,630 lb)
Max wing loading	75.0 kg/m² (15.36 lb/sq ft)

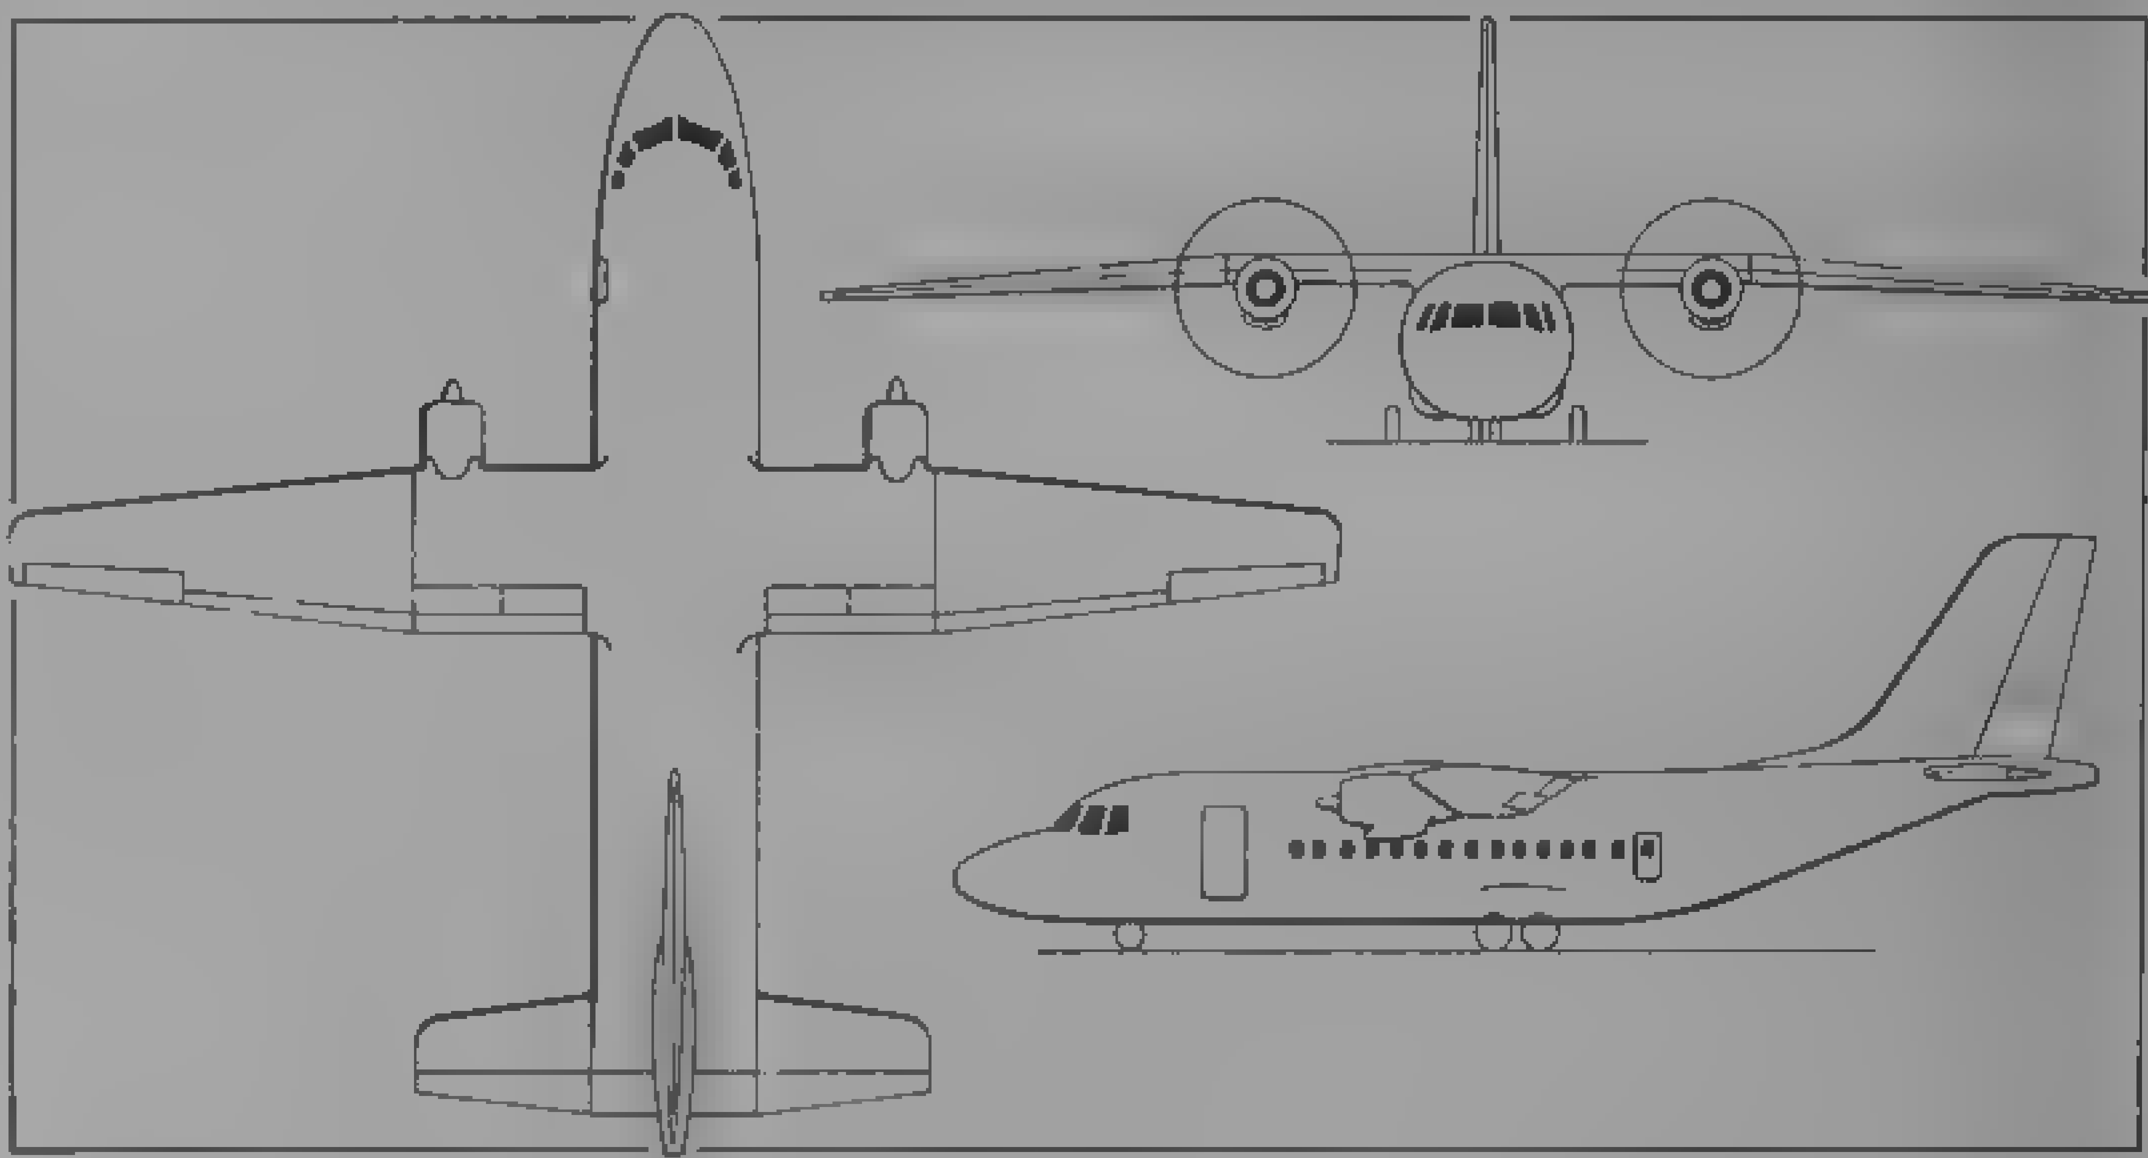
PERFORMANCE (estimated):

Max level speed	135 kts (250 km/h, 155 mph)
Nominal cruising speed	108 kts (200 km/h, 124 mph)
Spraying speed	65-75 kts (120-140 km/h, 75-87 mph)
Max rate of climb at S/L	270 m (885 ft)/min
Service ceiling	3,000 m (9,840 ft)
T-O run	180 m (590 ft)
Landing run	100 m (328 ft)
Balanced runway length	600 m (1,970 ft)
Ferry range	1,080 n miles (2,000 km, 1,240 miles)

UPDATED

Model of Tupolev Tu-130 short-range transport *(Piotr Butowski)*

1995



Tupolev Tu-130 twin-turboprop passenger/freight transport *(Jane's/Mike Keep)*

1994

TUPOLEV Tu-34

TYPE: Twin-turboprop STOL light transport

PROGRAMME: Project launched late 1990, design enlarged and revised 1993, finalised September 1994, production design under way 1995, construction of prototypes to begin early 1997, first flight scheduled late 1997, with FAR Pt 23/AR-23 certificat on 1998. Delivery of first of 400 production aircraft planned 1998

COSTS: Officially announced programme cost $22 million; standard production aircraft $1.4 million

DESIGN FEATURES: Intended to provide high degree of comfort, and multipurpose capability, from unimproved airfields. Shoulder-wing monoplane; unswept high-lift wings, with minimal anhedral from roots. Wide cabin section of fuselage tapers sharply to sweptback vertical tail surfaces, with unswept T tailplane and twin ventral fins. Engines mounted on trailing-edge of centre-section, driving pusher propellers

FLYING CONTROLS: Manually operated three-axis controls, incidence of tailplane electrically adjustable, trim tabs on port aileron, horn balanced elevator and rudder; full-span leading-edge slats, trailing-edge Fowler-type flaps and ailerons outboard of engines, two-section spoiler/airbrakes forward of flap on each wing

STRUCTURE: Basically aluminium alloy and glassfibre-based composites

LANDING GEAR: Retractable tricycle type, single wheel on each unit; nosewheel retracts forward, mainwheels rearward, upward and inward into fuselage; oleo-pneumatic shock-absorbers. Tyre size 400 × 150 mm on nosewheel, 600 × 180 mm on mainwheels. Electrically actuated brakes, with anti-skid units, on mainwheels. Floats and skis under development. Minimum ground turning radius 9.50 m (31 ft 2 in)

POWER PLANT: Two Allison 250 or Turbomeca Arrius 1D turboprops; each 313 to 335 kW (420 to 450 shp); four-blade fully feathering reversible-pitch constant-speed propellers. Fuel capacity 760 litres (200 US gallons; 167 Imp gallons)

ACCOMMODATION: Pilot and five/six passengers or equivalent freight. Door forward of wing on port side, with emergency exit opposite, separate door to baggage hold, behind rear seats. Cabin air conditioned and pressurised

DIMENSIONS, EXTERNAL:

Wing span	13.40 m (43 ft 11½ in)
Length overall	10.00 m (32 ft 9¾ in)
Tailplane span	3.80 m (12 ft 5⅝ in)
Wheel track	2.40 m (7 ft 10½ in)
Wheelbase	3.425 m (11 ft 3 in)
Propeller diameter	1.80 m (5 ft 10¾ in)
Distance between propeller centres	3.00 m (9 ft 10¼ in)

DIMENSIONS, INTERNAL:

Cabin: Max width	1.55 m (5 ft 1 in)
Max height	1.34 m (4 ft 4¾ in)

AREAS:

Wings, gross	17.4 m² (187.3 sq ft)

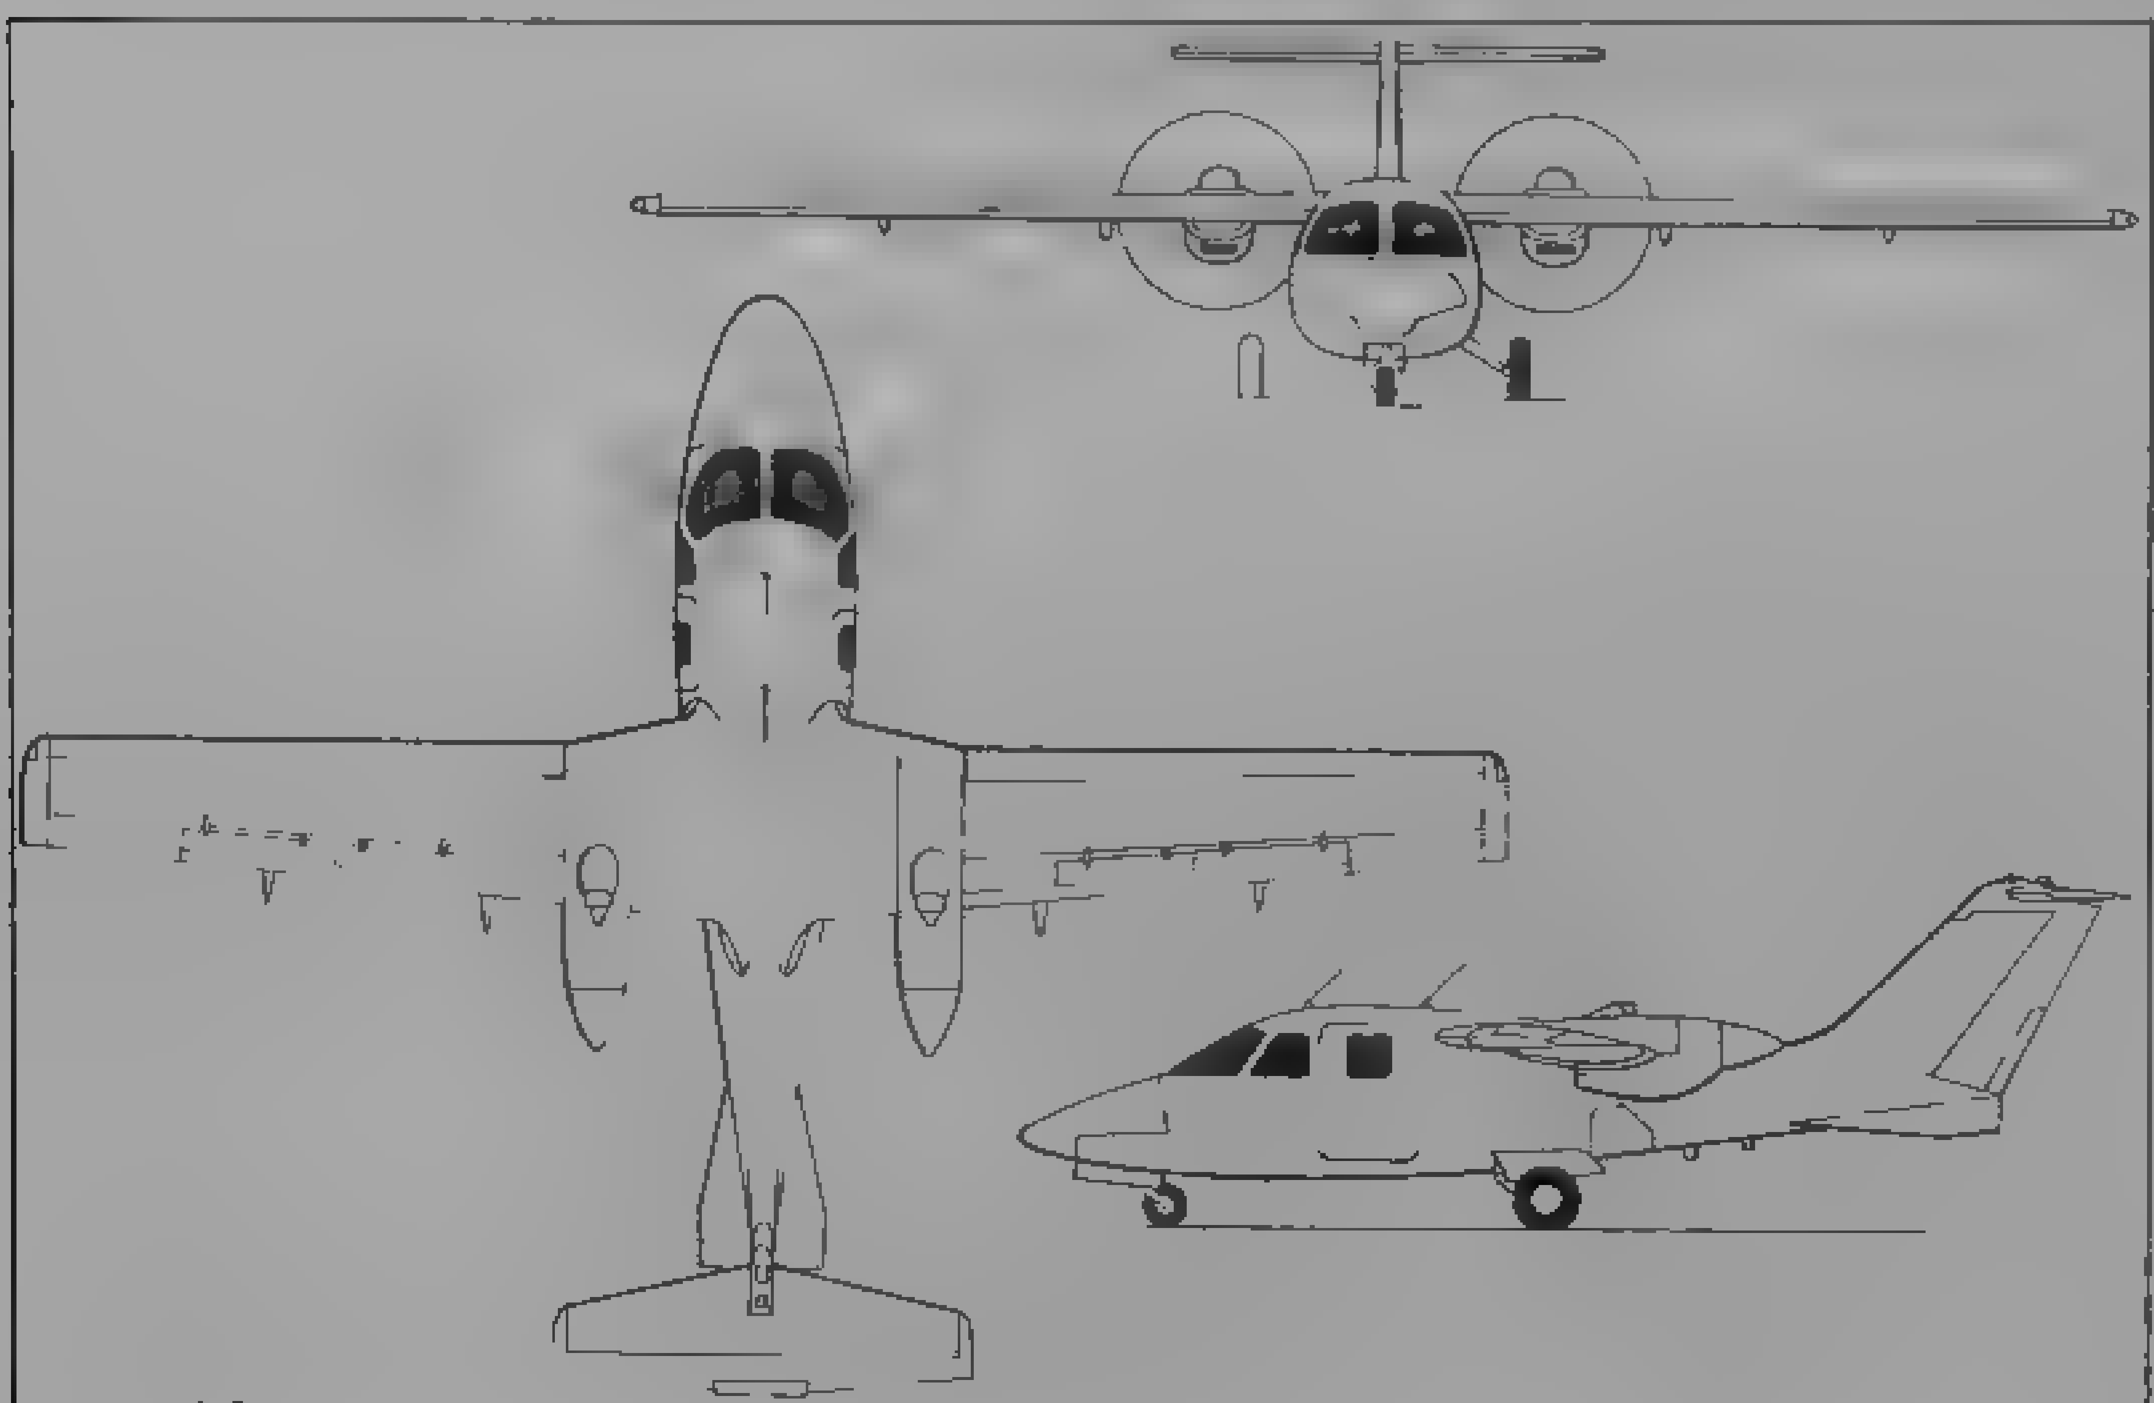
WEIGHTS AND LOADINGS:

Max payload	700 kg (1,543 lb)
Max T-O weight	2,520 kg (5,555 lb)

PERFORMANCE (estimated):

Max cruising speed at 7,600 m (24,935 ft)	259 kts (480 km/h, 298 mph)
Stalling speed, flaps down	52 kts (96 km/h, 60 mph)
T-O and landing run	150 m (493 ft)
Balanced runway length	less than 400 m (1,313 ft)
Range: with max payload	377 n miles (700 km, 435 miles)
with max fuel	1,133 n miles (2,100 km, 1,305 miles)

UPDATED



Tupolev Tu-34 six/seven-seat light utility aircraft *(Jane's/James Goulding)*

1995

TUPOLEV Tu-130

TYPE: Twin-turboprop short range passenger/freight transport

PROGRAMME: Announced and shown in form of wind tunnel model MosAeroshow '93, under active development in various forms, prototype planned to fly 1996

Tupolev Tu-154M medium-range airliner (three Aviadvigatel D-30KU-154-II turbofans) *(Peter J. Cooper)*

1995

DESIGN FEATURES: Conventional high-wing monoplane, wing in three sections, no dihedral or anhedral on centre-section, slight anhedral on outer panels, unswept wings and horizontal tail surfaces, sweptback vertical surfaces, rectangular wide-body fuselage with upswept tail embodying rear-loading ramp/door

LANDING GEAR: Retractable tricycle type, twin-wheel nose unit, each main unit comprises two wheels in tandem, retracting into long fairings on sides of fuselage.

POWER PLANT: Two 1,838 kW (2,465 shp) Klimov TV7-117C turboprops, provision for operating on propane-butane mixture and liquefied natural gas

ACCOMMODATION: Up to 53 passengers, basically five-abreast with single aisle, with galley and toilet, doors at front and rear on port side, rear-loading ramp of constant width in "beaver-tail"; alternative freight or vehicles, including four large pallets

DIMENSIONS, EXTERNAL

Wing span	26.54 m (87 ft 1 in)
Length overall	22.75 m (74 ft 7¾ in)
Height overall	8.30 m (27 ft 2¾ in)
Wheel track	3.60 m (11 ft 9¾ in)
Rear-loading ramp: Length	3.50 m (11 ft 5¾ in)
Width	2.80 m (9 ft 2¼ in)

DIMENSIONS, INTERNAL

Freight hold: Length	8.50 m (27 ft 10¾ in)
Width	2.80 m (9 ft 2¼ in)
Height	2.20 m (7 ft 2¾ in)
Floor area	23.8 m² (256.3 sq ft)
Volume	52.4 m³ (1,850 cu ft)

AREAS

Rear-loading ramp	9.8 m² (105.5 sq ft)

WEIGHTS AND LOADINGS

Max payload	5,000 kg (11,023 lb)
Max T-O weight	21,000 kg (46,300 lb)

PERFORMANCE (estimated, at max T-O weight):

Nominal cruising speed	270-280 kts (500-520 km/h, 310-323 mph)
Nominal cruising height	7,000 m (22,965 ft)
Balanced runway length	1,800 m (5,905 ft)
Range: with max payload	1,080 n miles (2,000 km; 1,242 miles)
with 3,000 kg (6,615 lb) payload	2,160 n miles (4,000 km, 2,485 miles)

VERIFIED

TUPOLEV Tu-136

TYPE: Cryogenic-fuelled twin-turboprop transport

PROGRAMME: Projected variant of Tu-130 powered by liquid natural gas, service entry nine years after go-ahead.

NEW ENTRY

TUPOLEV Tu-154M and Tu-154S

NATO reporting name: Careless

TYPE: Three-turbofan medium-range transport.

PROGRAMME: Basic Tu-154 announced Spring 1966 to replace Tu-104, Il-18 and An-10 on Aeroflot medium/long stages up to 3,240 n miles (6,000 km; 3,725 miles); SSSR-85000, first of six prototype/preproduction models flew 4 October 1968, regular services began 9 February 1972, 606 prototype and production Tu-154s and Tu-154As, Bs and B-2s with uprated turbofans and other refinements delivered, over 500 to Aeroflot (last described 1985-86 *Jane's*), prototype Tu-154M (SSSR 85317), converted from standard Tu-154B-2 (see 1990-91 *Jane's*), first flew 1982; first two production aircraft delivered to Aeroflot from GAZ 27 Kuybyshev December 1984, almost 290 built by March 1995; production continues; five delivered, 12 ordered 1994. Total Tu-154 production (all variants) almost 900

CURRENT VERSIONS: **Tu-154M**: Basic airliner with alternative standard configurations for up to 180 passengers; executive version available, with all passenger seats removed can carry light freight. *Detailed description applies to this version*

Tu-154M2: Modernised version; two Perm/Soloviev PS-90A turbofans, consuming 62 per cent as much fuel per passenger as Tu-154M, area navigation system. Intended to fly 1995. Life 20,000 hours or 15,000 cycles

Tu-154S: Specialised freight version, announced Autumn 1982; offered primarily as Tu-154B conversion, unobstructed main cabin cargo volume 72 m³ (2,542 cu ft); freight door 2.80 m (9 ft 2¼ in) wide and 1.87 m (6 ft 1½ in) high in port side of cabin, forward of wing, with ball mat inside and roller tracks full length of cabin floor, typical load nine standard international pallets 2.24 × 2.74 m (88 × 108 in) plus additional freight in standard underfloor baggage holds, volume 38 m³ (1,341 cu ft), nominal range 1,565 n miles (2,900 km, 1,800 miles) with 20,000 kg (44,100 lb) cargo

CUSTOMERS: Total of more than 750 Tu-154s in commercial use in January 1995, including 129 with Aeroflot and 44 with Aeroflot Russian International. Known Tu-154M operators number 66.

DESIGN FEATURES: Conventional all-swept low-wing configuration, two podded turbofans on sides of rear fuselage, third in extreme rear fuselage with intake at base of fin, nacelle to house retracted main landing gear on trailing-edge of each wing, wing sweep 35° at quarter-chord, anhedral on outer panels, geometric twist along span, circular section fuselage; sweepback at quarter-chord 40° on T tailplane; leading-edge sweep 45° on fin

FLYING CONTROLS: Hydraulically actuated ailerons, triple-slotted flaps, four-section spoilers forward of flaps on each wing, electrically actuated slats on outer 80 per cent each wing leading-edge, tab in each aileron, electrically actuated variable incidence tailplane; rudder and elevators hydraulically actuated by irreversible servo controls; tab in each elevator

STRUCTURE: All-metal, riveted three-spar wings, centre spar extending to just outboard of inner edge of aileron, semi-monocoque fail-safe fuselage; rudder and elevators of honeycomb sandwich construction

LANDING GEAR: Hydraulically retractable tricycle type, main bogies, each three pairs of wheels in tandem, retract rearward into fairings on wing trailing-edge; rearward-retracting anti-shimmy twin-wheel nose unit, steerable through ±63°; disc brakes and anti-skid units on mainwheels

POWER PLANT: Three Aviadvigatel D-30KU-154-II turbofans, each 104 kN (23,380 lb st), in pod each side of rear fuselage and inside extreme rear of fuselage, two lateral engines have clamshell thrust reversers. Integral fuel tanks in wings: four tanks in centre-section and two in outer wings; all fuel fed to collector tank in centre-section and thence to engines, single-point refuelling

ACCOMMODATION: Crew of three, two pilots and flight engineer, with provisions for navigator and five cabin staff. Two passenger cabins, separated by service compartments, alternative configurations for 180 economy class passengers, 164 tourist class with hot meal service, or 154 tourist/economy plus separate first class cabin seating eight to 24 persons, mainly six-abreast seating with centre aisle; washable non-flammable materials used for all interior furnishing. Fully enclosed baggage containers. Toilet, galley and wardrobe to customer's requirements. Executive and light cargo configurations available. Passenger doors forward of front cabin and between cabins on port side, with emergency and service doors opposite, all four doors open outward, six emergency exits: two overwing and one immediately forward of engine nacelle each side. Two pressurised baggage holds under floor of cabin, with two inward-opening doors; smaller unpressurised hold under rear of cabin

SYSTEMS: Air conditioning pressure differential 0.58 bar (8.4 lb/sq in). Three independent hydraulic systems, working pressure 207 bars (3,000 lb/sq in), powered by engine-driven pumps; Nos. 2 and 3 systems each have additional electric back-up pump, systems actuate landing gear retraction and extension, nosewheel steering, and operation of ailerons, rudder, elevators, flaps and spoilers. Three-phase 200/115 V 400 Hz AC electrical system supplied by three 40 kVA alternators, additional 36 V 400 Hz AC and 27 V DC systems and four storage batteries, TA-92 APU in rear fuselage. Hot air anti-icing of wing, fin and tailplane leading-edges, and engine air intakes, wing slats heated electrically. Engine fire extinguishing system in each nacelle; smoke detectors in baggage holds

AVIONICS: Avionics meet ICAO standards for Cat II weather minima

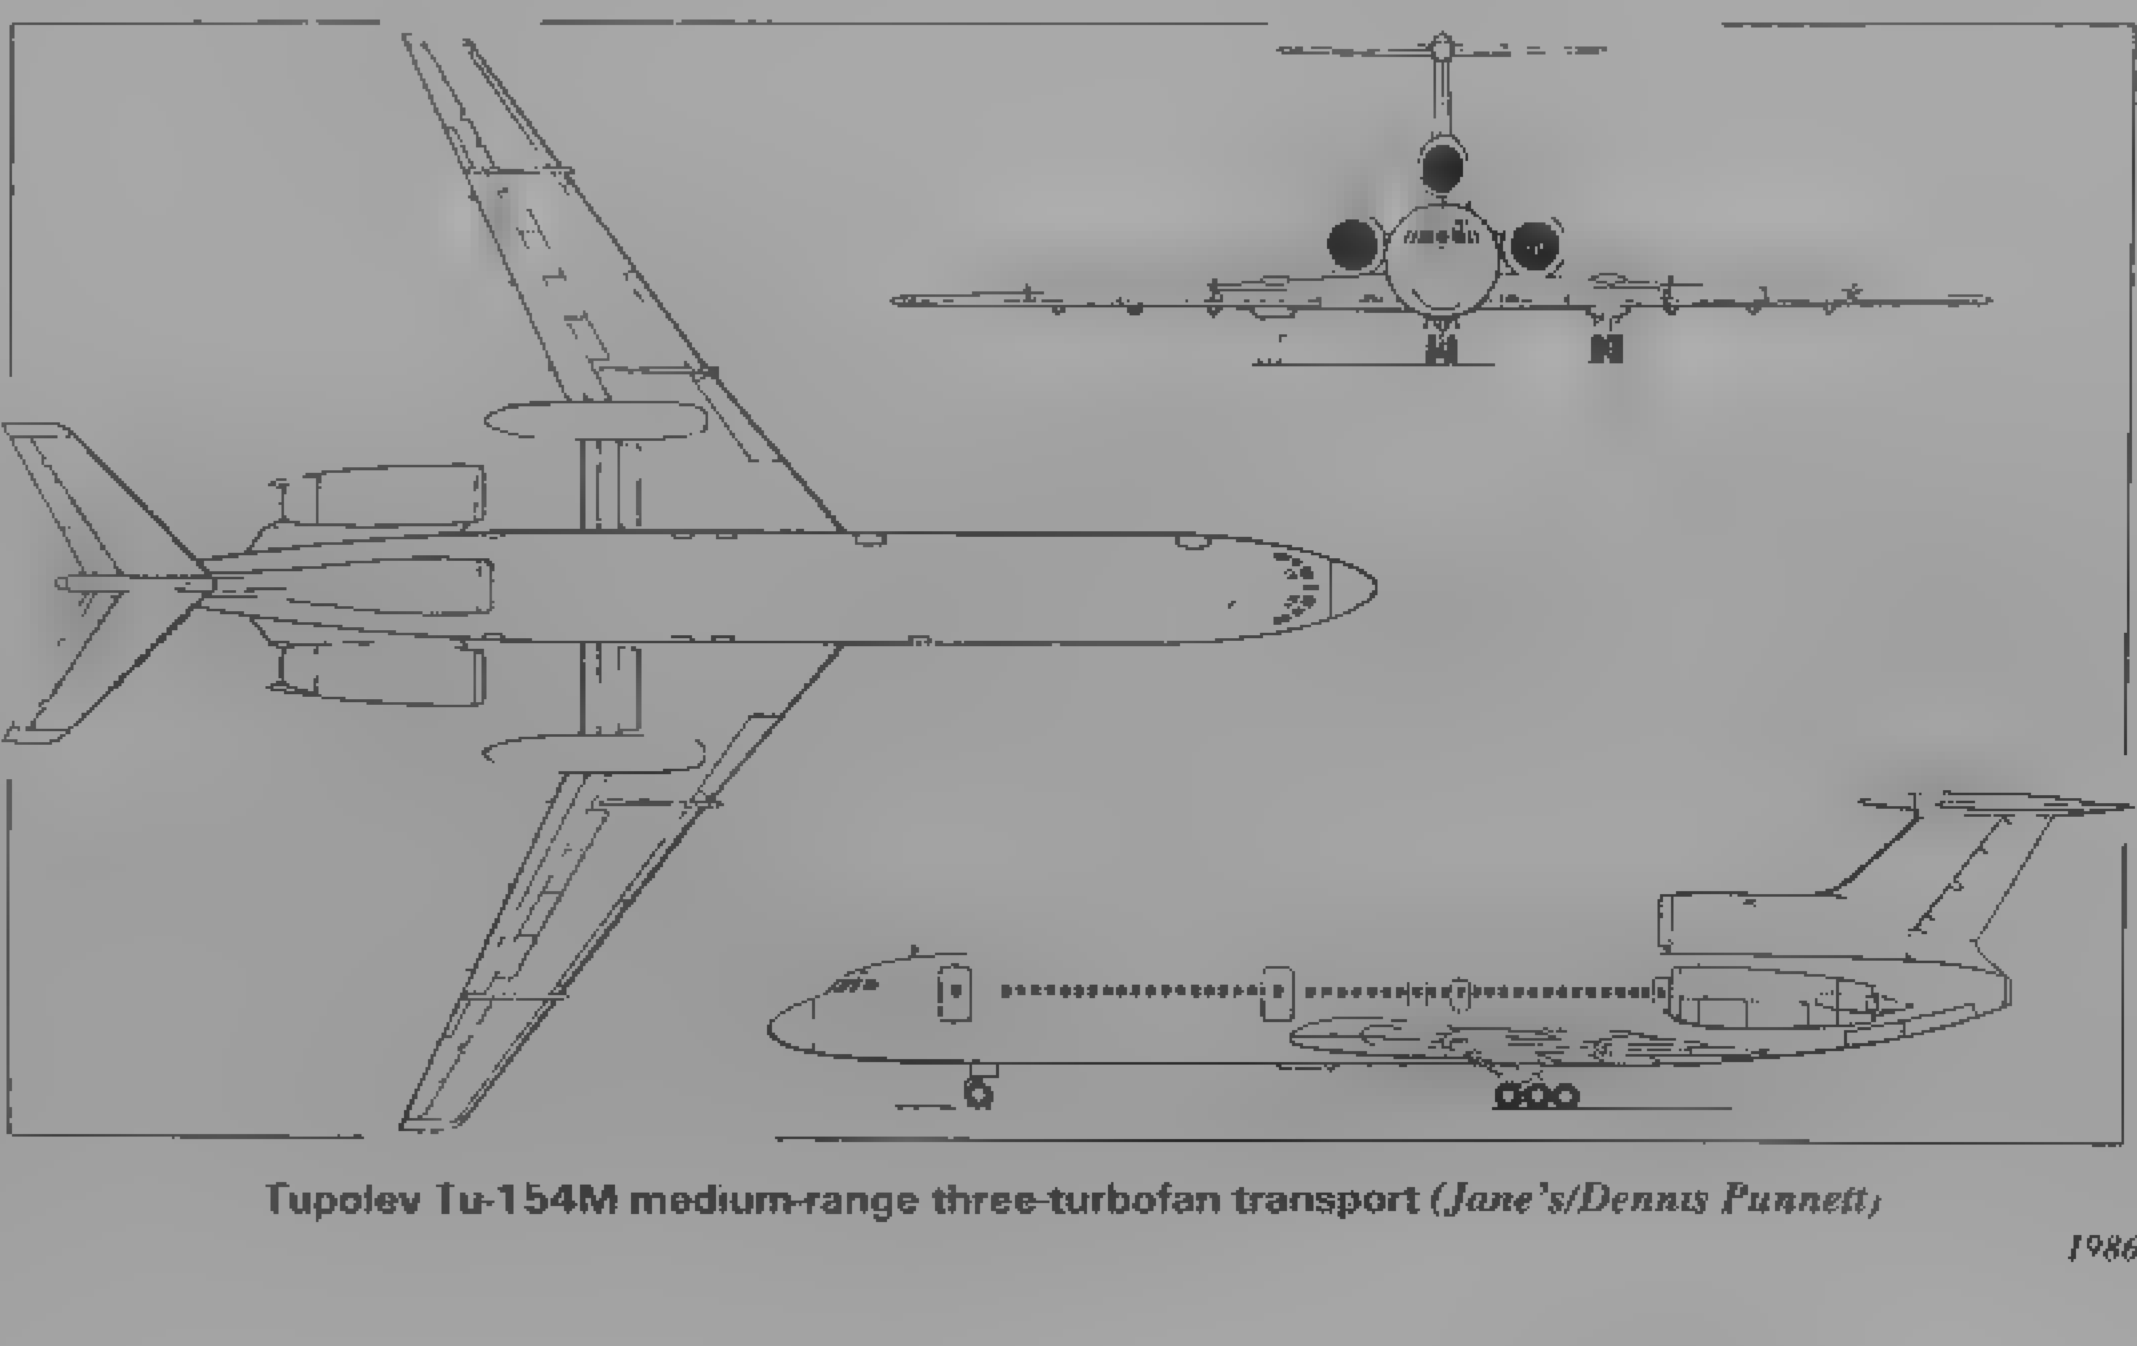
Comms: Dual HF and VHF com and emergency VHF, voice recorder, and transponder

Radar: Weather radar

Flight: Automatic flight control system operates throughout flight except during take-off to 400 m (1,312 ft) and landing from 30 m (100 ft); automatic go-round and automatic speed control provided by autothrottle down to 10 m (33 ft) on landing; triplex INS, Doppler and GPWS

DIMENSIONS, EXTERNAL

Wing span	37.55 m (123 ft 2½ in)
Wing aspect ratio	7.0
Length overall	47.90 m (157 ft 1¾ in)
Height overall	11.40 m (37 ft 4¾ in)
Diameter of fuselage	3.80 m (12 ft 5½ in)
Tailplane span	13.40 m (43 ft 11½ in)



Tupolev Tu-154M medium-range three-turbofan transport *(Jane's/Dennis Punnett)*

1986

Wheel track	11.50 m (37 ft 9 in)
Wheelbase	18.92 m (62 ft 1 in)
Passenger doors (each): Height	1.73 m (5 ft 7 in)
Width	0.80 m (2 ft 7½ in)
Height to sill	3.10 m (10 ft 2 in)
Servicing door: Height	1.28 m (4 ft 2½ in)
Width	0.61 m (2 ft 0 in)
Emergency door: Height	1.28 m (4 ft 2½ in)
Width	0.64 m (2 ft 1¼ in)
Emergency exits (each): Height	0.90 m (2 ft 11½ in)
Width	0.48 m (1 ft 7 in)
Main baggage hold doors (each)	
Height	1.20 m (3 ft 11¼ in)

WEIGHTS AND LOADINGS	
Basic operating weight empty	55,300 kg (121,915 lb)
Max payload	18,000 kg (39,680 lb)
Max fuel	39,750 kg (87,633 lb)
Max T-O weight	100,000 kg (220,460 lb)
Max landing weight	80,000 kg (176,366 lb)
Max zero-fuel weight	74,000 kg (163,140 lb)
Max wing loading	496.4 kg/m² (101.6 lb/sq ft)
Max power loading	320.5 kg/kN (3.14 lb/lb st)
PERFORMANCE	
Max cruising speed	513 kts (950 km/h, 590 mph)
Max cruising height	11,900 m (39,000 ft)
Balanced field length for T-O and landing	2,500 m (8,200 ft)
Range, with max payload	2,105 n miles (3,900 km, 2,425 miles)
with 12,000 kg (26,455 lb) payload	2,805 n miles (5,200 km, 3,230 miles)
with max fuel and 5,450 kg (12,015 lb) payload	3,563 n miles (6,600 km, 4,100 miles)

UPDATED

TUPOLEV Tu-156

TYPE: Cryogenic-fuelled three-turbofan transport

PROGRAMME: Details of 1988-89 flight trials of Tu-155, a Tu-154 modified with a Kuznetzov NK-88 turbofan operating on liquid hydrogen and liquefied natural gas fuels, last appeared in 1990-91 *Jane's*. Tupolev announced mid-1994 Russian government funding for conversion of three Tu-154s to Tu-156 standard, delivery of 12 NK-89 turbofans and six cryogenic fuel systems, an installation to supply liquefied natural gas (LNG) will be established at Samara. Delivery of first Tu-156 scheduled for 1998.

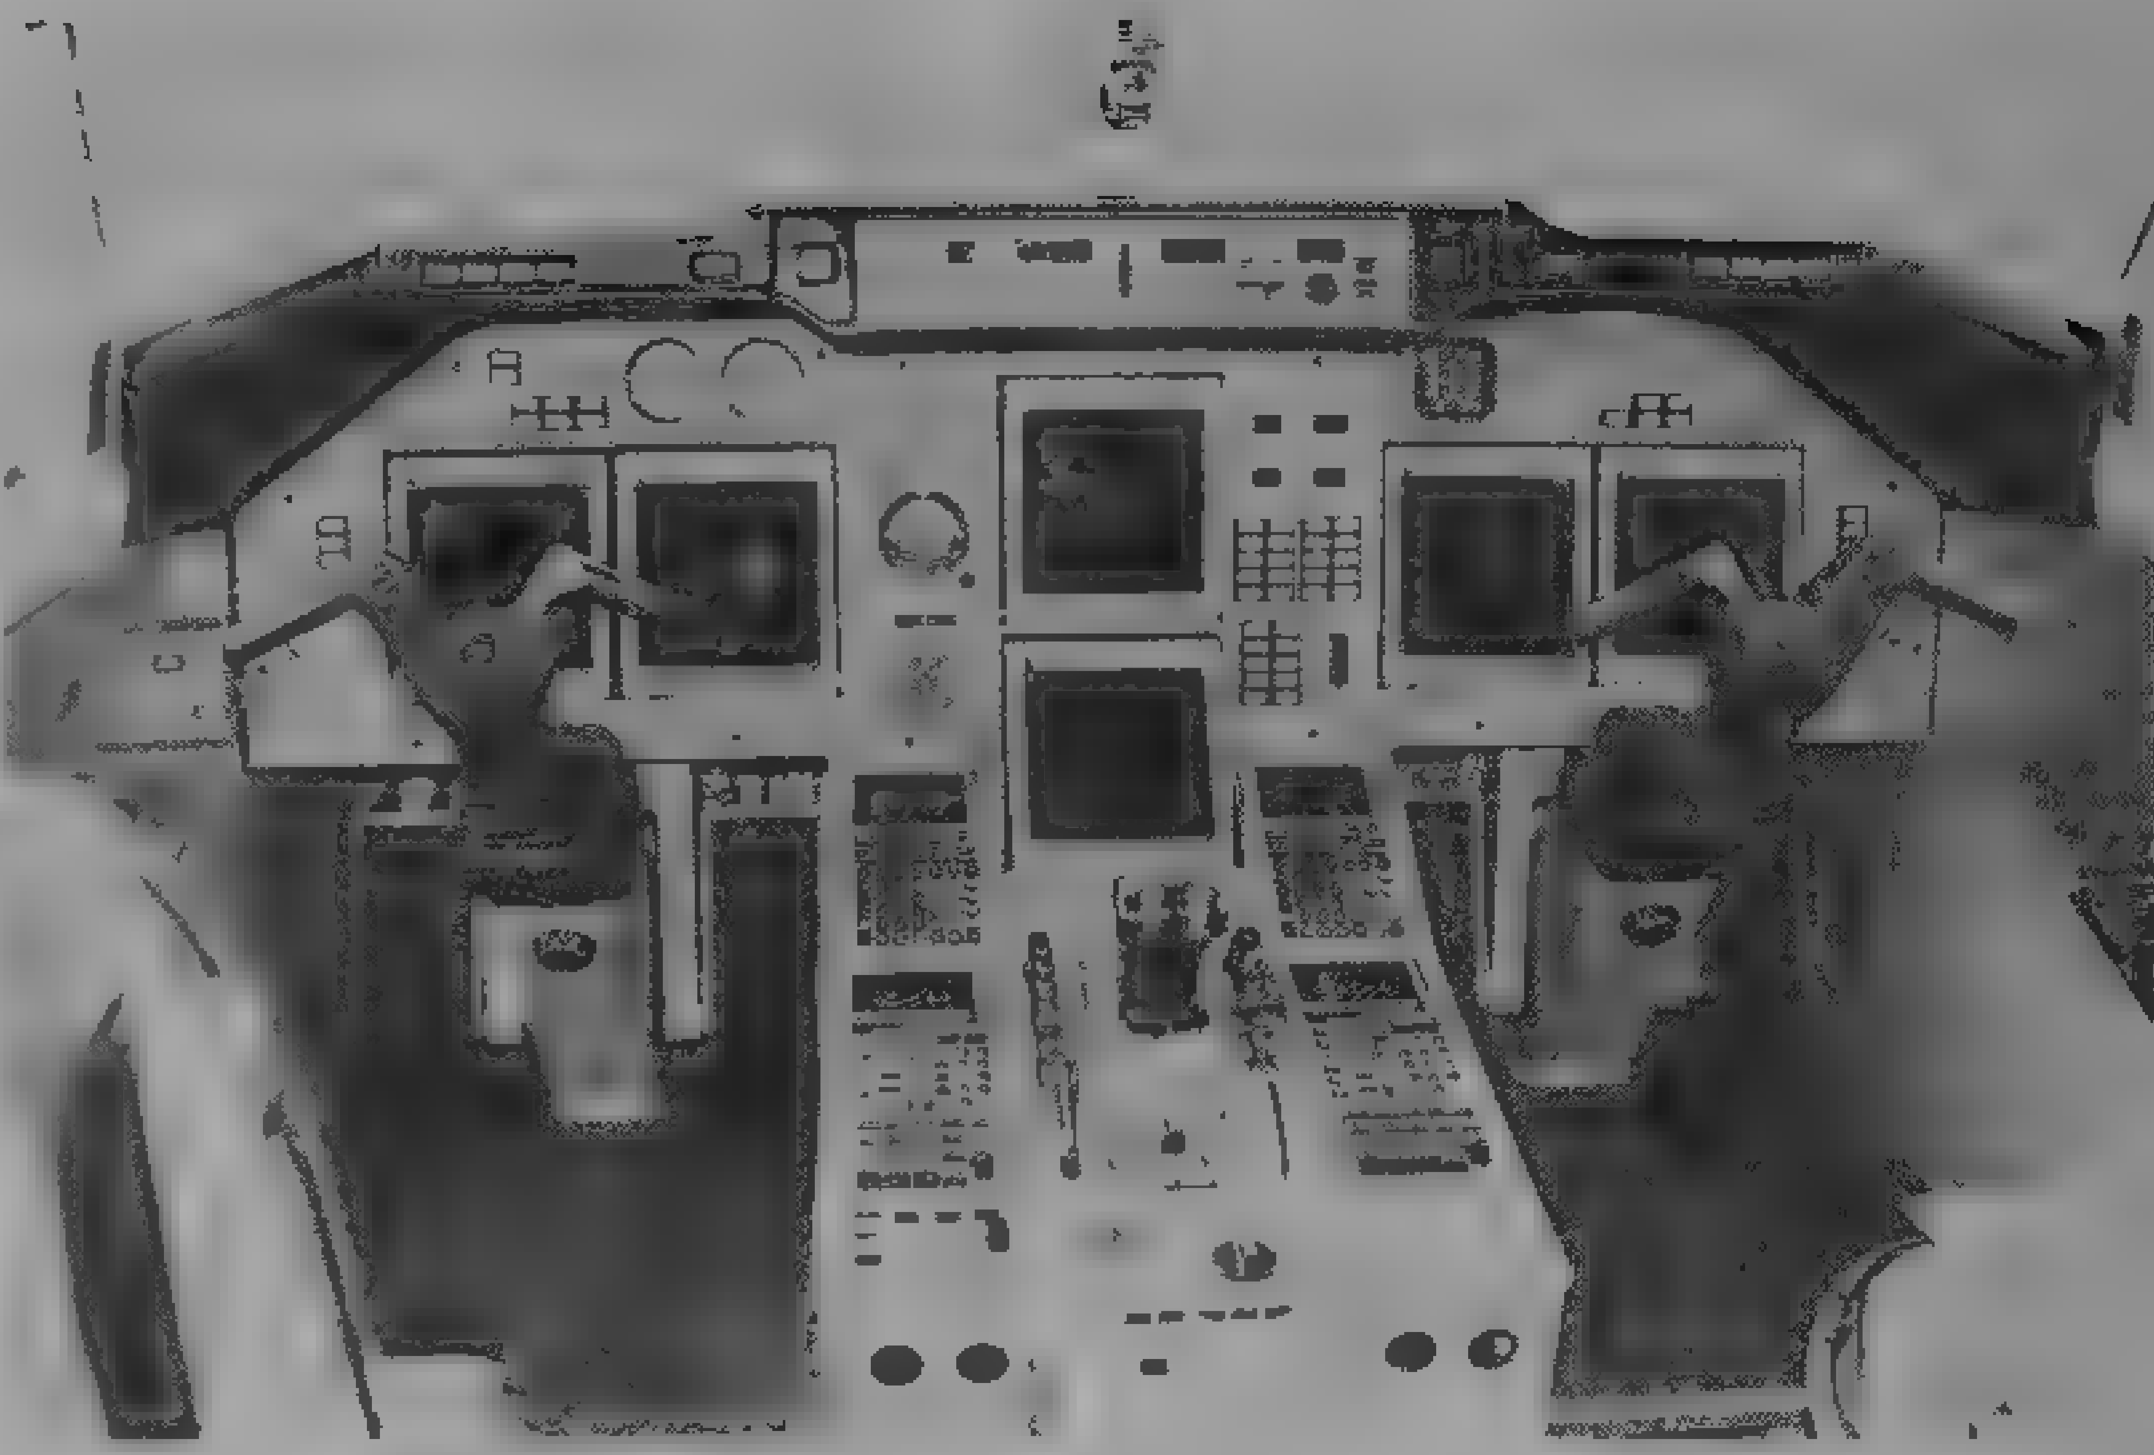
CURRENT VERSIONS: **Tu-156S:** Initial kerosene/LNG powered conversion of Tu-154B carrying 13,000 kg (28,660 lb) of LNG plus 10,000 kg (22,046 lb) of kerosene, payload 14,500 kg (31,967 lb) or 130 passengers range 1,457 n miles (2,700 km, 1,677 miles

Tu-156M. Developed version converted from Tu-154M, carrying 135 passengers, fuel load and performance as Tu-156S.

Tu-156M2 Proposal only, converted from Tu-154M2 20,000 kg (44,092 lb) of LNG only carried in two tanks above centre-fuselage allowing passenger load increase to 160, NK-94 engines, range 2,159 n miles (4,000 km, 2,485 miles)

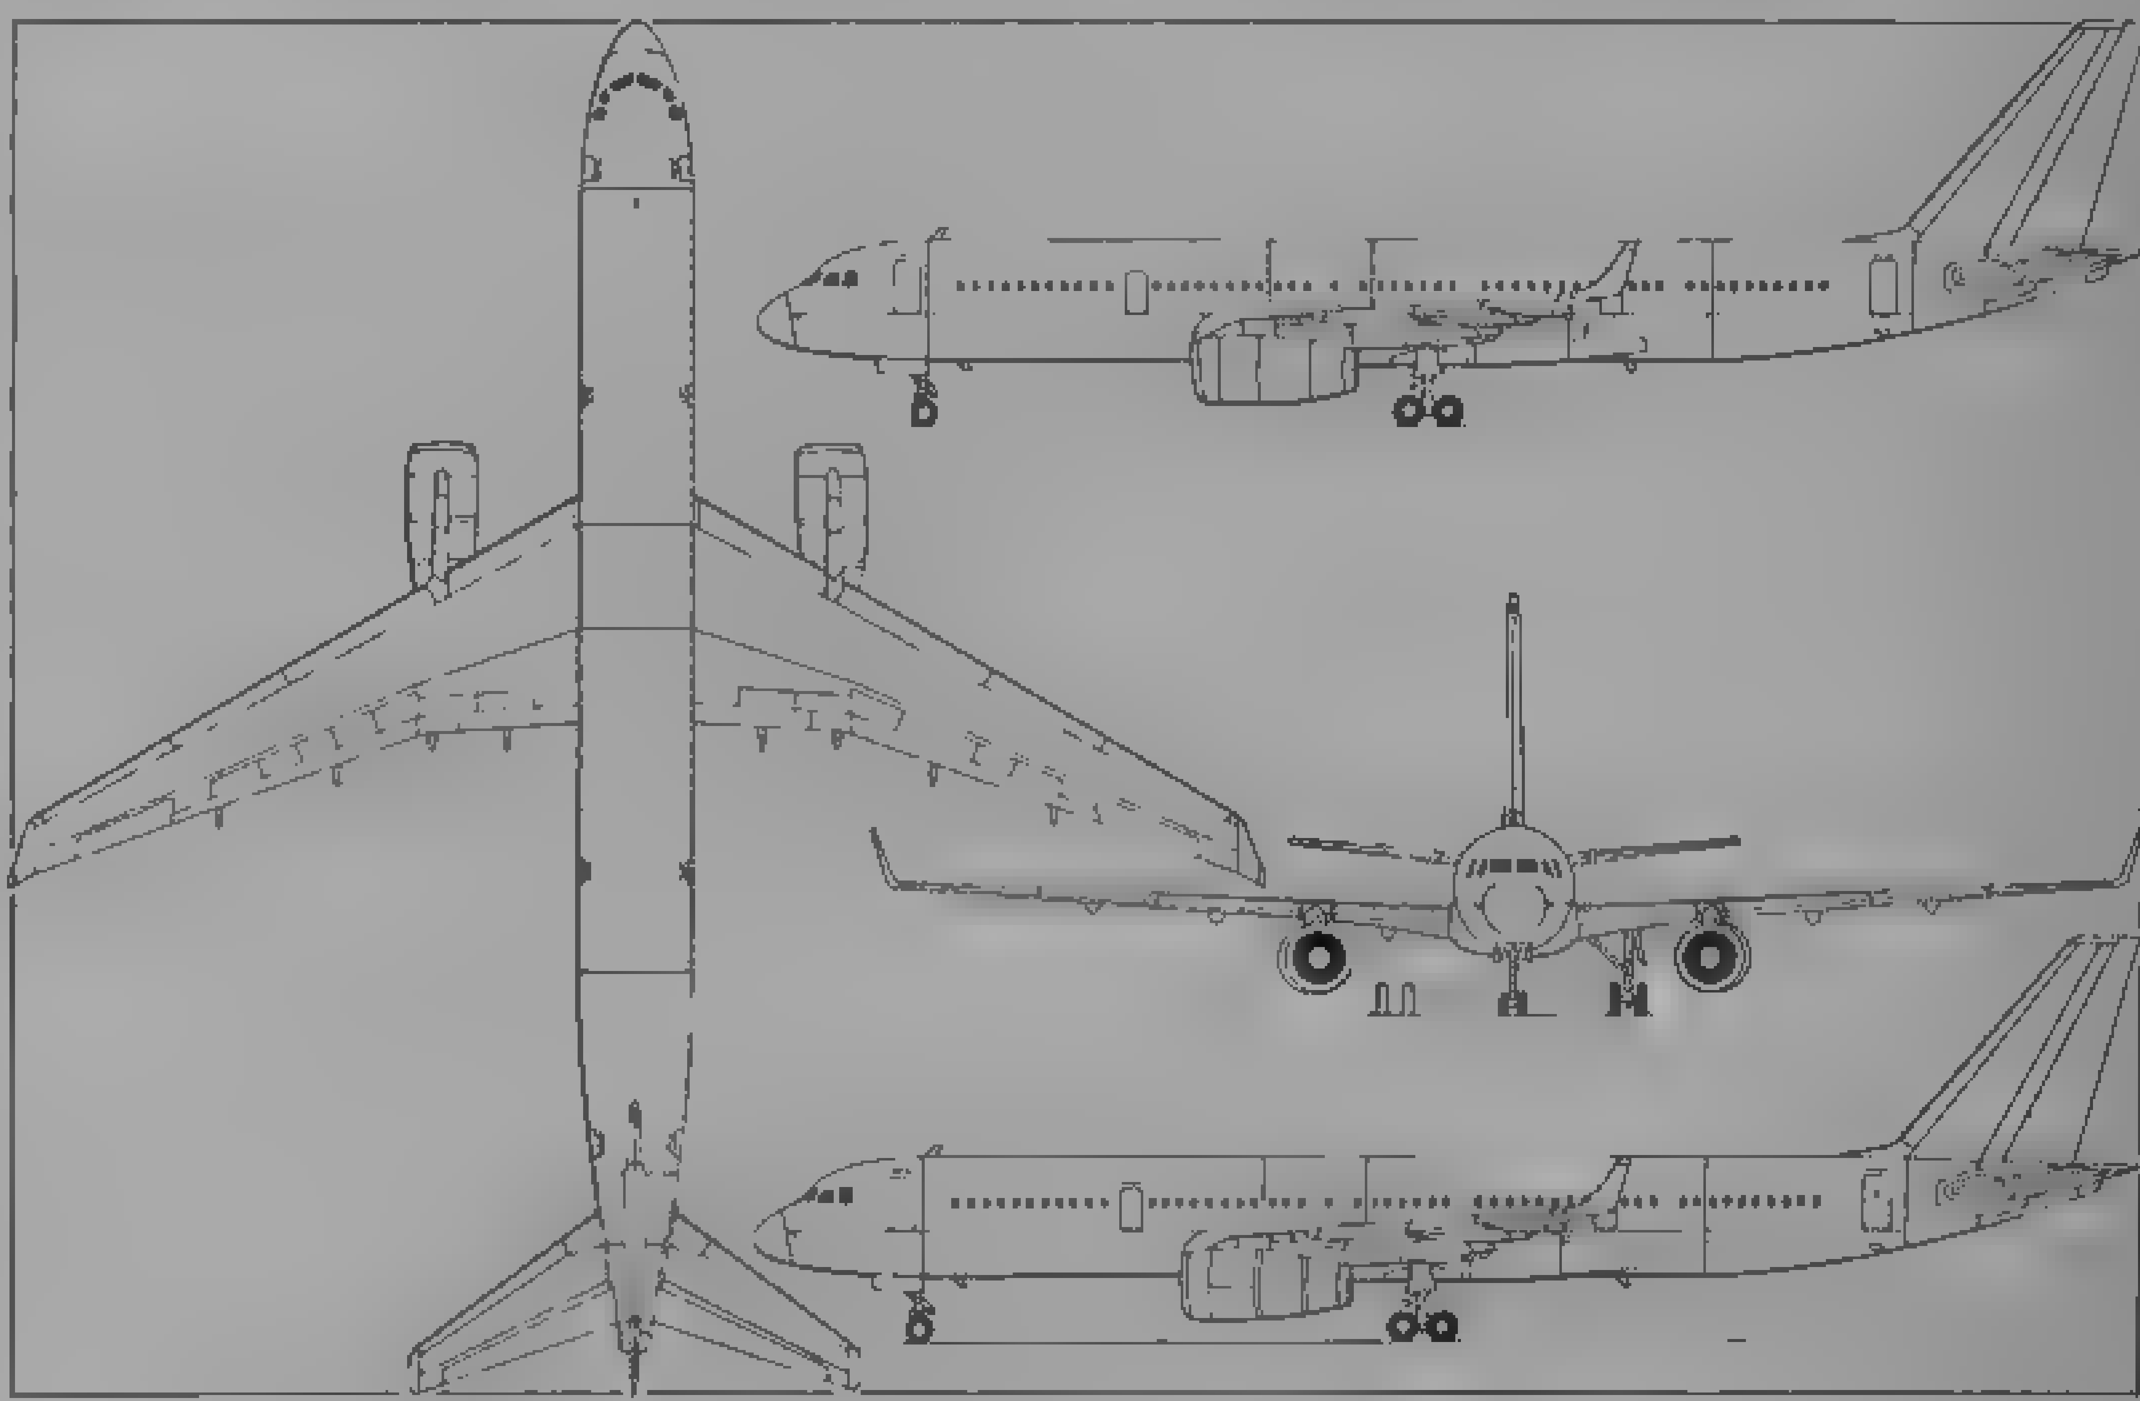
POWER PLANT: Experimental power plant will be Samara/Trud NK-89, tanks for cryogenic fuel will be mounted in rear of cabin and in forward baggage hold of Tu-156S/M. Aircraft will operate on mixed LNG/kerosene, as Tu-155. Tu-156M2 to have NK-94 engines, wholly LNG powered

NEW ENTRY



Cockpit of Tupolev Tu-204-220 twin-turbofan airliner *(Peter J. Cooper)*

1993



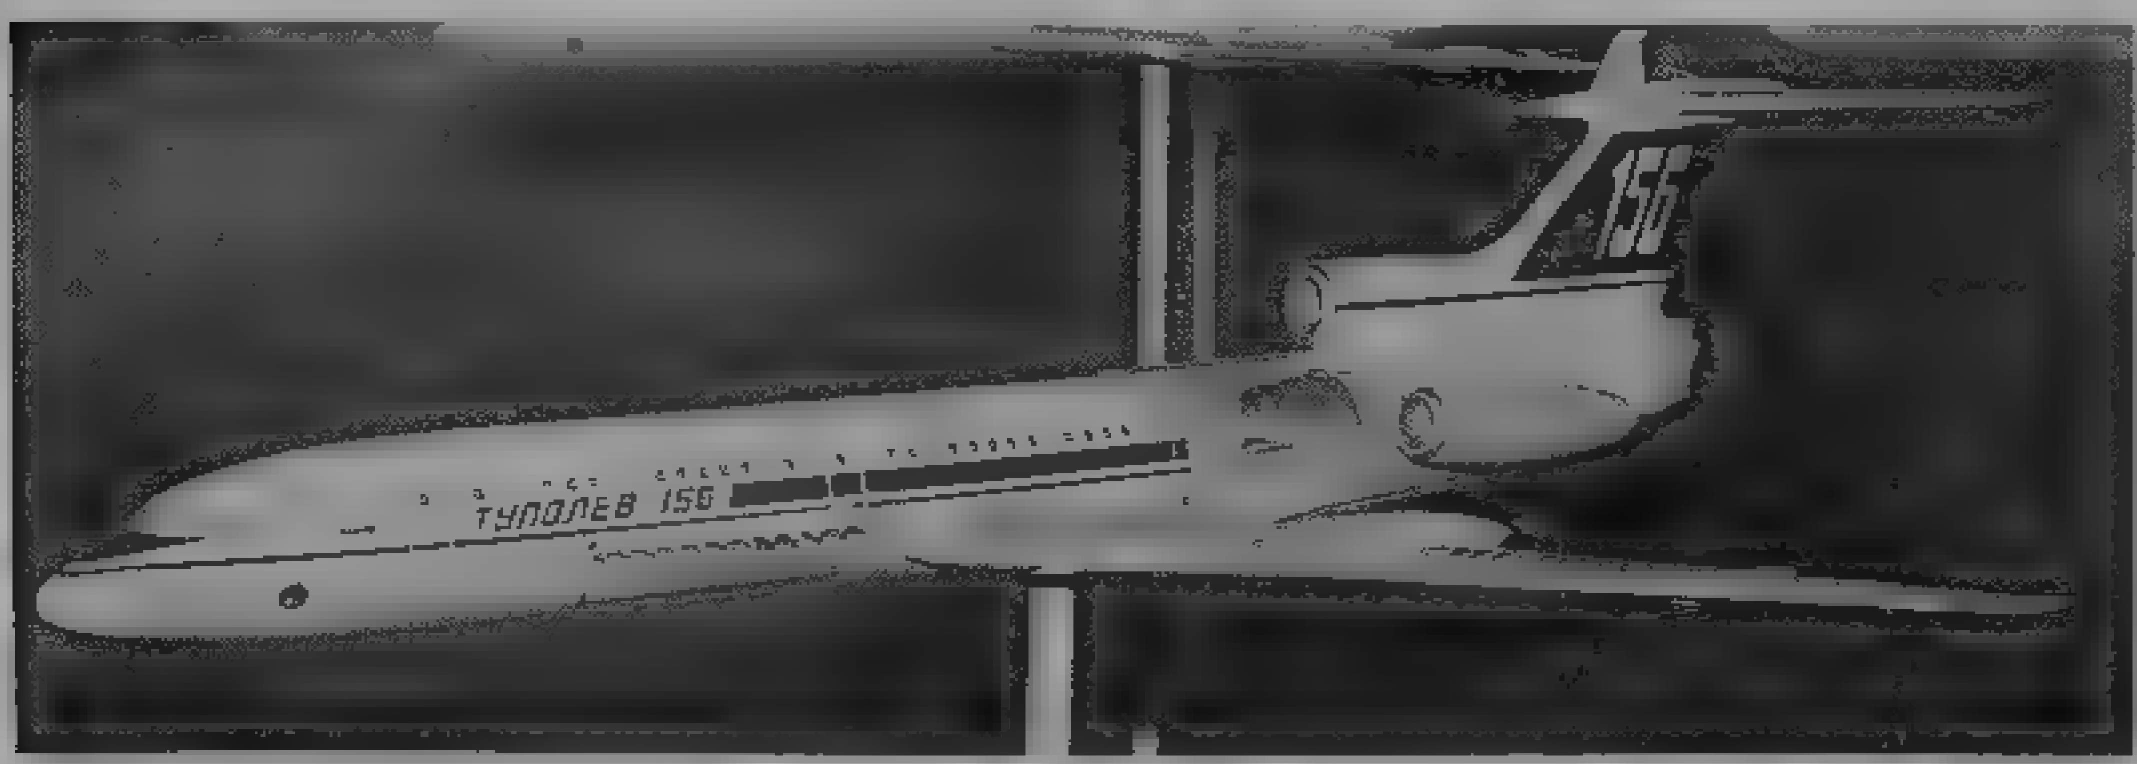
Tupolev Tu-204-200 medium-range transport (two Aviadvigatel PS-90A turbofans), with additional side view (top) of Tu-204-220 *(Jane's/Mike Keep)*

1994

TUPOLEV Tu-204/224/234

TYPE: Twin-turbofan medium-range airliner

PROGRAMME: Development to replace Tu-154 announced 1983, preliminary details available Spring 1985, programme finalised 1986; first prototype (SSSR-64001), with PS-90AT engines, flown 2 January 1989 by Tupolev chief test pilot A Talalakine, three more prototypes followed, plus two for structural and fatigue testing. second version, with RB211-535E4-B engines, flew 14 August 1992 and was demonstrated at Farnborough Air Show in following month, production of basic Tu-204 series by Aviastar at Ulyanovsk began 1990. Tu 204-200 by KAPO at Kazan and Aviastar in 1994, 16 completed by beginning of 1995. Russian certification of basic Tu-204 received 12 January 1995



Model of Tupolev Tu-156M-2 cryogenic aircraft *(Paul Jackson)*

1995

CURRENT VERSIONS: **Tu-204**: Basic medium-haul airliner for up to 214 passengers or maximum payload of 21,000 kg (46,295 lb), 158.3 kN (35,580 lb st) Aviadvigatel PS-90A turbofans. Marketed 1989

Tu-204-100: Extended-range version, additional fuel, dimensions, payload and power plant unchanged, maximum T-O weight 103,000 kg (227,070 lb). Marketed 1993

Tu-204-100C: As Tu-204-100. Payload increased at expense of reduced maximum range. Marketed 1994

Tu-204-120: As Tu-204-100, but with Rolls-Royce RB211-535 E4 turbofans, Russian avionics; prototype flew 14 August 1992. Marketed 1994

Tu-204-122: As Tu-204-120, but with Rockwell Collins avionics

Tu-204C: Cargo version of Tu 204-100, described separately

Tu-204-200: Further increase in payload and T-O weight, additional fuel in wing centre-section and adjacent baggage hold, dimensions and power plant as Tu-204-100: marketed 1994, deliveries to begin 1995

Tu-204-200C: As Tu-204-200. Payload increased at expense of reduced maximum range. Marketed 1994.

Tu-204-220. As Tu-204-200, but 191.7 kN (43,100 lb st) Rolls-Royce RB211-535E4 or RB211-535F5 turbofans, **funded and marketed by British Russian Aviation Corporation (BRAVIA), Moor House, London Wall, London EC2Y 5ET, UK (Tel: +44 71 382 8279. Fax +44 71 382 8271)** Available 1996. Tupolev-funded variant with 185.5 kN (41,700 lb st) Pratt & Whitney PW2240 turbofans, programme at low priority

Tu-204-222: As Tu-204-220, but with Rockwell Collins avionics

Tupolev Tu 204-220 with Rolls-Royce RB211 535E4 turbofans (*Paul Jackson*)

1995

Tu-204-230 With 176.5 kN (39,683 lb st) Samara NK-93 propfans. At initial project stage.

Tu-224 and **Tu-234** (formerly Tu-204-300): Announced 1994; trunk route versions with shorter fuselage. short-range and mid-range models for 166 passengers, long-range model for 99 to 160 passengers. Tu-224 has RB211-535 engines, Tu-234 has 158.3 kN (35,580 lb st) PS-90P engines.

CUSTOMERS: GTK Rossiya state transport company (two), Moscow Airways (one), Oriol Avia (three), Vnukovo Airlines (three). Russian government placed initial order in Autumn 1994 for 12 Tu-204s and three Tu-204-200s for state-owned leasing company, orders and options totalled 272 January 1995

DESIGN FEATURES: Conventional low/mid-wing configuration, with all surfaces sweptback, and winglets; wing dihedral from roots; sweepback 28°, supercritical section; thickness/chord ratio 14 per cent at root, 9 to 10 per cent at tip; negative twist, semi-monocoque oval section pressurised fuselage, torsion box of fin forms integral fuel tank, used for automatic trimming of CG in flight, design life 45,000 flights or 60,000 flight hours

FLYING CONTROLS: Triplex digital fly-by-wire, with triplex analog back-up; conventional 'Y' control yokes selected after evaluation of alternative sidestick on Tu-154 testbed, inset aileron outboard of two-section double-slotted flap on each wing trailing-edge, two-section upper surface airbrake forward of each centre-section flap; five-section spoiler forward of each outer flap, four-section leading-edge slat over full span of each wing, conventional rudder and elevators, no tabs

STRUCTURE: Approximately 18 per cent of airframe by weight of composites, three-piece two-spar wing, with metal structure, part composite skin, carbonfibre skin on spoilers, airbrakes and flaps; glassfibre wingroot fairings, all-metal fuselage, utilising aluminium-lithium and titanium, nose radome and some access panels of composites; extensive use of composites in tail unit, particularly for leading edges of fixed surfaces and for rudder and elevators

LANDING GEAR: Hydraulically retractable tricycle type, electrohydraulically steerable twin-wheel nose unit (±10° via rudder pedals; ±70° by electric steering control) retracts forward; four-wheel bogie main units retract inward into wing/fuselage fairings. Carbon disc brakes, electrically controlled. Tyre size 1,070 × 390 mm on mainwheels, 840 × 290 mm on nosewheels

POWER PLANT: Two turbofans (see notes on versions), underwing in composite cowlings. Tu-204-200 series carries fuel in six integral tanks in wings, in centre-section and adjacent baggage hold, and in tailfin, total capacity 40,730 litres (10,760 US gallons; 8,960 Imp gallons); torsion box of fin forms integral fuel tank for automatic trimming of CG in flight, as well as for optional standard use.

ACCOMMODATION: Can be operated by pilot and co-pilot, but Aeroflot specified requirement for a flight engineer, provision for fourth seat for instructor or observer. Three basic single-aisle passenger arrangements in Tu-204, 204-100 and 204-200 series: (1) 190 seats, with 12 seats four-abreast in first class cabin at front at pitch of 99 cm (39 in), 35 business class seats six-abreast at pitch of 96 cm (38 in) in centre cabin, and 143 tourist class seats six-abreast at pitch of 81 cm (32 in) at rear, (2) 196 seats, with 12 seats four-abreast at pitch of 99 cm (39 in) in first class cabin at front and 184 six-abreast tourist class seats at pitch of 81 cm (32 in) at rear, (3) 214 seats, all six abreast at tourist class pitch of 81 cm (32 in). Tu-224/234 series has 166 seats at 81 cm (32 in) pitch in short/mid-range models, 99 seats at 93 cm (36.5 in) or 160 seats at 81 cm (32 in) pitch in long-range model. All configurations have buffet/galley and toilet immediately aft of flight deck, and two more toilets, large buffet/galley and service compartment at rear of passenger accommodation, overhead stowage for hand baggage. Other layouts optional, with increased galley and toilet provisions. Passenger doors at front and rear of cabin on port side, service doors opposite. Type I emergency exit doors fore and aft of wing each side; inflatable slide for emergency use at each of eight doors. Tu-204-200 has two underfloor baggage/freight holds for total of eight 4D-3-46 international class containers, three in forward hold, five in rear hold. Fully automatic container loading system, manual back-up

SYSTEMS: Triplex fly-by-wire digital control system, with triplex analog back-up. Three independent hydraulic systems, pressure 207 bars (3,000 lb/sq in). Ailerons, elevators, rudder, spoilers and airbrakes operated by all three systems, flaps, leading-edge slats, brakes and nosewheel steering operated by two systems; landing gear retraction and extension by all three systems. Electrical power supplied by two 200/115 V 400 Hz AC generators and a 27 V DC system. Type TA-12-60 APU in tailcone

AVIONICS: Avionics of Russian design, or integrated by Sextant Avionique or Honeywell, with standard nav/com equipment by Collins or Bendix/King optional

Comms: VHF and HF radio, intercom

Radar: Weather radar

Flight: Triplex automatic flight control, VOR, DME, automatic approach and landing system, for operation to ICAO Cat IIIa minima. INS and satellite nav

Instrumentation: EFIS equipment comprises two colour CRTs for flight and nav information for each pilot, plus two central CRTs for engine and systems data

DIMENSIONS, EXTERNAL (A: 204, B: 204-200, C: 204-220, D: 234 short-range, E: 234 mid-range, F: 234 long-range)

Wing span: A, B, C	42.00 m (137 ft 9½ in)
D, E, F	40.88 m (134 ft 1½ in)
Wing aspect ratio: A, B, C	9.67
Length overall: A, B, C	46.00 m (150 ft 11 in)
D, E, F	40.20 m (131 ft 10¾ in)
Fuselage cross-section: all	3.80 m × 4.10 m (12 ft 5½ in × 13 ft 5½ in)
Height overall: all	13.90 m (45 ft 7¼ in)
Tailplane span: A, B, C	15.00 m (49 ft 2½ in)
Wheel track: A, B, C	7.82 m (25 ft 8 in)
Wheelbase: A, B, C	17.00 m (55 ft 9¼ in)
Passenger doors (each): Height: all	1.85 m (6 ft 0¾ in)
Width: all	0.84 m (2 ft 9 in)
Service doors (each): Height: all	1.60 m (5 ft 3 in)
Width: all	0.65 m (2 ft 1½ in)
Emergency exit doors (each): Height: all	1.44 m (4 ft 8¾ in)
Width: all	0.61 m (2 ft 0 in)
Baggage holds: Height to sill: all	2.71 m (8 ft 10¾ in)

DIMENSIONS, INTERNAL

Cabin, excl flight deck: Length: A, B, C	30.18 m (99 ft 0 in)
Max width: all	3.57 m (11 ft 8¼ in)
Max height: all	2.28 m (7 ft 6 in)
Fwd cargo hold: Height: all	1.162 m (3 ft 9¾ in)
Volume: A, B, C	11.00 m³ (388 cu ft)
Rear cargo hold: Height: A, B, C	1.162 m (3 ft 9[illegible])
Volume: A, B, C	15.4 m³ (544 cu ft)
Bulk volume: A, B, C	5.4 m³ (190 cu ft)

AREAS

Wings, gross: A, B, C	182.4 m² (1,963.4 sq ft)
D, E, F	184.17 m² (1,982.5 sq ft)

WEIGHTS AND LOADINGS

Operational weight empty: A	58,300 kg (128,530 lb)
B, C	59,000 kg (130,070 lb)
Max payload: A	21,000 kg (46,296 lb)
B, C: weight limited	25,200 kg (55,555 lb)
C: space limited (196 seats)	19,565 kg (43,132 lb)
D, E	18,000 kg (39,682 lb)
F	16,000 kg (35,273 lb)
Max baggage/freight: fwd hold: C	3,625 kg (7,990 lb)
rear hold: C	5,075 kg (11,190 lb)
Max fuel: A	24,000 kg (52,910 lb)
B, C	32,7[illegible] kg (72,[illegible] lb)
Max ramp weight: C	111,750 kg (246,360 lb)
Max T-O weight: A	94,600 kg (208,550 lb)
B, C	110,750 kg (244,155 lb)
D	84,800 kg (186,950 lb)
E, F	103,000 kg (227,070 lb)
Max landing weight: C	89,500 kg (197,310 lb)
Max zero-fuel weight: C	84,200 kg (185,625 lb)
Max wing loading: A	518.6 kg/m² (106.2 lb/sq ft)
B, C	607.2 kg/m² (124.4 lb/sq ft)
D	460.4 kg/m² (94.3 lb/sq ft)
E, F	559.3 kg/m² (114.5 lb/sq ft)
Max power loading: A	298.8 kg/kN (2.93 lb/lb st)
B	349.8 kg/kN (3.43 lb/lb st)
C	288.9 kg/kN (2.83 lb/lb st)
D	267.8 kg/kN (2.63 lb/lb st)
E, F	325.3 kg/kN (3.19 lb/lb st)

Tupolev Tu-204 190- to 214-seat airliner (*Paul Jackson*)

1995

Tupolev Tu-204 third prototype in Aeroflot markings (*Paul Jackson*)

1995

PERFORMANCE:
- Nominal cruising speed at 11,100-12,100 m (36,400-39,700 ft): A, B — 448 kts (830 km/h, 515 mph)
  - D, E, F — 448-458 kts (830-850 km/h, 515-528 mph)
- Approach speed: D — 119 kts (220 km/h, 137 mph)
  - E, F — 122 kts (225 km/h; 140 mph)
- T-O run: D — 1,450 m (4,760 ft)
  - E, F — 2,050 m (6,725 ft)
- Required landing runway: D, F — 1,800 m (5,905 ft)
  - E — 1,900 m (6,235 ft)
- Range: with max payload
  - A — 1,565 n miles (2,900 km; 1,800 miles)
  - B — 3,415 n miles (6,330 km, 3,930 miles)
  - D — 1,295 n miles (2,400 km; 1,490 miles)
  - E — 3,585 n miles (6,650 km, 4,130 miles)
  - F — 3,885 n miles (7,200 km, 4,475 miles)
  - with design payload
    - D — 1,835 n miles (3,400 km; 2,110 miles)
    - E — 4,075 n miles (7,550 km, 4,690 miles)
    - F — 4,990 n miles (9,250 km, 5,750 miles)

TUPOLEV/ORIOL-AVIA Tu-204 FREIGHTER

TYPE: Twin-turbofan medium-range freighter

PROGRAMME: General technical specification for converting Tu-204 passenger aircraft to freighter configuration issued by Tupolev and Oriol-Avia Airlines May 1993. Offered initially for Tu-204-100 series ordered by Aeroflot, with PS-90A engines, maximum T-O weight of 94,600 kg (208,550 lb), maximum landing weight of 88,200 kg (194,445 lb), maximum zero-fuel weight of 79,300 kg (174,825 lb), and maximum fuel weight of 24,000 kg (52,910 lb). Applicable to all other Tu-204 versions by means of work listed in Tupolev/ARISC (Aviation Register Interstate Committee) approved supplementary specification. Prototype RA-64010 delivered to Aeroflot Russian International Airlines 7 April 1995.

CUSTOMERS: ARIA (4 for 1995 delivery); Oriol-Avia Airlines (2); all Tu-204-100 conversions.

DESIGN FEATURES: Main deck cargo door installed on port side forward of wing, redundant passenger doors deactivated, cargo door operating controls, hydraulic, electrical and warning/indication systems installed; cargo door operable in wind speeds up to 54 km/h (33 mph). Courier compartment immediately aft of flight deck, with 9g cargo restraint bulkhead barrier to rear, three forward-facing seats, tip-up seat at front, storage and buffet facilities. Main deck floor reinforced for maximum loading capability of 280 kg/m² (57.3 lb/sq ft), maximum weight of loaded 2.24 × 2.74 m (88 × 108 in) pallet 1,500 kg (3,306 lb). (In later-model Tu-204s allowable loading will be 410 kg/m²; 84 lb/sq ft, with maximum weight of 3,100 kg, 6,834 lb for 2.24 × 2.74 m; 88 × 108 in or 2.24 × 3.18 m; 88 × 125 in pallet). New sandwich flooring with non-slip surface, sealed against water ingress. Cargo handling/restraint system installed, typically ball mat and sill protector at door and rollers with side guidance (powered if required). All passenger-related provisions removed. Top-hinged cargo door opening length 3.405 m (11 ft 2 in), height 2.19 m (7 ft 2 in).

ACCOMMODATION: All existing windows retained, also front toilet.

SYSTEMS: Cabin overhead air conditioning distribution system deleted. Temperature on flight deck and in cabin controllable 16 to 26°C (61 to 79°F); pressurisation unchanged. Flight deck/courier interphone. Fire extinguishers and cabin smoke detection system provided. Cabin lighting compatible with freighter configuration.

WEIGHTS AND LOADINGS:

Weight empty	55,040 kg (121,340 lb)
Operating weight empty	55,840 kg (123,105 lb)
Max payload	23,460 kg (51,720 lb)
Fuel with max payload	15,300 kg (33,730 lb)
Max T-O weight	94,600 kg (208,550 lb)
Max zero-fuel weight	79,300 kg (174,825 lb)

UPDATED

TUPOLEV Tu-204C FREIGHTER

TYPE: Twin-turbofan medium-range freighter

PROGRAMME: Tupolev has developed a full freighter configuration for embodiment on the production line in new build aircraft, applicable to all versions, including those with Rolls-Royce power. Marketed 1993.

DESIGN FEATURES: Basically as Tupolev/Oriol-Avia conversion, described separately, but main cabin windows deleted; heat/noise insulation panels of lightweight construction. All engineering details adaptable to customer's requirements.

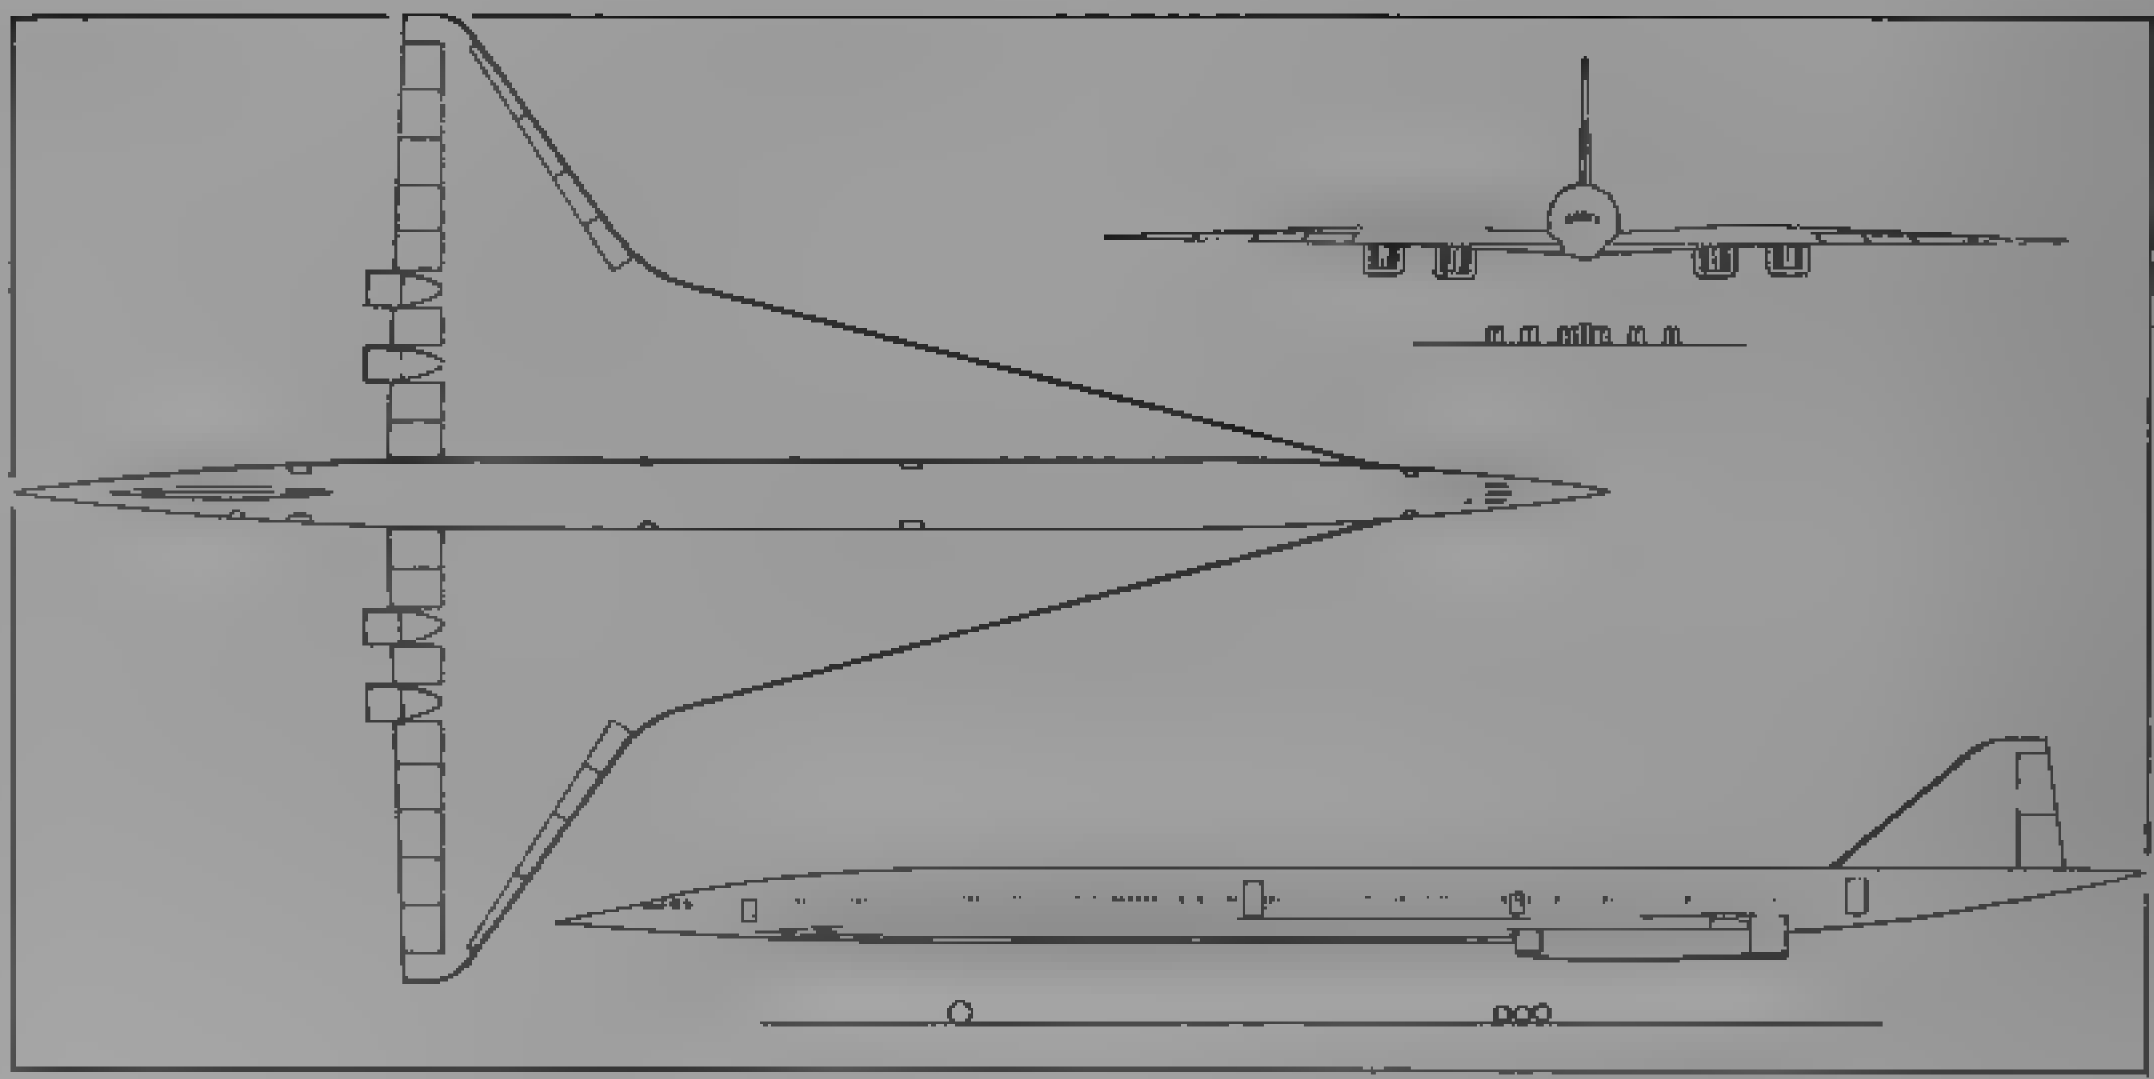
VERIFIED

TUPOLEV Tu-216

TYPE: Cryogenic-fuelled twin-turbofan airliner

PROGRAMME: Projected version of Tu-204 with two Samara NK-94 turbofans and 21,000 kg (46,297 lb) of liquid natural gas fuel in two tanks above front and centre fuselage. 210 passengers, range 2,321 n miles (4,300 km; 2,671 miles).

NEW ENTRY



Provisional three-view of projected Tu-244 supersonic transport *(Jane's/Mike Keep)* *1994*

TUPOLEV Tu-224/234

Described under Tu-204 heading.

NEW ENTRY

TUPOLEV Tu-244

TYPE: Second generation supersonic airliner

PROGRAMME: Ongoing programme based on more than 30 years of Tupolev SST research, development and testing; several Tu-144 first-generation SSTs in use as flying laboratories for ecology, noise and aerodynamic research, one on behalf of USA, sponsored by Rockwell, Boeing and NASA, from 1995. Details of competing designs in International section under Supersonic Airliner Studies.

DESIGN FEATURES: Current projected configuration shown in accompanying illustration. Programme directed at estimating SST market capacity; evaluating compatibility with environment in terms of sonic boom, engine noise and emission, and so on; ensuring high fuel/take-off weight ratio (51 to 52 per cent, compared with 49.5 to 50 per cent in Tu-144); providing high lift/drag ratio at all phases of flight (K9.5 at Mach 2 and K15 at Mach 0.9, compared with K8.1 at Mach 2 for Tu-144). Wing sweepback 75° inboard, 35° outboard.

POWER PLANT: Four turbofans, each 324 kN (72,750 lb st).

ACCOMMODATION: Nominal seating for 300 passengers.

AVIONICS: For operation to ICAO Cat IIIa standards.

DIMENSIONS, EXTERNAL:

Wing span	54.47 m (178 ft 8½ in)
Length overall	88.70 m (291 ft 0 in)
Height overall	15.80 m (51 ft 10 in)

AREAS:

Wings, gross	1,200 m² (12,917 sq ft)

WEIGHTS AND LOADINGS:

Max zero-fuel weight	172,000 kg (379,180 lb)
Max T-O weight	350,000 kg (771,605 lb)
Max wing loading	291.7 kg/m² (59.75 lb/sq ft)
Max power loading	270 kg/kN (2.65 lb/lb st)

PERFORMANCE (estimated):

Nominal cruising speed at 18,000-19,000 m (59,000-62,335 ft)	Mach 2.05
Max range	4,965 n miles (9,200 km; 5,715 miles)

OPERATIONAL NOISE LEVELS: Designed to meet FAR Pt 36 Chapter 3 noise requirements.

UPDATED

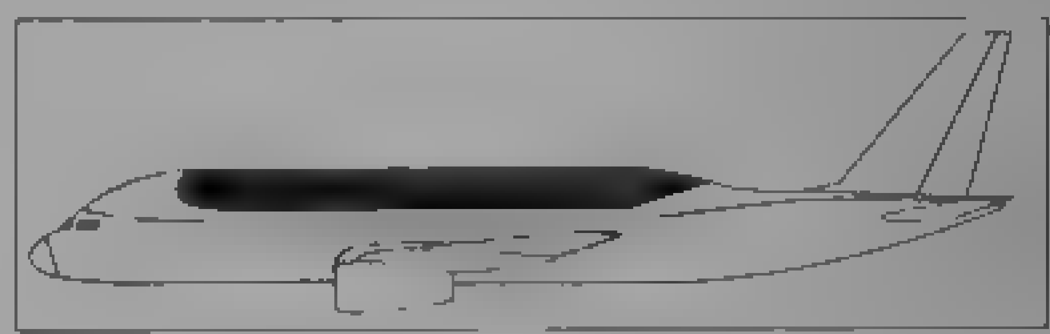
TUPOLEV Tu-304/306

TYPE: Projected 450-seat, twin-turbofan airliner.

CURRENT VERSIONS: **Tu-304:** Conventionally fuelled version, based on Tu-204.

Tu-306: Cryogenic-fuelled version, large tank above centre fuselage for 60,000 kg (132,277 lb) of liquid natural gas; TB7-46 engines, range 4,859 n miles (9,000 km, 5,592 miles).

NEW ENTRY



Profile of Tupolev Tu-306, indicating storage tank for liquid natural gas fuel *(Jane's/Paul Jackson)* *1995*

TUPOLEV Tu-324

TYPE: Twin-turbofan regional transport and business jet

PROGRAMME: Announced at 1995 Paris Air Show; manufacture by Kazan Aviation Production Organisation.

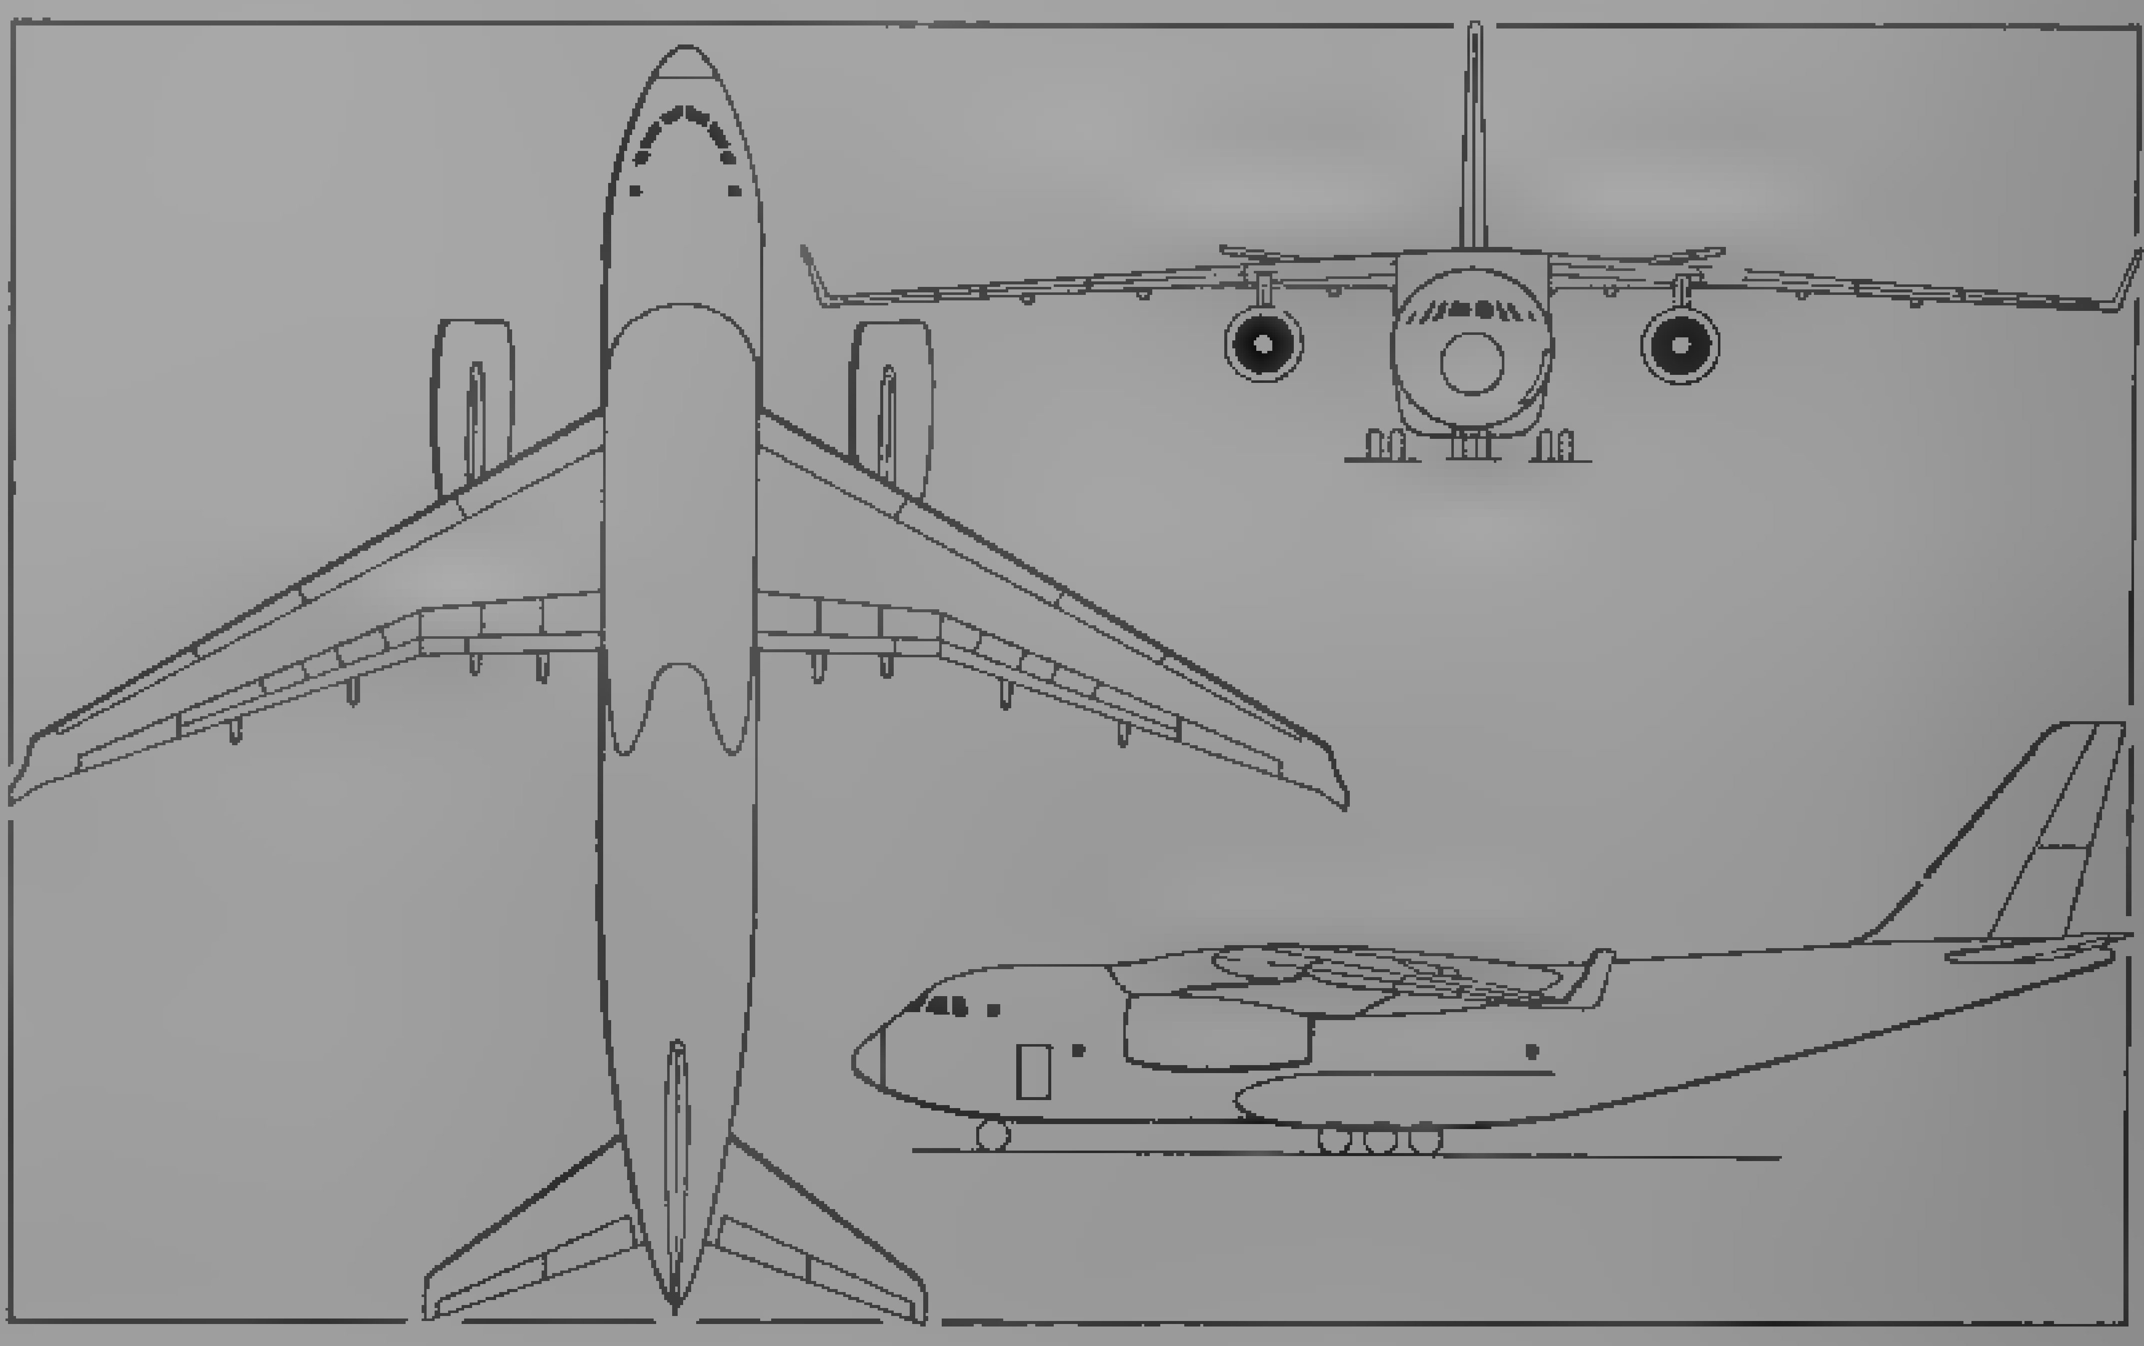
CURRENT VERSIONS: **Tu-324:** Basic transport for 30 to 50 passengers.

Tu-324A: Long-range VIP and business jet.

DESIGN FEATURES: Wings scaled down from Tu-204.

POWER PLANT: Two Soyuz R-126-300 turbofans in pods on sides of rear fuselage.

ACCOMMODATION: Two crew and 30 business class or 50 tourist passengers in Tu-324, up to four VIP or eight to 10 executive passengers in Tu-324A. Versions planned for ambulance and patrol duties.



Tupolev Tu-330 twin-turbofan freight transport *(Jane's/Mike Keep)* *1994*

DIMENSIONS, EXTERNAL (A: Tu-324, B: Tu-324A):

Wing span: A, B	24.70 m (81 ft 0½ in)
Length overall: A	26.20 m (85 ft 11½ in)
B	23.20 m (76 ft 1½ in)
Height overall: A, B	7.30 m (23 ft 11½ in)

WEIGHTS AND LOADINGS:

Max payload: A	5,000 kg (11,025 lb)
B	3,000 kg (6,615 lb)
Max T-O weight: A	24,630 kg (54,300 lb)
B	25,400 kg (56,000 lb)

PERFORMANCE (estimated):

Nominal cruising speed:
A, B — 431 kts (800 km/h; 497 mph)
Balanced runway length: A — 1,800 m (5,910 ft)
B — 1,950 m (6,400 ft)
Range: A, 50 passengers — 1,350 n miles (2,500 km; 1,553 miles)
A, 30 passengers — 2,455 n miles (4,550 km; 2,827 miles)
B, 3,000 kg (6,615 lb) payload — 3,183 n miles (5,900 km; 3,666 miles)
B, 1,000 kg (2,204 lb) payload — 4,262 n miles (7,900 km; 4,909 miles)

NEW ENTRY

TUPOLEV Tu-330

TYPE: Twin-turbofan freight transport.

PROGRAMME: Announced Spring 1993 as replacement for Antonov An-12, first 10 being built at Kazan, first flight scheduled 1997, for service from 1998.

DESIGN FEATURES: See accompanying three-view drawing. Wing design basically similar to Tu-204, engine pylons as Tu-204, rear-loading ramp.

FLYING CONTROLS: Each wing has four-section leading-edge flaps, three-section trailing-edge flaps, eight spoilers forward of flaps, and aileron. Elevators and rudder each in two sections.

LANDING GEAR: Retractable tricycle type; twin-wheel nose unit, each main unit three pairs of wheels in tandem.

POWER PLANT: Two Aviadvigatel PS-90A turbofans. Rolls-Royce, General Electric and Pratt & Whitney turbofans under consideration for export sales. Proposed cryogenic fuelled version with Samara NK-94 engines and 20,000 kg (44,092 lb) of liquid natural gas is designated **Tu-338**.

DIMENSIONS, EXTERNAL:

Wing span over winglets	43.50 m (142 ft 8½ in)
Length overall	42.00 m (137 ft 9½ in)
Height overall	14.00 m (45 ft 11¼ in)
Rear-loading ramp: Length, width	4.00 m (13 ft 1½ in)

DIMENSIONS, INTERNAL:

Cargo hold: Length	19.50 m (63 ft 11¾ in)
Width	4.00 m (13 ft 1½ in)
Height	3.55 m (11 ft 7¾ in)

AREAS:

Wings, gross	196.5 m² (2,115.2 sq ft)

WEIGHTS AND LOADINGS:

Design payload	35,000 kg (77,160 lb)
Max T-O weight	103,500 kg (228,175 lb)

PERFORMANCE (estimated):

Nominal cruising speed at 11,000 m (36,000 ft) — 431-458 kts (800-850 km/h; 497-528 mph)
Nominal range: with 20,000 kg (44,090 lb) payload — 3,020 n miles (5,600 km; 3,480 miles)
with 30,000 kg (66,135 lb) payload — 1,620 n miles (3,000 km; 1,865 miles)

UPDATED

TUPOLEV Tu-334

TYPE: Twin-turbofan medium-range airliner.

PROGRAMME: Under development as replacement for Tu-134s in Russian airline service; static test airframe at TsAGI; first prototype scheduled to fly mid-1995 with D-436T1 engines, second and third identical prototypes to fly late 1995, intended to enter service late 1996 or early 1997. Preparations for series production completed at Kiev and Taganrog.

CURRENT VERSIONS: **Tu-334-100**: Basic version, with D-436T1 engines, for 92 mixed class or 102 tourist class passengers. Prototypes are of this version.

Tu-334-200: Basically similar to Tu-334-100; D-436T2 or BR 715-55 engines, lengthened fuselage for 110 to 126 passengers, increased wing span and overall height, four-wheel bogies on main landing gear units.

DESIGN FEATURES: To meet urgent requirements of CIS airlines, Tu-334's wings have much in common with those of Tu-204 and its fuselage is shortened version of that of Tu-204, with identical flight deck; configuration is all-swept low/mid-wing, with rear-mounted engines and T tail; wings have supercritical section, 24° sweepback, with winglets; circular-section semi-monocoque fuselage; wings have dihedral from roots.

FLYING CONTROLS: Main and standby fly-by-wire, emergency hydraulic and mechanical back-up, except for ailerons. Two-section trailing-edge flap, two airbrakes forward of inner flap and two spoilers forward of outer flap on each wing; four-section leading-edge slat over full span each wing; conventional ailerons, elevators and two-section rudder; no tabs.

STRUCTURE: Composites and other lightweight materials make up 20 per cent of structure by weight.

LANDING GEAR: Retractable tricycle type; twin wheels on each unit of Tu-334-100; four-wheel bogies on main units of Tu-334-200; main units retract inward into wing/fuselage fairings; trailing-link mainwheel legs on Tu-334-100.

POWER PLANT: Two ZMKB Progress D-436T1 turbofans, each rated at 73.55 kN (16,535 lb st) on Tu-334-100. Two ZMKB Progress D-436T2 turbofans, each rated at 80.5 kN (18,100 lb st) on Tu-334-200. BMW Rolls-Royce BR 715-55 turbofans alternative both versions.

ACCOMMODATION (Tu-334-100): Crew of two or three on flight deck; provision for fourth seat for instructor or observer. Two basic single-aisle passenger arrangements: (1) 92 seats, with eight seats four-abreast in first class cabin at front, at pitch of 99 cm (39 in) and with 73 cm (28.75 in) aisle, and 84 tourist class seats six-abreast at 79 cm (31 in) pitch and with 47 cm (18.5 in) aisle; (2) 102 seats, all tourist, at 79 cm (31 in) pitch. Both configurations have buffet/galley and toilet immediately behind flight deck, a further buffet/galley, toilet and service compartment at rear; overhead stowage for hand baggage. Passenger doors at front and rear of cabin on port side; service doors opposite. Underfloor baggage/freight holds, doors on starboard side.

ACCOMMODATION (Tu-334-200): Flight deck unchanged. Two basic single-aisle passenger arrangements: (1) 110 seats with eight seats four-abreast in first class cabin at front, at pitch of 99 cm (39 in), and 102 tourist class seats six-abreast at 81 cm (32 in) pitch; (2) 126 seats, all tourist, at

Reassembly at Zhukovsky of prototype Tu-334, for first flight

81 cm (32 in) pitch. Facilities as Tu-334-100, plus emergency exit over wing each side.

AVIONICS: *Instrumentation*: EFIS standard, with six CRTs. Equipment for landings in ICAO Cat. IIIa conditions.

DIMENSIONS, EXTERNAL:

Wing span: 100	29.77 m (97 ft 8 in)
200	32.61 m (107 ft 0 in)
Wing aspect ratio: 100	10.17
200	10.62
Length overall: 100	31.26 m (102 ft 6¾ in)
200	35.16 m (115 ft 4½ in)
Fuselage cross-section:	
100, 200	3.80 m × 4.10 m (12 ft 5½ in × 13 ft 5½ in)
Height overall: 100	8.63 m (28 ft 3¾ in)
200	9.05 m (29 ft 8¼ in)
Wheelbase: 100	11.75 m (38 ft 6¾ in)

DIMENSIONS, INTERNAL:

Cabin: Length: 100	17.84 m (58 ft 6¼ in)
Height above aisle, 100, 200	2.155 m (7 ft 0¾ in)
beneath hand baggage racks:	
100, 200	1.70 m (5 ft 7 in)
Floor width: 100, 200	3.50 m (11 ft 5¾ in)
Volume: 100	118.0 m³ (4,167 cu ft)
Baggage holds:	
Max length: 100, forward	4.10 m (13 ft 5¼ in)
100, rear	3.00 m (9 ft 10 in)
Max height: 100	1.20 m (3 ft 11¼ in)
Total volume: 100	16.20 m³ (572 cu ft)

AREAS:

Wings, gross: 100	83.226 m² (895.8 sq ft)
200	100.0 m² (1,076.4 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: 100	30,050 kg (66,250 lb)
200	34,375 kg (75,785 lb)
Max payload: 100	11,000 kg (24,250 lb)
200	13,500 kg (29,760 lb)
Max fuel: 100	9,540 kg (21,030 lb)
200	13,790 kg (30,400 lb)
Max T-O weight: 100	46,100 kg (101,630 lb)
200	54,800 kg (120,810 lb)
Max wing loading: 100	553.9 kg/m² (113.5 lb/sq ft)
200	548.0 kg/m² (112.2 lb/sq ft)
Max power loading: 100	313.4 kg/kN (3.07 lb/lb st)
200	340.4 kg/kN (3.34 lb/lb st)

PERFORMANCE (estimated):

Nominal cruising speed at 10,600-11,100 m (34,775-36,400 ft):

100	431-442 kts (800-820 km/h, 497-510 mph)
200	431 kts (800 km/h, 497 mph)

Balanced runway length at 30°C:

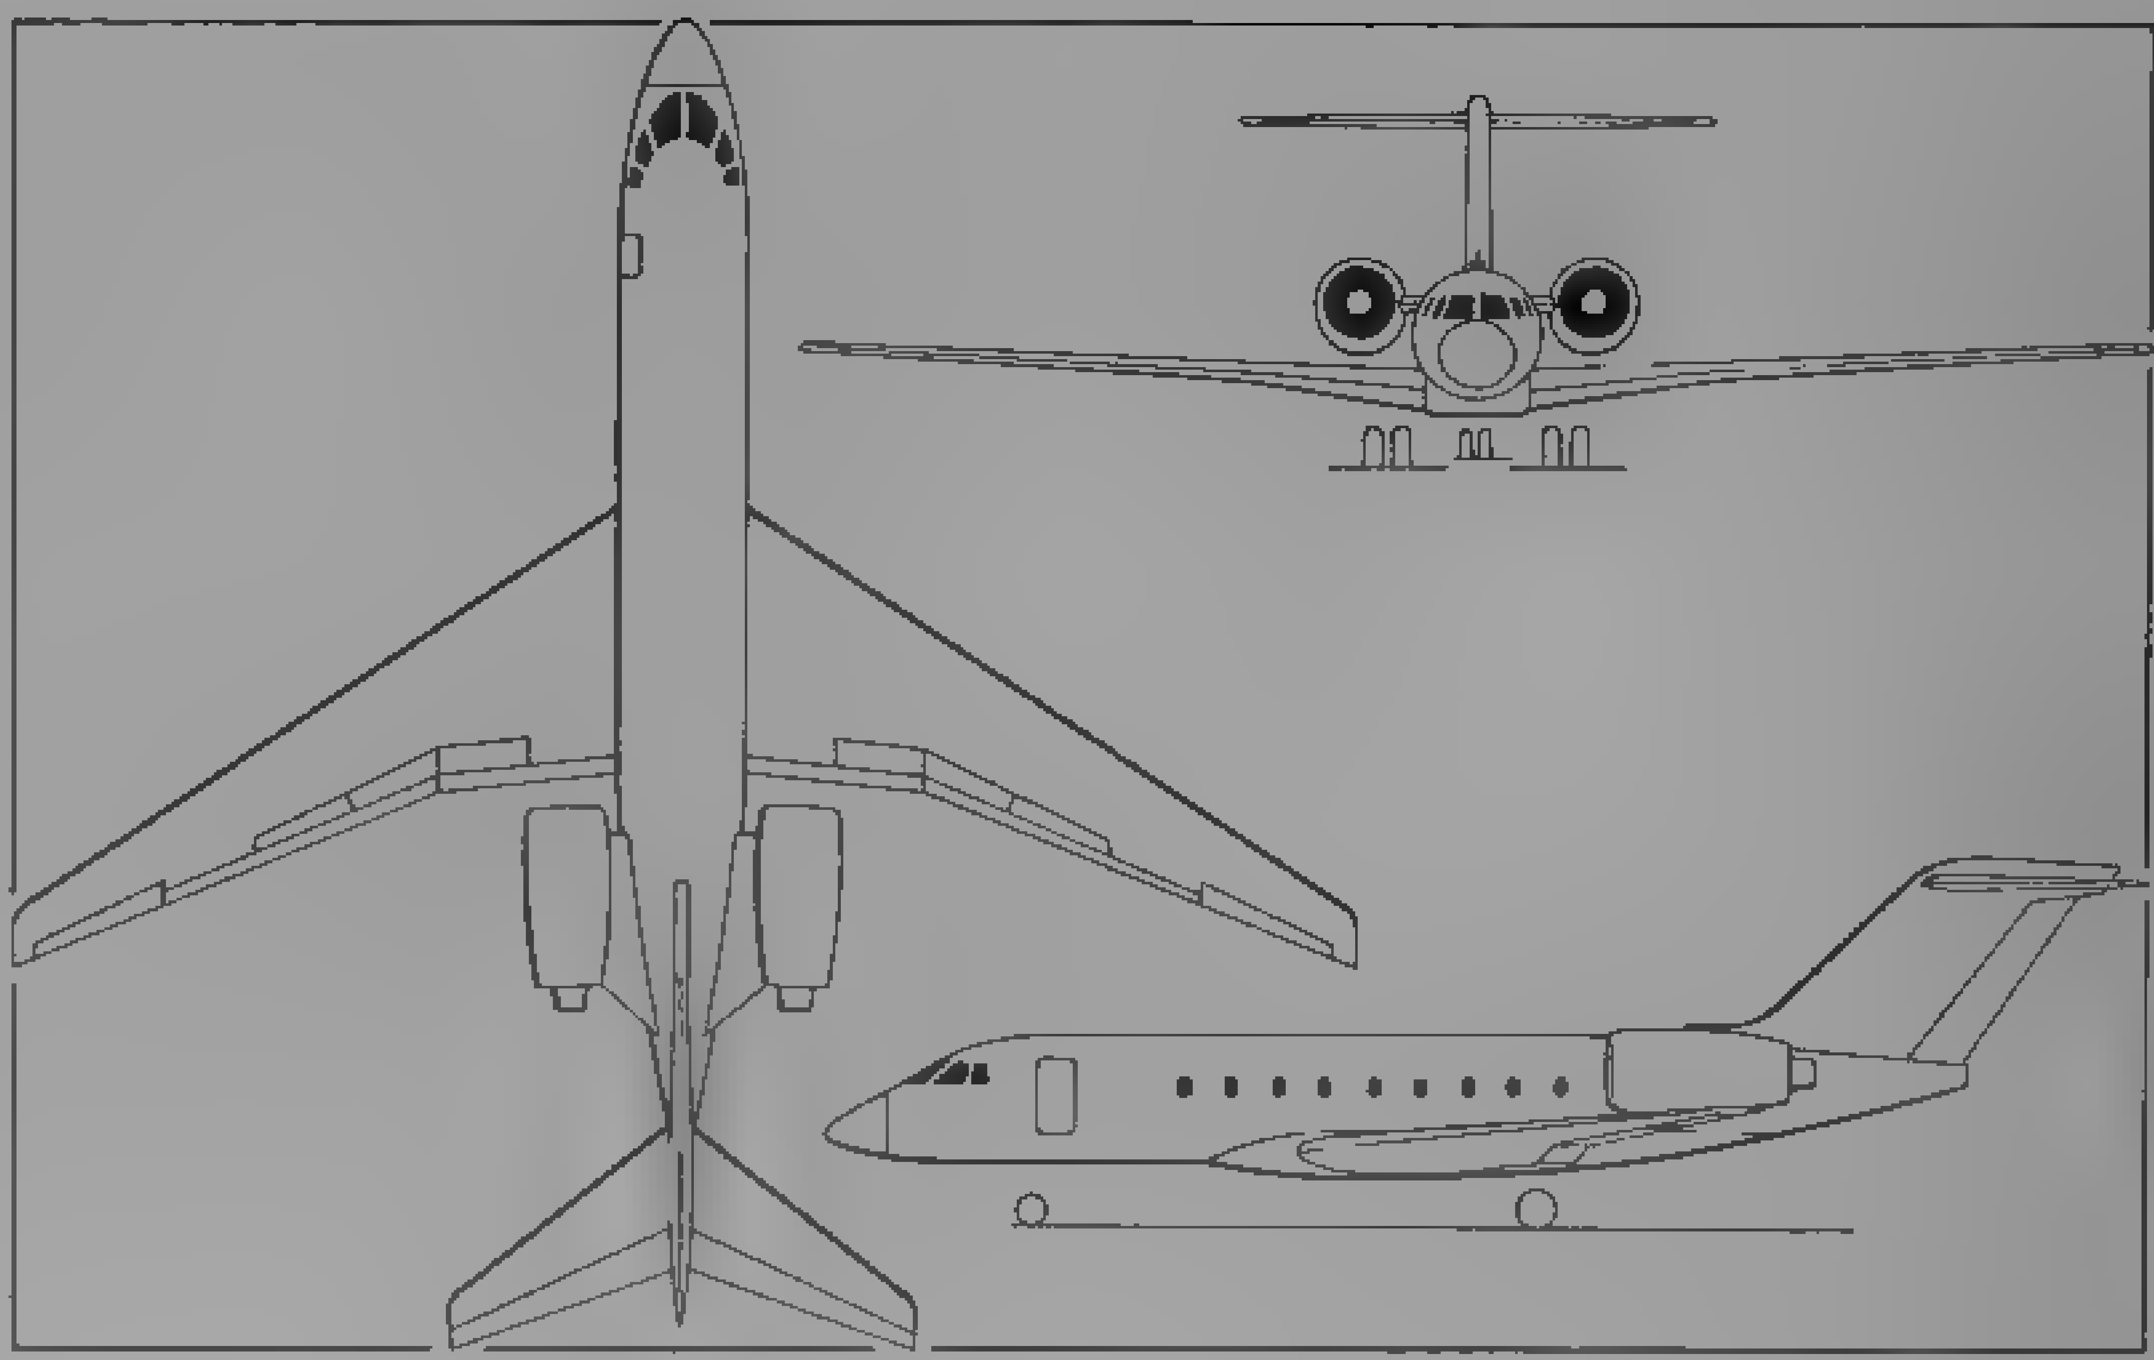
100, 200	2,200-2,300 m (7,220-7,545 ft)

Range:

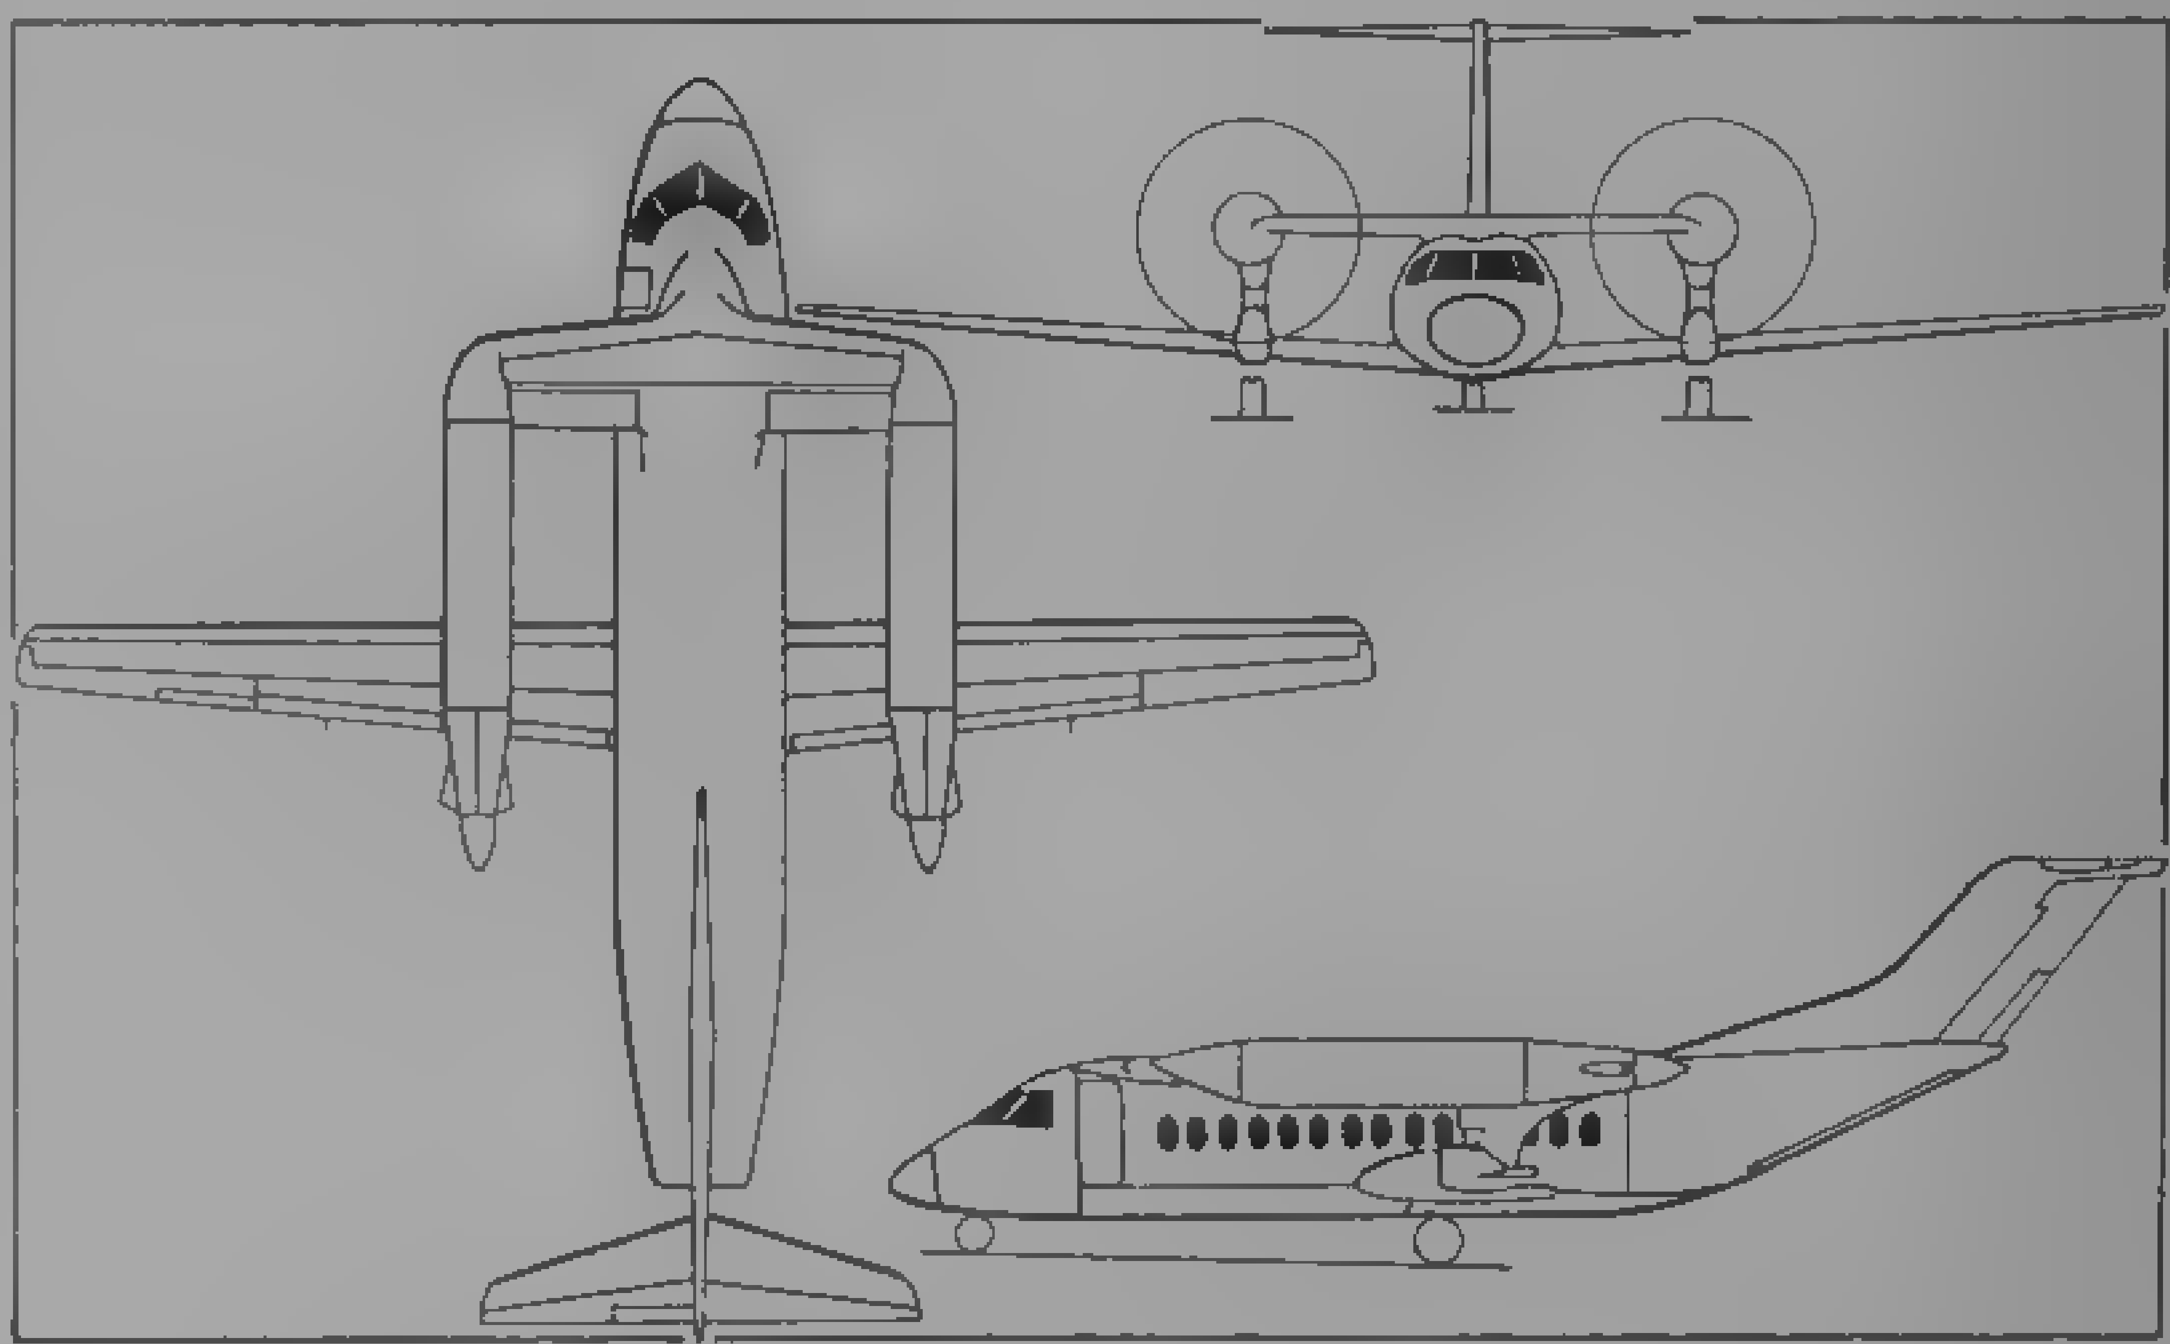
100, with 9,251 kg (20,395 lb) payload (102 passengers) 1,080 n miles (2,000 km, 1,242 miles)

200, with 11,970 kg (26,385 lb) payload (126 passengers) 1,187 n miles (2,200 km, 1,367 miles)

UPDATED



Tupolev Tu-414 twin-turbofan long-range business aircraft/regional transport *(Jane's/Mike Keep)* 1994



The projected Tupolev C-Prop cryogenic-fuelled turboprop transport *(Jane's/Paul Jackson)* 1995

TUPOLEV Tu-336

TYPE: Cryogenic-fuelled twin-turbofan airliner.

PROGRAMME: Projected version of Tu-334 with 8,000 kg (17,637 lb) of liquid natural gas in faired tank extending a most full length of cabin roof; Samara NK-112 engines; 120 passengers, range 647 n miles (1,200 km, 745 miles).

NEW ENTRY

TUPOLEV Tu-414

TYPE: Twin-turbofan long-range business aircraft/regional transport.

PROGRAMME: Announced at Asian Aerospace '94, Singapore.

DESIGN FEATURES: Conventional all-sweptback low-wing monoplane, with T tailplane; engine pod on each side of rear fuselage; dihedral constant from wingroots.

FLYING CONTROLS: Three-axis ailerons, elevators and rudder; long span two-section trailing-edge flaps on each wing; three-section spoilers forward of flaps.

LANDING GEAR: Retractable tricycle type; twin wheels on each unit.

POWER PLANT: Two BMW Rolls-Royce BR 710 turbofans, each 66.28 kN (14,900 lb st).

ACCOMMODATION: Two crew on flight deck, eight to 19 passengers in business versions, 30 passengers in regional transport.

DIMENSIONS, EXTERNAL:

Wing span	28.80 m (94 ft 6 in)
Length overall	28.20 m (92 ft 6¼ in)
Height overall	7.80 m (25 ft 7 in)

WEIGHTS AND LOADINGS:

Max payload	3,300 kg (7,275 lb)
Max T-O weight	40,000 kg (88,185 lb)

PERFORMANCE (estimated):

Nominal cruising speed	464 kts (860 km/h, 534 mph)
Balanced runway length	2,040 m (6,700 ft)

Range: with eight passengers 5,700 n miles (10,560 km, 6,560 miles)

with 30 passengers 4,590 n miles (8,500 km, 5,280 miles)

VERIFIED

TUPOLEV C-PROP

TYPE: Project for cryogenic-fuelled twin-turboprop transport.

PROGRAMME: Brief details announced at 1994 Farnborough Air Show.

DESIGN FEATURES: Tandem wing basic configuration, pusher turboprops on pylons above wings, fuel tanks in form of booms between foreplanes and engine nacelles; other details shown in accompanying three-view drawing.

POWER PLANT: Two 1,119 kW (1,500 shp) Pratt & Whitney Canada PT6A-67 turboprops, driving pusher propellers.

ACCOMMODATION: Basic payload of 32 passengers or three freight pallets, each 2.24 × 3.18 m (88 × 125 in) or 2.24 × 2.74 m (88 × 108 in).

DIMENSIONS, EXTERNAL:

Wing span	22.50 m (73 ft 9¾ in)
Length overall	21.00 m (68 ft 10¾ in)
Height overall	6.60 m (21 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin: Length	9.68 m (31 ft 9 in)
Max width	2.60 m (8 ft 6¼ in)
Max height	2.20 m (7 ft 2½ in)

WEIGHTS AND LOADINGS:

Max payload	3,400 kg (7,495 lb)
Max fuel (liquid gas)	2,400 kg (5,290 lb)
Max T-O weight	13,500 kg (29,760 lb)
Max power loading	6.03 kg/kW (9.92 lb/shp)

PERFORMANCE (estimated):

Nominal cruising speed at 8,000 m (26,250 ft) 242 kts (450 km/h, 280 mph)

Balanced runway length	620 m (2,035 ft)

Range with 32 passengers 810 n miles (1,500 km, 932 miles)

NEW ENTRY

OTHER AIRCRAFT

See *Jane's Aircraft Upgrades* for **Tu-16** and **Tu-22**, both withdrawn from Russian Air Force; 55 Tu-22s in Ukraine in January 1995, but being deactivated.

NEW ENTRY

ULAN-UDE

ULAN-UDE AIRCRAFT PRODUCTION ASSOCIATION

1 Khorinskaya Street, 670009 Ulan-Ude, Buryat Republic
Telephone: 7 (830122) 3 06 38 or 3 74 75
Fax: 7 (830122) 3 01 47
Telex: 288110 AVIA

GENERAL DIRECTOR: Yury N. Kravtsov

Founded in 1939, the Ulan-Ude Aircraft Production Association manufactures a wide range of products, from helicopters and fixed-wing aircraft to spares and domestic equipment. Its current products include modern developments of the Mil Mi-8/Mi-17 series of helicopters and Sukhoi Su-25UB combat trainers. It expects to manufacture the new Kamov Ka-62 helicopter.

NEW ENTRY

ULYANOVSK

ULYANOVSK AVIATION INDUSTRIAL COMPLEX "AVIASTAR"

Antonov pr 1, 432062 Ulyanovsk
Telephone: 7 (8422) 20 12 14
Fax: 7 (8422) 20 95 61
Telex: 263803 STAR SU
DIRECTOR GENERAL: Victor Mikhailov
COMMERCIAL DIRECTOR: Nikolai Kachalov

Opened in 1982, this large production facility manufactures the Antonov An-124, An-225 and Tu-204 transport aircraft

NEW ENTRY

YAKOVLEV

JOINT-STOCK COMPANY A. S YAKOVLEV DESIGN BUREAU

68 Leningradsky Prospekt, 125315 Moscow
Telephone: 7 (095) 157 17 34
Fax: 7 (095) 157 47 26
CHAIRMAN AND GENERAL DESIGNER: Alexander N Dondukov
PRESIDENT AND GENERAL DIRECTOR: Oleg F Demchenko
FIRST VICE-PRESIDENT AND FIRST DEPUTY GENERAL DESIGNER:
Vladimir G Dmitriev
VICE-PRESIDENT AND DEPUTY GENERAL DIRECTOR (EXTERNAL ECONOMIC RELATIONS): Arkady I. Gurtovoy
DEPUTY GENERAL DIRECTOR (FLIGHT TESTS): Andrei A. Sinitsin
VICE-PRESIDENTS AND CHIEF DESIGNERS:
Vladimir G Dmitriev (Yak 242, Yak 46)
Nicolas N Dolzhenkov (Yak-130)
Vladimir A Mitkin (Yak-48/IAI Galaxy)
Alexei G Rakhimbaev (Yak-42, Yak-142)
CHIEF DESIGNERS:
Sergei A Yakovlev (Yak-3, Yak-40TL, YAK-77)
Dmitry K. Drach (Yak-54, Yak-55M, Yak-112)
Yuri I. Yankevich (Yak 18T, Yak 52, Yak 58, UAV)
CHIEFS OF DEPARTMENTS:
Marketing and Sales: Anatoly S Ivanov
Exterior: Evgeny M. Tarasov
Information/Press Service: Yuri V Zasypkin

Founder of this OKB, Alexander Sergeyevich Yakovlev, died on 22 August 1989, aged 83. He was one of most versatile Soviet designers. Products of his OKB ranged from transonic long-range fighters to Yak-24 tandem-rotor helicopter, an operational V/STOL carrier-based fighter and a variety of training, competition aerobatic and transport aircraft

More than 200 aircraft designs and variants have been completed by Yakovlev since 1927, of which about 100 have been manufactured in series. By 1995, about 70,000 aircraft of Yakovlev design had been built

Current Yak Corporation formed in 1992 to engage in aircraft marketing, design, development, production, sales and after-sales support, includes A. S. Yakovlev Design Bureau, and Saratov and Smolensk airframe plants. From 1991, Skorost Industrial Association has co-operated in production of Yak-242. Hyundai-Yak Aerospace Co Ltd created in 1994, as a joint venture with Hyundai Group of South Korea, to develop, market and sell a wide range of small and medium size aircraft. Collaborative agreements concluded with Israel Aircraft Industries on Yak-48/Astra Galaxy design and production, and with Aermacchi of Italy on Yak-130

UPDATED

YAKOVLEV Yak-3

TYPE: Reproduction single-seat piston-engined fighter

PROGRAMME: Prototype of original wooden-skinned Yak-3 flew 1943, all-metal version flew 1945, deliveries to Soviet air forces began July 1944, totalled 4,848 (of 36,737 Yakovlev single-engined Second World War fighters), described often as lightest weight and most agile monoplanes of 1939-45 period. All metal version now available with Western power plant and uprated instrumentation, new build 'prototype' (0740101) displayed 1993 Paris Air Show, 20 being built to meet orders from Gunnell Museum, USA, six completed by January 1995

DESIGN FEATURES: Precise reproduction in metal of Second World War airframe, except for repositioned carburettor air intake above engine cowling to suit changed engine. Conventional cantilever low-wing configuration, with tapered, round-tipped wings

POWER PLANT: Reconditioned 925 kW (1,240 hp) Allison V 1710 12-cylinder V liquid-cooled piston engine replaces original 1,240/1,300 hp VK-105PF-2; three-blade propeller. Fuel capacity 320 litres (84 5 US gallons, 70 4 Imp gallons)

DIMENSIONS, EXTERNAL:	
Wing span	9 20 m (30 ft 2¼ in)
Length overall	8 49 m (27 ft 10¼ in)
AREAS:	
Wings, gross	14 85 m² (159 8 sq ft)
WEIGHTS AND LOADINGS:	
Max T-O weight	2,697 kg (5,945 lb)
Max wing loading	181 6 kg/m² (37 15 lb/sq ft)
Max power loading	2 91 kg/kW (4 80 lb/hp)
PERFORMANCE:	
Max level speed: at height	350 kts (648 km/h, 402 mph)
at S/L	307 kts (570 km/h; 354 mph)
Time to turn 360° at 1 000 m (3 280 ft)	19 s

UPDATED

YAKOVLEV Yak-18T

TYPE: Four-seat multipurpose light aircraft

PROGRAMME: Prototype first flew Summer 1967 as extensively redesigned cabin version of veteran Yak-18 trainer; produced subsequently in large series at Smolensk including trainer, ambulance, communications and light freight versions; last described in 1989-90 *Jane's*; production resumed to meet new contracts, one from Philippine Air Force for 20 aircraft, now manufactured also by Technoavia (which see)

DESIGN FEATURES: Conventional cantilever low wing monoplane; three-section two-spar wings, semi-monocoque fuselage of basically square section; strut- and wire-braced tail surfaces; wing section Clark YH, thickness/chord ratio 14 5 per cent at root, 9 3 per cent at tip; dihedral 7° 20' on outer panels only

STRUCTURE: All-metal construction, except for fabric covering on parts of outer wing panels, ailerons and tail surfaces

LANDING GEAR: Tricycle type, single wheel on each unit, pneumatic retraction, mainwheels inward into centre section, nosewheel rearward; oleo-nitrogen shock-absorbers, castoring nosewheel is non-steerable, tyres size 500 × 150 mm on mainwheels, 400 × 150 mm on nosewheel, pneumatic brakes on mainwheels

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P radial piston engine; two-blade variable-pitch metal propeller. Wing root fuel tanks, capacity 208 litres (55 US gallons, 45 75 Imp gallons)

ACCOMMODATION: Cabin seats four persons in pairs, with forward-hinged jettisonable door each side, rear bench seat, removable for freight carrying, ambulance configuration accommodates pilot, stretcher patient and medical attendant, baggage compartment aft of rear seat

Reproduction Yakovlev Yak-3 fighter with Allison engine *(Brian M. Service)*

1993

Yakovlev Yak 18T four-seat light aircraft built by Technoavia *(Peter R. March)*

1995

Yakovlev Yak-42D short/medium-range transport of Skoda Air at Moscow-Bykovo *(Mark Wagner/Flight International)*

1995

SYSTEMS: Pneumatic system for landing gear and flaps, electrical system includes red panel lighting, nav and landing lights, and fin-tip anti-collision beacon.

AVIONICS: *Comms*: 1 HF radio, intercom.

Instrumentation: Radio compass, radio altimeter and flight recorder standard.

DIMENSIONS, EXTERNAL:

Wing span	11.16 m (36 ft 7¼ in)
Wing chord, mean	1.74 m (5 ft 8½ in)
Length overall	8.39 m (27 ft 6½ in)
Height overall	2.80 m (9 ft 2¼ in)
Tailplane span	3.54 m (11 ft 7½ in)
Wheel track	3.12 m (10 ft 2¾ in)
Wheelbase	1.955 m (6 ft 5 in)

AREAS:

Wings, gross	18.8 m² (202.4 sq ft)
Ailerons (total)	1.92 m² (20.66 sq ft)
Fin	0.718 m² (7.73 sq ft)
Rudder	0.982 m² (10.57 sq ft)
Tailplane	1.95 m² (21.00 sq ft)
Elevators (total)	1.235 m² (13.30 sq ft)

WEIGHTS AND LOADINGS (A: instructor and one pupil, B: four persons):

Max payload: A	306 kg (675 lb)
B	436 kg (960 lb)
Max T-O weight: A	1,500 kg (3,307 lb)
B	1,650 kg (3,637 lb)
Max wing loading: A	80 kg/m² (16.4 lb/sq ft)
B	88 kg/m² (18.0 lb/sq ft)
Max power loading: A	5.66 kg/kW (9.32 lb/hp)
B	6.22 kg/kW (10.25 lb/hp)

PERFORMANCE (at max T-O weight):

Max level speed: A, B	159 kts (295 km/h; 183 mph)
Max cruising speed: B	135 kts (250 km/h; 155 mph)
Max rate of climb at S/L: B	300 m (985 ft)/min
Service ceiling: A, B	5,500 m (18,000 ft)
T-O run: A	330 m (1,085 ft)
B	400 m (1,315 ft)
Landing run: A	400 m (1,315 ft)
B	500 m (1,640 ft)
Range with max fuel, with reserves:	
A	350 n miles (650 km; 403 miles)
B	485 n miles (900 km; 560 miles)

UPDATED

YAKOVLEV Yak-42

NATO reporting name: Clobber

TYPE: Three-turbofan short/medium-range passenger transport.

PROGRAMME: Three prototypes ordered initially; first prototype (SSSR 1974) flew 7 March 1975, with 11° wing sweepback and furnished in 100-seat local service form, with carry-on baggage and coat stowage fore and aft of cabin; second prototype (SSSR 1975) had 23° sweepback and more cabin windows, representative of 120-seat version with three more rows of seats and no carry-on baggage areas; third prototype (SSSR 1976, later SSSR 42303) introduced small refinements (described in previous editions of *Jane's*); flight testing proved 23° wing superior; first series of production aircraft, built to replace some Aeroflot Tu-134s, generally similar to SSSR 42303 as exhibited 1977 Paris Air Show; changes for production included substitution of four-wheel main landing gear bogies for twin-wheel units on prototypes; scheduled service on Aeroflot's Moscow-Krasnodar route began late 1980.

CURRENT VERSIONS: **Yak-42**: Basic standard, *described in detail*.

Yak-42A: Experimental version displayed at 1993 Paris Air Show, similar to Yak-42D but with Western avionics. Production version, with AlliedSignal avionics, designated **Yak-142** (which see).

Yak-42B: As Yak-42A but Bendix/King nav system and flight deck CRTs.

Yak-42D: Increased fuel, range increased to 1,185 n miles (2,200 km; 1,365 miles) with 120 passengers; about 20 delivered by early 1991, production continues, seven built in 1993.

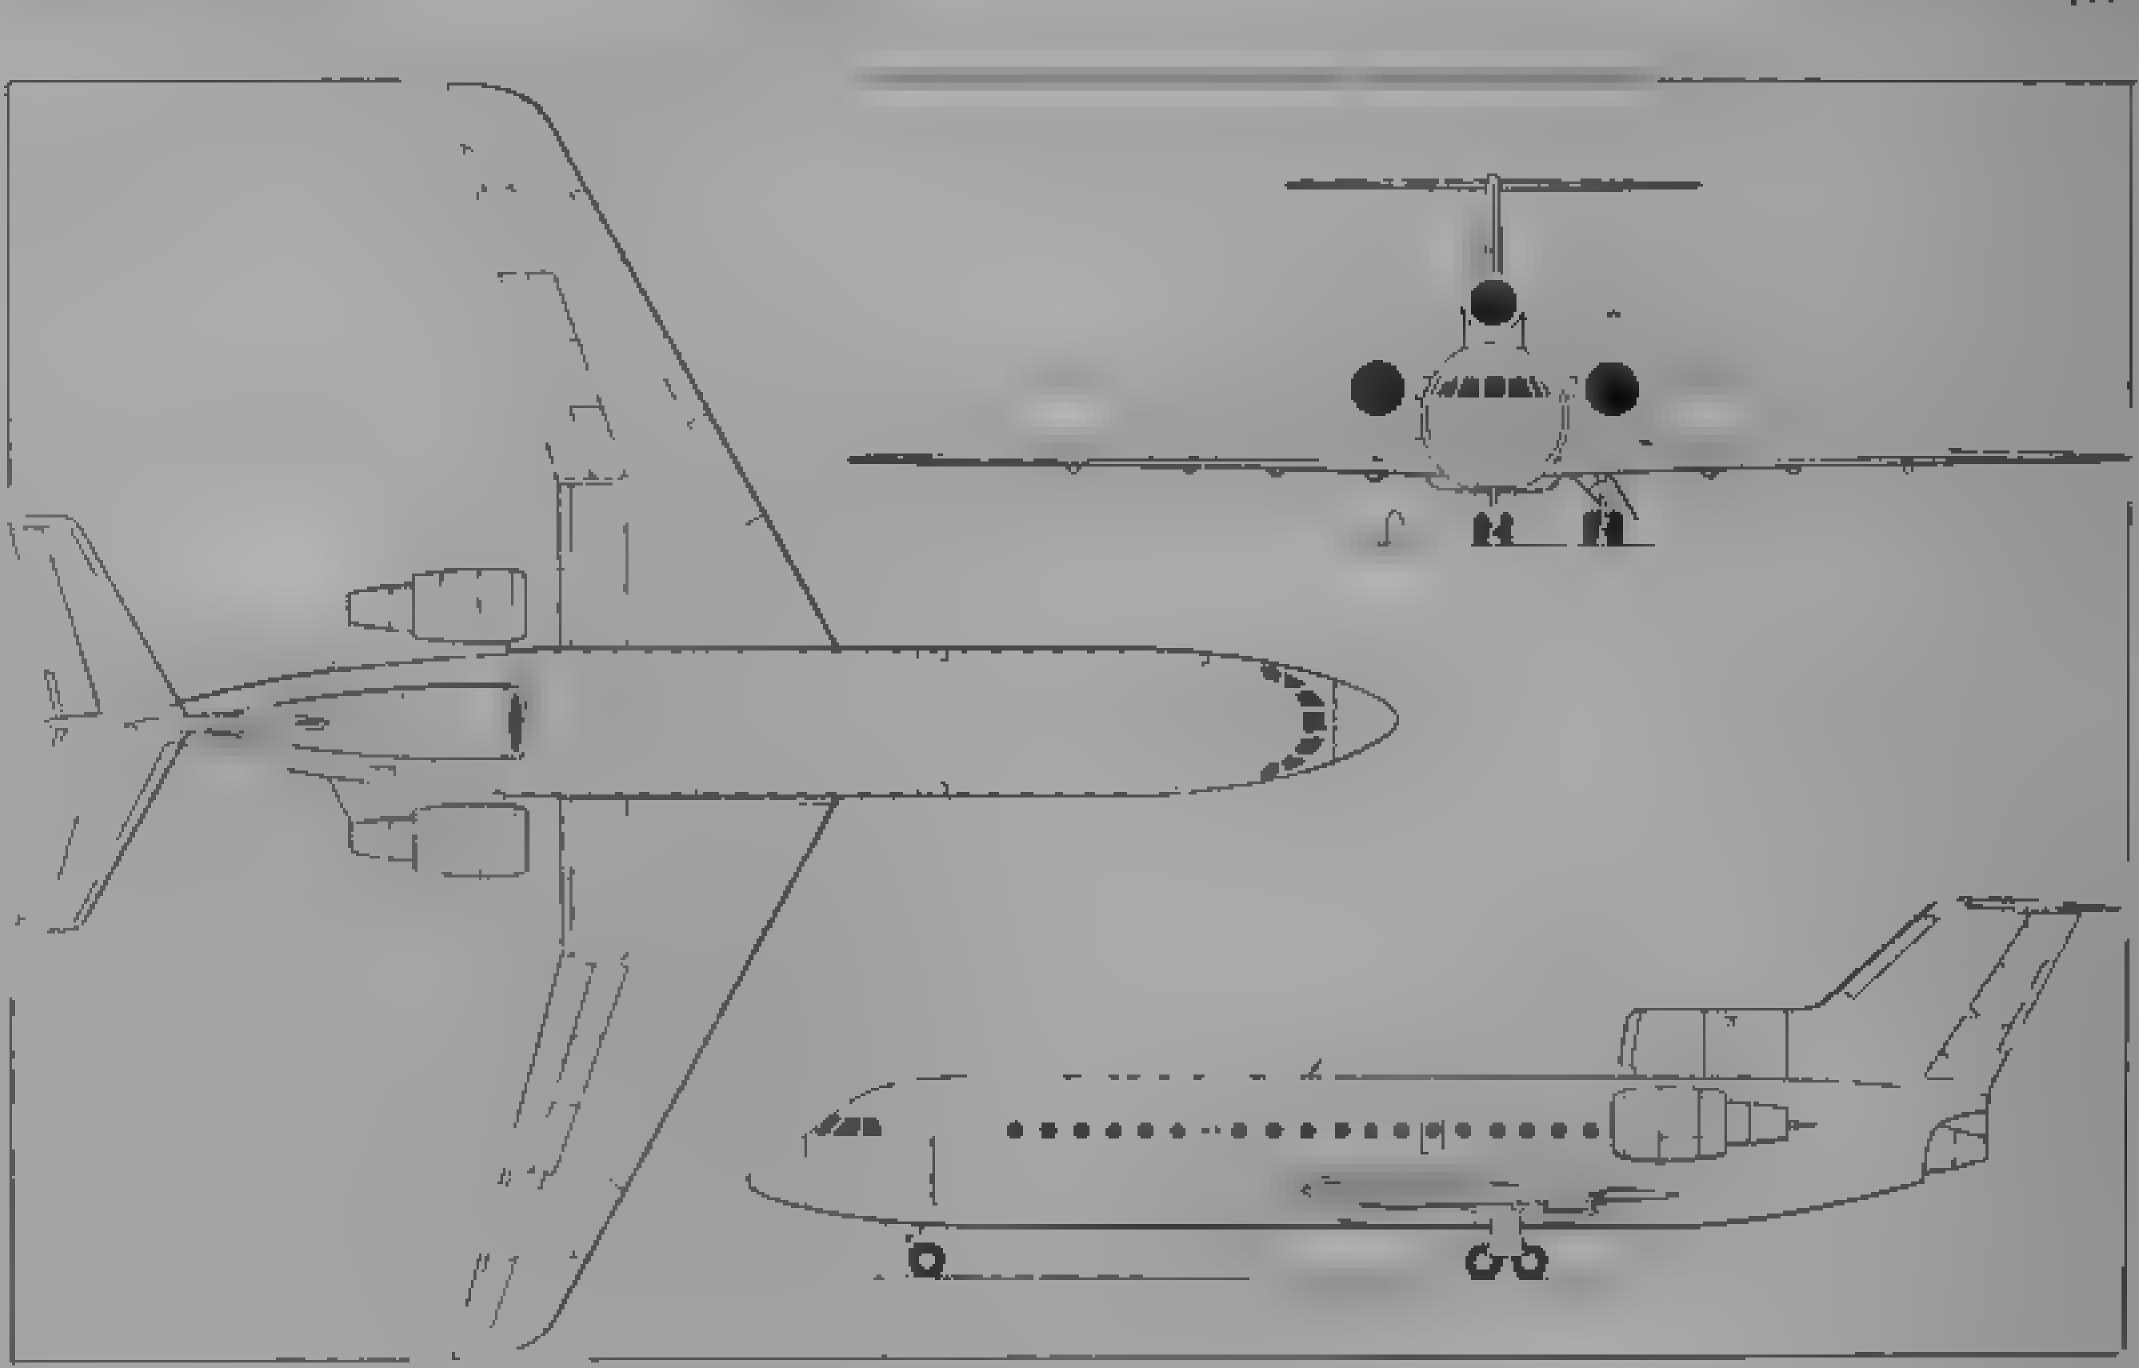
Yak-42E-LL: Propfan testbed; starboard D-36 turbofan replaced by ZMKB Progress D-236 geared propfan (8,090 kW; 10,850 shp), driving SV-36 tractor contraprops with eight forward blades and six rear blades; propeller diameter 4.2 m (13 ft 9½ in). First flown 15 March 1991, exhibited 1991 Paris Air Show.

Yak-42F: Basically standard Yak-42 adapted for electro-optical research, equipment in very large cylindrical pod under inboard panel of each wing. Unknown number used by Aeroflot for Earth resources and environmental survey.

Yak-42T: Freighter, with 2.50 m × 2.00 m (8 ft 2½ in × 6 ft 6¾ in) cargo door in upper deck; maximum freight load 12,000 kg (26,455 lb), including standard eight containers in underfloor holds.

CUSTOMERS: More than 130 built by January 1995, mostly for Aeroflot and its successors; four for Cubana, six for China General Aviation Corporation. Prototype and five preseries aircraft built at GAZ 11; 27 early production aircraft at GAZ 11 between 1978 and 1981, subsequent production at Smolensk 1981-1992 and GAZ 9, Saratov, from 1991. Seven delivered in 1993; 16 ordered and eight delivered in 1994.

DESIGN FEATURES: Basic design objectives simple construction, reliability in operation, economy, and ability to operate in remote areas with widely differing climatic conditions; design is in accordance with CIS civil airworthiness standards and US FAR 25, engines conform with international smoke and noise limitations, and aircraft is intended to operate in ambient temperatures from −50 to +50°C; APU for engine starting and services removes need for ground equipment.



Yakovlev Yak-42 three-turbofan short/medium-range passenger transport *(Jane's/Dennis Punnett)*

1982

Conventional all-swept low-wing configuration, two podded turbofans on sides of rear fuselage, third in extreme rear fuselage with intake at base of fin; no wing dihedral or anhedral; sweepback 23° at quarter-chord; basically circular fuselage, blending into oval rear section; T tail.

FLYING CONTROLS: Hydraulically actuated, two-section ailerons, each with servo tab on inner section, trim tab on outer section; two-section single-slotted trailing-edge flap, three-section spoiler forward of outer flap, full-span leading-edge flap on each wing; one-piece variable incidence tailplane (from 1° up to 12° down), trim tab in each elevator, trim tab and spring servo tab in rudder.

STRUCTURE: All-metal; two-spar torsion box wing structure; riveted, bonded and welded semi-monocoque fuselage.

LANDING GEAR: Hydraulically retractable tricycle heavy-duty type, made by Hydromash, four-wheel bogie main units retract inward into flattened fuselage undersurface, twin nosewheels retract forward, hydraulic back-up for extension only, emergency extension by gravity; oleo-nitrogen shock-absorbers, steerable nose unit of levered suspension type; low-pressure tyres, 930 × 305 mm on nosewheels, hydraulic disc brakes on mainwheels; nosewheel brakes to stop wheel rotation after take-off.

POWER PLANT: Three ZMKB Progress D-36 three-shaft turbofans, each 63.74 kN (14,330 lb st); centre engine, inside rear fuselage, has S-duct air intake, outboard engines in pod on each side of rear fuselage, no thrust reversers. Integral fuel tanks between spars in wings, capacity approximately 23,175 litres (6,120 US gallons; 5,100 Imp gallons).

ACCOMMODATION: Crew of two side by side, with provision for flight engineer, two or three cabin attendants. Single passenger cabin, with 120 seats six-abreast, at pitch of 75 cm (29.5 in), with centre aisle 45 cm (17.7 in) wide, in high-density configuration. Alternative 104-passenger (96 tourist, eight first class) local service configuration, with carry-on baggage and coat stowage compartments fore and aft of cabin. Main airstair door hinges down from undersurface of rear fuselage; second door forward of cabin on port side, with integral airstairs, service door opposite

Galley and crew coat stowage between flight deck and front vestibule; passenger coat stowage and toilet between vestibule and cabin, second coat stowage and toilet at rear of cabin. Two underfloor holds for cargo, mail and baggage in nets or standard containers, loaded through door on starboard side, forward of wing; chain-drive handling system for containers built into floor, forward hold for six containers, each 2.2 m³ (77.7 cu ft); rear hold takes two similar containers. Provision for convertible passenger/cargo interior, with enlarged loading door on port side of front fuselage. Two emergency exits, overwing and forward of wing, each side. All passenger and crew accommodation pressurised, air conditioned, and furnished with non-flammable materials.

SYSTEMS: TA-12 APU standard, for engine starting, and for power and air conditioning supply on ground and, if necessary, in flight.

AVIONICS: Flight and navigation equipment for operation by day and night under adverse weather conditions, with landings on concrete or unpaved runways in ICAO Cat. II weather minima down to 30 m (100 ft) visibility at 300 m (985 ft).

Flight: Type SAU-42 automatic flight control system and automatic navigation system standard.

DIMENSIONS, EXTERNAL:

Wing span	34.88 m (114 ft 5¼ in)
Wing aspect ratio	8.11
Length overall	36.38 m (119 ft 4½ in)
Fuselage diameter	3.80 m (12 ft 5½ in)
Height overall	9.83 m (32 ft 3 in)
Tailplane span	10.80 m (35 ft 5 in)
Wheel track	5.63 m (18 ft 5¾ in)
Wheelbase	14.78 m (48 ft 6 in)
Passenger door (fwd): Height	1.50 m (4 ft 11 in)
Width	0.83 m (2 ft 8½ in)
Passenger entrance (rear): Height	1.78 m (5 ft 10 in)
Width	0.81 m (2 ft 7¾ in)
Cargo door (convertible version):	
Height	2.025 m (6 ft 7¾ in)
Width	3.23 m (10 ft 7 in)
Baggage/cargo hold door: Height	1.35 m (4 ft 5 in)
Width	1.145 m (3 ft 9 in)
Height to sill	1.45 m (4 ft 9 in)

DIMENSIONS, INTERNAL:

Cabin: Length	19.89 m (65 ft 3 in)
Max width	3.60 m (11 ft 9¾ in)
Max height	2.08 m (6 ft 9¾ in)
Baggage compartment volume (100-seater):	
fwd	19.8 m³ (700 cu ft)
rear	9.5 m³ (335 cu ft)

AREAS:

Wings, gross	150.0 m² (1,615 sq ft)
Vertical tail surfaces (total)	23.29 m² (250.7 sq ft)
Horizontal tail surfaces (total)	27.60 m² (297.1 sq ft)

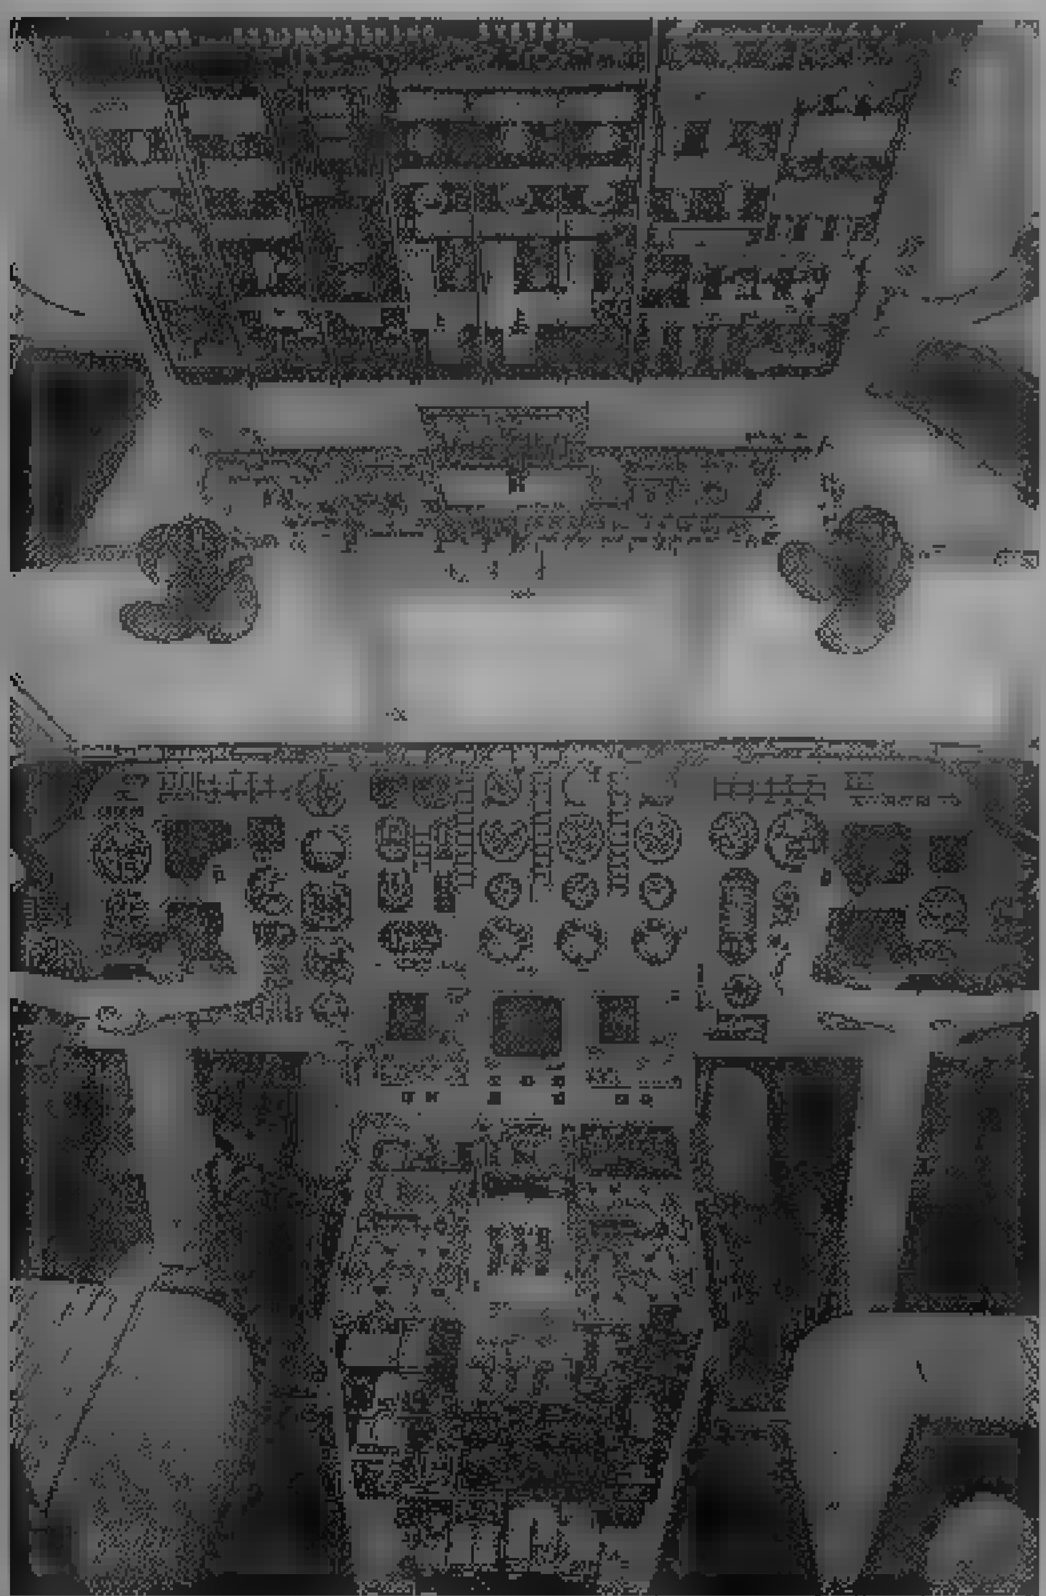
WEIGHTS AND LOADINGS:

Weight empty, equipped:	
104 seats	34,500 kg (76,058 lb)
120 seats	34,515 kg (76,092 lb)
Max payload	13,000 kg (28,660 lb)
Max fuel	18,500 kg (40,785 lb)
Max ramp weight	57,300 kg (126,320 lb)
Max T-O weight	57,000 kg (125,660 lb)
Max landing weight	51,000 kg (112,433 lb)
Max wing loading	380.0 kg/m² (77.8 lb/sq ft)
Max power loading	298.1 kg/kN (2.92 lb/lb st)

PERFORMANCE:

Max cruising speed at 7,620 m (25,000 ft)	437 kts (810 km/h; 503 mph)
Econ cruising speed at 9,100 m (29,850 ft)	399 kts (740 km/h; 460 mph)
T-O speed	119 kts (220 km/h; 137 mph) IAS
Approach speed	114 kts (210 km/h; 131 mph) IAS
Max cruising height	9,600 m (31,500 ft)
T-O balanced field length	2,200 m (7,220 ft)
Landing from 15 m (50 ft)	1,100 m (3,610 ft)
Range at econ cruising speed, with 3,000 kg (6,615 lb) fuel reserves:	
with max payload	745 n miles (1,380 km; 857 miles)
with 120 passengers (10,800 kg; 23,810 lb payload)	1,025 n miles (1,900 km; 1,180 miles)
with 104 passengers (9,360 kg; 20,635 lb payload)	1,240 n miles (2,300 km; 1,430 miles)
with max fuel and 42 passengers	2,215 n miles (4,100 km; 2,545 miles)

UPDATED



Flight deck of Yakovlev Yak-142 (*Mark Wagner/Flight International*)

1995

YAKOVLEV Yak-142

TYPE: Three-turbofan short/medium-range passenger transport.

PROGRAMME: Developed from Yak-42 via experimental Yak-42A, displayed at 1993 Paris Air Show; production beginning at Saratov.

DESIGN FEATURES: Improvements compared with Yak-42 include flight deployable wing spoilers to increase rate of descent, wide flap setting range for improved T-O performance and rate of climb, even in hot and high conditions; larger port-side cabin door, for improved compatibility with passenger boarding walkways, in addition to rear airstair; improved passenger comfort; state of the art digital avionics; EFIS cockpit displays, redesigned engine air intakes that lower noise levels to meet latest ICAO standards (Ch 3, Appendix 16); and addition of TA-12 APU, able to be started at up to 5,000 m (16,400 ft). Other features as Yak-42, except:

AVIONICS: SAU-4201 Cat. II qualified flight control system with autothrottle capability. AlliedSignal equipment includes KNS-660 flight data control system, KAD-480 air data system.

Comms: KHF 950 HF, RIA 35A ILS, RVA-36A VOR, DMA-37A DME, RTA-44A VHF com, DFA-75A ADF.

Radar: RDR-4A weather radar.

Instrumentation: EFIS-10 system with five colour CRTs and KAH 460 AHR, ALA 52A radio altimeter, TPA 81A TCAS II, TRA-67A Mode S transponder.

DIMENSIONS AND WEIGHTS: As Yak-42, except:

Passenger door (fwd): Height	1.70 m (5 ft 7 in)
Width	0.85 m (2 ft 9½ in)

PERFORMANCE: As Yak-42, except:

Max cruising speed	400 kts (740 km/h; 460 mph)
Optimum cruising height	9,600 m (31,500 ft)
FAR balanced field length: ISA at S/L	1,800 m (5,905 ft)
ISA + 20°C at 1,525 m (5,000 ft)	2,200 m (7,220 ft)

VERIFIED

YAKOVLEV Yak 242

TYPE: Twin-turbofan short-range airliner.

PROGRAMME: Superseded three-engined Yak-42M; first of two prototypes to fly in second half of 1990s.

CUSTOMERS: Aeroflot requirement for 200 aircraft in this category, stated some years ago, still firm.

DESIGN FEATURES: Much more than a stretched Yak 42; only fuselage cross-section is not new; wings have supercritical section devised in collaboration with TsAGI, with 25° sweepback, increased span and higher aspect ratio, double-slotted trailing-edge flaps, and winglets, together with new turbofans, this gives increased performance, digital fly-by-wire flight controls and five-CRT EFIS standard, avionics upgraded for ICAO Cat. IIIa minima.

FLYING CONTROLS: Fly-by-wire.

LANDING GEAR: Hydraulically retractable tricyle type; four-wheel bogie main units, twin nosewheels.

POWER PLANT: Two Aviadvigatel PS-90A12 turbofans, each 118 kN (26,525 lb st).

ACCOMMODATION: Crew of two side by side on flight deck, provision for flight engineer if required, 130 to 180 passengers, (1) single class cabin configuration for 180 passengers at 75 cm (29.5 in) pitch, 162 at 78 cm (30.7 in) pitch, or 156 at 81 cm (31.9 in) pitch, all six-abreast with centre aisle; (2) 12 four-abreast in first class cabin at front at 96 cm (37.8 in) pitch and 126 at 78 cm (30.7 in) pitch, or (3) 12 first class, 24 business class at 87 cm (34.25 in) pitch and 96 at 78 cm (30.7 in) pitch. Doors at front and rear of cabin, with service doors opposite; two emergency exits each side, over wing.

AVIONICS: *Instrumentation*: BendixKing flat-panel flight deck displays.

DIMENSIONS, EXTERNAL:

Wing span	36.25 m (118 ft 11¼ in)
Length overall	38.00 m (124 ft 8 in)

AREAS:

Wings, gross	120.0 m² (1,292 sq ft)

WEIGHTS AND LOADINGS:

Operating weight, equipped	38,400 kg (84,655 lb)
Normal fuel	14,000 kg (30,865 lb)
Max fuel	22,000 kg (48,500 lb)
Max payload	18,000 kg (39,680 lb)
Max T-O weight	64,600 kg (142,415 lb)

PERFORMANCE (estimated):

Nominal cruising speed at 11,100-11,600 m (36,400-38,050 ft)	431-458 kts (800-850 km/h; 497-528 mph)
Required runway length	2,200 m (7,220 ft)

Range. CAR reserves
with max payload 863 n miles (1,600 km, 994 miles)
with normal payload 1,457 n miles (2,700 km 1,677 miles)
with max fuel 2 700 n miles (5,000 km, 3,107 miles)

UPDATED

YAKOVLEV Yak-46-1

TYPE Twin-turbofan short/medium range passenger transport

PROGRAMME Design study announced early 1991, included in State Air Transport Programme to year 2000, adopted by Russian Transport Minister 22 May 1992

CURRENT VERSIONS Four versions projected: single class with up to 168 seats, mixed class for 12 first class and 114 tourist passengers, convertible passenger/freighter; casualty evacuation version

DESIGN FEATURES Conventional low-wing monoplane with underwing engines; supercritical high aspect ratio wings, sweptback 25°, with winglets, all swept tail surfaces, with tailplane mounted on tailcone

FLYING CONTROLS Fly by wire

LANDING GEAR Hydraulically retractable tricycle type; four-wheel bogie main units, twin nosewheels

POWER PLANT Two Samara/SSPE/Trud high bypass turbofans, each rated at 107 9 kN (24,250 lb st)

ACCOMMODATION Crew of two side by side on flight deck provision for flight engineer if required, typically 150 seats six abreast with centre aisle, galley, toilets, seats for flight attendants front and rear Doors at front and rear of cabin on port side, service doors opposite, two emergency exits each side over wing

AVIONICS Integrated flight and nav/com systems for operation to ICAO Cat IIIa standards

DIMENSIONS EXTERNAL

Wing span	36 25 m (118 ft 11¼ in)
Length overall	38 80 m (127 ft 3½ in)

AREAS

Wings, gross	120 0 m² (1,292 sq ft)

WEIGHTS AND LOADINGS

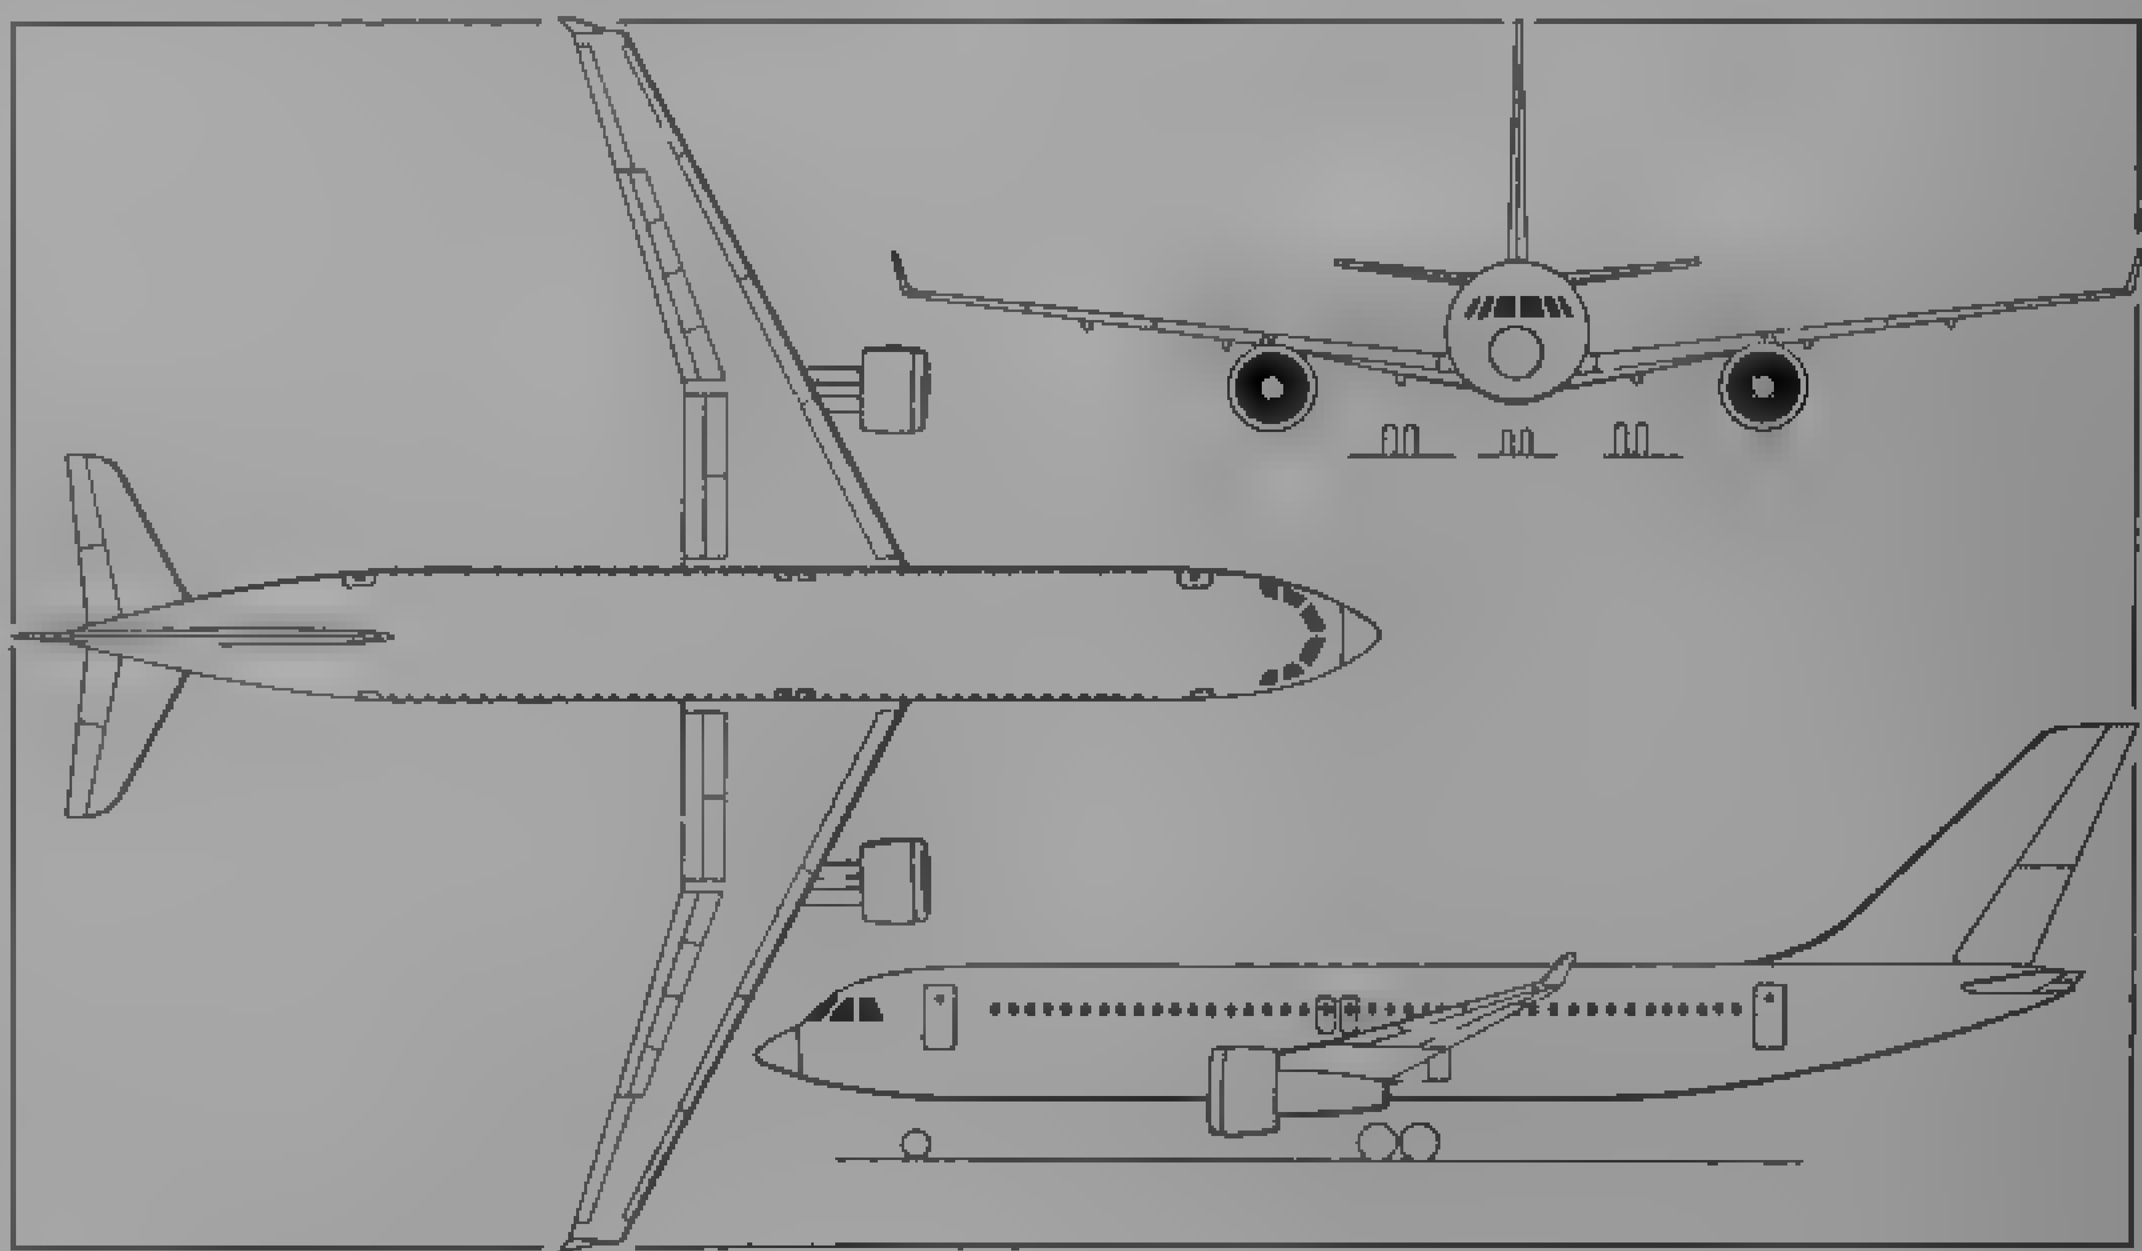
Weight empty, equipped	34,840 kg (76,808 lb)
Max payload	17,500 kg (38,580 lb)
Max T-O weight	60,200 kg (132,715 lb)
Max wing loading	501 7 kg/m² (102.7 lb/sq ft)
Max power loading	278.7 kg/kN (2.74 lb/lb st)

PERFORMANCE (estimated)

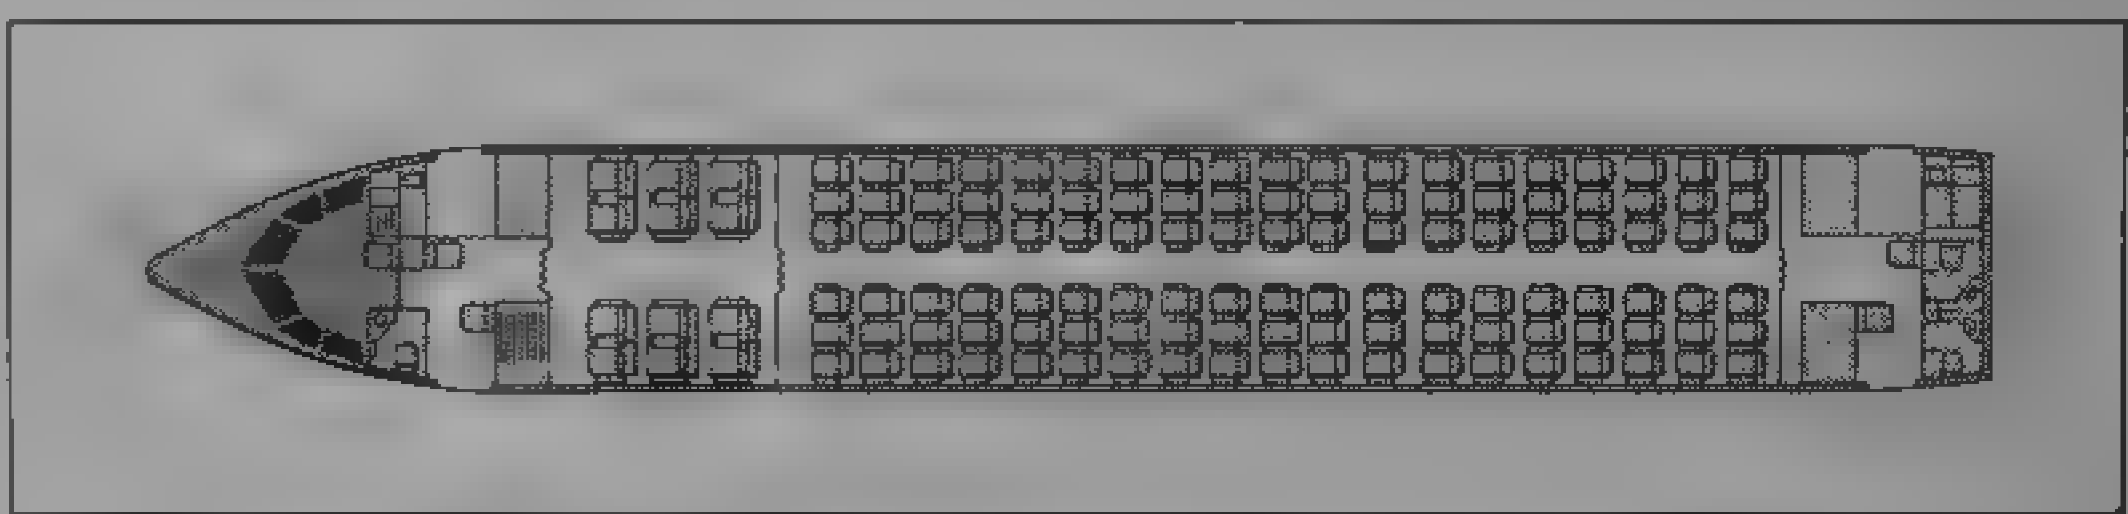
Nominal cruising speed	448-458 kts (830-850 km/h, 515-528 mph)
Nominal cruising height	11,100 m (36,400 ft)
Balanced runway length, ISA	2,100 m (6,890 ft)

Range with max payload 1,187 n miles (2,200 km, 1,367 miles)
with normal payload 1,863 n miles (3,450 km 2,143 miles)

VERIFIED



Yakovlev Yak 46-1 twin-turbofan short/medium-range airliner (*Jane's/Mike Keep*) *1994*



Typical cabin layout of the Yakovlev Yak 46-1 passenger transport (*Jane's/Mike Keep*) *1994*

YAKOVLEV Yak-46-2

TYPE Twin propfan short/medium range passenger transport

PROGRAMME Design study and model shown at Moscow Aerospace '90 Air Show, development dependant on propfan progress

CURRENT VERSIONS As for Yak-46-1

DESIGN FEATURES Despite sharing Yak-46 type designation, this aircraft is entirely different from Yak-46-1, except for same basic fuselage and accommodation, it has wings mounted further rearward, new rear fuselage and tail unit, with two side-mounted pusher propfans on pylons

FLYING CONTROLS Fly-by-wire

POWER PLANT Two ZMKB Progress D-27 propfans, each rated at 109 8 kN (24,690 lb st), driving contraprops, one with eight blades, other with six blades

ACCOMMODATION As for Yak 46-1

AVIONICS As for Yak 46-1

DIMENSIONS EXTERNAL

Wing span	35 50 m (116 ft 5¾ in)
Length overall	41 00 m (134 ft 6 in)
Propeller diameter (each)	3 80 m (12 ft 5¾ in)

AREAS

Wings, gross	120 0 m² (1,292 sq ft)

WEIGHTS AND LOADINGS

Weight empty, equipped	37,300 kg (82,230 lb)
Max payload	17,500 kg (38,580 lb)
Max T-O weight	61,300 kg (135,140 lb)
Max wing loading	510 8 kg/m² (104 6 lb/sq ft)
Max power loading	279 1 kg/kN (2 74 lb/lb st)

PERFORMANCE (estimated)

Nominal cruising speed	448 kts (830 km/h, 515 mph)
Nominal cruising height	11,100 m (36,400 ft)
Balanced runway length, ISA	2,100 m (6,890 ft)

Range with max payload 971 n miles (1,800 km, 1,118 miles)
with normal payload 1 888 n miles (3,500 km; 2,175 miles)

Yakovlev Yak-46-2, the projected twin-propfan derivative of the Yak-46-1 *(Jane's/Mike Keep)* 1994

YAKOVLEV Yak-54

TYPE: Tandem two-seat sporting and aerobatic training aircraft

PROGRAMME: Announced 1992, prototype at 1993 Paris Air Show, first flown 24 December 1993. In production from 1995

DESIGN FEATURES: Conventional mid-wing configuration, symmetrical section; no dihedral, anhedral or incidence; almost full-span ailerons, elevators and rudder all horn balanced, each aileron has large suspended balance tab; non-retractable tailwheel type landing gear, with cantilever main legs and small wheels. Designed on basis of systems and units of Yak-55M

STRUCTURE: All-metal, two-spar wings; semi-monocoque fuselage; conventional tail unit, titanium spring main landing gear legs

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine; three-blade variable-pitch propeller

ACCOMMODATION: Two seats in tandem under continuous transparent canopy, hinged to starboard

DIMENSIONS, EXTERNAL:

Wing span	8.16 m (26 ft 9¼ in)
Length overall	6.91 m (22 ft 8 in)

AREAS:

Wings, gross	12.89 m² (138.75 sq ft)

WEIGHTS AND LOADINGS:

Max T-O weight: one pilot	850 kg (1,874 lb)
two occupants	990 kg (2,182 lb)
Max wing loading	76.8 kg/m² (15.73 lb/sq ft)
Max power loading	3.74 kg/kW (6.15 lb/hp)

PERFORMANCE (estimated):

Never-exceed speed	243 kts (450 km/h; 280 mph)
Stalling speed	60 kts (110 km/h; 69 mph)
Rate of roll	345°/s
Rate of climb at S/L	900 m (2,950 ft)/min
Ferry range	377 n miles (700 km; 435 miles)
g limits	+9/-7

UPDATED

YAKOVLEV Yak-55M

TYPE: Single-seat aerobatic competition aircraft

PROGRAMME: Original Yak-55 made unanticipated appearance at 11th World Aerobatic Championships, Spitzerberg, Austria, August 1982; considerable subsequent refinement, including early change to stronger, tapered wings of thinner section for 1984 Championships; current Yak-55M, with further refinements, accompanied Soviet team to 1989 European Aerobatic Championships in Hungary; series production began 1991

DESIGN FEATURES: Mid-wing configuration; symmetrical section, no dihedral, anhedral or incidence; almost full-span ailerons, elevators and rudder all horn balanced, with ground adjustable tab, each aileron also has large suspended balance tab, non-retractable tailwheel type landing gear, with bowed cantilever main legs and small wheels

STRUCTURE: All-metal, two-spar wings; semi-monocoque fuselage, conventional tail unit, titanium spring main landing gear legs, rearward sliding canopy

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder air-cooled radial engine, two-blade controllable-pitch propeller; wing fuel tanks, capacity 120 litres (31.5 US gallons; 26 Imp gallons)

DIMENSIONS, EXTERNAL:

Wing span	8.10 m (26 ft 6¾ in)
Wing aspect ratio	5.13
Length overall	7.00 m (22 ft 11½ in)
Height overall	2.80 m (9 ft 2¼ in)
Tailplane span	3.15 m (10 ft 4 in)
Wheel track	2.24 m (7 ft 4¼ in)

AREAS:

Wings, gross	12.8 m² (137.8 sq ft)

WEIGHTS AND LOADINGS:

Max T-O weight	840 kg (1,852 lb)
Max wing loading	65.6 kg/m² (13.44 lb/sq ft)
Max power loading	3.13 kg/kW (5.14 lb/hp)

PERFORMANCE:

Max level speed	243 kts (450 km/h; 280 mph)
Stalling speed	57-60 kts (105-110 km/h, 66-69 mph)
Max rate of climb at S/L	930 m (3,050 ft)/min
Rate of roll	345°/s
g limits	+9/-6

UPDATED

YAKOVLEV Yak-58

TYPE: Six-seat light multipurpose aircraft

PROGRAMME: Shown in model form at Moscow Aerospace '90 Air Show; full-scale mockup exhibited February 1991, prototype (RA-01003) first flew 26 December 1993, at Tbilisi, Georgia, lost in accident 27 May 1994, second prototype flew 10 October 1994, two more completed, plus two static test airframes, by January 1995, OKB claims receipt of 250 letters of intent to purchase

DESIGN FEATURES: Constant-chord unswept wing with dihedral from roots and cambered tips, fuselage pod mounted above wing, with annular duct at rear to house air-cooled pusher engine, short twin booms carry sweptback and slightly toed-in tailfins and bridging horizontal tail surface

FLYING CONTROLS: Mechanical control system for ailerons, twin rudders and elevator; pneumatically operated trailing-edge flaps

LANDING GEAR: Pneumatically actuated retractable tricycle type, single wheel and low-pressure tyre on each trailing-link unit, for operation from unprepared strips, mainwheels retract inward, nosewheel forward

POWER PLANT: One 265 kW (355 hp) VOKBM M-14PT nine-cylinder radial engine enclosed in annular duct, three-blade variable-pitch pusher propeller. Location reduces noise in cabin

ACCOMMODATION: Six persons in pairs in enclosed cabin, large sliding door on starboard side, facilitating freight loading when passenger seats removed, or despatch of parachutists. Planned uses include business, taxi and ambulance transport, surveillance of forests, high tension cables, oilfields and fisheries; mail and freight operation

SYSTEMS: Two independent pneumatic systems for flaps and landing gear actuation and engine starting

DIMENSIONS, EXTERNAL:

Wing span	12.70 m (41 ft 8 in)
Wing aspect ratio	8.06
Length overall	8.55 m (28 ft 0½ in)
Height overall	3.16 m (10 ft 4½ in)

AREAS:

Wings, gross	20.0 m² (215.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,270 kg (2,800 lb)
Max payload	450 kg (992 lb)
Max T-O weight	2,100 kg (4,630 lb)
Max wing loading	105.0 kg/m² (21.5 lb/sq ft)
Max power loading	7.84 kg/kW (12.9 lb/hp)

PERFORMANCE (estimated):

Max level speed	162 kts (300 km/h; 186 mph)
Max cruising speed	153 kts (285 km/h; 177 mph)
Landing speed	68 kts (125 km/h; 78 mph)
Service ceiling	4,000 m (13,125 ft)
T-O run	610 m (2,000 ft)
Landing run	600 m (1,970 ft)
Range with max payload, 45 min reserves	more than 540 n miles (1,000 km; 620 miles)

UPDATED

YAKOVLEV Yak-77

TYPE: Twin-turbofan long-range executive/regional transport

PROGRAMME: Announced Spring 1993, first flight scheduled 1996

DESIGN FEATURES: All-swept low-wing configuration, TsAGI high-efficiency wing section, with compound sweepback and winglets, tailplane near tip of tailfin, rear-mounted turbofan pods. Designed to conform with FAR Pt 25 and JAR-25 requirements

LANDING GEAR: Retractable tricycle type, twin wheels on each unit

POWER PLANT: Two Allison GMA 3000 series turbofans

ACCOMMODATION: Two crew side by side on flight deck, main cabin able to accommodate eight business passengers or 32 in regional transport configuration, with changes only to cabin arrangements. Lengthened versions for 50 to 70 passengers projected

AVIONICS: Collins Pro Line 4 system

DIMENSIONS, EXTERNAL:

Wing span	21.55 m (70 ft 8½ in)
Length overall	20.45 m (67 ft 1¼ in)
Height overall	7.46 m (24 ft 5¾ in)
Tailplane span	6.53 m (21 ft 5 in)

WEIGHTS AND LOADINGS:

Max payload	3,500 kg (7,715 lb)
Payload, executive version	900 kg (1,985 lb)
Max T-O weight	25,200 kg (55,555 lb)

PERFORMANCE (estimated):

Max cruising speed	Mach 0.8
Econ cruising speed at 12,200 m (40,000 ft)	Mach 0.75
Balanced runway length (ISA)	2,200 m (7,220 ft)
Max range, with reserves: eight-seat executive	5,400 n miles (10,000 km; 6,215 miles)
32-seat regional	3,240 n miles (6,000 km; 3,725 miles)

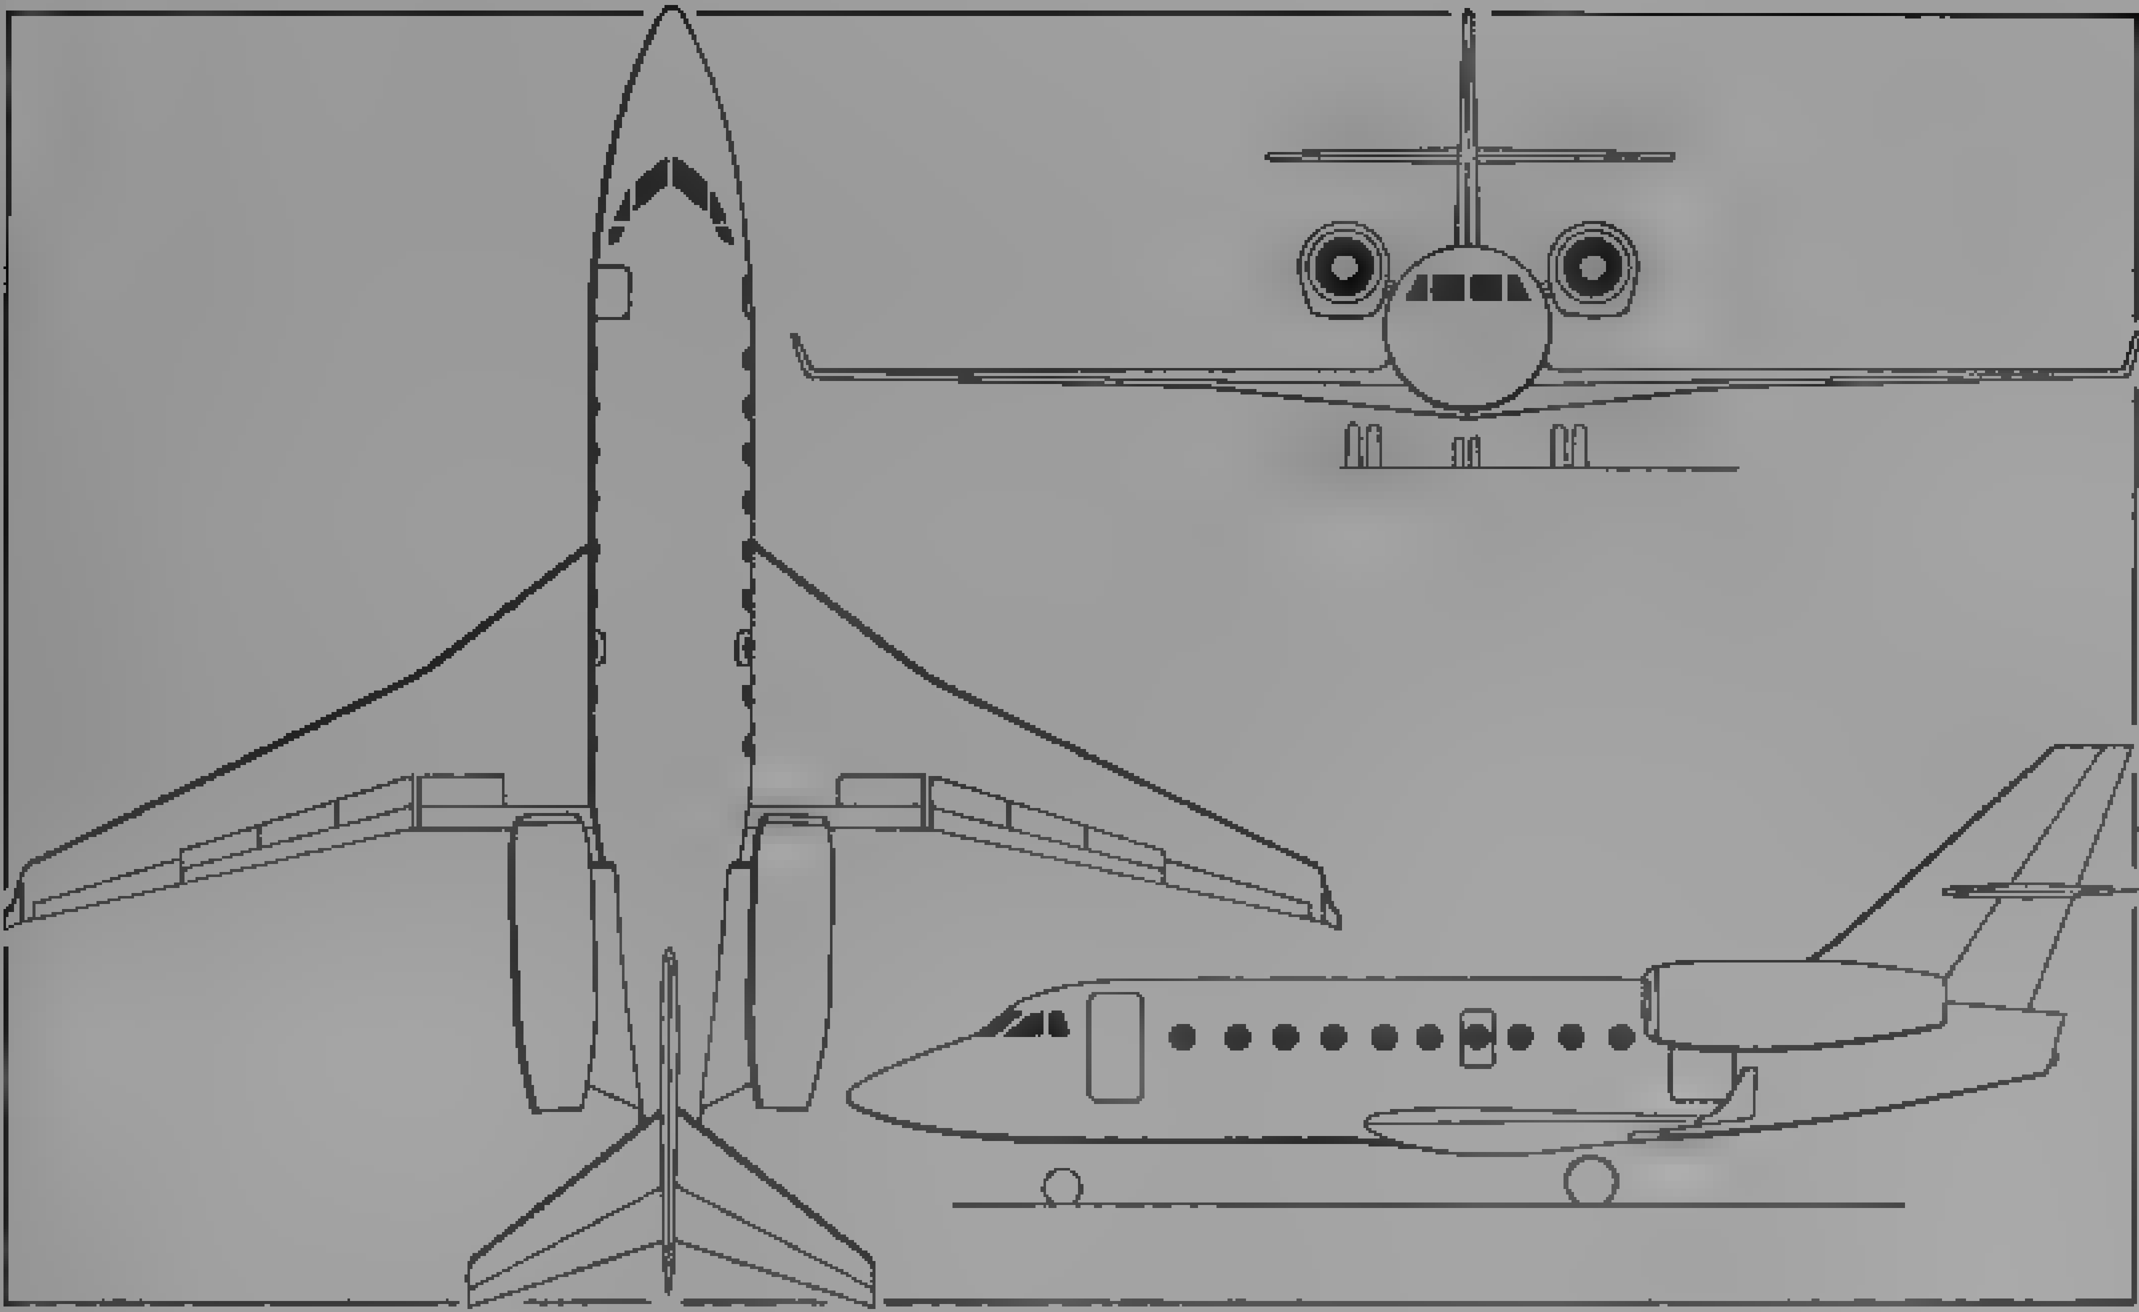
VERIFIED

YAKOVLEV Yak-112

TYPE: Four-seat multipurpose light aircraft

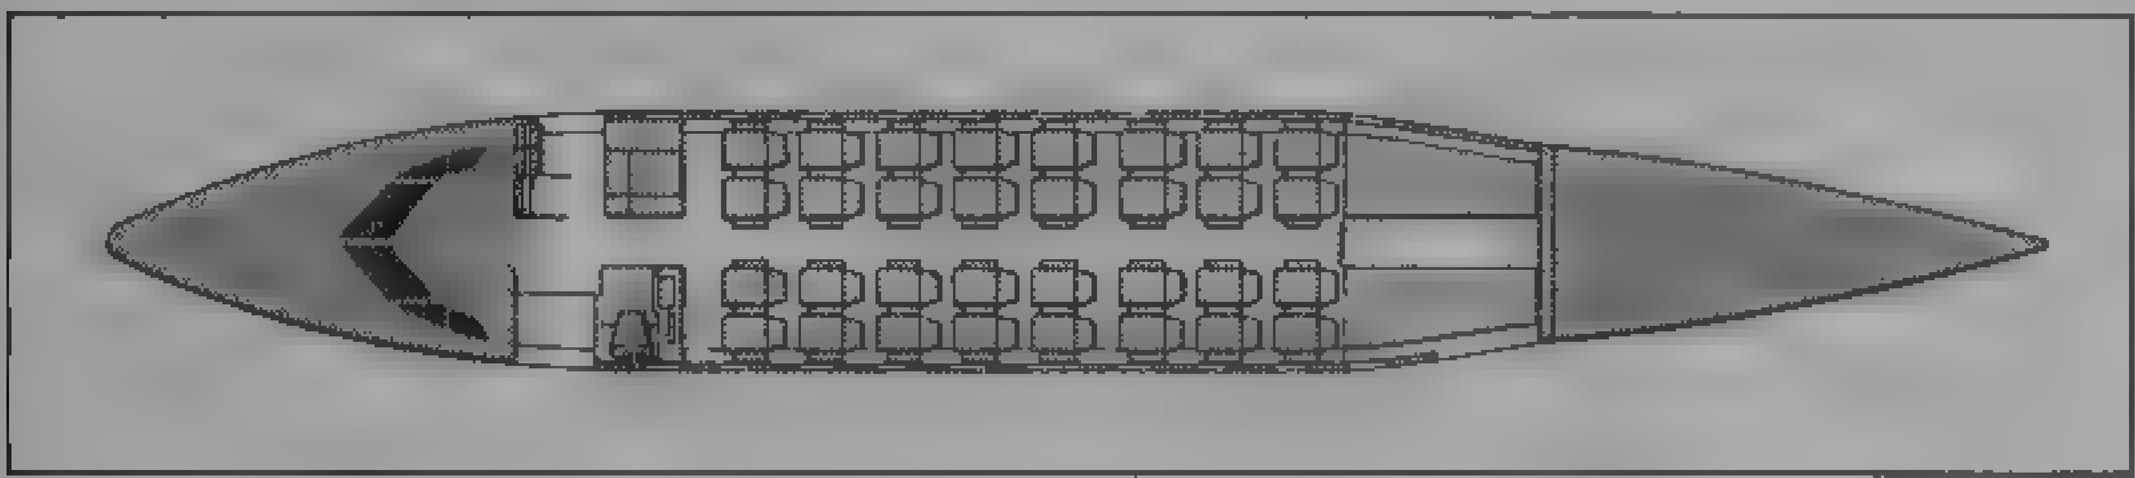
PROGRAMME: Winner of 1988 official design competition for two-seat primary trainer for CIS aero clubs, developed subsequently to current four-seat configuration; model shown at Moscow Aerospace '90 and full-scale mockup at 1991 Paris Air Show; first flight of prototype (RA-00001) 20 October 1992; production at Irkutsk

CURRENT VERSIONS: Intended to carry passengers, light cargo and mail, for pilot training, glider towing, ambulance duties, forest, pipeline and cable patrol, fisheries surveillance and agricultural use



Yakovlev Yak-77 twin-turbofan executive/regional transport *(Jane's/Mike Keep)*

1994



Typical cabin arrangement of Yakovlev Yak-77 *(Jane's/Mike Keep)*

1994

CUSTOMERS: Orders totalled 500 mid-1993, exports primarily to India and South America

DESIGN FEATURES: Conventional high-wing configuration, constant-chord unswept wing, dihedral 1°; cambered wingtips, single bracing strut each side; pod and boom fuselage, with heavily glazed cabin offering exceptional all-round view, swept tail fin, composites used extensively

LANDING GEAR: Non-retractable tricycle type; single wheel, with low-pressure tyre, on each unit, cantilever spring mainwheel legs, floats and skis optional

POWER PLANT: One 157 kW (210 hp) six-cylinder Teledyne Continental IO-360-ES, Hartzell two-blade two-position propeller

ACCOMMODATION: Four persons in pairs in enclosed cabin

AVIONICS: Bendix/King avionics

DIMENSIONS, EXTERNAL:

Wing span	10.25 m (33 ft 7½ in)
Wing aspect ratio	6.63
Length overall	6.96 m (22 ft 10 in)
Height overall	2.90 m (9 ft 6 in)

AREAS:

Wings, gross	16.96 m² (182.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	775 kg (1,709 lb)
Max payload	270 kg (595 lb)
Max T-O weight	1,260 kg (2,778 lb)
Max wing loading	74.29 kg/m² (15.21 lb/sq ft)
Max power loading	8.03 kg/kW (13.23 lb/hp)

PERFORMANCE:

Max cruising speed	135 kts (250 km/h; 155 mph)
Econ cruising speed	102 kts (190 km/h; 118 mph)
Landing speed	68 kts (125 km/h; 78 mph)
Service ceiling	4,000 m (13,125 ft)
T-O and landing run	500 m (1,640 ft)
Range, 45 min reserves:	
with max payload	458 n miles (850 km; 528 miles)
with max fuel	648 n miles (1,200 km; 745 miles)

UPDATED

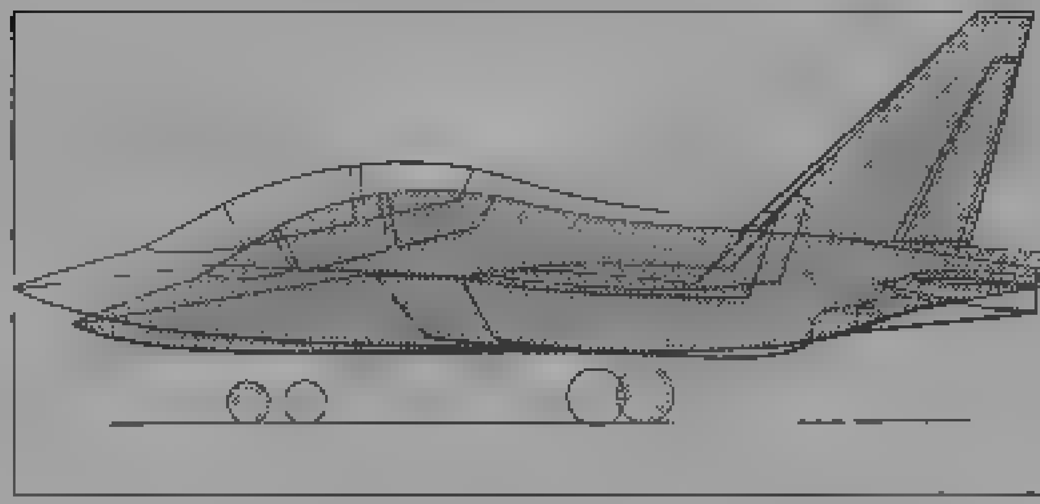
YAKOVLEV Yak-130D

TYPE: Two-seat light fighter/attack/reconnaissance combat aircraft; advanced air defence and deck trainer; special mission target drone aircraft

PROGRAMME: One of designs by five OKBs to meet official Russian requirement for 200 aircraft to replace Aero L-29 and L-39 Albatros for all aspects of flying training, basic to combat simulation, and combat; known initially as Yak UTS, now being developed in partnership with Aermacchi of Italy, prototype shown to press 30 November 1994, first flight scheduled for mid-1995; navalised version proposed for carrier training, tender now includes Penza (Russia)/CAE Electronics (Canada) simulators and Yak 54 for screening and primary training. To be manufactured at Saratov SAZ plant and Sokol plant, Nizhny Novgorod

Yakovlev Yak-112 four-seat multipurpose lightplane *(Paul Jackson)*

1995



Production Yak 130 (shaded) compared with prototype *(Jane's/James Goulding)*

1995

DESIGN FEATURES: Unconventional all-swept mid-wing monoplane, except for straight wing and tailplane trailing-edges; no dihedral or anhedral, winglets, full-span leading-edge slats permit flight at angles of attack up to 35°, low-mounted tailplane, with dogtooth leading-edge; engines in ducts under wingroots, beneath LERX extending almost to windscreen. Wing leading-edge sweepback 31°. Design service life 15,000 flying hours and 25,000 landings. See accompanying three-view for further details

FLYING CONTROLS: Avionika full-authority three-channel digital fly-by-wire system developed from that of Yak-141 V/STOL combat aircraft prototype inherently stable, production aircraft intended to have 5 per cent longitudinal instability to reproduce handling characteristics of MiG-29/Su-27 series. Controllability can be changed to simulate other types

LANDING GEAR: Retractable tricycle type, single wheel on each unit, mainwheels retract into engine ducts; low-pressure tyres

POWER PLANT: Two RD-35M turbofans (Klimov-modified ZMKB Progress DV 2s), each 21.6 kN (4,850 lb st)

ACCOMMODATION: Two crew in tandem under blister canopy, on Zvezda K-36 zero/zero ejection seats, rear seat raised

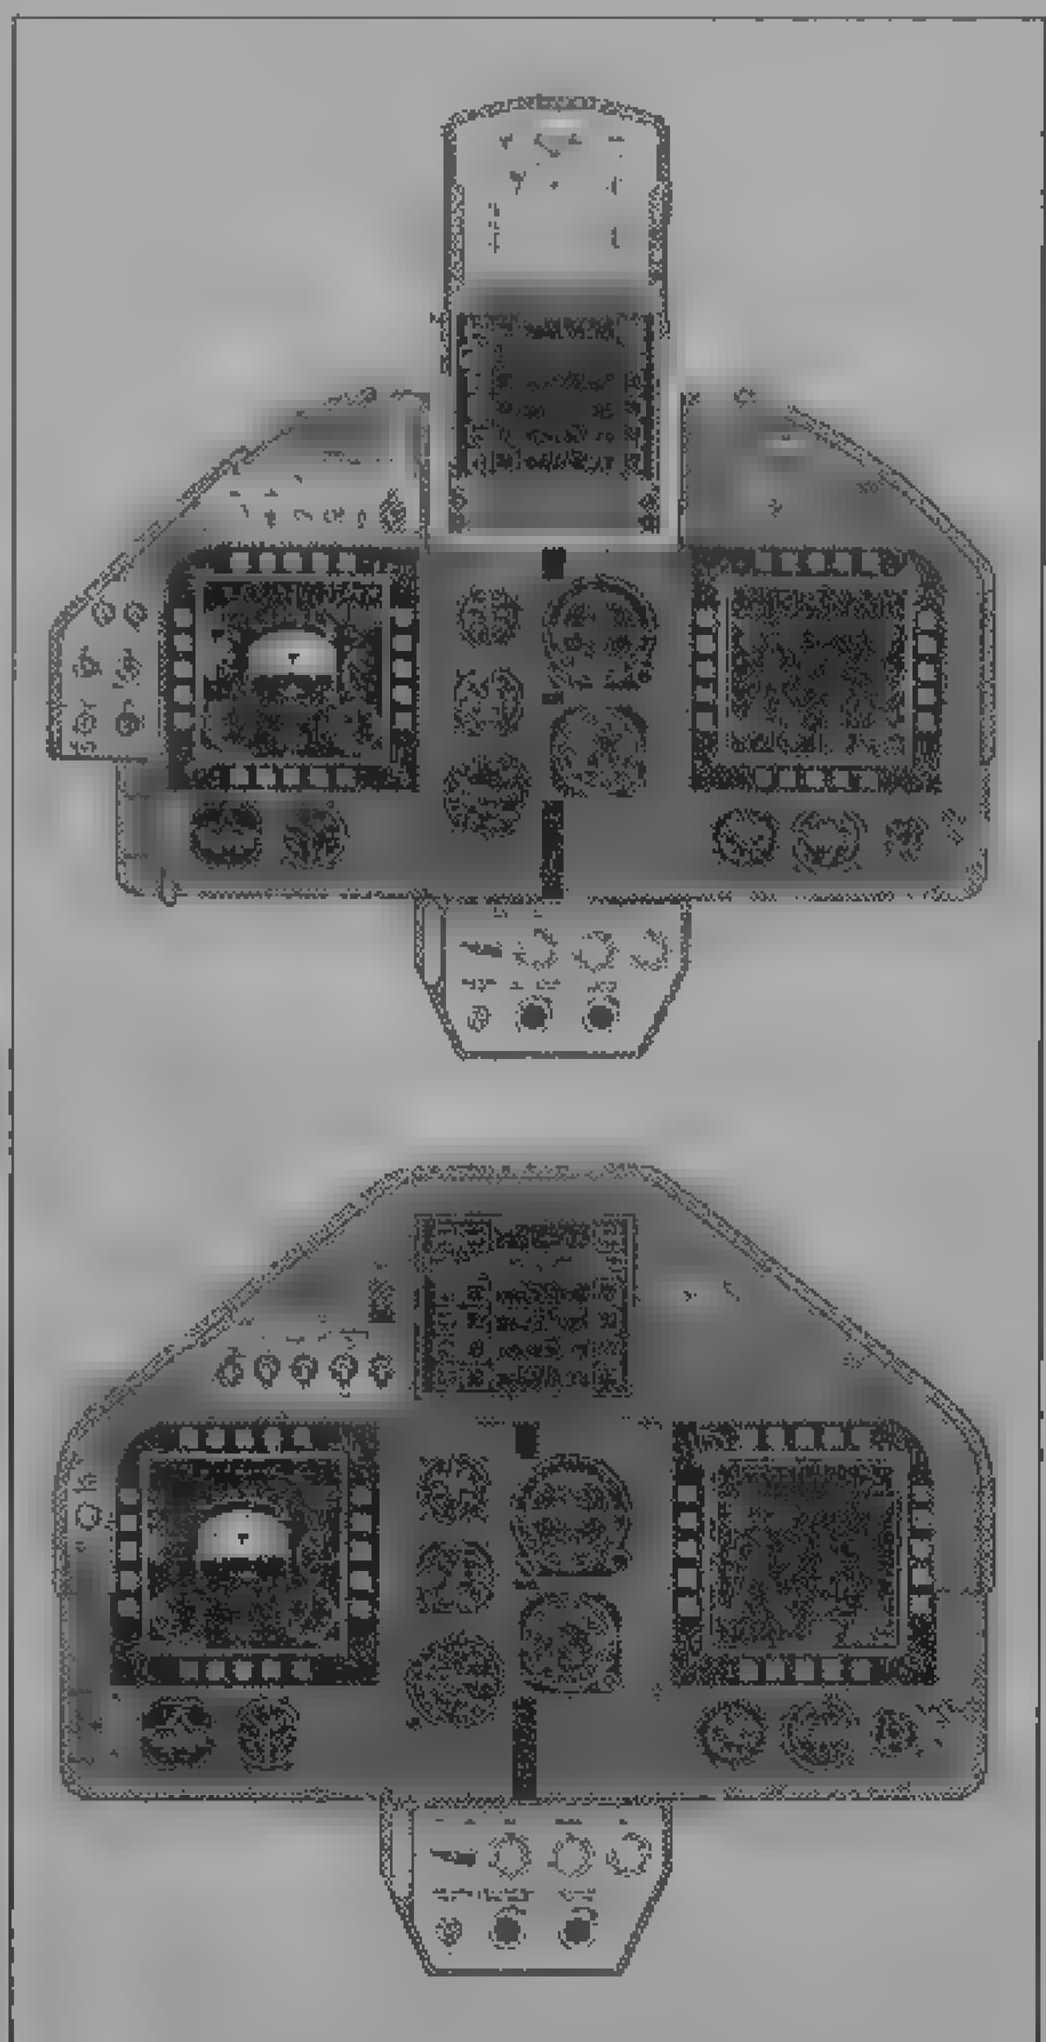
AVIONICS: Western avionics optional to replace standard Russian equipment

Radar: Optional

Flight: Nav computer, INS with GPS receiver, air data system, short-range radio nav and ILS, ADF and radio altimeter. IFF

Instrumentation: HUD in front cockpit as part of collimated flight and sighting display in conjunction with pilot's helmet-mounted target designator; two CRTs in each cockpit with standby electromechanical flight/nav instruments

Mission: Optical weapon aiming computer and weapons control system, simulator of moving targets, guidance



Front/student's (top) and rear/instructor's instrument panels of Yak-130. Western versions will have three MFDs

1995

commands, weapons preparation and tactical situations, flight data and crew actions recorder; TV monitor of eyes and hands positions, with video recorder, in front cockpit

ARMAMENT (optional): Seven (optionally nine) hardpoints for guns, missiles, guided and unguided bombs

DIMENSIONS, EXTERNAL:	
Wing span	10.64 m (34 ft 11 in)
Length overall	11.90 m (39 ft 0½ in)
Height overall	4.70 m (15 ft 5 in)
Wheel track	2.50 m (8 ft 2½ in)
Wheelbase	4.00 m (13 ft 1½ in)
AREAS:	
Wings, gross	23.5 m² (253.0 sq ft)
WEIGHTS AND LOADINGS:	
Max fuel: internal	1,650 kg (3,637 lb)
with external tank	2,200 kg (4,850 lb)
Normal T-O weight	6,000 kg (13,230 lb)
Max T-O weight	8,500 kg (18,740 lb)
Max power loading	197.0 kg/kN (1.93 lb/lb st)
PERFORMANCE (estimated):	
Max level speed at height	512-540 kts (950-1,000 km/h; 590-620 mph)
T-O speed	108 kts (200 km/h; 125 mph)
Landing speed	105 kts (195 km/h; 122 mph)
Service ceiling	more than 12,000 m (39,370 ft)
T-O run	380 m (1,250 ft)
Landing run	670 m (2,200 ft)
Max ferry range with conformal tank	1,185 n miles (2,200 km; 1,365 miles)
Sustained *g* limit at 4,575 m (15,000 ft)	+5
g limits	+8/−3

UPDATED

AEROTEK HUMMINGBIRD

TYPE: Two-seat observation and utility light aircraft.

PROGRAMME: Prototype first flight (ZU-AFU) 8 May 1993; no subsequent information received.

CUSTOMERS: Intended for civil/police patrol and surveillance market as alternative to helicopters.

DESIGN FEATURES: Strut-braced high-wing monoplane with T tail, pod and boom fuselage, helicopter-like view from cockpit. Tailplane/elevator/rudder removable for transportation and storage.

Wing section NASA GA(W)-1 (constant); dihedral 2°; washout 1°; no sweepback.

FLYING CONTROLS: Conventional mechanical (pushrods and cables) for primary surfaces. Plain ailerons of 25 per cent chord, Fowler flaps of 30 per cent chord.

STRUCTURE: All-composites (GFRP and Nomex). Single wing strut each side. Fin integral with fuselage. Tailplane and elevator each of one-piece construction.

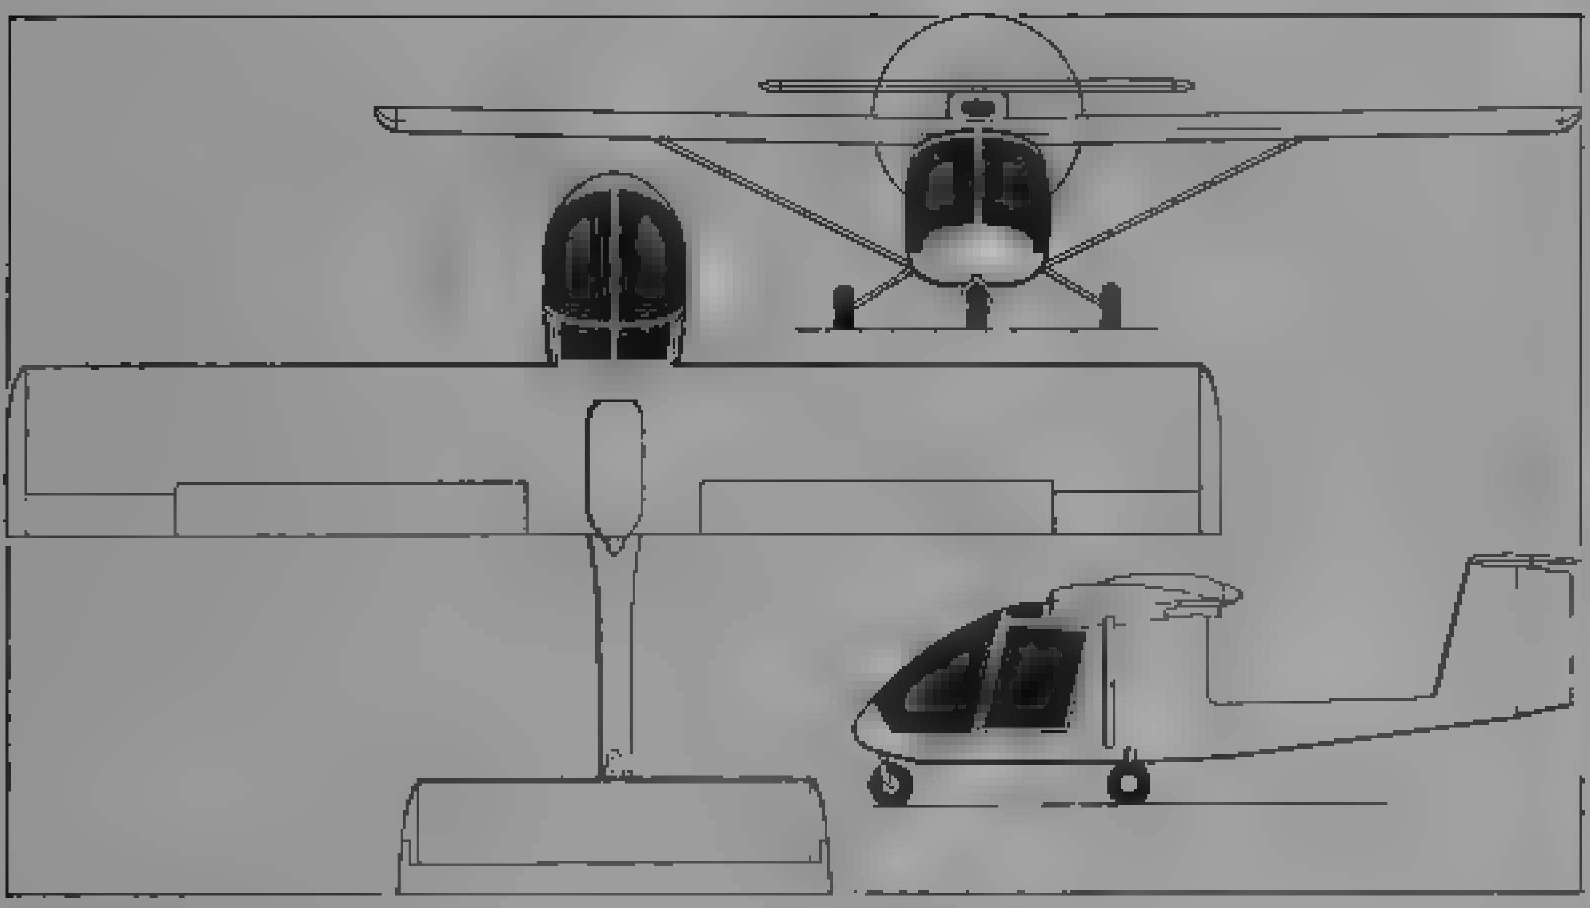
LANDING GEAR: Non-retractable tricycle type, with single wheel and size 5.00-5 tyre on each unit; nosewheel steerable. Cantilever self-sprung mainwheel legs and independent mainwheel brakes.

POWER PLANT: One 74.6 kW (100 hp) Norton NR 642-GF 90 rotary engine, reduced from 7,000 to 2,550 rpm through integral gearbox and driving a two-blade, two-position pusher propeller. Fuel tank in each wing, combined capacity 80 litres (21.1 US gallons; 17.6 Imp gallons). Rotax 914 engine optional.

ACCOMMODATION: Two seats side by side in fully enclosed and extensively glazed cabin, second seat removable; provision for third seat behind front pair in emergency. Forward-opening window/door each side.

AVIONICS: *Instrumentation:* VFR instrumentation to JAR-VLA standard.

DIMENSIONS, EXTERNAL:	
Wing span	10.90 m (35 ft 9¼ in)
Wing aspect ratio	7.27
Length overall	6.50 m (21 ft 4 in)
Height overall	2.10 m (6 ft 10¾ in)
Elevator span	4.00 m (13 ft 1½ in)
DIMENSIONS, INTERNAL:	
Cockpit: Max width	1.27 m (4 ft 2 in)
AREAS:	
Wings, gross	16.35 m² (176.0 sq ft)
Vertical tail surfaces (total)	1.60 m² (17.22 sq ft)
Horizontal tail surfaces (total)	4.00 m² (43.06 sq ft)



Aerotek Hummingbird two-seat observation light aircraft *(Jane's/Mike Keep)* 1993

Prototype Aerotek Hummingbird (100 hp Norton NR 642-GF-90 rotary engine) 1994

WEIGHTS AND LOADINGS:

Weight empty	320 kg (705 lb)
Max T-O weight	620 kg (1,367 lb)
Max wing loading	37.9 kg/m² (7.77 lb/sq ft)
Max power loading	8.32 kg/kW (13.67 lb/hp)

PERFORMANCE (estimated):

Max level speed at S/L	105 kts (195 km/h; 121 mph)
Cruising speed at S/L, 70% power	90 kts (167 km/h; 103 mph)
Loiter speed, 10° flap	41 kts (76 km/h; 47 mph)
Stalling speed, flaps down	30 kts (56 km/h; 35 mph)
Max rate of climb at S/L	220 m (725 ft)/min
Service ceiling	4,575 m (15,000 ft)
T-O and landing run	less than 100 m (328 ft)
Endurance at max cruising speed	4 h 30 min

CEO: J. J. Eksteen
PUBLIC RELATIONS MANAGER: Patricia Wilson

Atlas Aircraft Corporation (see 1991-92 and earlier *Jane's*) founded 1964 by Bonuskor as private company; delivered first Impala Mk 1 (Aermacchi MB-326) jet trainers to SAAF 1966; incorporated into Armscor Group 1969; has manufacturing, design and development facilities for airframes, engines, missiles and avionics; developed Cheetah from Mirage III, Rooivalk from Puma, Oryx (Super Puma) from Puma, V3B and V3C dogfight missiles, and many weapons installations. Restructuring of Armscor on 1 April 1992 created Denel as self-sufficient commercial industrial group, in which Atlas Aviation is military aircraft manufacturing branch of Simera in Denel Aerospace Group; Atlas workforce over 5,000 in 1994-95.

UPDATED

ATLAS/AEROTEK ACE

TYPE: Tandem two-seat turboprop trainer.

PROGRAMME: Design started September 1985 by government research agency Aerotek (which see), initially as demonstrator for composites manufacturing technology (Project Ovid); then known simply as NGT turboprop trainer; first flight of Atlas built prototype 29 April 1991, proposed later that year as replacement for South African Air Force T-6G Harvards, but not selected, now being marketed for export as ACE (All-Composites Evaluator). Following initial flight testing, tail surfaces modified, including addition of tailplane strakes. Civil registration in September 1993 (ZU-AHE); foreign debut at Dubai in October 1993. Prototype badly damaged in wheels-up landing 14 February 1995 after losing pitch control; a second prototype has been ordered.

CURRENT VERSIONS: **ACE 1**: For intermediate training. Prototype is to this standard. *Detailed description applies to this version except where indicated.*

ACE 2: For advanced training; project only. Main difference is more powerful engine (894 kW; 1,200 shp P&WC PT6A-68C).

DESIGN FEATURES: Objectives were pilot comfort, good view, high performance, aerobatics and simplicity to meet NATO trainer specification. Straight tapered wing, slightly sweptback vertical tail, stepped tandem cockpits, fully aerobatic to FAR Pt 23+ standards.

FLYING CONTROLS: Ailerons, one-piece elevator and rudder conventional mechanical, inset tab in rudder and starboard half of elevator; electric trim in all three axes. Single slotted trailing-edge flaps, airbrake under fuselage in line with flaps. Oil system permits up to 30 seconds of inverted flight.

STRUCTURE: All-composites (GFRP/CFRP) airframe: one-piece wing with honeycomb box main spar, auxiliary spar and integral fuel tanks, one-piece fuselage, tailplane and control surfaces. 15,000 hour airframe life.

LANDING GEAR: Hydraulically retractable tricycle type, with single wheel and oleo-pneumatic shock absorber on each unit. Main units retract inward, steerable nose unit rearward. Dunlop wheels and tyres, size 6.50-10 on main units, 6.00-6 on nose unit; tyre pressures 5.52 and 3.79 bars (80 and 55 lb/sq in) respectively. Parker Cleveland hydraulic mainwheel brakes. Minimum ground turning radius 7.00 m (22 ft 11½ in).

POWER PLANT: One 559 kW (750 shp) Pratt & Whitney Canada PT6A-25C turboprop, driving a Hartzell T10178(H)-8R three-blade metal constant-speed, reversible-pitch propeller. Integral fuel tank in each wing, combined capacity 600 litres (158.5 US gallons; 132 Imp gallons). Provision for two 330 litre (87.2 US gallon; 72.6 Imp gallon) underwing tanks, raising total capacity to 1,260 litres (332.9 US gallons; 277.2 Imp gallons). Overwing gravity refuelling point each side. Oil capacity 10.5 litres (2.8 US gallons; 2.3 Imp gallons).

ACCOMMODATION: Pupil (in front) and instructor on tandem Martin-Baker Mk 16L seats, ejecting through canopy; rear seat raised. One-piece framed canopy, opening sideways to starboard. Baggage compartment in rear fuselage.

SYSTEMS: High-pressure hydraulic system for landing gear, flaps and airbrake, separate system for wheel brakes and emergency landing gear extension. Electrical system 28 V DC. High-pressure gaseous oxygen system. De-icing of propeller blades, air intake, pitots and AoA vanes.

AVIONICS: *Comms:* Dual VHF and comm radios; intercom. ATC transponder.

Flight: ADF, VOR, DME, AHRS, ILS and marker beacon receiver.

Instrumentation: EFIS LCDs.

ARMAMENT: Three hardpoints (including one wet) under each wing for training gun packs, bombs, rockets and pair of auxiliary fuel tanks.

DIMENSIONS, EXTERNAL (ACE 1 and 2):

Wing span	10.80 m (35 ft 5¼ in)
Wing aspect ratio	6.48
Length overall	10.80 m (35 ft 5¼ in)
Height overall	4.10 m (13 ft 5½ in)
Fuselage: Max width	1.00 m (3 ft 3¼ in)
Tailplane span	4.30 m (14 ft 1¼ in)
Wheel track	3.90 m (12 ft 9½ in)
Wheelbase	3.20 m (10 ft 6 in)
Propeller diameter	2.36 m (7 ft 9 in)

AREAS (ACE 1 and 2):

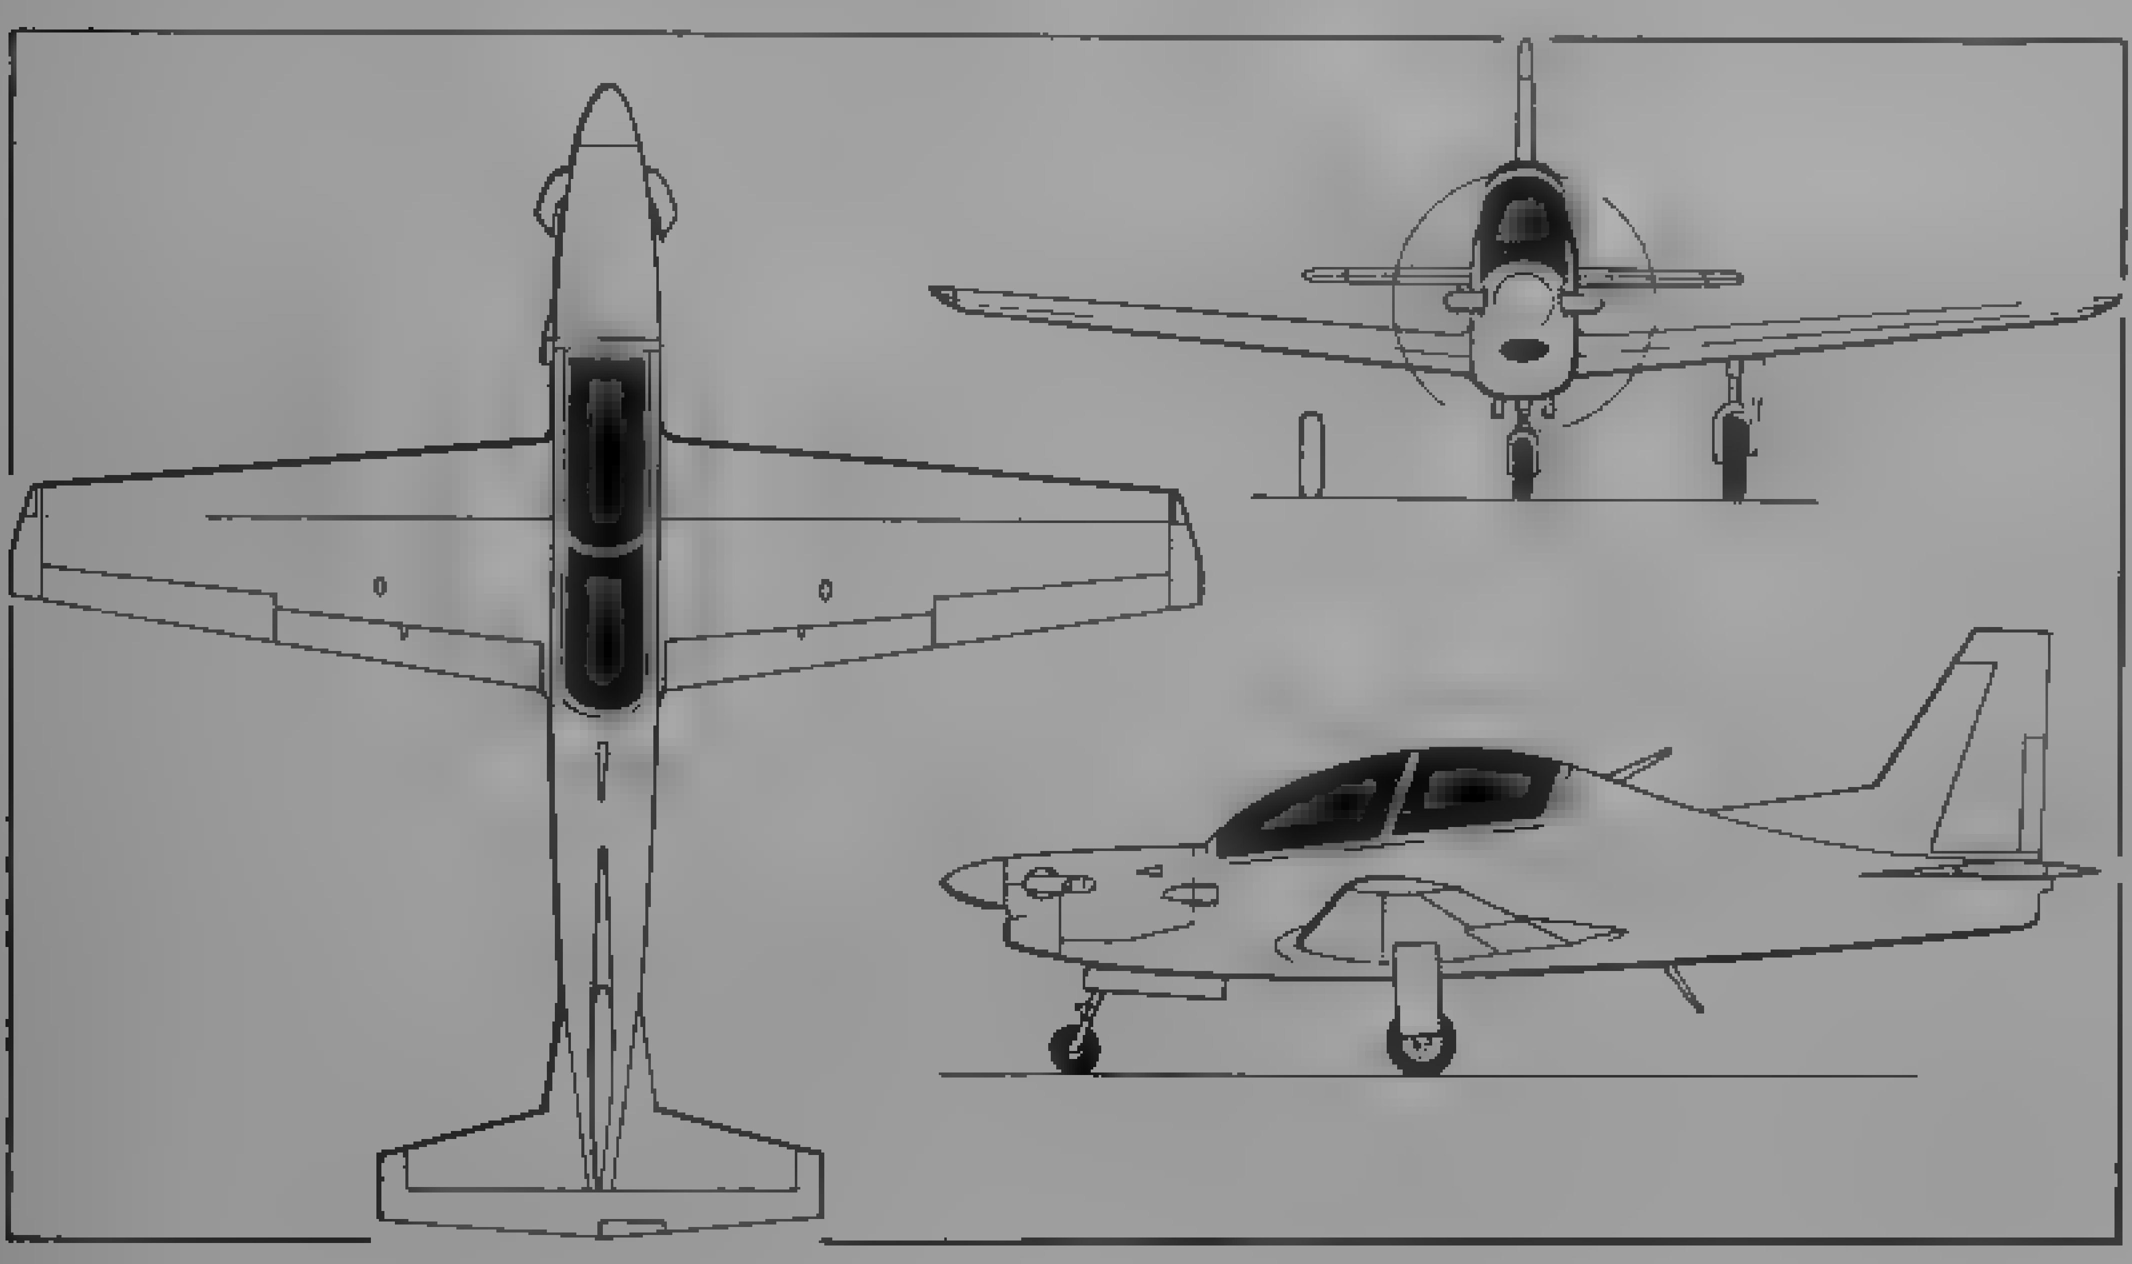
Wings, gross	18.00 m² (193.75 sq ft)
Vertical tail surfaces (total)	2.00 m² (21.53 sq ft)
Horizontal tail surfaces (total)	4.32 m² (46.50 sq ft)

WEIGHTS AND LOADINGS:

Basic weight empty: ACE 1	1,545 kg (3,406 lb)
ACE 2	1,820 kg (4,012 lb)
Max external stores load: ACE 1	1,000 kg (2,205 lb)
Max T-O weight:	
ACE 1, Aerobatic, clean	2,200 kg (4,850 lb)
ACE 1 with external stores	3,200 kg (7,054 lb)
ACE 2, Aerobatic, clean	2,475 kg (5,456 lb)
Max wing loading:	
ACE 1, Aerobatic, clean	122.2 kg/m² (25.03 lb/sq ft)
ACE 1 with external stores	177.8 kg/m² (36.41 lb/sq ft)
ACE 2, Aerobatic, clean	137.5 kg/m² (28.16 lb/sq ft)
Max power loading:	
ACE 1, Aerobatic, clean	3.94 kg/kW (6.47 lb/shp)
ACE 1 with external stores	5.72 kg/kW (9.41 lb/shp)
ACE 2, Aerobatic, clean	2.77 kg/kW (4.55 lb/shp)

PERFORMANCE (ACE 1 at clean Aerobatic max T-O weight, ISA):

Never-exceed speed (V_{NE})	320 kts (592 km/h; 368 mph)
Max operating speed (V_{MO})	300 kts (555 km/h; 345 mph) EAS
Max level speed at 1,525 m (5,000 ft)	270 kts (500 km/h; 311 mph)
Econ cruising speed at 4,575 m (15,000 ft)	200 kts (370 km/h; 230 mph)
Stalling speed, engine idling:	
flaps up	72 kts (134 km/h; 83 mph) EAS
flaps down	65 kts (121 km/h; 75 mph) EAS
Max rate of climb at S/L	838 m (2,750 ft)/min



Atlas/Aerotek ACE trainer powered by P&WC PT6A-25C or -68C turboprop *(Jane's/James Goulding)* 1995

Prototype ACE turboprop trainer developed by Atlas and Aerotek

1995

Service ceiling	10,060 m (33,000 ft)
Sustained turn rate at 1,525 m (5,000 ft)	20.7°/s
T-O run	340 m (1,116 ft)
T-O to 15 m (50 ft): flaps up	420 m (1,378 ft)
T-O flap setting	365 m (1,198 ft)
Landing from 15 m (50 ft): flaps up	430 m (1,411 ft)
landing flap setting	375 m (1,231 ft)
landing run	300 m (985 ft)
Max range at 7,620 m (25,000 ft), 45 min reserves	1,100 n miles (2,037 km, 1,266 miles)
Max endurance at 7,620 m (25,000 ft)	5 h 30 min
g limits	+7/−3.5

PERFORMANCE: (ACE 2, estimated, at clean Aerobatic max T-O weight, ISA)

Never-exceed speed (V_{NE})	340 kts (629 km/h, 391 mph)
Max operating speed (V_{MO})	320 kts (592 km/h, 368 mph) EAS
Max level speed: at S/L	290 kts (537 km/h, 334 mph)
at 1,525 m (5,000 ft)	310 kts (574 km/h, 357 mph)
Stalling speed, flaps down	69 kts (128 km/h, 80 mph) EAS
Max rate of climb at S/L	1,356 m (4,450 ft)/min
Time to 4,575 m (15,000 ft)	3 min 30 s
Service ceiling	12,500 m (41,000 ft)
Sustained turn rate at 1,525 m (5,000 ft)	24°/s
Max roll rate at 240 kts (444 km/h, 276 mph)	130°/s
T-O to 15 m (50 ft), T-O flap setting	420 m (1,378 ft)
Landing from 15 m (50 ft), landing flap setting	430 m (1,411 ft)
Max range at 7,620 m (25,000 ft), 45 min reserves	940 n miles (1,741 km, 1,082 miles)
Max endurance at 7,620 m (25,000 ft)	4 h 12 min

UPDATED

ATLAS CSH-2 ROOIVALK (RED KESTREL)

TYPE: Combat support helicopter (battlefield attack development of French AS 330 Puma).

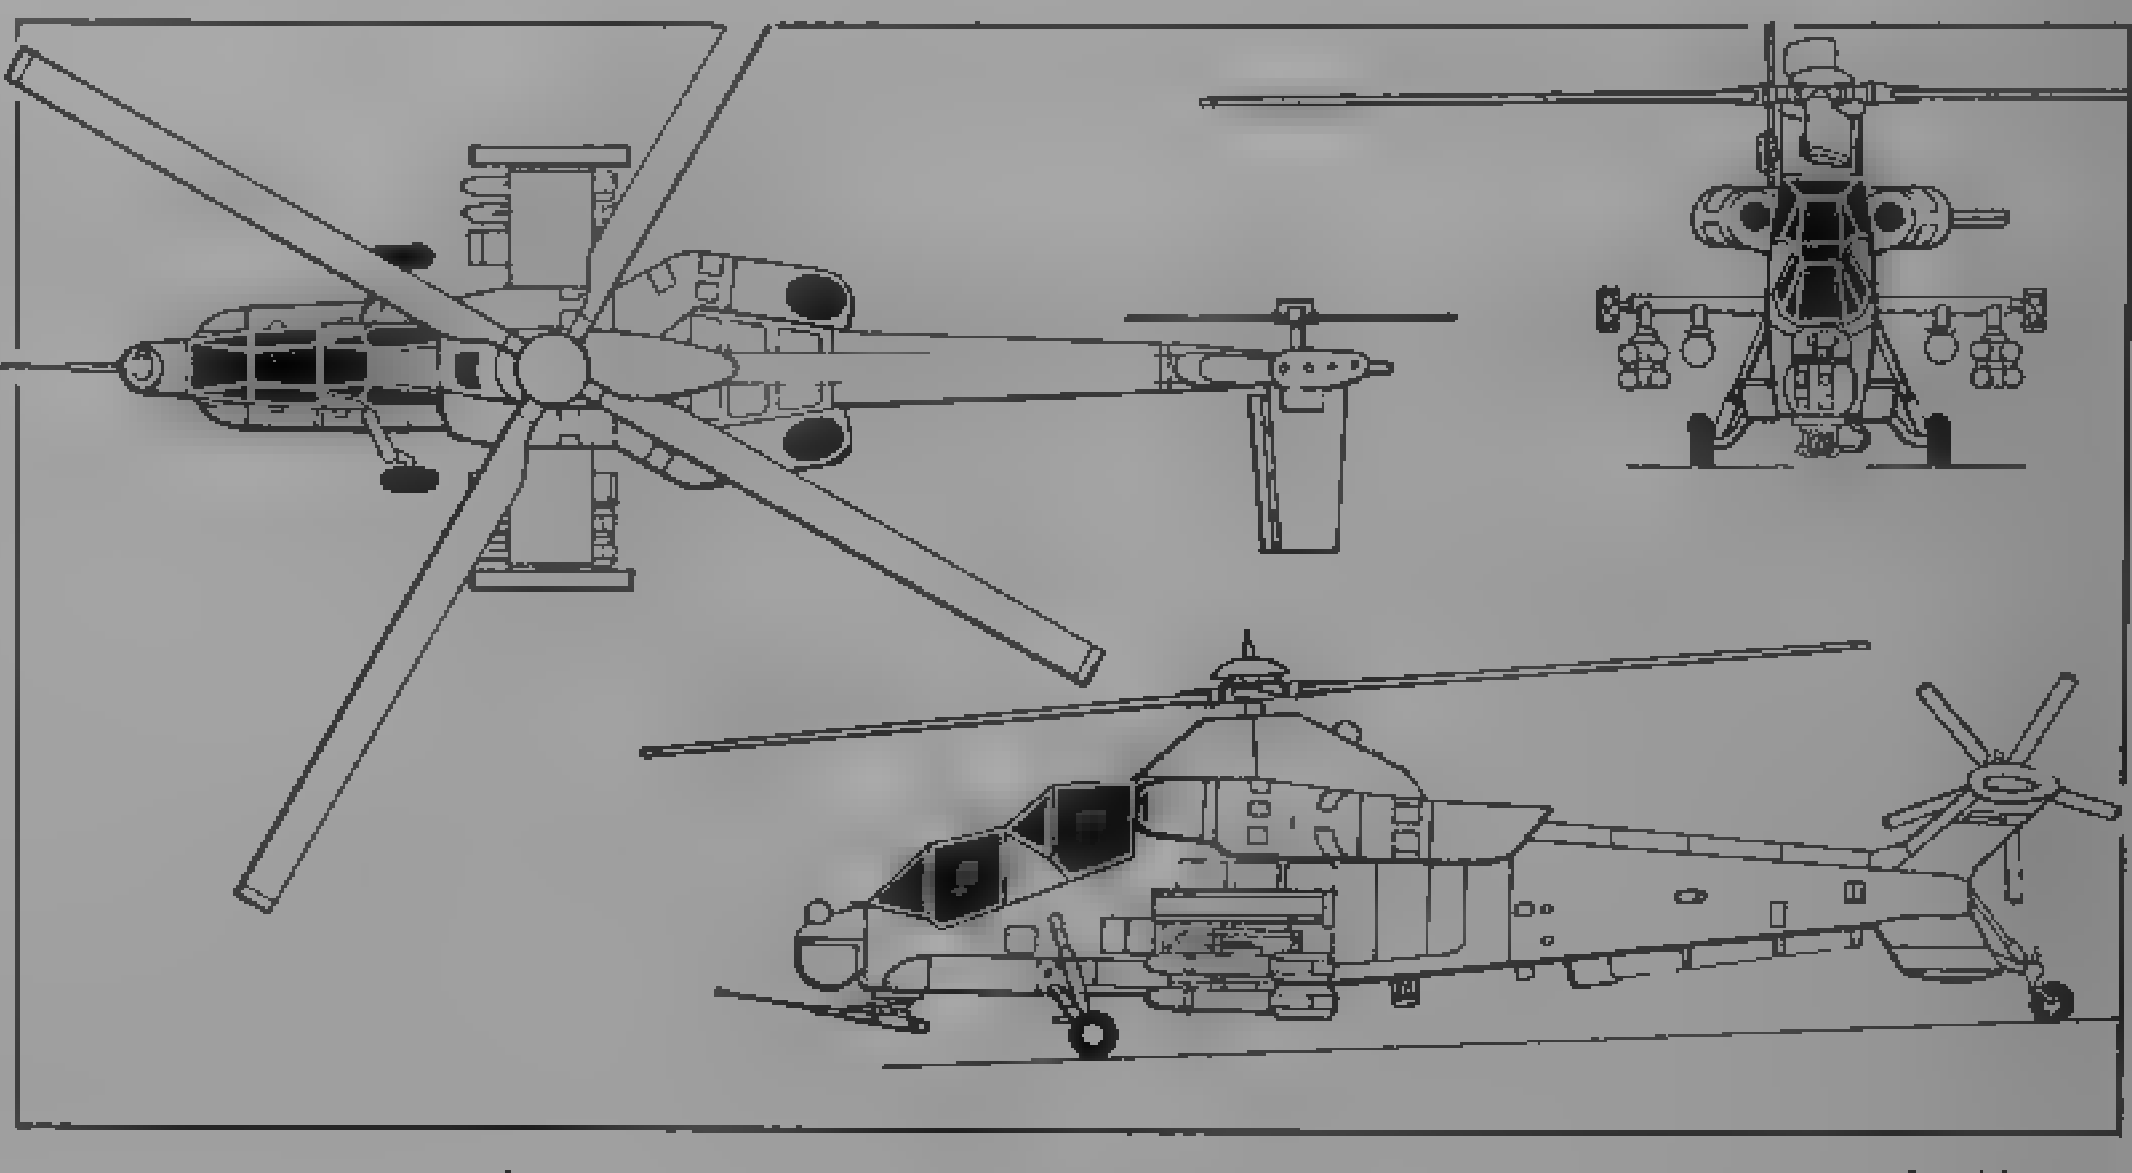
PROGRAMME: For background to Rooivalk programme, see 1994-95 and earlier editions. Design of Rooivalk **XDM** (experimental development model) first prototype (originally designated XH-2, later CSH-2) began late 1984 to meet South African Air Force user requirement specification, leading to public roll-out 15 January and first flight 11 February 1990; ending of war in Namibia and subsequent defence cuts removed SAAF need for the aircraft and programme temporarily halted later in 1990, but restarted as mainly company funded venture with reported export interest and discussions with possible development partners 1990-91. **ADM** (advanced demonstration model) second prototype, with fully integrated avionics and full weapons system, made first flight during second quarter of 1992 and later registered ZU-AHC; over 400 hours flown by XDM and over 200 hours by ADM by early 1995. third prototype (**EDM**, engineering development model, with sponsons for ammunition storage and additional avionics) to fly May 1996; certification and service entry due 1998. South African Air Force order for four in October 1993 increased to 16 mid-March 1994. Submitted (partnered by Marshall of Cambridge) as unsolicited bid for British Army requirement in 1993-94, but subsequently eliminated.

CUSTOMERS: South African Air Force, 16 to equip two squadrons. Malaysia reportedly announced intention to purchase.

DESIGN FEATURES: Based on reverse engineering of SA 330 Puma dynamics system to Super Puma equivalent

Atlas artist's drawing of CSH-2 Rooivalk, armed with wingtip air-to-air missiles, 22-round pods of 68 mm unguided rockets, four-round anti-tank missile pods and a chin-mounted 20 mm gun

1994



Production version of Atlas Rooivalk twin-turbine combat support helicopter ***(Jane's/James Goulding)***

1995

Second (ADM) prototype of the CSH-2 Rooivalk during firing trials of F2 gun

1995

standard, engines moved aft to clear stepped tandem cockpits, rear drive taken inboard and forward to modified transmission. Nose-mounted target acquisition turret and chin-mounted gun, sweptback stub-wings for weapon carriage. Four-blade fully articulating main rotor rotates at 265 to 290 rpm, five-blade, starboard-mounted tail rotor rotates at 1,279 rpm. Rotor brake fitted. Fixed leading-edge slat on horizontal stabiliser.

Low radar/visual/infra-red/acoustic signatures, optimised for NOE operation, NVG-compatible 'glass' cockpit; primary missions anti-armour and close air support; integrated digital nav/attack system. Performance includes 52 per cent excess hover power and 50 knots (92 km/h; 57 mph) sideways flight.

FLYING CONTROLS: Duplex digital AFCS with automatic height hold, hover capture and hover hold; HOCAS (hands on collective and stick) controls.

TDATS sensors and GA-1 20 mm gun on Rooivalk ADM *(Paul Jackson)*

1995

STRUCTURE: Crash resistant primary structure, of aluminium alloy, is of I-beam and monocoque construction; rotor blades and fuselage secondary structures of composites sandwich. Integral access ladders in fuselage, engine cowls form work platforms.

LANDING GEAR: Forward-mounted main gear with two-stage high-absorption main legs, fully castoring tailwheel at base of lower fin. Gear designed to withstand landing impact of up to 6 m (20 ft)/s.

POWER PLANT: Two Topaz (locally upgraded Turbomeca Makila 1A2) turboshafts, each rated at 1,491 kW (2,000 shp) for T-O and 1,548 kW (2,075 shp) for 30 seconds emergency operation; rear drive turned to drive forward into rear of transmission. Infra-red heat suppressors on exhausts, particle separators on intakes. Main gearbox mounted on vibration isolation system using tuned beam to isolate fuselage from rotor vibrations (claimed to have one of lowest vibration levels in its class). Transmission rated at 2,243 kW (3,008 shp) for T-O and 1,817 kW (2,436 shp) maximum continuous from both engines; single-engine transmission ratings are 1,548 kW (2,076 shp) maximum contingency and, 1,481 kW (1,986 shp) maximum continuous. Transmission has 40 minutes run dry capability at reduced power settings. Fuel tankage (self-sealing) in fuselage, under stub-wings (three 618 litre, 163.3 US gallon, 135.9 Imp gallon tanks for total of 1,854 litres, 489.8 US gallons, 407.8 Imp gallons). Pressure refuelling and defuelling. Provision for 750 litre (198 US gallon; 165 Imp gallon) drop tank on each inboard underwing station.

ACCOMMODATION: Pilot (rear) and co-pilot/weapons officer in stepped, tandem cockpits with crashworthy seats and armour protection. Access to cockpits via gull-wing starboard side window panels. All transparencies flat-plate or single curvature. Dual flight controls.

SYSTEMS: Environmental control system for cockpit air conditioning. Two independent hydraulic systems, each at 175 bars (2,538 lb/sq in) pressure, at 170 bars (2,465 lb/sq in) flow rate is 12 litres (3.2 US gallons; 2.6 Imp gallons)/min in right-hand system and 27 litres (7.1 US gallons; 5.9 Imp gallons)/min in left-hand system.

Electrical power from two 20 kVA alternators providing 200 V three-phase and 115 V single-phase AC at 400 Hz, with two transformer rectifiers and two 24 V 31 Ah

Rooivalk ADM prototype displays its external stores capability at Farnborough in 1994 *(Kenneth Munson)*

1995

batteries for 28 V DC power. Full or partial electric de-icing, demisting optional.

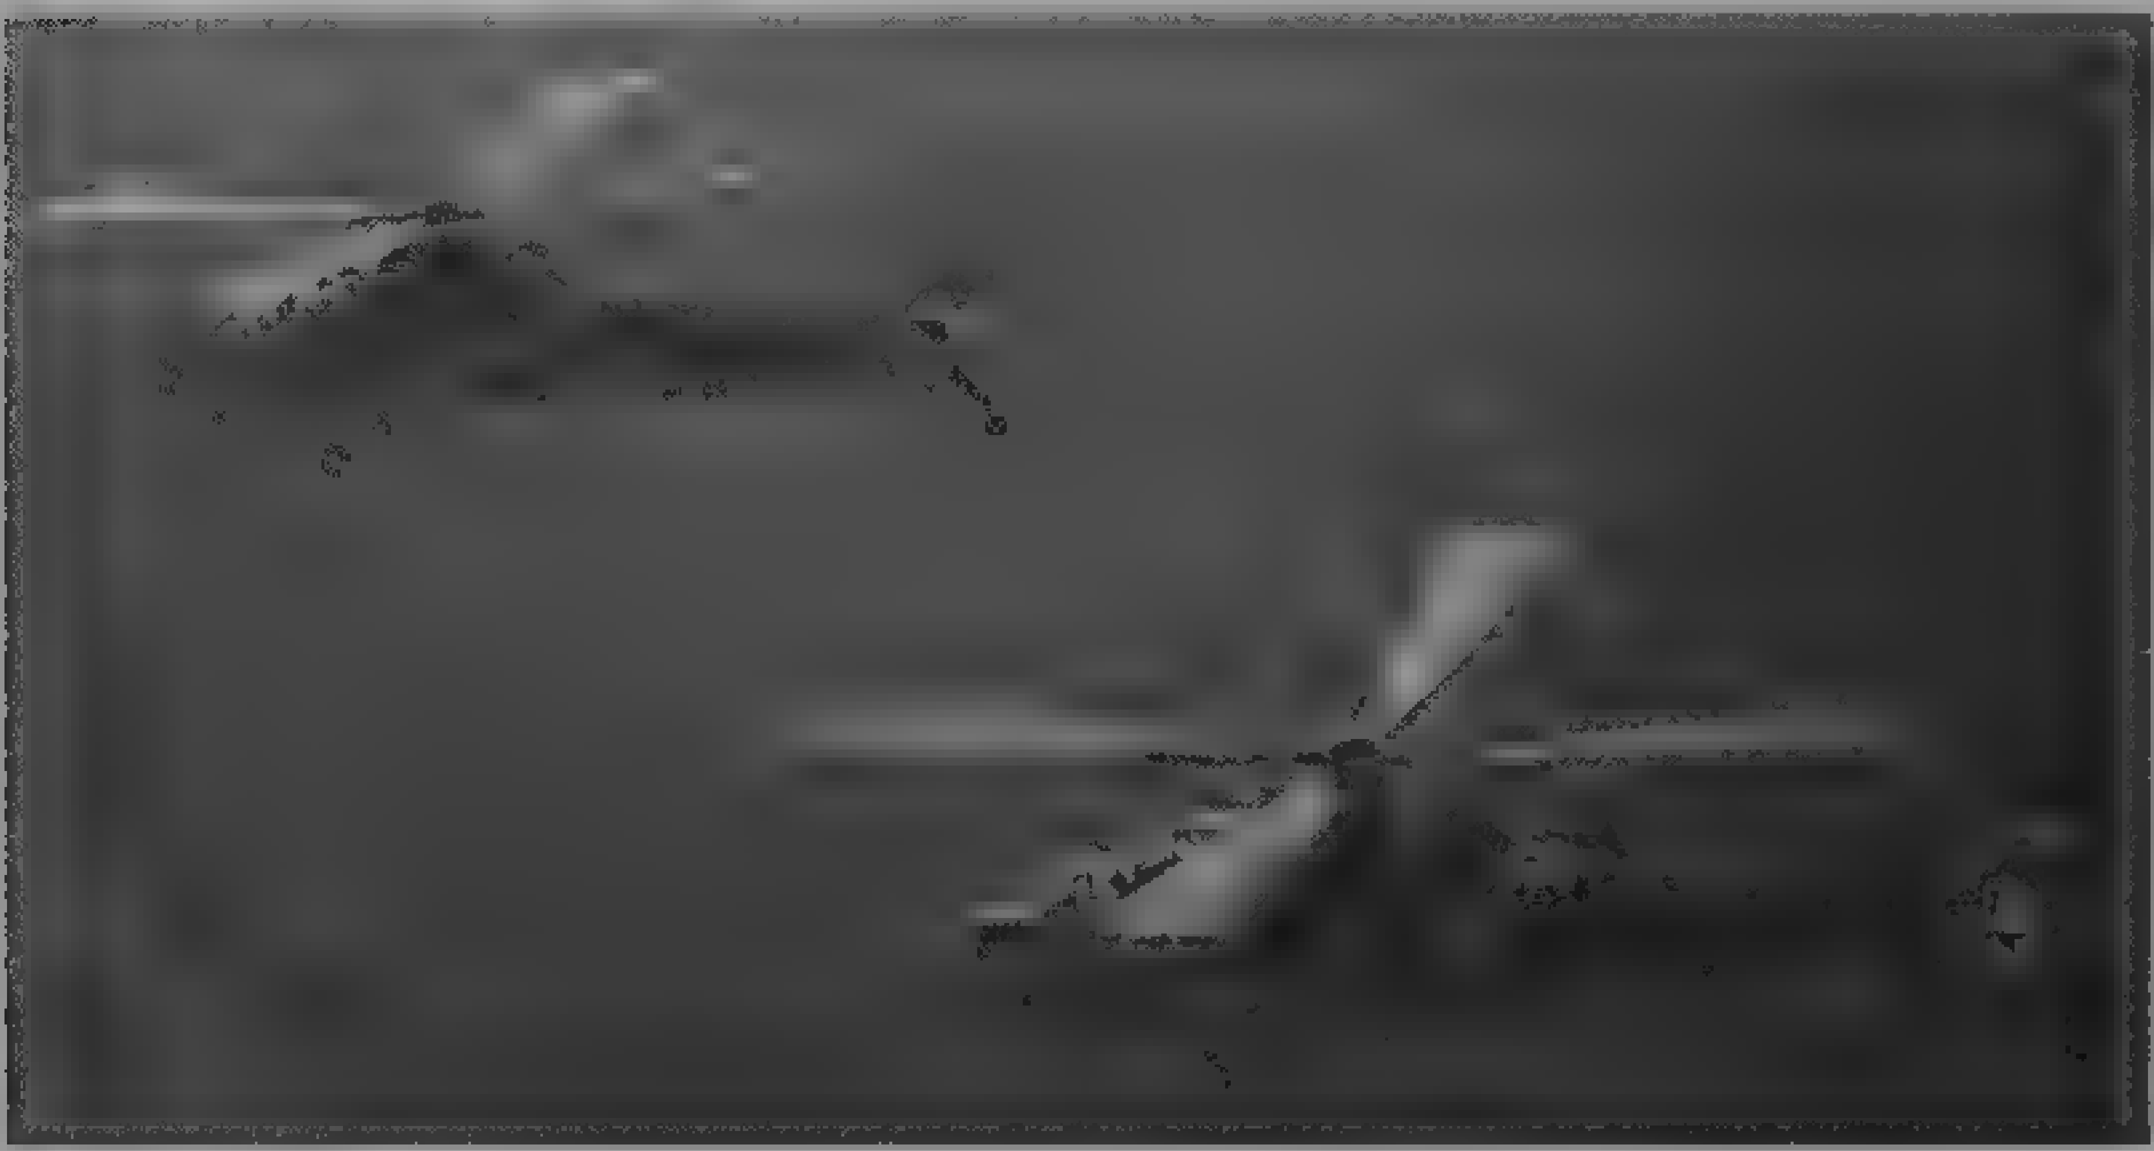
Crew oxygen system, and fire detection and extinguishing systems, standard.

AVIONICS: All-digital, interfaced to dual-redundant mission computers and MIL-STD-1553B databuses; stores management system conforms to MIL-STD-1760A. Avionics prime contractor is ATE (Advanced Technologies and Engineering), supported by 15 subcontractors.

Comms: Frequency-agile transceivers: dual V/UHF (30 to 400 MHz) for normal use and single HF (2 to 30 MHz) for NOE flights, intercom/audio system, IFF transponder.

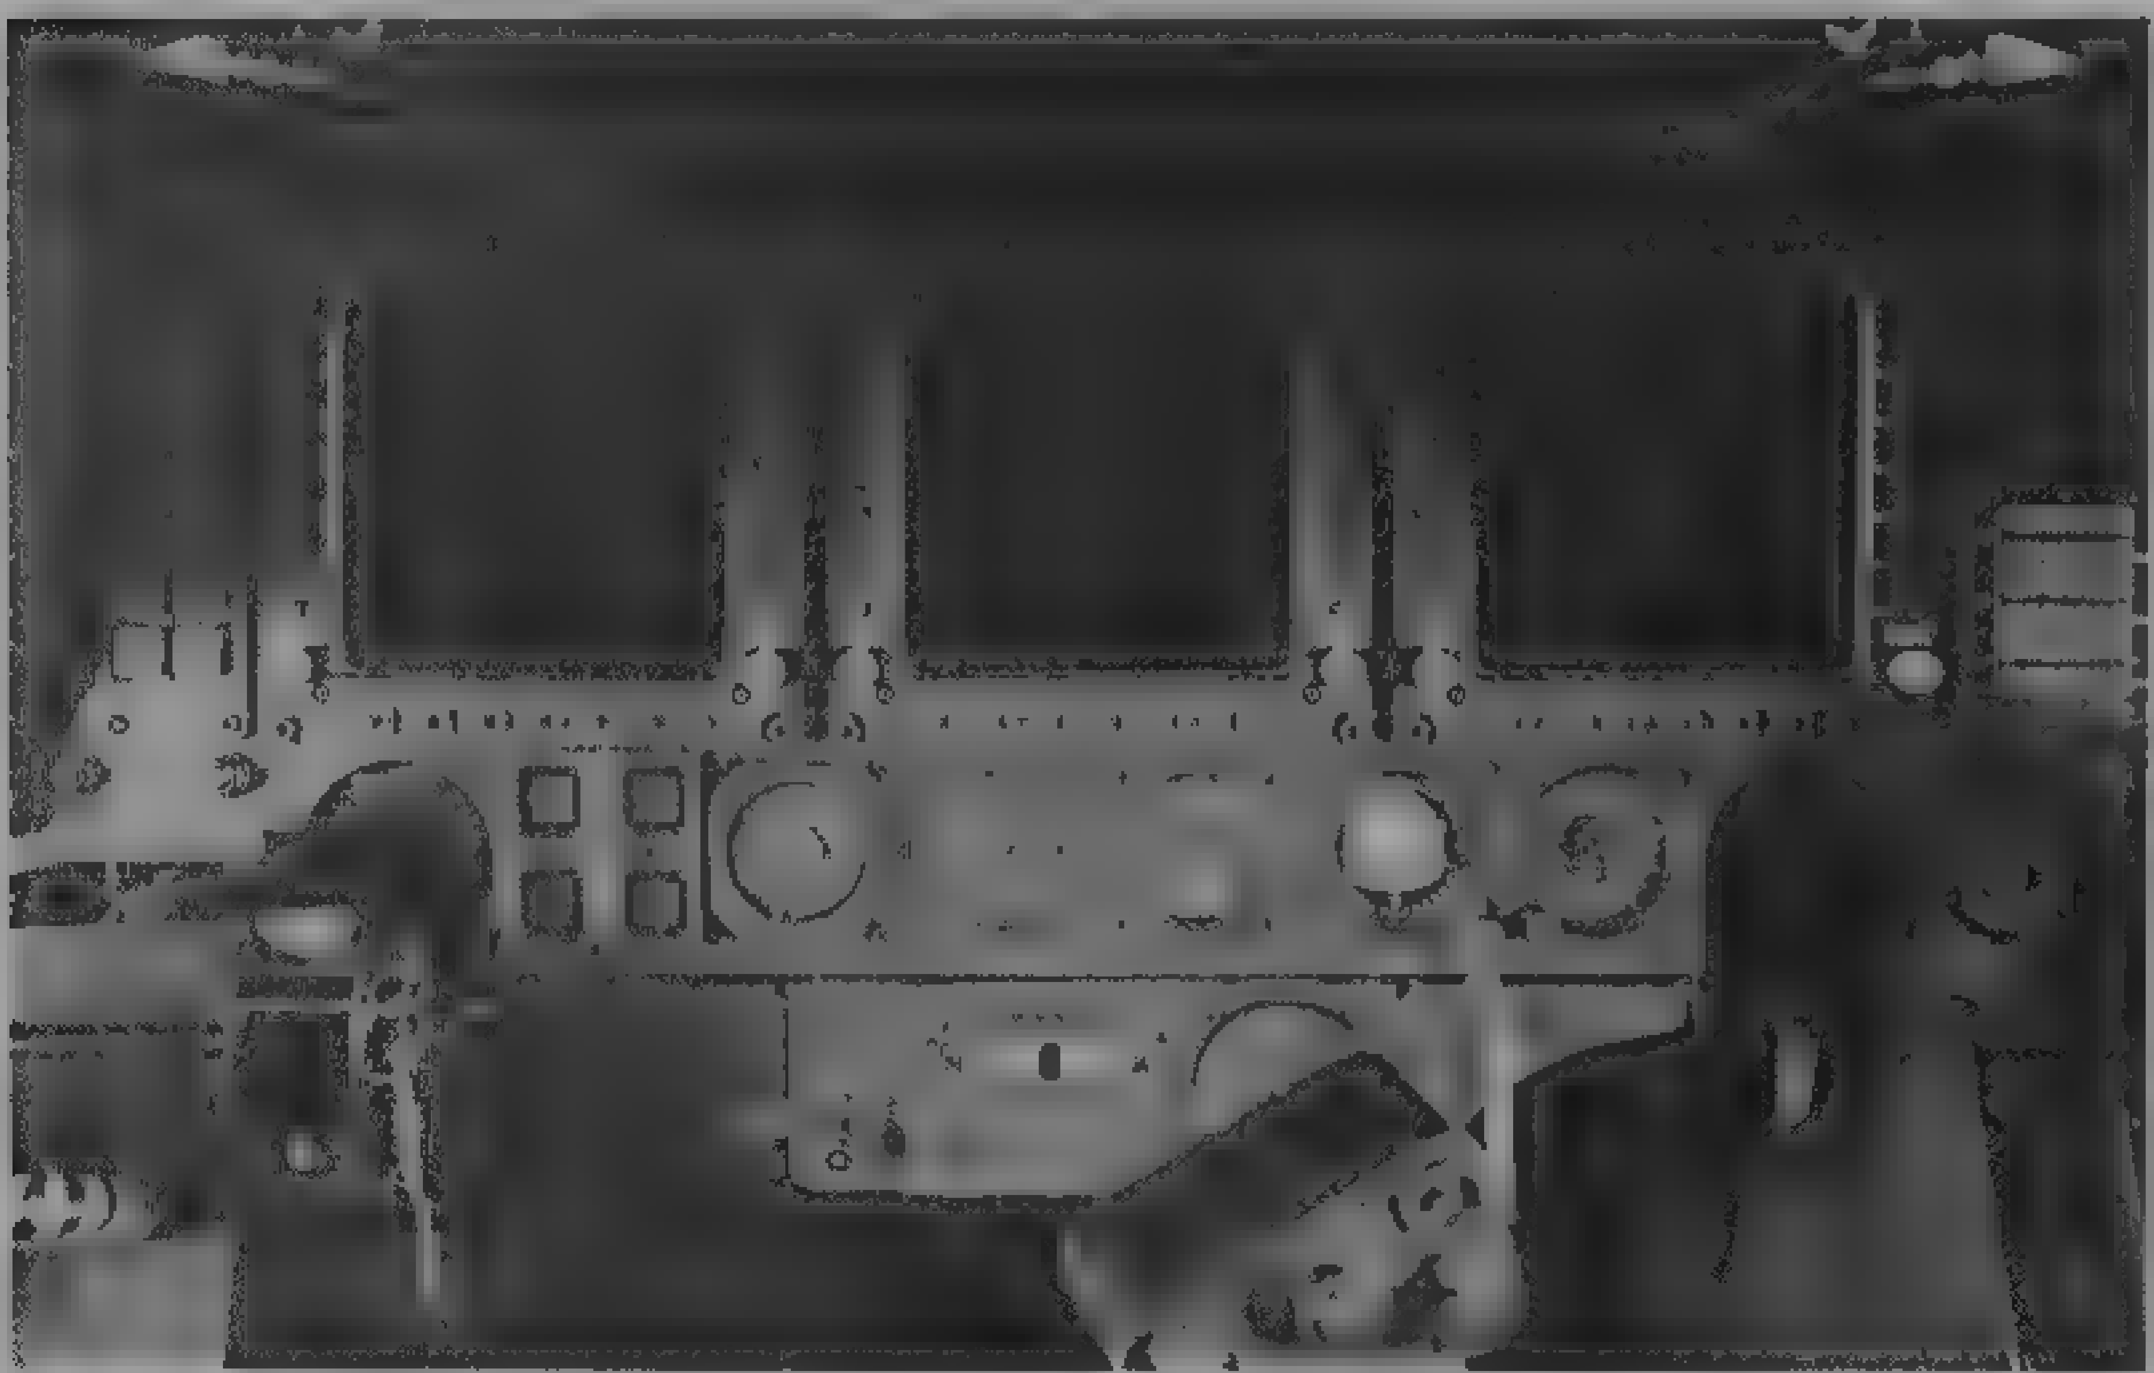
Flight: Duplex four axis digital AFCS, incorporating three-axis strapdown ring laser gyro AHRS, eight-channel GPS, Doppler radar velocity sensor, J-band radar altimeter, heading sensor unit (magnetometer), air data unit and omnidirectional airspeed sensor, all interfaced to two redundant navigation computers. Autopilot has one-touch autohover and attitude hold. Nav/attack system programmed by preloaded cartridge, can hold up to five flight plans (100 waypoints), which can be edited in flight by either crew member.

Instrumentation: Integrated flight management system, with two 160 × 160 mm (6.3 × 6.3 in) MFDs,



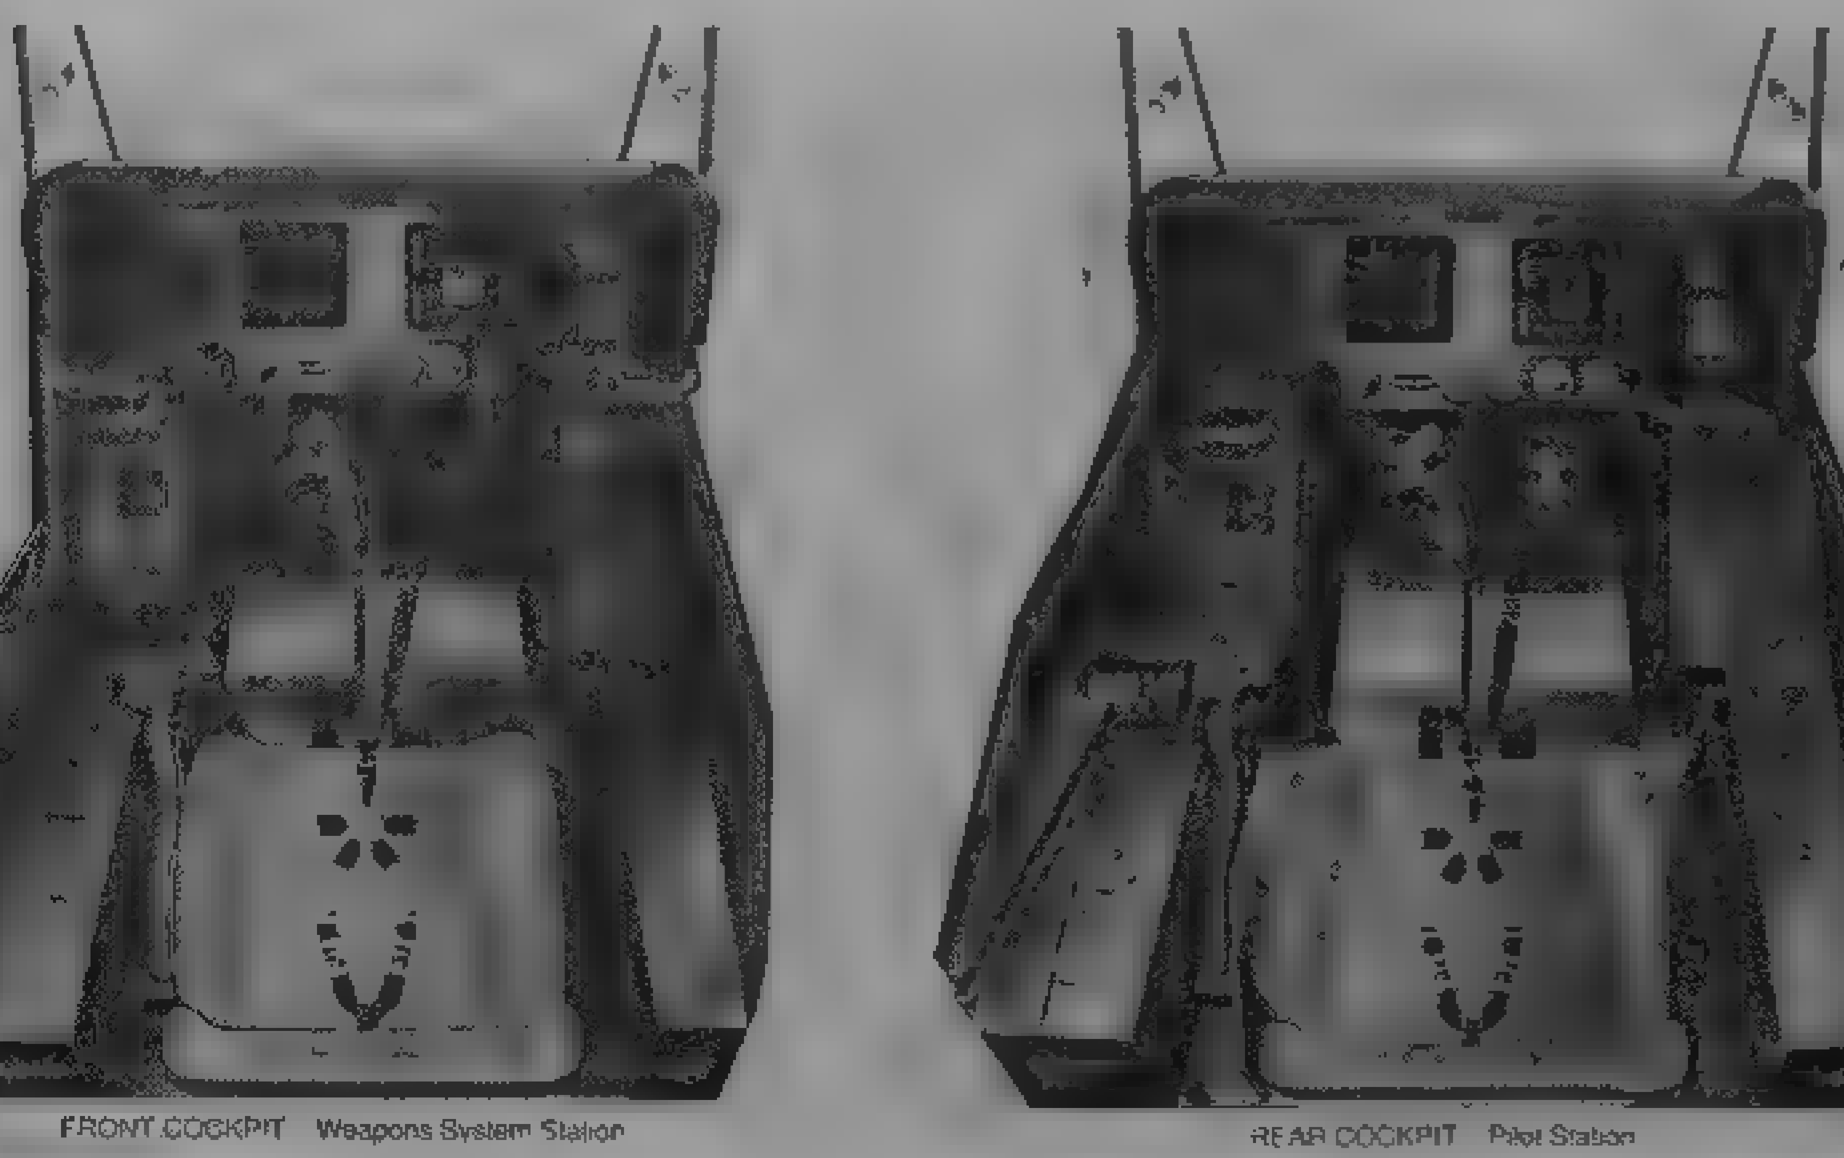
The two Rooivalk prototypes (XDM nearest camera) have flown more than 600 hours

1995



Rooivalk cockpit with multifunction displays and back up instruments. Production aircraft will have only two MFDs

1995



Production configuration of Rooivalk cockpits

1995

helmet-mounted display and position management system in each cockpit. Both cockpits have a back-up basic instrument panel for 'get home' capability in the event of computer or power failure. MFDs show flight control, navigation (including moving map on pilot's display), threat warning/EW, fire/weapons control and TDATS imagery, and can copy to each other. Cockpit instruments compatible with NVGs.

Mission: Nose-mounted, gyrostabilised turret contains target detection, acquisition and tracking system (TDATS), incorporating a three fields of view FLIR with automatic guidance and tracking, an LLTV camera and a laser rangefinder; associated equipment includes crew members' helmet sights, missile command link and tracking goniometer. Helmet sights display both flight and weapon data, and can cue both the TDATS turret and the gun turret.

Self-defence: Optimised ECM can include radar and laser warning receivers, chaff/flare dispensers and jammers.

ARMAMENT: Kentron GA-1 Rattler 20 mm gun in TC-20 hydraulically steerable chin mounting, or longer barrel 20 mm Armscor F2, cleared also for 30 mm weapon. F2 has up to 700 rounds of ammunition, firing rate of 740 rds/min, and slew rate of 90°/s. Gun linked to TDATS and helmet sights. One wingtip and two articulated underwing stores stations each side. Launchers for eleven or twenty-two × 68 mm unguided rockets and/or four-round launchers for ZT 35 Swift or ZT 4 laser-guided anti-tank missiles on underwing pylons; two V3C Darter infra-red air-to-air missiles at each wingtip. Kentron is prime contractor for weapons integration. Final weapon mix for SAAF to be decided.

DIMENSIONS, EXTERNAL:

Main rotor diameter 15.58 m (51 ft 1½ in)
Tail rotor diameter 3.04 m (9 ft 11¾ in)
Length: fuselage, excl gun, tail rotor turning 16.39 m (53 ft 9¼ in)
overall, rotors turning 18.73 m (61 ft 5¼ in)
Wing span over AAMs 5.20 m (17 ft 0¾ in)
Fuselage: Max width 1.28 m (4 ft 2½ in)
Max depth (belly to top of rotor head) 4.00 m (13 ft 1½ in)
Height: over tail rotor 4.445 m (14 ft 7 in)
to top of rotor head 4.59 m (15 ft 0¾ in)
overall 5.185 m (17 ft 0¼ in)
Wheel track 2.78 m (9 ft 1½ in)
Wheelbase 11.77 m (38 ft 7½ in)

AREAS:

Main rotor disc 190.6 m² (2,052.1 sq ft)
Tail rotor disc 7.27 m² (78.23 sq ft)

WEIGHTS AND LOADINGS:

Weight empty 5,910 kg (13,029 lb)
Max internal fuel weight 1,469 kg (3,238 lb)
External weapons load with full internal fuel 1,563 kg (3,446 lb)
Max external load (with 1,000 kg, 2,205 lb fuel) 2,032 kg (4,480 lb)
Typical mission T-O weight 7,500 kg (16,535 lb)
Max T-O weight 8,750 kg (19,290 lb)
Max disc loading 45.91 kg/m² (9.40 lb/sq ft)
Max power loading 3.90 kg/kW (6.41 lb/shp)

PERFORMANCE (at 7,500 kg, 16,535 lb combat weight, except where indicated. A: ISA at S/L, B: ISA + 27°C at 1,525 m, 5,000 ft):

Never exceed speed (VNE)
A, B 167 kts (309 km/h, 192 mph)
Max cruising speed
A 150 kts (278 km/h, 172 mph)
Max rate of climb at S/L: A 670 m (2,200 ft)/min
B 457 m (1,500 ft)/min
Rate of climb at S/L, OEI
A 512 m (1,680 ft)/min
Service ceiling: A 6,100 m (20,000 ft)
B 5,150 m (16,900 ft)
Hovering ceiling IGE: A 5,545 m (18,200 ft)
B 3,110 m (10,200 ft)
Hovering ceiling OGE: A 5,030 m (16,500 ft)
B 2,410 m (7,900 ft)
Range with max internal fuel, no reserves
A 380 n miles (704 km, 437 miles)
B 507 n miles (940 km, 584 miles)
Range at max T-O weight with external fuel
A 680 n miles (1,260 km, 783 miles)
B 720 n miles (1,335 km, 829 miles)
Endurance with max internal fuel, no reserves
A 3 h 36 min
B 4 h 55 min
Endurance at max T-O weight with external fuel
A 6 h 52 min
B 7 h 22 min
g limits +2.6/-0.5

UPDATED

ATLAS ORYX

TYPE: Twin-turboshaft multirole military helicopter.

PROGRAMME: South African helicopter industrialisation programme, launched 1978, had by early 1980s given Atlas capability to manufacture most critical components for in-service Alouette IIIs and SA 330 Pumas, and to build complete Pumas.

First upgraded Puma was XTP-1, flown 1986 (see 1989-90 *Jane's*), first Oryx delivered to SAAF in 1988 and first locally manufactured Topaz engines in 1990. Programme, comprising upgraded and new-build aircraft, due for completion in 1995

CUSTOMERS: South African Air Force; part equips No 15 Squadron at Durban Airport, No 17 at Swartkop, No 19 at Louis Trichardt and No 22 at Ysterplaat

DESIGN FEATURES: Puma fuselage re-engineered to Super Puma/Cougar standard and lightened by use of composites; power plant and transmission similar to those of Rooivalk, greatly increased fuel load in sponson tanks, dust and sand filters, modernised avionics. Performance is aimed to be identical at sea level and 3,050 m (10,000 ft) and 25 to 30 per cent better than Puma, for 25 to 30 per cent lower operating cost

POWER PLANT: Two 1,491 kW (2,000 shp) Topaz turboshafts

AVIONICS: New, NVG-compatible 'glass' cockpit, with displays redesigned for single-pilot operation. Features include

Radar: All-weather radar with ground-mapping capability

Flight: GPS navigation

Founded 1923, owned 99.2852 per cent by TENEO 0.7098 per cent by DASA (Germany) and 0.005 per cent by others; INI ready to reduce its holding in favour of other European interests

CASA formed Industria de Turbopropulsores (ITP) in 1989 to make parts for and assemble turbojets, including EJ200 for Eurofighter 2000, F404 for F/A-18, possibly R-R Pegasus for Spanish Matadors (Harriers) and eventually for CASA AX. Compania Espanola de Sistemas Aeronauticas (CESA) formed with 40 per cent holding by Lucas Aerospace; CASA space division greatly extended, largely automated composites assembly plant opened at Illescas, near Toledo, January 1991

Largest current programme is 4.2 per cent share in Airbus, makes horizontal tail, landing gear doors, wing ribs and skins, leading/trailing-edges and passenger doors for A300/310/320/330/340, many in composites. Second largest programme is share in Eurofighter 2000 with membership of avionics, control systems, flight management and structure teams, shares starboard wing with BAe and rear fuselage with Alenia, CASA responsible for integration and software creation for communications system. Own programmes include C-212 Aviocar and CN-235 (latter shared with IPTN through Airtech); looking for partner for AX fighter/trainer

Contract to design, stress, test and manufacture whole wing of Saab 2000 won October 1989; designed and is making tailplane of McDonnell Douglas MD-11, makes outer flaps for Boeing 757, tail components for Spanish Sikorsky S-70s, member of European Future Large Aircraft Group and (with Airbus partners and Boeing) of Very Large Commercial Transport Group (see Euroflag and UHCA/VLCT/NLA entries in International section)

Maintenance Division has for nearly 40 years maintained and modernised some 7,900 aircraft and helicopters and 145,000 components for different customers, principally USAF and Spanish Air Force, this Division currently performing major F-5 modernisation programme, plus other work on F-4, F/A-18, CASA's own aircraft, AV-8A/B, C-130 and various types of helicopter

CASA's seven factories have 335,000 m² (3,605,900 sq ft) covered floorspace; 1993 workforce 9,200

UPDATED

CASA AX

Government funded prefeasibility and feasibility studies under way since 1989 for this advanced trainer and light attack aircraft to succeed Spanish F-5As and Bs from about 2000; joint studies being carried out in search for international partnership to launch development phase no later than 1996; could use afterburning F404 or alternative

UPDATED

CASA C-101 AVIOJET

Spanish Air Force designation: E 25 Mirlo (Blackbird)
Chilean Air Force designations: T 36 and A 36 Halcón (Hawk)

TYPE: Tandem two-seat basic and advanced trainer and attack aircraft

PROGRAMME: First flight 27 June 1977, four prototypes; first flight Spanish production aircraft 1979; nav/attack system modernisation of DD completed 1992. No recent sales

CURRENT VERSIONS: See earlier editions for C-101EB (1983-84) and C-101BB (1993-94). Latest versions are

C-101CC: Light attack version, powered by 19.13 kN (4,300 lb st) AlliedSignal TFE731-5-1J with military power reserve (MPR) rating of 20.91 kN (4,700 lb st), first flight 16 November 1983, designations **CC-02** for Chile, **CC-04** for Jordan. *Description applies to this version except where indicated*

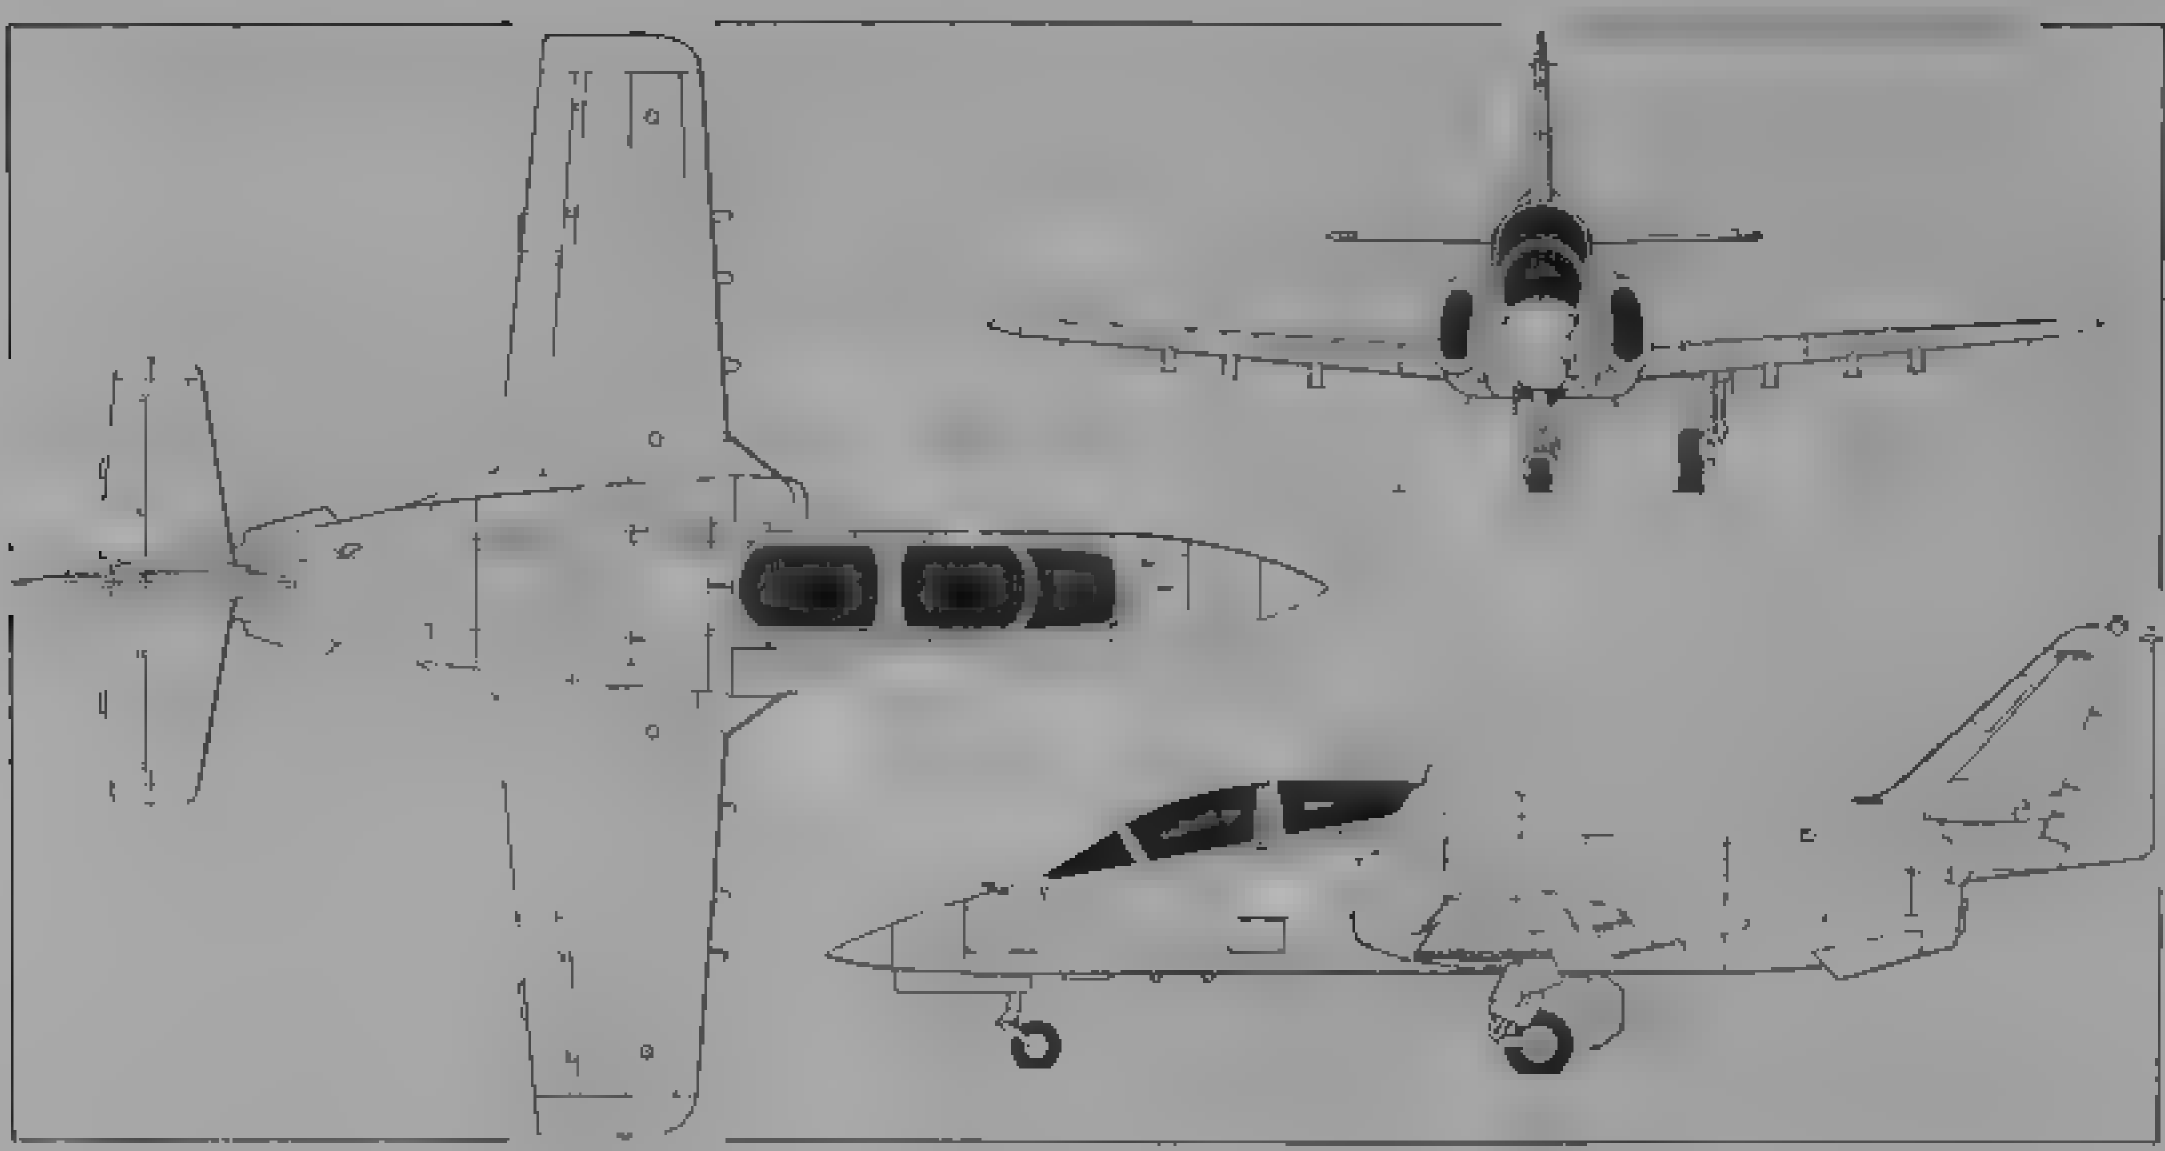
C-101DD: Enhanced training and attack version, first flight (EC-DVQ) 20 May 1985, avionics include GEC-Marconi HUD, weapon aiming computer and inertial platform, engine as for C-101CC, prototype/demonstrator only

CUSTOMERS: Spanish Air Force 88 EB (E.25 Mirlo) delivered from 17 March 1980; serving with Spanish Academia General del Aire, Grupo de Escuelas de Matacan, Ala 21 and Patrulla Aguila display team. Chilean Air Force 14 BB-02 (**T-36 Halcón**) plus 23 CC-02 (**A-36 Halcón**) of which 22 being assembled and part manufactured in Chile by ENAER (which see). Honduras four BB-03 with custom avionics; 16 CC-04 delivered to Royal Jordanian Air Force 1987-88. Four XE.25 prototypes and two demonstrators

POWER PLANT: One AlliedSignal TFE731 non-afterburning turbofan (see variants for details), with lateral intake on each side of fuselage abreast of second cockpit. Fuel in one 1,155 litre (305 US gallon, 254 Imp gallon) fuselage bag tank, one 575 litre (152 US gallon, 126.5 Imp gallon) integral tank in wing centre section, and two outer wing integral tanks, for ferry missions, each of 342 litres (90.4 US gallons, 75.25 Imp gallons). Total internal fuel capacity 1,730 litres (457 US gallons; 380.5 Imp gallons) normal, 2,414 litres (637.8 US gallons; 531 Imp gallons) maximum. Fuel system permits up to 30 seconds of inverted flight. Pressure refuelling point beneath port air

CASA C-101CC demonstrator

1995



CASA C-101CC Aviojet light attack aircraft *(Jane's/Dennis Punnett)*

1983

intake; gravity fuelling point for each tank. No provision for external fuel tanks. Oil capacity 8.5 litres (2.2 US gallons; 1.8 Imp gallons).

ACCOMMODATION: Crew of two in tandem, on Martin-Baker Mk 10L zero/zero ejection seats, under individual canopies which open sideways to starboard and are separated by internal screen. Rear (instructor's) seat elevated 32.5 cm (12¾ in). Cockpit pressurised and air conditioned by engine bleed air. Dual controls standard.

AVIONICS (C-101CC): *Comms:* Magnavox AN/ARC-164A UHF, Collins AN/ARC-186 VHF, Andrea AN/AIC-18 interphone, Teledyne/CASA AN/APX-101 IFF/SIF. Dorne & Margolin DMELT 8.1 ELT.

Flight: VIR-31A VOR/ILS, DME-42 and ADF-60 (all Collins); Lear Siegler LSI 6000D gyro platform, ADI 500C, RD-550A HSI, Honeywell STARS IVC flight director. Collins AN/ARN-118 Tacan optional.

Mission: CASA SCAR 81 armament control system, Avimo RGS2 gunsight in each cockpit.

Self-defence: General Instrument AN/ALR-66 RWR and Vinten Vicon 78 chaff/flare dispenser optional.

AVIONICS (C-101DD): *Comms:* Collins AN/ARC-182(V) UHF/VHF-AM/FM and AN/ARC-186 VHF-AM/FM.

Flight: Collins VIR-130A VOR/ILS, Alenia radar altimeter; Litton LN-39A inertial platform.

Mission: GEC Marconi FD 4513 HUDWAC and Alenia mission computer, linked with INS to MIL-STD-1553B digital databus; HOTAS controls; video camera and rear seat monitor.

ARMAMENT: Large bay below rear cockpit suitable for quick-change packages, including 30 mm DEFA 553 cannon pod with 130 rounds, twin 12.7 mm Browning M3 machine gun pod with 220 rds/gun, reconnaissance camera, ECM package or laser designator. Six underwing hardpoints, capacities 500 kg (1,102 lb) inboard, 375 kg (827 lb) centre and 250 kg (551 lb) outboard; total external stores load 2,250 kg (4,960 lb). Typical armament can include one 30 mm cannon with up to 130 rounds, or two 12.7 mm guns, in fuselage, and four LAU-10 pods of 5 in rockets, six 250 kg BR250 bombs, four LAU-3/A rocket launchers, four 125 kg BR125 bombs and two LAU-3/A launchers, two AGM-65 Maverick missiles, or two AIM-9L Sidewinders or Matra Magics.

DIMENSIONS, EXTERNAL:

Wing span	10.60 m (34 ft 9⅜ in)
Length overall	12.50 m (41 ft 0 in)
Height overall	4.25 m (13 ft 11¼ in)
Wheel track (c/l of shock struts)	3.18 m (10 ft 5¼ in)
Wheelbase	4.77 m (15 ft 7¾ in)

AREAS:

Wings, gross	20.00 m² (215.3 sq ft)

WEIGHTS AND LOADINGS (C-101CC and DD):

Weight empty, equipped	3,470 kg (7,650 lb)
Max fuel weight	1,882 kg (4,149 lb)
Max external stores load	1,840 kg (4,056 lb)
T-O weight, clean	5,000 kg (11,023 lb)
Max T-O and landing weight	6,300 kg (13,890 lb)
Max wing loading	315.0 kg/m² (64.52 lb/sq ft)
Max power loading	301.0 kg/kN (2.95 lb/lb st)

PERFORMANCE (C-101CC and DD at 4,350 kg, 9,590 lb AUW, CC in training configuration with 50% normal fuel, except where indicated):

Max limiting Mach number	0.80
Max level speed	450 kts (834 km/h; 518 mph)
Max rate of climb at S/L	1,950 m (6,397 ft)/min
Service ceiling	13,410 m (44,000 ft)
T-O run	560 m (1,835 ft)
Landing run	480 m (1,575 ft)
Typical interdiction radius (lo-lo-lo) with four 250 kg bombs and 30 mm gun, 5 min over target, 30 min reserves	260 n miles (482 km; 299 miles)
Typical close air support radius (lo-lo-lo) with four 19 × 2.75 in rocket launchers and 30 mm gun, 30 min loiter over battle area, 5 min over target, 30 min reserves	250 n miles (463 km; 287 miles)
Typical photo-reconnaissance radius (hi-lo-hi), 30 min reserves	740 n miles (1,370 km; 852 miles)
Armed patrol mission, no underwing stores, 100 n mile (185 km; 115 mile) transit from base to patrol area, with one 30 mm or two 12.7 mm guns, 45 min reserves	3 h 30 min at 200 kts (370 km/h; 230 mph) at S/L
Max endurance	7 h
g limits:	
at 4,900 kg (10,802 lb) AUW	+7.5/–3.9
at 6,300 kg (13,890 lb) AUW	+5.5/–2

UPDATED

CASA C-212 SERIES 300 AVIOCAR

TYPE: Twin-turboprop general purpose transport.

PROGRAMME: See 1991-92 and previous editions for early history; Series 100 last described in 1981-82 *Jane's* and Series 200 in 1987-88 edition. Series 300 certificated to FAR Pts 25, 121 and 135 in December 1987.

CURRENT VERSIONS: **300 Airliner:** Standard seating for 26 passengers, or 24 if toilet included.

300 Utility: Standard seating for 23 passengers, or 21 if toilet included, with maximum capacity for 26.

300M: Military troop/cargo/general purpose transport.

300ASW: Anti-submarine version; described separately.

300DE: Elint/ECM version; described separately.

300MP: Maritime patrol version; described separately.

300P: As standard Series 300 but powered by 820 kW (1,100 shp) P&WC PT6A-65 turboprops for improved hot and high performance. Spanish certification 1989; no announced orders up to Spring 1995.

CUSTOMERS: Total 447 of all versions (208 civil/239 military) sold by November 1994, of which nearly all delivered, including 164 Series 100 and approximately 240 Series 200. Over 30 Series 300 then ordered, including Series 300M for air forces of Bolivia (one), Botswana (two), Chile (two), Colombia (two), France (five), Lesotho (three), Panama (three) and Thailand (two), plus nine Series 300MPs (see separate entry) and at least 10 civil examples including six for Thailand Ministry of Agriculture. Military customers for Series 100/200 listed in 1991-92 and earlier editions. Above includes production in Indonesia by IPTN (which see).

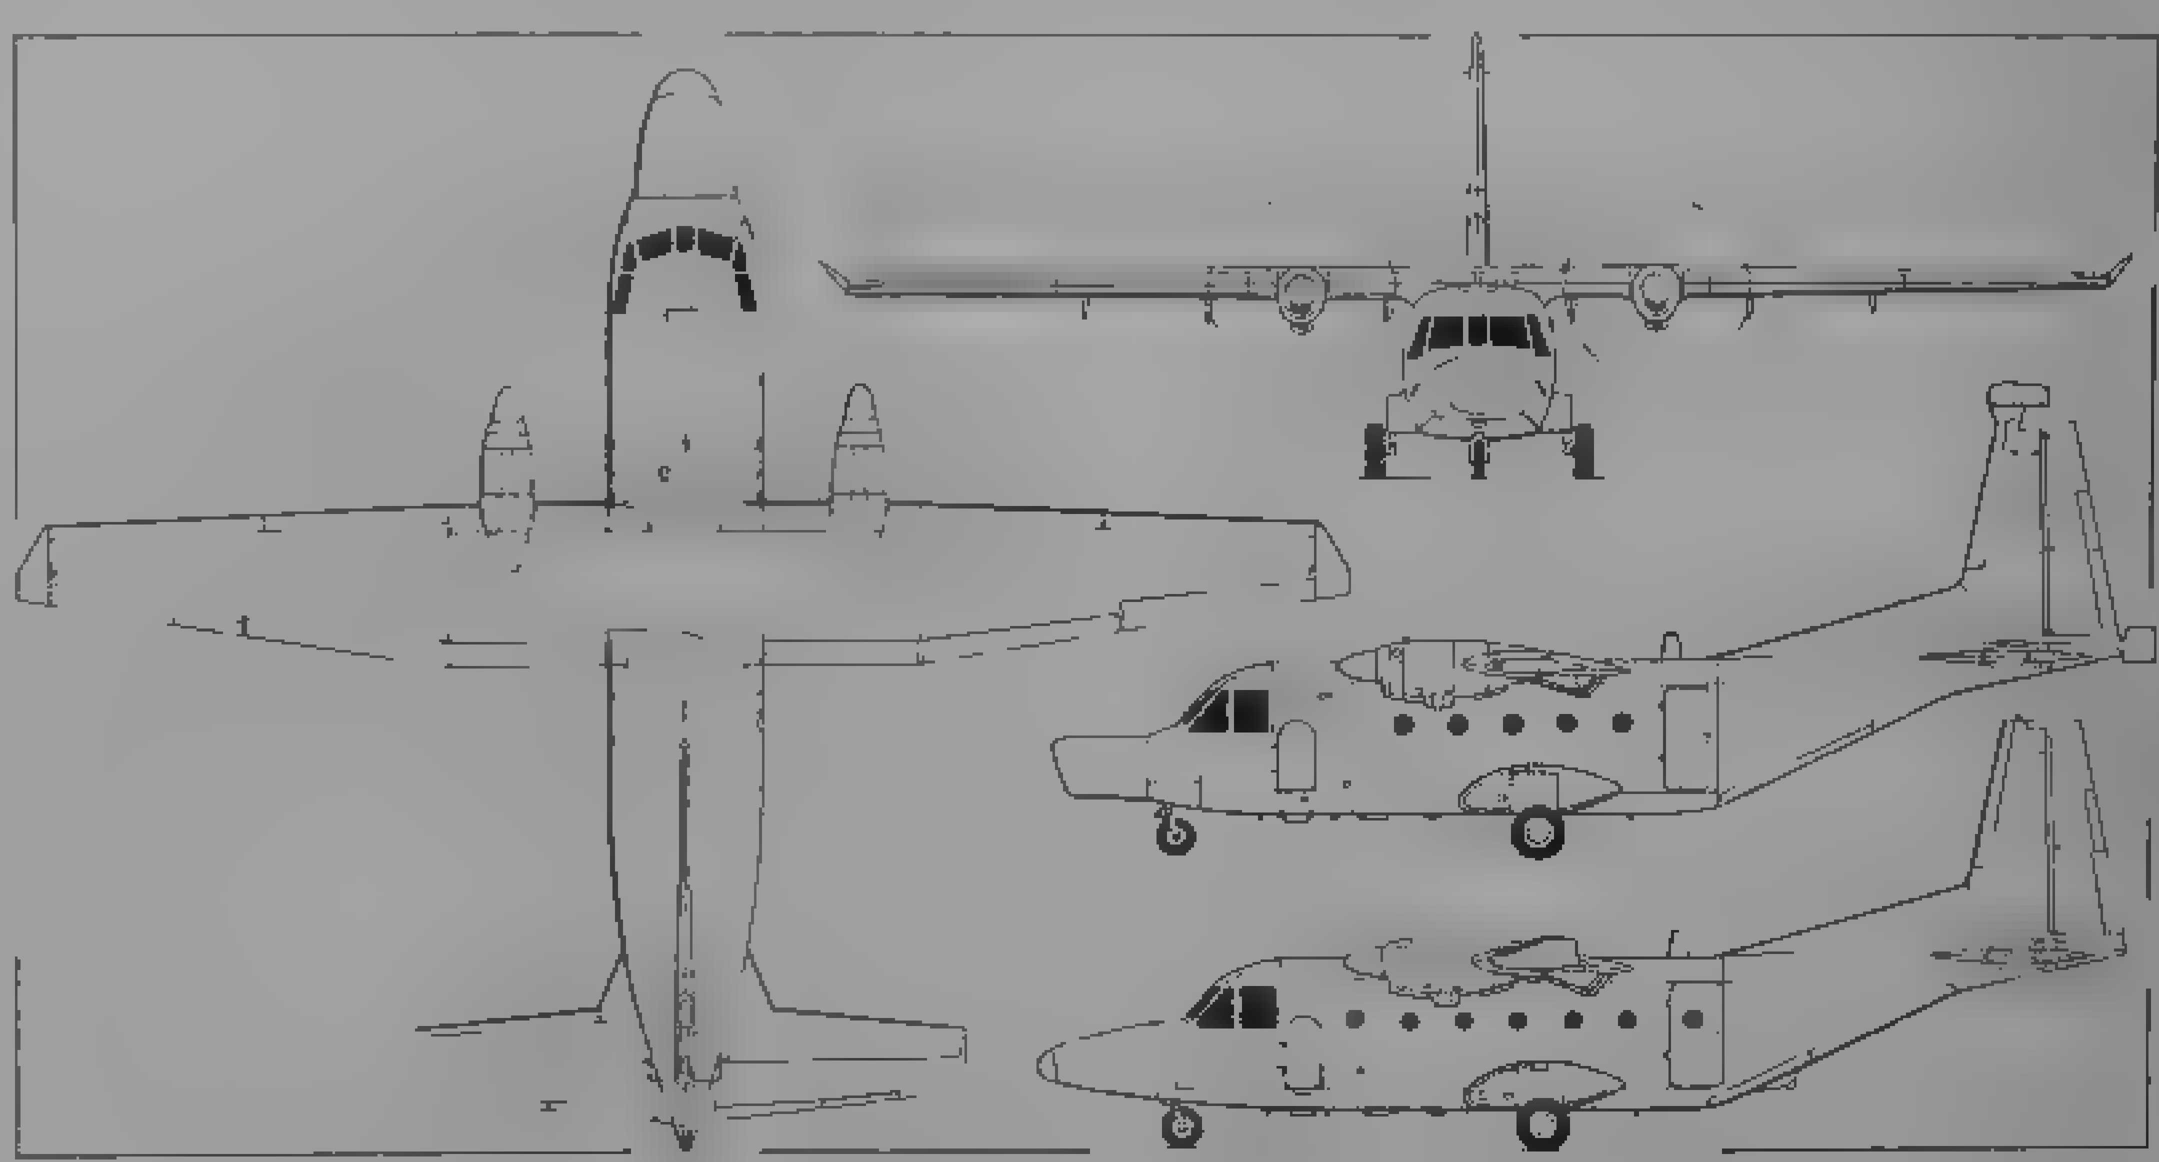
DESIGN FEATURES: Wing section NACA 65_3-218, no dihedral, incidence 2° 30′, swept winglets canted upwards at 45°; meets FAR Pt 36 noise limits.

FLYING CONTROLS: Mechanical, fixed incidence tailplane; trim tab in port aileron, trim and geared tabs in rudder and each elevator; double-slotted flaps.

STRUCTURE: All-metal light alloy fail-safe structure, unpressurised, two-spar tailplane and fin. Wing centre-section, forward and rear passenger doors and dorsal fin manufactured by AISA.

LANDING GEAR: Non-retractable tricycle type, with single mainwheels and single steerable nosewheel. CASA oleo-pneumatic shock absorbers. Goodyear wheels and tyres, main units size 11.00-12 Type III (10 ply rating), nose unit size 24-7.7 Type VII (8 ply rating). Tyre pressure 3.86 bars (56 lb/sq in) on main units, 4.0 bars (58 lb/sq in) on nose unit. Goodyear hydraulic disc brakes on mainwheels. No brake cooling. Anti-skid system optional.

POWER PLANT: Two AlliedSignal TPE331-10R-513C turboprops, each flat rated at 671 kW (900 shp) and equipped with automatic power reserve (APR) system providing 690 kW (925 shp) in event of one engine failing during take-off. Dowty Aerospace R-334/4-82-F/13 four-blade constant-speed fully feathering reversible-pitch propellers. Fuel in four integral wing tanks, with total capacity of 2,040 litres (539 US gallons; 449 Imp gallons), of which 2,000 litres (528 US gallons; 440 Imp gallons) usable. Gravity refuelling point above each tank. Single pressure



CASA C-212 Series 300 Aviocar, with additional side view (centre) of C-212DE (ECM) version *(Jane's/Dennis Punnett)*

1992

refuelling point in starboard wing leading-edge. Additional fuel can be carried in one 1,000 litre or two 750 litre (264 or 198 US gallon, 220 or 165 Imp gallon) optional ferry tanks inside cabin, and/or two 500 litre (132 US gallon, 110 Imp gallon) auxiliary underwing tanks. Oil capacity 4.5 litres (1.2 US gallons, 1.0 Imp gallon) per engine.

ACCOMMODATION: Crew of two on flight deck, cabin attendant in civil version. For troop transport role, main cabin can be fitted with 25 inward-facing seats along cabin walls, to accommodate 24 paratroops with instructor/jumpmaster, or seats for 25 fully equipped troops. As ambulance, cabin is normally equipped to carry 12 stretcher patients and four medical attendants. As freighter, up to 2,700 kg (5,952 lb) of cargo can be carried in main cabin, including two LD1, LD727/DC-8 or three LD3 containers, or light vehicles. Cargo system, certificated to FAR Pt 25, includes roller loading/unloading system and 9 *g* barrier net. Photographic version equipped with two Leica RC-20/30 vertical cameras and darkroom. Navigation training version has individual desks/consoles for instructor and five pupils, in two rows, with appropriate instrument installations.

Civil passenger transport version has standard seating for up to 26 in mainly three-abreast layout at 72 cm (28.5 in) pitch, with provision for quick change to all-cargo or mixed passenger/cargo interior. Toilet, galley and 400 kg (882 lb) capacity baggage compartment standard, plus additional 150 kg (330 lb) in nose bay. VIP transport version can be furnished to customer's requirements.

Forward/outward-opening door on port side immediately aft of flight deck, forward/outward opening passenger door on port side aft of wing, inward-opening emergency exit opposite each door on starboard side. Additional emergency exit in roof of forward main cabin. Two-section underfuselage loading ramp/door aft of main cabin is openable in flight for discharge of paratroops or cargo, and can be fitted with optional external wheels for door protection during ground manoeuvring. Interior of rear-loading door can be used for additional baggage stowage in civil version. Entire accommodation heated and ventilated; air conditioning optional.

SYSTEMS: Freon cycle or (on special mission versions) engine bleed air air conditioning system optional. Hydraulic system, operating at service pressure of 138 bars (2,000 lb/sq in), provides power via electric pump to actuate mainwheel brakes, flaps, nosewheel steering and rear cargo ramp/door. Hand pump for standby hydraulic power in case of electrical failure or other emergency. Electrical system supplied by two 9 kW starter/generators, three batteries and three static converters. Pneumatic boot and engine bleed air de-icing of wing and tail unit leading-edges, electric de-icing of propellers and windscreens. Oxygen system for crew (including cabin attendant), two portable oxygen cylinders for passenger supply. Engine and cabin fire protection systems.

AVIONICS: *Comms*: Collins VHF, ATC transponder, intercom (with Gables control) and PA system standard. Collins HF, UHF and second transponder, and Fairchild CVR optional.

Radar: Bendix/King weather radar standard.

Flight: Collins VOR/ILS, ADF, DME and radio altimeter, and Honeywell AFCS and directional gyro, standard; second Collins ADF, Global Omega nav, Dorne & Margolin marker beacon receiver and Fairchild flight data recorder optional.

Instrumentation: Blind-flying instrumentation standard.

ARMAMENT: (military versions, optional): Two machine gun pods or two rocket launchers, or one launcher and one gun pod, on hardpoints on fuselage sides (capacity 250 kg, 551 lb each).

DIMENSIONS, EXTERNAL:

Wing span	20.28 m (66 ft 6½ in)
Wing chord: at root	2.50 m (8 ft 2½ in)
at tip	1.25 m (4 ft 1¼ in)
Wing aspect ratio	10.03
Length overall	16.15 m (52 ft 11¾ in)
Fuselage: Max width	2.30 m (7 ft 6½ in)
Height overall	6.60 m (21 ft 7¾ in)
Tailplane span	8.40 m (27 ft 6¾ in)
Wheel track	3.10 m (10 ft 2 in)
Wheelbase	5.46 m (17 ft 11 in)
Propeller diameter	2.79 m (9 ft 2 in)
Propeller ground clearance (min)	1.27 m (4 ft 2 in)
Distance between propeller centres	5.27 m (17 ft 3¼ in)
Passenger door (port, rear):	
Height	1.58 m (5 ft 2¼ in)
Width	0.70 m (2 ft 3½ in)
Crew and servicing door (port, fwd):	
Max height	1.10 m (3 ft 7¼ in)
Width	0.58 m (1 ft 10¾ in)
Rear-loading door: Max length	3.66 m (12 ft 0 in)
Max width	1.70 m (5 ft 7 in)
Max height	1.80 m (5 ft 10¾ in)
Emergency exit (stbd, fwd): Height	1.10 m (3 ft 7¼ in)
Width	0.58 m (1 ft 10¾ in)
Emergency exit (stbd, rear): Height	0.94 m (3 ft 1 in)
Width	0.55 m (1 ft 9¾ in)

DIMENSIONS, INTERNAL:

Cabin (excl flight deck and rear-loading door):	
Length: passenger	7.22 m (23 ft 8¼ in)
cargo/military	6.50 m (21 ft 4 in)
Max width	2.10 m (6 ft 10¾ in)
Max height	1.80 m (5 ft 10¾ in)
Floor area: passenger	13.51 m² (145.4 sq ft)
cargo/military	12.21 m² (131.4 sq ft)
Volume: passenger	23.7 m³ (837 cu ft)
cargo/military	22.0 m³ (777 cu ft)
Cabin volume incl flight deck and rear loading door	30.4 m³ (1,073.6 cu ft)
Baggage compartment volume	3.6 m³ (127 cu ft)

AREAS:

Wings, gross	41.0 m² (441.33 sq ft)
Ailerons (total, incl tab)	7.50 m² (80.73 sq ft)
Trailing-edge flaps (total)	14.92 m² (160.60 sq ft)
Fin, incl dorsal fin	4.22 m² (45.42 sq ft)
Rudder, incl tab	2.05 m² (22.07 sq ft)
Tailplane	9.01 m² (96.98 sq ft)
Elevators (total, incl tabs)	3.56 m² (38.32 sq ft)

WEIGHTS AND LOADINGS:

Manufacturer's weight empty	3,780 kg (8,333 lb)
Weight empty, equipped (cargo)	4,400 kg (9,700 lb)
Max payload: cargo	2,700 kg (5,952 lb)
300M	2,820 kg (6,217 lb)
Max fuel: standard	1,600 kg (3,527 lb)
with underwing auxiliary tanks	2,400 kg (5,291 lb)
Max T-O weight: standard	7,700 kg (16,975 lb)
300M	8,100 kg (17,857 lb)
Max ramp weight	7,750 kg (17,085 lb)
Max landing weight	7,450 kg (16,424 lb)
Max zero-fuel weight	7,100 kg (15,653 lb)
Max cabin floor loading	732 kg/m² (150 lb/sq ft)
Max wing loading: standard	187.8 kg/m² (38.46 lb/sq ft)
300M	197.6 kg/m² (40.46 lb/sq ft)
Max power loading: standard	5.74 kg/kW (9.43 lb/shp)
300M	6.04 kg/kW (9.92 lb/shp)

PERFORMANCE (at max T-O weight. A: passenger version, B: freighter, C: 300M at 8,000 kg, 17,637 lb MTOW):

Max operating speed (VMO):	
A, B, C	200 kts (370 km/h; 230 mph)
Max cruising speed at 3,050 m (10,000 ft):	
A, B, C	191 kts (354 km/h; 220 mph)
Econ cruising speed at 3,050 m (10,000 ft):	
A, B, C	162 kts (300 km/h; 186 mph)
Stalling speed in T-O configuration:	
A, B, C	78 kts (145 km/h, 90 mph)
Max rate of climb at S/L: A, B, C	497 m (1,630 ft)/min
Rate of climb at S/L, OEI: A, B, C	95 m (312 ft)/min
Service ceiling: A, B, C	7,925 m (26,000 ft)
Service ceiling, OEI: A, B, C	3,380 m (11,100 ft)
FAR T-O distance: A, B	817 m (2,680 ft)
FAR landing distance: A, B	866 m (2,840 ft)
MIL-7700C T-O to 15 m (50 ft):	
C	610 m (2,000 ft)
MIL-7700C landing from 15 m (50 ft):	
C	462 m (1,516 ft)
MIL-7700C landing run: C	285 m (935 ft)
Required runway length for STOL operation:	
C	384 m (1,260 ft)
Range (civil operation, IFR reserves):	
with 25 passengers, at max cruising speed	237 n miles (440 km, 273 miles)
with 1,713 kg (3,776 lb) payload	773 n miles (1,433 km, 890 miles)
Range (military operation):	
with max payload	450 n miles (835 km, 519 miles)
with max standard fuel and 2,120 kg (4,674 lb) payload	907 n miles (1,682 km, 1,045 miles)
with max standard and auxiliary fuel and 1,192 kg (2,628 lb) payload	1,447 n miles (2,680 km; 1,665 miles)

Flight deck of the CASA C-212M

1995

CASA C-212-300M Aviocar of the Panamanian Air Force

1995

CASA C-212 PATRULLERO (SPECIAL MISSION VERSIONS)

TYPE: Specialised adaptations of standard C-212 Series 300.

CURRENT VERSIONS: **ASW**: Anti-submarine version, 360° scan radar under fuselage, ESM.

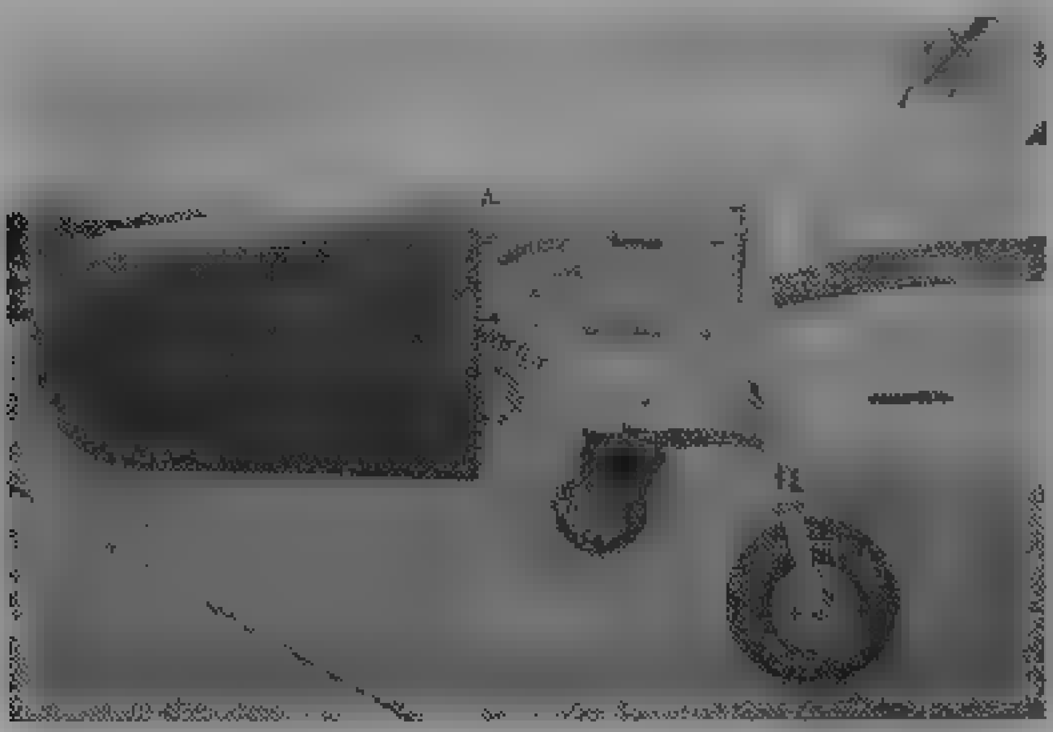
DE: Elint/ECM version, see Equipment paragraph; development began 1981.

MP: Maritime patrol version; nose- or belly-mounted search radar in enlarged radome, FLIR; additional antennae.

CUSTOMERS: Deliveries of versions based on Series 100/200 listed in 1991-92 and earlier *Jane's*; customers for Series 300-based variants include Argentine Prefectura Naval (five MP), Portuguese Air Force (two MP for No. 401 Squadron) and Spanish Ministry of Finance/Customs Service (two MP).

POWER PLANT: As C-212 Series 300. Two 500 litre (132 US gallon; 110 Imp gallon) underwing auxiliary fuel tanks.

ACCOMMODATION: Flight crew of two; four systems operators in ASW version, radar operator and two observer stations in MP version. Radar console, weapon controls and intervalometer added to flight deck, nav/com boxes in rack aft of pilot, starboard rack behind pilot contains radar, sonobuoy, MAD and ESM boxes; three consoles on starboard side of cabin: (1) radar control and display, ESM and intercom, (2) tactical display, MAD recorder and intercom, (3) sonobuoy controls, acoustic controls and displays. Radar



Nose radar (and optional FLIR) detail of the C-212 300MP Patrullero

1995

Artist's impression of CASA's projected 68/78-seat CASA 3000

1994

repeater console and searchlight controls added to flight deck. nav/com (including UHF/DF and VLF/Omega) and radar in rack behind pilot, radar operator console on starboard side of cabin, observer stations at rear

AVIONICS (ASW) *Comms.* Dual VHF, single HF and UHF radios, intercom IFF/SIF

Radar 360° scan underfuselage radar

Flight Autopilot, flight director, UHF/DF, VLF/Omega

Mission. MAD, OTPI, tactical and sonobuoy processing systems, ESM

AVIONICS (MP) *Comms:* As for ASW version. Nose- or belly mounted AN APS 128 100 kW search radar with 360° scan

Mission FLIR

EQUIPMENT (MP): Sonobuoy and smoke marker launchers searchlight

EQUIPMENT (DE) Automatic signal interception classification and identification, jamming emitters map for plotting location and characteristics of hostile radars

ARMAMENT (ASW): Can include torpedoes such as Mk 46 and Sting Ray, air-to-surface missiles such as AS15TT and Sea Skua, unguided air-to-surface rockets

UPDATED

CASA 3000

TYPE. Twin-turboprop regional airliner

PROGRAMME. Market studies completed September 1991, definition phase completed May 1993. Launch decision still dependent on market situation, no go-ahead given up to mid-1995

DESIGN FEATURES. Conventional twin-engined low-wing configuration, carbonfibre wing, wing and tailplane non-swept but with marked dihedral, sweptback vertical tail Designed for Cat II landings (Cat IIIa optional) and flight into known icing conditions

FLYING CONTROLS: Ailerons operated mechanically, all other control surfaces electrohydraulically One aileron and two spoilers on each wing, latter operable symmetrically on ground to act as airbrakes, two independent elevators, with artificial feel (Q-feel) and stall warning (stick shaker and stick pusher) capability, two (vertically split) rudder surfaces operated electrically (fly-by-wire). Two-segment hydraulically operated single-slotted flaps on each wing, maximum deflection 40°

STRUCTURE: Mainly of aluminium alloys, with extensive metal to metal bonding, composites for radome, movable control surfaces, fairings, trailing-edges, cabin flooring, and possibly other structural components. Primary structure designed for 60,000 hour service life

LANDING GEAR Retractable tricycle type, with twin wheels on each unit All units retract forward Designed for service life of 75,000 landings, following safe-life criteria

POWER PLANT: Two turboprops, each rated at 3,244 kW (4,350 shp) for T-O (3,579 kW, 4,800 shp with APR), each driving an 880 rpm six-blade propeller FADEC engine control system. Fuel capacity 6,460 litres (1,706 US gallons, 1,421 Imp gallons)

ACCOMMODATION. Flight crew of pilot, co-pilot and observer Basic cabin arranged for 72 passengers in mainly four-abreast seating at 81 cm (32 in) pitch, with galley and stowage areas at front and toilet at rear, plus one attendant seat at front and one at rear Baggage compartment aft of passenger area. Alternative layouts for 78 passengers at 76 cm (30 in) pitch (high density), or 68 in mixed class (22 at 86 cm: 34 in and 46 at 32 in). Passenger door at front and rear on port side, service door at front and rear, and baggage compartment door at rear, on starboard side Entire accommodation pressurised and air conditioned

SYSTEMS Cabin pressure differential of 0 48 bar (7 0 lb/sq in), providing 2,285 m (7,500 ft) environment at altitude of 9,450 m (31,000 ft)

AVIONICS. *Flight.* Navigation control and sensors, central radio tuning units, aircraft systems monitoring sensors and flight management system connected through digital buses to two avionics computers. Options to include GPS ACARS (ARINC communication and reporting system) and MLS

Instrumentation: Two primary flight parameter displays, two multifunction displays, two EICAS displays and Cat. II (optionally Cat IIIa) autopilot all deriving data from avionics computers

DIMENSIONS EXTERNAL	
Wing span	27 66 m (90 ft 9 in)
Length overall	29 70 m (97 ft 5¼ in)
Height overall	8.68 m (28 ft 5¾ in)
Wheel track (c/l of shock-struts)	9 24 m (30 ft 3¾ in
Wheelbase	10 428 m (34 ft 2½ in)
Propeller fuselage clearance	1 16 m (3 ft 9¾ in)
DIMENSIONS INTERNAL	
Cabin Max width	2.64 m (8 ft 8 in)
Width at floor	2.27 m (7 ft 5½ in)
Max height	1 97 m (6 ft 5½ in)
Baggage compartment volume	13 9 m³ (491 cu ft)
Carry-on baggage volume	9 8 m³ (346 cu ft)
WEIGHTS AND LOADINGS	
Operating weight empty	16,700 kg (36,817 lb)
Max payload	8,000 kg (17,637 lb)
Max T-O weight	28,300 kg (62,391 lb)
Max landing weight	27,800 kg (61,288 lb)
Max zero-fuel weight	24,700 kg (54,454 lb)
Max power loading	
without APR	4 36 kg/kW (7 17 lb/shp)
with APR	3 95 kg/kW (6.50 lb/shp)
PERFORMANCE (estimated)	
Max cruising speed	350 kt (648 km/h, 403 mph)
FAR 25 T-O balanced field length at max T-O weight	
ISA at S/L	1,350 m (4,430 ft)
ISA + 20°C at 610 m (2,000 ft)	1,600 m (5,250 ft)
Range at max cruising speed with 72 passengers and baggage	1,000 n miles (1,852 km, 1,151 miles)

Joint venture company formed June 1993 by Aviation Scotland Ltd and Lvan Invest AB to manufacture modified version of ARV Super2 in Sweden

UPDATED

ASL OPUS 280

TYPE: Two-seat light cabin monoplane.

PROGRAMME: Modified ARV Super2. Now manufactured at Hagfors, Sweden. Initial production from assembly of Scottish built kits. JAR-VLA certification early 1995 Original prototype Island Aircraft ARV 1 Super2 (G-OARV) first flew 11 March 1985, piloted by Hugh Kendall: two further trials/demonstrator aircraft in programme which resulted in BCAR Section K certification July 1986; production halted 1987 but resumed 1988 for short period. Design and manufacturing rights purchased late 1991 by Aviation Scotland Ltd and facilities transferred to Burnbank, relaunched November 1991 at Copex '91 UK show at Sandown, overseas relaunch at Copex Caribbean and Latin American show in Miami February 1992, CAA A1 approval received October 1992: first Aviation Scotland aircraft flew November 1992 with AE 75 engine manufactured by Mid-West Aero-Engines, MWAE rotary engine, in testbed Super2 G-BMWG, flew January 1993 for engine development purposes, Aviation Scotland

received CAA certification to carry out modifications in March 1993 but programme transferred entirely to Sweden during 1994. JAR-VLA certificate received March 1995 first deliveries due June 1995

CURRENT VERSIONS: **Super2**: Basic original version, with AE 75 engine.

Opus 280: Developed in Sweden with Rotax 912A four-cylinder four-stroke engine. *Description applies to this version.*

ARV K1 Super2. Kit version of standard Super2 with MWAE 75D two-stroke engine.

Rotary prototype: Version powered by MWAE 100R twin-rotor rotary engine giving 71 kW (95 hp) at 7,500 rpm; engine certification testing by Mid-West Aero Engines at Staverton, UK.

CUSTOMERS: Total of 32 Super2s built by early 1994 (seven by Aviation Scotland). UK production then discontinued. Aircraft c/n 033 to Sweden in October 1994 as SE-KYP for demonstrations. Four Opus 280s ordered by June 1995, when first two due for delivery to Bromma Flight School.

DESIGN FEATURES: Design objective low initial cost and low maintenance cost; engine with aluminium radiator in recessed duct in rear fuselage, superplastically formed aluminium alloy pressings to save weight. Designed to BCAR Section K and FAR Pt 23; also intended to be suitable for home building in kit form under auspices of Popular Flying Association. Wing section NACA 2415 (modified); 5° 12′ forward sweep.

FLYING CONTROLS: Mass balanced ailerons operated by torque tube through leading-edge of manually operated, three-position, plain flaps; single-spar mass balanced rudder and elevator with trim tab.

STRUCTURE: Single-spar aluminium alloy wing, cold bonded and flush riveted. Single uncompromised main bulkhead carries wings, bracing struts, controls, seats, fuel tank and main landing gear; conventional double beam forward of main bulkhead carries firewall, nose landing gear and engine; front fuselage skinning in four panels, rear fuselage of aluminium alloy construction with single curvature skinning. Tail unit conventional aluminium alloy structure with three-spar fixed surfaces. Airframe corrosion-treated.

LANDING GEAR: Non-retractable tricycle type. Cantilever main legs of tapered steel leaf spring. All three wheels size 3.50 × 6.0, with tyres size 13 × 4.00-6, pressure 1.72 bars (25 lb/sq in). Hydraulic disc brakes. Nose leg with gas filled damper and rubber in tension springing.

POWER PLANT: One 59.7 kW (80 hp) Rotax 912A flat-four engine driving two-blade propeller. Fuel capacity 75 litres (19.8 US gallons; 16.5 Imp gallons).

ACCOMMODATION: Enclosed cabin seating two side by side, shoulder location of wing with forward sweep, low panel line and close cowling of small engine combine to provide optimum view from cabin, particularly in turns. Seats adjustable for height, and fold to reveal baggage compartment; additional storage space under seats. Rearward-hinged canopy is one-piece Perspex moulding with GFRP frame. Dual controls standard.

SYSTEMS: Wheel disc brakes operated hydraulically. Electrical system 12 V, with alternator and 12 V 18 Ah battery.

AVIONICS: To customers' requirements.

Comms: Optional Bendix/King or Becker nav/com; Narco transponder.

EQUIPMENT: Standard equipment includes three basic flight instruments plus engine instruments. Optional vacuum instruments driven by dual venturis mounted under front fuselage. Landing and navigation lights.

Aviation Scotland Super2 registered in Sweden as Opus 280 demonstrator

1995

DIMENSIONS, EXTERNAL:	
Wing span	8.69 m (28 ft 6 in)
Width, wings folded	2.54 m (8 ft 4 in)
Wing aspect ratio	8.78
Length overall	5.49 m (18 ft 0 in)
Height overall	2.31 m (7 ft 7 in)
Tailplane span	2.54 m (8 ft 4 in)
Wheel track	1.83 m (6 ft 0 in)
Wheelbase	1.74 m (5 ft 8½ in)
Propeller diameter	1.70 m (5 ft 7 in)
DIMENSIONS, INTERNAL:	
Cabin: Length	1.27 m (4 ft 2 in)
Max width	0.99 m (3 ft 3 in)
Max height	1.09 m (3 ft 7 in)
AREAS:	
Wings, gross	8.59 m² (92.5 sq ft)
Ailerons (total)	0.60 m² (6.5 sq ft)
Trailing-edge flaps (total)	0.89 m² (9.6 sq ft)
Fin	0.59 m² (6.4 sq ft)
Rudder	0.26 m² (2.8 sq ft)
Tailplane	1.23 m² (13.2 sq ft)
Elevators, incl tab	0.55 m² (5.9 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty, equipped	330 kg (728 lb)
Max T-O and landing weight	530 kg (1,168 lb)
Max wing loading	61.7 kg/m² (12.6 lb/sq ft)
Max power loading	8.87 kg/kW (14.60 lb/hp)
PERFORMANCE (at max T-O weight):	
Never-exceed speed (VNE)	134 kts (248 km/h; 154 mph)
Max level speed	104 kts (193 km/h; 120 mph)
Cruising speed, (75% power)	95 kts (176 km/h; 109 mph)
Stalling speed, power off, 40° flap	45 kts (84 km/h; 52 mph)
Max rate of climb at S/L	198 m (650 ft)/min
T-O run	272 m (893 ft)
T-O to 15 m (50 ft)	492 m (1,614 ft)
Landing from 15 m (50 ft)	462 m (1,516 ft)
Landing run	184 m (604 ft)
Range	410 n miles (759 km; 471 miles)
g limits	+3.8/–1.5

1993

IG JAS

INDUSTRIGRUPPEN JAS AB

PRESIDENT AND CEO: Hans Ahlinder
CHIEF PROGRAMME MANAGER: Ingemar Nycander
PUBLIC RELATIONS: Jan Ahlgren

JAS Industry Group formed 1981 to represent Saab-Scania, Ericsson, Volvo Flygmotor and FFV Aerotech in JAS 39 Gripen programme; acts as contractor for Försvarets Materielverk (Defence Materiel Administration, FMV) and co-ordinates JAS 39 Gripen programme within Sweden.

INTERNATIONAL MARKETING:
Saab Military Aircraft, S-581 88 Linköping
MANAGING DIRECTOR: Hans Ahlinder
MARKETING DIRECTOR: Jan Hammarström

International marketing of JAS 39 Gripen is responsibility of Saab Military Aircraft (which see) and British Aerospace, with the JAS Industry Group partners as subcontractors. Workshare on export orders would be Saab 55/BAe 45 per cent under agreement signed 12 June 1995.

UPDATED

Saab artist's impression of the two-seat JAS 39B Gripen SK

1994

JAS 39 GRIPEN (GRIFFIN)

TYPE: Single-seat all-weather, all-altitude interceptor, attack and reconnaissance aircraft.

PROGRAMME: Funded definition and development began June 1980; initial proposals submitted 3 June 1981; government approved programme 6 May 1982, initial FMV development contract 30 June 1982 for five prototypes and 30 production aircraft, with options for next 110; overall go-ahead confirmed Spring 1983; first test runs of RM12 engine January 1985; Gripen HUD first flown in Viggen testbed February 1987; study for two-seat JAS 39B authorised July 1989.

First of five single-seat prototypes (39-1) rolled out 26 April 1987, made first flight 9 December 1988 but lost in landing accident after fly-by-wire problem 2 February

Gripen with wingtip Rb74 (AIM 9 Sidewinder) AAMs. Paired stores, reading inward, are RBS 15F, Rakkapapsnos 70 six-round rocket pod, DWS 39 and Rb75 (Maverick), in front of nose are AIM 120 AMRAAM (left) and radar-guided Mica AAMs

1995

Four early production JAS 39As awaiting delivery to F7 Wing of the Swedish Air Force in 1994

1995

1989, subsequent first flights 4 May 1990 (39-2), 20 December 1990 (39-4), 25 March 1991 (39-3) and 23 October 1991 (39-5); total Gripen sorties 1,869 by 30 May 1995; modified Viggen (37-51) retired at end of 1991 after assisting with avionics trials (nearly 250 flights), two single-seat fatigue test airframes (39-51 discarded 1993; 39-52 began 16,000 hour programme, August 1993); second production batch (110 aircraft) approved 3 June 1992; first production Gripen (39 101) made first flight 10 September 1992 and joined test programme in lieu of 39-1, flight test results in many cases (acceleration, speed, range, turn performance) better than specification due to lower zero drag, flight test programme continuing into 1995, including high-AoA and spin trials by 39-2 beginning in Spring 1995. Total programme is 1,800 hours in 2,200 sorties by six trials aircraft.

First production aircraft for Swedish Air Force (39 102) made first flight 4 March 1993 and was handed over to FMV 8 June 1993, flight control software modified following loss of 39 102 in crash on 8 August 1993 and installed from December 1994, further software upgrade to new generation P11 standard first flown 22 March 1995 in trials aircraft and due for introduction to production Gripens from Autumn 1995, modified control stick introduced with production aircraft 39 108 (first flight 11 April 1995).

Initial 30 aircraft to be delivered 1993-96 (five in 1994), next 110 in 1996-2002; first unit is F7 Wing at Såtenäs, maintenance training begun May 1994 at Linköping; conversion scheduled to begin 1 October 1995, IOC April 1996. First flight of JAS 39B (39 800) due second quarter 1996, delivery second quarter 1998, first production trainer in final assembly by mid-1995.

CURRENT VERSIONS: **JAS 39A:** Standard single-seater. *Description applies to this version except where indicated.*

JAS 39B. Two-seater (Gripen SK), with 0.655 m (2 ft 1¾ in) fuselage plug and lengthened cockpit canopy. Primary roles conversion and tactical training, but also combat-capable. Avionics essentially as for JAS 39A and both cockpits identical, except no HUD in rear; instead, HUD image from front seat can be presented on flight data display in rear cockpit. Redesigned environmental control system. Reduced fuel; no internal gun. Prototype entered final assembly 1 September 1994, fatigue test specimen (39-71) also being built.

JAS 39C and D: Potential improved Swedish versions of A and B with enhanced data handling capability.

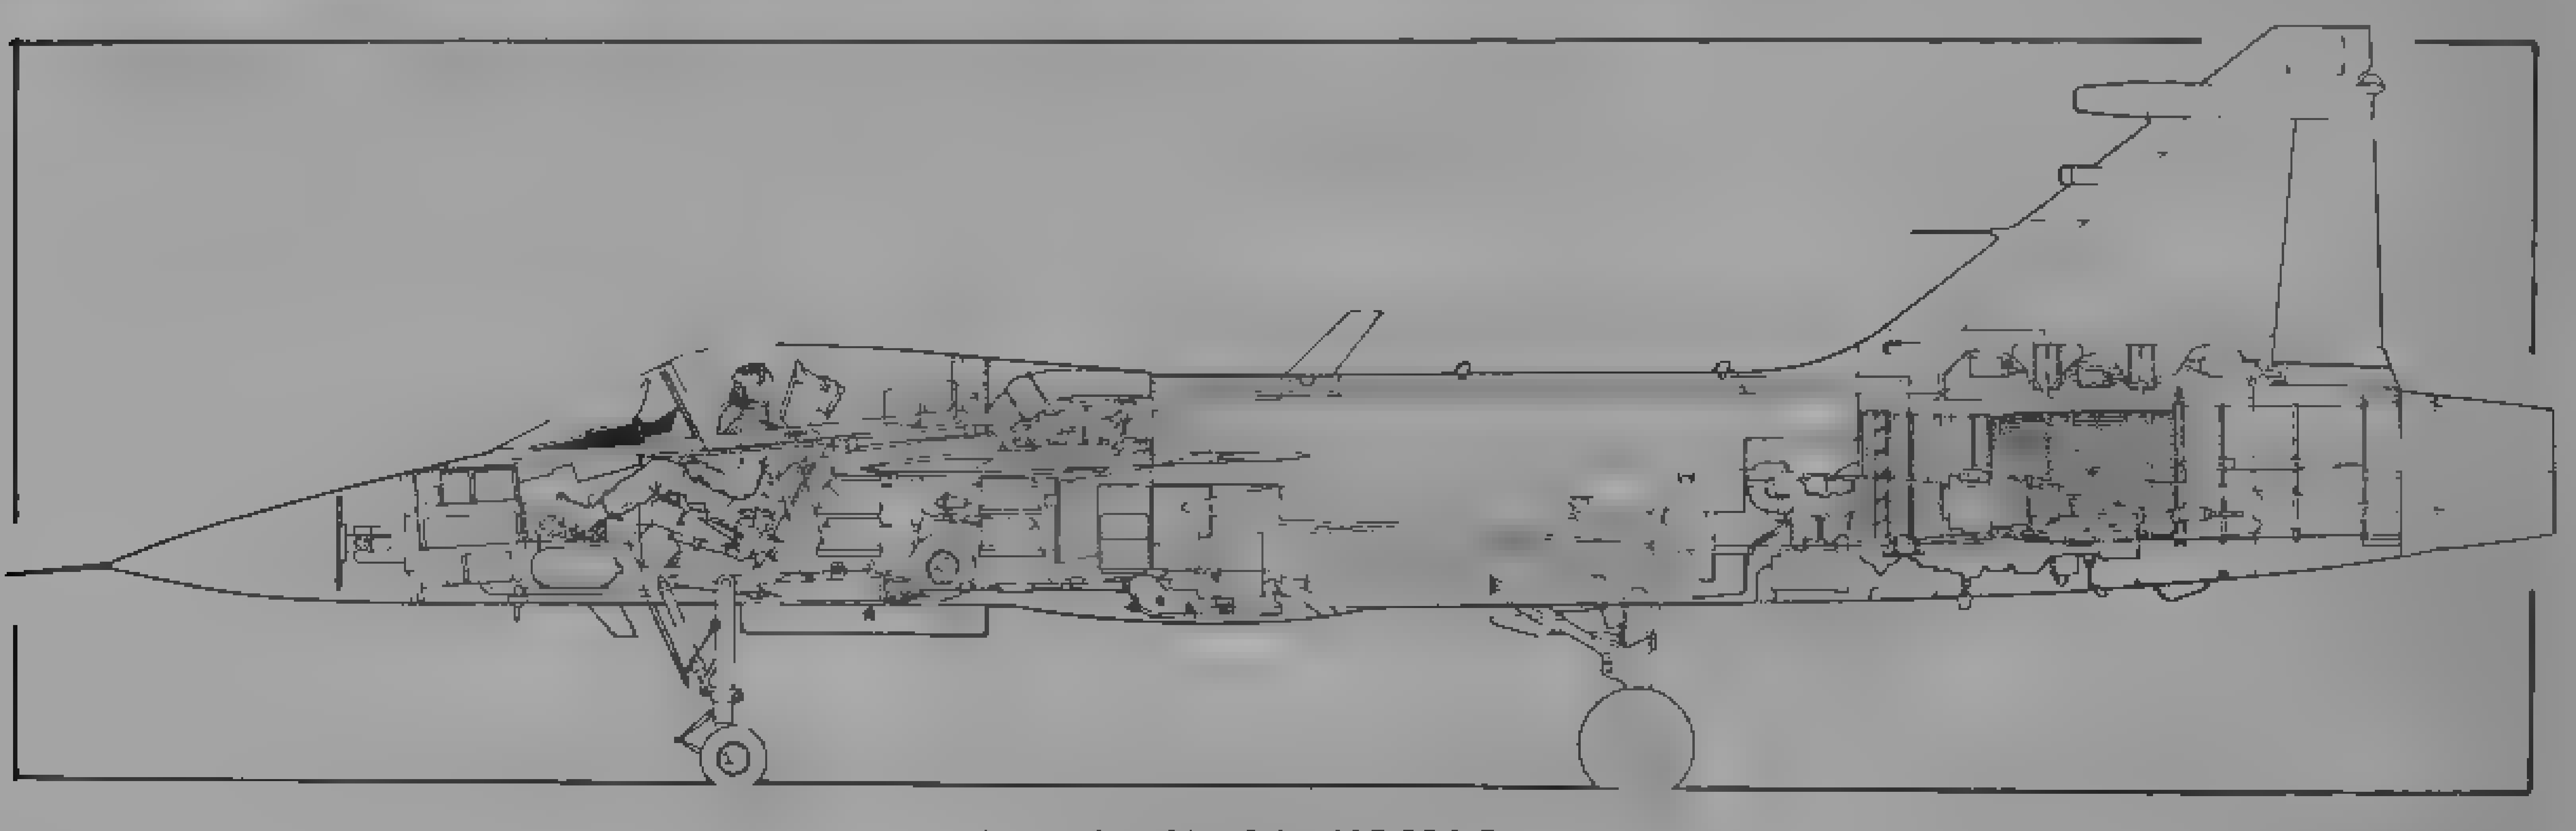
JAS 39X: Potential future export version, to upgraded standard of C/D.

CUSTOMERS: Current production of 140 will equip eight squadrons by 2002. Eventual Swedish Air Force requirement approximately 280, to equip 16 squadrons, second eight replacing JA and AJS Viggens, first 30 ordered with prototypes and full-scale development 30 June 1982, next 110 will include 14 JAS 39Bs. Aircraft 39 101 to 39 109 handed over by May 1995, with 110 and [illegible] on flight test 112 to 126 then in final assembly and 127 to 145 under construction. Required third batch expected to be to JAS 39C/D standard with engine and computer upgrades.

COSTS: Planned cost of SEK25.7 billion in 1982, increased to SEK48.5 billion 1991 by inflation. FMV has reported total cost increase of SEK9.3 billion for period 1982-2001, total budget SEK60.2 billion decided by Swedish Parliament 1993. SEK22.7 billion spent by 1 July 1993, including SEK14.5 billion to IG JAS. Up to SEK300 million approved late 1991 for JAS 39B development. Costs for 300-aircraft programme estimated in 1994 as SEK15 billion for development and SEK48 billion for production.

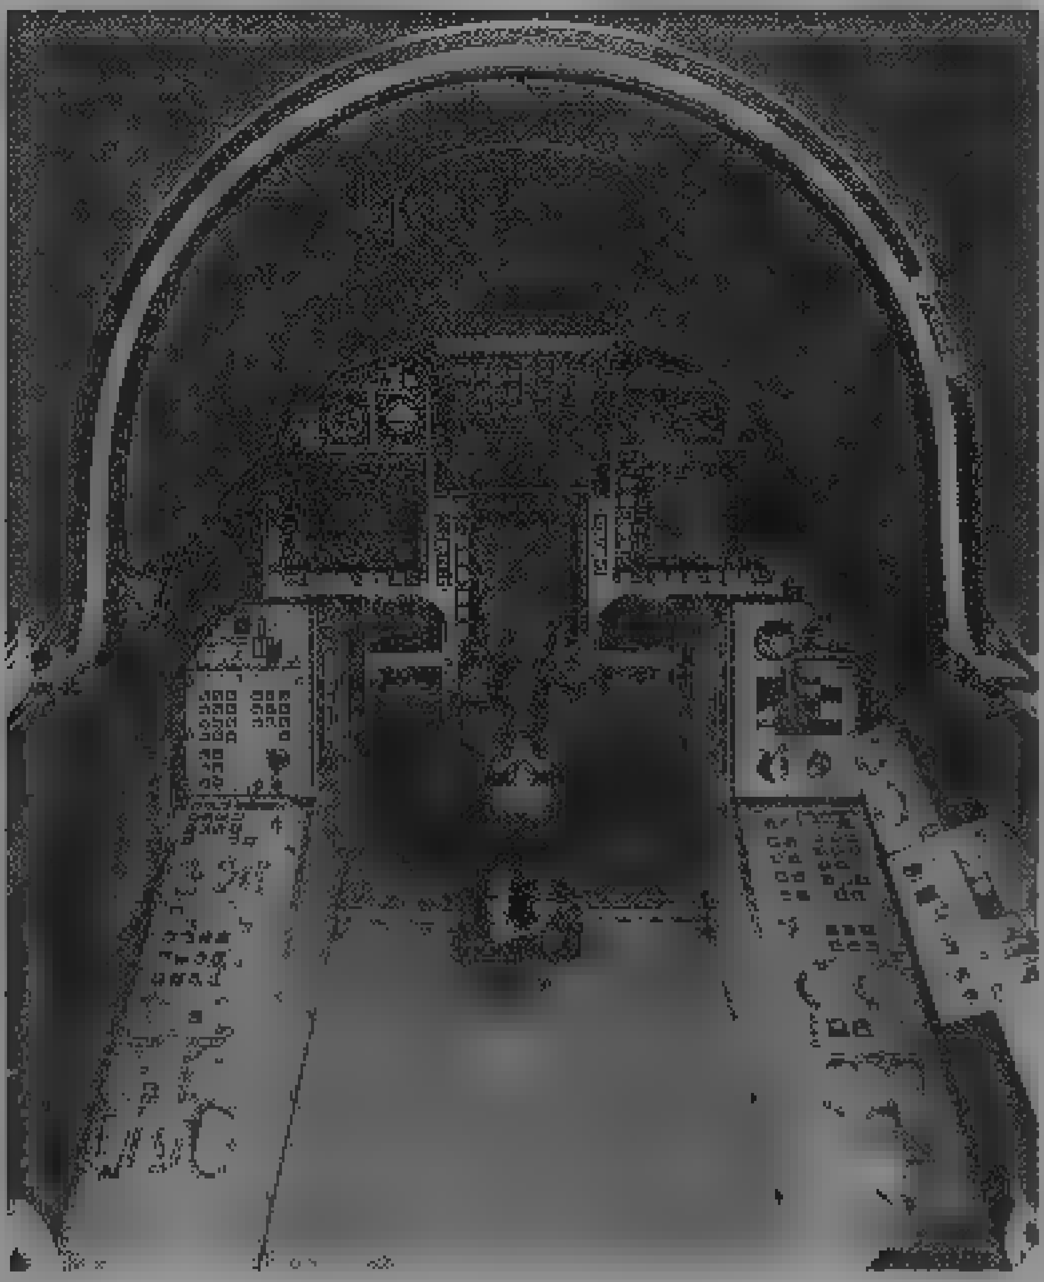
DESIGN FEATURES: Intended to replace AJ/SH/SF/JA/AJS versions of Saab Viggen, in that order, and remaining J 35 Drakens, partners are Saab Military Aircraft, Ericsson Radar Electronics, Volvo Flygmotor and FFV Aerotech, to operate from 800 m (2,625 ft) Swedish V90 road strips, simplified maintenance and quick turnround with ground crew comprising one technician and five conscripts.

Delta wing with squared tips for missile rails has approximately 45° leading-edge sweepback.



Inboard profile of the JAS 39A Gripen

1994



Cockpit of the JAS 39A

1995

Prototype 39-2 in experimental all-black finish, carrying four Rb74 and two AIM-120 air-to-air missiles

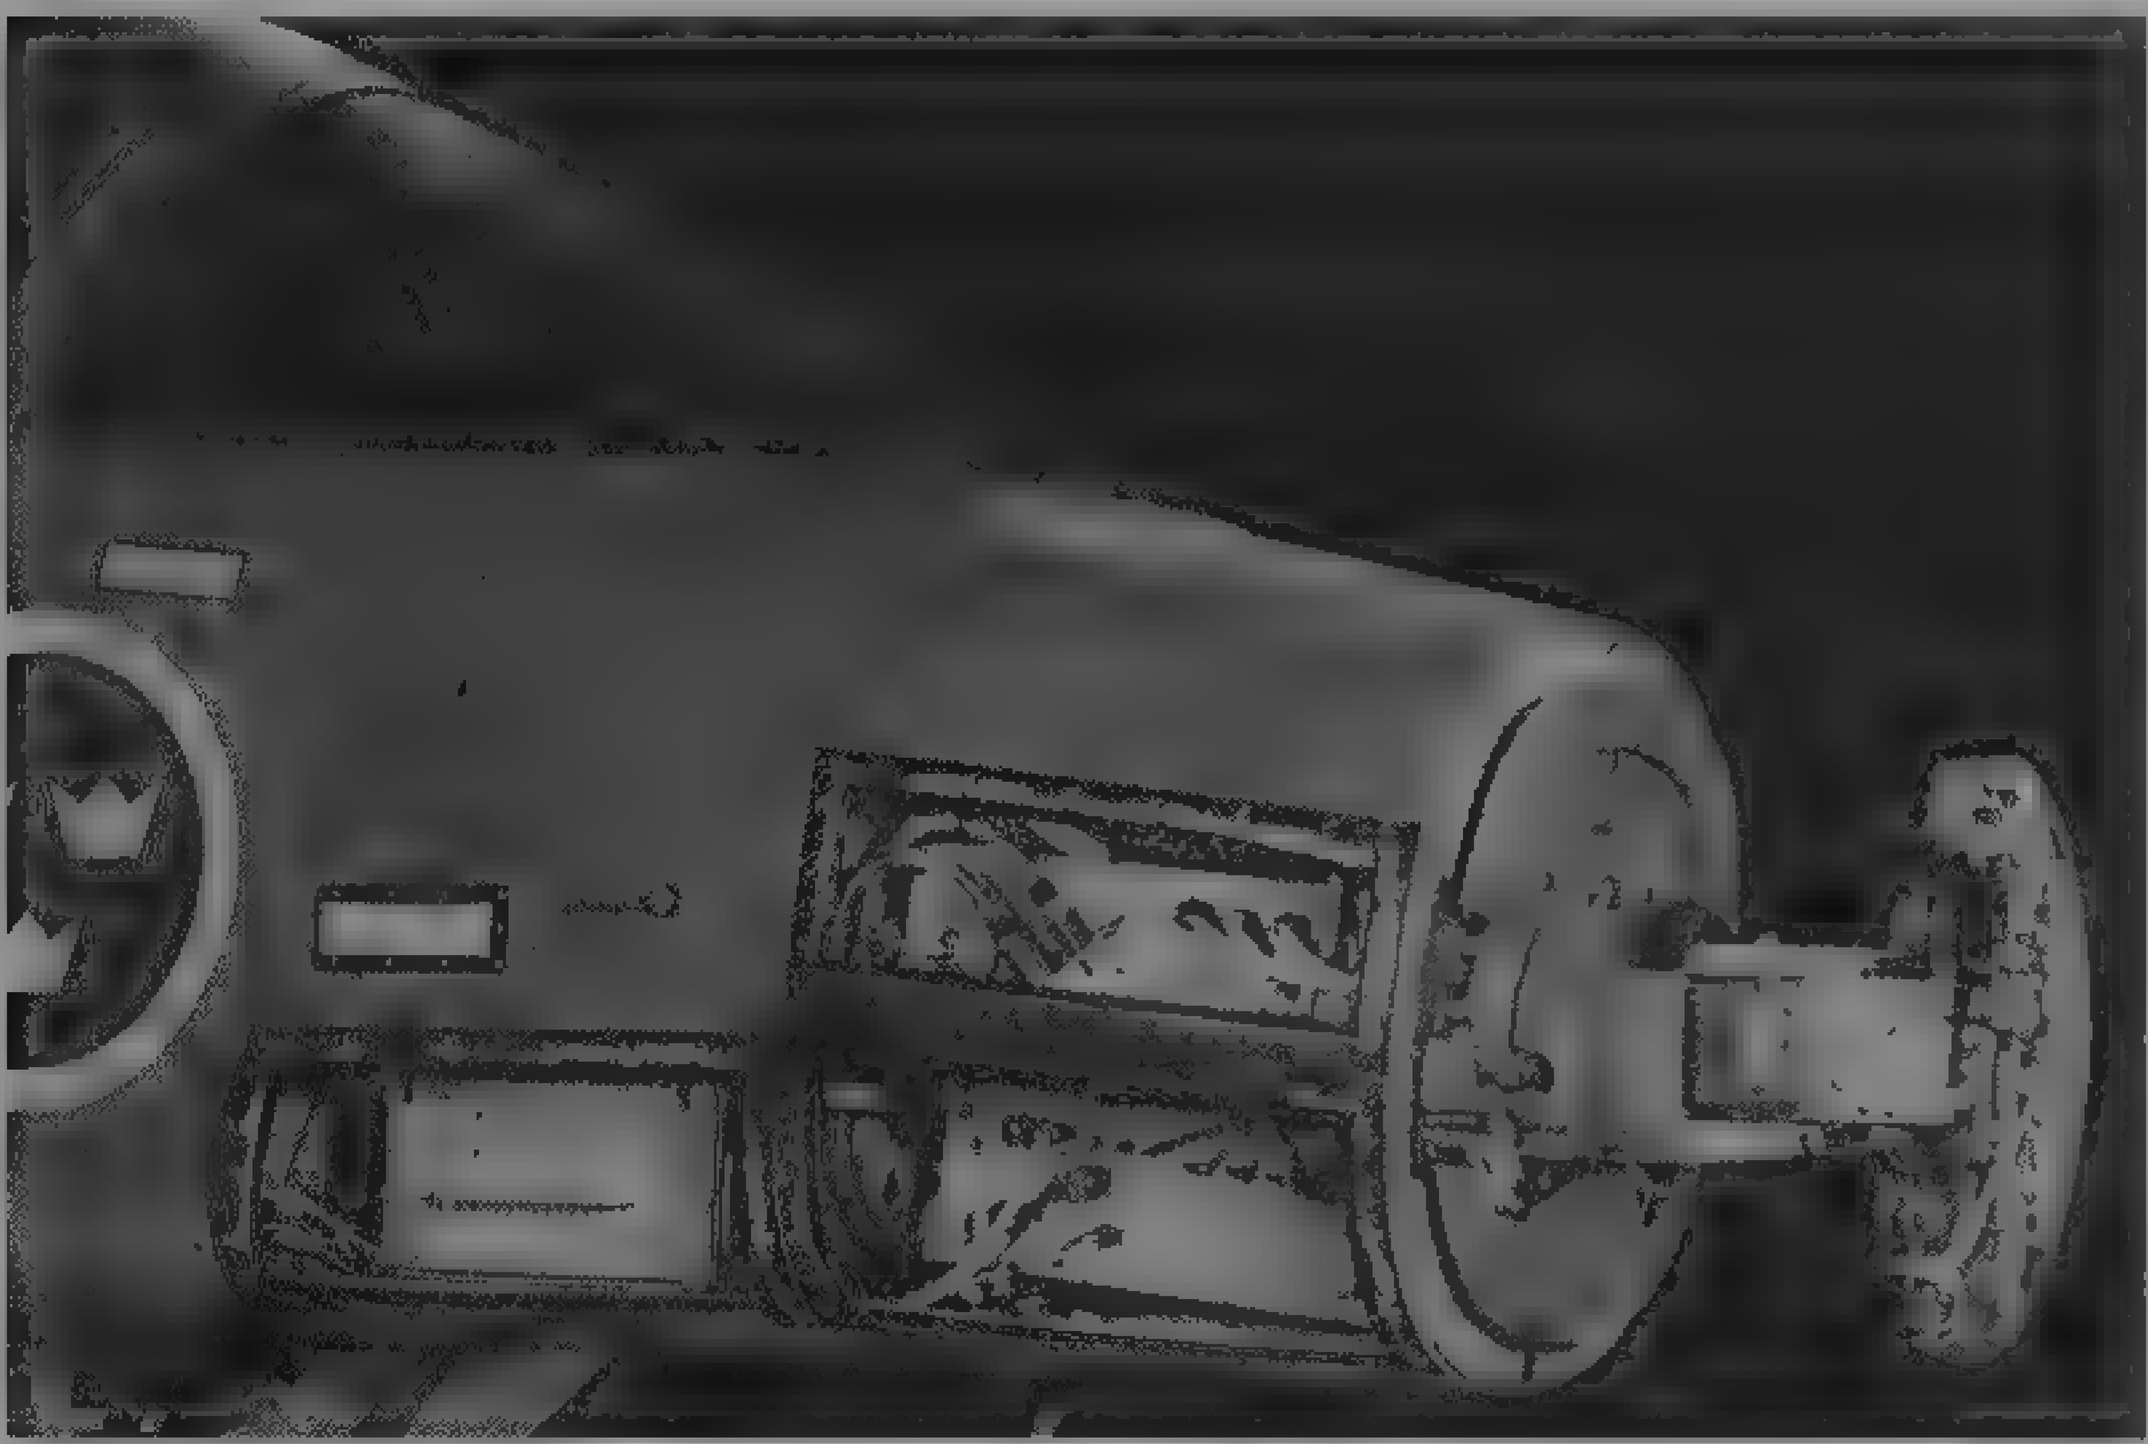
1995

independently movable foreplanes have leading-edge sweep of approximately 43°.

FLYING CONTROLS: Lear Astronics (Lot 1) or Lockheed Martin SA11 (Lot 2) triplex fly-by-wire system with Moog electrically signalled servo valves on powered control units, Saab Combitech aircraft motion sensors and throttle actuator, mini-stick and HOTAS controls.

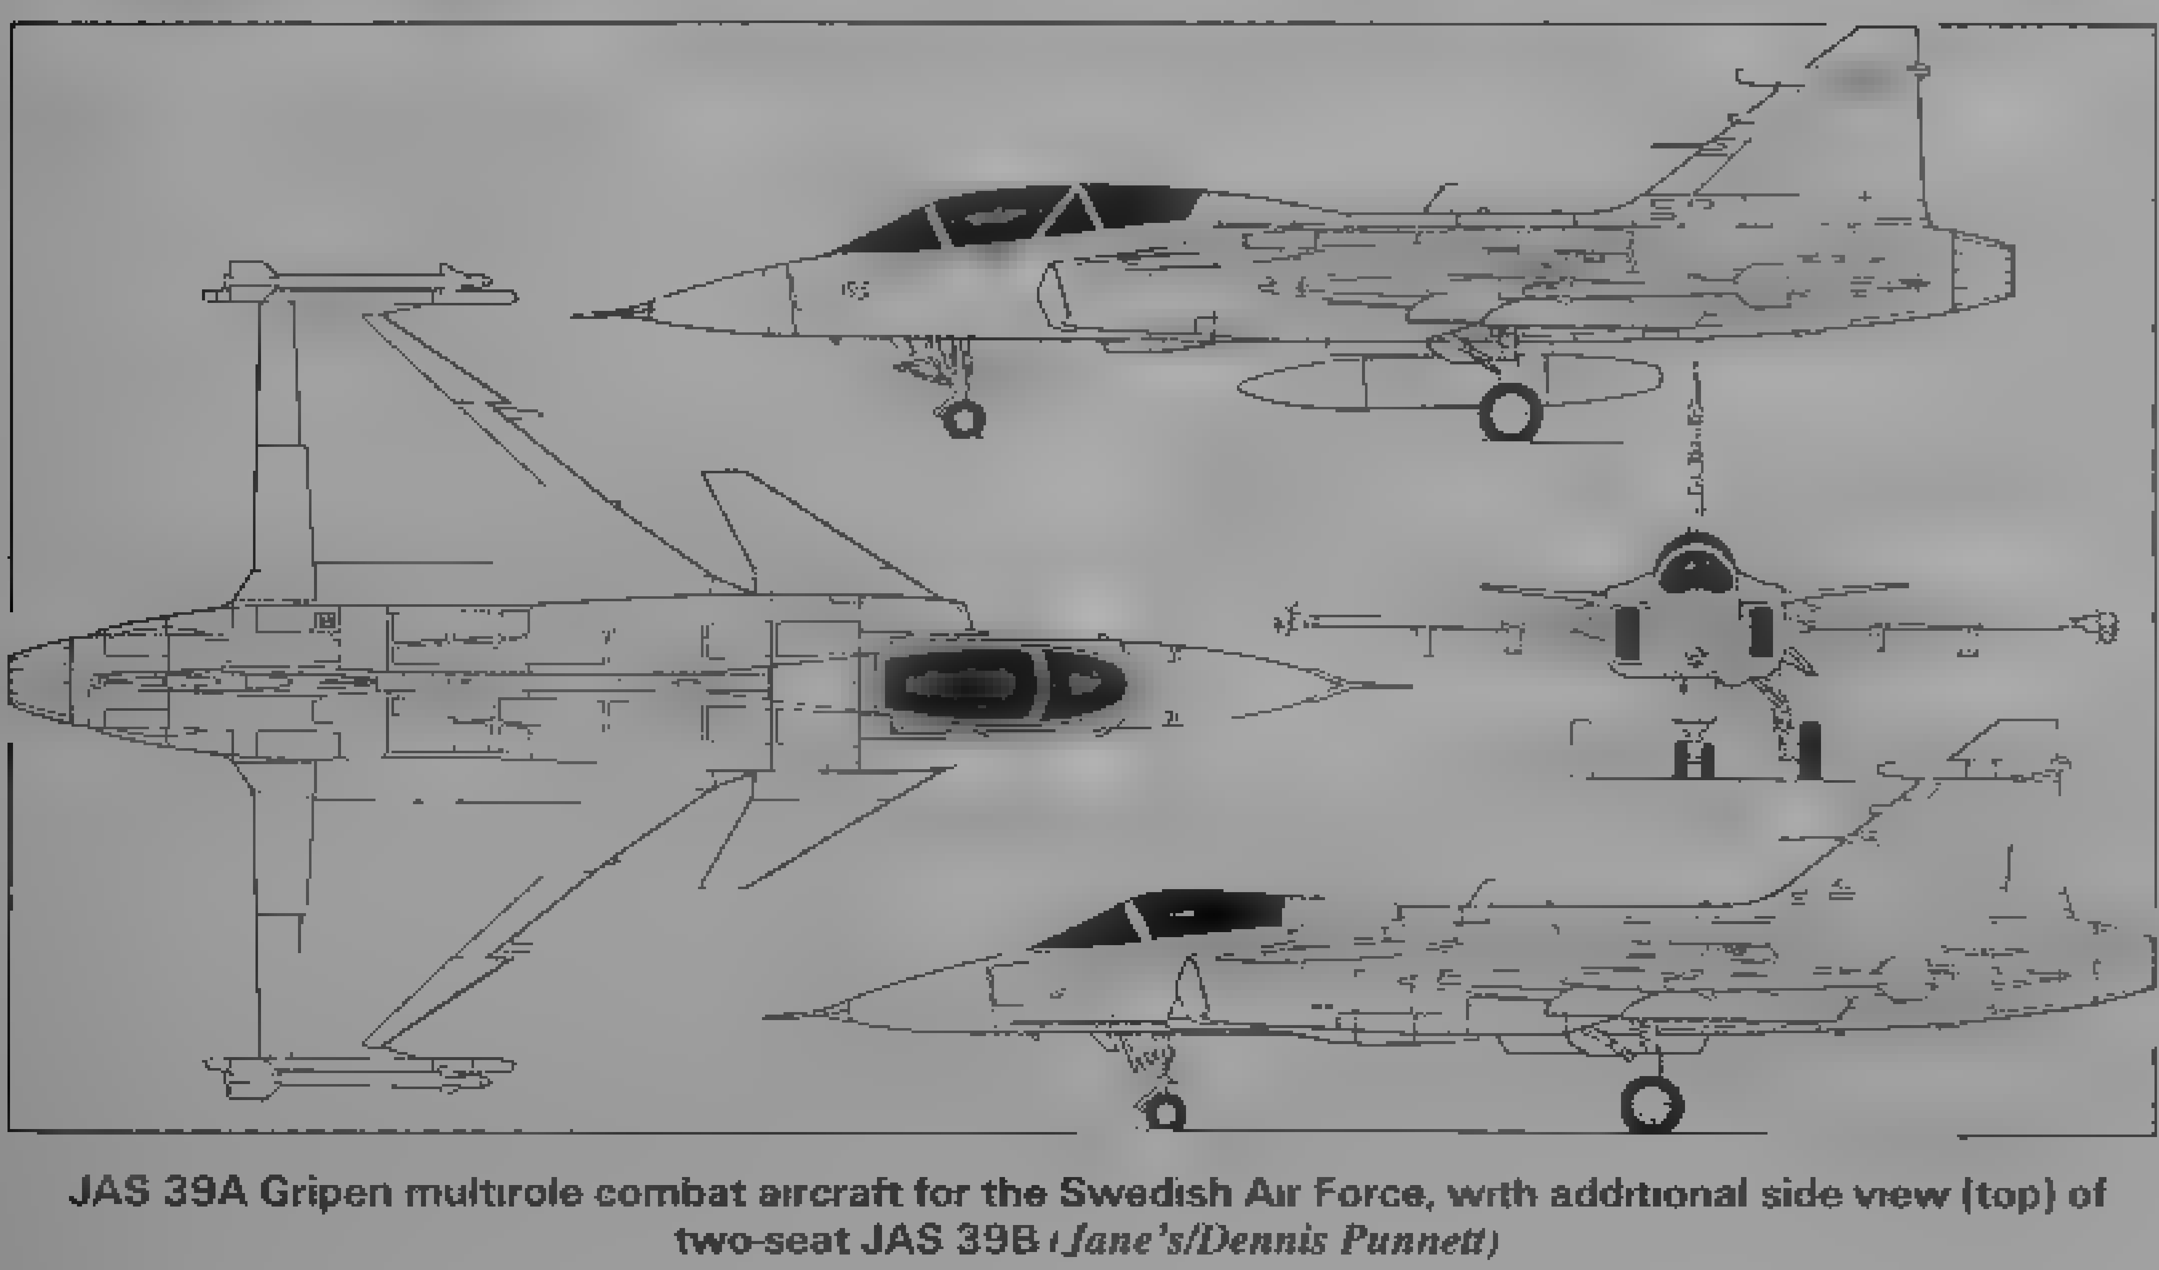
Leading-edge with dog tooth and automatic flaps (one inboard/one outboard of dog-tooth, inner one outboard of canard) on Lucas Aerospace 'geared hinge' rotary actuators; two elevon surfaces at each trailing-edge; individual all moving foreplanes, which also 'snowplough' for aerodynamic braking after landing; airbrake each side of rear fuselage.

STRUCTURE: First 3½ carbonfibre wing sets produced by BAe; all subsequent carbonfibre parts (30 per cent of airframe) made by Saab, including wing boxes, foreplanes, fin and all major doors and hatches.



Ericsson/GMAv PS-05/A radar installation in JAS 39 nose

1995



JAS 39A Gripen multirole combat aircraft for the Swedish Air Force, with additional side view (top) of two-seat JAS 39B (*Jane's/Dennis Punnett*)

1993

LANDING GEAR: AP Precision Hydraulics retractable tricycle gear, single mainwheels retracting hydraulically forward into fuselage, steerable twin-wheel nose unit retracts rearward. Goodyear wheels and tyres. Carbon disc brakes and ABS anti-skid units. Nosewheel braking. Entire gear designed for high rate of sink.

POWER PLANT: One General Electric/Volvo Flygmotor RM12 (F404-GE-400) turbofan, rated initially at approximately 54 kN (12,140 lb st) dry and 80.5 kN (18,100 lb st) with afterburning. Near-rectangular intakes, each with splitter plate. Fuel in integral tanks in fuselage and wings. Intertechnique fuel management system.

ACCOMMODATION: Pilot only in JAS 39A, on Martin-Baker S10LS zero/zero ejection seat. Hinged canopy (opening sideways to port) and one-piece windscreen by Lucas Aerospace. Two seats in tandem in JAS 39B.

SYSTEMS: Hymatic environmental control system for cockpit air conditioning, pressurisation and avionics cooling. Hughes-Treitler heat exchanger. Two hydraulic systems, with Dowty equipment and Abex pumps. Sundstrand main electrical power generating system (40 kVA constant speed, constant frequency at 400 Hz) comprises an integrated drive generator, generator control unit and current transformer assembly. Lucas Aerospace auxiliary and emergency power system, comprising gearbox-mounted turbine, hydraulic pump and 10 kVA AC generator, to provide auxiliary electric and hydraulic power in event of engine or main generator failure. In emergency role, the turbine is driven by engine bleed or APU air; if this is not available the stored energy mode, using thermal batteries is selected automatically. Microturbo APU and air turbine starter for engine starting, cooling air and standby electrical power.

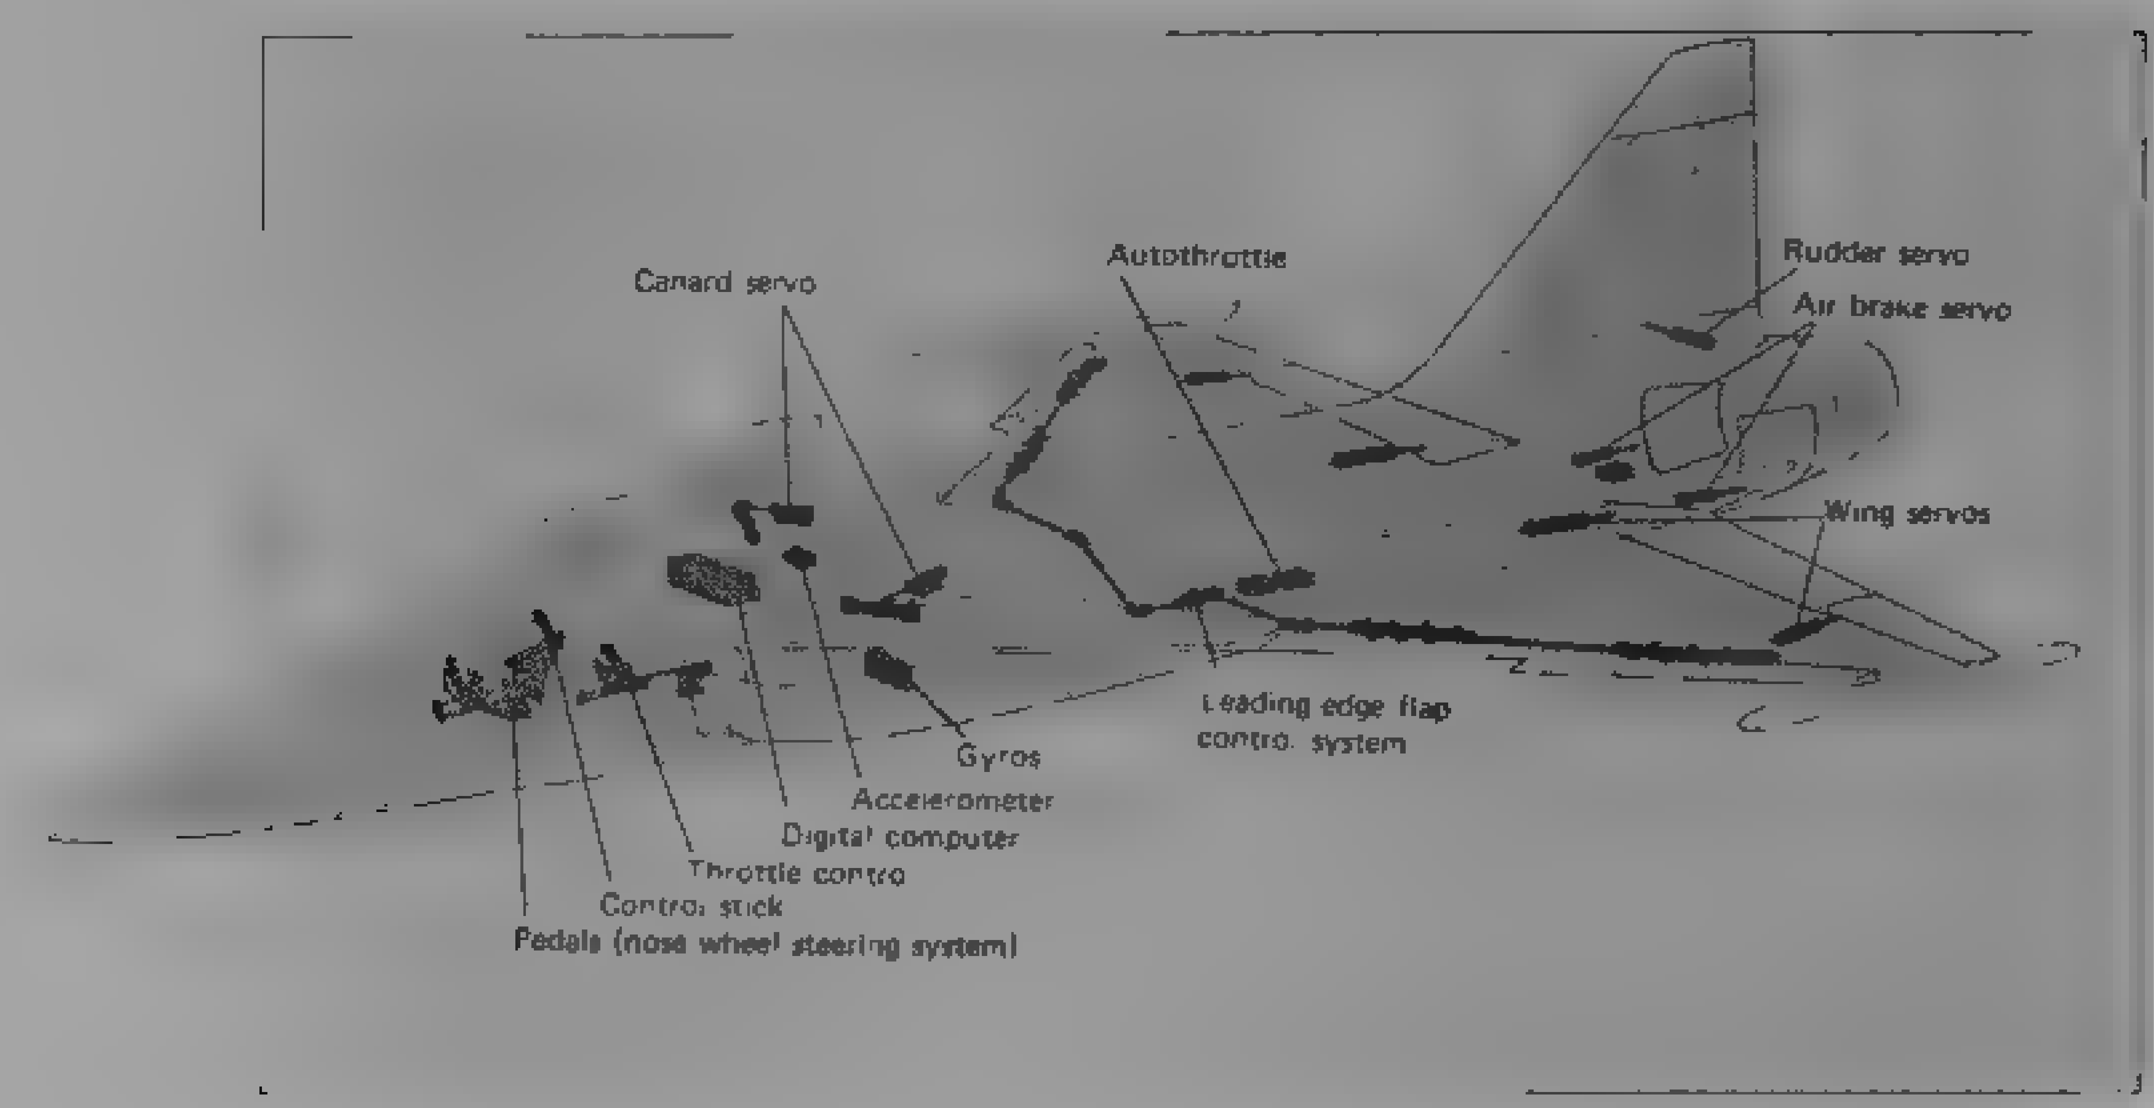
AVIONICS: *Comms*: CelsiusTech dual VHF/UHF transceivers and IFF. Retrofit planned with tactical radio systems (TARAS).

Radar: Ericsson/GMAv PS-05/A multimode pulse Doppler target search and acquisition (lookdown/shootdown) radar (weight 156 kg; 344 lb). For fighter missions, system provides fast target acquisition at long range, search and multitarget track-while-scan, quick scanning and lock on at short ranges; and automatic fire control for missiles and cannon. In attack and reconnaissance roles, operating functions are search against sea and ground targets, mapping, with normal and high resolution, and navigation.

Flight: Ericsson SDS 80 central computing system (D80 computer, Pascal/D80 high order language and programming support environment; upgraded D80E computer flown mid-1994 and introduced from 39.108); three MIL-STD-1553B databuses, one of which links flight data, navigation, flight control, engine control and main systems; Honeywell laser INS and radar altimeter; Nordmicro air data computer. BAe three-axis strapdown gyromagnetic unit provides standby attitude and heading information.

Instrumentation: Ericsson EP-17 electronic display system, incorporating Kaiser wide-angle HUD and using advanced diffraction optics to combine symbology and video images, PP1 or PP2 display processors (PP12 in Production Lot 2 for colour imagery); three Ericsson CRT HDDs. Left-hand (flight data) HDD normally replaces all conventional flight instruments; central display shows computer generated map of area surrounding aircraft with tactical information superimposed; right hand CRT is a multisensor display showing information on targets acquired by radar, FLIR and weapon sensors. Minimum of conventional analog instruments for back-up only.

Mission: FLIR pod, carried under starboard air intake trunk, forward of wing leading-edge, for attack and reconnaissance missions at night, providing heat picture of target on right-hand HDD.



JAS 39 Gripen triplex digital flight control system

1994

Self defence: Radar warning equipment; CelsiusTech countermeasures, including chaff/flare and jamming.

ARMAMENT: Internally mounted 27 mm Mauser BK27 automatic cannon in port side of lower front fuselage and two wingtip-mounted Rb74 (AIM-9L) Sidewinder infra-red AAMs standard. (No internal gun in JAS 39B.) Five other external hardpoints (two under each wing and one on centreline) for short- and medium-range air-to-air missiles such as Rb74, Mica or AIM-120 AMRAAM, air-to-surface missiles such as Rb75 (Maverick); anti-shipping missiles such as Saab RBS 15F; DASA DWS 39 munitions dispenser; conventional or retarded bombs; air-to-surface rockets, or external fuel tanks.

DIMENSIONS, EXTERNAL:

Wing span	8.40 m (27 ft 6¾ in)
Length overall: JAS 39A	14.10 m (46 ft 3 in)
JAS 39B	14.755 m (48 ft 5 in)
Height overall	4.50 m (14 ft 9 in)
Wheel track	2.40 m (7 ft 10½ in)
Wheelbase: JAS 39A	5.20 m (17 ft 0¾ in)
JAS 39B	5.90 m (19 ft 4¼ in)

WEIGHTS AND LOADINGS:

Operating weight empty	6,622 kg (14,600 lb)
Internal fuel weight	2,268 kg (5,000 lb)
T-O weight, clean	approx 8,500 kg (18,740 lb)
Max T-O weight with external stores	approx 13,000 kg (28,660 lb)

PERFORMANCE:

Max level speed	supersonic at all altitudes
T-O and landing strip length	approx 800 m (2,625 ft)
g limit	+9

MFI

MALMÖ FORSKNINGS & INNOVATIONS

Kantyxegatan 21, S-213 76 Malmö
Telephone: 46 (40) 21 99 50
Fax: 46 (40) 21 81 11
CHIEF DESIGNER: Håkan Langebro

MFI has manufactured various designs by Björn Andreasson, including BA-12 Slandan (see Microlights section, 1992-93 *Jane's*), BA-14 and earlier MFI-9. A recent move, and preoccupation with manufacture of new floor panels for Swedish Navy ASW helicopters slowed development of BA-14B, company hoped to resume flight testing during 1994, but no confirmation received up to mid-1995. MFI also developed MFI-11 (new version of MFI-9B), last described in 1994-95 *Jane's*.

UPDATED

MFI BA-14B

TYPE: Two/four-seat trainer and utility aircraft.

PROGRAMME: Construction of BA-14 Starling (SE-KFV, first flight 25 August 1988), designed by Bjorn Andreasson, began 1987, became joint venture project between MFI and FFV Aerotech, but later redesigned by MFI to FAR Pt 23A, development delayed by other work, but resumption of flight testing apparently still awaited.

CUSTOMERS: Production not yet begun.

DESIGN FEATURES: Strut-braced, no-dihedral high wing with approximately 3° forward sweep; sweptback vertical tail with dorsal fin, upswept rear fuselage with baggage/freight door amidships.

FLYING CONTROLS: Ailerons, mass balanced rudder, and all-moving tailplane with large inset tab; mechanical actuation; plain flaps.

STRUCTURE: Mostly composites: GFRP wing with CFRP reinforced spar caps; fuselage GFRP/CFRP semi-monocoque. Wing carry through structure of welded steel tube.

LANDING GEAR: Non-retractable tricycle type, with mainwheels on arched GFRP leaf spring and nosewheel on shock-strut. Mainwheel brakes. Twin-float gear optional.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming IO-320 flat-four engine, driving a Hoffmann HO-V72A variable-pitch wood/GFRP propeller. Fuel capacity 80 litres (21 US gallons; 17.6 Imp gallons).

ACCOMMODATION: Two seats side by side under large one-piece transparent canopy. Provision for two further seats. Baggage compartment aft of seats.

DIMENSIONS, EXTERNAL:

Wing span	9.00 m (29 ft 6¼ in)
Wing aspect ratio	7.71
Length overall	7.20 m (23 ft 7½ in)
Height overall	2.90 m (9 ft 6¼ in)
Propeller diameter	1.85 m (6 ft 0¾ in)

AREAS:

Wings, gross	10.50 m² (113.02 sq ft)

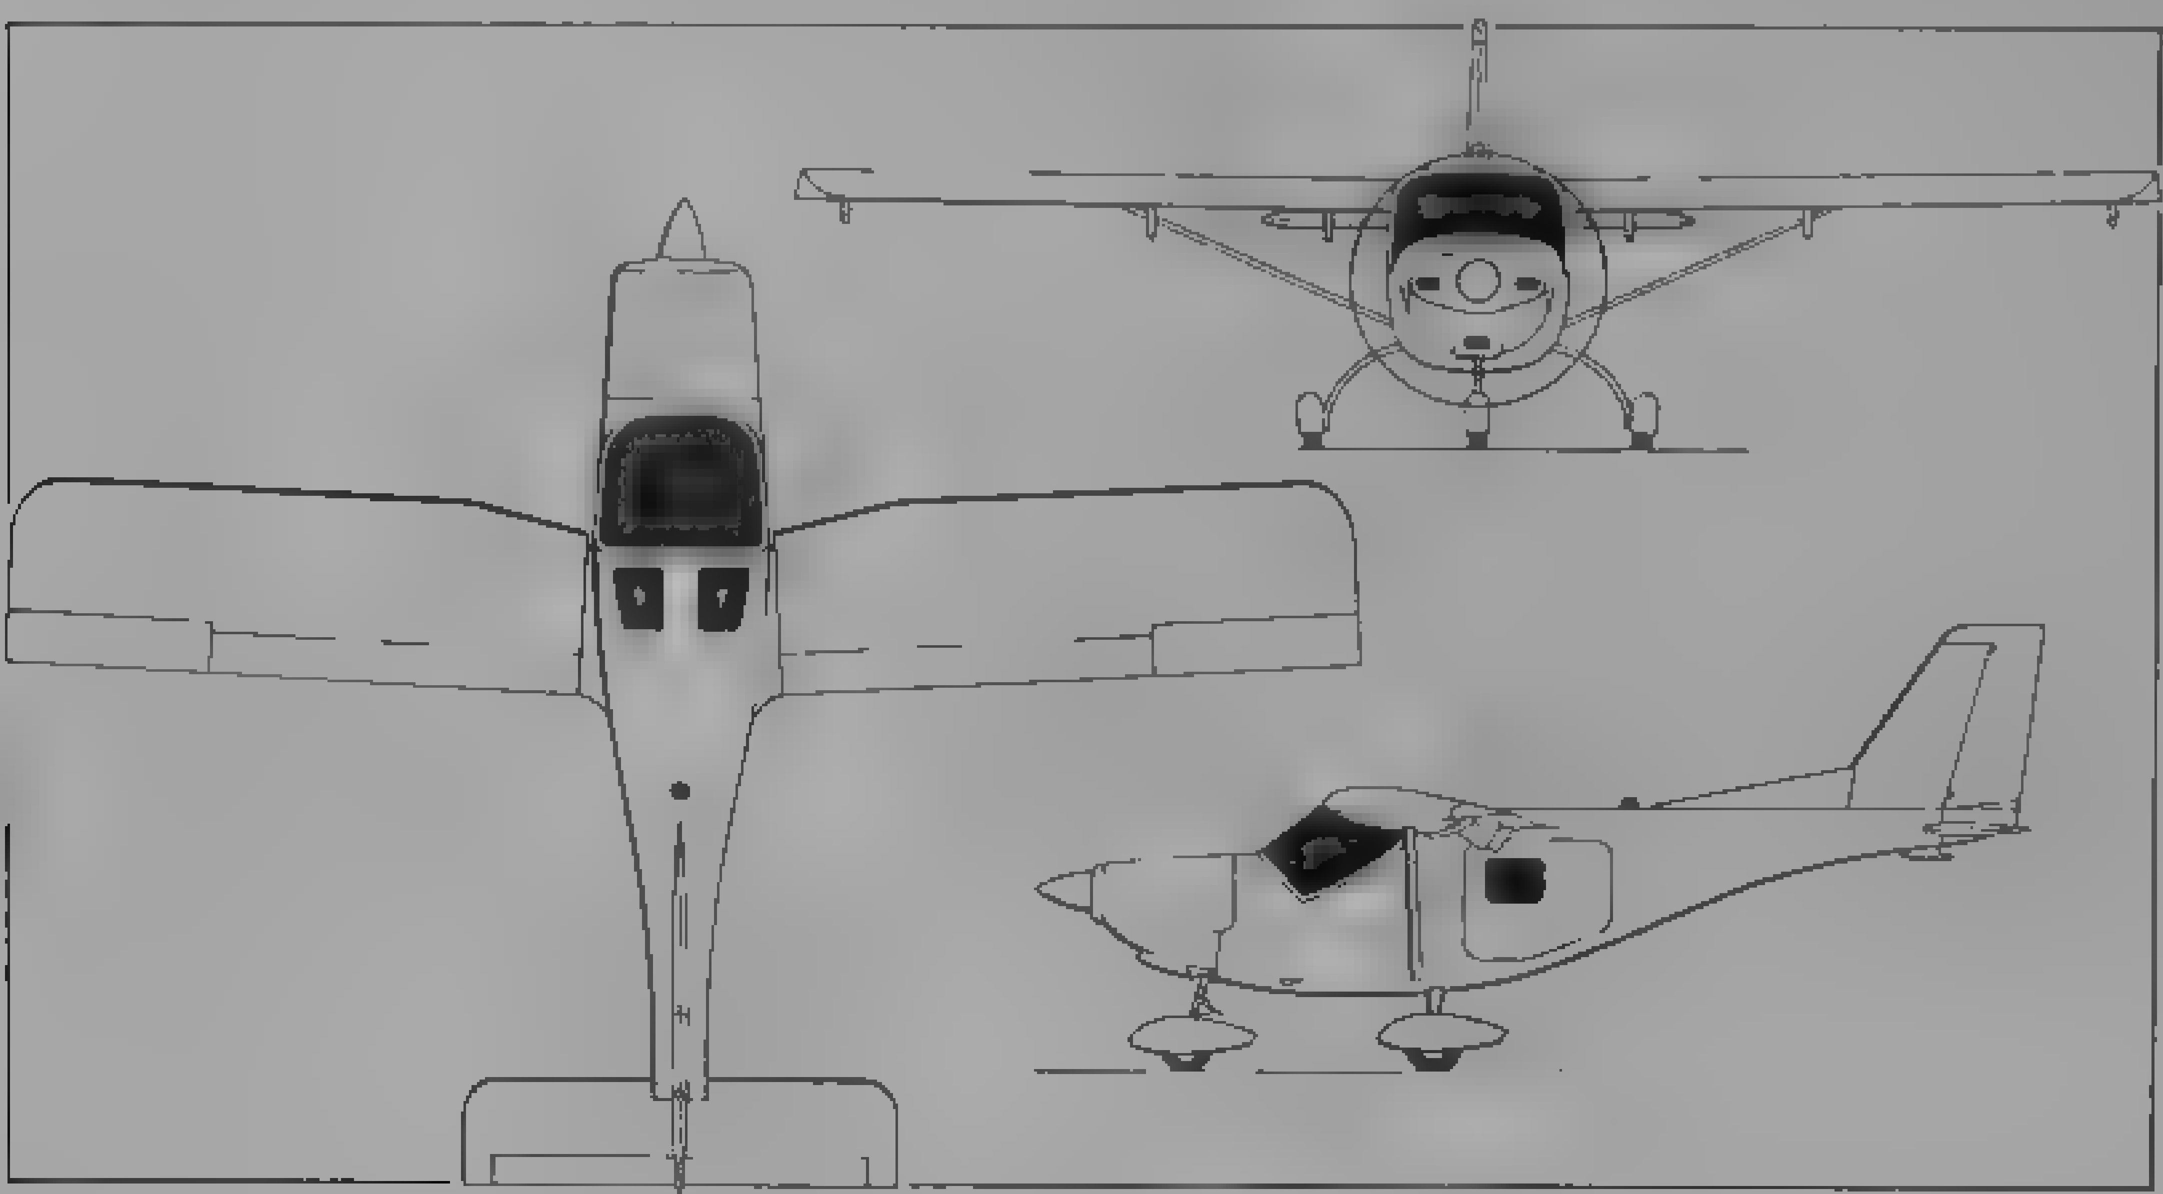
WEIGHTS AND LOADINGS:

Weight empty	615 kg (1,356 lb)
Max T-O weight	900 kg (1,984 lb)
Max wing loading	85.71 kg/m² (17.55 lb/sq ft)
Max power loading	7.55 kg/kW (12.40 lb/hp)

PERFORMANCE:

Max level speed at S/L	124 kts (230 km/h; 143 mph)
Max cruising speed at S/L	113 kts (210 km/h; 130 mph)
Econ cruising speed at S/L	108 kts (200 km/h; 124 mph)
Stalling speed, power off	46 kts (84 km/h; 53 mph)
Max rate of climb at S/L	335 m (1,100 ft)/min
T-O and landing run	250 m (821 ft)
g limits	+4.4/–2.2

UPDATED



MFI BA-14B training and utility aircraft (*Jane's/Mike Keep*)

1993

MFI MFI-11

TYPE: Two-seat light aircraft in landplane or floatplane versions.

PROGRAMME: Developed 1991-92; prototype (SE-XDK) made first flight 1 August 1992, flight testing completed by end of 1993, but production plans suspended indefinitely. Full description in 1994-95 edition.

Saab Service Partner AB (Subsidiary of Saab-Scania AB)

PRESIDENT: Stellan Eklöf

Original Svenska Aeroplan AB founded at Trollhättan 1937 to make military aircraft; amalgamated 1939 with Aircraft Division of Svenska Järnvägsverkstaderna rolling stock factory at Linköping, renamed Saab Aktiebolag May 1965, merged with Scania-Vabis 1968 to combine automotive interests; Malmö Flygindustri acquired 1968. More than 4,000 military and commercial aircraft delivered since 1940; has held dealership for McDonnell Douglas (formerly Schweizer/Hughes) helicopters in Scandinavia and Finland since 1962.

Former Aircraft Division (see 1991-92 *Jane's*) reorganised from 31 March 1992 into Saab Military Aircraft (producing JAS 39 Gripen), Saab Aircraft AB (producing Saab 340B and 2000) and Saab Service Partner AB (Last named provides plant, operations, personnel, computer support, airfield, transportation and other service activities for the other two.) Subcontract work includes wing flaps and airbrakes for McDonnell Douglas MD-80 series. New Saab 340 building at Linköping, opened July 1982, extended in 1986 and 1991 to cater for increased Saab 340 production and Saab 2000 assembly, now exceeds 60,000 m² (645,834 sq ft).

Creation of Saab Defense announced 2 February 1994, combining activities of Saab Missiles, Saab Instruments and Saab Training Systems (all previously part of Saab Combitech AB) with those of Saab Military Aircraft. Saab Defense, Saab Aircraft AB, Saab Combitech AB and Saab Service Partner AB together formed Saab Aircraft & Defense business of Saab-Scania AB. Total Saab-Scania workforce 26,945 at January 1995, of these, about 5,200 in Saab Defense, 1,700 in Saab Aircraft and 900 in Saab Combitech.

Dissolution of Saab-Scania Group agreed on 22 February 1995 and effective from 16 May 1995. Saab AB (workforce 7,800) now comprises Saab Service Partner and five product companies

UPDATED

SAAB MILITARY AIRCRAFT

Principal activity is production of **JAS 39 Gripen**, described under IG JAS heading in this section. Agreement signed with British Aerospace Defence on 12 June 1995 for joint marketing, adaptation, manufacture and support of Gripen in the export market.

UPDATED

OTHER AIRCRAFT

Details of the **AJS 37 Viggen** upgrade and **Sk 60** engine retrofit will be found in *Jane's Aircraft Upgrades*.

NEW ENTRY

SAAB AIRCRAFT AB

Principal programmes are Saab 340B and Saab 2000 regional airliners.

VERIFIED

SAAB 340B

Swedish Air Force designation: Tp 100/100B

TYPE: Twin-turboprop regional and business transport.

PROGRAMME: Go-ahead for joint Saab-Fairchild 340 programme given September 1980; Saab took over programme November 1985; Fairchild continued as subcontractor until 1987, when designation changed to Saab 340; first flight (SE-ISF) 25 January 1983, first flight of first production 340A (fourth aircraft, SE-E04) 5 March 1984, Swedish certification 15 May 1984, followed by 10 European civil aviation directorates and US FAA sharing FAR/JAR certification June 1984, first operator Crossair, first corporate 340A delivered November 1985; 340B announced late 1987, certificated 3 July 1989; 200th Saab 340 delivered 14 August 1990, 300th on 20 May 1992, 4 million flight hours passed in August 1994; 340BPlus introduced February 1994.

CURRENT VERSIONS: **340A**: Initial production version delivered from June 1984 to September 1989, when 340B introduced; 340A engine power increased from 1,215 kW (1,630 shp) to 1,294 kW (1,735 shp) and propeller enlarged mid-1985, earlier aircraft retrofitted, improved cabin by Metair, meeting 1990 fire regulations, introduced mid-1988. Total of 159 built, including three prototypes, full description in 1989-90 *Jane's*.

340B: Hot and high version, first flight April 1989, replaced 340A from c/n 160 onwards, first delivery (Crossair) September 1989, powered by GE CT7-9B with APR, improved payload/range, higher weights and increased tailplane span. *Detailed description applies to this version.*

340 AEW&C: (SAF designation **Tp 100B**, SAF mission system **FSR 890**) Saab 340B with dorsal Ericsson PS-890 Erieye side-looking airborne reconnaissance radar, FSR 890 mission system and avionics suite comprises a high-performance, long-range E/F-band (S-band) pulse Doppler SLAR with fixed active phased-array antenna, IFF/SSR interrogator (Mk 12 IFF, Modes 1-4) interface to 2 to 18 GHz tactical ESM system, INS/GPS navigation, voice/datalink communications in HF and VHF/UHF bands (4,800 bits/s for U/VHF data), and multifunction workstations for up to three optional operators monitoring radar performance, fighter control and other functions performed by land stations fed by datalink. Erieye range coverage is typically 189 n miles (350 km, 217 miles) against fighter-sized targets, even at low altitude and in heavy clutter, sea surveillance mode included, 360° coverage with performance optimised in 150° sectors each side.

Prototype, ordered February 1993, made first flight (SE-C42/100002) 17 January 1994 (minus antenna), first flight with antenna 1 July 1994, five more ordered by Swedish Air Force 23 December 1993, deliveries to begin in 1996. Total order valued at approximately SEK500 million. Antenna unit is 9 m (29 5 ft) long and weighs more than 900 kg (1,984 lb). APU fitted in tailcone for electrical power and third air cycle pack in cargo compartment for mission system cooling.

340BPlus: 340B with 2000 features, launched February 1994, improvements to cabin comfort, airfield performance and lower maintenance costs, first example (c/n 359) delivered to AMR Eagle/Wings West Airline 10 April 1994. 'Generation III' interior with 20 per cent increase in overhead bin volume, improved lighting, new passenger service units, redesigned passenger seats and toilet, active noise control system to lower cabin noise level by approximately 6 dBA, optional extended wingtips (0 61 m; 2 ft on each wing), permitting up to 680 kg (1,500 lb) increase in allowable T-O weight and reducing T-O field length by up to 122 m (400 ft). New low-pressure tyres (5 8 bars, 84 lb/sq in) optional.

Saab 340 AEW&C prototype taking off for its first flight with Ericsson dorsal radar on 1 July 1994 *1995*

340BPlus SAR-200: Rescue version for Japan Maritime Safety Agency; Telephonics AN/APS-143(V) 360° search radar beneath fuselage, FSI AN/AAQ-22 turreted FLIR, GPS and VLF/Omega, wide windows, flare and marker launch system, and rescue pack dropping hatch. JMSA requirement for 10, first funded in 1995 for delivery in 1997.

CUSTOMERS: More than 400 firm orders for 340A, 340B and 340BPlus by 30 August 1994, of which 366 delivered by January 1995.

Customers for 340A were Aigle Azur (one), Air Nelson (eight), Brit Air (six), Business Air (five), Business Express (17), Chautauqua Airlines (two), Comair (19), Crossair (eight), Deutsche BA (nine), Finnaviation (five), Formosa Airlines (three), Kendell Airlines (six), LAPA (two), Northwest Airlink (25), Nusantara Saku (two), Riga Airlines Express (one), Simmons/AMR Airlines (16), Skyways (four), Swedair (11), TAN (one) and unannounced (two), plus four corporate sales.

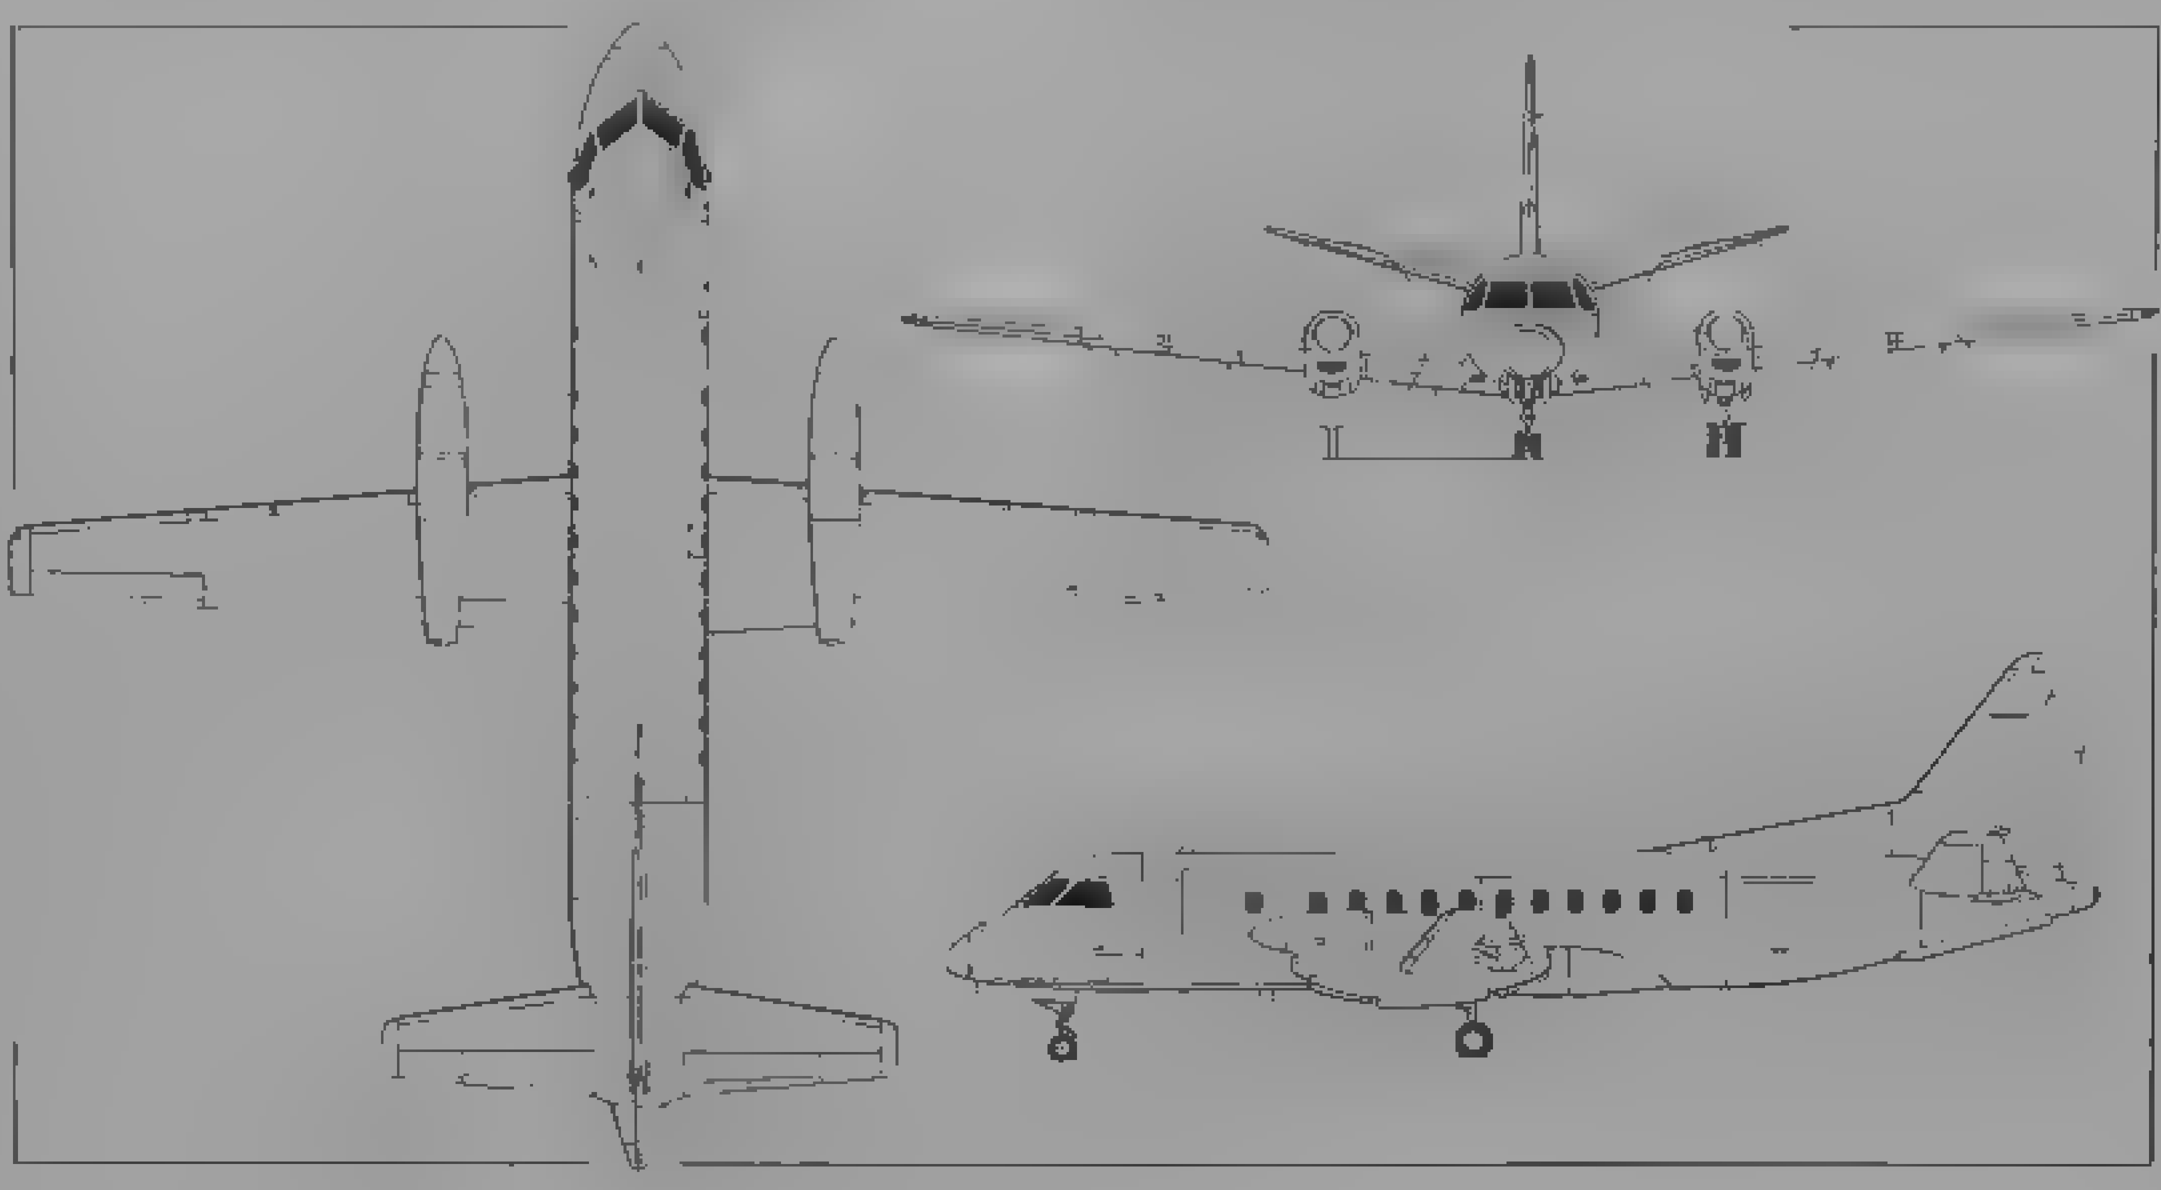
Saab 340B and 340BPlus ordered by Aer Lingus Commuter (four), AMR Eagle (100), Business Express (56), Calm Air (two 340BPlus), Chautauqua Airlines (four), China Southern Airlines (four), Crossair (15), Finnaviation (one), Formosa Airlines (six), Golden Air (one), Hazelton Airlines (five, including one 340BPlus), Japan Air Commuter (eight), KLM Cityhopper (12), Northwest Airlink (11), Regional Airlines (eight), Skyways (four), Skywest (one), Tatra Air (two) and Swedish government (one Tp 100 and six Tp 100B), plus one unannounced.

COSTS: 340 AEW&C, equipment only, $25 million (plus airframe, plus installation).

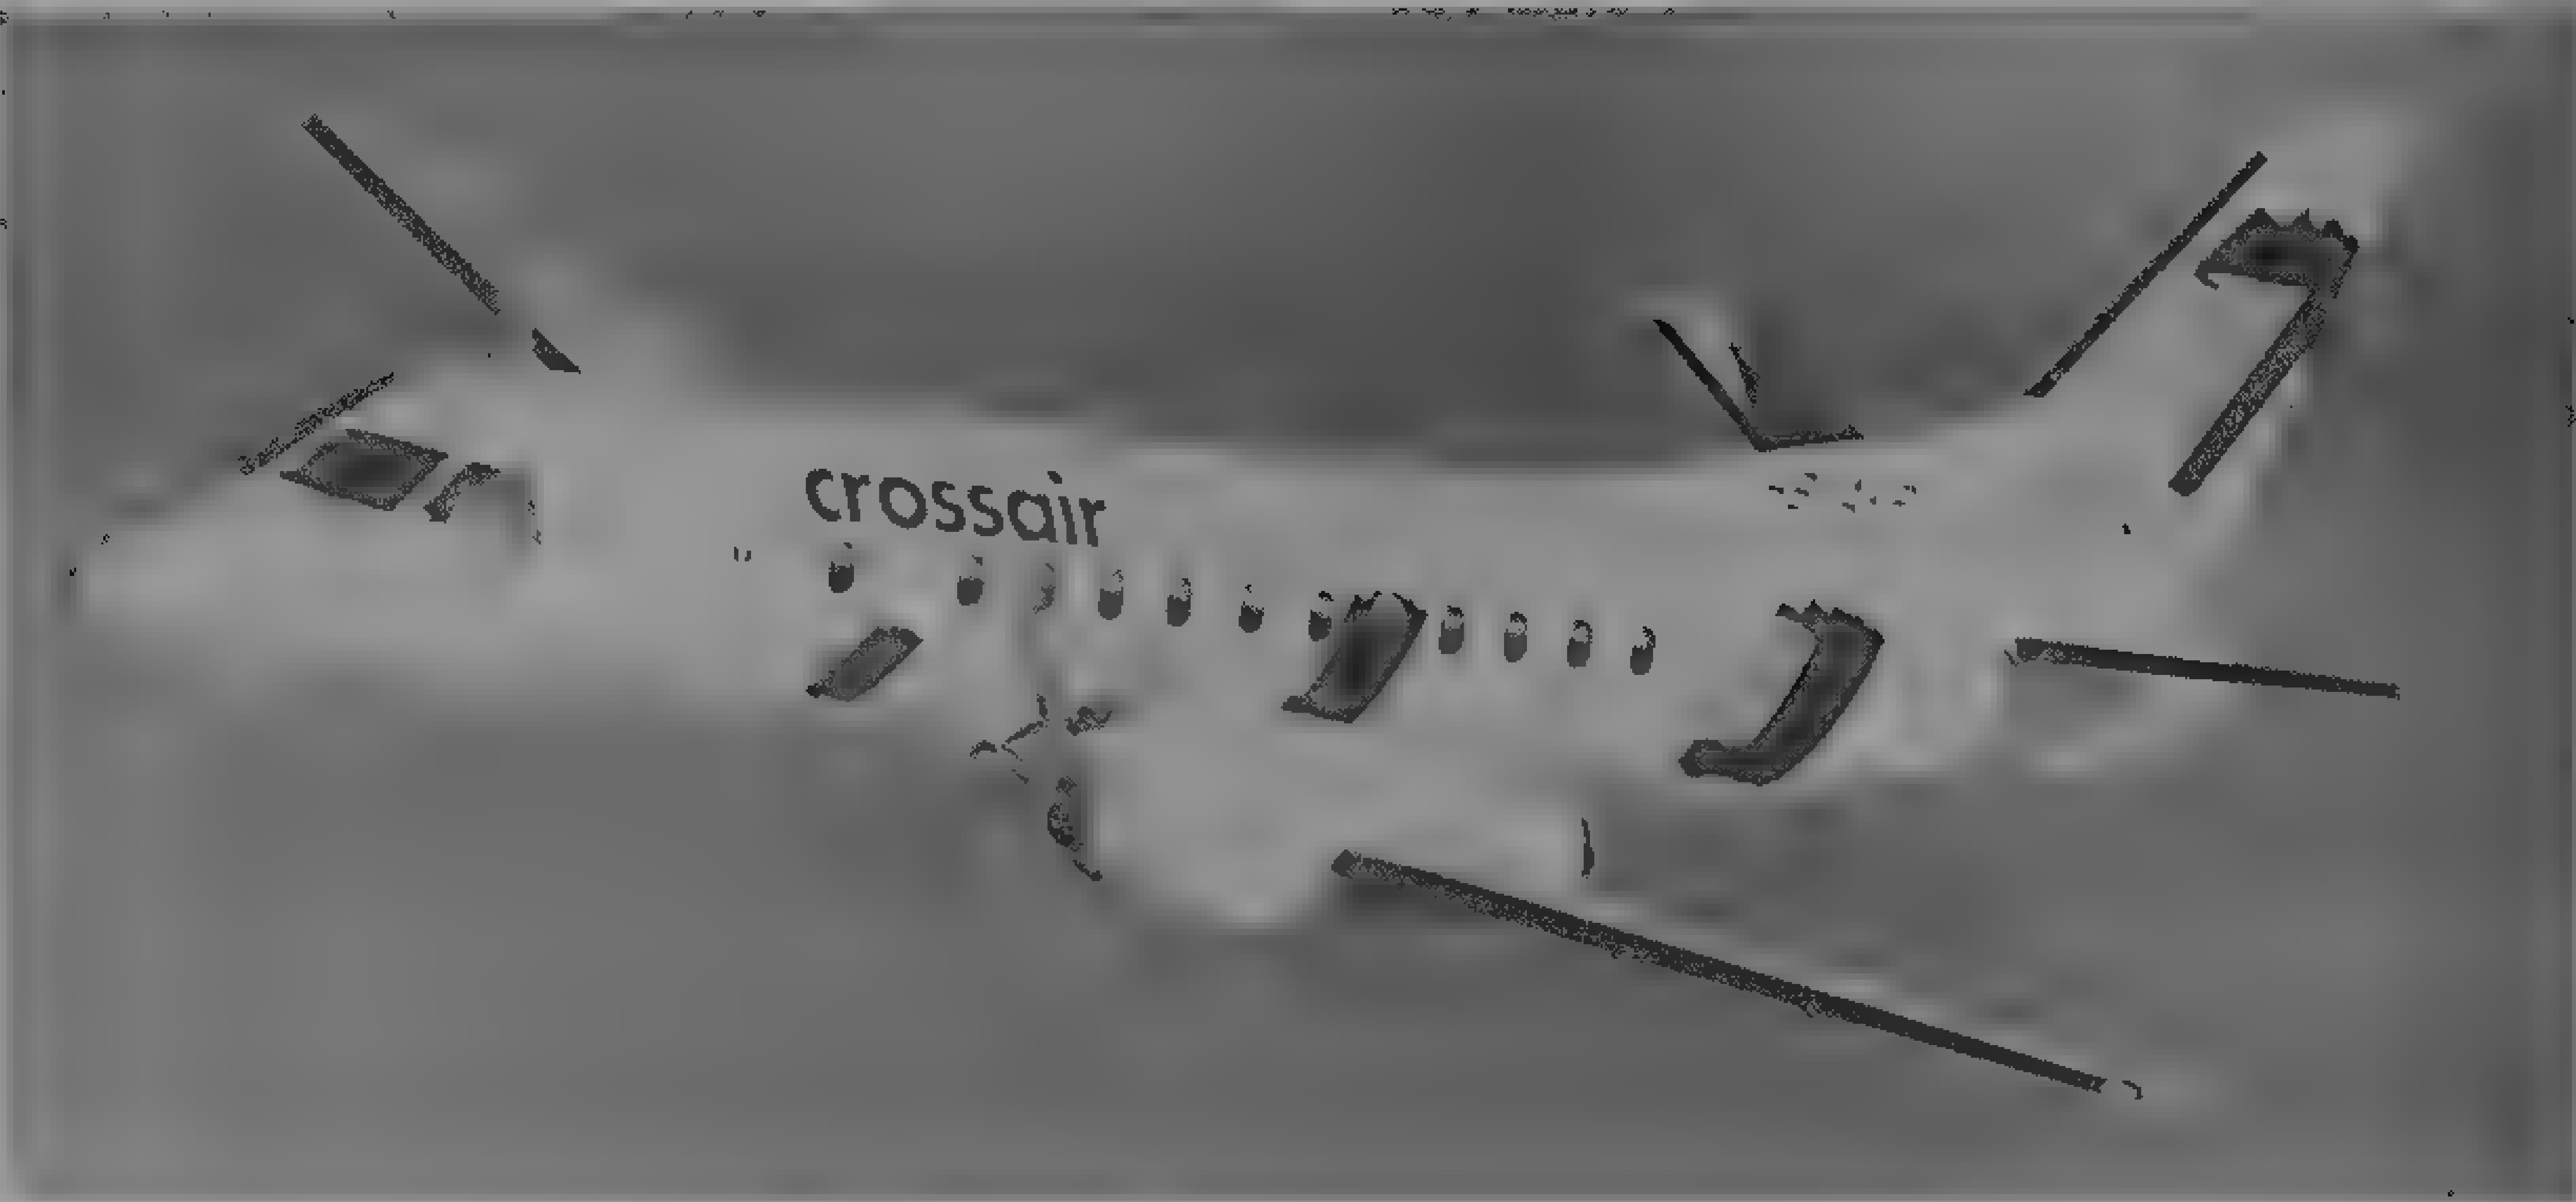
DESIGN FEATURES: Wing section NASA MS(1)-0313, tapered planform with quarter-chord sweep 3° 36', thickness/chord ratio 16 per cent at root, 12 per cent at tip, dihedral 7° from root; incidence 2° at root, swept fin, dihedral tailplane, pressurised cabin with circular cross-section.

FLYING CONTROLS: Mechanical controls, fixed tailplane, trimmable ground tab in each aileron and elevator, trimmable spring tab in rudder, all tabs actuated electromechanically, small strakes under rear fuselage, hydraulically actuated single-slotted flaps. Collins APS-85 autopilot system.

STRUCTURE: Fail-safe mainly all metal structure, two-spar wing, stringers and skins of 2024/7075 aluminium alloy, built in three sections, all doors of aluminium honeycomb, double-shell GFRP radome, CFRP sandwich cabin floor, flaps have aluminium spars, honeycomb panels faced with



Saab 340B regional airliner (two General Electric CT7-9B turboprops) *(Jane's/Dennis Punnett)* *1990*

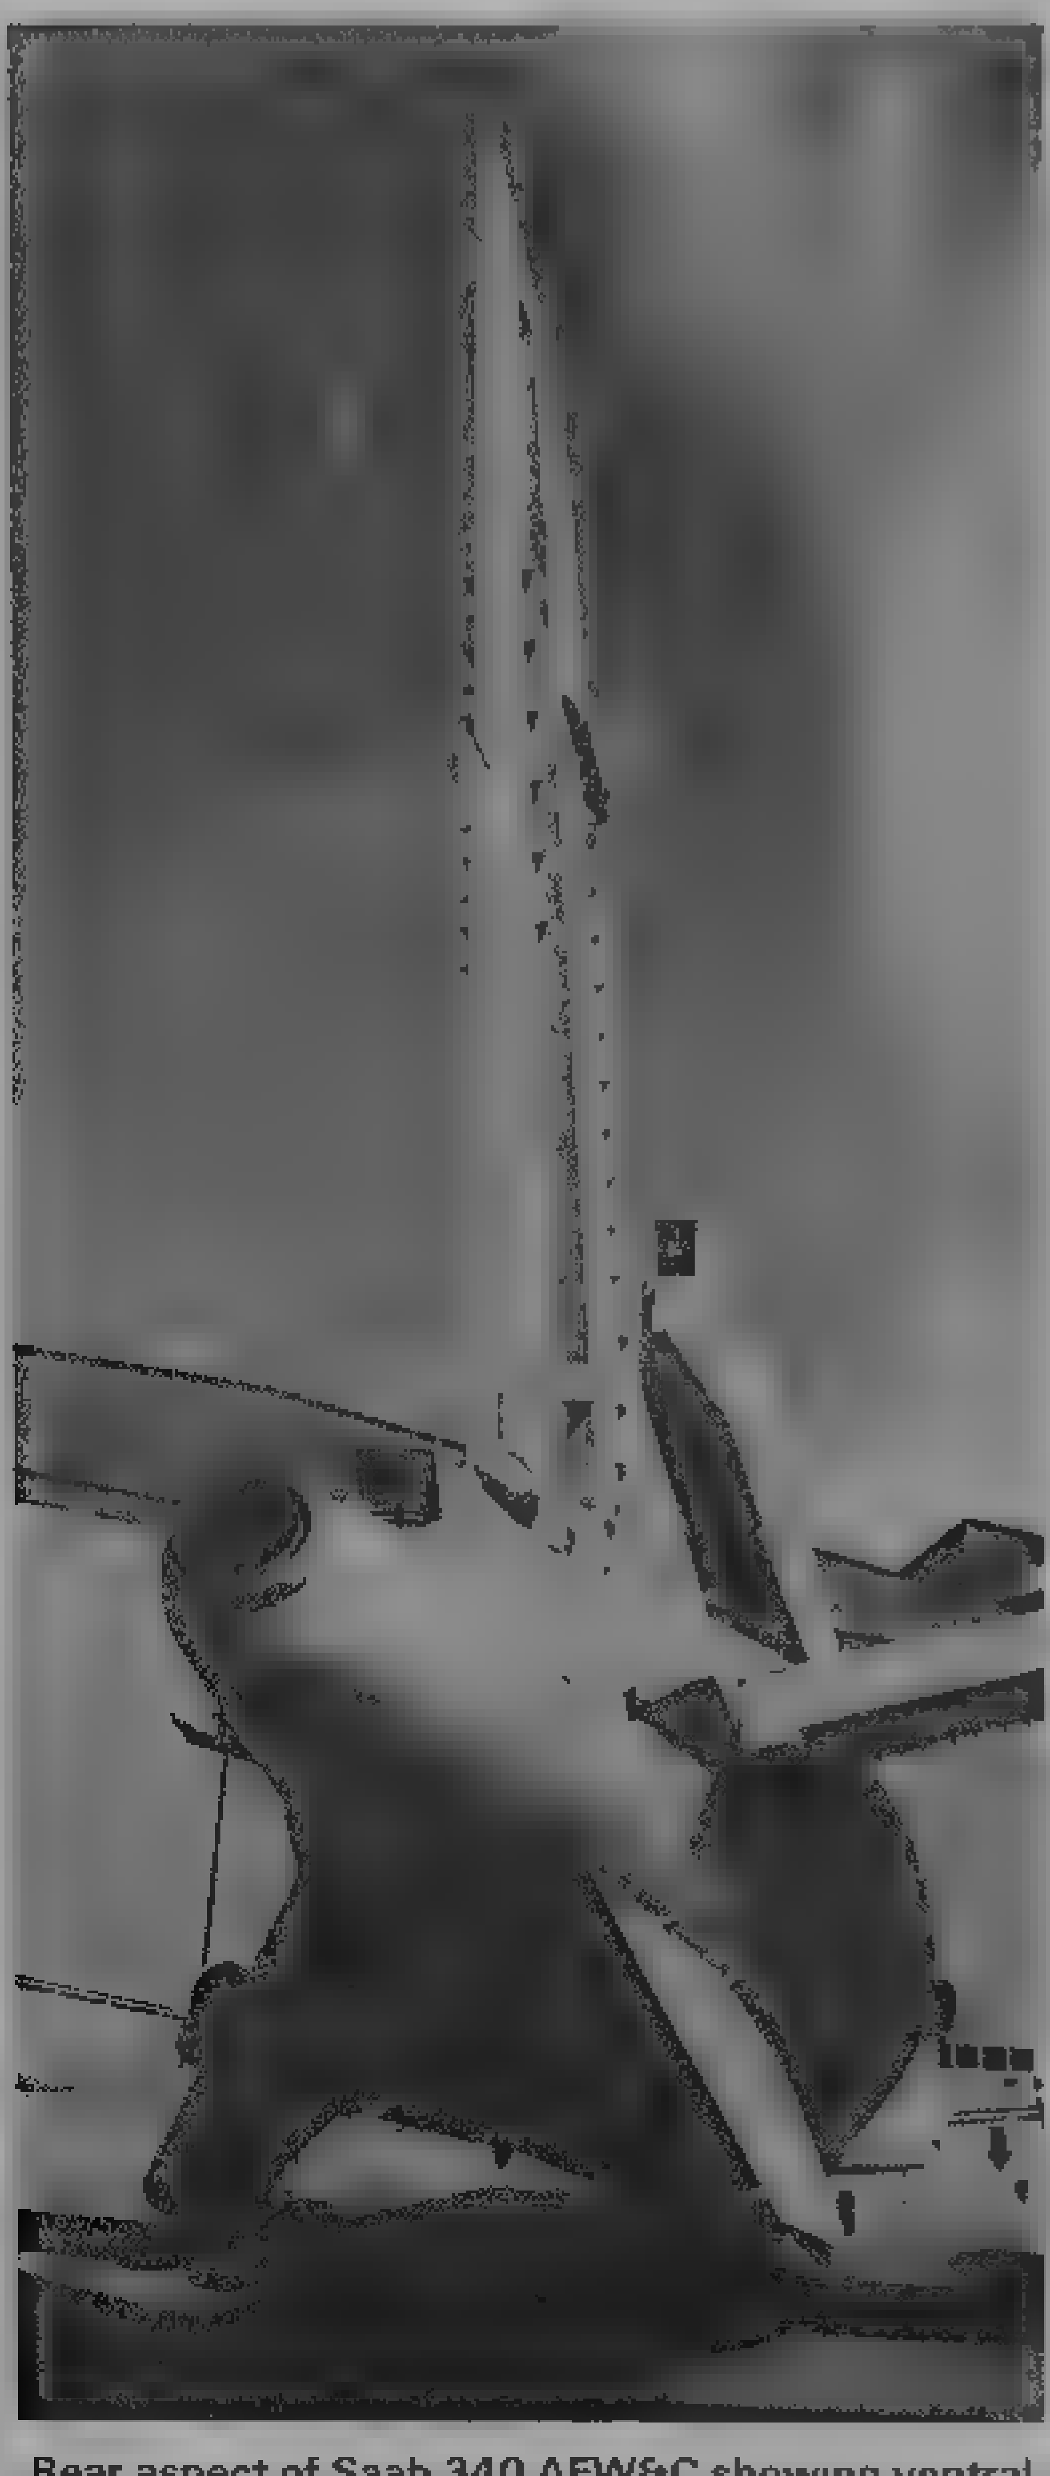


Saab 340BPlus with extended wingtips in the livery of Swiss operator Crossair

1995

aluminium sheet and Kevlar leading- and trailing-edges, ailerons, rudder and elevators have Kevlar skins and GFRP leading-edges, fin integral with fuselage; tailplane and fin contain aluminium honeycomb, mainwheel doors Kevlar sandwich. Propeller blades are moulded glassfibre/polyurethane foam/carbonfibre.

LANDING GEAR: Retractable tricycle type, of AP Precision Hydraulics design and manufacture, with twin Goodyear wheels and oleo-pneumatic shock absorber on each unit. Hydraulic actuation. All units retract forward, main units into engine nacelles. Hydraulically steerable nose unit (±60°), with shimmy damper. Mainwheel tyres size 24 × 7.7-10, pressure 8.27 bars (120 lb/sq in); nosewheel tyres size 17.5 × 6.25-6, pressure 4.0 bars (58 lb/sq in). Independent Goodyear carbon hydraulic disc brakes on main units, with Hydro Aire anti-skid control. Minimum ground turning radius 8.90 m (29 ft 2½ in).



Rear aspect of Saab 340 AEW&C showing ventral strakes, APU exhaust and multiplicity of vortex generators *(Paul Jackson)*

1995

POWER PLANT: Two General Electric CT7-9B turboprops, each rated at 1,305 kW (1,750 shp) for normal T-O and 1,394 kW (1,870 shp) with automatic power reserve. Dowty (Hamilton Standard optional) four-blade slow-turning constant-speed propellers, with full autofeathering and reverse pitch capability. Fuel in two integral tanks in each wing, total capacity 3,220 litres (850.5 US gallons; 708 Imp gallons). Single-point pressure refuelling inlet in starboard outer wing leading-edge. Overwing gravity refuelling point in each wing. Oil capacity 13.8 litres (3.65 US gallons, 3.04 Imp gallons).

ACCOMMODATION: Two pilots and provision for observer on flight deck, attendant's seat (forward, port) in passenger cabin. Main cabin accommodates up to 37 passengers (35 standard), in 12 rows of three, with aisle, and rearward-facing seat(s) on starboard side at front. One or both rearward-facing seats can be replaced by an optional galley module and/or baggage/wardrobe module. Seat pitch 76 cm (30 in). Standard provision for galley, wardrobe or storage module on port side at front of cabin, regardless of installations on starboard side. Toilet at front or rear of cabin. In former case, QC operation (conversion from passenger to freight interior or vice versa) is possible. Also available is a VIP-to-airliner convertible, as well as a fixed-installation combi with 19 passengers and 1,500 kg (3,307 lb) of cargo.

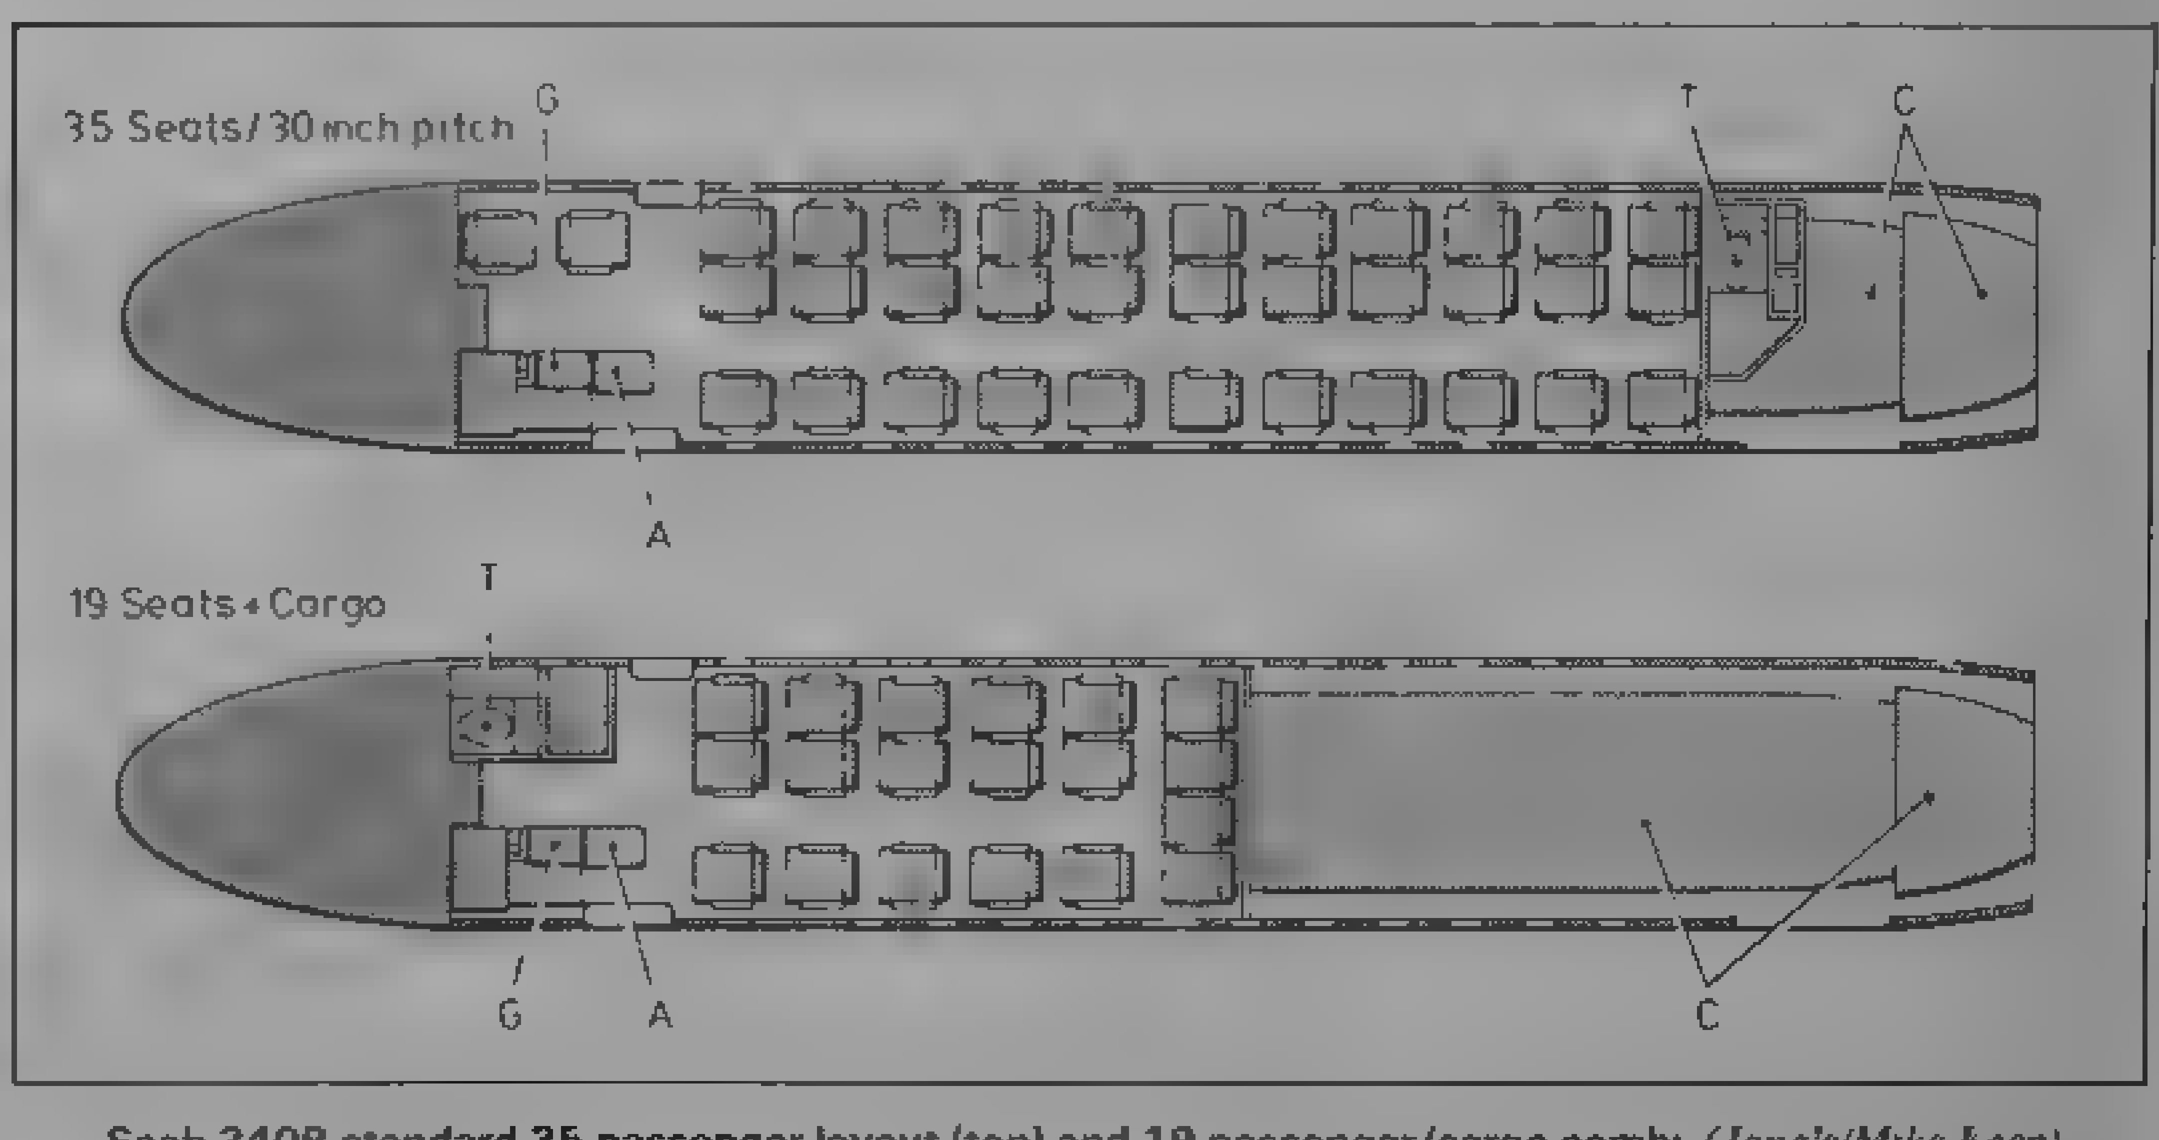
Passenger door (plug type) at front of cabin on port side with separate forward-stowing airstair. Type II emergency exit opposite this on starboard side, and Type III over wing on each side. Crew escape hatch in flight deck roof. Baggage space under each passenger seat; overhead stowage bins. Main baggage/cargo compartment aft of passenger cabin (from which it is accessible), with large plug type door on port side. Entire accommodation pressurised, including baggage compartment.

SYSTEMS: Hamilton Standard ECS (maximum pressure differential 0.48 bar; 7.0 lb/sq in) maintains S/L cabin environment up to altitude of 3,660 m (12,000 ft) and 1,525 m (5,000 ft) environment up to 7,620 m (25,000 ft).

Single on-demand hydraulic system, operating at up to 207 bars (3,000 lb/sq in), for actuation of landing gear, wheel and propeller braking, nosewheel steering and wing flaps. System is powered by single 28 V DC electric motor-driven pump, rated delivery 9.5 litres (2.5 US gallons; 2.1 Imp gallons)/min. Self-pressurising main reservoir with 5.08 litres (0.18 cu ft) capacity, operating at pressure of 1.79 to 2.69 bars (26 to 39 lb/sq in). Hydraulic back-up via four accumulators and pilot operated handpump, working via 2.5 litre (0.09 cu ft) emergency reservoir.

Electrical power supplied by two 28 V 400 A DC engine-driven starter/generators, each connected to separate busbar. Variable frequency 115/200 V for heating circuits provided by two 26 kVA AC generators; single-phase 115 V and 26 V AC at 400 Hz for avionics provided by static inverters. Two 43 Ah Ni/Cd batteries for ground power and engine starting, standby 5 Ah lead-acid battery for emergency use. External power receptacle.

Engine bleed air for air conditioning, pressurisation and pneumatic boot de-icing of wing and tail unit leading-edges. Oxygen system (11.2 litre, 2.96 US gallon; 2.46 Imp gallon cylinder operating at 127.5 bars, 1,850 lb/sq in pressure) includes portable and first aid units. Plug in connections for oxygen masks. Flight deck windows have electric anti-icing and electrically driven windscreen wipers. Cox & Co electric anti-icing for engine air intakes, propellers, AoA and OAT sensors and pitot heads. Demisting by means of air conditioning system. Kidde engine fire detection system. No APU, except in 340 AEW&C.



Saab 340B standard 35-passenger layout (top) and 19-passenger/cargo combi. *(Jane's/Mike Keep)*

Flight: Collins APS-85 AFCS, VOR/ILS, LAS flight data recorder and GPWS standard

Instrumentation Dual electronic flight instrument display (EFIS), standby gyro horizon indicator and magnetic compass standard.

DIMENSIONS, EXTERNAL:

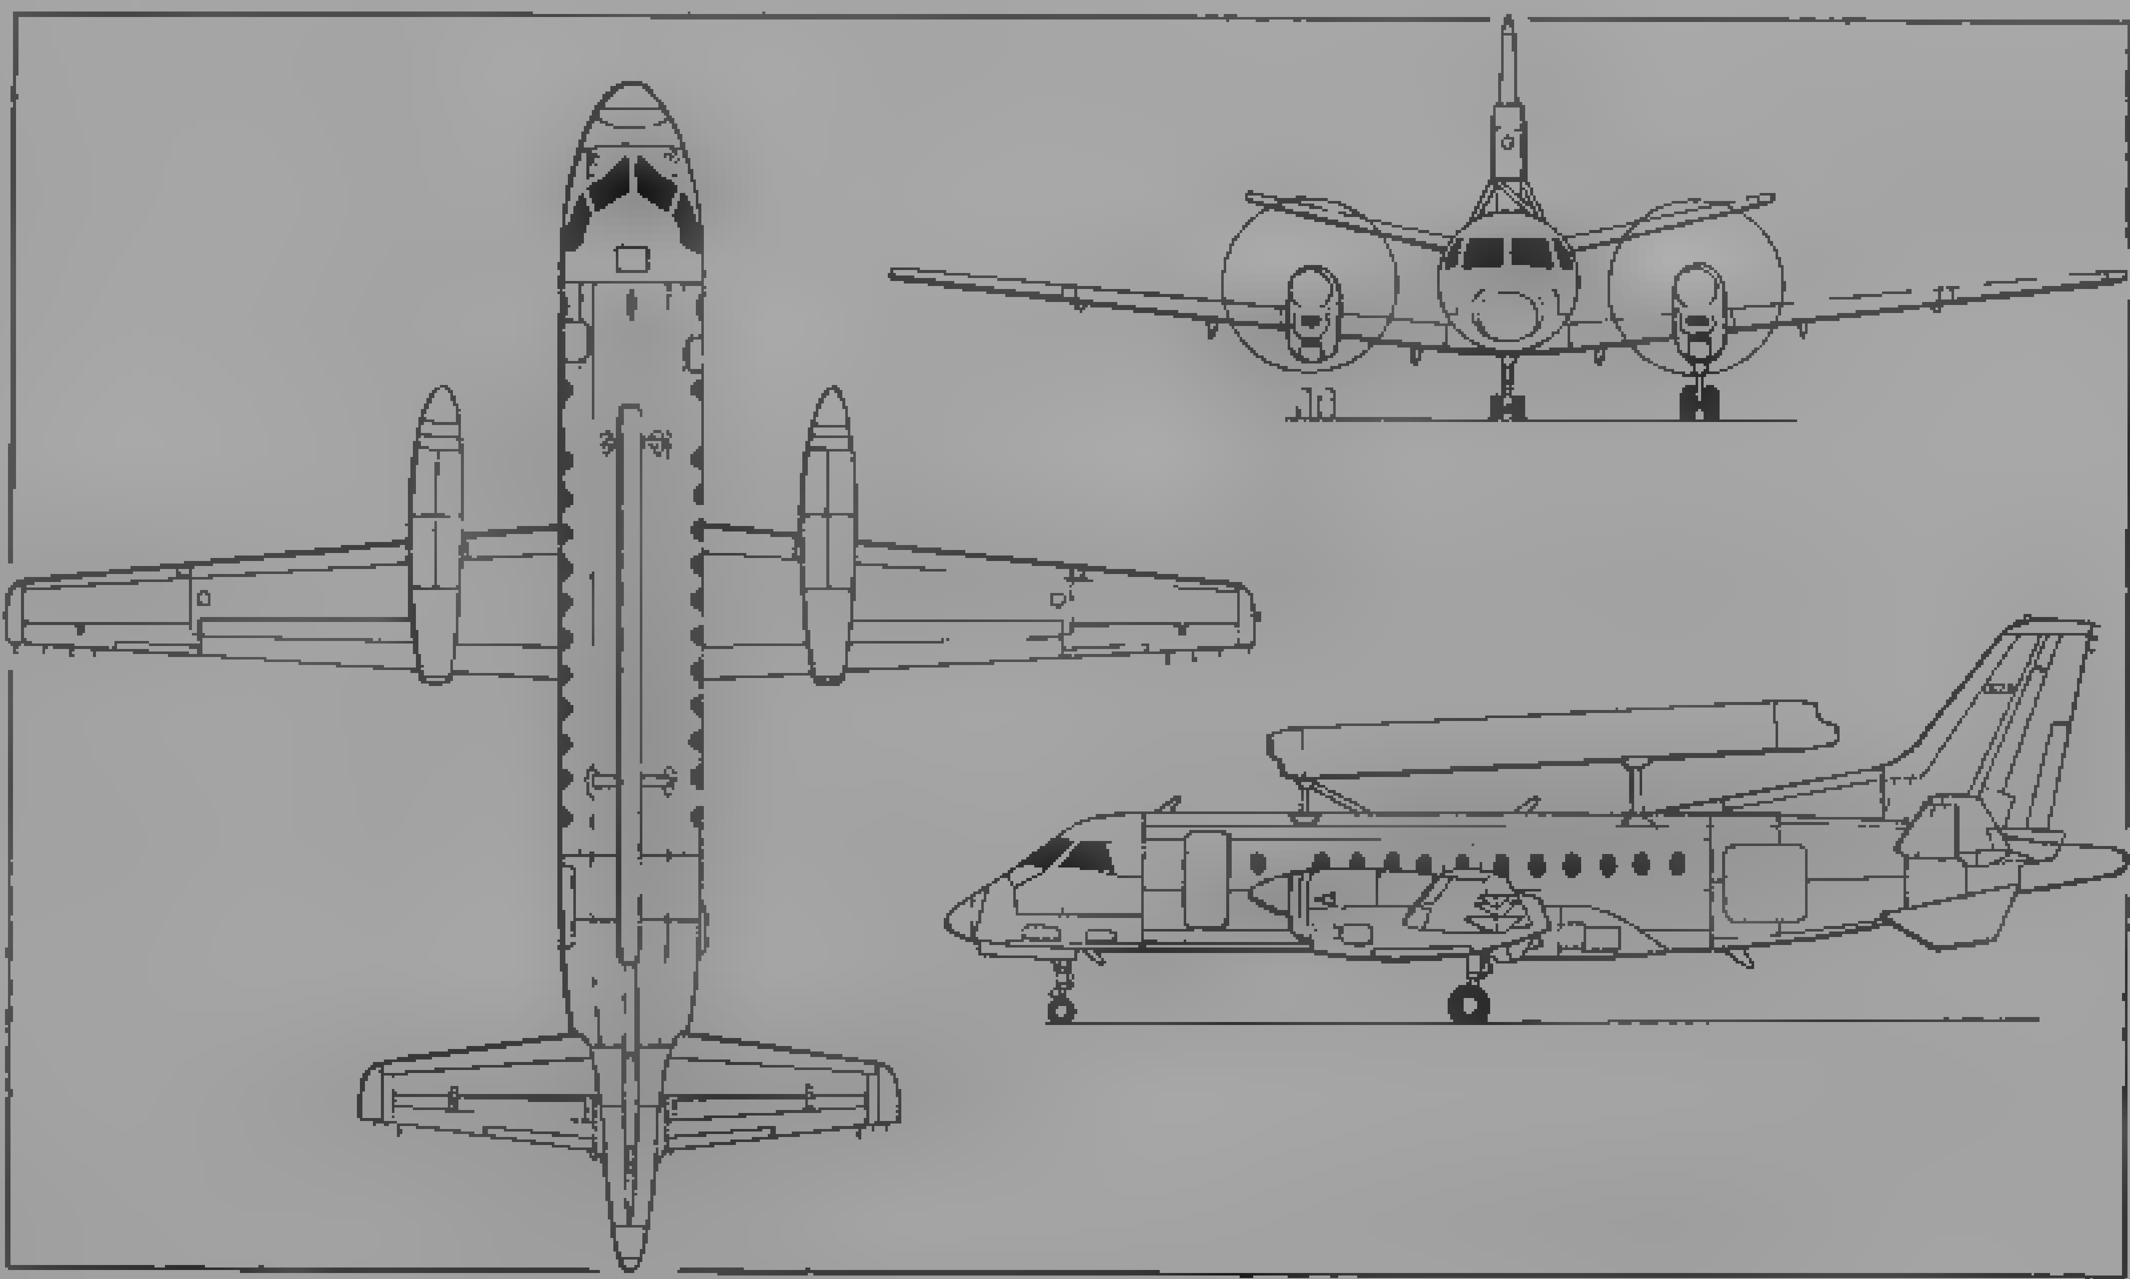
Wing span	21.44 m (70 ft 4 in)
Wing aspect ratio	10.99
Length overall	19.73 m (64 ft 8¾ in)
Fuselage: Max diameter	2.31 m (7 ft 7 in)
Height overall	6.97 m (22 ft 10½ in)
Tailplane span	9.24 m (30 ft 3¾ in)
Wheel track	6.71 m (22 ft 0 in)
Wheelbase	7.14 m (23 ft 5 in)
Propeller diameter	3.35 m (11 ft 0 in)
Propeller ground clearance	0.51 m (1 ft 8 in)
Passenger door: Height	1.60 m (5 ft 3 in)
Width	0.69 m (2 ft 3¼ in)
Height to sill	1.63 m (5 ft 4 in)
Cargo door: Height	1.30 m (4 ft 3 in)
Width	1.35 m (4 ft 5 in)
Height to sill	1.66 m (5 ft 5½ in)
Emergency exit (fwd, stbd): Height	1.32 m (4 ft 4 in)
Width	0.51 m (1 ft 8 in)
Emergency exits (overwing, each):	
Height	0.91 m (3 ft 0 in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck, toilet and galley:	
Length	10.39 m (34 ft 1 in)
Max width	2.16 m (7 ft 1 in)
Width at floor	1.70 m (5 ft 7 in)
Max height	1.83 m (6 ft 0 in)
Volume	33.4 m³ (1,179.5 cu ft)
Baggage/cargo compartment volume	
with rear toilet	6.8 m³ (240.0 cu ft)
with fwd toilet	8.3 m³ (293.1 cu ft)

AREAS:

Wings, gross	41.81 m² (450.0 sq ft)
Ailerons (total)	2.12 m² (22.84 sq ft)
Trailing-edge flaps (total)	8.07 m² (86.84 sq ft)
Fin (incl dorsal fin)	7.77 m² (83.64 sq ft)
Rudder (incl tab)	2.76 m² (29.71 sq ft)
Tailplane	11.28 m² (121.42 sq ft)
Elevators (total, incl tabs)	3.29 m² (35.40 sq ft)



Saab 340 AEW&C/Tp 100B surveillance aircraft (*Jane's/James Goulding*)

1995

WEIGHTS AND LOADINGS:
Operating weight empty 8,140 kg (17,945 lb)
Max payload (weight limited) 3,880 kg (8,554 lb)
Max fuel load 2,581 kg (5,690 lb)
Max ramp weight 13,210 kg (29,123 lb)
Max T-O weight 13,155 kg (29,000 lb)
Max landing weight 12,930 kg (28,505 lb)
Max zero-fuel weight 12,020 kg (26,500 lb)
Max wing loading 314.6 kg/m² (64.44 lb/sq ft)
Max power loading (with APR) 4.72 kg/kW (7.75 lb/shp)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max operating speed (VMO) 250 kts (463 km/h, 288 mph)
Max operating Mach number (MMO) 0.5
Max cruising speed:
at 4,575 m (15,000 ft) 282 kts (522 km/h, 325 mph)
at 6,100 m (20,000 ft) 280 kts (519 km/h, 322 mph)
Best range cruising speed at 7,620 m (25,000 ft) 252 kts (467 km/h, 290 mph)
Stalling speed: flaps up 106 kts (197 km/h, 123 mph)
T-O flap 95 kts (176 km/h, 110 mph)
approach flap 92 kts (171 km/h, 106 mph)
landing flap 88 kts (164 km/h, 102 mph)
Max rate of climb at S/L 610 m (2,000 ft)/min
Rate of climb at S/L, OEI 160 m (525 ft)/min
Service ceiling: standard 7,620 m (25,000 ft)
optional 9,450 m (31,000 ft)
Service ceiling, OEI (1.1% net gradient at 95% MTOW) 3,810 m (12,500 ft)
T-O to 15 m (50 ft) at S/L:
JAR 1,290 m (4,233 ft)
FAR 1,322 m (4,338 ft)
T-O to 15 m (50 ft) at 1,525 m (5,000 ft):
JAR (low flap setting) 1,835 m (6,021 ft)
FAR 1,657 m (5,437 ft)
Landing from 15 m (50 ft) at max landing weight at S/L:
JAR 1,035 m (3,396 ft)
FAR 1,065 m (3,495 ft)
Landing from 15 m (50 ft) at max landing weight at 1,525 m (5,000 ft): JAR 1,165 m (3,823 ft)
FAR 1,200 m (3,937 ft)
Runway LCN: flexible pavement 8
rigid pavement 10
Range with 35 passengers and baggage, reserves for 45 min hold at 1,525 m (5,000 ft) and 100 n mile (185 km, 115 mile) diversion:
at max cruising speed 805 n miles (1,491 km, 927 miles)
at long-range cruising speed 935 n miles (1,732 km, 1,076 miles)
Range with 37 passengers, reserves as above:
at max cruising speed 695 n miles (1,288 km, 800 miles)
at long-range cruising speed 795 n miles (1,473 km, 915 miles)

OPERATIONAL NOISE LEVELS (FAR Pt 36, Appendix C):
T-O 78.6 EPNdB
Sideline 85.9 EPNdB
Approach 91.6 EPNdB

UPDATED

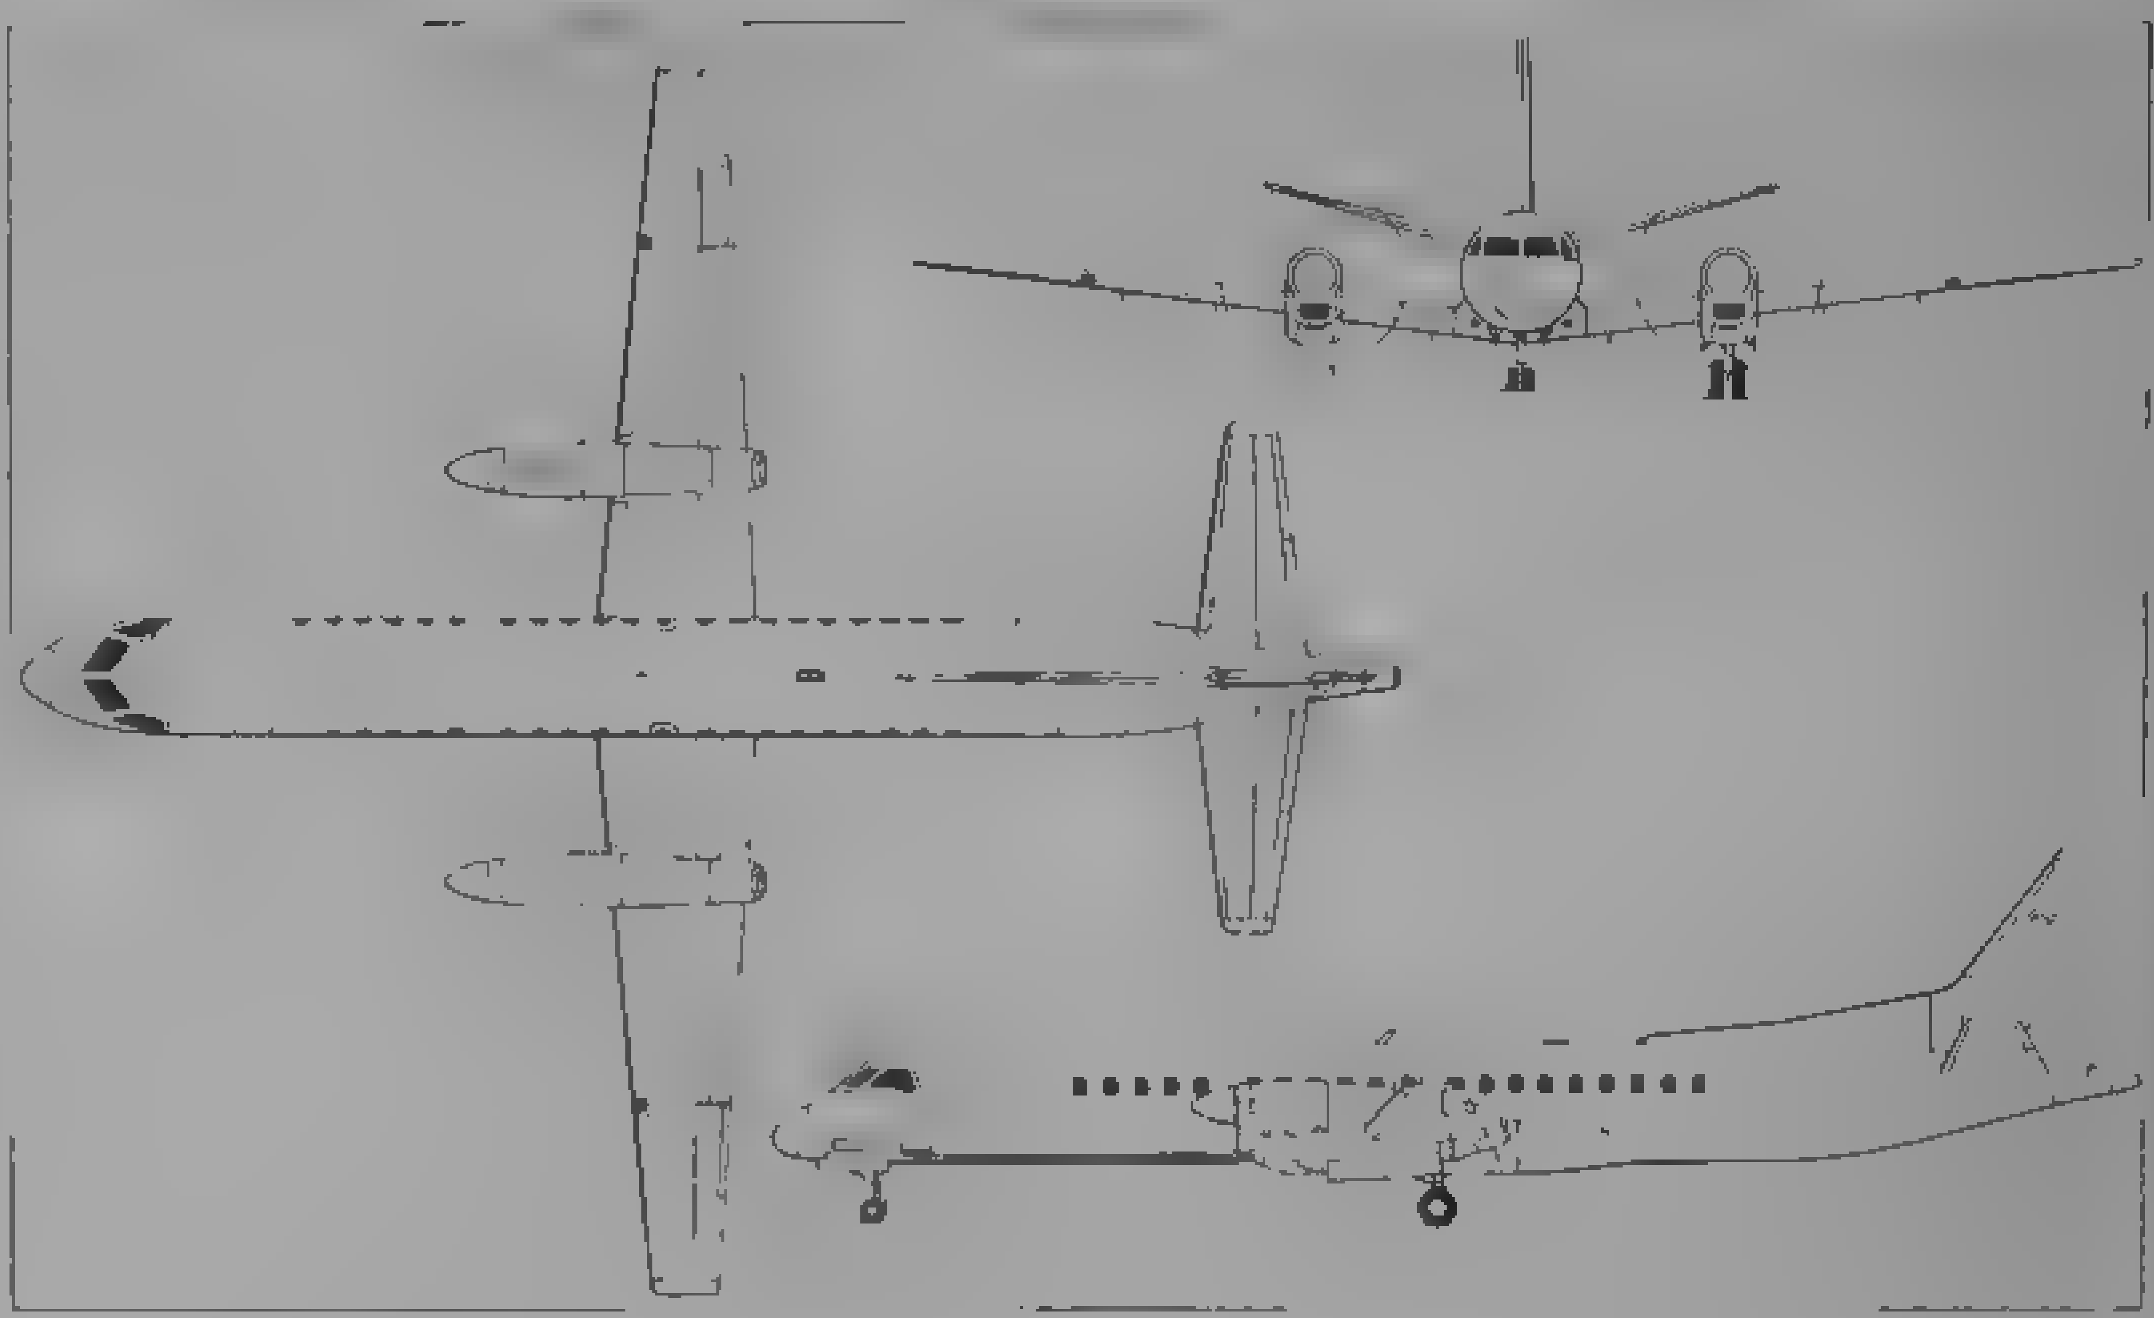
SAAB 2000

TYPE: Twin-turboprop regional transport.

PROGRAMME: Definition started Autumn 1988; launched 15 December 1988 with Crossair commitment for 25 firm and 25 on option, formal go-ahead May 1989. Allison GMA (now AE) 2100 selected as power plant July 1989, first metal cut February 1990; major subcontractor items delivered 1991 by Westland (rear fuselage, March), Valmet (tail unit, July), CASA (wing, August) and Allison (engines, August); first aircraft (SE-001) rolled out 14 December 1991 and made first flight 26 March 1992. Three aircraft in certification programme, of which c/n 002 made first flight 3 July 1992, followed by 003 on 28 August; 003 first to production standard; static and fatigue test airframes also completed; first flight of production aircraft (SE-004) 17 March 1993; engine certificated 23 April 1993. Saab 2000 certification, initially to JAR 25 (Amendment 13) and FAR 25 (Amendment 70), received on 31 March and 29 April 1994 respectively; will be extended later to include Cat IIIa operation; 2,798 hours flown in 1,518 sorties by first four aircraft (3,235 hours in 1,859 sorties by all eight then flying) up to 30 August 1994; powered elevator control system (PECS) first flown on development aircraft 19 May 1994; deliveries began with 006 (HB-IZC) to Crossair on 30 August 1994, service entry September 1994; five delivered to Crossair by 31 October 1994, further three by March 1995. Status at 31 December 1994: 11 flown: five (005-009) delivered, two (010-011) in customer preparation, and four Saab flight test (001-004).

COSTS: Swedish government lent Saab between $163 million and $187 million (1989) for development between 1989 and 1994, to be repaid from sales from 31st aircraft until 2009. Finnish Flygplansfabriken investing $8.4 million (1989) and ADCO $5.3 million (1989) in Valmet tail unit subcontract; total Valmet agreement valued at $69.8 million (1989); Westland rear fuselage production contract worth £40 million (1990).

Saab 2000 in the colours of German operator Deutsche BA *1994*



Saab 2000 short/medium-range 50/58-passenger regional transport *(Jane's/Dennis Punnett)* *1989*

CUSTOMERS: Firm orders for 42 by March 1995 included Air Marshall Islands (two), Crossair (20), Regional Airlines (three), Salenia (five), Deutsche BA (five), and General Motors Air Transportation System (three, in executive shuttle configuration); options at same date totalled 128 including Air Marshall Islands (two), AMR Eagle (50), Brit Air (four), Business Express (10), Calm Air (two), Crossair (25), Deutsche BA (five), Kendell Airlines (two), Salenia (five) and Skywest (20). Second recipient following Crossair was Deutsche BA on 17 March 1995 (013/D-ADSA).

DESIGN FEATURES: Objective to combine jet speeds with turboprop economy, aiming at 360 knots (667 km/h, 414 mph) cruising speed, climb to 6,100 m (20,000 ft) in 10 minutes and cruising altitudes between 5,485 m and 9,450 m (18,000 and 31,000 ft). CAD/CAM designed throughout; same fuselage cross-section as 340B, but longer; same wing section, but span stretched 15 per cent to give 33 per cent more area, engines farther outboard.

FLYING CONTROLS: Rod and cable control linkages for ailerons and (initially) for elevators, with electrically actuated trim tab in each aileron and each elevator, plus spring tab in each elevator. Initial production have MECS (mechanical elevator control system), powered (electrically signalled hydraulic) elevator control system (PECS) standard on production aircraft from c/n 010 (HB-IZG), first flight 2 December 1994, and available for retrofit to earlier airframes. Electrically signalled, hydraulically powered rudder, with dual Dowty actuators; hydraulically actuated single slotted flaps with offset hinges.

STRUCTURE: Wing and fuselage primary structures of metal/metal bonded aluminium alloy, as in Saab 340B, with honeycomb sandwich fin, tailplane and doors, two spar wings, fin and tailplane; composites for ailerons (CFRP/Nomex), flaps (CFRP skins), wing/body fairings (Kevlar/Nomex), nosecone (GFRP/Nomex), rudder and elevators (GFRP leading-edges and CFRP skins), dorsal fin, propeller blades, and cabin floor (carbonfibre sandwich); superplastic formed/diffusion bonded titanium nacelle firefloors.

Major subcontractors are CASA (wing, including design, stressing and testing), Westland Engineering (rear fuselage and, with Hispano-Suiza, engine cowlings), Valmet (fin, rudder, tailplane and elevators) and Fischer Advanced Composites (dorsal fin).

LANDING GEAR: AP Precision Hydraulics retractable tricycle type, with twin wheels and oleo-pneumatic shock-absorbers on each unit, all units retract forward. ABS wheels and carbon brakes; Goodyear tyres; Hydro Aire anti-skid system, Ozone Inc nosewheel steering.

POWER PLANT: Two Allison AE 2100A turboprops, each flat rated at 3,076 kW (4,125 shp) with APR (S/L, ISA, at 1,100 rpm); Lucas Aerospace full dual channel FADEC (single-lever control of engines and propellers). Dowty Aerospace R381 slow-turning, constant-speed propellers with six swept blades, full autofeathering and reverse pitch; propellers 950 rpm in cruise, blades of both propellers held in phase at all times. Fuel in two integral tanks in each outer wing, total usable capacity 5,185 litres (1,370 US gallons; 1,140 Imp gallons). Single pressure refuelling point in starboard outer wing panel, overwing gravity refuelling point in each wing.

ACCOMMODATION: Flight crew of three or four, including cabin attendant(s). Standard AIM Aviation (UK) 'European' cabin has 50 seats three-abreast at 81 cm (32 in) pitch with single aisle, but cabin length can be extended for additional galley and wardrobe space by moving rear bulkhead aft into baggage space, permitting seating to be increased to 58 at 76 cm (30 in) pitch. Main baggage compartment aft of passenger cabin, with door on port side; provision for additional, smaller baggage area at front of cabin on starboard side. Passenger airstair door at front on port side; service/emergency door at rear on starboard side, overwing Type III emergency exit each side. Entire accommodation pressurised and air conditioned. Ultra Electronics active noise control (ANC) system standard, employing 72 microphones and 37 loudspeakers in cabin interior which continually monitor noise levels and, via a microprocessor electronic systems controller, generate an anti-phase sound field to lower cabin noise level by more than 8 dBA.

SYSTEMS: Hamilton Standard Recircair ECS, using engine bleed air; maximum pressure differential 0.48 bar (7.0 lb/sq in). Hydraulic system, with Abex pumps, for landing gear, flap, elevator and rudder actuation. Goodrich pneumatic boot de-icing system for wing/fin/tailplane

1994

leading-edges and engine intakes. Electrical system has two 45 kVA variable frequency engine-driven generators for three-phase 115/200 V AC power and three 28 V DC batteries. Electric anti-icing of propeller blades, Swedlow electrically heated windscreen panels. Sundstrand APU for engine starting and ECS. Scott oxygen system. Pacific Scientific fire detection and Kidde-Graviner fire extinguishing systems

AVIONICS: *Comms:* Com/nav/pulse package and radio tuning units standard

Radar: Collins WXR 840 solid state weather radar standard; turbulence detecting weather radar optional

Flight: AHRS and digital air data system standard, flight management system optional

Instrumentation: Collins Pro Line IV package with six CRT displays, integrated avionics processing system (IAPS) and EICAS standard, TCAS optional

DIMENSIONS, EXTERNAL:
Wing span 24.76 m (81 ft 2¾ in)
Wing aspect ratio 11.00
Length overall 27.03 m (88 ft 8¼ in)
Fuselage: Max diameter 2.31 m (7 ft 7 in)
Height overall 7.73 m (25 ft 4 in)
Tailplane span 10.36 m (34 ft 0 in)
Wheel track 8.23 m (27 ft 0 in)
Wheelbase 10.97 m (36 ft 0 in)
Min ground turning radius 18.85 m (61 ft 10 in)
Propeller diameter 3.81 m (12 ft 6 in)
Propeller ground clearance 0.46 m (1 ft 6 in)
Passenger door: Height 1.60 m (5 ft 3 in)
Width 0.69 m (2 ft 3 in)
Height to sill 1.81 m (5 ft 11¼ in)
Baggage door (rear, port):
Height 1.30 m (4 ft 3 in)
Width 1.35 m (4 ft 5 in)
Height to sill 1.85 m (6 ft 0¾ in)
Service/emergency door (rear, stbd):
Height 1.22 m (4 ft 0 in)
Width 0.61 m (2 ft 0 in)
Emergency exits (overwing, each):
Height 0.91 m (3 ft 0 in)
Width 0.51 m (1 ft 8 in)

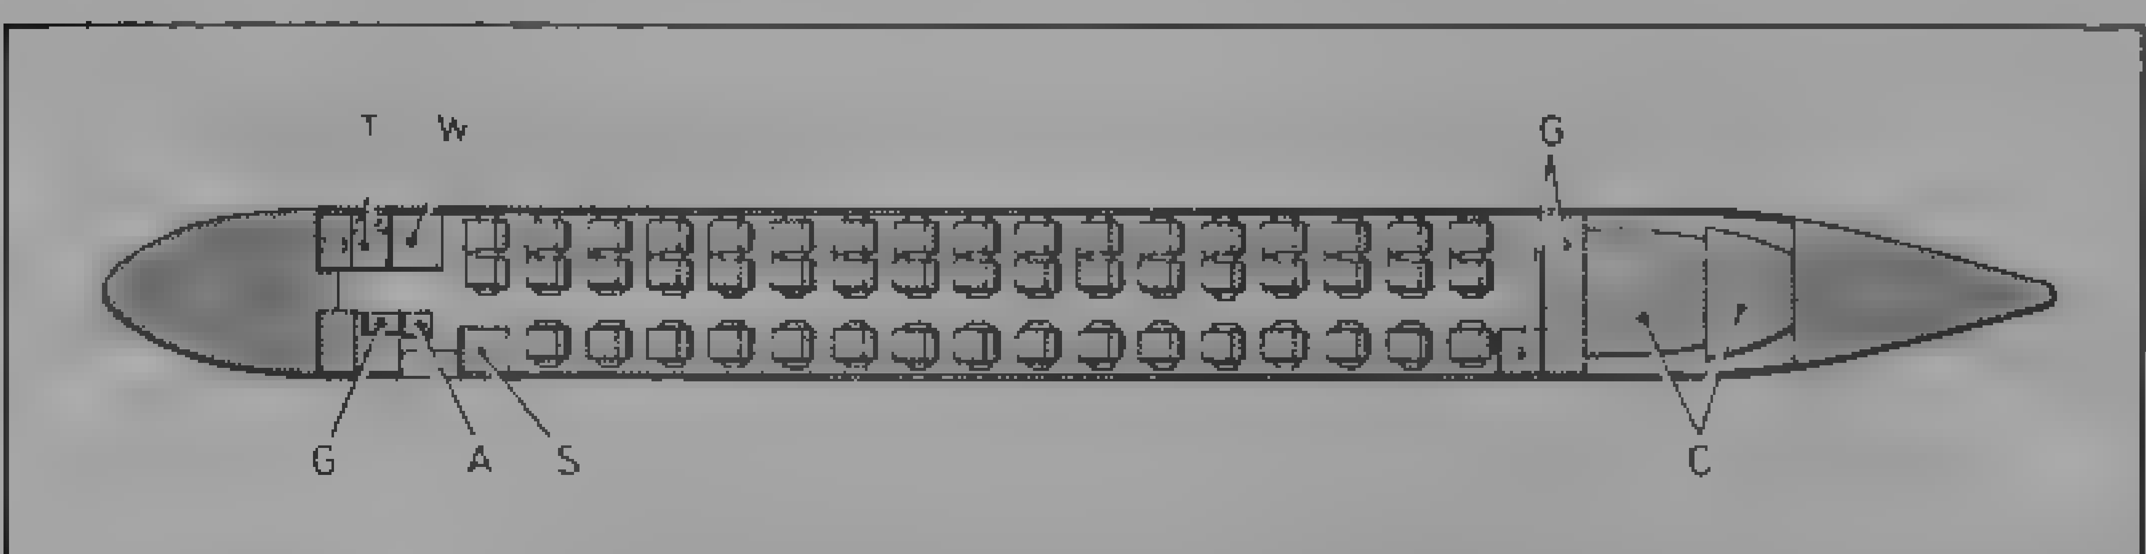
DIMENSIONS, INTERNAL:
Cabin, excl flight deck, toilet and galley:
Length 17.25 m (56 ft 7¼ in)
Max width 2.16 m (7 ft 1 in)
Width at floor 1.70 m (5 ft 7 in)
Max height 1.83 m (6 ft 0 in)
Volume 52.7 m³ (1,860.0 cu ft)
Baggage/cargo compartment:
Volume 10.2 m³ (360.0 cu ft)

AREAS:
Wings, gross 55.74 m² (600.0 sq ft)
Vertical tail surfaces (total) 13.01 m² (140.0 sq ft)
Horizontal tail surfaces (total) 18.35 m² (197.5 sq ft)

WEIGHTS AND LOADINGS:
Operating weight empty 13,800 kg (30,423 lb)
Max payload (weight limited) 5,900 kg (13,007 lb)
Max fuel load 4,165 kg (9,182 lb)
Max ramp weight 23,000 kg (50,706 lb)
Max T-O weight 22,800 kg (50,265 lb)
Max landing weight 22,000 kg (48,501 lb)
Max zero-fuel weight 19,700 kg (43,431 lb)
Max wing loading 394.7 kg/m² (80.84 lb/sq ft)
Max power loading 3.58 kg/kW (5.88 lb/shp)

PERFORMANCE (at max T-O weight ISA, except where indicated):
Max operating speed (VMO):
below 3,050 m (10,000 ft) 250 kts (463 km/h, 288 mph) IAS
above 3,050 m (10,000 ft) 270 kts (500 km/h, 311 mph) IAS
Max operating Mach number (MMO) 0.62
Max cruising speed:
at 7,620 m (25,000 ft) 366 kts (678 km/h, 421 mph)
at 9,450 m (31,000 ft) 353 kts (653 km/h, 406 mph)
Long-range cruising speed at 9,450 m (31,000 ft) 300 kts (556 km/h, 345 mph)
Max rate of climb at S/L 725 m (2,380 ft)/min
Rate of climb at S/L, OEI 183 m (600 ft)/min
Time to 6,100 m (20,000 ft) 10 min
Service ceiling 9,450 m (31,000 ft)
Service ceiling, OEI, at 95% of MTOW:
ISA 5,334 m (17,500 ft)
ISA + 10°C 4,297 m (14,100 ft)
T-O to 15 m (50 ft): at S/L 1,360 m (4,465 ft)
at 1,525 m (5,000 ft) 1,680 m (5,515 ft)
Landing from 15 m (50 ft) at max landing weight:
at S/L 1,250 m (4,105 ft)
at 1,525 m (5,000 ft) 1,390 m (4,560 ft)
Runway LCN (paved runways) max 15
Range at 9,450 m (31,000 ft) with 50 passengers and baggage, reserves for 45 min hold at 1,525 m (5,000 ft) and 100 n mile (185 km, 115 mile) diversion:
at max cruising speed 1,255 n miles (2,324 km, 1,444 miles)
at long-range cruising speed 1,425 n miles (2,639 km, 1,640 miles)

OPERATIONAL NOISE LEVELS (estimated):
T-O 89.0 EPNdB
Sideline 94.0 EPNdB
Approach 98.0 EPNdB



Saab 2000 standard 50-passenger layout *(Jane's/Mike Keep)*
A: attendant's seat, C: baggage/cargo, G: galley, S: stowage, T: toilet, W: wardrobe

Originated as Swiss branch of German Dornier company, becoming all Swiss in 1948, acquired by Justus Dornier group in Zurich January 1987, taking present name 1 June 1987. Privately owned since 1991. Activities include producing spares for Swiss built Northrop F-5E/F and parts for F/A-18, overhaul and maintenance for Swiss Air Force and general aviation, and subcontract work for various foreign aircraft manufacturers. Current workforce (1995) about 120.

FFA AS 202/26A1 (194 kW, 260 hp AEIO-540 engine) *1994*

FFA AS 202/18A BRAVO

TYPE: Two/three-seat trainer and sporting aircraft.

PROGRAMME: Originally a joint venture with SIAI-Marchetti of Italy, then became independent Swiss programme: first flight by AS 202/15 Swiss prototype (HB-HEA) 7 March 1969, 34 of this version built (see 1981-82 *Jane's*), plus one prototype AS 202/26A (1985-86 edition), AS 202/18A made first flight (HB-HEY) 22 August 1974, certificated by Swiss 12 December 1975, UK CAA on 10 December 1987 and FAA on 17 December 1976.

CURRENT VERSIONS: **AS 202/18A:** Two/three-seat aerobatic version, subtypes include **A2** (higher maximum T-O/landing weight, extended canopy, electric trim), **A3** (as A2 but mechanical trim, 24 V electrics) and **A4** (as A2 but with British CAA approved special instrumentation); A4s of BAe Flying College named **Wren**. *Full description in 1991-92 and earlier editions, following shortened version applies to 18A4 except where indicated.*

AS 202/26A1: Designed for higher performance, especially in hot/high locations. Prototype made first flight 1978 but not put into production then, certification work currently suspended to concentrate on 32TP (which see). Powered by 194 kW (260 hp) Textron Lycoming AEIO-540-D4B5 flat-six engine with two-blade constant-speed metal propeller (three-blade expected for final version), 24 V electrical system, as in 18A3, air conditioning to be available as option.

AS 202/32TP: Turboprop version, described separately.

CUSTOMERS: Total of 180 AS 202/15s and 18s delivered, latest delivery, one 18A4 to Japan Airlines training school at Nappa, California, USA.

DESIGN FEATURES: Typical low-wing, fixed-gear lightplane configuration, angular flying surfaces, sweptback vertical tail. Wing section NACA 63_2618 (modified) at centreline, 63_2415 at tip; thickness/chord ratio 17.63 per cent at root, 15 per cent at tip, dihedral 5° 43′ from roots; incidence 3°, quarter-chord sweepback 0° 40′.

FLYING CONTROLS: Mechanical, single-slotted ailerons and mass balanced rudder; ground adjustable tab on each aileron, electrically actuated trim tab in starboard elevator. 18A4 also has electrically actuated rudder tab. Single-slotted flaps, fixed incidence tailplane.

STRUCTURE: All-aluminium fail-safe except for glassfibre fairings and engine cowling, single-spar wings and tail with riveted honeycomb laminate skins.

LANDING GEAR: Non-retractable tricycle type, with steerable nosewheel. Rubber cushioned FFA shock-absorber struts. Mainwheel tyres size 6.00-6; nosewheel tyre size 5.00-5. Tyre pressure (all units) 2.41 bars (35 lb/sq in). Independent hydraulically operated disc brake on each mainwheel.

POWER PLANT: One 134 kW (180 hp) Textron Lycoming AEIO-360-B1F flat-four engine, driving a Hartzell HC-C2YK-1BF/F7666A-2 two-blade constant-speed propeller; Hoffmann three-blade propeller optional. Two wing leading-edge rubber fuel tanks with total capacity of 170 litres (44.9 US gallons; 37.4 Imp gallons). Refuelling point above each wing. Starboard tank has additional flexible fuel intake for aerobatics. Christen 801 fully aerobatic oil system, capacity 7.6 litres (2 US gallons, 1.6 Imp gallons).

ACCOMMODATION: Seats for two persons side by side in Aerobatic versions, under rearward-sliding jettisonable transparent canopy. Space at rear in Utility versions for third seat or 100 kg (220 lb) of baggage. Dual controls, cabin ventilation and heating standard.

SYSTEMS: Hydraulic system for brake actuation. One 12 V 60A engine-driven alternator (24 V in A3) and one 25 Ah battery provide electrical power for engine starting, lighting instruments, communications and navigation installations; 28 V electrical system optional.

AVIONICS: To customer's requirements. Provision for VHF radio, VOR, ADF, Nav-O-Matic 200A autopilot, blind-flying instrumentation or other special equipment.

EQUIPMENT: Clutch and release mechanism for glider towing optional.

DIMENSIONS, EXTERNAL:

Wing span	9.78 m (32 ft 1 in)
Wing aspect ratio	6.90
Length overall	7.50 m (24 ft 7¼ in)
Height overall	2.81 m (9 ft 2¾ in)
Tailplane span	3.67 m (12 ft 0½ in)
Wheel track	2.25 m (7 ft 4½ in)
Wheelbase	1.85 m (6 ft 0¾ in)
Propeller diameter	1.88 m (6 ft 2 in)

AREAS:

Wings, gross	13.86 m² (149.2 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped: 18A4	710 kg (1,565 lb)
26A1	793 kg (1,748 lb)
Max useful load (incl fuel):	
18A4, Aerobatic	177 kg (390 lb)
18A4, Utility	248 kg (546 lb)
26A1	467 kg (1,029 lb)
Max T-O weight:	
18A4, Aerobatic	1,010 kg (2,226 lb)
18A4, Utility	1,080 kg (2,380 lb)
26A1, Aerobatic	1,140 kg (2,513 lb)
26A1, Utility	1,260 kg (2,778 lb)
Max landing weight:	
26A1	1,200 kg (2,645 lb)
Max wing loading:	
18A4, Aerobatic	72.9 kg/m² (14.92 lb/sq ft)
18A4, Utility	77.1 kg/m² (15.96 lb/sq ft)
26A1, Aerobatic	82.25 kg/m² (16.85 lb/sq ft)
26A1, Utility	90.91 kg/m² (18.62 lb/sq ft)
Max power loading:	
18A4, Aerobatic	7.53 kg/kW (12.37 lb/hp)
18A4, Utility	7.84 kg/kW (12.86 lb/hp)
26A1, Aerobatic	5.88 kg/kW (9.67 lb/hp)
26A1, Utility	6.50 kg/kW (10.68 lb/hp)

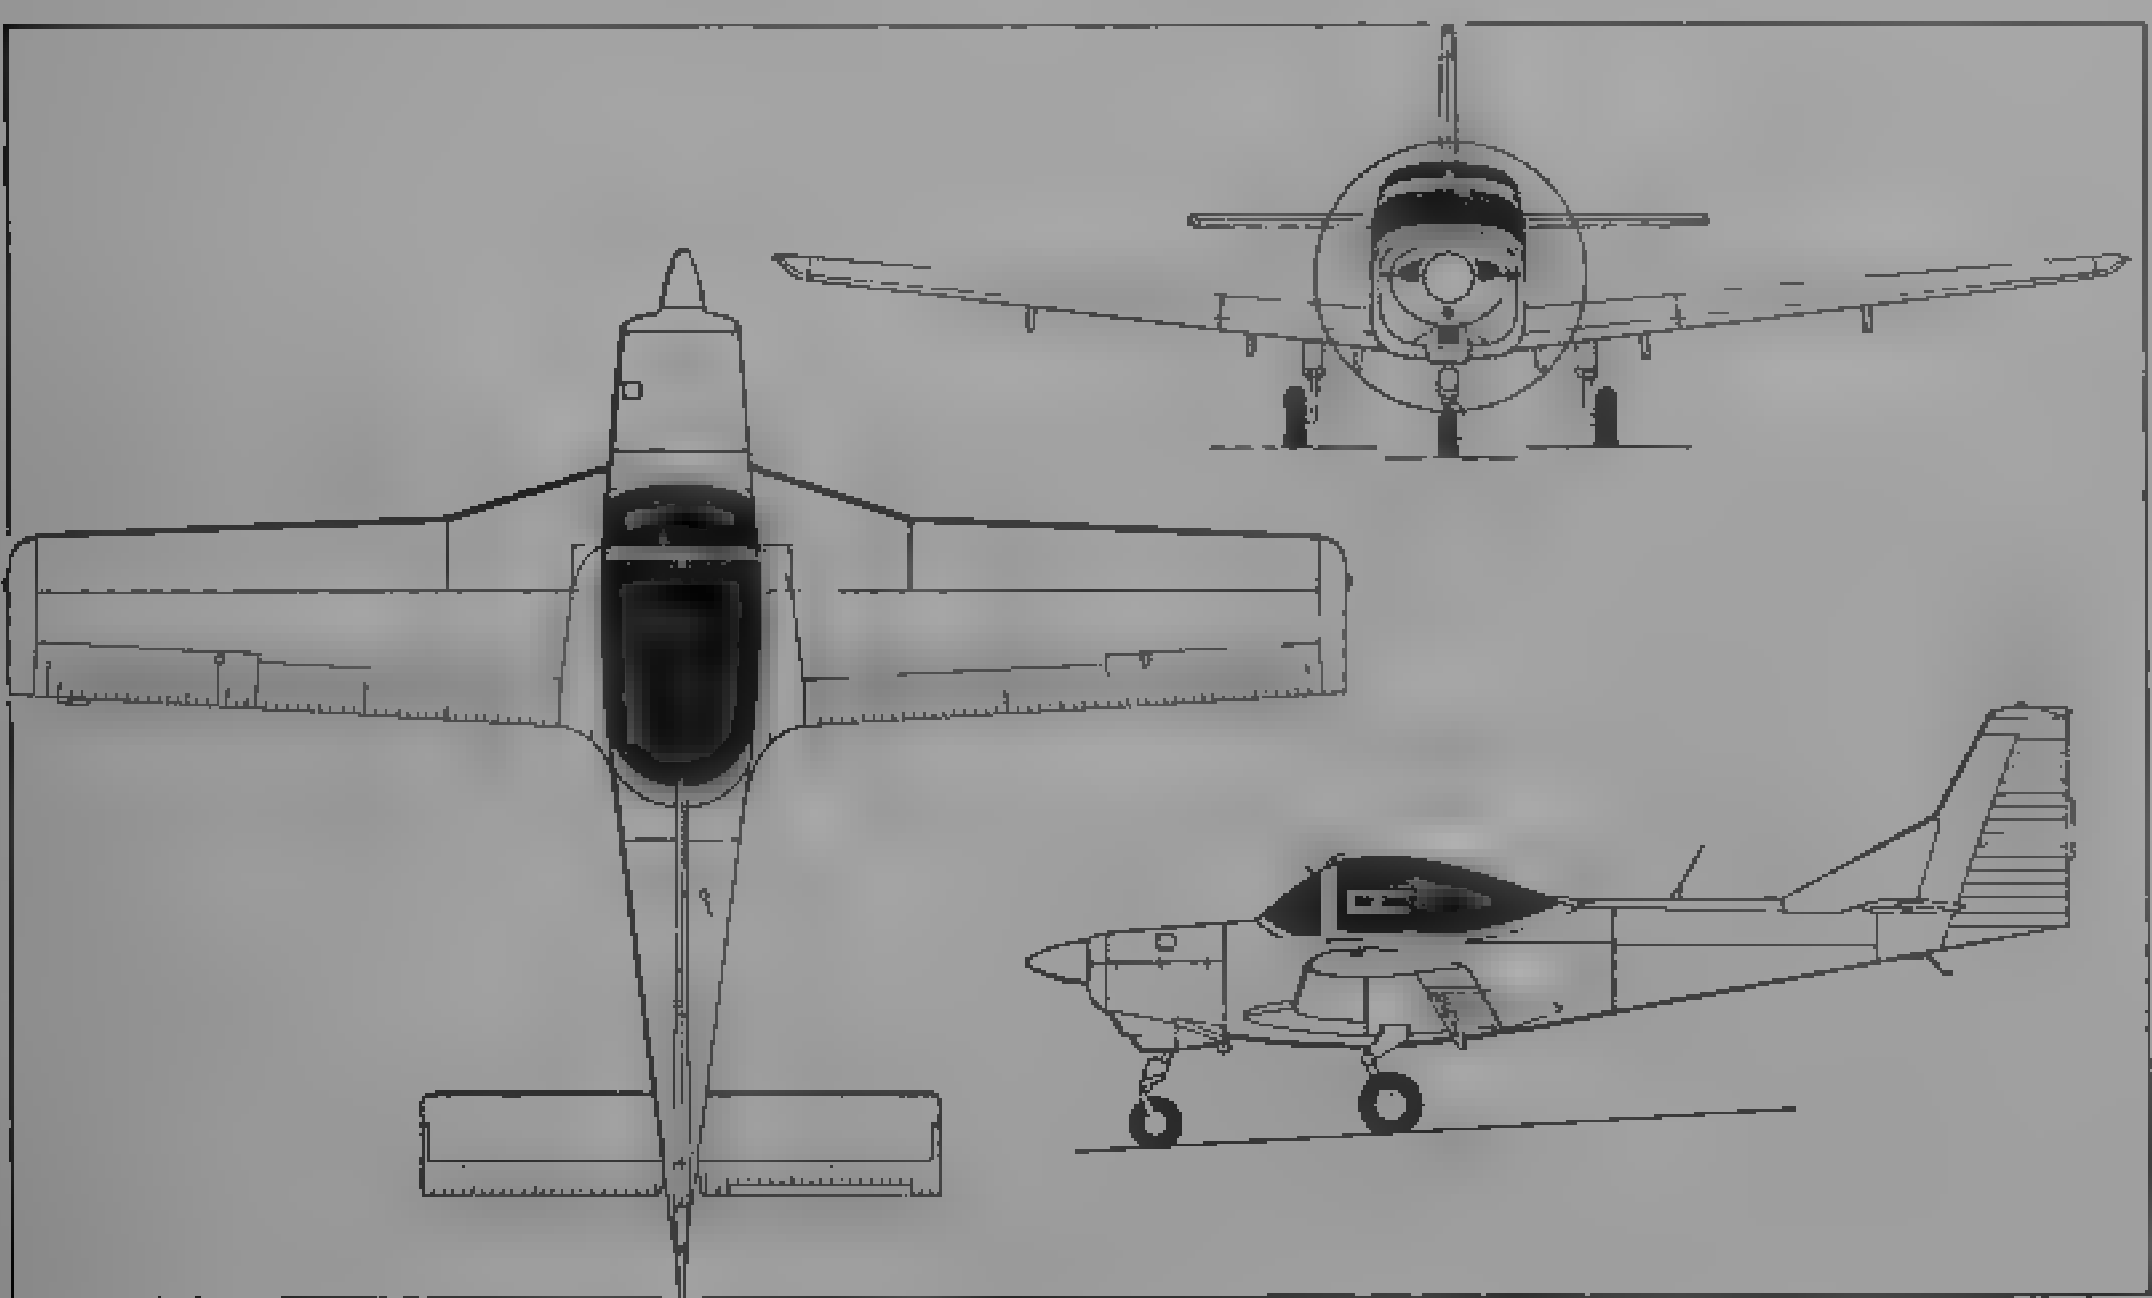
PERFORMANCE (18A4, at Utility category max T-O weight):

Never-exceed speed (VNE)	173 kts (320 km/h, 199 mph)
Max level speed at S/L	130 kts (241 km/h, 150 mph)
Max cruising speed (75% power) at 2,440 m (8,000 ft)	122 kts (226 km/h; 141 mph)
Econ cruising speed (55% power) at 3,050 m (10,000 ft)	109 kts (203 km/h, 126 mph)
Stalling speed, engine idling:	
flaps up	62 kts (115 km/h, 71 mph)
flaps down	49 kts (90 km/h, 56 mph)
Max rate of climb at S/L	244 m (800 ft)/min
Service ceiling	5,180 m (17,000 ft)
T-O run at S/L	215 m (705 ft)
T-O to 15 m (50 ft) at S/L	415 m (1,360 ft)
Landing from 15 m (50 ft)	465 m (1,525 ft)
Landing run	210 m (690 ft)
Range with max fuel, no reserves	615 n miles (1,140 km; 707 miles)
Max endurance	5 h 30 min
g limits	+4.4/−2.2

PERFORMANCE (26A1, at Aerobatic category max T-O weight):

Max permissible diving speed (VD)	232 kts (429 km/h; 267 mph)
Never exceed speed (VNE)	214 kts (396 km/h, 246 mph)
Max level speed at S/L	146 kts (270 km/h, 168 mph)
Design manoeuvring speed (VA)	134 kts (248 km/h, 154 mph)
Stalling speed: flaps up	60 kts (112 km/h, 70 mph)
flaps down	51 kts (95 km/h, 59 mph)
Max rate of climb at S/L	426 m (1,398 ft)/min
T-O run at S/L	170 m (558 ft)
T-O to 15 m (50 ft)	310 m (1,017 ft)
Landing from 15 m (50 ft)	460 m (1,510 ft)
Landing run	200 m (657 ft)
g limits	+6/−3

UPDATED



AS 202/26A1 Bravo two/three-seat trainer and sporting aircraft ***(Jane's/Mike Keep)*** *1994*

FFA AS 202/32TP TURBINE BRAVO

TYPE: Two/three-seat trainer, glider tug and sporting aircraft.

PROGRAMME: Introduced 1992 (prototype HB-HFJ, first flight 20 July); initial certification will be in Utility category, permitting use in glider towing role. Certification work completed, provisional type certificate was expected by end of January 1995 and full certificate by mid year.

CUSTOMERS: One delivered 1993 to Alpine Segelflugschule at Schanis, Switzerland.

Description as for AS 202/18A4 except as follows.

DESIGN FEATURES: Rapid T-O and climb to release point; dive brakes permit rapid descent after glider release; slow propeller rpm and quiet engine allow acceptance in heavily populated and other sensitive areas.

POWER PLANT: One 313 kW (420 shp) Allison 250-B17D turboprop, maximum continuous rating 275 kW (369 shp) at 2,030 rpm, driving a Hartzell HC-B3TF-7A/10173N-19R three-blade constant-speed propeller. Two wing leading-edge rubber fuel tanks with combined capacity of 170 litres (44.9 US gallons; 37.4 Imp gallons), plus two wingtip tanks with combined capacity of 114 litres (30.1 US gallons; 25.1 Imp gallons), giving total capacity of 284 litres (75 US gallons; 62.5 Imp gallons). Overwing refuelling point each side, plus point in each wingtip tank.

DIMENSIONS, EXTERNAL: As AS 202/18A4 except:

Wing span	9.95 m (32 ft 7¾ in)
Wing aspect ratio	7.04
Length overall	7.778 m (25 ft 6¼ in)
Wheelbase	1.869 m (6 ft 1½ in)
Propeller diameter	2.08 m (6 ft 10 in)

AREAS: As AS 202/18A4 except:

Wings, gross	14.056 m² (151.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	780 kg (1,719 lb)
Max T-O weight, Utility	1,080 kg (2,381 lb)
Max landing weight	1,050 kg (2,315 lb)
Max wing loading	76.83 kg/m² (15.74 lb/sq ft)
Max power loading	4.36 kg/kW (7.17 lb/shp)

PERFORMANCE (at Utility max T-O weight):

Max permissible diving speed (V_D)	210 kts (389 km/h; 241 mph)
Max operating speed (V_{MO})	175 kts (324 km/h; 201 mph)
Design manoeuvring speed (V_A)	130 kts (241 km/h; 149 mph)
Stalling speed: flaps up	62 kts (115 km/h; 72 mph)
flaps down	53 kts (99 km/h; 61 mph)
Max rate of climb at S/L	579 m (1,900 ft)/min
T-O run at S/L	155 m (509 ft)
T-O to 15 m (50 ft)	300 m (985 ft)
Landing from 15 m (50 ft)	465 m (1,526 ft)
Landing run	210 m (689 ft)
g limits	+4.4/−2.2 (Utility)
	+6/−3 (Aerobatic)

Formed December 1939, now part of Oerlikon-Buhrle Group; purchased assets of Britten-Norman (Bembridge) Ltd of UK 24 January 1979, which now operates as Pilatus Britten-Norman Ltd.

Current products include PC-6 Turbo-Porter, PC-7 and PC-7 Mk II Turbo Trainer, PC-9 and PC-12; overhauls Swiss Air Force aircraft and helicopters; modified (Mk II) PC-9 declared winner of US Air Force/Navy JPATS trainer competition.

UPDATED

PILATUS PC-6 TURBO-PORTER

US Army designation: UV-20A Chiricahua

TYPE: Single-turboprop multipurpose STOL utility transport.

PROGRAMME: First flight piston-engined prototype 4 May 1959 (see contemporary *Jane's*); current PC-6/B2-H4 introduced mid-1985. Production continuing at about 20 per year in 1995.

CURRENT VERSIONS: **Early versions**: PC-6/A, A1, A2, B, B1, B2 and C2-H2 with various turboprops (see 1974-75 *Jane's*); about 40 produced as agricultural aircraft with spray or dusting gear.

PC-6/B2-H4: Gross weight for FAR Pt 23 passenger carrying increased by 600 kg (1,323 lb), giving up to 570 kg (1,257 lb) greater payload for CAR 3 operations; changes include turned-up wingtips, enlarged dorsal fin, uprated mainwheel shock-absorbers, new tailwheel assembly and slight airframe reinforcement. H4 changes can be retrofitted to B2-H2. *Description applies to B2-H4.*

CUSTOMERS: Total of over 500 (all versions) produced, including licence manufacture in USA; in service in more than 50 countries; military operators include Argentina, Austria, Colombia, Dubai, Ecuador, France, Iran, Mexico, Myanmar, Peru, Switzerland, Thailand and US Army.

DESIGN FEATURES: Wing section NACA 64-514 (constant) with span-increasing wingtip fairings; dihedral 1°; incidence 2°.

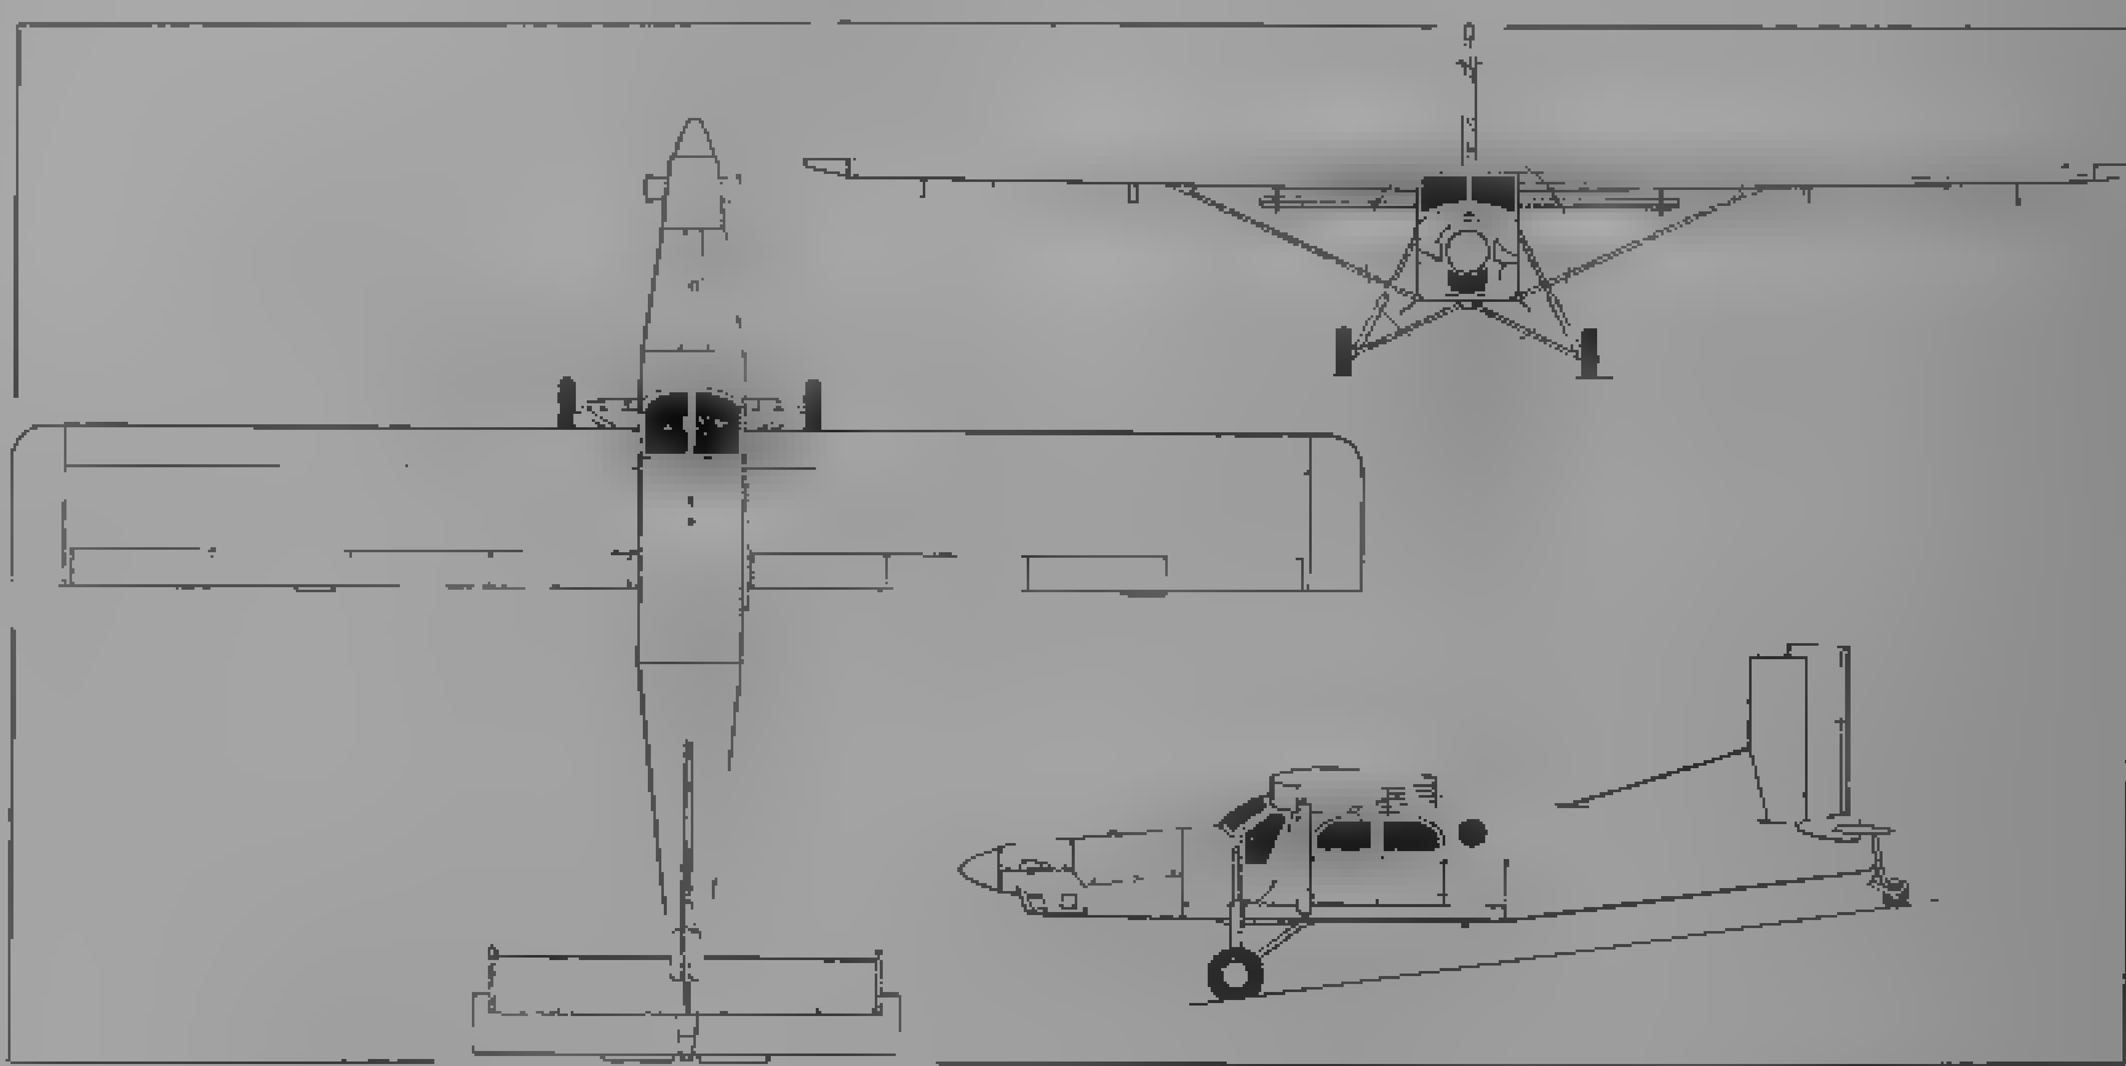
FLYING CONTROLS: Mechanical primary surfaces; Flettner tabs on elevator, geared aileron tabs, electrically actuated double-slotted flaps, electrically actuated variable incidence tailplane.

STRUCTURE: All-metal, single-strut wing bracing.

LANDING GEAR: Non-retractable tailwheel type. Oleo shock-absorbers of Pilatus design in all units. Steerable/lockable tailwheel. Goodyear Type II mainwheels and GA 284 tyres size 24 × 7 or 7.50 × 10 (pressure 2.21 bars; 32 lb/sq in); oversize Goodyear Type III wheels and tyres optional, size 11.0 × 12, pressure 0.88 bar (12.8 lb/sq in). Goodyear tailwheel with size 5.00-4 tyre. Goodyear disc brakes. Pilatus wheel/ski gear and (from July 1994) plain or amphibious floats optional.

POWER PLANT: One 507 kW (680 shp) Pratt & Whitney Canada PT6A-27 turboprop (flat rated at 410 kW; 550 shp at S/L), driving a Hartzell HC-B3TN-3D/T-10178 C or CH or T10173 C or CH constant-speed fully feathering reversible-pitch propeller with Beta mode control. Standard fuel in integral wing tanks, usable capacity 644 litres (170 US gallons; 142 Imp gallons). Two underwing auxiliary tanks, each of 245 litres (65 US gallons; 54 Imp gallons), available optionally. Oil capacity 12.5 litres (3.3 US gallons; 2.75 Imp gallons).

ACCOMMODATION: Cabin has pilot's seat forward on port side, with one passenger seat alongside, and is normally fitted with six quickly removable seats, in pairs, to rear of these for additional passengers. Up to 11 persons, including pilot, can be carried in 2-3-3-3 high density layout; or up to 10 parachutists, or two stretchers plus three attendants in ambulance configuration. Floor level, flush with door sill, with seat rails. Forward-opening door beside each front



Pilatus PC-6/B2-H4 Turbo-Porter with optional port-side double door *(Jane's/Dennis Punnett)*

1993

seat. Large rearward-sliding door on each side of main cabin. Optional double door, without central pillar, on port side. Hatch in floor 0.58 × 0.90 m (1 ft 10¾ in × 2 ft 11½ in), openable from inside cabin, for aerial camera or supply dropping. Starboard side door in rear fuselage 0.50 × 0.80 m (1 ft 7 in × 2 ft 7 in) permits stowage of six passenger seats or accommodation of freight items up to 5.0 m (16 ft 5 in) in length. Walls lined with lightweight soundproofing and heat insulation material. Adjustable heating and ventilation systems. Dual controls optional.

SYSTEMS: Cabin heated by engine bleed air. Scott 8500 oxygen system optional. 200 A 30 V starter/generator and 24 V 34 Ah (optionally 40 Ah) Ni/Cd battery.

AVIONICS: VFR or IFR packages (mainly Bendix/King) to customer's requirements.

Instrumentation: Standard instruments comprise ASI, VSI, barometric altimeter, directional gyro and magnetic compass.

EQUIPMENT: Generally to customer's requirements, but can include gear for parajumping role, stretchers for ambulance role, aerial photography and survey gear, agricultural equipment, or 800 litre (211 US gallon, 176 Imp gallon) water tank in cabin, with quick release system, for firefighting role. Stainless steel 1,330 litre (351.5 US gallon, 292.5 Imp gallon) agricultural tank, installed behind front seats, can also be used in firebombing role. With 46- or 62-nozzle underwing spraybooms, aircraft can spray a 45 m (148 ft) swath; optional ULV system (four to six atomisers or two to six Micronairs) can increase swath width to 400 m (1,310 ft).

DIMENSIONS, EXTERNAL:

Wing span	15.87 m (52 ft 0¾ in)
Wing chord, constant	1.90 m (6 ft 3 in)
Wing aspect ratio	8.35
Length overall	10.90 m (35 ft 9¼ in)
Height overall (tail down)	3.20 m (10 ft 6 in)
Elevator span	5.12 m (16 ft 9½ in)
Wheel track	3.00 m (9 ft 10 in)
Wheelbase	7.87 m (25 ft 10 in)
Propeller diameter	2.56 m (8 ft 5 in)
Cabin sliding doors (port/starboard):	
Max height	1.04 m (3 ft 5 in)
Width	1.58 m (5 ft 2¼ in)

DIMENSIONS, INTERNAL:

Cabin, from back of pilot's seat to rear wall:	
Length	2.30 m (7 ft 6½ in)
Max width	1.16 m (3 ft 9½ in)
Max height (at front)	1.28 m (4 ft 2½ in)
Height at rear wall	1.18 m (3 ft 10½ in)
Floor area	2.67 m² (28.6 sq ft)
Volume	3.28 m³ (107 cu ft)

AREAS:

Wings, gross	30.15 m² (324.5 sq ft)
Ailerons (total)	3.83 m² (41.2 sq ft)
Flaps (total)	3.76 m² (40.5 sq ft)
Fin	1.70 m² (18.3 sq ft)
Rudder, incl tabs	0.96 m² (10.3 sq ft)
Tailplane	4.03 m² (43.4 sq ft)
Elevator, incl tab	2.11 m² (22.7 sq ft)

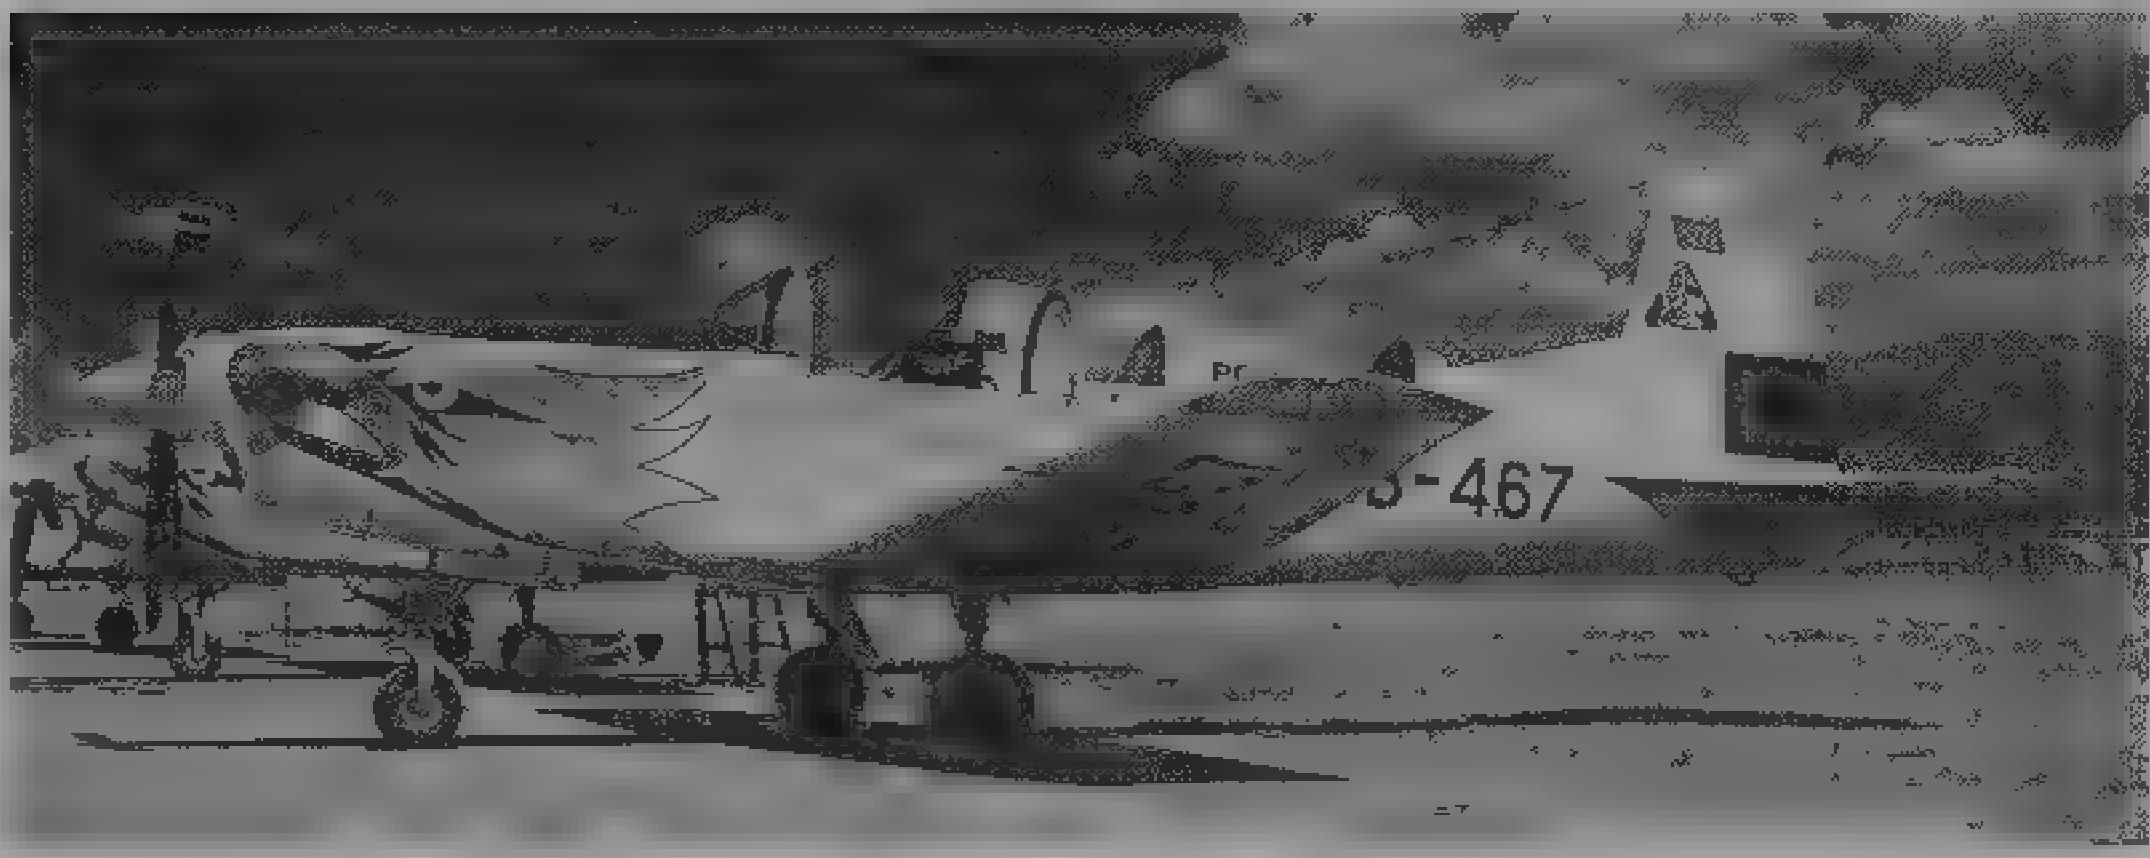
WEIGHTS AND LOADINGS:

Weight empty, equipped	1,270 kg (2,800 lb)
Max fuel weight: internal	508 kg (1,120 lb)
underwing	392 kg (864 lb)
Max payload:	
with reduced internal fuel	1,130 kg (2,491 lb)
with max internal fuel	1,062 kg (2,341 lb)
with max internal and underwing fuel	571 kg (1,259 lb)
Max T-O weight, Normal (CAR 3):	
wheels (standard)	2,800 kg (6,173 lb)
skis	2,600 kg (5,732 lb)
Max landing weight: wheels	2,660 kg (5,864 lb)
skis	2,600 kg (5,732 lb)
Max cabin floor loading	488 kg/m² (100 lb/sq ft)
Max wing loading (Normal):	
wheels	92.87 kg/m² (19.03 lb/sq ft)
skis	86.23 kg/m² (17.67 lb/sq ft)
Max power loading (Normal):	
wheels	6.83 kg/kW (11.22 lb/shp)
skis	5.13 kg/kW (8.43 lb/shp)

PERFORMANCE (at max T-O weight, ISA, Normal category):

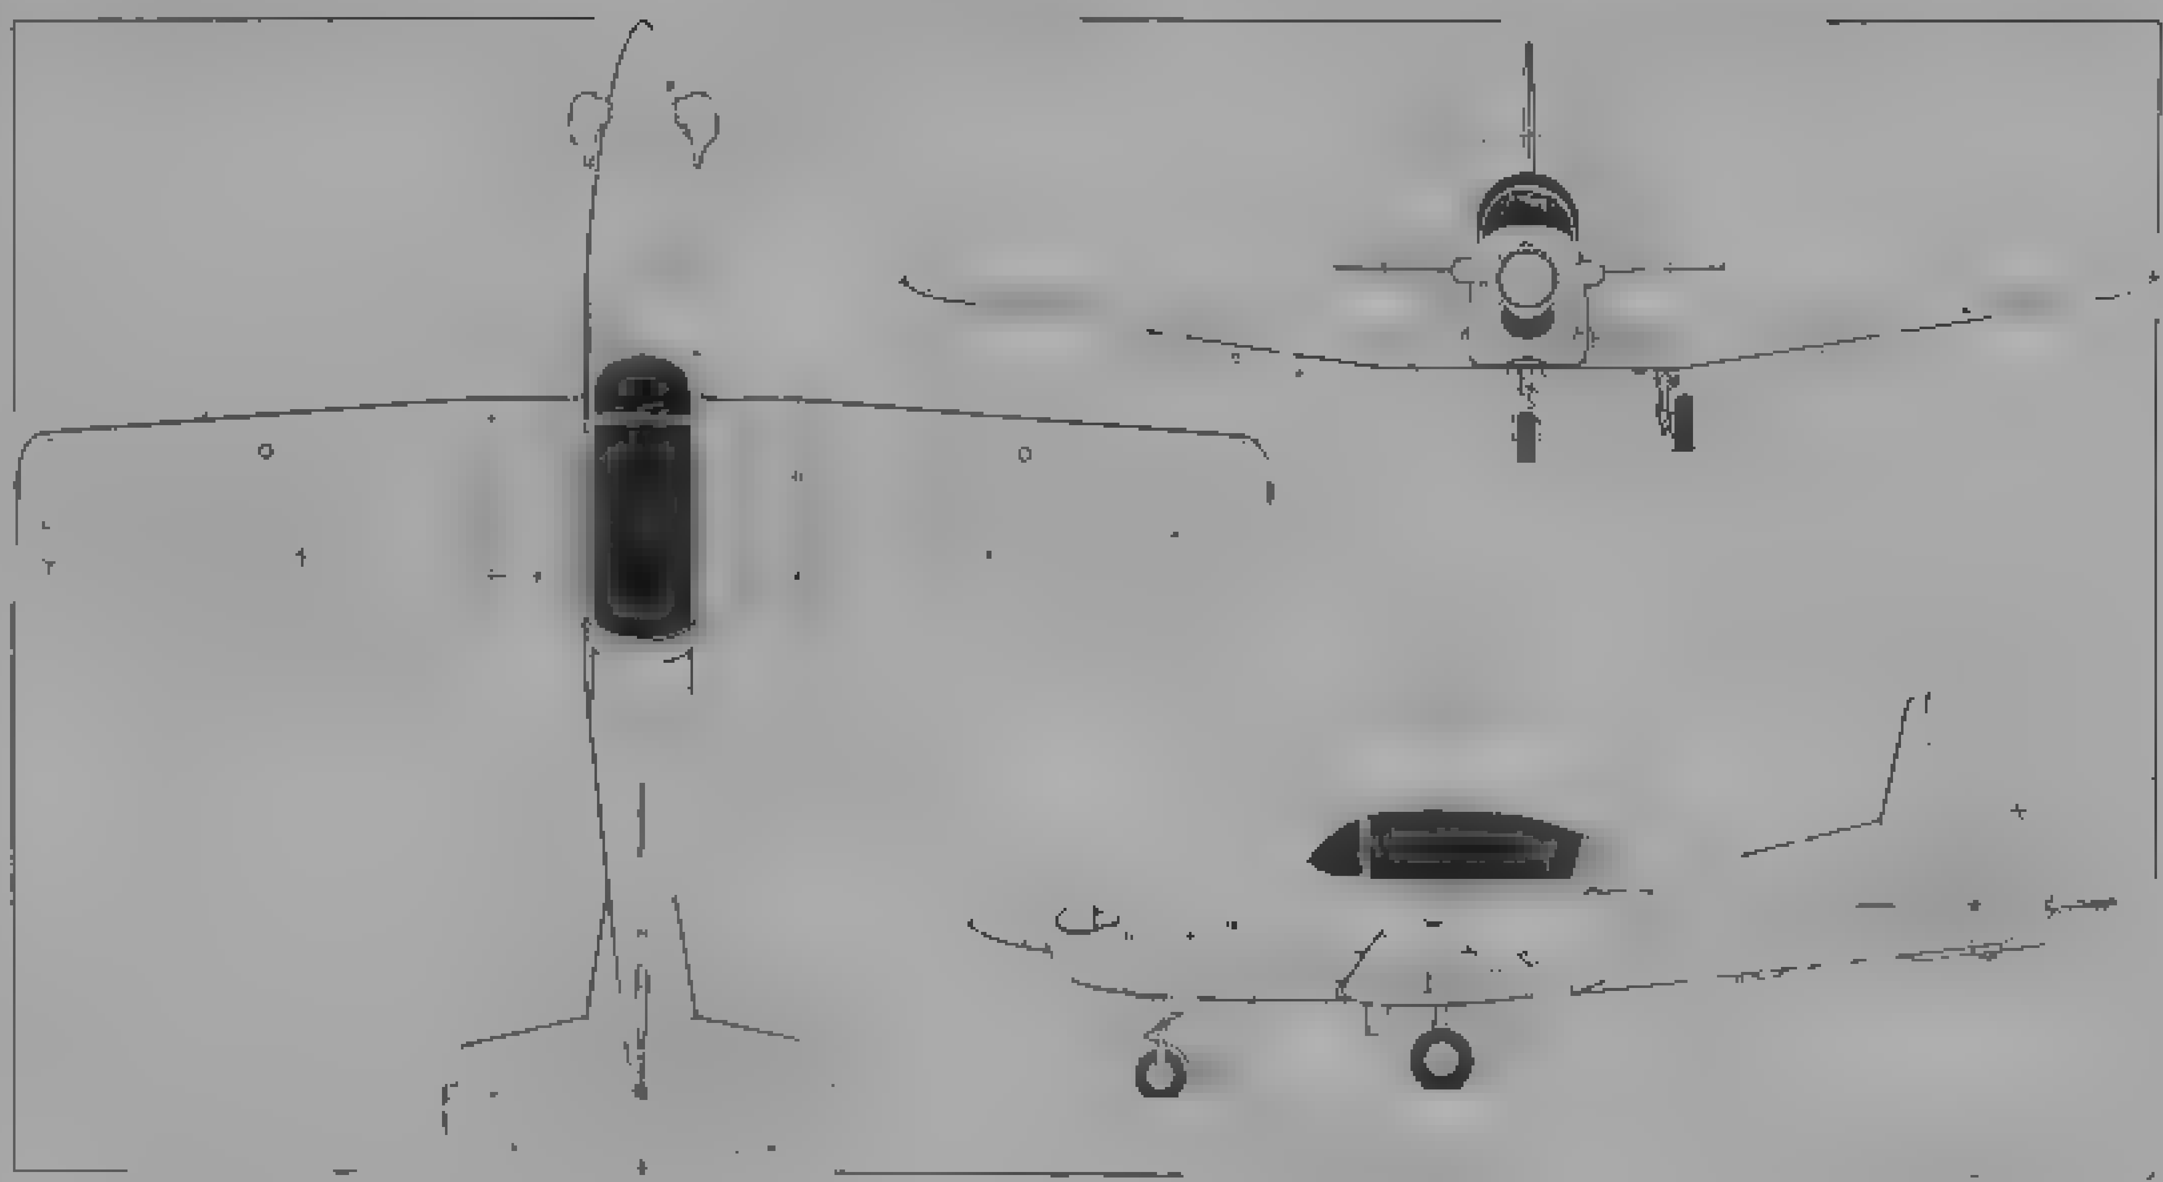
Never-exceed speed (V_{NE})	151 kts (280 km/h; 174 mph) IAS
Econ cruising speed at 3,050 m (10,000 ft)	115 kts (213 km/h; 132 mph)
Stalling speed, power off, flaps down	52 kts (96 km/h; 60 mph)
Max rate of climb at S/L	287 m (941 ft)/min
Max operating altitude	7,620 m (25,000 ft)
T-O run at S/L	197 m (646 ft)
Landing run at S/L	127 m (417 ft)
Max range at 115 kt (213 km/h; 132 mph) at 3,050 m (10,000 ft), no reserves:	
with max payload	394 n miles (730 km; 453 miles)
with max internal fuel	500 n miles (926 km; 576 miles)
with max internal and underwing fuel	870 n miles (1,612 km; 1,002 miles)
g limits	+3.72/−1.5

UPDATED



PC-7 Turbo-Trainers of the Bolivian Air Force

1995



Pilatus PC-7 Turbo-Trainer (Pratt & Whitney Canada PT6A-25A turboprop) (*Jane's/Dennis Punnett*)

1993

PILATUS PC-7 TURBO-TRAINER

Swiss Air Force designation: PC-7/CH

TYPE: Two-seat turboprop trainer.

PROGRAMME: First flight production PC-7, 18 August 1978; Swiss federal civil Aerobatic category certification 5 December 1978; first deliveries December 1978. Swiss Utility category 6 April 1979; French DGAC certification 16 May 1983; US FAR Pt 23 certification 12 August 1983; meets selected group of US military trainer category specifications.

CURRENT VERSIONS: **PC-7**: Standard version, *to which detailed description applies*.

PC-7 Mk II: Modified version for South Africa; described separately.

CUSTOMERS: Total deliveries (excluding South Africa) over 440 by early 1995; customers (see also 1992-93 *Jane's*) include air forces of Abu Dhabi, Angola, Austria, Bolivia, Chile, France (for CEV), Guatemala, Iran, Iraq, Malaysia, Mexico, Myanmar, Netherlands, Switzerland, Uruguay and four undisclosed countries; others include four US private owners. French Patrouille ECCO formation display team operates four with smoke generators.

DESIGN FEATURES: Constant chord centre-section and tapered outer sections with 1° quarter-chord sweepback; wing section NACA 64₂A 415 at root and 64₁A 612 at tip; dihedral 7° on outer panels. Six underwing stations for external stores.

FLYING CONTROLS: Elevators and rudder cable operated; mass balanced ailerons pushrod operated; trim tab in starboard half of elevator, anti-servo tab in rudder, trim tab in port aileron; strakes under rear fuselage and at tailplane leading-edges; dorsal fin; electrically operated split flaps extending under fuselage.

STRUCTURE: All-metal with some GFRP fairings on wings and fuselage; one-piece single-spar wing with auxiliary spar, ribs and stringer-reinforced skin; tail surface structure similar to wing.

LANDING GEAR: Electrically actuated retractable tricycle type, with emergency manual extension. Mainwheels retract inward, nosewheel rearward. Oleo-pneumatic shock absorber in each unit. Castoring nosewheel, with shimmy dampers. Goodrich mainwheels and tyres, size 6.50-8, pressure 4.5 bars (65 lb/sq in). Goodrich nosewheel and tyre, size 6.00-6, pressure 2.75 bars (40 lb/sq in). No mainwheel doors. Goodrich hydraulic disc brakes on mainwheels. Parking brake.

POWER PLANT: One 485 kW (650 shp) Pratt & Whitney Canada PT6A-25A turboprop, flat rated at 410 kW (550 shp at S/L), driving a Hartzell HC-B3TN-2/T10173C-8 three-blade constant-speed fully feathering propeller. Fuel in integral tanks in outer wing leading-edges, total usable capacity 474 litres (125 US gallons; 104 Imp gallons). Overwing refuelling point on each tank. Engine oil system permits up to 30 seconds of inverted flight. Provision for

Malaysian Police PC-6/B2-H4 Turbo-Porter with wing-mounted radar and underwing fuel tanks

1995

Pilatus PC 7 Mk II prototype in the former insignia of the South African Air Force

1994

two 152 or 240 litre (40 or 63.5 US gallon; 33.5 or 52.75 Imp gallon) underwing drop tanks. Oil capacity 16 litres (4.2 US gallons, 3.5 Imp gallons)

ACCOMMODATION: Adjustable seats for two persons in tandem (instructor at rear), beneath rearward-sliding jettisonable Plexiglas canopy. Martin-Baker Mk CH 15A lightweight ejection seats, available optionally, offer safe escape for both occupants at speeds between 60 knots on runway and 300 knots in the air (111 and 556 km/h, 69 and 345 mph), and at altitudes up to 6,700 m (22,000 ft). Dual controls standard. Cockpits ventilated and heated by engine bleed air, which can also be used for windscreen de-icing. Space for 25 kg (55 lb) of baggage aft of seats, with external access

SYSTEMS: Freon air conditioning and oxygen systems standard. Hydraulic system for mainwheel brakes only. No pneumatic system. 28 V DC operational electrical system incorporating Lear Siegler 30 V 200 A starter/generator and Marathon 36 Ah or 42 Ah Ni/Cd battery; two static inverters for AC power supply. Ground power receptacle in port side of rear fuselage. Goodrich propeller electric de-icing system optional

AVIONICS: *Flight*: Basic flight and navigation instrumentation in both cockpits, except for magnetic compass (front cockpit only). Additional nav and com equipment to customer's requirements

EQUIPMENT: Landing/taxying light standard on each mainwheel leg. Optional equipment includes hood to screen pupil from rear cockpit during IFR training

DIMENSIONS, EXTERNAL:

Wing span	10.40 m (34 ft 1 in)
Wing chord: mean aerodynamic	1.64 m (5 ft 5 in)
mean geometric	1.60 m (5 ft 3 in)
Wing aspect ratio	6.52
Length overall	9.78 m (32 ft 1 in)
Height overall	3.21 m (10 ft 6 in)
Tailplane span	3.40 m (11 ft 2 in)
Wheel track	2.54 m (8 ft 4 in)
Wheelbase	2.32 m (7 ft 7 in)
Propeller diameter	2.36 m (7 ft 9 in)

AREAS:

Wings, gross	16.60 m² (179.0 sq ft)
Ailerons (total)	1.621 m² (17.45 sq ft)
Trailing-edge flaps (total)	2.035 m² (21.90 sq ft)
Fin, incl dorsal fin	1.062 m² (11.43 sq ft)
Rudder, incl tab	0.959 m² (10.32 sq ft)
Tailplane	1.783 m² (19.19 sq ft)
Elevators, incl tab	1.395 m² (15.02 sq ft)

WEIGHTS AND LOADINGS (A: Aerobatic, U: Utility category):

Basic weight empty	1,330 kg (2,932 lb)
Max T-O weight: A	1,900 kg (4,188 lb)
U	2,700 kg (5,952 lb)
Max ramp weight: U	2,711 kg (5,976 lb)
Max landing weight	
A (military specification)	1,804 kg (3,977 lb)
A (FAR Pt 23)	1,900 kg (4,188 lb)
U	2,565 kg (5,655 lb)
Max zero-fuel weight	1,664 kg (3,668 lb)
Max wing loading: A	114.5 kg/m² (23.44 lb/sq ft)
U	162.7 kg/m² (33.31 lb/sq ft)
Max power loading: A	4.63 kg/kW (7.61 lb/shp)
U	6.59 kg/kW (10.82 lb/shp)

PERFORMANCE (at max T-O weight, ISA, except where indicated):

Never-exceed speed (VNE)	
A, U	270 kts (500 km/h, 310 mph) EAS
Max operating speed	
A, U	270 kts (500 km/h, 310 mph) EAS
Max cruising speed at 6,100 m (20,000 ft)	
A	222 kts (412 km/h, 256 mph)
U	196 kts (364 km/h, 226 mph)
Econ cruising speed at 6,100 m (20,000 ft):	
A	171 kts (317 km/h; 197 mph)
U	165 kts (305 km/h, 190 mph)
Manoeuvring speed	
A	175 kts (325 km/h, 202 mph) EAS
U	181 kts (335 km/h, 208 mph) EAS
Max speed with flaps and landing gear down	
A, U	135 kts (250 km/h, 155 mph) EAS
Stalling speed, flaps and landing gear up, power off	
A	71 kts (131 km/h, 82 mph) EAS
U	83 kts (154 km/h, 96 mph) EAS
Stalling speed, flaps and landing gear down, power off	
A	64 kts (119 km/h, 74 mph) EAS
U	74 kts (138 km/h, 86 mph) EAS
Max rate of climb at S/L: A	655 m (2,150 ft)/min
U	393 m (1,290 ft)/min
Time to 5,000 m (16,400 ft): A	9 min
U	17 min
Max operating altitude	7,620 m (25,000 ft)
Service ceiling: A	10,060 m (33,000 ft)
U	7,925 m (26,000 ft)
T-O run at S/L: A	240 m (787 ft)

g limits: A	+6/−3
U	+4.5/−2.25

UPDATED

PILATUS PC-7 MK II TURBO-TRAINER

SAAF name: Astra

TYPE: Two-seat turboprop trainer

PROGRAMME: Launched 1992 and developed to bid for South African Air Force requirement; first of two prototypes (HB-HMR) made first flight 28 September 1992; SAAF contract announced June 1993, first production aircraft started January 1994 and made first flight August 1994, 12 kits delivered by 1 January 1995 and continuing at 2½ per month, for assembly by Atlas

CUSTOMERS: South African Air Force (60), to replace AT-6G Harvard/Texans

DESIGN FEATURES: Reduced-drag airframe based on that of PC-9; higher powered PT6A-25 engine with four-blade propeller; Martin-Baker CH 11A ejection seats standard; optimised flying controls

FLYING CONTROLS: Generally as for PC-9 except that ventral airbrake is optional, stall strips and ventral fin added to improve stall characteristics and directional stability

STRUCTURE: Generally as for PC-7/PC-9, but some components (flaps, tailplanes, elevators, rudder and engine cowlings) of South African (Atlas) manufacture

LANDING GEAR: As described for PC-7, but with hydraulic actuation, Dunlop tyres and higher tyre pressures (main wheels 4.62 bars; 67 lb/sq in, nosewheel 3.79 bars; 55 lb/sq in). Steering ±61° by differential braking, nosewheel steering (±12°) standard. Simera is landing gear subcontractor. Minimum ground turning radius 11.125 m (36 ft 6 in), based on nosewheel

POWER PLANT: One 522 kW (700 shp) Pratt & Whitney Canada PT6A-25C turboprop, driving a Hartzell HC-D4N-2A four-blade constant-speed fully feathering propeller. Two integral wing fuel tanks and collector tanks, each of 235 litres (62.1 US gallons, 51.7 Imp gallons) capacity, plus a 12 litre (3.2 US gallon, 2.6 Imp gallon) aerobatic tank, giving total internal capacity of 482 litres (127.3 US gallons, 106 Imp gallons). Provision for 155 litre (41 US gallon, 34 Imp gallon) long-range auxiliary tank or 246 litre (65 US gallon, 54 Imp gallon) ferry tank under each wing. Single overwing gravity fuelling point each side. Oil capacity 16 litres (4.25 US gallons; 3.5 Imp gallons). Capability for 30 seconds of inverted flight

ACCOMMODATION: Instructor and pupil in tandem on Martin-Baker CH 11A ejection seats. Canopy opens sideways to starboard. Cockpits unpressurised

SYSTEMS: Vapour cycle air conditioning system. Hydraulic system, pressure 207 bars (3,000 lb/sq in), for landing gear actuation and optional airbrake and nosewheel steering; system maximum flow rate 18.8 litres (4.97 US gallons; 4.13 Imp gallons)/min. Electrical system (28 V DC) powered by 200 A starter/generator and 24 V Ni/Cd battery. Gaseous oxygen system

AVIONICS (Astra): ATE of South Africa is overall systems integrator; all of South African origin except ADF and panel displays.

Comms: Dual Barcom VHF radios, ESD intercom and transponder

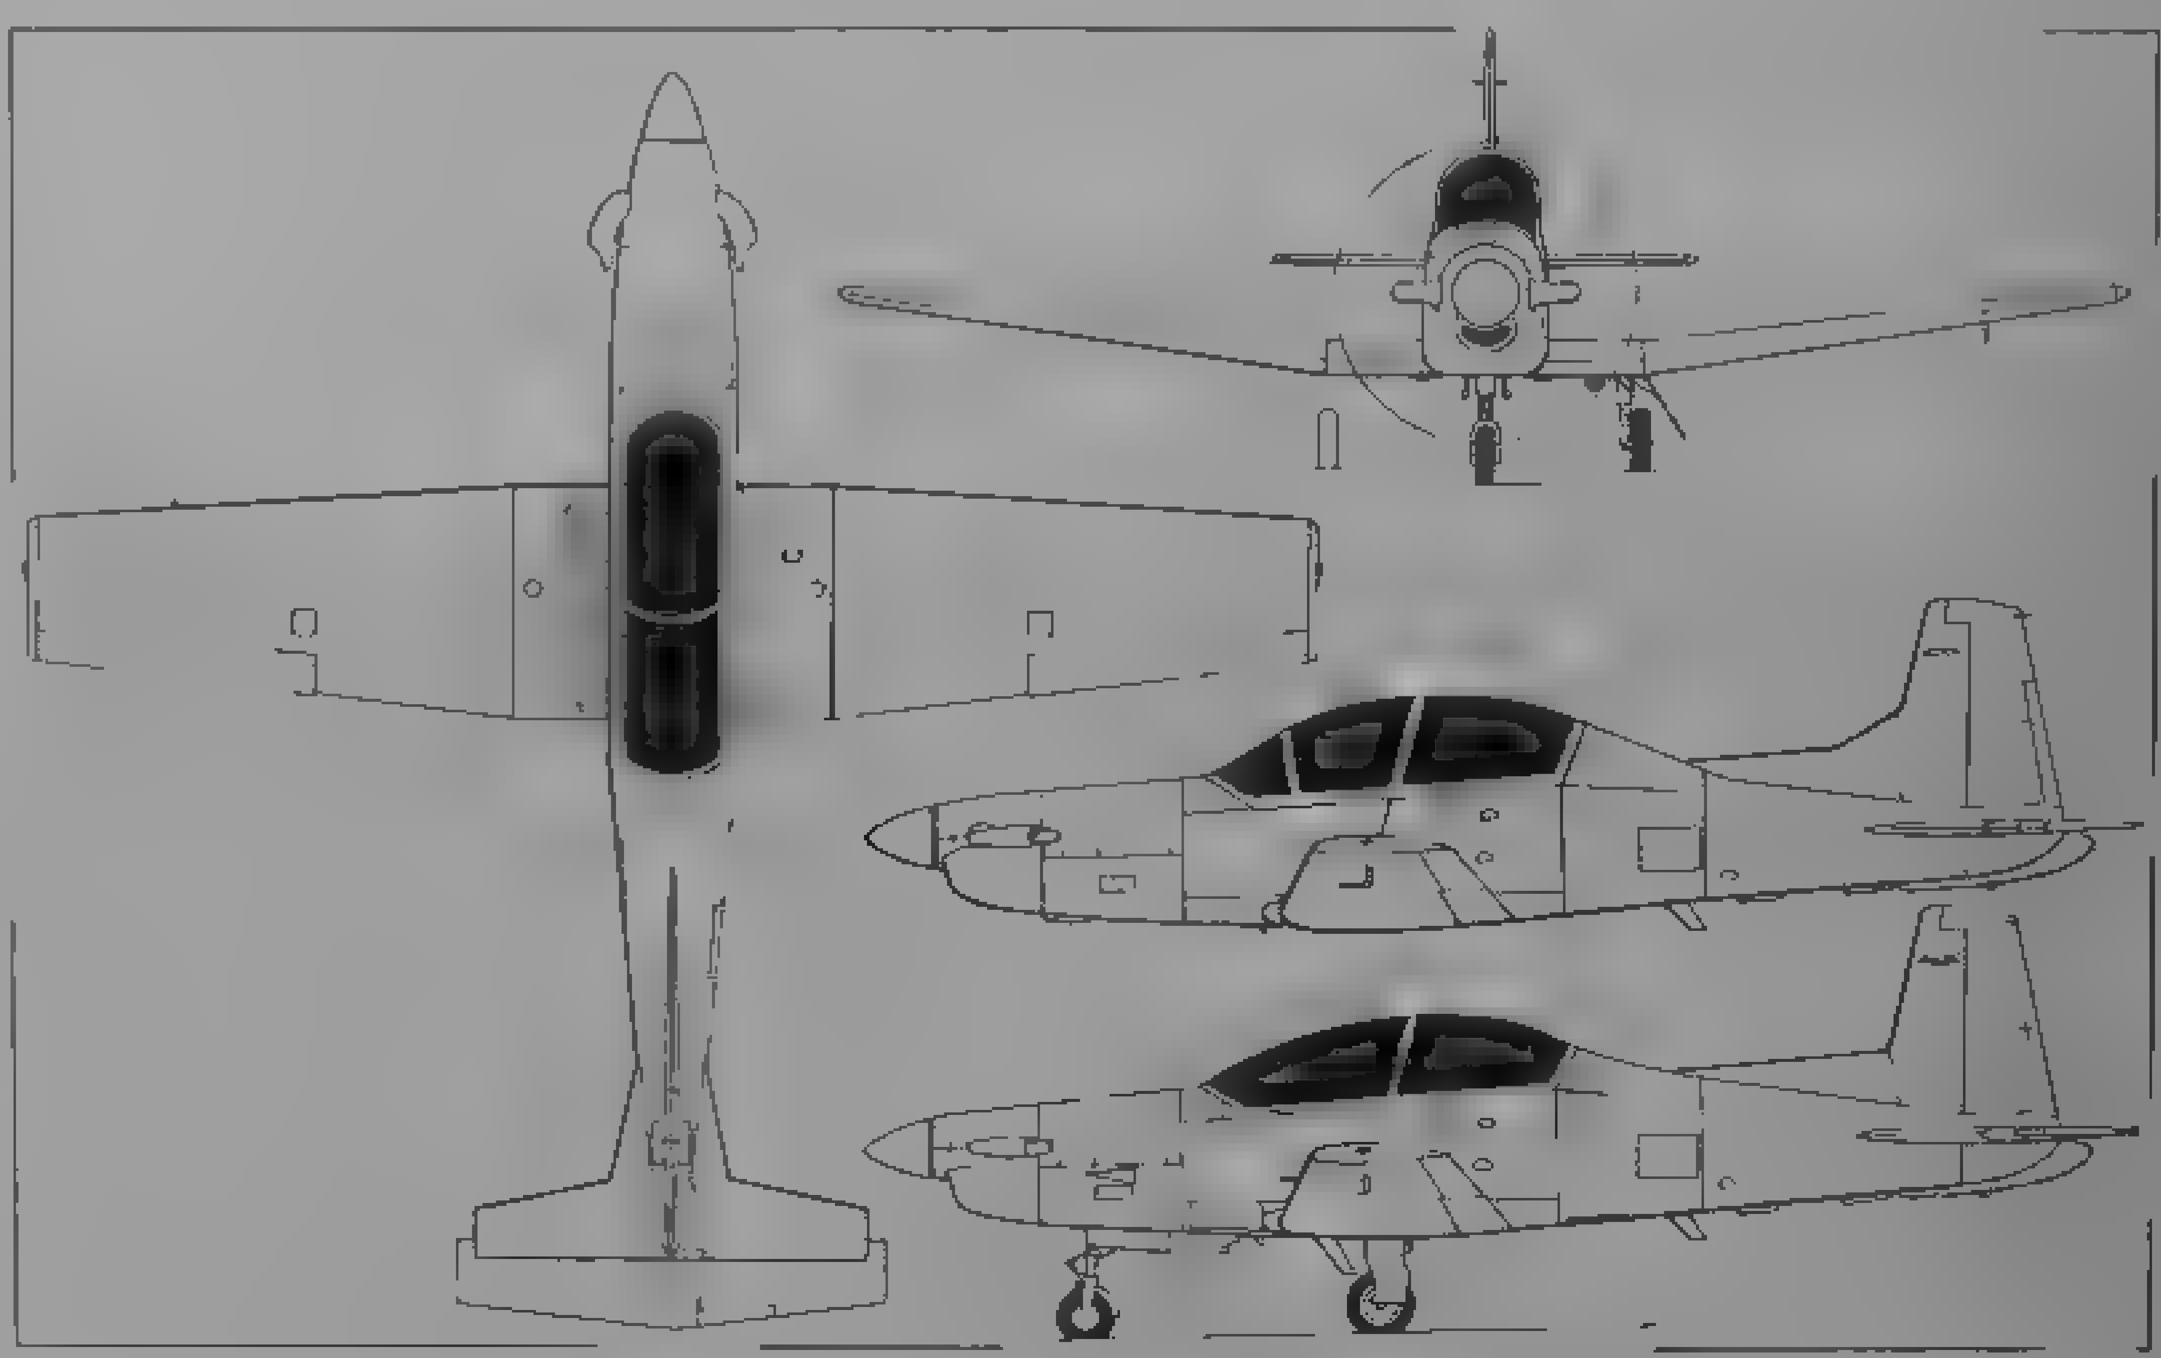
Flight: ESD VOR/ILS and DME, Kentron AHRS, Collins ADF, Avitronics flight management system computer.

Instrumentation: Plessey Telumat mode selection panel, XCel MFDs; Sextant Avionique flat panel displays, altimeters and other instrumentation provided by SAAF.

ARMAMENT: Engineered to inhibit fitment of weapons.

DIMENSIONS, EXTERNAL:

Wing span	10.12 m (33 ft 2¼ in)
Wing chord, at root	1.88 m (6 ft 2 in)
at tip	1.14 m (3 ft 9 in)
Wing aspect ratio	6.29



Pilatus PC-9 basic/advanced trainer, with additional side view (top) of JPATS Mk II *(Jane's/Dennis Punnett)*

1993

Length overall	10 13 m (33 ft 2¾ in)
Fuselage. Max width	0 972 m (3 ft 2¼ in)
Height overall	3 26 m (10 ft 8¼ in)
Tailplane span	3 70 m (12 ft 1¾ in)
Wheel track	2 54 m (8 ft 4 in)
Wheelbase	2 312 m (7 ft 7 in)
Propeller diameter	2.44 m (8 ft 0 in)
Propeller ground clearance	0 388 m (1 ft 3¼ in)

DIMENSIONS, INTERNAL:

Baggage compartment volume	0 14 m³ (4 94 cu ft)

AREAS: As for PC-9 except:

Tailplane	1 98 m² (21 31 sq ft)
Elevators (total, incl tab)	1 64 m² (17 65 sq ft)

WEIGHTS AND LOADINGS (A: Aerobatic, U: Utility category):

Basic weight empty, equipped	1 670 kg (3,682 lb)
Max T-O weight: A	2,250 kg (4,960 lb)
U	2,700 kg (5,952 lb)
Max ramp weight: A	2,260 kg (4,982 lb)
U	2,710 kg (5 974 lb)
Max landing weight: A	2,250 kg (4,960 lb)
U	2 565 kg (5,655 lb)
Max zero-fuel weight: A, U	1 900 kg (4,189 lb)
Max wing loading: A	138 1 kg/m² (28 29 lb/sq ft)
U	165 7 kg/m² (33 95 lb/sq ft)
Max power loading: A	4 31 kg/kW (7 09 lb/shp)
U	5 18 kg/kW (8 50 lb/shp)

PERFORMANCE (at max Aerobatic T-O weight):

Never-exceed (V_{NE}) and max level speed
300 kts (555 km/h, 345 mph)

Max cruising speed at 3 050 m (10 000 ft)
250 kts (463 km/h, 288 mph)

Stalling speed, engine idling:

flaps up	79 kts (147 km/h, 91 mph)
flaps down	70 kts (130 km/h, 81 mph)
Max rate of climb at S/L	824 m (2,705 ft)/min
Service ceiling	8,380 m (27,500 ft)
T-O run	260 m (853 ft)
T-O to 15 m (50 ft)	530 m (1,739 ft)
Landing from 15 m (50 ft)	485 m (1,592 ft)
Landing run	365 m (1,198 ft)

Range with max internal fuel, 5% and 20 min reserves
730 n miles (1,352 km, 840 miles)

Endurance at 243 kts (450 km/h, 279 mph) 1 h 30 min

UPDATED

PILATUS PC-9

TYPE: Two-seat turboprop trainer

PROGRAMME: Design began May 1982; aerodynamic elements tested on PC-7 1982-83, first flights by two preproduction PC-9s, HB-HPA on 7 May 1984 and HB-HPB on 20 July 1984, aerobatic certification 19 September 1985

CURRENT VERSIONS: **Standard PC-9**: *Description applies to this version*

PC-9/A: Australian version

PC-9B: German target towing version, operated for Luftwaffe by civilian company, increased fuel for 3 hours 20 minutes mission, two Southwest RM-24 winches on inboard pylons with targets stowed aft of winch, TAS 06 acoustic scoring system

PC-9 Mk II: Modified for US Air Force/Navy JPATS trainer programme; described separately

CUSTOMERS: Total sales more than 200 to 11 customers including Germany (10) and eight air forces including those of Australia (67), Cyprus (two), Iraq (20), Myanmar (four), Saudi Arabia (30), Switzerland (12) and Thailand (20)

DESIGN FEATURES: Meets FAR Pt 23 (Amendments 1 to 28) and special Swiss federal civil conditions for both Aerobatic and Utility categories; complies with selected parts of US military training specifications, approximately 9 per cent structural commonality with standard PC-7, parallel chord wing centre-section; tapered outer panels with quarter-chord sweepback 1°. Wing section PIL15M825 at root, PIL12M850 at tip; dihedral 7° from centre-section incidence 1° at root, twist −2

FLYING CONTROLS: Cable operated elevator and rudder; mass balanced, electrically actuated trim tab in starboard half of elevator; electrically actuated trim/anti-balance tab in rudder controlled from rocker switch on power control lever ailerons operated by pushrods, electrically operated lateral trim, hydraulically operated split flaps, hydraulically operated airbrake panel under centre-fuselage

STRUCTURE: All metal with some GFRP wing/fuselage fairings; one-piece wing with auxiliary spar, ribs and stringer reinforced skin

LANDING GEAR: Retractable tricycle type, with hydraulic actuation in both normal and emergency modes. Mainwheels retract inward into wing centre-section, nosewheel rearward, all units enclosed by doors when retracted. Oleo-pneumatic shock-absorber in each leg. Hydraulically actuated nosewheel steering. Goodrich wheels and tyres, with Goodrich multipiston hydraulic disc brakes on main wheels. RAAF version has low-pressure tyres for grass field operation. Parking brake

POWER PLANT: One 857 kW (1,150 shp) Pratt & Whitney Canada PT6A-62 turboprop, flat rated at 708 kW (950 shp), driving a Hartzell HC-D4N ZA/09512A four-blade constant-speed fully feathering propeller. Single lever engine control. Fuel in two integral tanks in wing leading edges, total usable capacity 535 litres (141 3 US gallons, 117 7 Imp gallons). Overwing refuelling point on each side. Fuel system includes 12 litre (3 2 US gallon, 2.6 Imp gallon) aerobatics tank in fuselage, forward of front cockpit, which permits up to 60 s of inverted flight. Provision for two 154 or 248 litre (40.7 or 65 5 US gallon, 33 9 or 54.5 Imp gallon) drop tanks on centre underwing attachment points. Total oil capacity 16 litres (4 2 US gallons, 3 5 Imp gallons)

ACCOMMODATION: Two Martin-Baker Mk CH 11A adjustable ejection seats, each with integrated personal survival pack and fighter-standard pilot equipment. Stepped tandem arrangement with rear seat elevated 15 cm (6.3 in). Seats operable, through canopy, at zero height and speeds down to 60 knots (112 km/h; 70 mph). Anti g system optional. One-piece acrylic Perspex windscreen, one-piece framed canopy, incorporating rollover bar, opens sideways to starboard. Dual controls standard. Cockpit heating, cooling, ventilation and canopy demisting standard. Space for 25 kg (55 lb) of baggage aft of seats, with external access

SYSTEMS: AiResearch ECS, using air cycle and engine bleed air, for cockpit heating/ventilation and canopy demisting. Fairey Systems hydraulic system, pressure 207 bars (3,000 lb/sq in), for actuation of landing gear, mainwheel doors, nosewheel steering, flaps and airbrake, system maximum flow rate 18 8 litres (4 97 US gallons, 4 14 Imp gallons)/min. Bootstrap oil/oil reservoir, pressurised at 3 45 to 207 bars (50 to 3,000 lb/sq in). Oil/nitrogen accumulator, also charged to 207 bars (3,000 lb/sq in), provides emergency hydraulic power for flaps and landing gear. Primary electrical system (28 V DC operational, 24 V nominal) powered by Lear Siegler 30 V 200 A starter/generator and 24 V 40 Ah battery, two static inverters supply 115/26 V AC power at 400 Hz. Ground power receptacle. Electric anti icing of pitot tube, static ports and AoA transmitter standard, electric de-icing of propeller blades optional. Diluter demand oxygen system, selected and controlled individually from panel in each cockpit

AVIONICS: Both cockpits fully instrumented to customer specifications, with Logic computer operated integrated engine and systems data display. Customer-specified equipment provides flight environmental, attitude and direction data, and ground-transmitted position determining information

Comms: Single or dual VHF, UHF and/or HF radios to customer's requirements. Audio integrating system controls audio services from com, nav and interphone systems

Optional equipment includes Bendix/King CRT displays (electronic ADI and HSI, standard on PC-9/A), J E T HUDs, encoding altimeter and ELT

EQUIPMENT: Retractable 250 W landing/taxying light in each main landing gear leg bay

DIMENSIONS, EXTERNAL:

Wing span	10.19 m (33 ft 5¼ in)
Wing chord: mean aerodynamic	1.65 m (5 ft 5 in)
mean geometric	1 61 m (5 ft 3½ in)
Wing aspect ratio	6 29
Length overall	10.175 m (33 ft 4¼ in)
Height overall	3 26 m (10 ft 8¼ in)
Wheel track	2 54 m (8 ft 4 in)
Propeller diameter	2 44 m (8 ft 0 in)

AREAS:

Wings, gross	16 29 m² (175.3 sq ft)
Ailerons (total)	1 57 m² (16 90 sq ft)
Trailing-edge flaps (total)	1.77 m² (19 05 sq ft)
Airbrake	0 30 m² (3 23 sq ft)
Fin	0 86 m² (9 26 sq ft)
Rudder, incl tab	0 90 m² (9 69 sq ft)
Tailplane	1 80 m² (19 38 sq ft)
Elevator, incl tab	1 60 m² (17 22 sq ft)

WEIGHTS AND LOADINGS (A: Aerobatic, U: Utility):

Basic weight empty	1,685 kg (3,715 lb)
Max T-O weight: A	2,250 kg (4,960 lb)
U	3,200 kg (7,055 lb)
Max ramp weight: A	2,260 kg (4,982 lb)
U	3,210 kg (7,077 lb)
Max landing weight: A	2,250 kg (4,960 lb)
U	3 100 kg (6,834 lb)
Max zero-fuel weight: A	1,900 kg (4,188 lb)
Max wing loading: A	138.1 kg/m² (28 3 lb/sq ft)
U	196.4 kg/m² (40 2 lb/sq ft)
Max power loading: A	3.18 kg/kW (5.22 lb/shp)
U	4 52 kg/kW (7.42 lb/shp)

PERFORMANCE (at appropriate max T-O weight, ISA, propeller speed 2,000 rpm):

Max permissible diving speed (V_D): A, U
Mach 0 73 (360 kts, 667 km/h, 414 mph EAS)

Max operating speed: A, U
Mach 0 68 (320 kts, 593 km/h, 368 mph EAS)

Max level speed:

A at S/L 270 kts (500 km/h, 311 mph)

A at 6,100 m (20 000 ft)
300 kts (556 km/h, 345 mph)

Max manoeuvring speed:

A	210 kts (389 km/h, 242 mph) EAS
U	200 kts (370 km/h, 230 mph) EAS

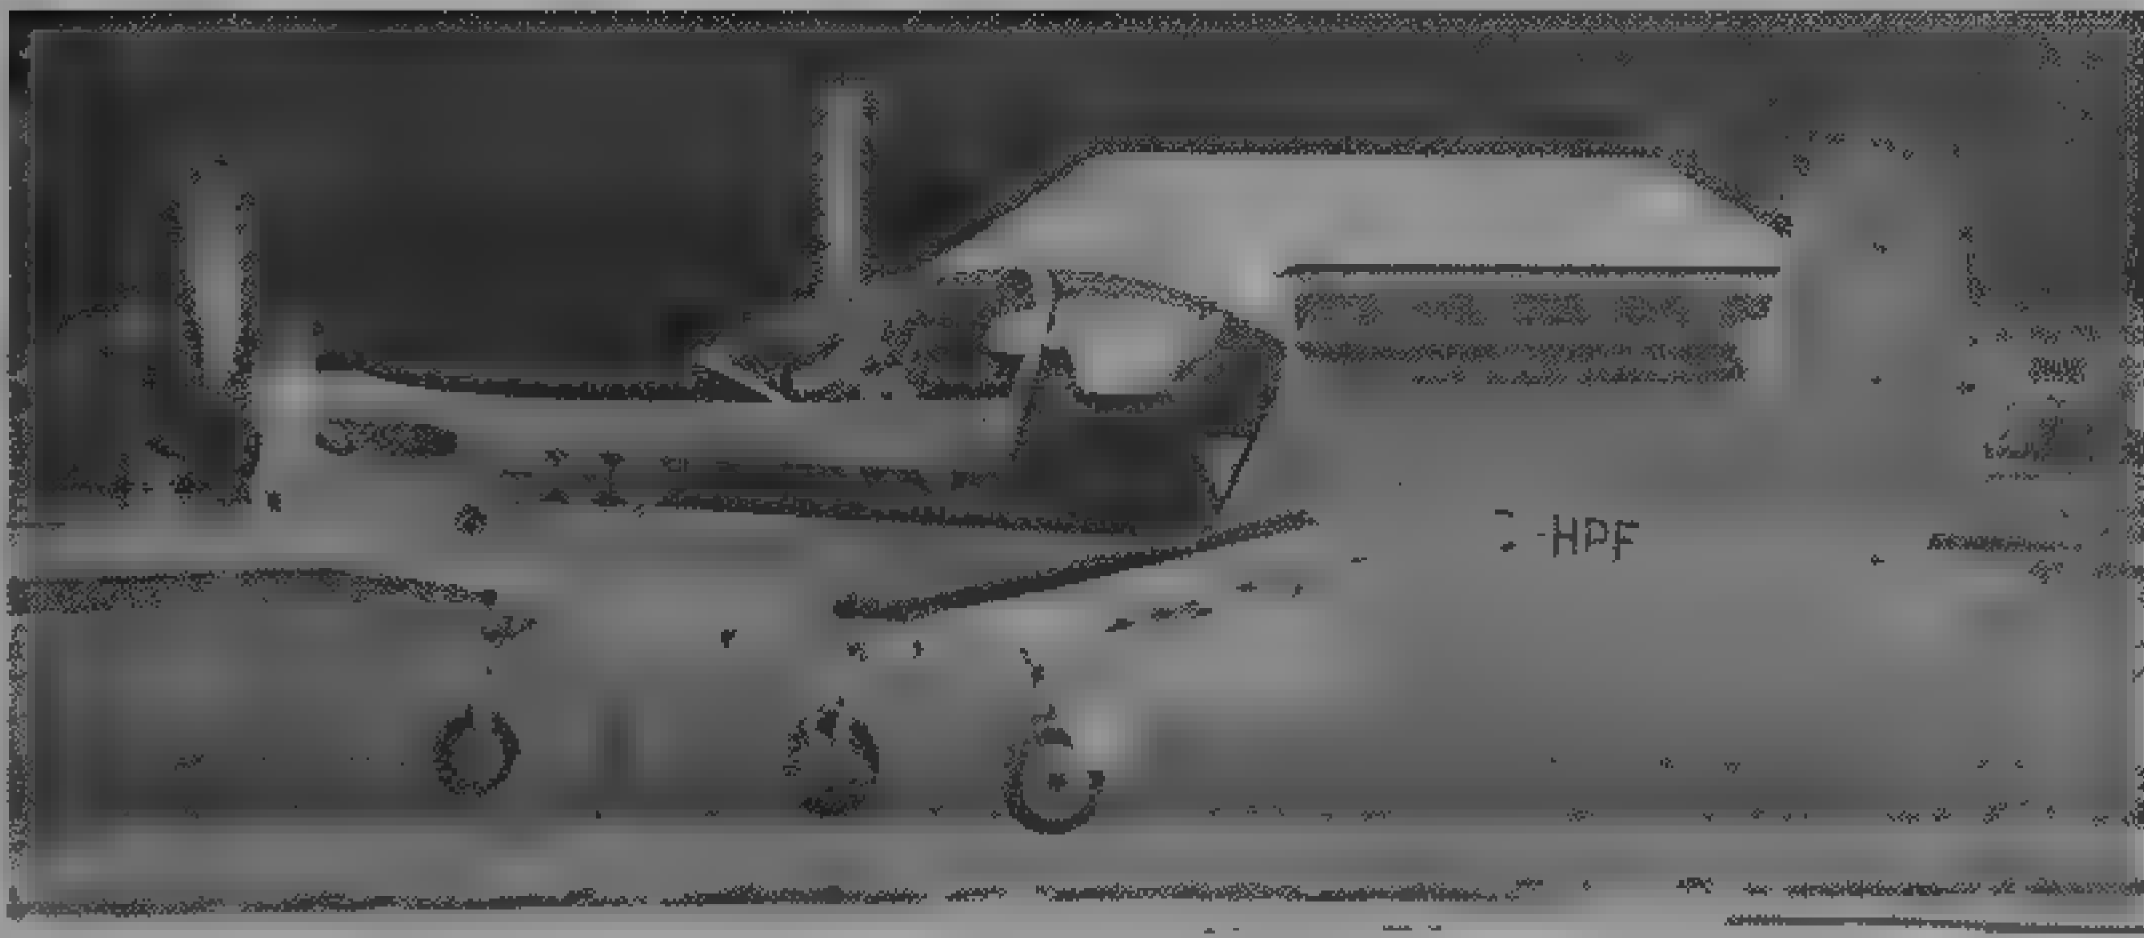
Max speed with flaps and/or landing gear down:

A and U 150 kts (278 km/h, 172 mph) EAS

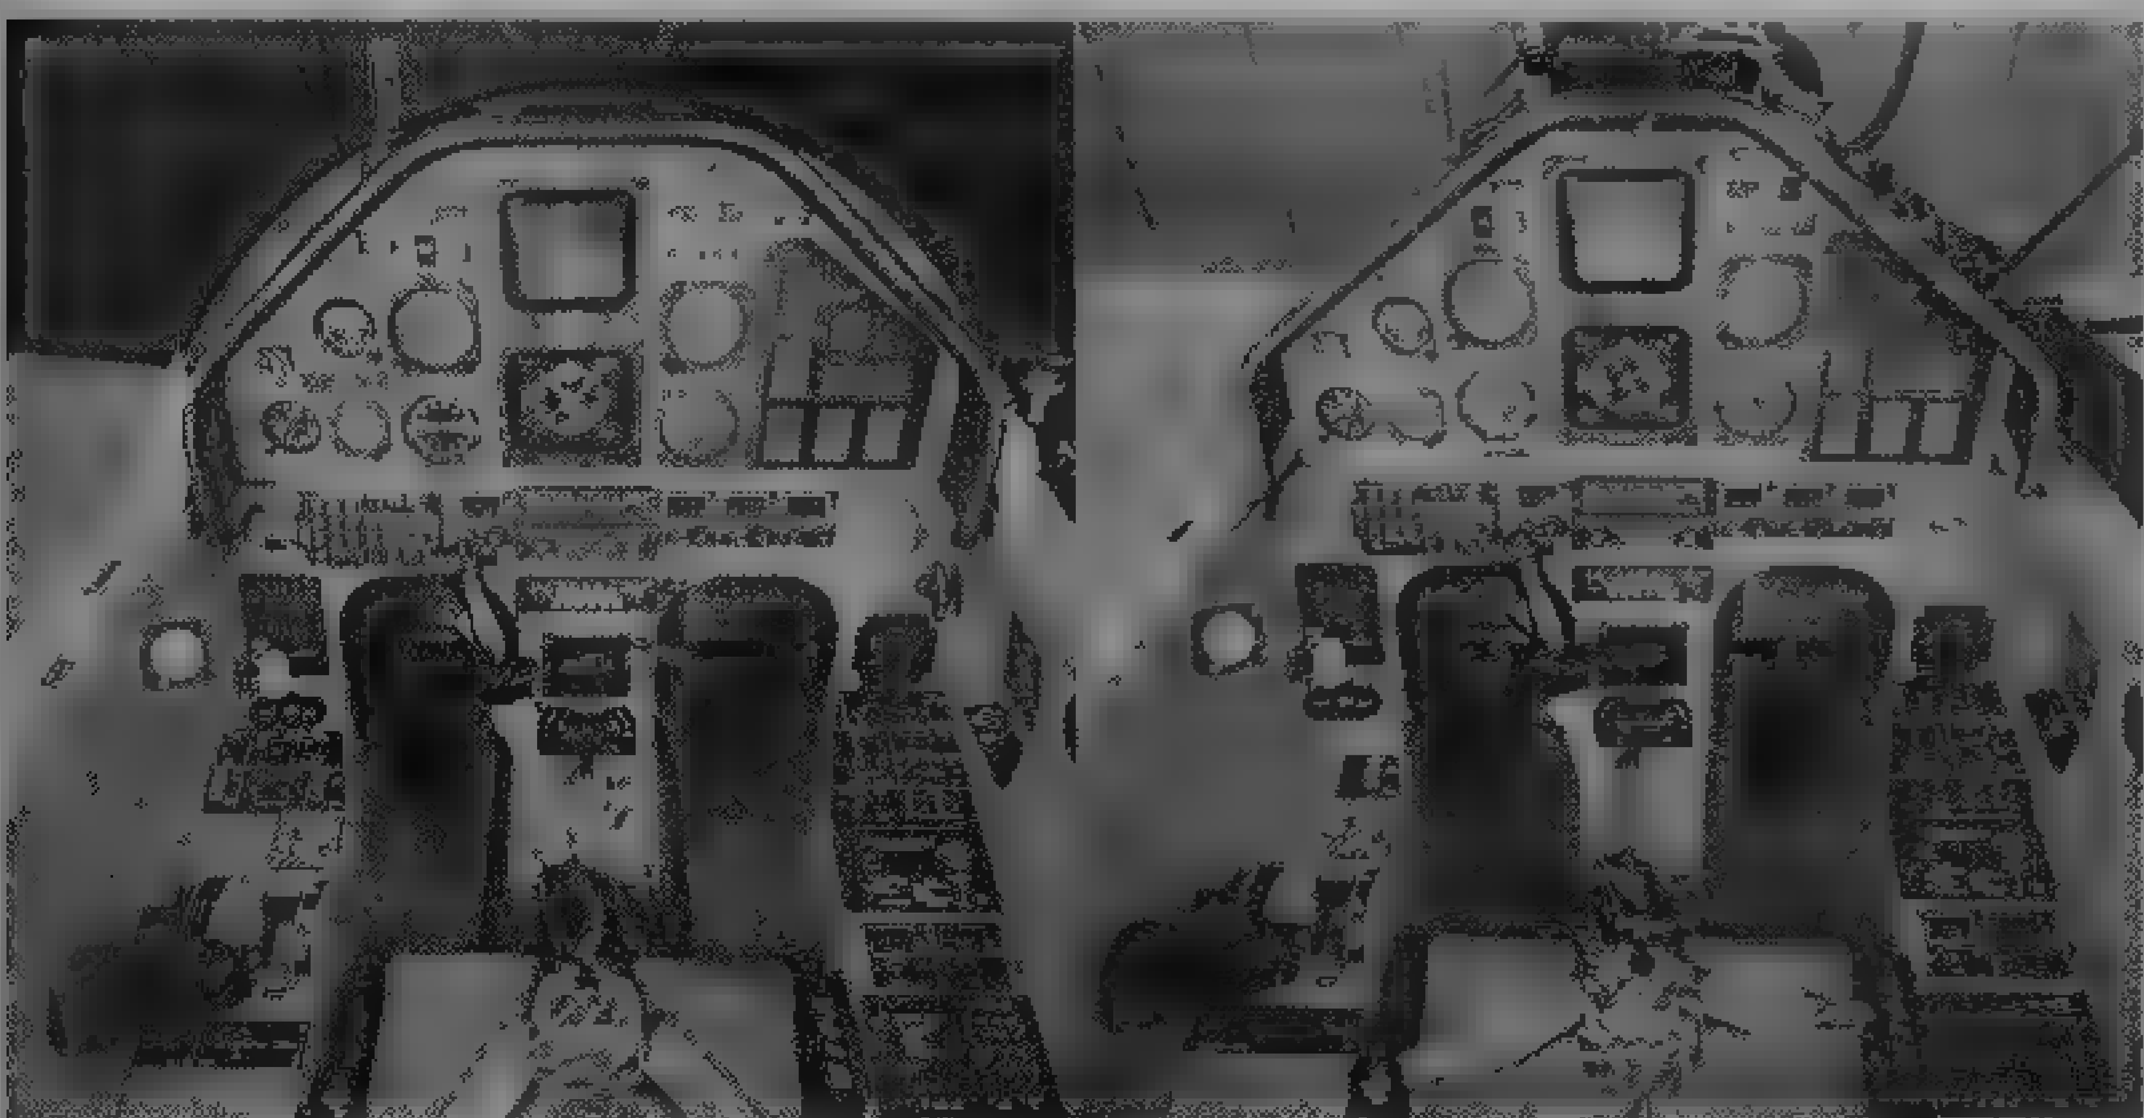
Stalling speed, engine idling:

A, flaps and landing gear up
79 kts (147 km/h, 91 mph) EAS

U, flaps and landing gear up
93 kts (172 km/h, 107 mph) EAS



Pilatus PC-9 (one Pratt & Whitney Canada PT6A-62 turboprop) *(Paul Jackson)* 1995



Front (left) and rear cockpits of the PC-9, showing EFIS and LCD engine displays 1993

A, flaps and landing gear down
70 kts (130 km/h, 81 mph) EAS
U, flaps and landing gear down
86 kts (159 km/h 99 mph) EAS
Max rate of climb at S/L: A 1,247 m (4,090 ft)/min
Time to 4,575 m (15,000 ft): A 4 min 30 s
Max operating altitude 7,620 m (25,000 ft)
Service ceiling 11,580 m (38,000 ft)
T-O run at S/L: A 227 m (745 ft)
T-O to 15 m (50 ft) at S/L: A 375 m (1,231 ft)
Landing from 15 m (50 ft) at S/L: A 540 m (1,772 ft)
Landing run at S/L:
A (normal braking action) 417 m (1,368 ft)
Max range at cruise power at 7,620 m (25,000 ft), 5% fuel plus 20 min reserves
887 n miles (1,642 km, 1,020 miles)
Endurance (typical mission power settings)
2 sorties of 1 h duration plus 20 min reserves
g limits: A +7/-3.5
U +4.5/-2.25

UPDATED

PILATUS/RAYTHEON PC-9 Mk II

TYPE: Modified PC-9 for US JPATS competition.

PROGRAMME: Entered for US Air Force/Navy JPATS trainer programme following August 1990 agreement with Beech Aircraft Corporation (now Raytheon, which see); two PC-9s supplied by Pilatus as demonstrators, one of which (N26BA) converted as engineering testbed, making first flight with new engine and canopy September 1992; it flew more than 260 hours on engineering development. Beech also manufactured (designation PD373) two production prototypes (first flight 23 December 1992 by N8284M, second aircraft, N209BA, made first flight July 1993). Declared JPATS winner June 1995.

DESIGN FEATURES: Approximately 70 per cent redesign including strengthened fuselage, pressurised cockpits with larger and more birdstrike resistant canopy (no penetration by 2 kg; 4 lb bird at 270 kts; 500 km/h; 311 mph); more powerful engine, increased fuel capacity and single-point pressure fuelling, new digital avionics.

STRUCTURE: Generally as for standard PC-9, but modified dorsal fin; possible use of honeycomb panels in fuselage; empty weight increased by approximately 317.5 kg (700 lb).

POWER PLANT: One 1,274 kW (1,708 shp) Pratt & Whitney Canada PT6A-68 turboprop, flat rated at 895 kW (1,200 shp). Wing tank fuel capacity increased to 700 litres (185 US gallons, 154 Imp gallons). Overwing and single-point pressure refuelling.

ACCOMMODATION: Martin-Baker US Mk 16LA zero/zero ejection seats, rear seat position modified to improve instructor's view. Cockpits pressurised (maximum differential 0.24 bar; 3.5 lb/sq in). Canopy deeper, strengthened with extra frame at front, and made from more impact resistant acrylic.

AVIONICS: All-digital.

UPDATED

PILATUS PC-12

TYPE: Single-turboprop pressurised utility/business transport.

PROGRAMME: Announced at NBAA Show October 1989; first flight P 01 (HB-FOA) 31 May 1991; announced October 1991 that parent company Oerlikon Buhrle would fund remaining development cost to make PC-12 a single company programme; more than 290 hours in 295 flights by November 1992; first flight of second prototype (HB-FOB) 28 May 1993; Swiss certification to FAR Pt 23 Amendment 42 (covering FAR Pt 135 commercial and Pt 91 general operations) received 30 March 1994, FAA type approval 15 July 1994.

CURRENT VERSIONS: **Standard**: Nine-passenger combi.
Detailed description applies to standard PC-12 except where indicated.
Executive: Six-passenger combi.
PC-12F: Planned freighter version.
Military: Planned future version.

CUSTOMERS: Total of 33 firm orders and 12 options by 1 December 1994. Nine aircraft (including prototypes) built by 1 January 1995, further 24 planned during 1995. Customer deliveries began September 1994 (N312 to USA); six delivered by 31 December 1994 (USA five, Japan one). Subsequent deliveries include two to Royal Flying Doctor Service in South Australia.

COSTS: Basic price $1.95 million (1994).

DESIGN FEATURES: Claimed 100 knots (185 km/h, 115 mph) faster than Cessna Caravan I and longer range than Raytheon Super King Air B200; can fly three 200 n mile sectors in six hour flight; to be approved for single/two-pilot VFR/IFR operation into known icing.

Wing sections (modified NASA GA(W)-1 series), LS(1)-0417-MOD at root and LS(1)-0313 at tip, help to reduce tailplane loads; latter's T mounting reduces trim changes with power and protects against lorry strikes; CG range 25 to 46 per cent of MAC. Modifications following early flight trials include introduction of winglets, increased wing span, paired elevators instead of single surface, sweptback tailplane tips, addition of tailplane/fin bullet fairing, and enlarged dorsal fin and ventral strakes.

Pilatus PC-9 in target towing configuration

1995

FLYING CONTROLS: Mechanical, by push/pull rods and cables, servo tab in each aileron, electrically actuated Flettner tab in rudder, short span mass balanced ailerons, electrically actuated Fowler flaps cover 67 per cent of wing trailing-edge; electrically actuated (dual redundant) variable incidence tailplane.

STRUCTURE: All-metal basic structure; composites for ventral strakes and dorsal fin (Kevlar/honeycomb sandwich), wingtips (glassfibre), fairings, engine cowling (glassfibre/honeycomb sandwich) and interior trim; titanium firewall; two-spar wing with integral fuel tankage; airframe to be proved for 20,000 hour life.

Swiss Federal Aircraft Factory makes rudder, tailplane and elevators. Second production location being sought, probably in USA.

LANDING GEAR: Nardi hydraulically retractable tricycle type, with single wheel on each unit, nosewheel steerable ±60°. Suitable for operation from grass strips. Goodrich wheels and tyres on all units: size 8.50-10, pressure 3.79 bars (55 lb/sq in) on main gear; size 17.5 × 6.25-6, pressure 4.14 bars (60 lb/sq in) on nose unit. Propeller ground clearance maintained with nose leg compressed and nosewheel tyre flat. Main gear retracts inward into wings, nose gear rearward under flight deck. Minimum ground turning radius about nosewheel 4.12 m (13 ft 6¼ in).

POWER PLANT: One 1,197 kW (1,605 shp) Pratt & Whitney Canada PT6A-67B turboprop, flat rated to 895 kW (1,200 shp) for T-O and 746 kW (1,000 shp) for climb and cruise. Hartzell HC-E4A-3D/E10477K constant-speed, fully feathering reversible-pitch four-blade aluminium propeller, turning at 1,700 rpm. Two integral fuel tanks in wings, total capacity 1,540 litres (407 US gallons, 339 Imp gallons), of which 1,522 litres (402 US gallons, 335 Imp gallons) are usable. Gravity fuelling point in top of each wing. Oil capacity 11 litres (2.9 US gallons, 2.4 Imp gallons).

ACCOMMODATION: Two-seat flight deck, approved for single pilot, but dual controls and second flight instrument panel optional. Limit of nine passengers under FAR Pt 23, or business layout for six, both with toilet. Downward opening airstair crew/passenger door at front, upward opening cargo door at rear, both on port side; Type III emergency exit above wing on starboard side.

SYSTEMS: Westland ECS, maximum pressure differential 0.4 bar (5.8 lb/sq in). Vickers Systems (Germany) hydraulic system, pressure 207 bars (3,000 lb/sq in), for landing gear actuation. Lucas electrical power system (28 V DC) supplied by two engine-driven starter/generators (300 A main and 100 A standby) and 24 V 40 Ah Ni/Cd battery, with two 150 VA static inverters for 115/26 V AC power at 400 Hz. Goodrich pneumatic boot de-icing of wing and tailplane leading-edges; Goodrich electric de-icing of propeller blades; electric heating for windscreen, bleed air de-icing of engine air intake. Oxygen system for crew and passengers.

AVIONICS: *Comms*: Bendix/King dual KX 155 VHF transceivers, KMA 24H audio control panel and intercom and KT 71 transponder, and Narco ELT-910 emergency locator transmitter, standard. Bendix/King HF radio optional.

Radar: Bendix/King RDS 82CP weather radar optional.

Flight: Bendix/King KFC 325 AFCS, KN 63 DME, KR

SWISS FEDERAL AIRCRAFT FACTORY (F+W)

EIDGENÖSSISCHES FLUGZEUGWERK—FABRIQUE FÉDÉRALE D'AVIONS—FABBRICA FEDERALE DI AEROPLANI

CH-6032 Emmen
Telephone: 41 (41) 59 41 11
Fax: 41 (41) 55 25 88
Telex: 868 505 FWE CH
MANAGING DIRECTOR: Hansjurg Kobelt

Swiss government official aircraft and missile research, development, production, maintenance and modification establishment. Emmen factory has 140,000 m² (1,506,950 sq ft) floor space, 1994-95 workforce about 650

R&D activities include aerodynamics and flight mechanics department, with four wind tunnels for speeds up to Mach 4 to 5 and test cells for piston and jet engines with and without afterburners, all with digital data acquisition and processing, wind tunnel work done for customers worldwide, including subsonic testing for spacecraft, work for surface transport designers and building industry. Structural and systems engineering department deals with aircraft, helicopters and space hardware, with specialities in fatigue analysis and testing of entire aircraft structures. Electronics and missile systems department deals with all system aspects of aircraft and helicopter avionics and missiles. Fourth R&D department is for prototype fabrication, flight test, instrumentation and system environmental testing

Production department can handle mechanical sheet metal and composites and electronic, electrical, electromechanical and electro-optical subassemblies. Recently completed programmes include Swiss Air Force Mirage III improvement, assembly of 19 BAe Hawk Mk 66s and integration of 12 Super Pumas for Swiss Air Force. Current work includes production of slats for McDonnell Douglas MD-80 series and wingtips and fences for Airbus A320, development, manufacture and delivery of Rafale drop tanks to Dassault Aviation, maintenance of Boeing 737s and Super Pumas. F+W will assemble 32 of the 34 single- and two-seat F-18 Hornets being acquired by the Swiss Air Force (final delivery due 1999), and will establish engineering support and develop and manufacture low-drag pylons for these aircraft. F+W is sole source manufacturer of Dragon anti-tank missile, TOW missile programme begun 1986; Stinger missile programme begun 1989, co-fabrication with Contraves of all payload fairings for Ariane IV and V space launchers, development and production of TVD-ergometer spaceborne astronaut trainer

Proprietary products include acoustic systems for failure and flight envelope warning, all-electronic linear AoA and g indicators, scoring indicators for air-to-air and air-to-ground shooting with microcomputer-based ground station, multi-component strain gauge balances for forces from few hundred grammes to several tonnes, helicopter remote cargo hook with prerotation, automatic self-locking latch system and long-line ASA, and a modular helicopter container system. F+W took part in KZD 95 target drone development, subsequently developed and delivered Ranger UAVs with hydraulic launcher and ground support (see *Jane's Unmanned Aerial Vehicles and Targets*)

AIDC

AERO INDUSTRY DEVELOPMENT CENTER

PO Box 90008-10-2, Taichung 40722
Telephone: 886 (4) 256 2379
Fax: 886 (4) 256 2282
OTHER WORKS: Kangshan
DIRECTOR GENERAL: Gen Wen-Li Lin
VICE-DIRECTOR GENERAL: Dr Shih-sen Wang

Established 1969 to succeed Bureau of Aircraft Industry (BAI), formed 1946, which moved to Taiwan in 1948, now subsidiary of government Chung Shan Institute of Science and Technology (CSIST). Occupies 120 ha (296.5 acre) site, current workforce over 6,000 in 1995

Produced 118 Bell UH-1H (Model 205) helicopters under licence 1969-76 for Chinese Nationalist Army, built PL-1A prototype (based on Pazmany PL-1) and 55 PL-1B Chien Shou primary trainers for Republic of China Air Force between 1968 and 1974 (see 1975-76 *Jane's*), built 248 Northrop F-5E Tiger IIs and 36 two-seat F-5Fs under licence between 1974 and 1986 (see 1986-87 edition). Designed and produced T-CH-1 Chung Hsing turboprop basic trainer (see 1981-82 *Jane's*); developed and produced AT-3 Tzu-Chung twin-turbofan advanced trainer (1994-95 *Jane's*); now producing IDF Ching-Kuo fighter

Ministry of National Defence announced in 1994 intention to restructure AIDC into a privatised corporation, new business development unit set up by early 1994, 3½ year privatisation programme approved by Taiwan government 16 May 1995. New company to be named Han Hsiang Aerospace Industry Company

UPDATED

AIDC CHING-KUO

TYPE: Single-seat air superiority fighter

PROGRAMME: IDF (Indigenous Defensive Fighter) programme initiated May 1982 after US refusal to allow purchase of Northrop F-20 Tigershark or GD F-16; US development assistance received for airframe (General Dynamics), engine (Garrett), radar (Westinghouse) and various subsystems; design frozen 1985, named after former Taiwan president in 1988. Four flying prototypes built (three single-seat and one two-seat), with first flights 28 May 1989 (77-8001), 27 September 1989 (78-8002), 10 January 1990 (78-8003) and 10 July 1990 (two-seater, 79-8004), of which '002 lost 12 July 1991 following vibration during transonic acceleration, modified intakes on '003, total prototype flying hours 1,400 by 1 January 1995

Preproduction batch of 10 started October 1990, all of these handed over to RoCAF by 19 November 1993, Sky Sword I missile launch demonstrated late 1992; 120 production aircraft authorised, first production aircraft delivered to RoCAF January 1994, average production rate of two per month in 1994-95

CUSTOMERS: Original Republic of China Air Force requirement for 250 reduced in 1993 to 130, including 28 two-seaters, to be delivered by end of 1998 to replace six squadrons of F/TF-104Gs, IOC 1995. Total of 34 (10 preproduction, 16 single- and eight two-seat production)

Line-up of Ching-Kuos, preproduction aircraft nearest

1995

IDFs delivered by 1 January 1995, replacing F-104Gs with three squadrons of RoCAF 3rd Tactical Fighter Wing at Ching Chuan Kang AB: No 7 (instructor training, evaluation and tactics), No.8 (conversion completed 28 December 1994, became operational 1 January 1995 with 22 aircraft) and No.28 (converting 1994-95).

COSTS: Reported programme cost of $6 billion (1993) for 130 aircraft, flyaway bare aircraft $23 million.

DESIGN FEATURES: Collective project name An Hsiang (Safe Flight), individual programme names for airframe (Ying Yang: Soaring Eagle), engine (Yun Han: Cloud Man), avionics (Tien Lei: Sky Thunder) and main missile armament (Tien Chien: Sky Sword).

Slightly swept blended wing/body with large leading-edge strakes and tip-mounted missiles, fixed intakes; transonic area rule, 8,000 hour airframe design life.

FLYING CONTROLS: Lear Astronics digital fly-by-wire control system. Sidestick controller. Near-full-span flaperons and large all-moving tailerons controlled jointly with leading-edge flaps by fly-by-wire system, strakes designed to shed large vortices over wing at high angles of attack.

STRUCTURE: All-metal initially, but some composites since introduced (tailplane and flaperons).

LANDING GEAR: Retractable tricycle type of Menasco design, with single wheel and oleo-pneumatic shock-absorber on each unit. Nose unit retracts forward, main units inward/upward into engine air intake trunks.

POWER PLANT: Two ITEC (AlliedSignal/AIDC) TFE1042-70 (F125) turbofans initially, side by side in rear fuselage, each developing 26.80 kN (6,025 lb st) dry and 42.08 kN (9,460 lb st) with afterburning and fitted with FADEC. Elliptical air intakes, with splitter plates, mounted low on centre-fuselage beneath wingroots. Internal fuel capacity approximately 2,517 litres (665 US gallons; 554 Imp gallons).

ACCOMMODATION: Pilot only, on Martin-Baker Mk 12 zero/zero ejection seat. One-piece bubble canopy, hinged at rear and opening upward. (Canopy of preproduction aircraft and two-seaters opens sideways to port.) Cockpit(s) pressurised and air conditioned.

SYSTEMS: AiResearch ECS. Westinghouse variable speed constant-frequency electrical power generating system.

AVIONICS: *Radar:* Golden Dragon 53 (GD-53) multimode pulse Doppler radar, modified version of Lockheed Martin AN/APG-67 (V) incorporating also some elements of Westinghouse AN/APG-66, has range of approximately 81 n miles (150 km; 93 miles), capability for air and sea search, and lookdown/shootdown capability.

Flight: Honeywell H423 inertial navigation system.

Instrumentation: Bendix/King cockpit displays (two multifunction and one HUD). (No second HUD in two-seater.) Digital databus and data processor.

ARMAMENT: One 20 mm M61A Vulcan cannon in port side of fuselage. Photo-Sonics gun camera. Six attachment points for external stores: two under fuselage, one under each wing and one at each wingtip. First prototype at roll-out shown with four Sky Sword I short-range infra-red homing air-to-air missiles (two underwing and two at wingtips). Other combinations may include two medium-range Sky Sword II radar homing air-to-air missiles under fuselage in addition to four Sky Sword Is, or three Hsiung Feng II (Male Bee II) sea skimming anti-shipping missiles (under wings and fuselage) plus two wingtip Sky Sword Is. In attack role, underwing and underfuselage hardpoints could be occupied by Maverick (or similar) missiles, single or cluster bombs, or rocket pods.

DIMENSIONS, EXTERNAL:

Wing span, incl missile rails	8.53 m (28 ft 0 in)
over wingtip missiles	9.00 m (29 ft 6 in)
Length overall: excl nose probe	13.26 m (43 ft 6 in)
incl nose probe	14.48 m (47 ft 6 in)
Height overall	4.42 m (14 ft 6 in)

WEIGHTS AND LOADINGS (estimated):

Internal fuel weight	1,950 kg (4,300 lb)
Max T-O weight	9,072 kg (20,000 lb) class

PERFORMANCE (estimated):

Max level speed	approx Mach 1.7
Max rate of climb at S/L	15,240 m (50,000 ft)/min
Service ceiling	16,760 m (55,000 ft)
g limit	+6.5

AIDC Ching-Kuo fighter (two ITEC TFE1042-70 turbofans) with additional side view (lower) of two-seat version (*Jane's/James Goulding*)

1995

AIDC AT 3 TZU CHUNG

TYPE: Tandem two-seat twin-turbofan military trainer and close support aircraft.

PROGRAMME: Development contract placed July 1975; first flights of two prototypes (69-6001/0801 and 71-6002/0802) 16 September 1980 and 30 October 1981; production started March 1982, first flight of production aircraft (73-6003/0803) 6 February 1984, deliveries began March 1984, completed 1989; wingroot leading edge improvements flight tested 1992. AIDC plans further conversions to AT 3A and 3B.

CURRENT VERSIONS: **AT-3**: Standard trainer, of which 20 converted for close support role, described in 1994-95 and earlier *Jane's*.

AT 3A Lui-Meng: Single-seat ground and maritime attack version, equipped with nav/attack system avionics. Prototype (71-7002/0902, converted from second AT 3 prototype) first flown 1989.

AT-3B: Two-seat flight trainer and close air support version, with same nav/attack system as AT-3A. Prototype only (converted from standard AT 3, 75-6025) and first flown 1989.

CUSTOMERS: RoCAF (61 AT-3), total 63 built, including prototypes.

TAC

TAIWAN AEROSPACE CORPORATION

Room 2901, 333 Keelung Road, Sector 1, Taipei
Telephone: 886 (2) 345 0030
Fax: 886 (2) 757 6451
WORKS: Taichung

Established 27 September 1991 as intended foundation for civil aircraft industry, 29 per cent owned by Taiwan government; start-up capital $200 to 250 million; aim was to develop national manufacturing capability for aircraft, engines, avionics and materials by 2000.

Planned joint venture with British Aerospace to co-produce Avro RJ family in Taiwan (see 1994-95 *Jane's*) failed to materialise, but joint venture with Swearingen (see US section) as partner in SJ30 business jet announced late 1994. Also in late 1994, TAC acquired Taiwan-based Air Asia overhaul and maintenance company, which it plans to modernise and expand.

TAI

TUSAŞ AEROSPACE INDUSTRIES INC (TUSAŞ Havacılık ve Uzay Sanayi A. Ş.)

PO Box 18, TR-06692 Kavaklıdere, Ankara
Telephone: 90 (312) 811 18 00
Fax: 90 (312) 811 14 25
MANAGING DIRECTOR: Jerry R Jones
DEPUTY MANAGING DIRECTOR: Dr Birol Altan
DIRECTOR OF PROGRAMMES: Kaya Ergenç

Formed 15 May 1984, shareholders (by percentage) are TUSAS (49), Turkish Armed Forces Foundation (1.9), Turkish Air League (0.1), Lockheed Martin of Turkey Inc (42) and General Electric (7), TAI aims to produce modern weapon systems, aircraft and helicopters, modernise aircraft, conduct R&D and develop and manufacture weapon systems.

R&D activities are carried out in collaboration with Lockheed Martin, NASA and NATO AGARD. TAI is engaged in design and development of a UAV and the HD-19, a 19-passenger or cargo aircraft; it is also participating in the Future Large Aircraft programme (see Euroflag in International section).

TAI site of 230 ha (568.3 acres) includes 130,000 m² (1,399,300 sq ft) covered floor area; 62,500 m² (672,675 sq ft) main assembly building, factory contains facilities and high technology machinery including large chemical processing and milling plant and advanced computer capability to manufacture modern aircraft, workforce 2,287 at beginning of 1995, TAI had then trained 908 Turkish employees and 64 others at its training centre.

TAI (LOCKHEED MARTIN) F-16C/D FIGHTING FALCON

TAI under contract to Lockheed Martin to co-produce 152 of 160 F-16C/D for Turkish Air Force under Peace Onyx programme and to manufacture rear and centre-fuselages and wings for US Air Force; first F-16C delivered to Turkish Air Force 30 November 1987; 157 delivered by early 1995. Agreement signed early 1992 for further 40 F 16C/Ds, 40 more ordered early 1994, 46 of 240 total (first deliveries Spring 1994) are for Egyptian Air Force.

TAI also installing Loral ALQ-178 ECM in Turkish Air Force F 16s from 1993.

UPDATED

TAI (SIKORSKY) UH-60L BLACK HAWK

TAI co-producing last 50 of 95 UH-60Ls ordered under $1.1 billion contract of 8 December 1992; production started August 1994 and to run for four years. Further orders may follow.

UPDATED

TAI HD-19

TYPE: Dual purpose passenger/cargo aircraft.

PROGRAMME: Design work finished in early 1994, funding being sought for project launch.

DESIGN FEATURES: Designed for semi prepared strips, basic variant will have capacity for 19 passengers, 30-seat version also planned.

ANTONOV

ANTONOV DESIGN BUREAU

1 Tupolev Street, 252062 Kiev
Telephone: 38 (044) 442 61 24, 442 70 98
Fax: 38 (044) 442 70 98, 449 99 96
Telex: 131309 OZON SU
GENERAL DESIGNER: Pyotr Vasilyevich Balabuyev

Antonov OKB was founded in 1946 by Oleg Konstantinovich Antonov, who died 4 April 1984, aged 78. In current production are An-32 at Kiev, An-72/74 at Kharkov, An-124 at Kiev and Ulyanovsk. Small An-2 and An-28 are built by PZL Mielec, Poland, plus small batch production of An-2 (as Y 5B) in China. More than 22,000 aircraft of over 100 types and versions of Antonov design have been built, more than 1,500 have been exported, to 42 countries.

UPDATED

ANTONOV An-2

NATO reporting name: Colt

TYPE: Single-engined general purpose biplane.

PROGRAMME: Prototype flew as SKh 1 on 31 August 1947. More than 5 000 An 2s were built at Kiev, ending in mid 1960s, 300 still serve in Russian air forces. Production transferred to PZL Mielec, Poland, from where more than 11,950 delivered from 1960 onwards, production continuing at low volume. China acquired licence and has built **Yunshuji-5 (Y-5)** versions 1957 to date. (See SAMC entry in Chinese section.)

UPDATED

ANTONOV An-12

NATO reporting name: Cub

TYPE: Four-turboprop transport and electronic warfare aircraft; described in previous editions

PROGRAMME: Prototype flew 1958, with Kuznetsov NK-4 turboprops, as rear loading development of An-10 airliner, approximately 1,350 built with AI-20K engines for military and civil use, ending in USSR in 1973. GAZ (Plant) 34 at Tashkent produced some 830 in 1961-72, GAZ 40 at Voronezh approximately 343 in 1961-73, GAZ 90 at Ulan Ude about 170 in 1968-71, plus dozen from GAZ 22 at Kazan

An-12BP ('Cub') was standard medium-range paratroop and cargo transport of Soviet Military Transport Aviation (VTA) from 1959, replacement with Il-76 began 1974, but 350 remain in air force service plus 125 'Cub-A/B/C/D' electronic warfare conversions. Shaanxi Aircraft Company, China, manufactures redesigned **Yunshuji-8 (Y-8)** transport version and derivatives (see SAC, China)

UPDATED

ANTONOV An-24

NATO reporting name: Coke

Production of An-24 twin-turboprop short-haul transport at Irkutsk (GAZ 39), Ulan Ude (GAZ 90) and Kiev (GAZ 473) ended in 1979, after about 1,465 had been delivered, 100 remain in Russian air force inventory. Versions known as **Y7-100** and **-200** (which see) continue in production at Xian in China

UPDATED

ANTONOV An-26

NATO reporting name: Curl

TYPE: Twin-turboprop pressurised short-haul transport

PROGRAMME: First exhibited 1969 Paris Air Show; approximately 1,410 built by GAZ 473 at Kiev, 1968-85, before superseded in production by An-32, derivative **Y7H-500** built by Xian Aircraft Company (see XAC, China)

CURRENT VERSIONS: **An-26** ('Curl-A') Original version, electrically/manually operated conveyor flush with cabin floor for freight handling

An-26B ('Curl-A') Improved version, announced 1981, to carry three standard freight pallets, each 2.44 m (8 ft) long, 1.46 m (4 ft 9½ in) wide and 1.60 m (5 ft 3 in) high, with total weight of 5,500 kg (12,125 lb). Improved freight handling equipment

An-26BRL: Special version for research into pack ice formations and to act as airborne guide to help ships navigate around ice floes. Additional internal fuel tanks for 11 hours endurance. Small stub wing attached to fuselage below rear window; a number of small pods under fuselage. Five An-26Bs converted to BRL

An-26L (L: laboratoriya): Special version equipped for airfield calibration missions

An-26M: Ambulance version, typically for 24 stretcher patients and medical attendant

An-26P: Firefighting version

An-26RTR ('Curl-B'): Radio technicheskaya razvyedchik signals intelligence (sigint) version, many short blade antennae mounted above and below fuselage; about 100 in service

CUSTOMERS: Military An-26s assigned to air commands in CIS regiments and squadrons; exported to at least 27 air forces. Angolan and Mozambique aircraft have bomb racks. Civil operators worldwide have 425, of which Aeroflot and its successors operate more than 200, available as military reserve

DESIGN FEATURES: Generally similar to earlier An-24RT specialised freighter, with auxiliary turbojet, more powerful turboprops and redesigned 'beaver tail' rear fuselage. Oleg Antonov's special loading ramp forms underside of rear fuselage when retracted, slides forward under rear of cabin to facilitate direct loading and when airdropping cargo. Wing anhedral 2° on outer panels, incidence 3°; sweepback on outer panels 6° 50′ at quarter-chord, 9° 41′ on leading-edge; swept vertical and horizontal tail; tailplane dihedral 9°

FLYING CONTROLS: Mechanical controls, mass balanced servo compensated ailerons with electrically operated glassfibre trim tabs, manual tab in each elevator; electrical trim/servo tab in rudder; hydraulically actuated tracked and slotted TsAGI flaps, single-slotted on centre-section, double-slotted outboard of nacelles

STRUCTURE: Conventional light alloy, two-spar wing, built in centre, two inner and two detachable outer sections, with skin attached by electric spot welding, bonded/welded semi-monocoque fuselage in front, centre and rear portions, with 'bimetal' (duralumin titanium) bottom skin for protection during operation from unpaved airfields; blister on each side of fuselage forward of rear ramp carries track to enable ramp to slide forward; large dorsal fin, ventral strake each side of ramp

LANDING GEAR: Hydraulically retractable tricycle type; twin wheels on each unit. Emergency extension by gravity. All units retract forward. Shock absorbers of oleo-nitrogen type on main units, nitrogen-pneumatic type on nose unit. Mainwheel tyres size 1,050 × 400 mm, pressure 5.9 bars (85 lb/sq in). Nosewheel tyres size 700 × 250 mm, pressure 3.9 bars (57 lb/sq in). Hydraulic disc brakes and anti-skid units on mainwheels. Nosewheels steered hydraulically ±45° while taxying and controllable ±10° during take-off and landing. Minimum ground turning radius 22.3 m (73 ft 2 in)

POWER PLANT: Two 2,074 kW (2,780 ehp) ZMKB Progress AI-24VT turboprops, four-blade constant-speed fully feathering propellers. One 7.85 kN (1,765 lb st) RU 19A-300 auxiliary turbojet in starboard nacelle for use, as required, during take-off, climb and level flight, and for self-contained starting of main engines. Two independent but interconnected fuel systems, with 5,500 kg (12,125 lb) of fuel in integral tanks in inner wings and 10 bag tanks in centre-section. Pressure refuelling socket in starboard engine nacelle. Gravity fuelling point above each tank area. Carbon dioxide inert gas system to create fireproof condition inside fuel tanks

ACCOMMODATION: Crew of five (pilot, co-pilot, radio operator, flight engineer and navigator), station at rear of cabin on starboard side for loading supervisor or load dispatcher. Optional domed observation window for navigator on port side of flight deck. Toilet on port side aft of flight deck crew door, small galley and oxygen bottle stowage on starboard side. Emergency escape hatch in door immediately aft of flight deck. Large downward-hinged rear ramp/door, hinged to an anchorage mounted on tracks running forward under blister fairings. Ramp/door slides forward under fuselage for direct loading on to cabin floor or for airdropping freight. When doing so, its rear is supported by the pivoted swinging arm on each side which raises and lowers door in alternative fixed hinge mode. Door can be locked in any intermediate position

Electrically powered mobile winch, capacity 2,000 kg (4,409 lb), hoists crates through rear entrance and runs on rail in cabin ceiling to position payload. Electrically and manually operated conveyor, capacity 4,500 kg (9,920 lb), flush with cabin floor of original An-26, facilitates loading and airdropping freight. An-26B has removable rollgangs, mechanism for moving pallets inside hold, and moorings, enabling two men to load and unload three pallets in 30 minutes. Rollgangs can be stowed against sides of cabin. Both versions accommodate motor vehicles, including GAZ-69 and UAZ-469 military vehicles, or cargo up to 1.50 m (59 in) high by 2.10 m (82.6 in) wide. Height of rear edge of cargo door surround above cabin floor is 1.50 m (4 ft 11 in). Cabin pressurised and air conditioned, optional tip-up seats along each wall for total of 38 to 40 persons. Conversion to troop transport, or to An-26M ambulance, takes 20 to 30 minutes in the field

SYSTEMS: Air conditioning hot air tapped from 10th compressor stage of each engine, with heat exchanger and turbocooler in each nacelle. Cabin pressure differential 0.29 bar (4.27 lb/sq in). Main and emergency hydraulic systems, pressure 151.7 bars (2,200 lb/sq in), for landing gear retraction, nosewheel steering, flaps, brakes, windscreen wipers, propeller feathering and operation of cargo ramp and emergency escape doors. Hand pump to operate doors only and to build up pressure in main system. Electrical system includes two 27 V DC starter/generators on engines, standby generator on auxiliary turbojet, and three storage batteries for emergency use. Two engine-driven alternators provide 115 V 400 Hz single-phase AC supply, with standby inverter. Basic source of 36 V 400 Hz three-phase AC supply is two inverters, with standby transformer. Permanent oxygen system for pilot, installed equipment for other crew members and three portable bottles for personnel in cargo hold. Bleed air thermal de-icing system for wing and tail unit leading edges. Electric windscreen de-icing. Electric de-icing system for propeller blades and hubs, hot air system for engine air intakes

AVIONICS: *Comms:* Two VHF transceivers, HF, intercom.

Radar: Weather/navigation radar

Flight: Two ADF, radio altimeter, glide path receiver,

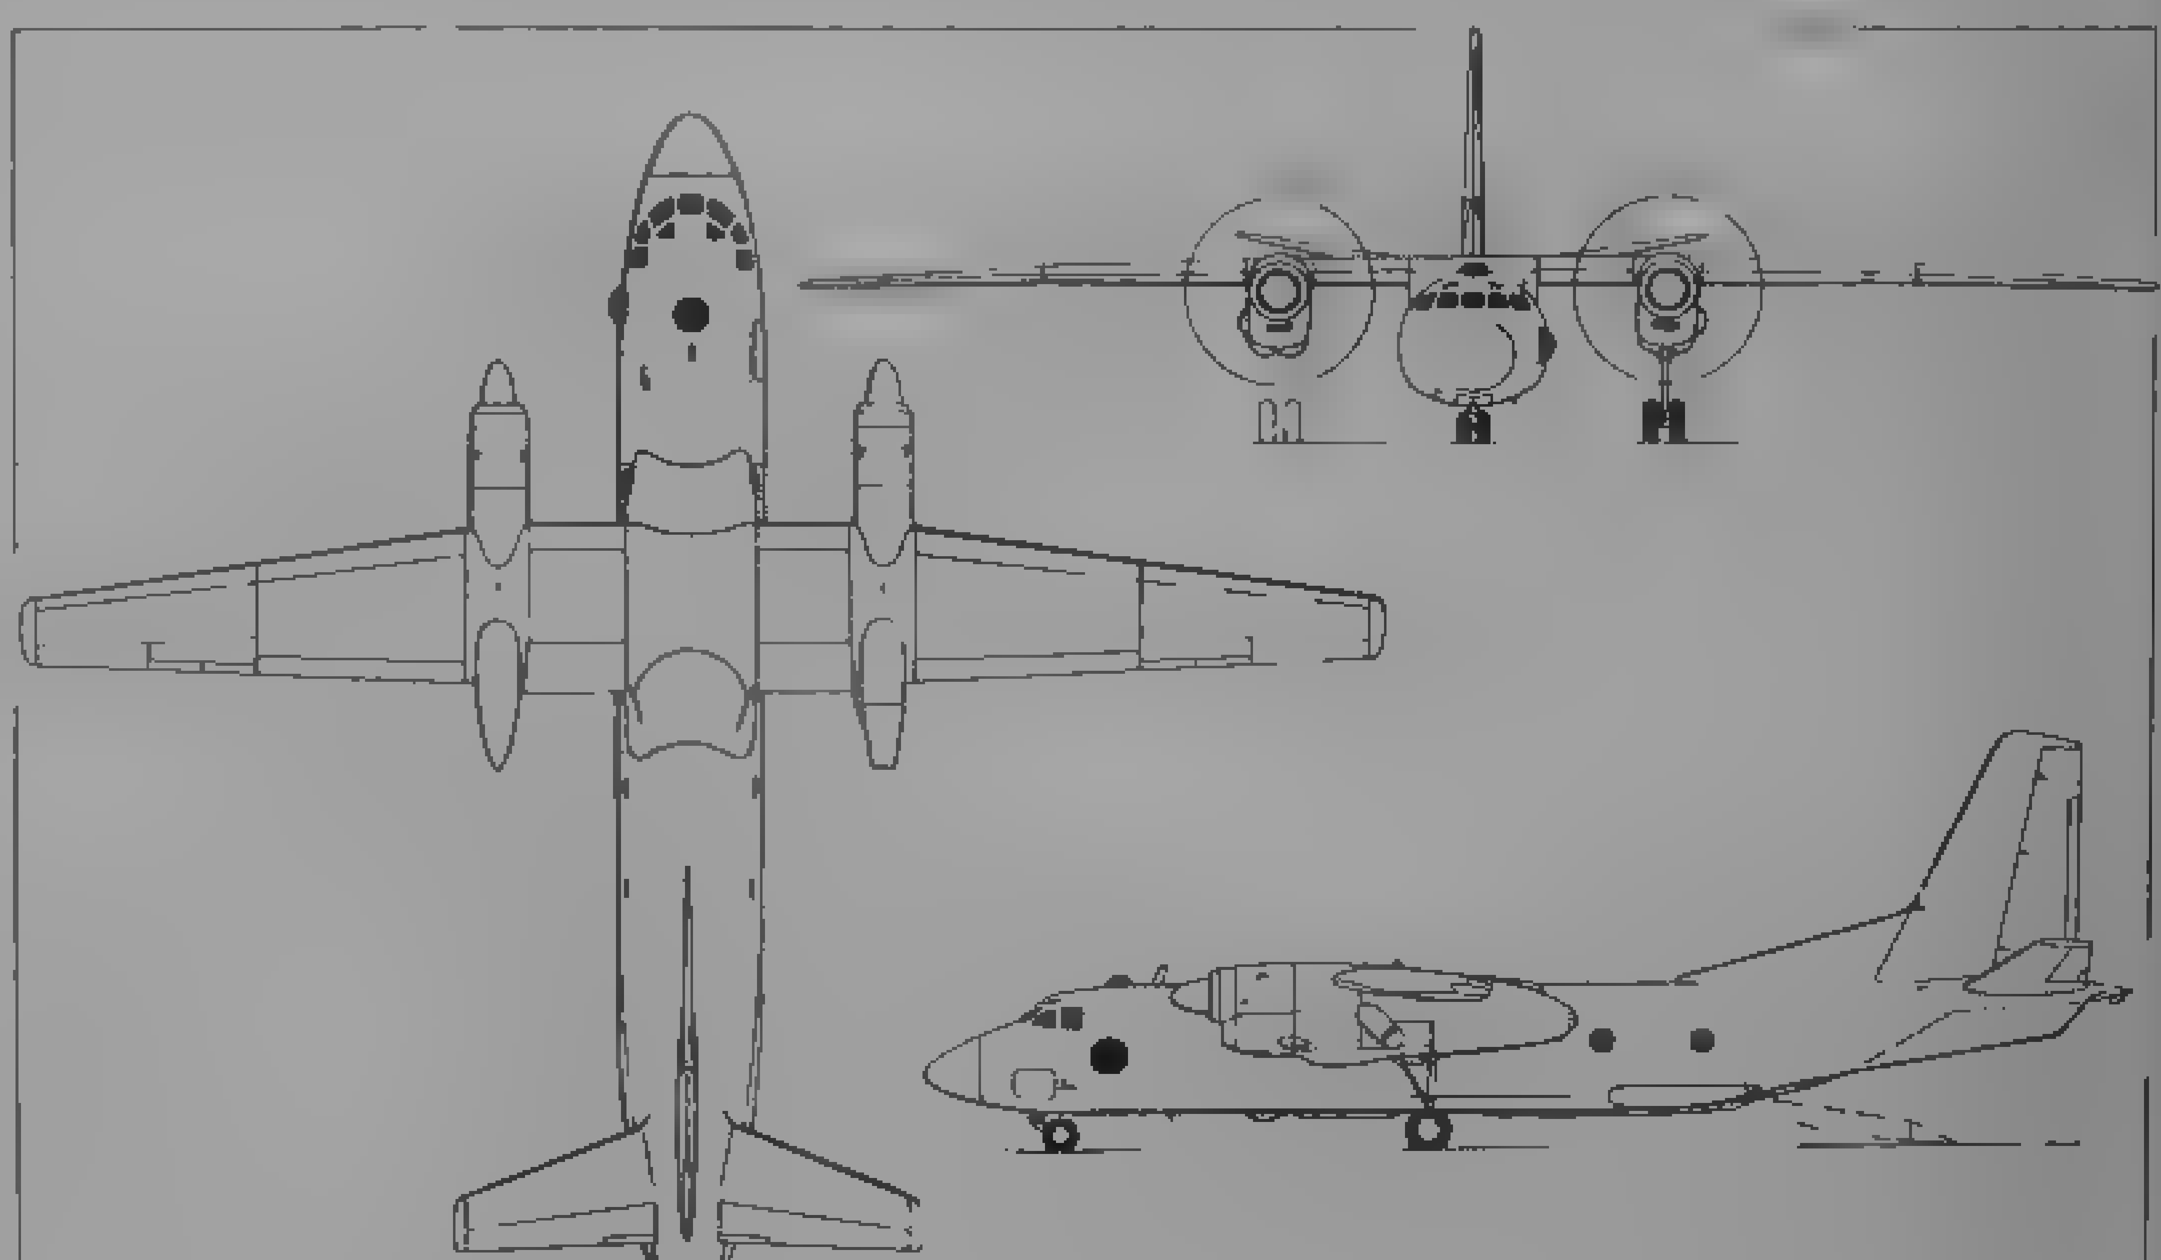
1994



Antonov An-26 twin-turboprop short-haul transport *(Jane's/Dennis Punnett)*

1976

glide slope receiver, marker beacon receiver. Optional flight director system, astrocompass and autopilot.

Instrumentation: Directional gyro and flight recorder standard.

Self-defence: Provision for chaff/flare dispensers pylon-mounted on each side of lower fuselage below wings (seen on Afghan aircraft).

EQUIPMENT: Parachute static line attachments and retraction devices, tiedowns, jack to support ramp sill, flight deck curtains, sun visors and windscreen wipers standard. Optional OPB-1R sight for pinpoint dropping of freight, medical equipment, and liquid heating system. Provision for water bombing equipment on An-26P.

ARMAMENT: Provision for bomb rack on fuselage below each wingroot trailing-edge.

DIMENSIONS, EXTERNAL:

Wing span	29.20 m (95 ft 9½ in)
Wing aspect ratio	11.7
Length overall	23.80 m (78 ft 1 in)
Height overall	8.575 m (28 ft 1 in)
Width of fuselage	2.90 m (9 ft 6 in)
Depth of fuselage	2.50 m (8 ft 2½ in)
Tailplane span	9.975 m (32 ft 8¾ in)
Wheel track (c/l shock struts)	7.90 m (25 ft 11 in)
Wheelbase	7.65 m (25 ft 1¼ in)
Propeller diameter	3.90 m (12 ft 9½ in)
Propeller ground clearance	1.23 m (4 ft 0½ in)
Crew door (stbd, front): Height	1.40 m (4 ft 7 in)
Width	0.60 m (1 ft 11½ in)
Height to sill	1.47 m (4 ft 9¾ in)
Loading hatch (rear): Length	3.15 m (10 ft 4 in)
Width at front	2.40 m (7 ft 10½ in)
Width at rear	2.00 m (6 ft 6¾ in)
Height to sill	1.47 m (4 ft 9¾ in)
Height to top edge of hatchway	3.015 m (9 ft 10¾ in)
Emergency exit (in floor at front):	
Length	1.02 m (3 ft 4¼ in)
Width	0.70 m (2 ft 3½ in)
Emergency exit (top): Diameter	0.65 m (2 ft 1½ in)
Emergency exits (one each side of hold):	
Height	0.60 m (1 ft 11¾ in)
Width	0.50 m (1 ft 7¾ in)

DIMENSIONS, INTERNAL:

Cargo hold: Length of floor	11.50 m (37 ft 8¾ in)
Width of floor	2.78 m (9 ft 1½ in)
Max height	1.91 m (6 ft 3 in)

AREAS:

Wings, gross	74.98 m² (807.1 sq ft)
Vertical tail surfaces (total, incl dorsal fin)	15.85 m² (170.61 sq ft)
Horizontal tail surfaces (total)	19.83 m² (213.45 sq ft)

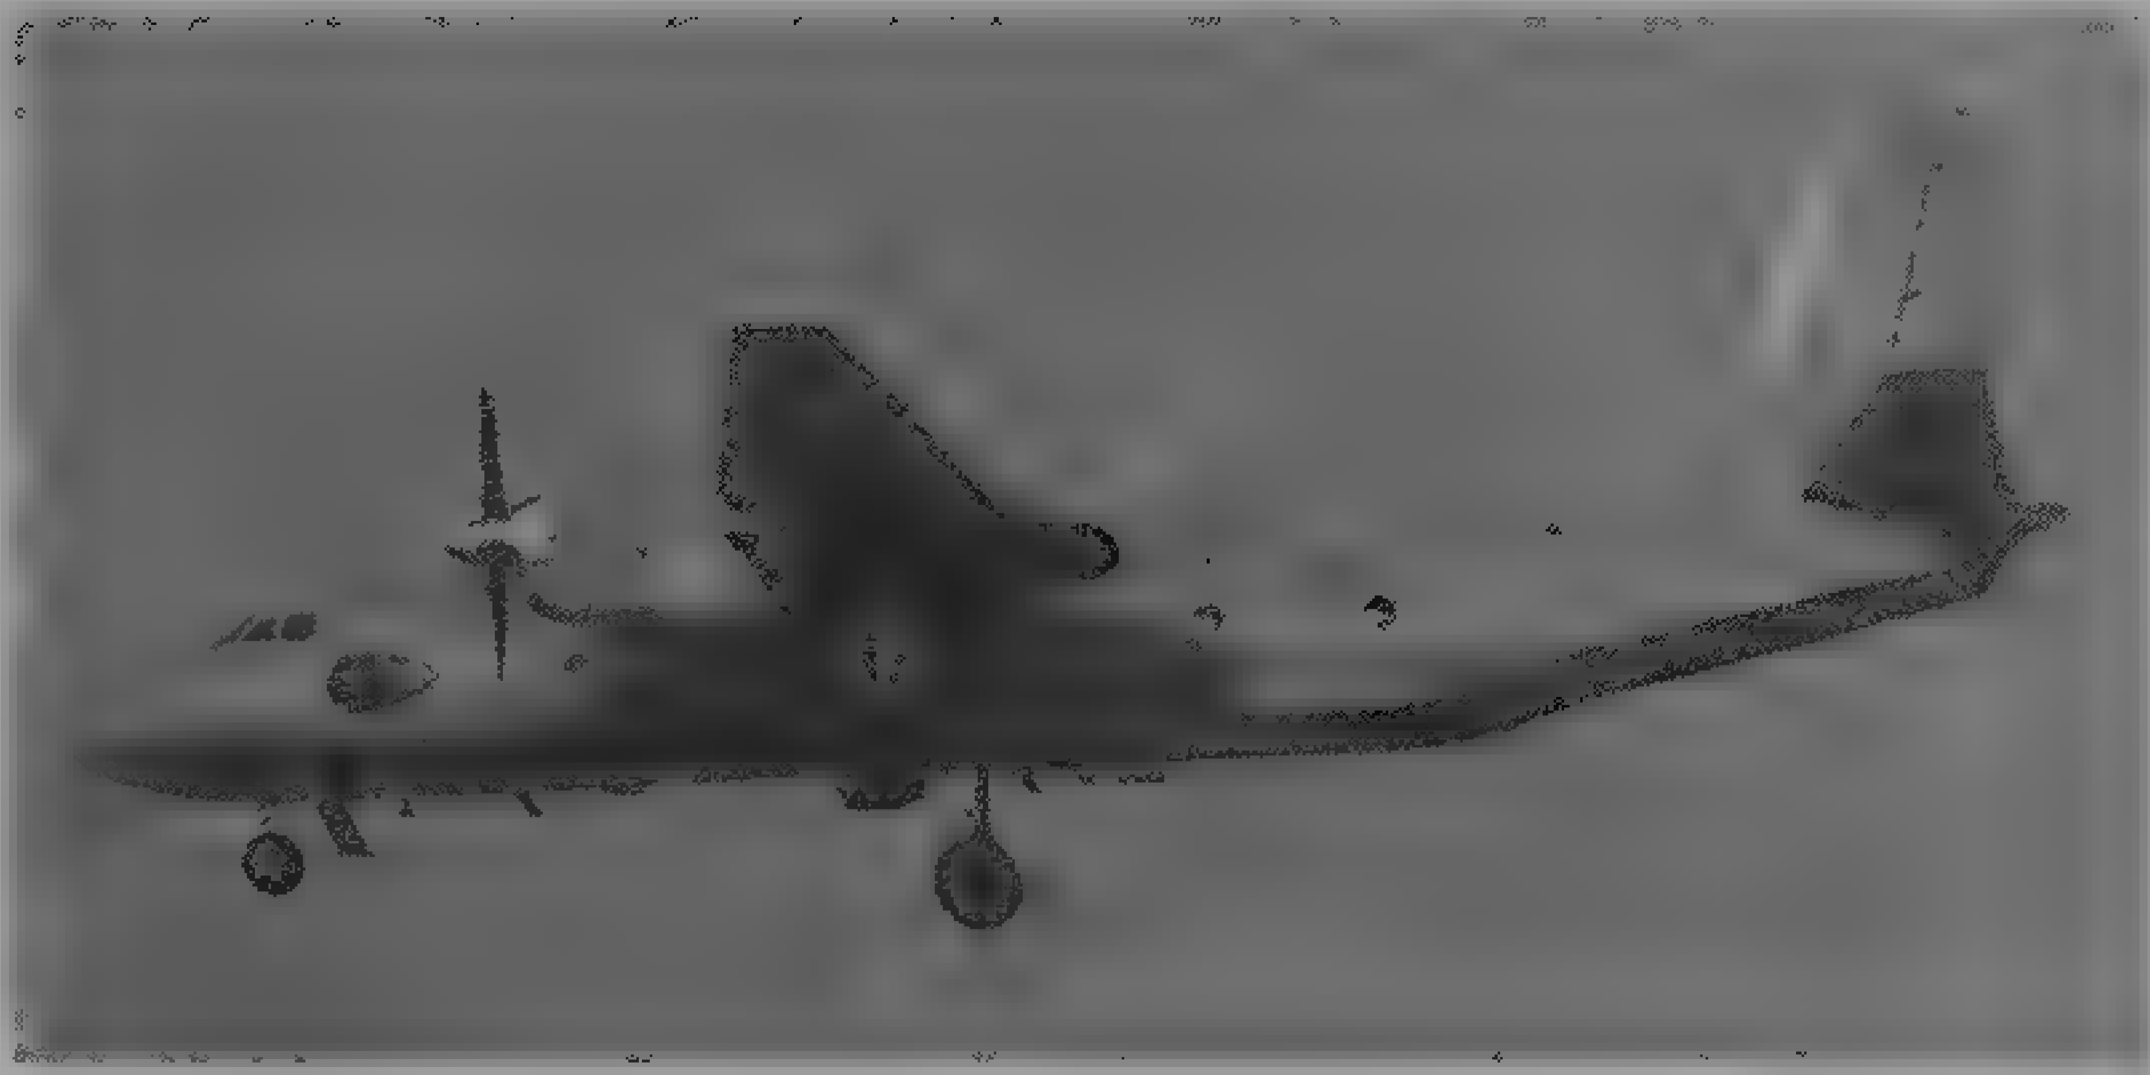
WEIGHTS AND LOADINGS:

Weight empty	14,750 kg (32,518 lb)
Normal payload	4,500 kg (9,920 lb)
Max payload	5,500 kg (12,125 lb)
Normal T-O and landing weight	23,000 kg (50,706 lb)
Max T-O and landing weight	24,000 kg (52,911 lb)
Max wing loading	320.1 kg/m² (65.6 lb/sq ft)
Max power loading	5.79 kg/kW (9.52 lb/ehp)

PERFORMANCE (at normal T-O weight):

Cruising speed at 6,000 m (19,685 ft)	235 kts (435 km/h, 270 mph)
T-O speed	116 kts (215 km/h, 134 mph)
Landing speed	102 kts (190 km/h, 118 mph)
Max rate of climb at S/L	480 m (1,575 ft)/min
Service ceiling	7,500 m (24,600 ft)
T-O run, on concrete	870 m (2,855 ft)
T-O to 15 m (50 ft)	1,240 m (4,068 ft)
Landing from 15 m (50 ft)	1,740 m (5,709 ft)
Landing run, on concrete	650 m (2,135 ft)
Range, no reserves:	
with max payload	669 n miles (1,240 km, 770 miles)
with max fuel	1,434 n miles (2,660 km, 1,652 miles)

UPDATED



An-26RTR sigint version, known to NATO as 'Curl-B' *(Jon Lake)*

1995

ANTONOV An-28

NATO reporting name: Cash

An-28 manufactured in PZL Mielec works in Poland (see Polish section).

VERIFIED

ANTONOV An-32

NATO reporting name: Cline

Indian Air Force name: Sutlej

TYPE: Twin-turboprop short/medium-range transport.

PROGRAMME: Prototype (SSSR-83966, converted An-26) first exhibited 1977 Paris Air Show, second prototype (new build) SSSR-21132; export deliveries to India began 1984. Indian contract completed prior to other deliveries; current production, 40 a year, largely for CIS armed forces, from GAZ 473 at Kiev.

CURRENT VERSIONS: **An-32**: Basic version, *as described in detail*. Specialised versions available for fisheries surveillance, agricultural and air ambulance use, last-named complete with operating theatre.

An-32B: First seen early 1993; reported to be upgraded with approximately 149 kW (200 shp) additional power from each turboprop to provide increase of 500 kg (1,100 lb) maximum payload.

An-32P (protivopozharny): Firefighting version; quickly removable tank on each side of fuselage; total water capacity 8,000 kg (17,635 lb); able to drop 30 smoke-jumpers; provision for flare packs to induce atmospheric precipitation artificially over fire; maximum T-O weight 29,000 kg (63,930 lb); cruising speed 215 knots (400 km/h, 248 mph); operating speed 124 to 130 knots (230 to 240 km/h, 143 to 149 mph); radius of action 80 n miles (150 km, 93 miles). An-32P has not been built in series.

CUSTOMERS: CIS air forces and government agencies (50 with Russian air forces, about 100 with Department of Agriculture); air forces of Afghanistan, Bangladesh, India (123 named Sutlej after a Punjabi river), Peru (24) and Sri Lanka (3). Civil operators have about 75, including Aeroflot (28), Air Ukraine (4), Azerbaijan Airlines (2), Aerolit (4), Antau (6), Aviatrans (3), Moscow Airways (2).

DESIGN FEATURES: Development of An-26, with triple-slotted trailing-edge flaps outboard of engines, automatic leading-edge slats, enlarged ventral fins and full-span slotted tailplane; improved landing gear retraction, de-icing and air conditioning, electrical system and engine starting; large increase in power compared with An-26 improves take-off performance, service ceiling and payload under hot and high conditions; overwing location of engines reduces possibility of stone or debris ingestion, but requires nacelles of considerable depth to house underwing landing gear; operation possible from unpaved strips at airfields 4,000 to 4,500 m (13,125 to 14,750 ft) above sea level in ambient temperature of ISA + 25°C; APU helps to ensure independence of ground servicing equipment, including onboard engine starting at these altitudes.

FLYING CONTROLS: As An-26 except for high-lift wings (see Design Features).

STRUCTURE: Generally as An-26.

LANDING GEAR: Hydraulically retractable tricycle type, basically as An-26. All shock absorbers of oleo-nitrogen type. Tyre sizes and pressures unchanged.

POWER PLANT: Two ZMKB Progress AI-20D Series 5 turboprops, each 3,760 kW (5,042 ehp), four-blade constant-speed reversible pitch propellers; TG-16M APU in rear of starboard landing gear fairing.

ACCOMMODATION: Crew of three (pilot, co-pilot and navigator), with provision for flight engineer. Rear-loading hatch and forward-sliding ramp/door, as An-26, plus winch and hoist, capacity 3,000 kg (6,615 lb), for freight handling. Cargo or vehicles can be airdropped by parachute, including extraction of large loads by drag parachute, with aid of removable roller conveyors and guide rails on floor of hold. Payloads include 12 freight pallets,

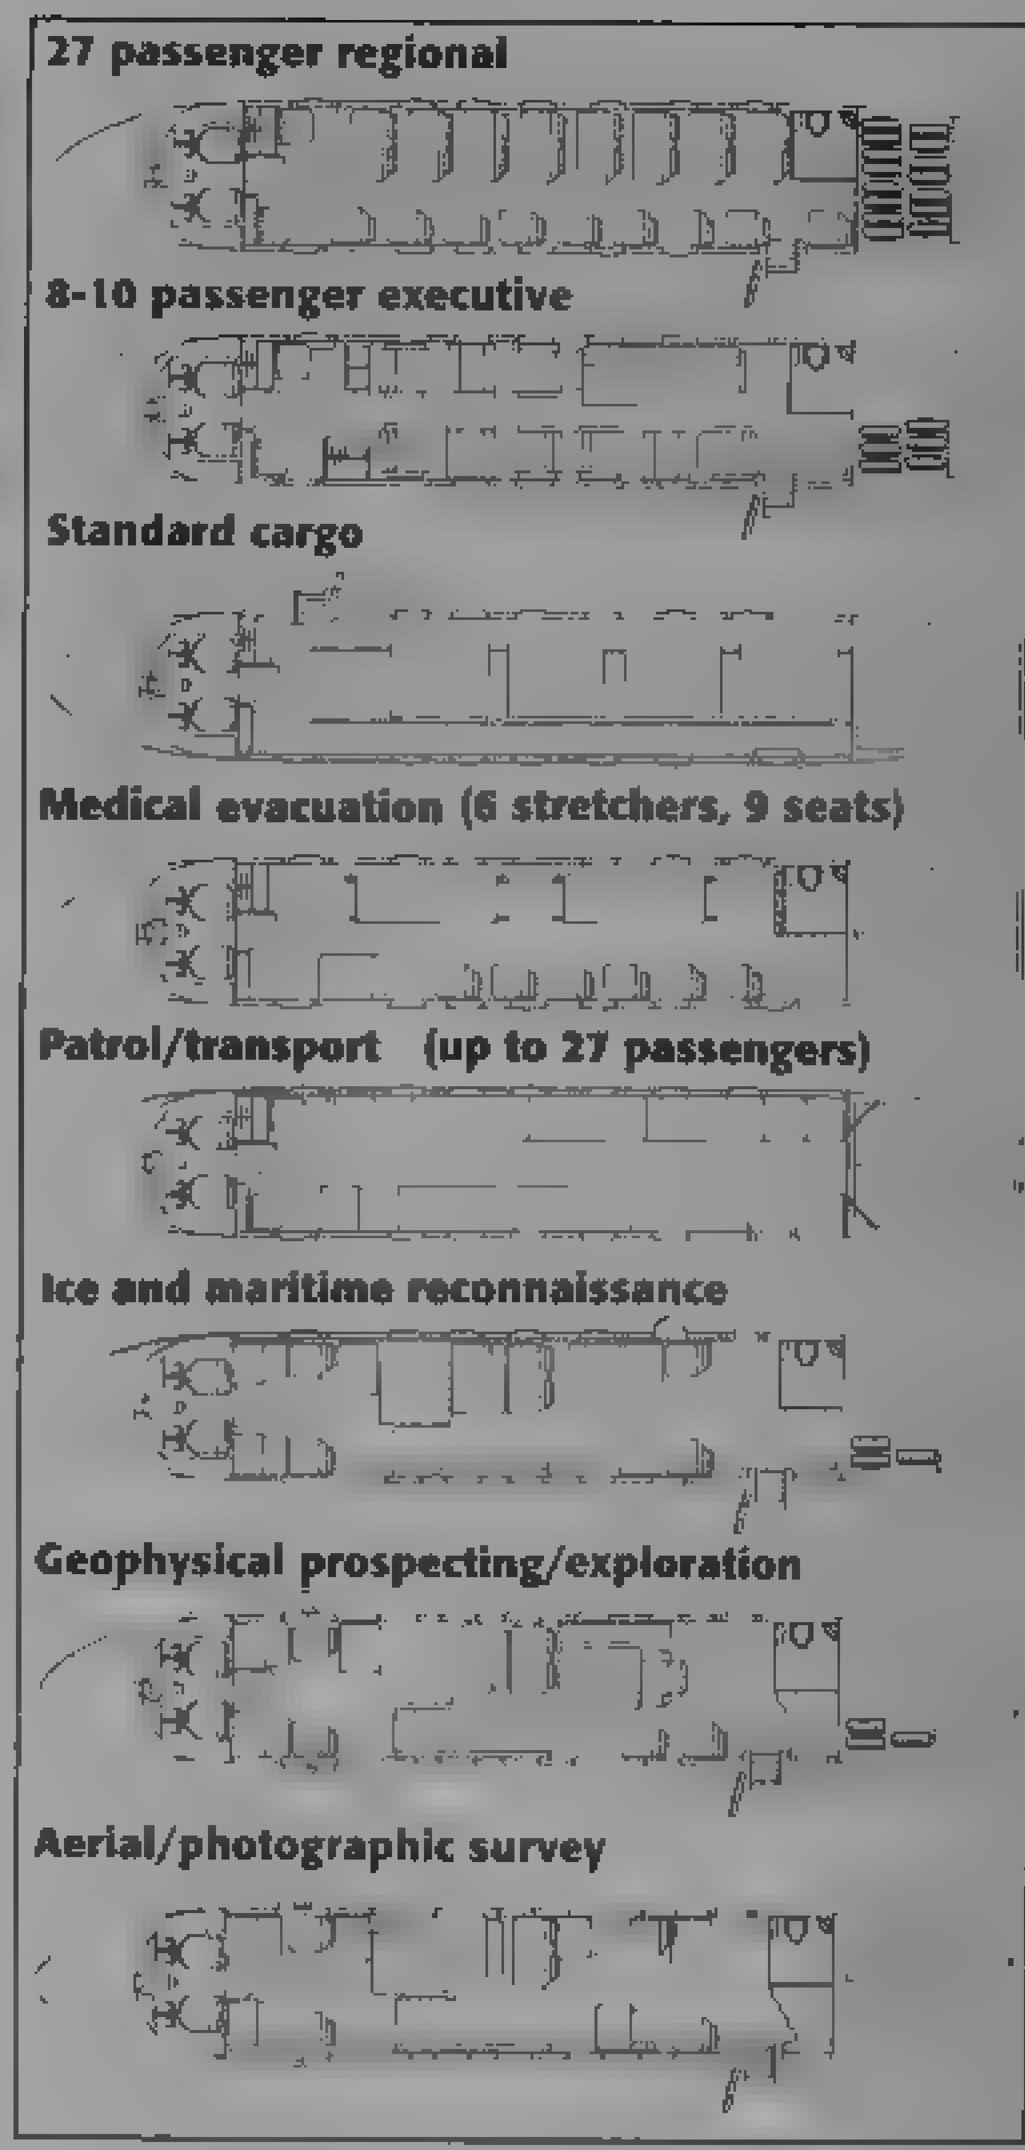
1987



Alternative cabin configurations for An-38 current and projected versions

1995

50 passengers or 42 parachutists and a jumpmaster on row of tip-up seats along each cabin wall, or 24 stretcher patients and up to three medical personnel

SYSTEMS: Accommodation fully pressurised and air conditioned. Systems basically as An-26 but generally improved

AVIONICS: Basically as An-26

EQUIPMENT: Basically as An-26

ARMAMENT: Provision for four bomb racks, two on each side of fuselage below wings (fitted to aircraft for Peru)

DIMENSIONS, EXTERNAL: As for An-26, except

Length overall	23.78 m (78 ft 0¼ in)
Height overall	8.75 m (28 ft 8 in)
Tailplane span	10.23 m (33 ft 6¾ in)
Propeller diameter	4.70 m (15 ft 5 in)
Propeller ground clearance	1.55 m (5 ft 1 in)

DIMENSIONS, INTERNAL:

Cargo hold: Length	15.68 m (51 ft 5¼ in)
Max width	2.78 m (9 ft 1½ in)
Max height	1.84 m (6 ft 0½ in)
Volume	66.0 m³ (2,330 cu ft)

AREAS:

Wings, gross	74.98 m² (807.1 sq ft)
Ailerons (total)	6.12 m² (65.88 sq ft)
Flaps (total)	15.00 m² (161.46 sq ft)
Vertical tail surfaces (total, incl dorsal fin)	17.22 m² (185.36 sq ft)
Horizontal tail surfaces (total)	20.30 m² (218.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	16,800 kg (37,038 lb)
Weight empty, equipped	17,308 kg (38,158 lb)
Max payload	6,700 kg (14,770 lb)
Max fuel	5,445 kg (12,004 lb)
Max fuel with max payload	2,267 kg (4,998 lb)
Max ramp weight	27,250 kg (60,075 lb)
Max T-O weight	27,000 kg (59,525 lb)
Max landing weight	25,000 kg (55,115 lb)
Max wing loading	360.1 kg/m² (73.75 lb/sq ft)
Max power loading	3.59 kg/kW (5.90 lb/ehp)

PERFORMANCE:

Max cruising speed	286 kts (530 km/h; 329 mph)
Econ cruising speed	254 kts (470 km/h; 292 mph)
Landing speed	100 kts (185 km/h; 115 mph)
Optimum cruising height	8,000 m (26,250 ft)
Service ceiling	9,400 m (30,840 ft)
Service ceiling, OEI	4,800 m (15,750 ft)
T-O run on concrete	760 m (2,495 ft)
T-O to 15 m (50 ft)	1,200 m (3,940 ft)
Landing run	470 m (1,542 ft)
Range: with max payload	647 n miles (1,200 km; 745 miles)
with max fuel	1,360 n miles (2,520 km; 1,565 miles)

UPDATED

ANTONOV An-38

TYPE: Twin-turboprop light multipurpose regional airliner

PROGRAMME: Details announced, and model displayed, at 1991 Paris Air Show; initial batch of six: one prototype (01001, first flight 23 June 1994, with TPE331 engines), four trials aircraft, one for static testing at Kiev; second aircraft scheduled to fly August 1995, certification to ICAO Cat. II standards expected second quarter 1996; series production of An-38 and An-38K under way by Novosibirsk Aircraft Production Association, building up to 60 to 100 aircraft per year

CURRENT VERSIONS: **An-38-100**: With AlliedSignal TPE331 engines.

An-38-200: With Omsk MKB 'Mars' TVD-20 engines

An-38K: Convertible version of An-38-100; large upward-hinging side door at rear on port side; able to carry four LD-3 or five LD-3K containers; cargo handling equipment removable for conversion to 30-passenger transport.

A version with RKBM TVD-1500 engines is projected. All versions can be equipped for aerial photography, survey, forest patrol, VIP transport, ambulance (six stretchers, nine seated, with attendant), fishery and ice patrol duties

CUSTOMERS: In mid-1995, orders for 150 from Russian airlines, including An-38-100s for Vostok Airlines; options on 200 for export

DESIGN FEATURES: Developed from PZL Mielec (Antonov) An-28 (see Polish section) to replace An-24s, Let L-410s and Yak-40s. New high-efficiency engines, lengthened passenger cabin; optional weather radar and automatic flight control system, improved sound and vibration insulation, wheel or ski landing gear; rear cargo door and cargo handling system; able to operate from unpaved runways, operating temperatures from −50 to +45°C, including 'hot and high' conditions. Service life 30,000 hours. Maintenance requirement four man-hours/flying hour.

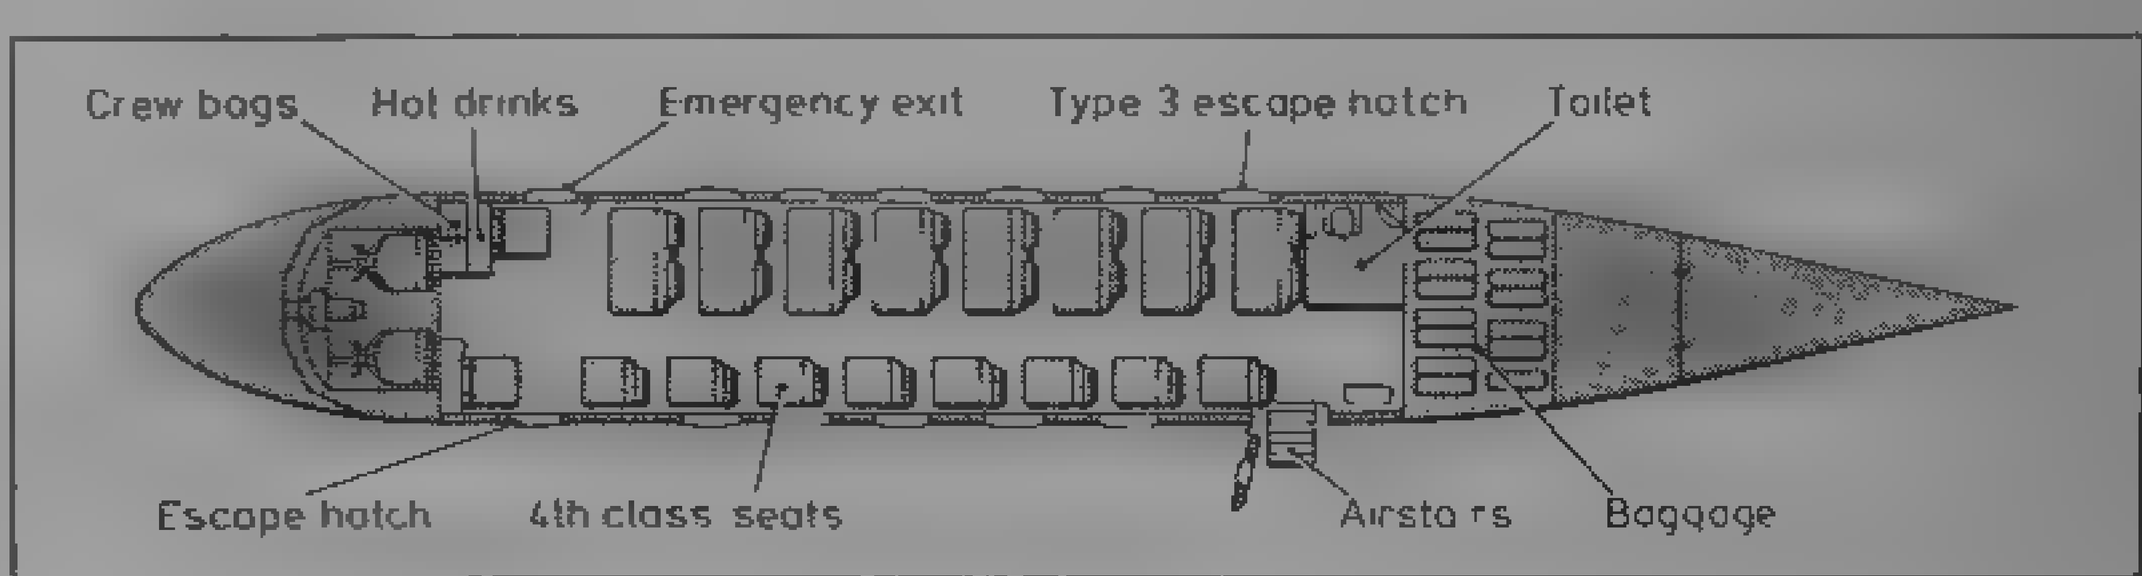
POWER PLANT: Two Omsk MKB 'Mars' TVD-20 turboprops, each 1,029 kW (1,380 shp), driving AV-36 quiet reversible-pitch propellers, or two AlliedSignal TPE331-14GR-801E turboprops, each 1,227 kW (1,645 shp), driving Hartzell HC-B5MA five-blade propellers. Lucas starter-generators. An-38K has 2,860 litres (755.5 US gallons; 629 Imp gallons) fuel

ACCOMMODATION: Two crew side by side on flight deck; passenger cabin equipped normally with 26 seats, basically three abreast; 27 seats optional; ambulance version for six stretchers, nine seated casualties and medical attendant, and executive versions with eight to 10 seats available; seats and baggage compartment can be folded quickly against cabin wall to provide clear space for 2,500 kg (5,510 lb) of freight. Cabin door with airstairs on port side, with service door opposite; emergency exit each side. Cargo door under upswept rear fuselage sides forward under cabin for direct loading/unloading of freight

AVIONICS: Russian, AlliedSignal and United Instruments or other avionics optional for VFR or IFR flying, including equipment for ICAO Cat. I approach and satellite navigation

DIMENSIONS, EXTERNAL:

Wing span	22.06 m (72 ft 4½ in)
Length overall	15.54 m (51 ft 0 in)



Antonov An-38 cabin arranged for 24 passengers and an attendant *(Jane's/Mike Keep)*

1994

Height overall 4.30 m (14 ft 1¼ in)
Span over tailfins 5.14 m (16 ft 10½ in)
Wheel track 3.43 m (11 ft 3 in)
Wheelbase 6.27 m (20 ft 7 in)
Propeller diameter 2.85 m (9 ft 4 in)
Cargo door: An-38-100
  Length 2.20 m (7 ft 2½ in)
  Width 1.40 m (4 ft 7 in)

DIMENSIONS, INTERNAL (An-38K)
Cargo hold: Length 8.80 m (28 ft 10½ in)
  Width 1.65-1.87 m (5 ft 5 in-6 ft 1½ in)
  Height 1.75-1.80 m (5 ft 8¾ in-5 ft 10¾ in)
  Volume 23.5 m³ (830 cu ft)

WEIGHTS AND LOADINGS (A, An-38-100; K, An-38K)
Weight empty: A 5,087 kg (11,215 lb)
Max payload: A 2,500 kg (5,510 lb)
  K 3,200 kg (7,055 lb)
Max T-O weight: A 8,800 kg (19,400 lb)
  K 9,400 kg (20,725 lb)

PERFORMANCE (estimated)
Nominal cruising speed at 3,000 m (9,840 ft):
  A, K 188-205 kts (350-380 km/h; 217-236 mph)
T-O run: K 480 m (1,575 ft)
Landing run: K 440 m (1,445 ft)
Balanced field length: A 850 m (2,790 ft)
Range, 45 min fuel reserves:
  A, with 26 passengers 323 n miles (600 km; 372 miles)
  A, with 17 passengers 782 n miles (1,450 km; 901 miles)
  A, max, with nine passengers 890 n miles (1,650 km; 1,025 miles)
  K, with max payload 183 n miles (340 km; 211 miles)
  K, with max fuel and 1,800 kg (3,968 lb) payload 798 n miles (1,480 km; 920 miles)

UPDATED

ANTONOV An-70

TYPE: Four-propfan medium-size wide-body transport.

PROGRAMME: Development began 1975 to replace some An-12s remaining in air force service; announced by *Izvestia* 20 December 1988; at 1991 Paris Air Show Antonov OKB reported prototype under assembly at Kiev; funding passed from former Soviet Air Force to Ukrainian government in 1992; preliminary details released and model displayed at Moscow Aero Engine and Industry Show April 1992; prototype first flight 16 December 1994; lost following in-flight collision with An-72 on 10 February 1995; second aircraft being completed for 1996 first flight; planned production at Kiev and Samara, Russia; entry into service 1997.

CURRENT VERSIONS: **An-70**: Military transport, *as described in detail.*

An-70T: Commercial transport, generally as An-70.

An-70TK: Convertible cargo/passenger transport, with seats in removable modules.

DESIGN FEATURES: First aircraft to fly powered only by propfans. Slightly larger than projected international Euroflag transport, much smaller than US McDonnell Douglas C-17A; conventional high-wing configuration, with wings and tail surfaces slightly sweptback; supercritical wing section; anhedral from roots; loading ramp/doors under upswept rear fuselage with adjustable sill height and built-in cargo handling system; horizontal tail surfaces on rear fuselage; propfans mounted conventionally on wing leading-edge. Design life 20,000 cycles and 45,000 flying hours in 25 years. Operable 3,500 hours per year, with eight to 10 man-hours of maintenance per flying hour. Cost-effective with only 200 flying hours per month.

FLYING CONTROLS: Conventional three-axis Fly-by-wire system with three digital and six analog channels, back-up by unique fly-by-hydraulics system, in which pilot or autopilot inputs are relayed to actuators by commands in hydraulic control channels, unaffected by electromagnetic interference. Double-slotted trailing-edge flaps in two sections on each wing; three-section spoilers forward of each outer flap.

STRUCTURE: Approximately 28 per cent of airframe, by weight, made of composites, including complete tail unit, ailerons and flaps. Wings manufactured at Chkalov plant, Tashkent, Uzbekistan.

LANDING GEAR: Twin-wheel nose unit; each main unit has three pairs of wheels in tandem, retracting into large fairing on side of cabin; can operate from unpaved surfaces of bearing ratio 8 kg/cm² (114 lb/sq in).

POWER PLANT: Four ZMKB Progress D-27 propfans, each 10,290 kW (13,800 shp). Stupino SV-27 contrarotating propellers, each with eight composites blades in front and six at rear. Reversible-pitch blades of scimitar form, with electric anti-icing. Export version proposed with CFM56-5A1 turbofans.

ACCOMMODATION: Three flight crew (two pilots and flight engineer) plus loadmaster; provision for converting cockpit for two-crew operation; seats in forward fuselage for two cargo attendants; freight loaded via rear ramp. Freight can be carried on PA-5.6 rigid pallets, PA-3, PA-4 and PA-6.8 flexible pallets, in UAK-2.5, UAK-5 and UAK-10 containers; unpackaged freight, wheeled and tracked vehicles, food and perishables can be carried; seats for 170 troops can be installed; crew door at front of cabin on port side; cargo hold pressurised and air conditioned.

SYSTEMS: Aircraft systems automated to simplify operation and decrease probability of crew errors.

AVIONICS: Flight data, navigation and radio-navigation systems to ARINC 700 requirements; digital multiplex data interface equivalent to US 1553B.

Comms: VHF and HF radio.

Flight: Laser INS, SKI-77 HUD, flight management system, designed for operation in adverse weather and for landing in ICAO Cat. II and IIIa conditions. BASK-70 onboard diagnostic system collects data from subsystems, registering and analysing 8,000 in-flight parameters.

Instrumentation: Colour digital CRT displays.

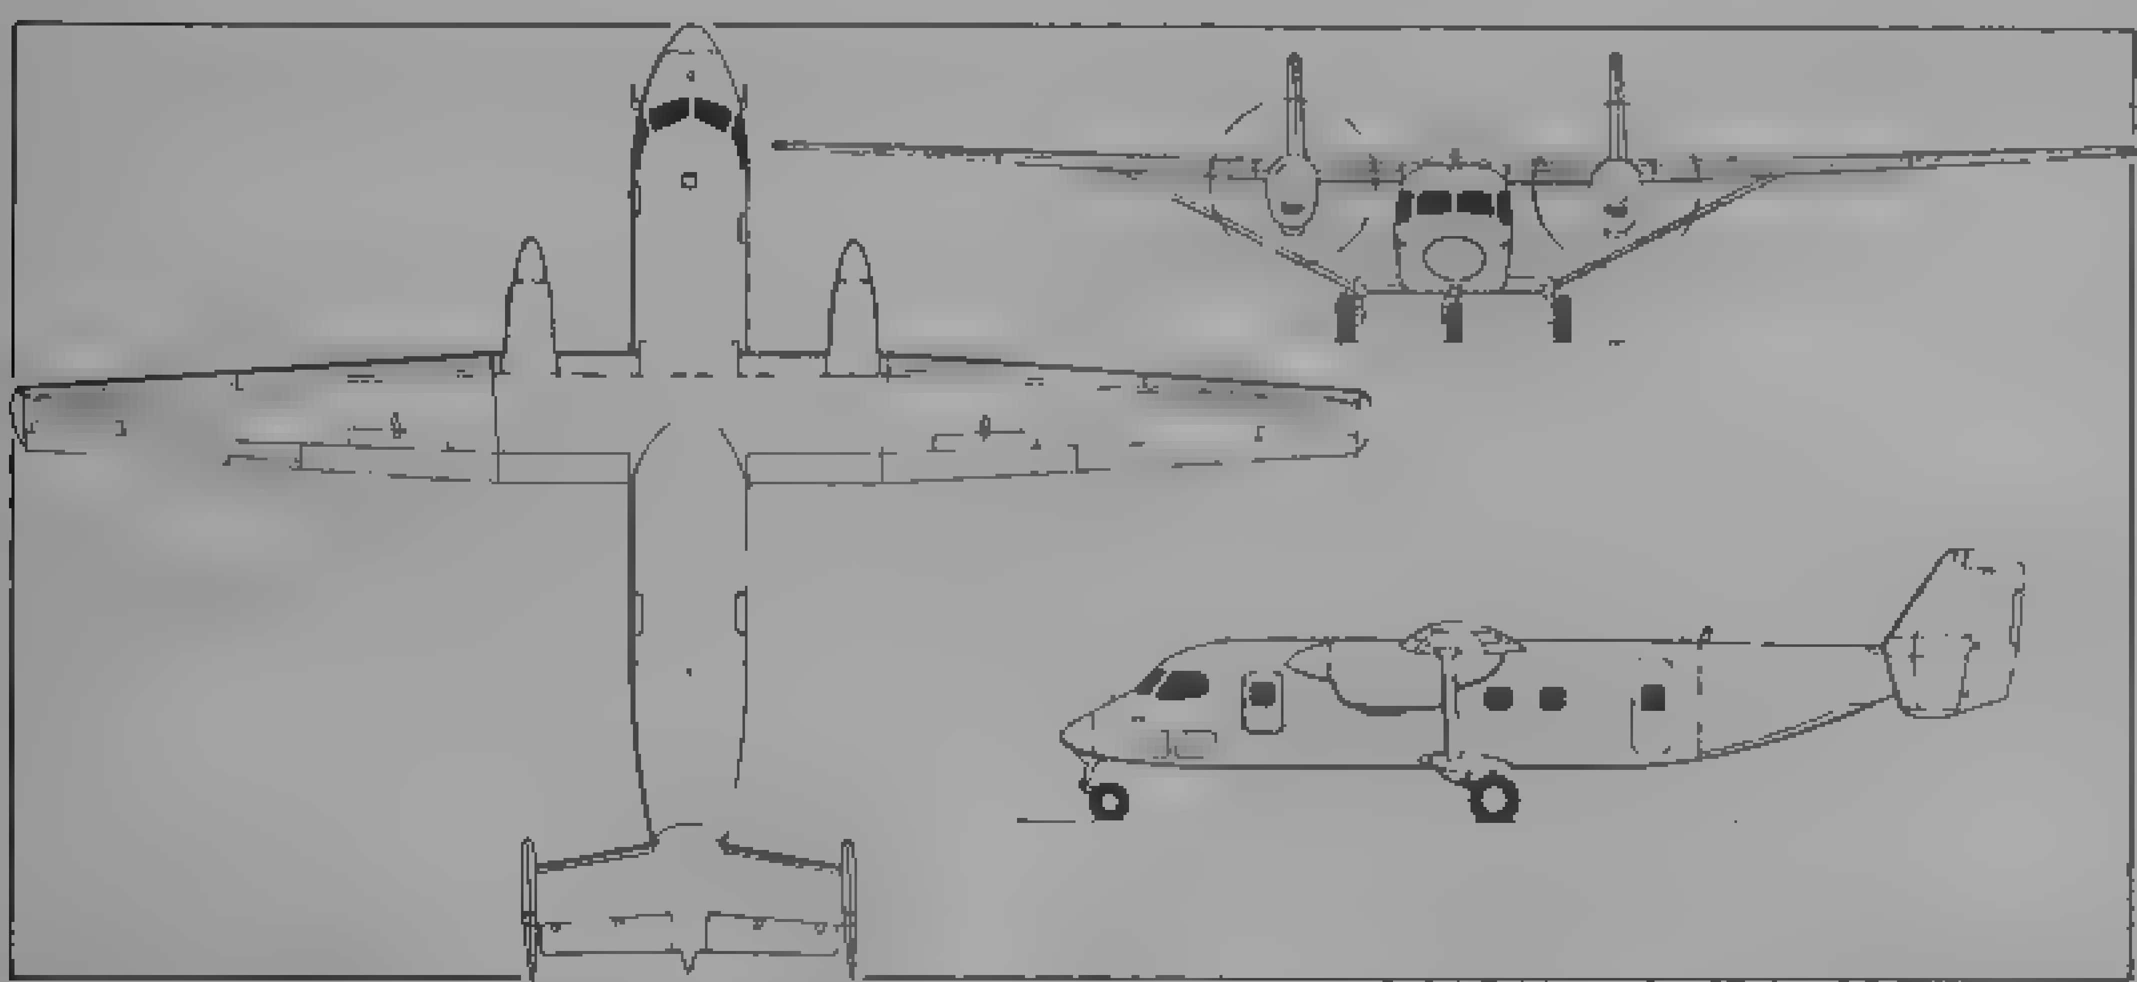
DIMENSIONS, EXTERNAL
Wing span 44.06 m (144 ft 6¾ in)
Length overall 40.25 m (132 ft 0¾ in)
Height overall 16.10 m (52 ft 10 in)
Propeller diameter 4.50 m (14 ft 9 in)
Rear-loading aperture: Height 4.10 m (13 ft 5½ in)
  Width 4.00 m (13 ft 1½ in)

DIMENSIONS, INTERNAL
Cargo hold: Floor length 18.60 m (61 ft 0¼ in)
  Floor length, incl ramp 22.40 m (73 ft 6 in)
  Floor width 4.00 m (13 ft 1½ in)
  Height 4.10 m (13 ft 5½ in)

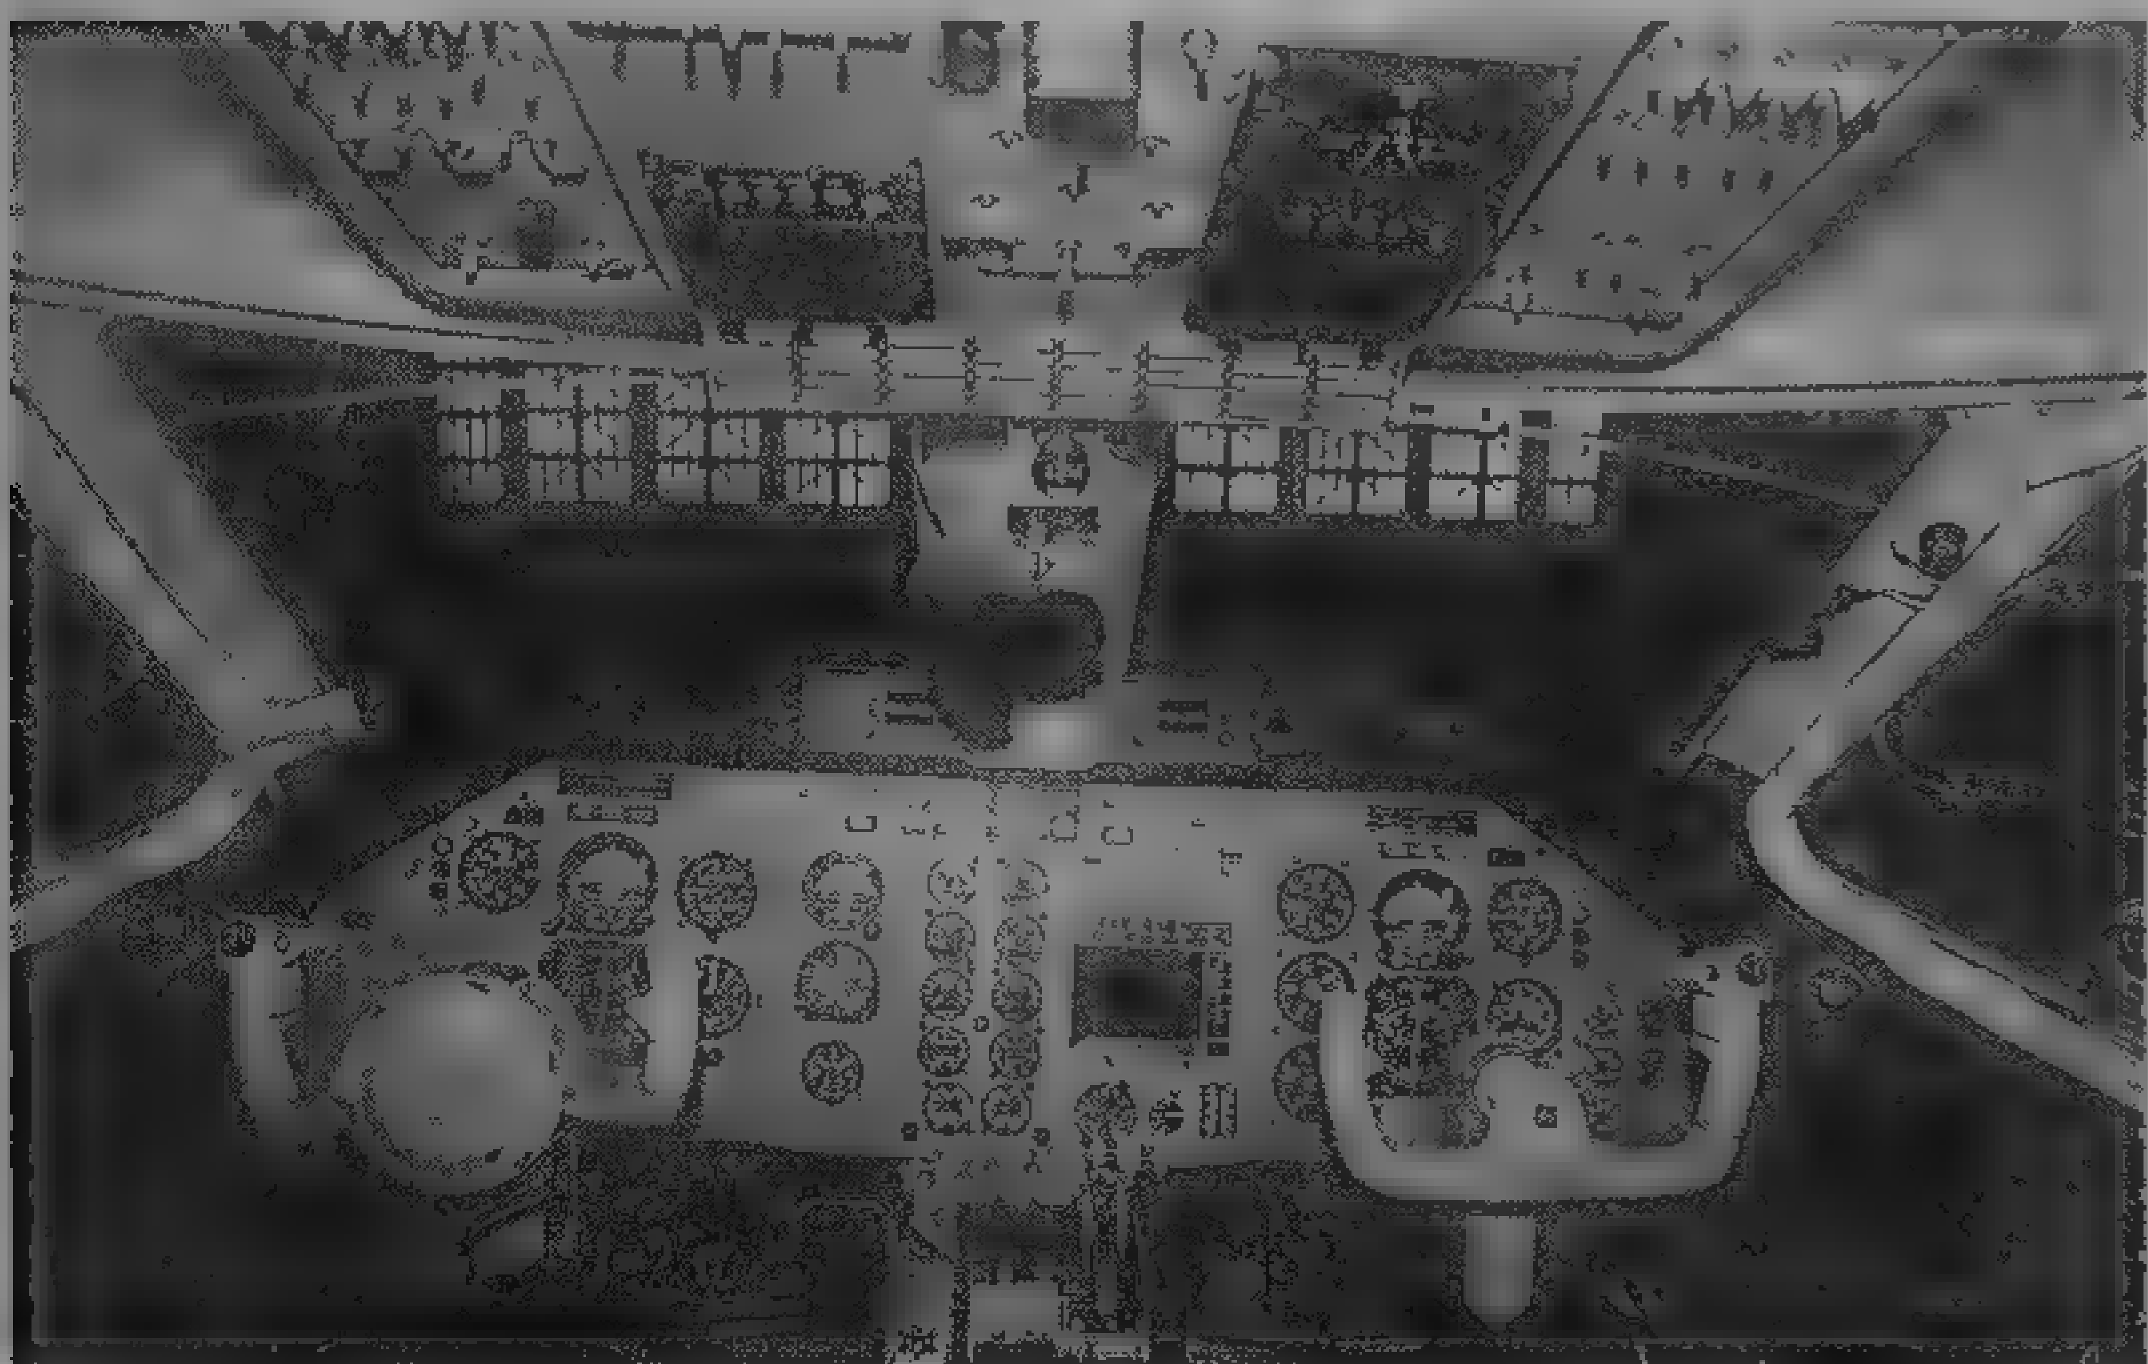
WEIGHTS AND LOADINGS
Normal payload (incl 5,000 kg; 11,025 lb on ramp) 30,000 kg (66,135 lb)
Normal payload from unpaved runway 20,000 kg (44,090 lb)
Max payload 35,000 kg (77,160 lb)
Normal T-O weight 112,000 kg (246,900 lb)
Max T-O weight 130,000 kg (286,600 lb)
Max T-O weight from unpaved runway 100,000 kg (220,460 lb)
Max power loading 3.16 kg/kW (5.19 lb/shp)

PERFORMANCE (estimated)
Nominal cruising speed 405-431 kts (750-800 km/h; 466-497 mph)
Cruising height 8,600-9,600 m (28,200-31,500 ft)
T-O run: normal T-O weight 1,500 m (4,920 ft)
  max T-O weight 1,800 m (5,905 ft)

Antonov An-38-100 prototype making Western debut at Paris 1995 *(Paul Jackson)*
1995



Antonov An-38, stretched version of the An-28 *(Jane's/Mike Keep)*
1995



Flight deck of Antonov An-38-100 *(Mark Wagner/Flight International)*
1995

An-70 pressurised propfan-powered transport prototype *(Sergey Sergeyev)*

1995

Runway length at max T-O weight
  for T-O 1,720 m (5,645 ft)
  for landing 1,950 m (6,400 ft)
Landing run 1,900 m (6,235 ft)
Range with 20,000 kg (44,090 lb) payload
  from 600-800 m (1,970-2,625 ft) unpaved runway
  1,618 n miles (3,000 km; 1,864 miles)
  at normal T-O weight
  2,885 n miles (5,350 km; 3,325 miles)
  at max T-O weight
  3,910 n miles (7,250 km; 4,505 miles)
Range with 30,000 kg (66,135 lb) payload
  at normal T-O weight
  1,670 n miles (3,100 km; 1,925 miles)
  at max T-O weight
  2,985 n miles (5,530 km; 3,435 miles)

UPDATED

ANTONOV An-72 and An-74

NATO reporting name: Coaler

TYPE: Twin-turbofan light STOL transport.

PROGRAMME: First of two prototype An-72s, built at Kiev, flew 22 December 1977; after eight preseries aircraft, manufacture transferred to Kharkov; An-74 polar transport announced February 1984; An-72P maritime patrol version demonstrated 1992; production of An-72/74 variants currently 20 a year.

CURRENT VERSIONS: **An-72** ('Coaler-C'): Light STOL transport for military use; extended wings, lengthened fuselage and other changes compared with An-72 ('Coaler-A') prototypes; ZMKB Progress D-36 Series 2A engines; crew of two or three.

An-72P/An-76: Maritime patrol version, described separately.

An-74-200 ('Coaler-B'): For all-weather operation including Arctic flying to assist in setting up scientific stations on ice floes, airdrop supplies to motorised expeditions and observe changes in icefields; flight crew of five; D-36 Series 3A engines of unchanged rating; wing, tail unit and engine air intake de-icing, advanced navigation aids, including inertial navigation system; provision for wheel/ski landing gear; much increased fuel capacity; airframe identical with An-72 except for two blister windows at rear of flight deck and front of cabin on port side and larger nose radome; maximum T-O weight increased to 36,500 kg (80,465 lb), payload 7,500 kg (16,535 lb); range with maximum payload, 1 hour reserve 1,160 n miles (2,150 km; 1,335 miles).

An-74T-200 ('Coaler-B'): Cargo version, payload 10,000 kg (22,045 lb); loading winch, roller conveyors in floor; crew of two. Range with maximum payload, 1 hour reserve 675 n miles (1,250 km; 776 miles).

An-74TK-200 ('Coaler-B'): Convertible cargo/passenger aircraft with 52 folding passenger seats or all-cargo or all-passenger or combi layouts. Built-in loading equipment. Crew of two. Range with 10,000 kg (22,045 lb) payload, 1 hour reserve 430 n miles (800 km; 497 miles).

An-74T-100 ('Coaler-B'): As An-74T-200, with navigator station (crew of four).

An-74TK-100: As An-74TK-200, with navigator station (crew of four).

CUSTOMERS: More than 150 An-72/74s built, most of them for military use; 20 in Russian air forces, four in Peruvian Air Force.

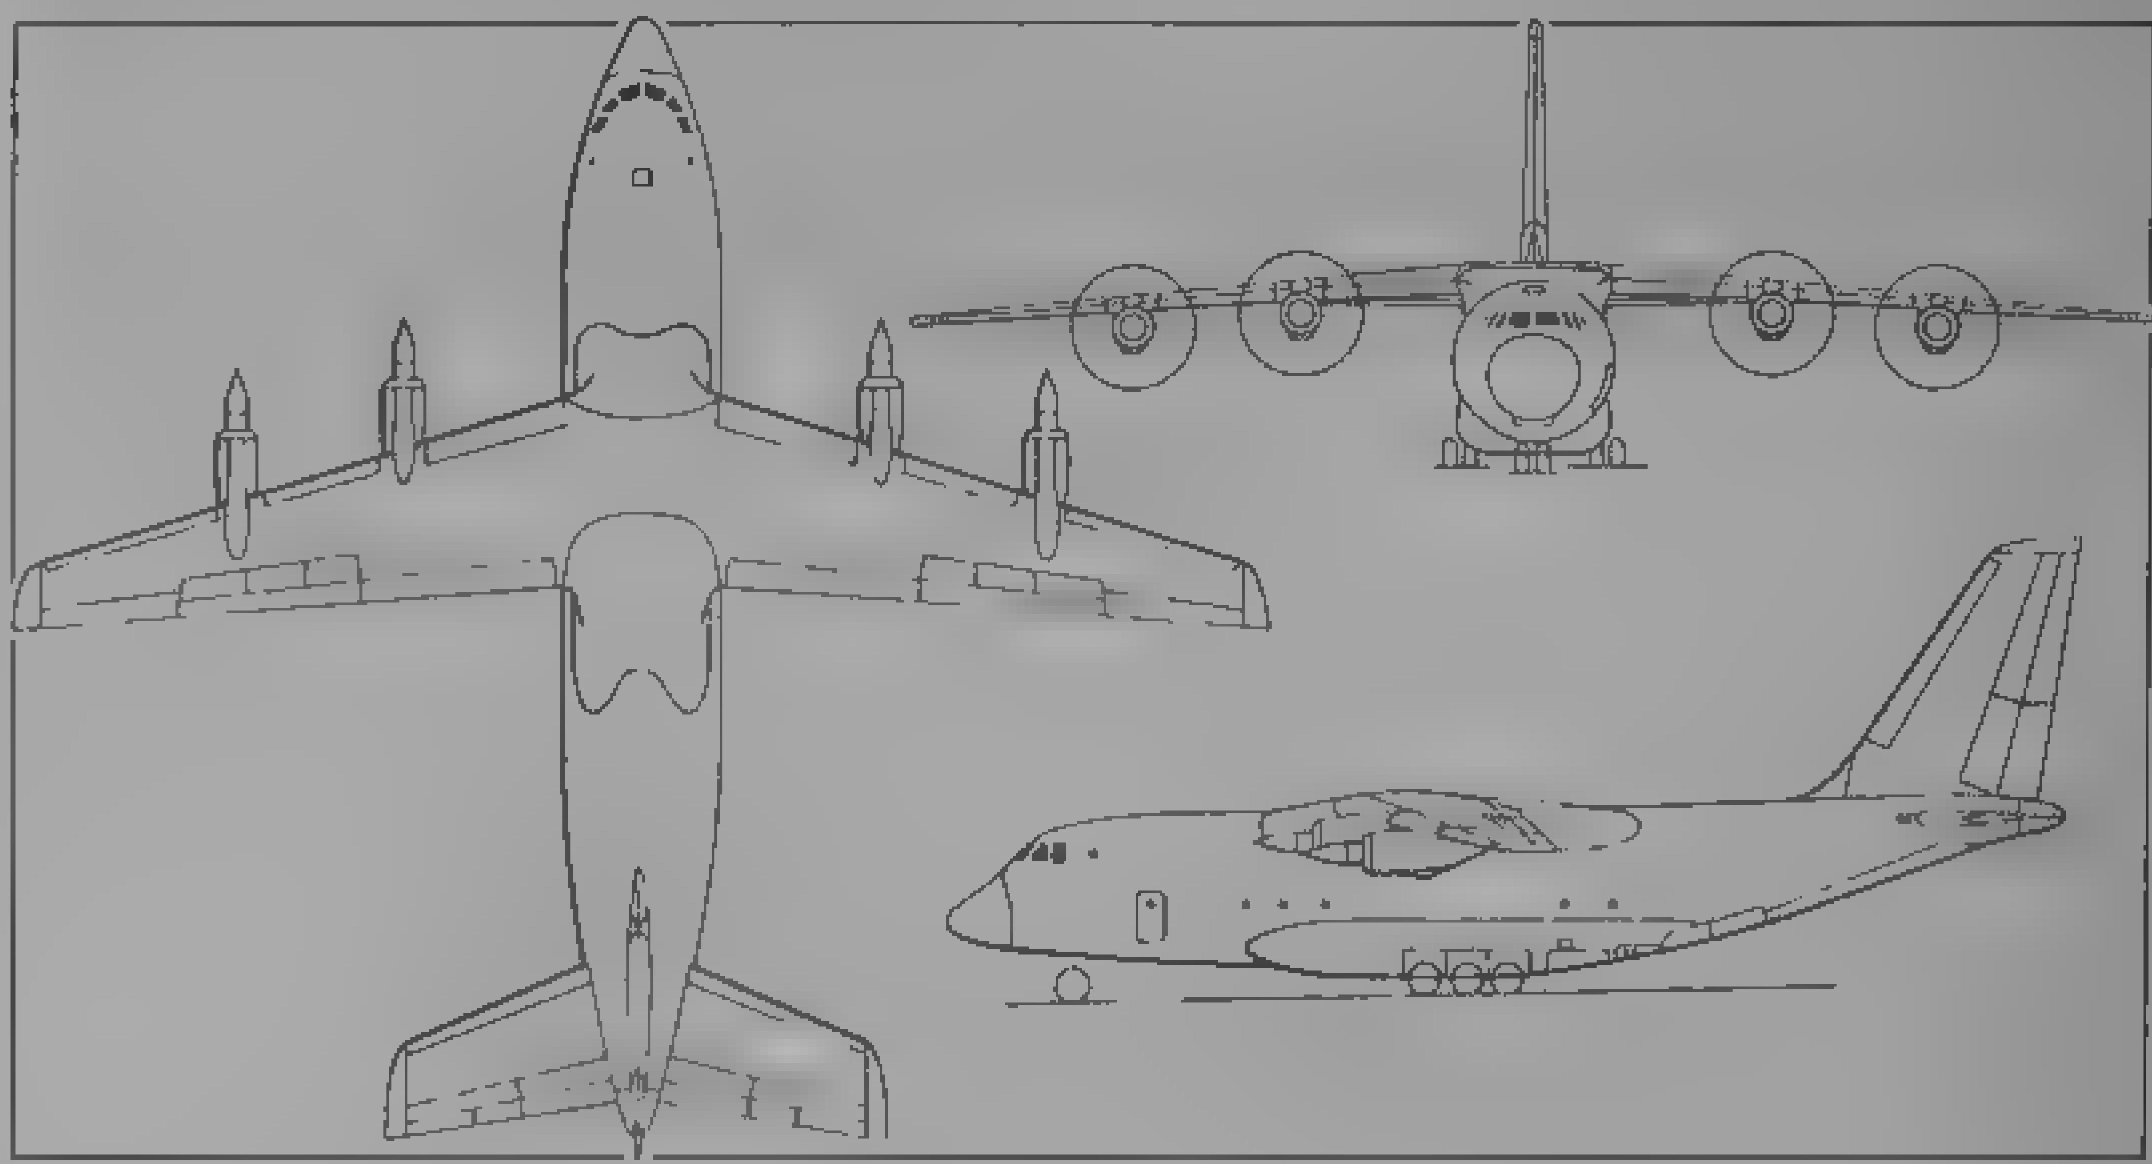
COSTS (An-74): Approximately $12.5 million.

DESIGN FEATURES: Primary role as STOL replacement for turboprop An-26, with emphasis on freight carrying; ejection of exhaust efflux over upper wing surface and down over large multislotted flaps gives considerable increase in lift; special ramp/door as An-26; low-pressure tyres and multiwheel landing gear for operation from unprepared strips, ice or snow; high-set engines avoid foreign object ingestion; wing leading-edge sweepback 17°, anhedral approximately 10° on outer wings; normal T-O flap setting 25 to 30°, maximum deflection 60°; sweptback fin and rudder.

FLYING CONTROLS: Power actuated ailerons, with two tabs in port aileron, one starboard; double-hinged rudder, with tab in lower portion of two-section aft panel; during normal flight only lower rear rudder segment is used, both rear segments used in low-speed flight; forward segment is actuated automatically to offset thrust asymmetry; horn balanced and mechanically actuated, aerodynamically balanced elevators, each with two tabs; hydraulically actuated full-span wing leading-edge flaps outboard of nacelles; trailing-edge flaps double-slotted in exhaust efflux, triple-slotted between nacelles and outer wings; four-section spoilers forward of triple-slotted flaps, two outer sections on each side raised before landing, remainder opened automatically on touchdown by sensors actuated by weight on main landing gear; inverted leading-edge slat on tailplane linked to wing flaps.

STRUCTURE: All-metal multispar wings mounted above fuselage; wing skin, spoilers and flaps of titanium aft of engine nacelles; circular semi-monocoque fuselage, with rear ramp/door; tapered fairing forward of T tail fin/tailplane junction, blending into ogival rear fairing.

LANDING GEAR: Hydraulically retractable tricycle type, primarily of titanium. Rearward-retracting steerable twin-wheel nose unit. Each main unit comprises two trailing arm legs in tandem, each with a single wheel, retracting inward through 90° so that wheels lie horizontally in bottom of fairings, outside fuselage pressure cell.



Antonov An-70 transport (four ZMKB Progress D-27 propfans) *(Jane's/Mike Keep)*

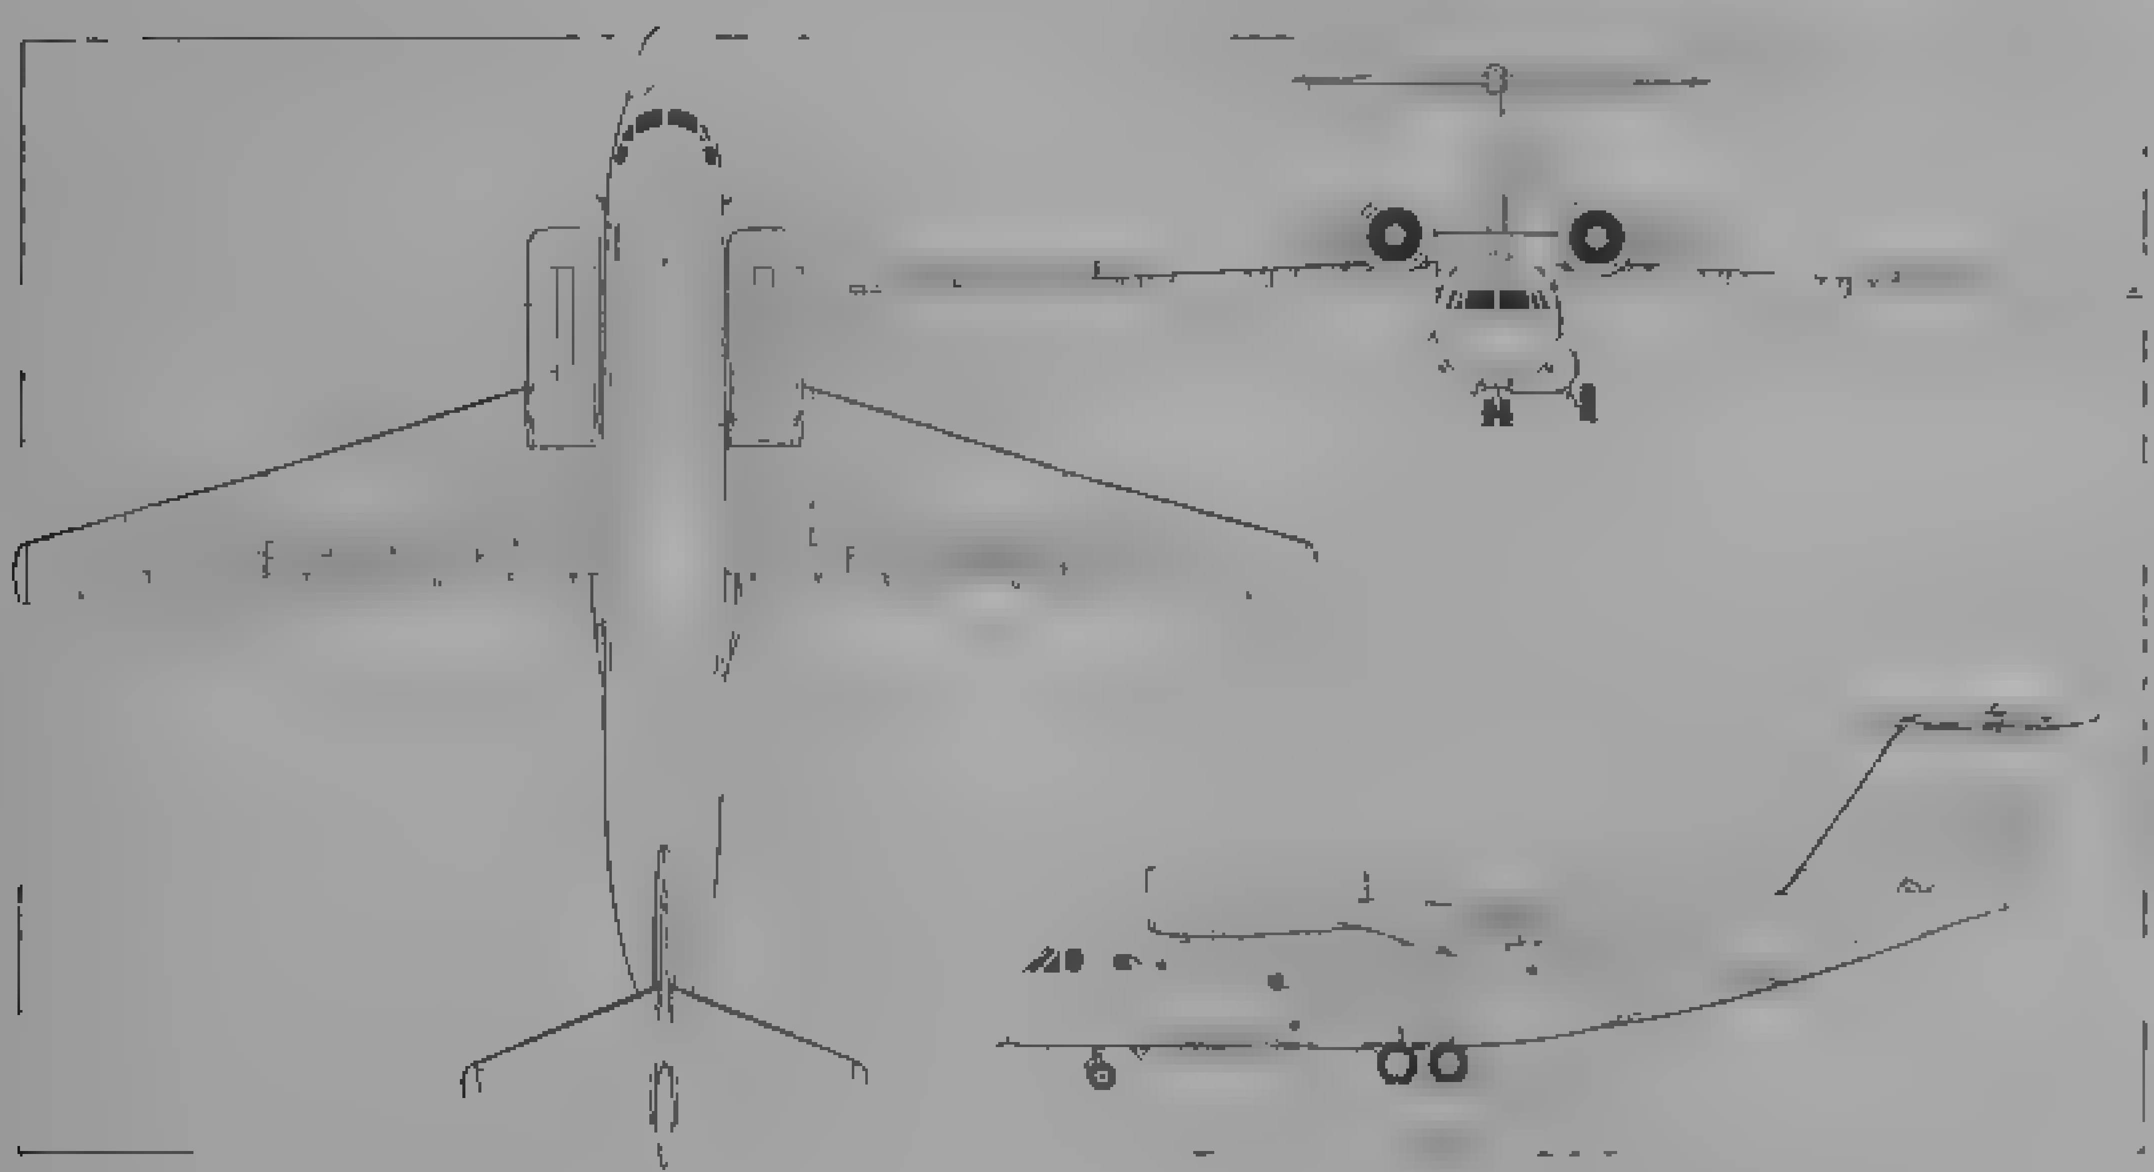
1994

Antonov An-74 at the Myasishchev Space Centre, Krasnoy *(Mark Wagner/Flight International)*

1995

Antonov An-72 ('Coaler-C') twin-turbofan STOL transport in military service *(Mark Wagner/Flight International)*

1994



Antonov An-74 ('Coaler-B') STOL transport (two ZMKB Progress D-36 turbofans) *(Jane's/Dennis Punnett)*

1992

Oleopneumatic shock-absorber in each unit. Low-pressure tyres, size 720 × 310 mm on nosewheels, 1,050 × 400 mm on mainwheels. Hydraulic disc brakes. Telescopic strut hinges downward, from rear of each side fairing, to support fuselage during direct loading of hold with ramp/door under fuselage.

POWER PLANT: Two ZMKB Progress D-36 high-bypass ratio turbofans, each 63.74 kN (14,330 lb st). Integral fuel tanks between spars of outer wings. Thrust reversers standard.

ACCOMMODATION: Pilot and co-pilot/navigator side by side on flight deck of basic An-72, plus flight engineer, with provision for fourth person. Heated windows. Two windscreen wipers. Flight deck and cabin pressurised and air conditioned. Main cabin designed primarily for freight, including four UAK 2.5 containers or four PAV 2.5 pallets each weighing 2,500 kg (5,511 lb). An-72 has folding seats along sidewalls and removable central seats for 68 passengers. It can carry 57 parachutists, and has provision for 24 stretcher patients, 12 seated casualties and an attendant in ambulance configuration. An-74 can carry eight mission staff in combi role, in two rows of seats, with tables and with two bunks, one on each side of cabin aft of seats. Bulged observation windows on port side for navigator and hydrologist. Provision for wardrobe and galley. Movable bulkhead between passenger and freight compartments, with provision for 1,500 kg (3,307 lb) of freight in rear compartment. Downward-hinged and forward sliding rear ramp/door for loading trucks and tracked vehicles, and for direct loading of hold from trucks, as described under An-26 entry. It is openable in flight, enabling freight loads of up to 7,500 kg (16,535 lb), with a maximum of 2,500 kg (5,511 lb) per individual item, to be airdropped by parachute extraction system. Removable mobile winch, capacity 2,500 kg (5,511 lb), assists loading of containers up to 1.90 × 2.44 × 1.46 m (6 ft 3 in × 8 ft × 4 ft 9½ in) in size, pallets 1.90 × 2.42 × 1.46 m (6 ft 3 in × 7 ft 11 in × 4 ft 9½ in) in size, and other bulky items. Cargo straps and nets stowed in lockers on each side of hold when not in use. Provision for roller conveyors in floor. Main crew and passenger door at front of cabin on port side. Emergency exit and servicing door at rear of cabin on starboard side.

SYSTEMS: Air conditioning system for comfort to altitude of 10,000 m (32,800 ft), with independent temperature control in flight deck and main cabin areas. Used to refrigerate main cabin when perishable goods carried. Maximum cabin pressure differential 0.49 bars (7.1 lb/sq in). Hydraulic system for landing gear, flaps and ramp. Electrical system powers auxiliary systems, flight deck equipment, lighting and mobile hoist. Thermal de-icing system for leading edges of wings and tail unit (including tailplane slat), engine air intakes and cockpit windows. Provision for APU in starboard landing gear fairing. This can be used to heat cabin under cold ambient conditions, servicing personnel can gain access to major electric, hydraulic and air conditioning components without stepping outside.

AVIONICS: *Comms*: HF com, VHF com/nav, 'Odd Rods' IFF standard.

Radar: Navigation/weather radar in nose.

Flight: ADF. Doppler based automatic navigation system, linked to onboard computer, is preprogrammed before take-off on push-button panel to right of map display.

Instrumentation: Failure warning panels above windscreen display red lights for critical failures, yellow lights for non-critical failures, to minimise time spent on monitoring instruments and equipment.

An-74 has enhanced avionics, including INS.

DIMENSIONS, EXTERNAL:

Wing span	31.89 m (104 ft 7½ in)
Wing aspect ratio	10.31
Length overall (An-72)	28.07 m (92 ft 1¼ in)
Fuselage: Max diameter	3.10 m (10 ft 2 in)
Height overall	8.65 m (28 ft 4½ in)
Wheel track	4.15 m (13 ft 7½ in)
Wheelbase	8.12 m (26 ft 7¾ in)
Crew/passenger door: Height	1.65 m (5 ft 5 in)
Width	0.90 m (2 ft 11½ in)
Rear-loading door: Length	7.10 m (23 ft 3½ in)
Width	2.40 m (7 ft 10½ in)

DIMENSIONS, INTERNAL:

Cabin: Length	10.50 m (34 ft 5¼ in)
Width at floor level	2.15 m (7 ft 0½ in)
Height	2.20 m (7 ft 2½ in)

AREAS:

Wings, gross	98.53 m² (1,060.6 sq ft)

WEIGHTS AND LOADINGS (An-72):

Weight empty	19,050 kg (42,000 lb)
Max fuel	12,950 kg (28,550 lb)
Max payload: normal	10,000 kg (22,045 lb)
Max T-O weight:	
from 1,800 m (5,905 ft) runway	34,500 kg (76,060 lb)
from 1,500 m (4,920 ft) runway	33,000 kg (72,750 lb)
from 1,000 m (3,280 ft) runway	27,500 kg (60,625 lb)
Max landing weight	33,000 kg (72,750 lb)
Max wing loading	349.8 kg/m² (71.62 lb/sq ft)
Max power loading	270.6 kg/kN (2.65 lb/lb st)

PERFORMANCE (An-72, A: at T-O weight of 33,000 kg; 72,750 lb, B: at T-O weight of 27,500 kg; 60,625 lb on 1,000 m; 3,280 ft unprepared runway):

Max level speed at 10,000 m (32,800 ft):	
A	380 kts (705 km/h; 438 mph)
Cruising speed at 10,000 m (32,800 ft):	
A, B	297-324 kts (550-600 km/h; 342-373 mph)
Approach speed: A	97 kts (180 km/h; 112 mph)
Service ceiling: A	10,700 m (35,100 ft)
B	11,800 m (38,715 ft)
Service ceiling, OEI: A	5,100 m (16,730 ft)
B	6,800 m (22,300 ft)
T-O run: A	930 m (3,052 ft)
B	620 m (2,035 ft)
T-O to 10.7 m (35 ft): A	1,170 m (3,840 ft)
B	830 m (2,725 ft)
Landing run: A	465 m (1,525 ft)
B	420 m (1,380 ft)

Range, with 45 min reserves:

A with max payload	430 n miles (800 km; 497 miles)
A with 7,500 kg (16,535 lb) payload	1,080 n miles (2,000 km; 1,240 miles)
A with max fuel	2,590 n miles (4,800 km; 2,980 miles)
B with 5,000 kg (11,020 lb) payload	430 n miles (800 km; 497 miles)
B with max fuel	1,760 n miles (3,250 km; 2,020 miles)

PERFORMANCE (An-74-200):

Generally as for An-72 except:

Range, with 2 h reserves:

with max payload	620 n miles (1,150 km; 715 miles)
with 5,000 kg (11,020 lb) payload	1,726 n miles (3,200 km; 1,988 miles)
with 1,500 kg (3,307 lb) payload	2,860 n miles (5,300 km; 3,293 miles)

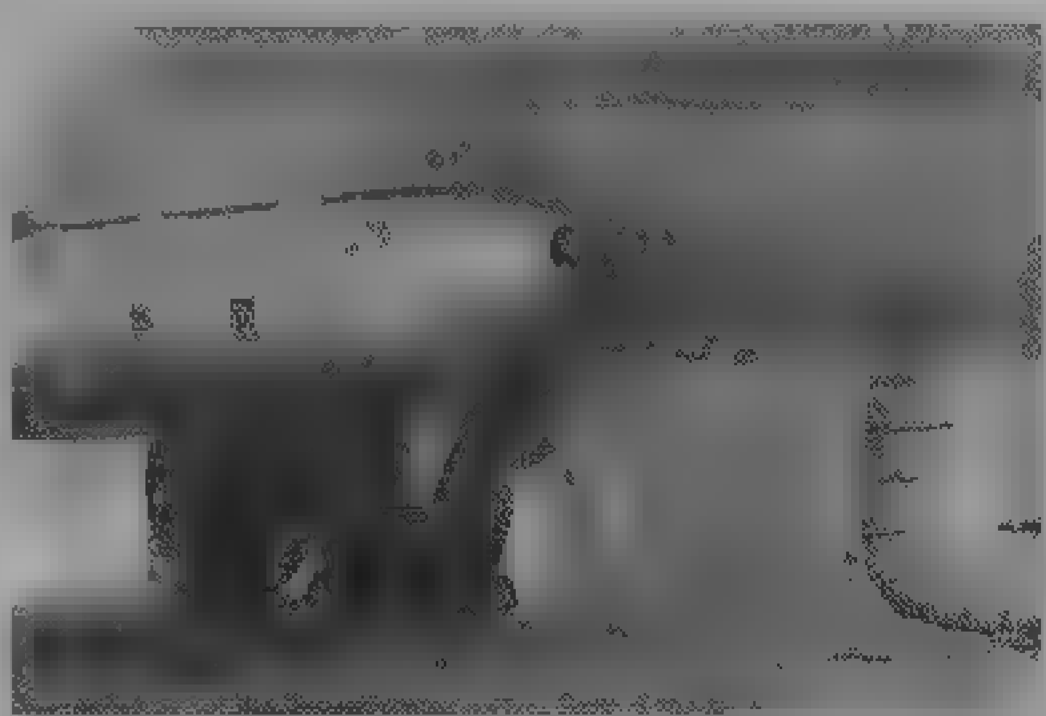
UPDATED

ANTONOV An-72P (An-76)

NATO reporting name: Coaler

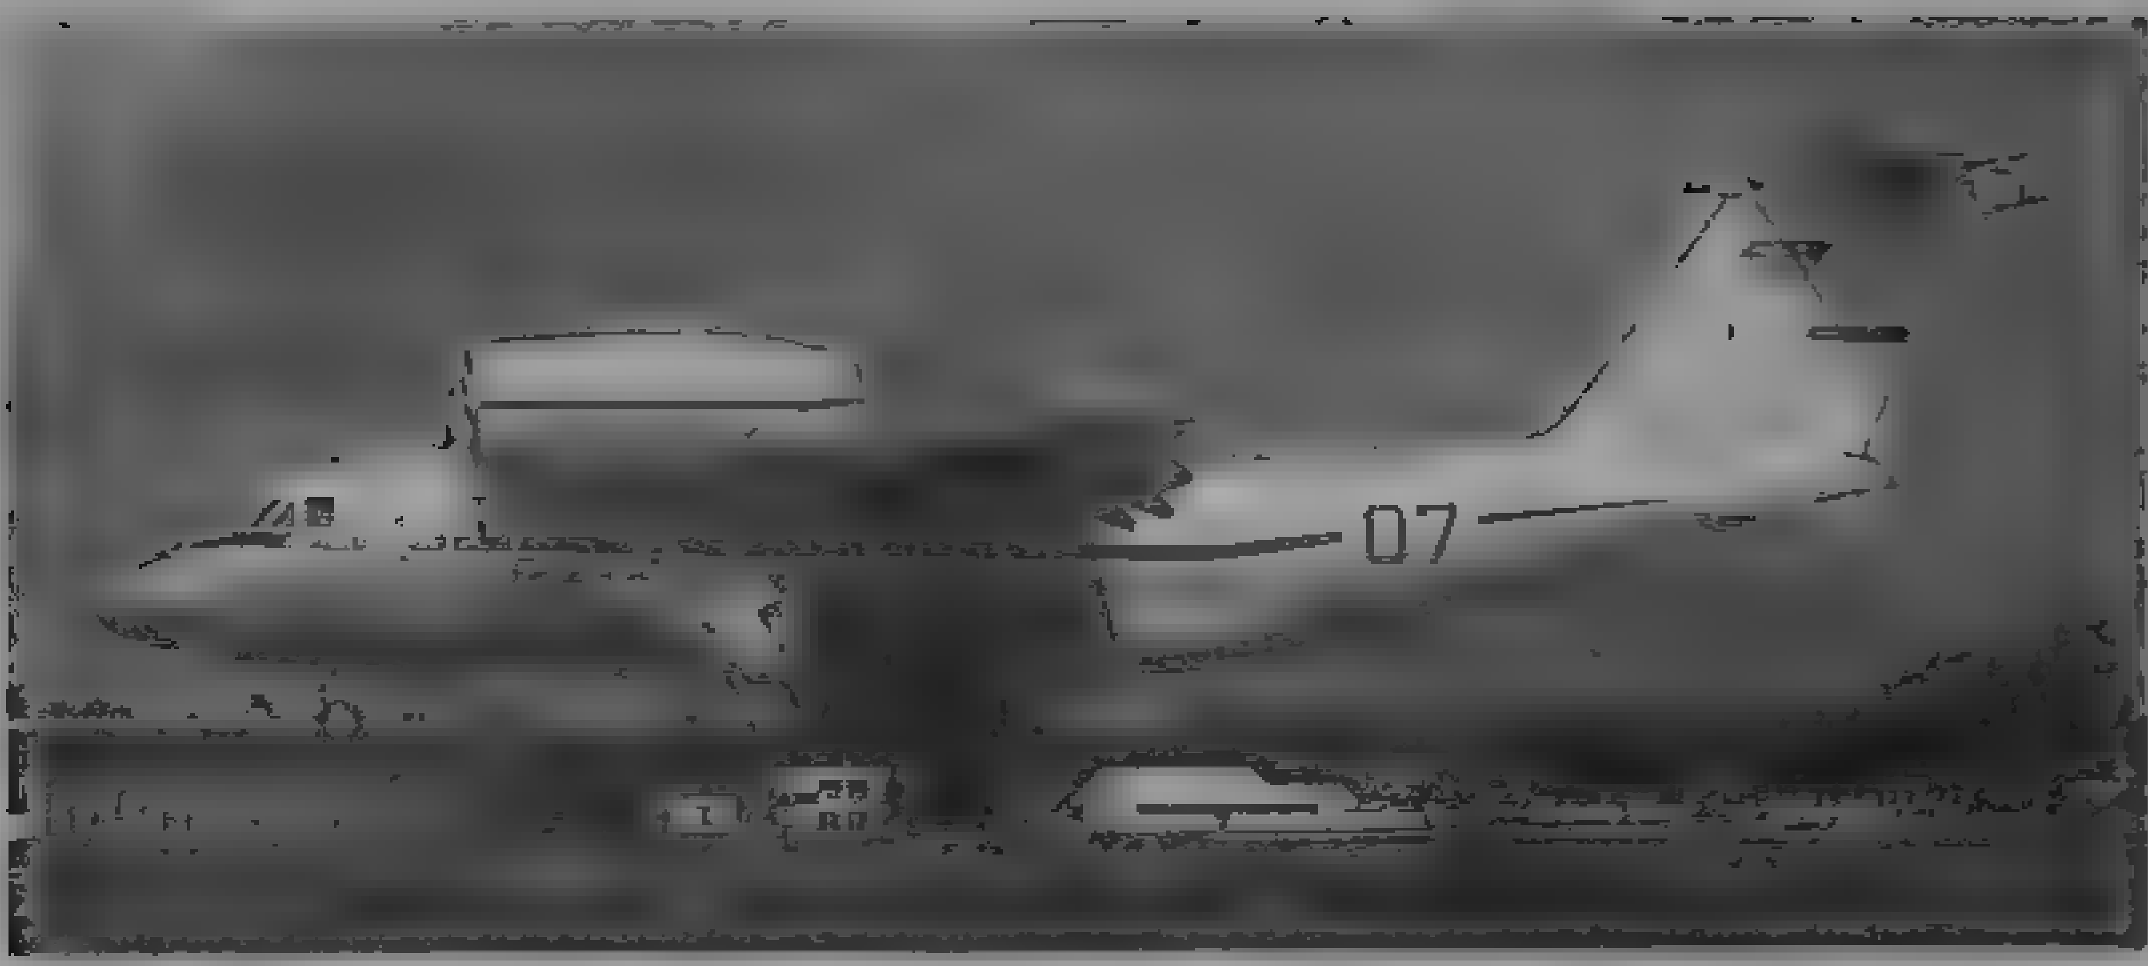
TYPE: Twin-turbofan STOL maritime patrol aircraft.

PROGRAMME: First seen 1992, displayed at 1992 Farnborough Air Show, in production. Upgraded version, with Israel avionics and armament, marketed by Israel Aircraft Industries.



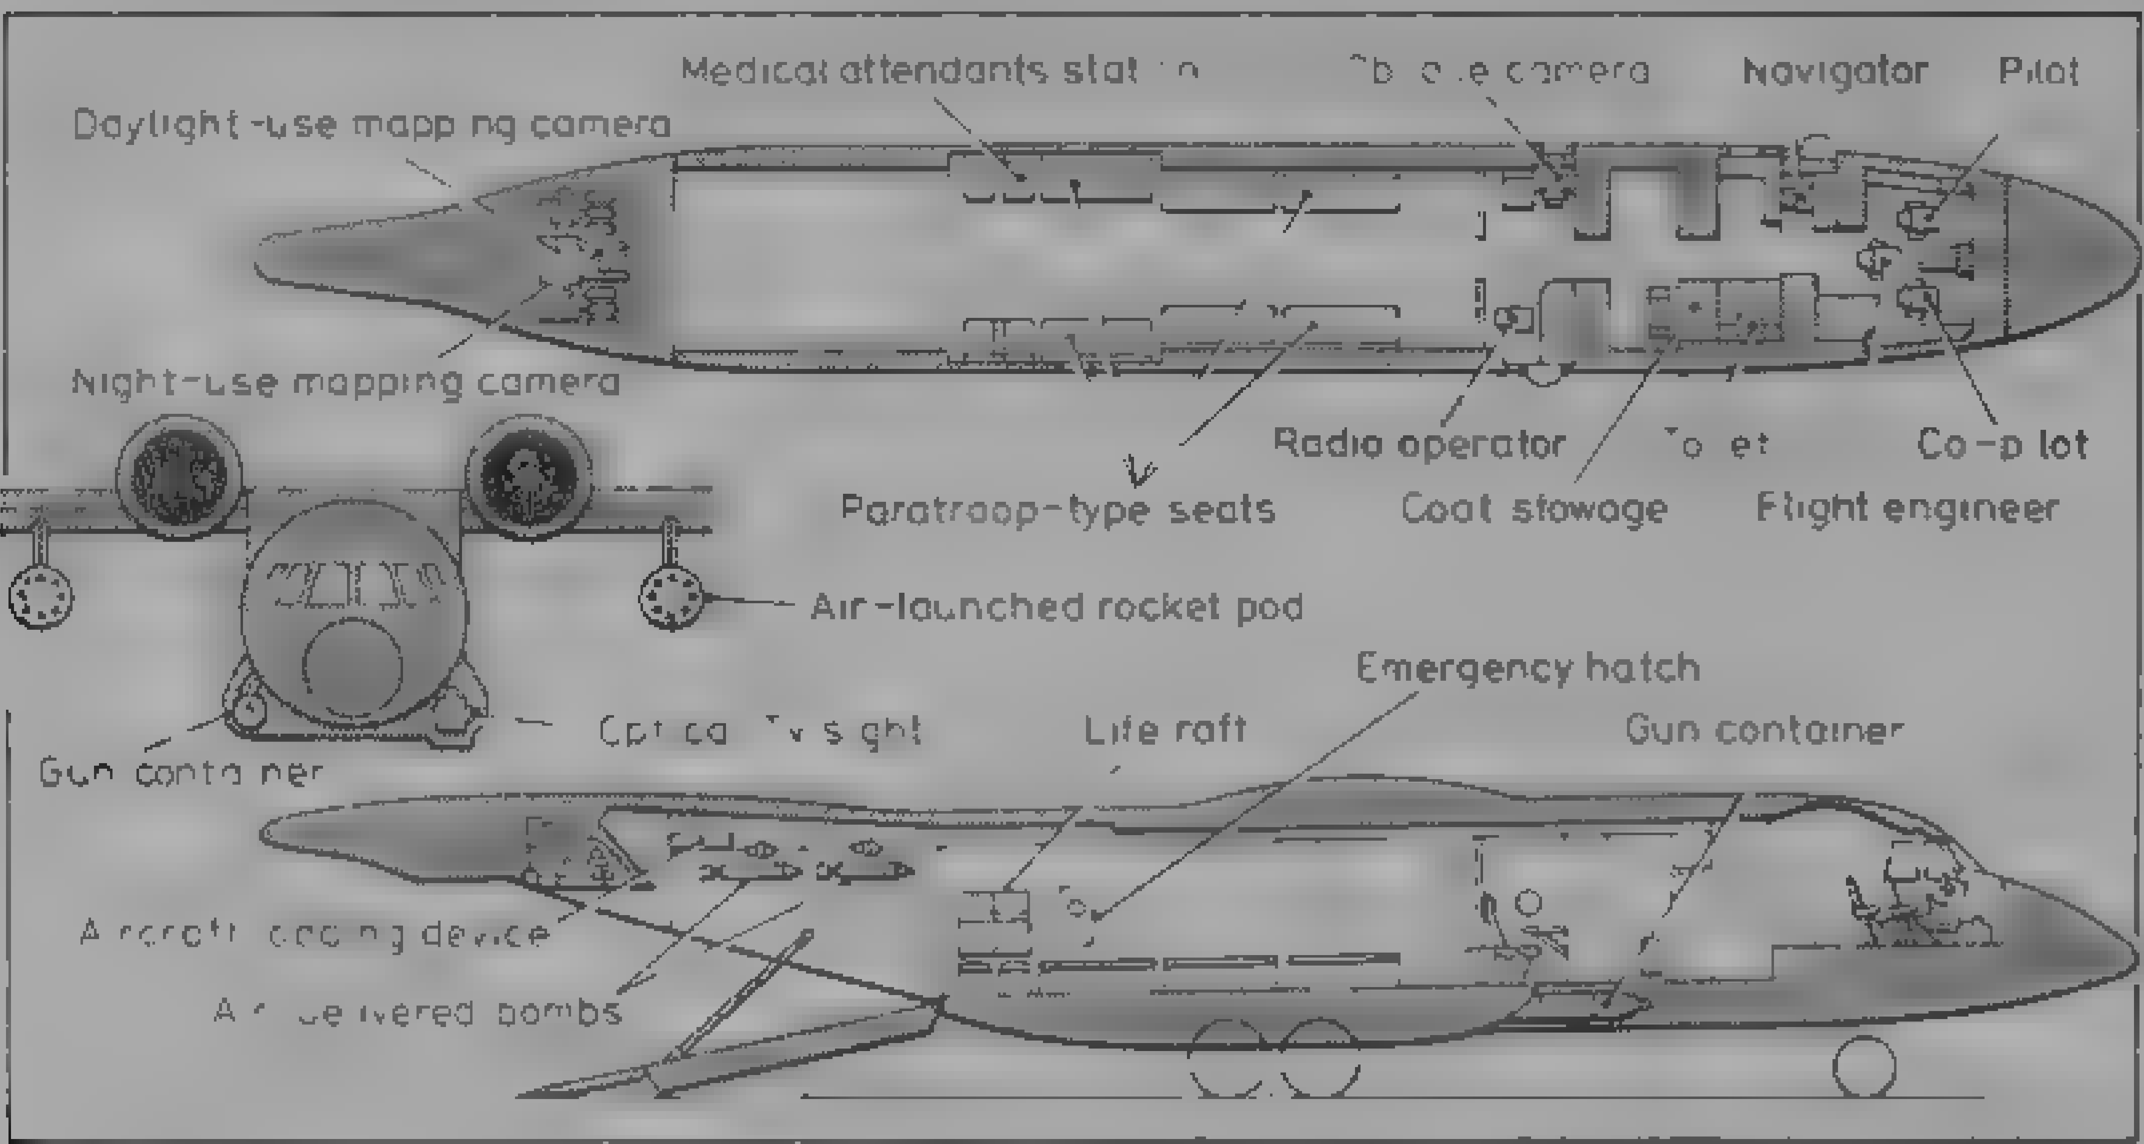
Rotating sensor turret under fuselage of An-72P/An-76 upgraded by Israel Aircraft Industries *(Kenneth Munson)*

1994



Antonov An-72P/An-76 STOL maritime patrol aircraft (*Paul Jackson*)

1995



Disposition of equipment and armament in the military Antonov An-72P/An-76. The ramp moves down and forward to lie underneath the fuselage when bombs are dropped from the cargo gantry (*Jane's/Mike Keep*)

1993

CUSTOMERS: Initial order 20 for Russian military use

COSTS: Israeli upgraded version quoted at $15 to 20 million early 1994

DESIGN FEATURES: Basically identical to An-72 transport intended for armed surveillance of coastal areas within 200 n miles (370 km, 230 miles) of shore, day and night in all weathers

ACCOMMODATION: For maritime missions, flight crew of five with navigator and radio operator stationed by bulged windows at rear of flight deck on port side and immediately forward of wing leading-edge on starboard side respectively. Provision in main cabin for 40 persons on sidewall and centreline removable seats, including ramp-mounted seats, or 22 fully equipped paratroops, or 16 stretcher patients and medical attendant; or up to 5,000 kg (11,025 lb) of ammunition, equipment or vehicles, with seats stowed

AVIONICS: Permit automated navigation at all stages of flight precise fixing of coordinates, speed and heading of surface ships, air-to-air and air-to-surface communication with aircraft, ships and coastguard to support missions. Digital cockpit avionics in IAI upgraded version. TV scanning system in port main landing gear fairing. IAI version offered with Elta EL/M 2022A maritime surveillance radar, El Op day/night long-range observation system, and Elisra electronic warfare suite

EQUIPMENT: Oblique camera on port side opposite radio operator's station; daylight and night mapping cameras in tailcone; SFP-2A flares for night use

ARMAMENT: One 23 mm GSh-23L gun, with 250 rounds, in pod forward of starboard main landing gear fairing. UB-32M rocket pack under each wing, four 100 kg (220 lb) bombs in roof of hold, above rear loading hatch with ramp slid forward under cabin to make release practicable. Israeli upgraded version can carry IAI Griffin laser guided bomb underwing

Other data generally as for An-72 transport except:

WEIGHTS AND LOADINGS:

Mission load	650 kg (1,433 lb)
Max T-O weight	37,500 kg (82,670 lb)

PERFORMANCE:

Patrol speed at 500-1,000 m (1,640-3,280 ft)	162-189 kts (300-350 km/h, 186-217 mph)
Service ceiling	10,100 m (33,135 ft)
Field requirement	1,400 m (4,600 ft)
Max endurance	7 h to 7 h 18 min

UPDATED

ANTONOV An-124

NATO reporting name: Condor

TYPE: Long range heavy-lift four-turbofan freight transport

PROGRAMME: Bureau design number 305. Prototype (SSSR-680125) first flew 26 December 1982; second aircraft (SSSR-680210) similarly built at Kiev; first production aircraft (SSSR-82002 *Ruslan*, named after giant hero of Russian folklore immortalised by Pushkin) exhibited 1985 Paris Air Show; lifted payload of 171,219 kg (377,473 lb) to 10,750 m (35,269 ft) on 26 July 1985, exceeding by 53 per cent C-5A Galaxy's record for payload lifted to 2,000 m and setting 20 more records; entered service January 1986, transporting units of US/Canadian Euclid 154 tonne dumper truck for Yakut diamond miners; set closed circuit distance record 6-7 May 1987 by flying 10,880.625 n miles (20,150.921 km, 12,521.201 miles) in 25 hours 30 minutes; deliveries to VTA, to replace An-22, began 1987; in September 1990, during Gulf crisis, an An-124 carried 451 Bangladeshi refugees from Amman to Dacca, after being fitted with chemical toilets, a 570 litre (150 US gallon, 125 Imp gallon) drinking water tank and foam rubber cabin lining in lieu of seats. Two records set by Air Foyle with An-124s: heaviest commercial air cargo movement of three 43 tonne transformers and ancillary equipment, totalling 143 tonnes, from Barcelona, Spain, to Noumea, New Caledonia, and single heaviest cargo item comprising 120 tonne Liebherr crane from Krivoy Rog, Ukraine, to Berlin, Germany

CURRENT VERSIONS: **An-124**: Basic transport, *as described in detail*

An-124-100: Commercial transport, civil type certificate granted by AviaRegistr of Interstate Aviation Committee of CIS on 30 December 1992. Maximum T-O weight restricted to 392,000 kg (864,200 lb) and maximum payload to 120,000 kg (264,550 lb)

An-124-100M: As An-124-100, but with Western avionics, including Litton LTN-92 INS and LTN 2001 GPS, and Rockwell Collins satcom, ACARS, weather radar and TCAS-2. Crew reduced to four by removal of radio operator and navigator. Deliveries scheduled to begin late 1995

An-124-102: Flight deck EFIS equipped, with dual sets of CRTs. Crew reduced to three (two pilots and flight engineer)

An-124FFR: Proposed firefighting water-bomber, able to drop 200 tonnes of fire retardants. Convertible to freighter

Re-engining with Western turbofans is also under consideration

CUSTOMERS: Manufactured at Kiev (GAZ 473) and (beginning with fifth production aircraft, SSSR-82005, in late 1985) Ulyanovsk (GAZ 977); by January 1995, 51 built, comprising 19 at Kiev (including one military) and 32 (including six military) at Ulyanovsk. Production continues at nominal five per year. First international commercial operator was Air Foyle of Luton, UK, which wet leases three An-124s from Antonov OKB, with option on two more; eight available to HeavyLift (UK)/VolgaDnepr (Russia) for charter operations. Other operators include Ajax, the freight subsidiary of ARIA (two + one on order); Rossiya division of Aeroflot (two for state missions + two), Antonov Airtrack (one + one), and Transcharter (one)

DESIGN FEATURES: World's largest production aircraft; configuration similar to Lockheed C-5 Galaxy, except for low-mounted tailplane, upward-hinged visor type nose and rear

Antonov An-72P/An-76, with thrust reverser doors open and flaps extended (*Kenneth Munson*)

Antonov An-124 heavy freight transport in the insignia of VolgaDnepr *(Paul R. Duffy)*

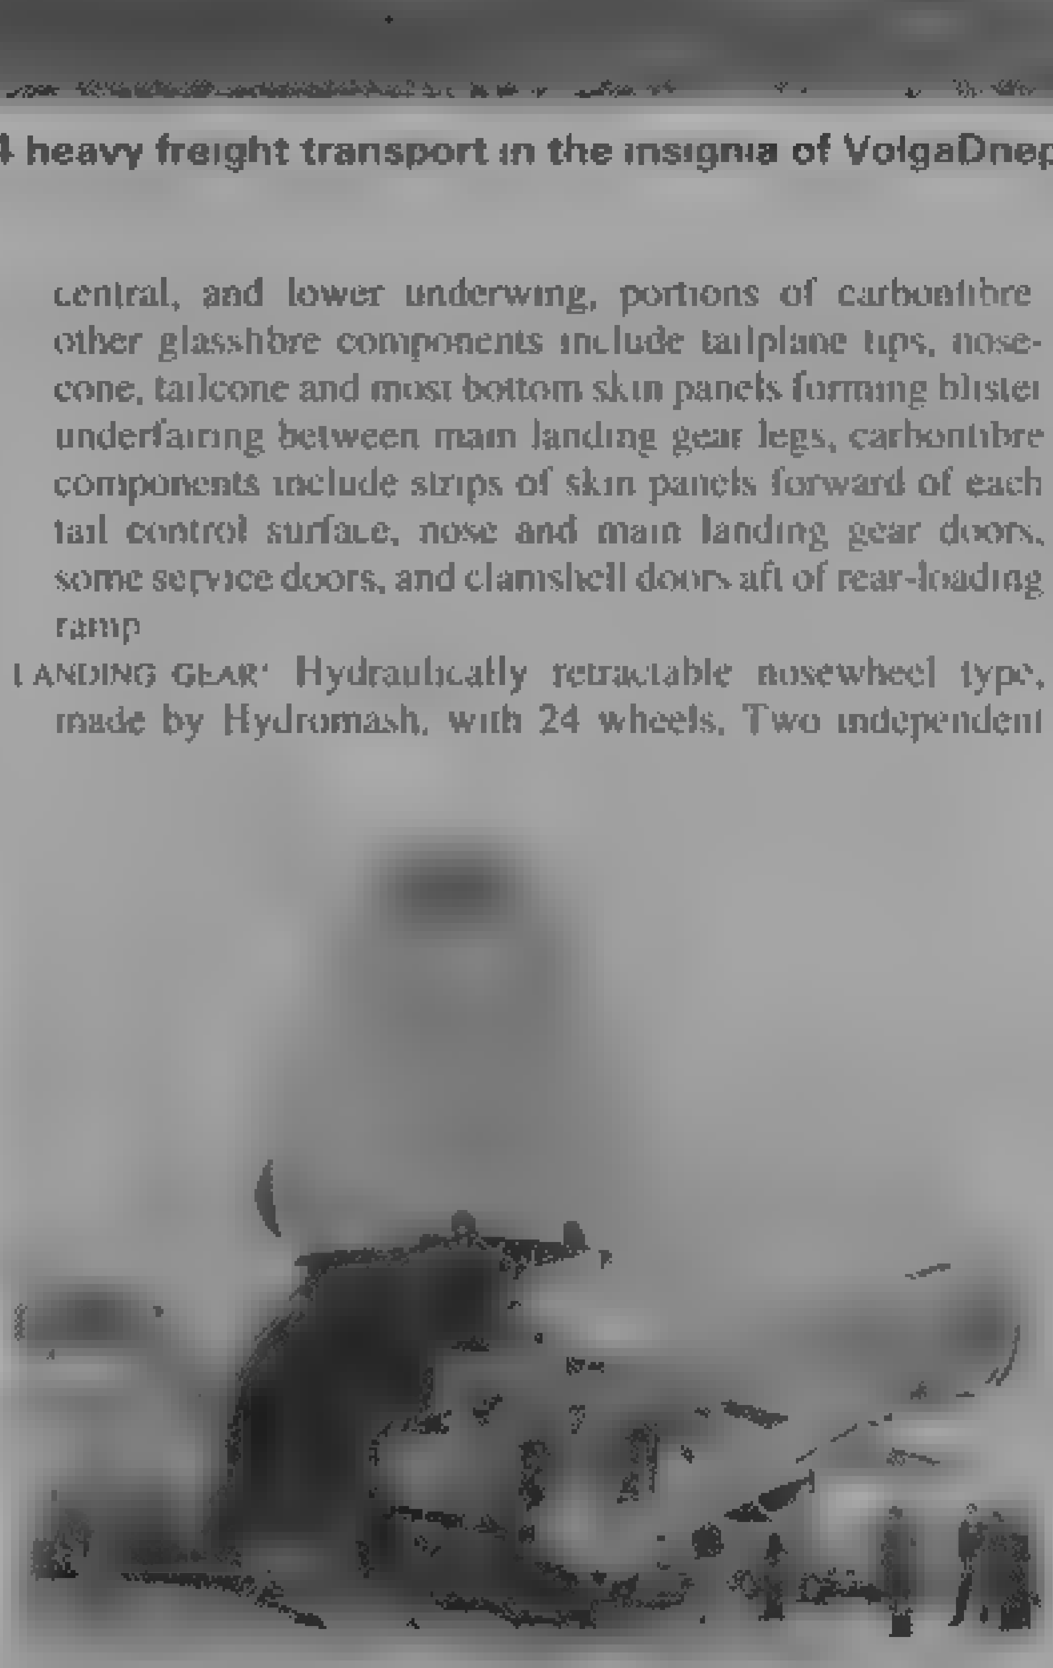
1994

fuselage ramp/door for simultaneous front and rear loading/unloading, 100 per cent fly-by-wire control system, titanium floor throughout constant-section main hold, which is lightly pressurised, with a fully pressurised cabin for passengers above, landing gear for operation from unprepared fields, hard packed snow and ice covered swampland, steerable nosewheels and mainwheels permit turns on 45 m (148 ft) wide runway. Supercritical wings, with anhedral, sweepback approximately 35° on inboard leading-edge, 32° outboard, all tail surfaces sweptback.

FLYING CONTROLS: Fly-by-wire, with all surfaces hydraulically actuated, two-section ailerons, three-section single-slotted Fowler flaps and six-section full-span leading-edge flaps on each wing, small slot in outer part of two inner flap sections each side to optimise aerodynamics; 12 spoilers on each wing, forward of trailing-edge flaps, no wing fences, vortex generators or tabs; hydraulic flutter dampers on ailerons, rudder and each elevator in two sections, without tabs but with hydraulic flutter dampers, fixed incidence tailplane, control runs (and other services) channelled along fuselage roof.

STRUCTURE: Basically conventional light alloy, but 5,500 kg (12,125 lb) of composites make up more than 1,500 m² (16,150 sq ft) of surface area, giving weight saving of more than 2,000 kg (4,410 lb), each wing has one-piece root-to-tip upper surface extruded skin panel, strip of carbonfibre skin panels on undersurface forward of control surfaces, and glassfibre tip, front and rear of each flap guide fairing of glassfibre, centre portion of carbonfibre, central frames of semi-monocoque fuselage each comprise four large forgings; fairings over intersection of fuselage double-bubble lobes in line with wing, from rear of flight deck to plane of fin leading-edge, primarily of glassfibre, with central, and lower underwing, portions of carbonfibre; other glassfibre components include tailplane tips, nosecone, tailcone and most bottom skin panels forming blister underfairing between main landing gear legs, carbonfibre components include strips of skin panels forward of each tail control surface, nose and main landing gear doors, some service doors, and clamshell doors aft of rear-loading ramp.

LANDING GEAR: Hydraulically retractable nosewheel type, made by Hydromash, with 24 wheels. Two independent forward-retracting and steerable twin-wheel nose units, side by side. Each main gear comprises five independent inward-retracting twin-wheel units, front two units on each side steerable. Each mainwheel bogie enclosed by separate upper and lower doors when retracted. Nosewheel doors and lower mainwheel doors close when gear extended. All wheel doors of carbonfibre. Main gear bogies retracted individually for repair or wheel change. Mainwheel tyres size 1,270 × 510 mm. Nosewheel tyres size 1,120 × 450 mm. Aircraft can 'kneel', by retracting nosewheels and settling on two extendable 'feet', giving floor of hold a 3.5° slope to assist loading and unloading. Rear of cargo hold lowered by compressing main gear oleos. Carbon brakes normally toe operated, via rudder pedals. For severe braking, pedals depressed by toes and heels.



One of six 31.5 tonne excavators carried to Kuwait from Stansted Airport by Air Foyle Antonov An-124

1994

POWER PLANT: Four ZMKB Progress D-18T turbofans, each 229.5 kN (51,590 lb st), thrust reversers standard. Engine cowlings of glassfibre; pylons have carbonfibre skin at rear end. All fuel in 10 integral tanks in wings, total capacity 348,740 litres (92,128 US gallons, 76,714 Imp gallons).

ACCOMMODATION: Crew and passenger accommodation on upper deck, freight and/or vehicles on lower deck. Flight crew of six, in pairs, on flight deck, with place for loadmaster in lobby area (10 to 12 cargo handlers and servicing staff carried on commercial flights). Pilot and co-pilot on fully adjustable seats, which rotate for improved access. Two flight engineers, on wall-facing seats on starboard side, have complete control of master fuel cocks, detailed systems instruments, and digital integrated data system with CRT monitor. Behind pilot are navigator and communications specialist, on wall-facing seats. Between flight deck and wing carry-through structure, on port side, are toilets, washing facilities, galley, equipment compartment, and two cabins for up to six relief crew, with table and facing bench seats convertible into bunks. Aft of wing carry-through is passenger cabin for 88 persons. Hatches in upper deck provide access to wing and tail unit for maintenance when workstands not available. Flight deck and passenger cabin each accessible from cargo hold by hydraulically folding ladder, operated automatically with manual override. Rearward-sliding and jettisonable window each side of flight deck. Primary access to flight deck via airstair door, with ladder extension, forward of wing on port side. Smaller door forward of this and slightly higher. Door from main hold aft of wing on starboard side. Upper deck doors at rear of flight deck on starboard side and at rear of passenger cabin on each side. Emergency exit from upper deck aft of wing on each side. Hydraulically operated visor type upward-hinged nose takes 7 minutes to open fully, with simultaneous extension of folding nose loading ramp. When open, nose is steadied by reinforcing arms against wind gusts. No hydraulic, electrical or other system lines broken when nose is open. Radar wiring passes through hollow tube in hinge. Hydraulically operated rear loading doors take 3 minutes to open, with simultaneous extension of three-part folding ramp. This can be locked in intermediate position for direct loading from truck. Aft of ramp, centre panel of fuselage undersurface hinges upward, clamshell door to each side opens downward. Completely unobstructed lower deck freight hold has titanium floor, attached 'mobilely' to lower fuselage structure to accommodate changes of temperature, with rollgangs and retractable attachments for cargo tiedowns. Narrow catwalk along each sidewall facilitates access to, and mobility past, loaded freight. Payloads include largest CIS main battle tanks, complete missile systems, 12 standard ISO containers, oil well equipment and earth movers, HeavyLift/VolgaDnepr aircraft transport Airbus wings in Europe. No personnel carried normally on lower deck in

1995

flight, because of low pressurisation. Two electric travelling cranes in roof of hold, each with two lifting points, offer total lifting capacity of 20,000 kg (44,100 lb). Two winches each pull a 3,000 kg (6,614 lb) load.

SYSTEMS: Entire interior of aircraft is pressurised and air conditioned. Maximum pressure differential 0.55 bar (7.8 lb/sq in) on upper deck, 0.25 bar (3.55 lb/sq in) on lower deck. Four independent hydraulic systems. Quadruple redundant fly-by-wire flight control system, with mechanical emergency fifth channel to hydraulic control servos. Special secondary bus electrical system. Landing lights under nose and at front of each main landing gear fairing. APU in rear of each landing gear fairing for engine starting, can be operated in the air or on the ground to open loading doors for airdrop from rear or normal ground loading/unloading, as well as for supplying electrical, hydraulic and air conditioning systems. Bleed air anti-icing of wing leading edges. Electro-impulse de-icing of fin and tailplane leading edges.

AVIONICS: *Radar*: Two dielectric areas of nose visor enclose forward-looking weather radar and downward-looking ground mapping/nav radar.

Flight: Hemispherical dielectric fairing above centre-fuselage for satellite nav receiver, quadruple INS, Loran and Omega.

Instrumentation: Conventional flight deck equipment, including automatic flight control system panel at top of glareshield, weather radar screen and moving map display forward of throttle and thrust reverse levers on centre console. No electronic flight displays. Dual attitude indicator/flight director and HSIs, and vertical tape engine instruments.

EQUIPMENT: Small two-face mirror, of V form, enables pilots to adjust their seating position until their eyes are reflected in the appropriate mirror, which ensures optimum field of view from flight deck.

DIMENSIONS, EXTERNAL:

Wing span	73.30 m (240 ft 5¾ in)
Wing aspect ratio	8.55
Length overall	69.10 m (226 ft 8½ in)
Height overall	21.08 m (69 ft 2 in)
Wheel track	8.00 m (26 ft 3 in)
Wheelbase (centre row mainwheels)	22.90 m (75 ft 1½ in)

DIMENSIONS, INTERNAL:

Cargo hold: Length	36.0 m (118 ft 1¼ in)
Width at floor	6.40 m (21 ft 0 in)
Max width	6.68 m (21 ft 11 in)
Max height	4.4 m (14 ft 5¼ in)
Volume	1,000 m³ (35,315 cu ft)

AREAS:

Wings, gross	628.0 m² (6,760.0 sq ft)

WEIGHTS AND LOADINGS (A: basic An-124, B: An-124-100):

Operating weight empty: A	175,000 kg (385,800 lb)
Max payload: A	150,000 kg (330,700 lb)
B	120,000 kg (264,550 lb)
Max ramp weight: B	398,000 kg (877,425 lb)
Max T-O weight: A	405,000 kg (892,875 lb)
B	392,000 kg (864,200 lb)
Max landing weight: B	330,000 kg (727,513 lb)
Max zero-fuel weight: A	325,000 kg (716,500 lb)
Max wing loading: A	644.9 kg/m² (132.1 lb/sq ft)
Max power loading: A	441.2 kg/kN (4.32 lb/lb st)

PERFORMANCE (Basic An-124):

Max cruising speed	467 kts (865 km/h; 537 mph)
Normal cruising speed at 10,000-12,000 m (32,800-39,370 ft)	432-459 kts (800-850 km/h; 497-528 mph)
Approach speed	124-140 kts (230-260 km/h; 143-162 mph)
T-O balanced field length at max T-O weight	3,000 m (9,850 ft)
T-O run	2,520 m (8,270 ft)
Landing run at max landing weight	900 m (2,955 ft)
Range: with max payload	2,430 n miles (4,500 km; 2,795 miles)
with max fuel	8,900 n miles (16,500 km; 10,250 miles)

OPERATIONAL NOISE LEVELS:
Stated to meet ICAO requirements

UPDATED

ANTONOV An-140

TYPE: Twin-turboprop short range transport.

PROGRAMME: Announced 1993 as An-24 replacement; prototype with TV7-117S engines under construction, first flight scheduled 1995, certification to ICAO Cat II standards intended; series production for Russia and Ukraine under way at KhAPA aircraft manufacturing centre; version with PW120 series turboprops under development.

DESIGN FEATURES: Conventional high-wing monoplane (see accompanying illustration); engines mounted underwing; main landing gear retracts into fairings on sides of lower fuselage.

LANDING GEAR: Retractable tricycle type, twin wheels on each unit. Able to operate from gravel or unpaved fields.

POWER PLANT: Two 1,850 kW (2,480 shp) Klimov TV7-117S turboprops, driving Stupino six-blade propellers, or, optionally, two 1,864 kW (2,500 shp) Pratt & Whitney

Canada PW127A turboprops, driving Hamilton Standard 247F propellers

ACCOMMODATION: Crew of two plus cabin attendant, basic seating for 44 or 52 passengers, four-abreast with centre aisle, at 81 cm (32 in) or 75 cm (29.5 in) pitch respectively; seats and baggage compartment can be folded against cabin walls for freight carrying; door at rear of cabin on port side, with service door opposite, emergency exit each side at front of cabin, toilet at rear of cabin. Accommodation air conditioned and pressurised

DIMENSIONS, EXTERNAL:

Wing span	23.29 m (76 ft 5 in)
Length overall	20.90 m (68 ft 7 in)
Height overall	7.70 m (25 ft 3 in)

PERFORMANCE (estimated):

Max cruising speed at 7,600 m (25,000 ft) 310 kts (575 km/h, 357 mph)

Balanced runway length 1,300 m (4,265 ft)

Designed range at 280 kts (520 km/h, 323 mph) at 7,200 m (23,620 ft):

with max payload 960 n miles (1,780 km, 1,105 miles)

with max fuel 2,023 n miles (3,750 km, 2,330 miles)

UPDATED

ANTONOV An-180

TYPE: Twin-propfan medium-range passenger transport

PROGRAMME: Company funded programme; first details, and model, at 1991 Paris Air Show; configuration changed with engines on tailplane tips, 1992; studies and wind tunnel tests continuing

DESIGN FEATURES: Unique configuration, with propfans at tips of dihedral tailplane; low-mounted sweptback wings; circular-section fuselage and all-sweptback tail surfaces. Designed to equal, or exceed, highest Western standards, burning less fuel per passenger-km per engine than equivalent Western aircraft, equipped for automated navigation at all flight stages and for ICAO Cat. IIIa automatic landing. Airframe design life 60,000 flying hours

POWER PLANT: Two ZMKB Progress D-27 tractor propfans, each rated at 10,305 kW (13,820 shp), mounted on tips of tailplane

ACCOMMODATION: Two or three crew, single-class seating for 163 to 175 passengers or mixed class seating for 150 to 156, in pairs, six-abreast, with two aisles; seven LD3 containers underfloor; four seats for cabin attendants by passenger doors (port side) and service doors (starboard); one toilet at front, two at rear. Available in 180/200 passenger, mixed passenger/freight and all-freight versions with side-loading door. Emergency exit over each wing

DIMENSIONS, EXTERNAL:

Wing span	35.83 m (117 ft 6¾ in)
Length overall	40.90 m (134 ft 2¼ in)
Height overall	11.15 m (36 ft 7 in)

WEIGHTS AND LOADINGS:

Max payload	18,000 kg (39,680 lb)
Max T-O weight	67,500 kg (148,810 lb)

PERFORMANCE (estimated):

Nominal cruising speed 432 kt (800 km/h, 497 mph)

Nominal cruising height 9,100-10,100 m (29,850-33,135 ft)

Nominal field length 2,200-2,600 m (7,220-8,530 ft)

Range, with reserves:

from 2,200 m (7,220 ft) field:

with max payload 971 n miles (1,800 km; 1,118 miles)

with max fuel 4,155 n miles (7,700 km, 4,785 miles)

from 2,600 m (8,530 ft) field:

with max payload 1,780 n miles (3,300 km; 2,050 miles)

with max fuel 4,047 n miles (7,500 km, 4,660 miles)

UPDATED

ANTONOV An-218

TYPE: Twin-turbofan passenger transport

PROGRAMME: Announced at 1991 Paris Air Show; mockup constructed, first flight scheduled for 1996, but development now deferred

CURRENT VERSIONS: **An-218-100**: Basic version as *described in detail*.

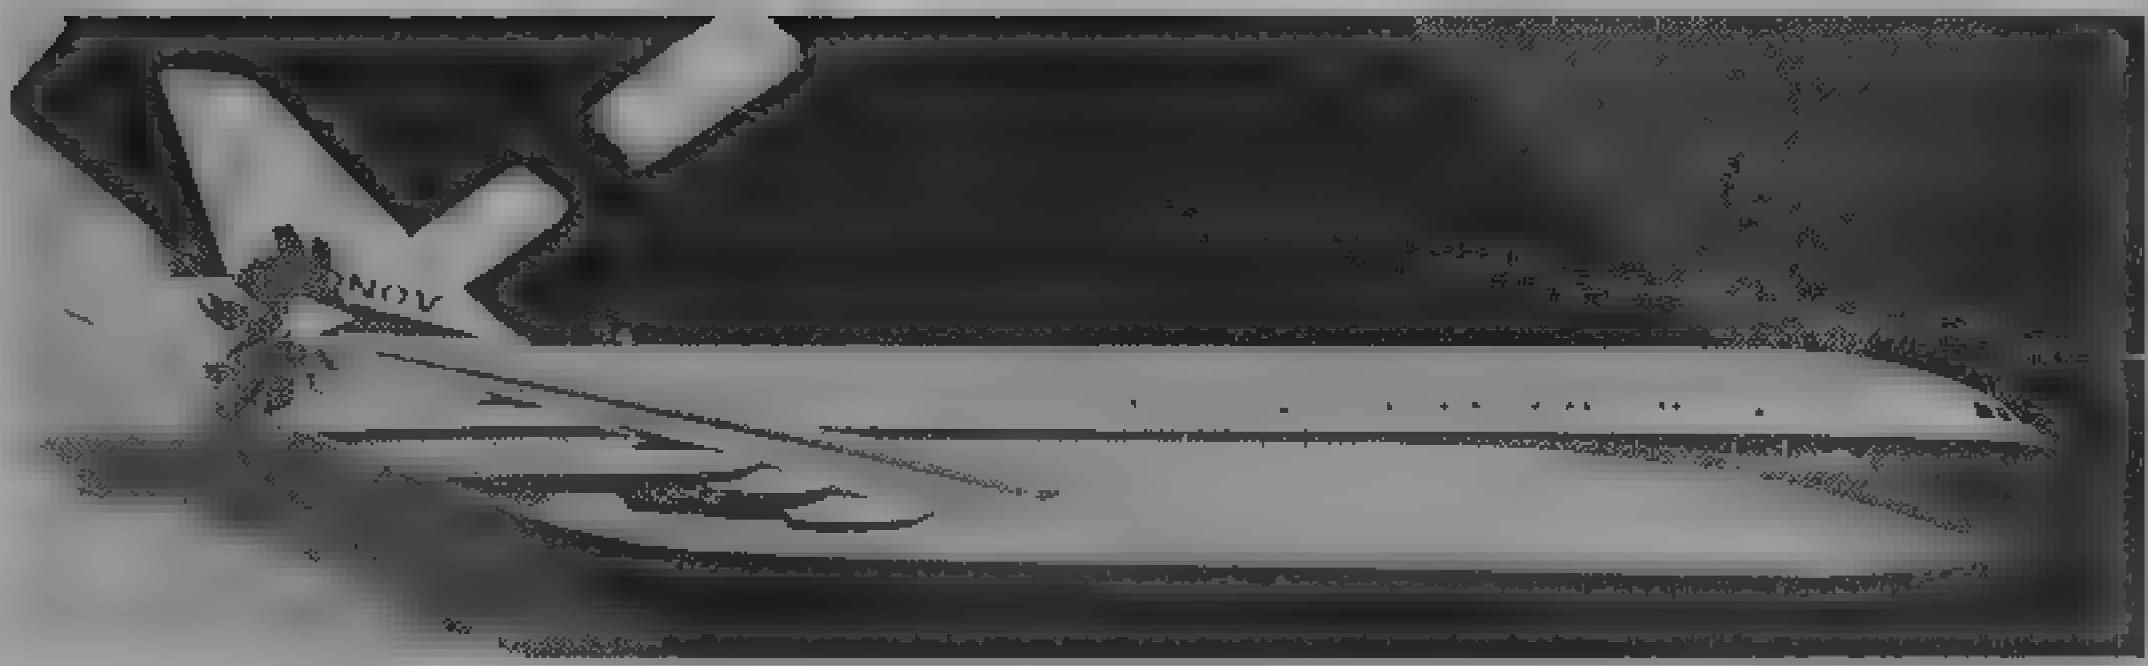
An-218-200: Extended range, two D-18TR (modified D-18TM), each 275 kN (61,820 lb st), or PW4060, CF6-80C2B6, or RB211-524H4 engines; additional fuel tanks in cargo compartments, enhanced cabin comfort for 220 passengers, range 5,720 n miles (10,600 km, 6,585 miles).

An-218-300: Long-range version; fuselage shortened by 11.50 m (37 ft 8¾ in) by removal of plugs; additional fuel in cargo compartments, 195 passengers, range 6,045 n miles (11,200 km, 6,960 miles).

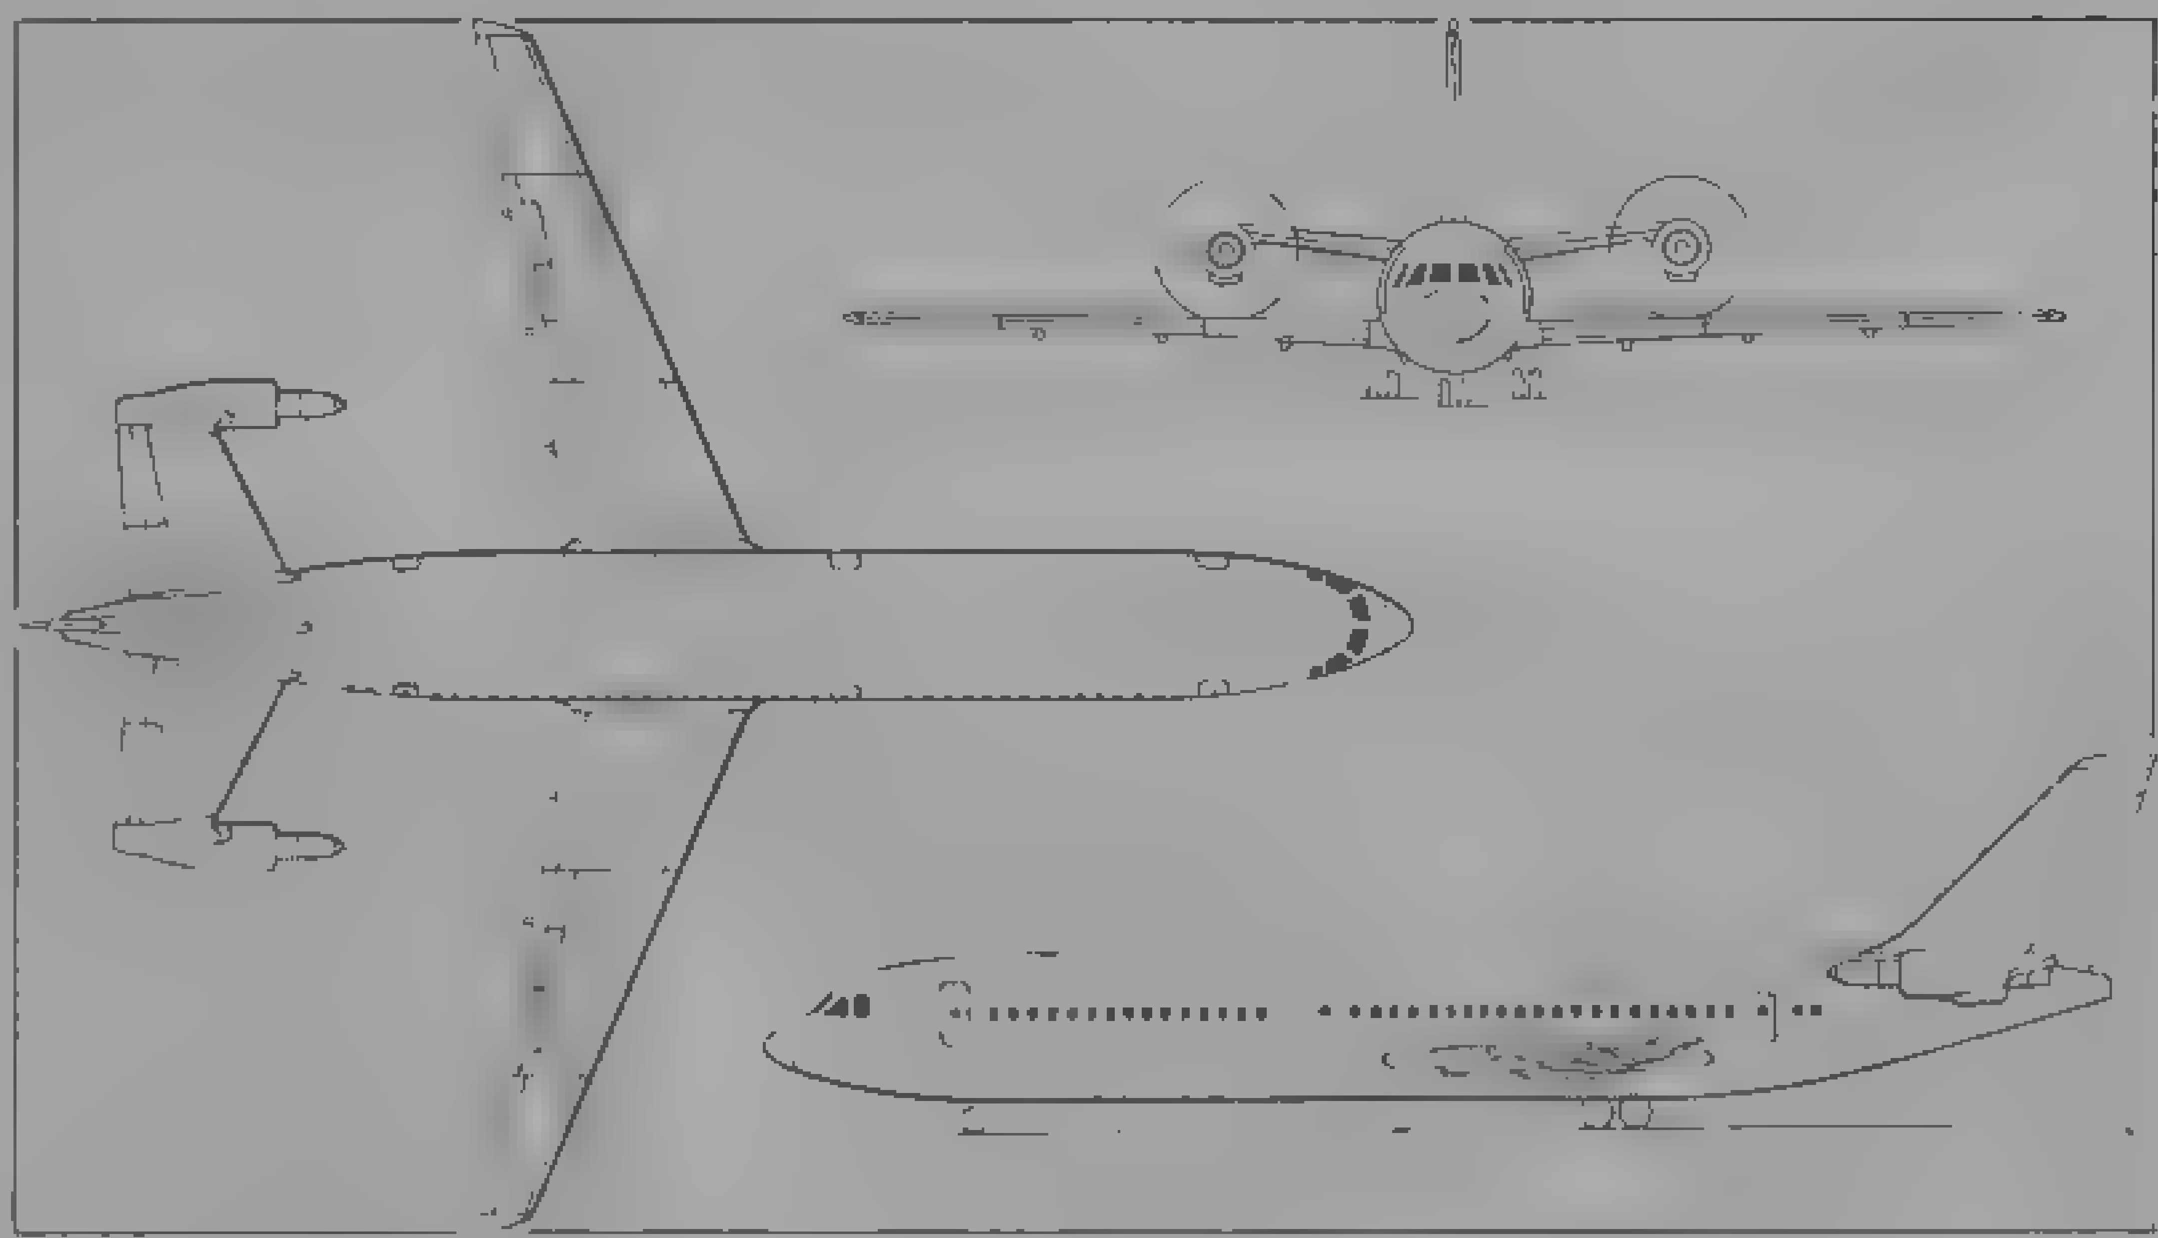
An-218-400: Under study; fuselage lengthened, 400 passengers, range 5,935 to 6,475 n miles (11,000 to 12,000 km; 6,835 to 7,455 miles)

DESIGN FEATURES: In general class of very similar Airbus A330, but slightly smaller and lighter in weight, with less fuel. Certification to ICAO Cat. IIIa standards intended

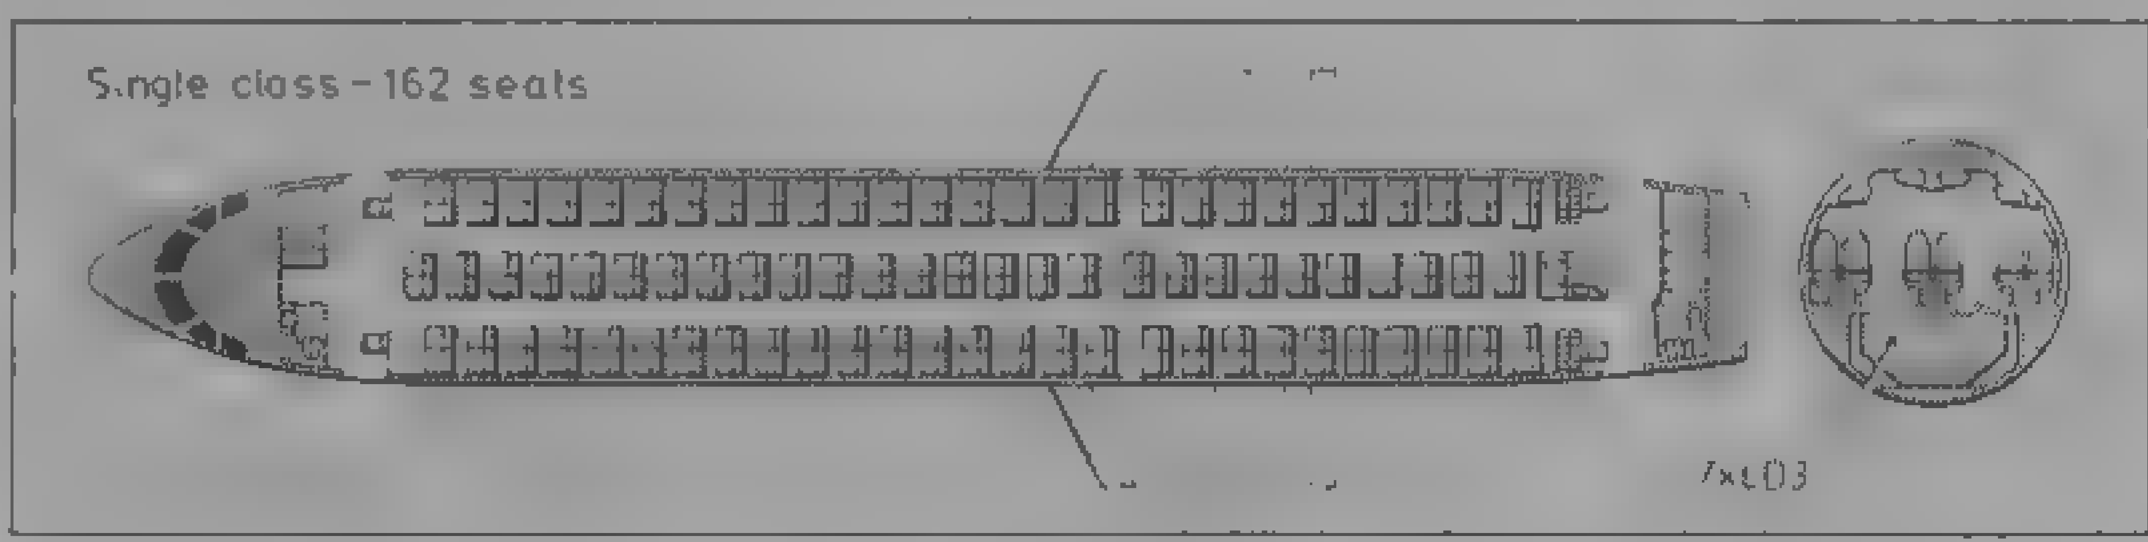
POWER PLANT: Two ZMKB Progress D-18TM turbofans, each 250-275 kN (56,200-61,820 lb st), in underwing pods



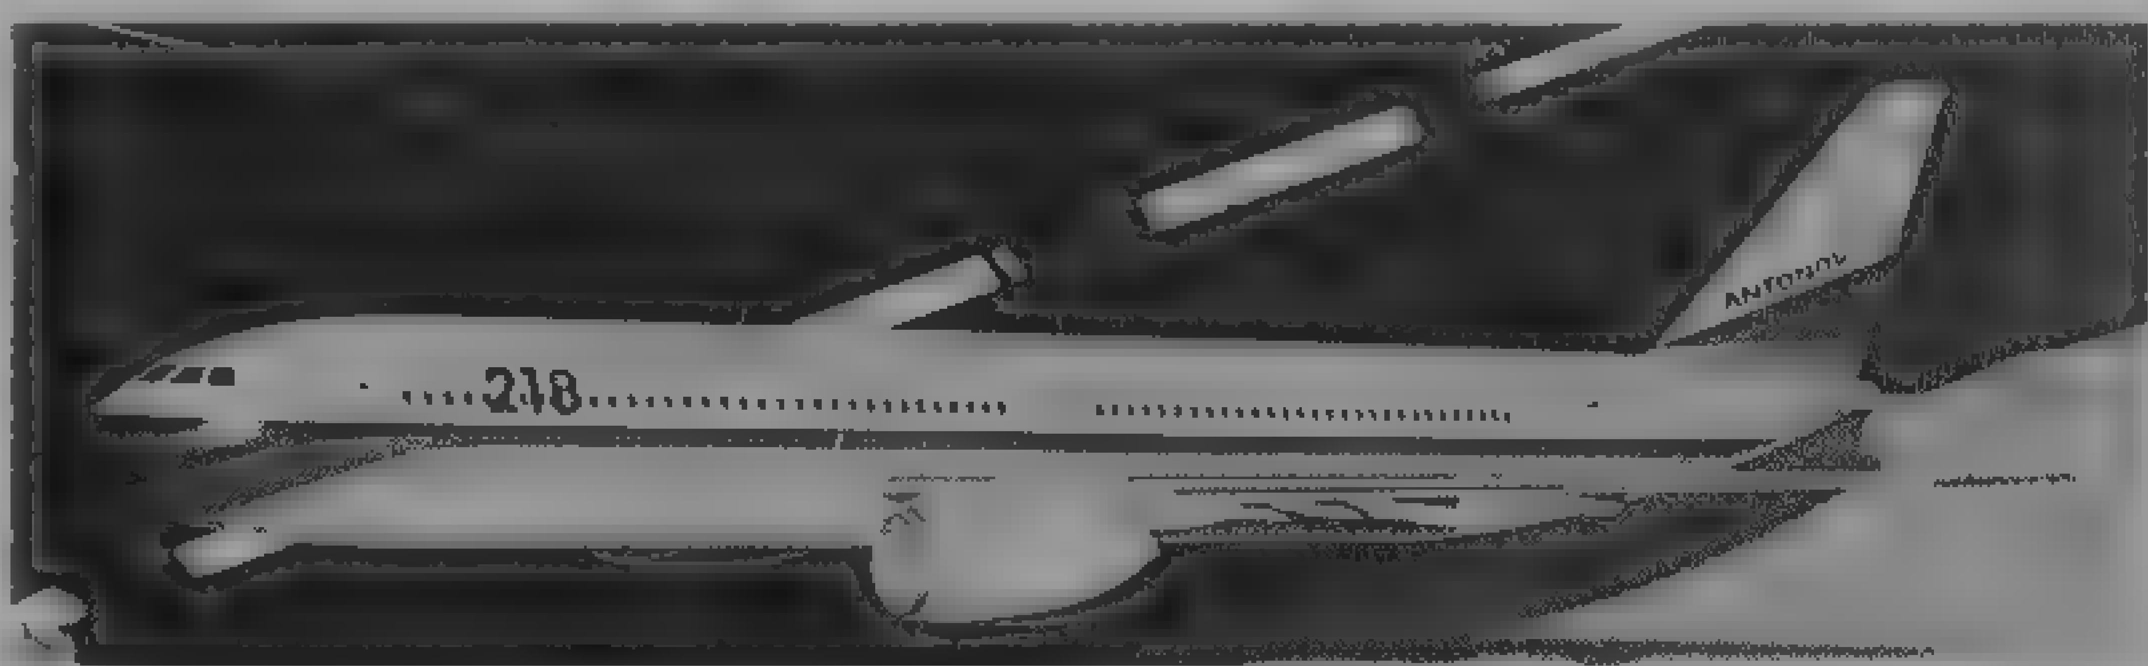
Model of Antonov An-180 propfan passenger transport *(Paul Jackson)* 1995



Latest configuration of Antonov An-180 twin-propfan airliner *(Jane's/Mike Keep)* 1994



Cabin layout of Antonov An-180 showing fore and aft galleys, four attendants' seats and three toilets *(Jane's/Mike Keep)* 1994



Model of Antonov An-218-100 transport *(Paul Jackson)* 1995

ACCOMMODATION: Two pilots on modern flight deck with electronic displays; three basic cabin configurations: (1) 292 passengers: 18 first class six-abreast at 102 cm (40 in) pitch, 64 business class at 87 cm (34.25 in) pitch and 210 econ class at 81 cm (32 in) pitch. (2) 350 passengers seven/eight abreast, all econ class. (3) 400 passengers seven/nine-abreast at 75 cm (29.5 in) pitch. 24 freight/baggage containers in underfloor compartments. Four cabin doors on port side; service doors opposite

DIMENSIONS, EXTERNAL:

Wing span	50.00 m (164 ft 0½ in)
Length overall	59.79 m (196 ft 2 in)
Height overall	15.70 m (51 ft 6 in)

DIMENSIONS, INTERNAL:

Cargo compartments:

Volume: front	81.0 m³ (2,860 cu ft)
rear	57.5 m³ (2,030 cu ft)

Baggage compartment volume for outsize cargoes 42.0 m³ (1,483 cu ft)

WEIGHTS AND LOADINGS:

Max payload	42,000 kg (92,600 lb)

PERFORMANCE (estimated):

Nominal cruising speed at 10,600-11,600 m (34,775-38,000 ft) 458-470 kts (850-870 km/h, 528-540 mph)

Required runway length, 30°C 2,900 m (9,500 ft)

Range, with reserves:

with 350 passengers 3,400-4,045 n miles (6,300-7,500 km; 3,915-4,660 miles)

with 292 passengers 3,885-4,585 n miles (7,200-8,500 km, 4,475-5,280 miles)

Fuel efficiency 18 g/passenger km

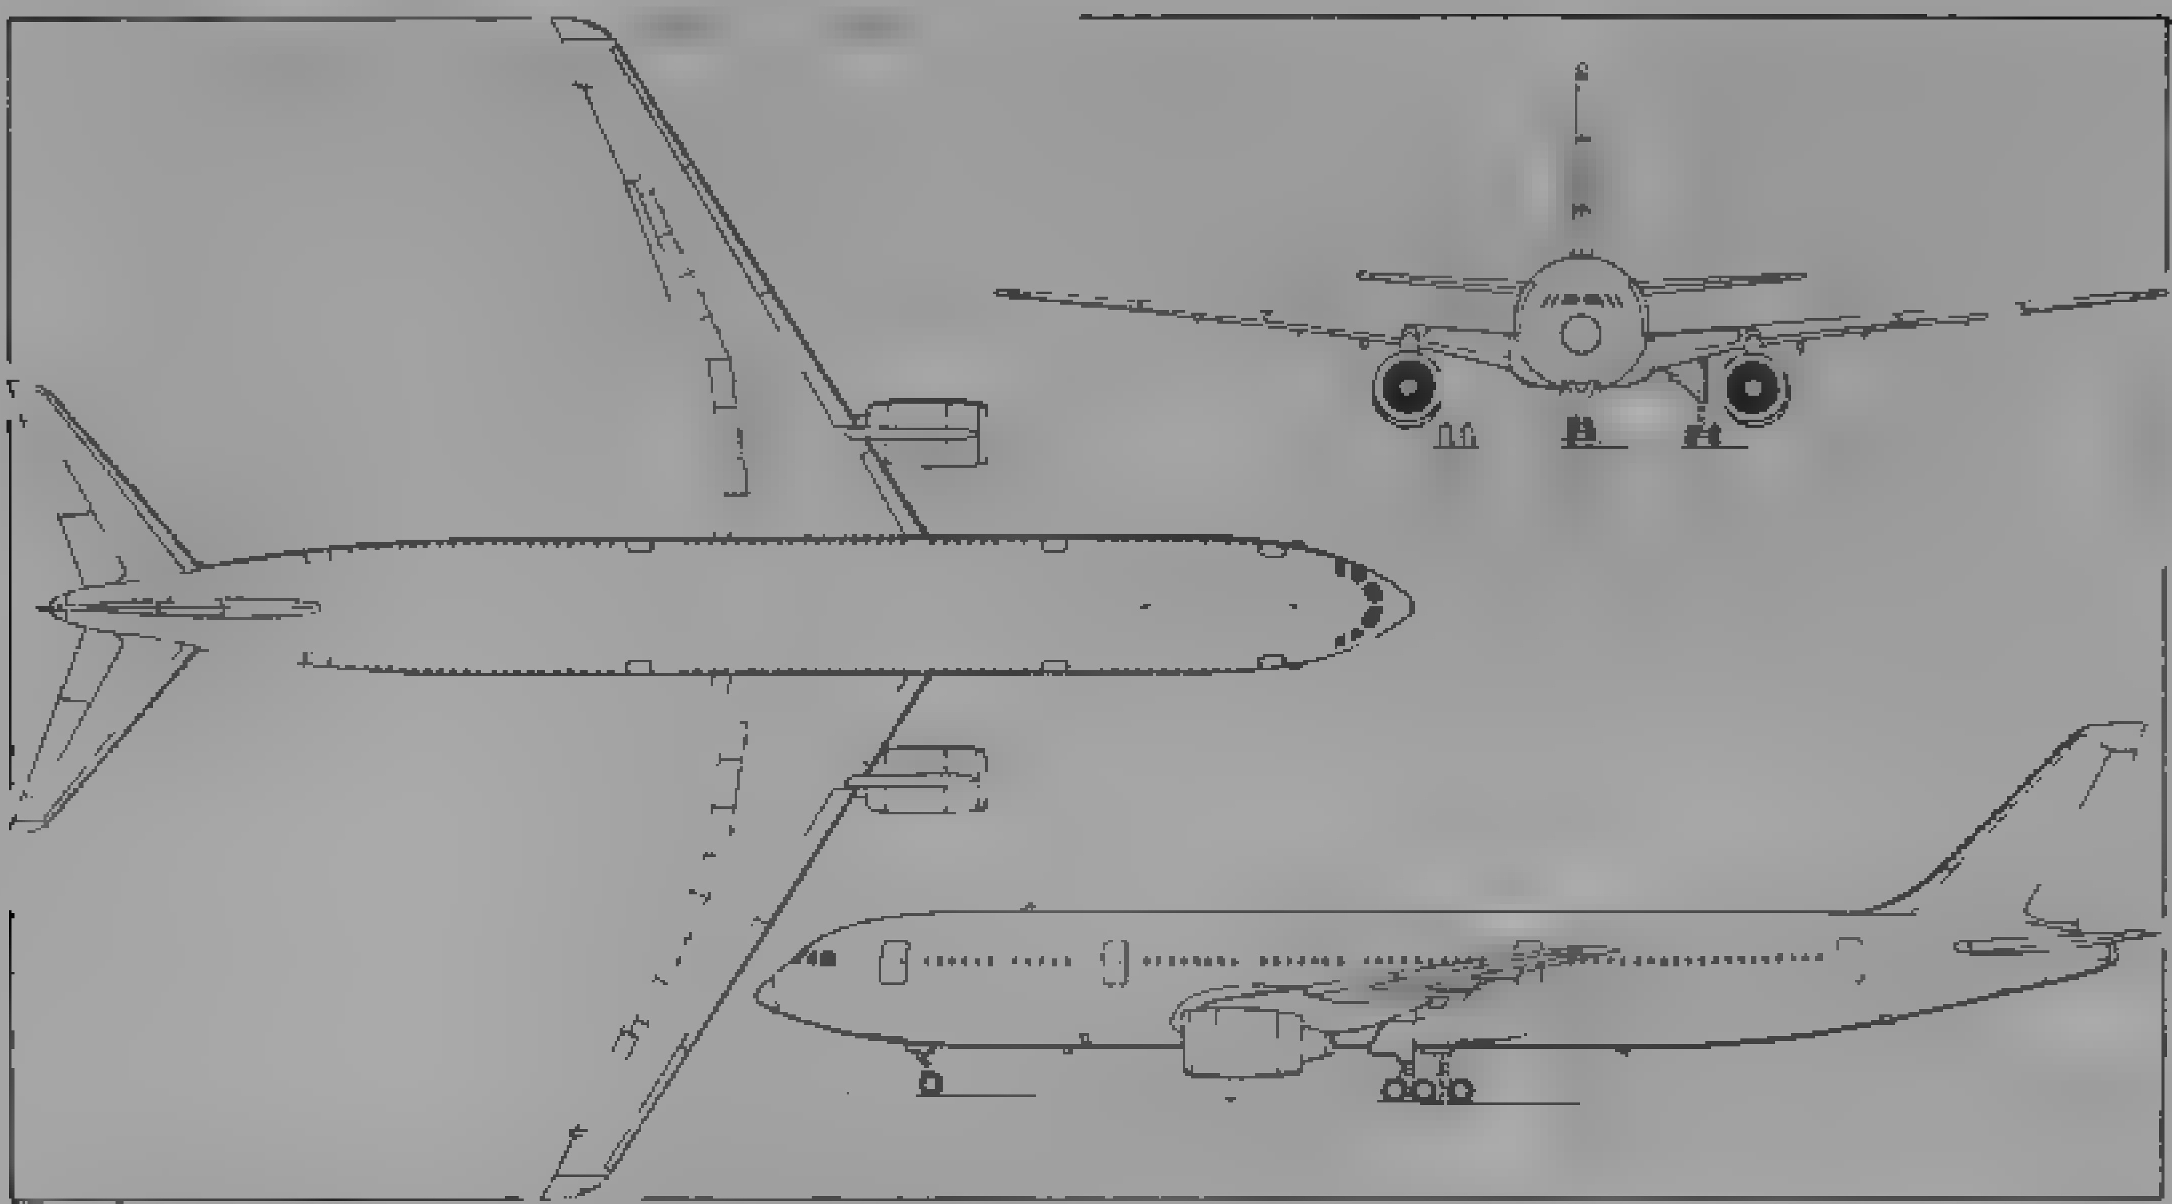
UPDATED

ANTONOV An-225 MRIYA (DREAM)

NATO reporting name: Cossack

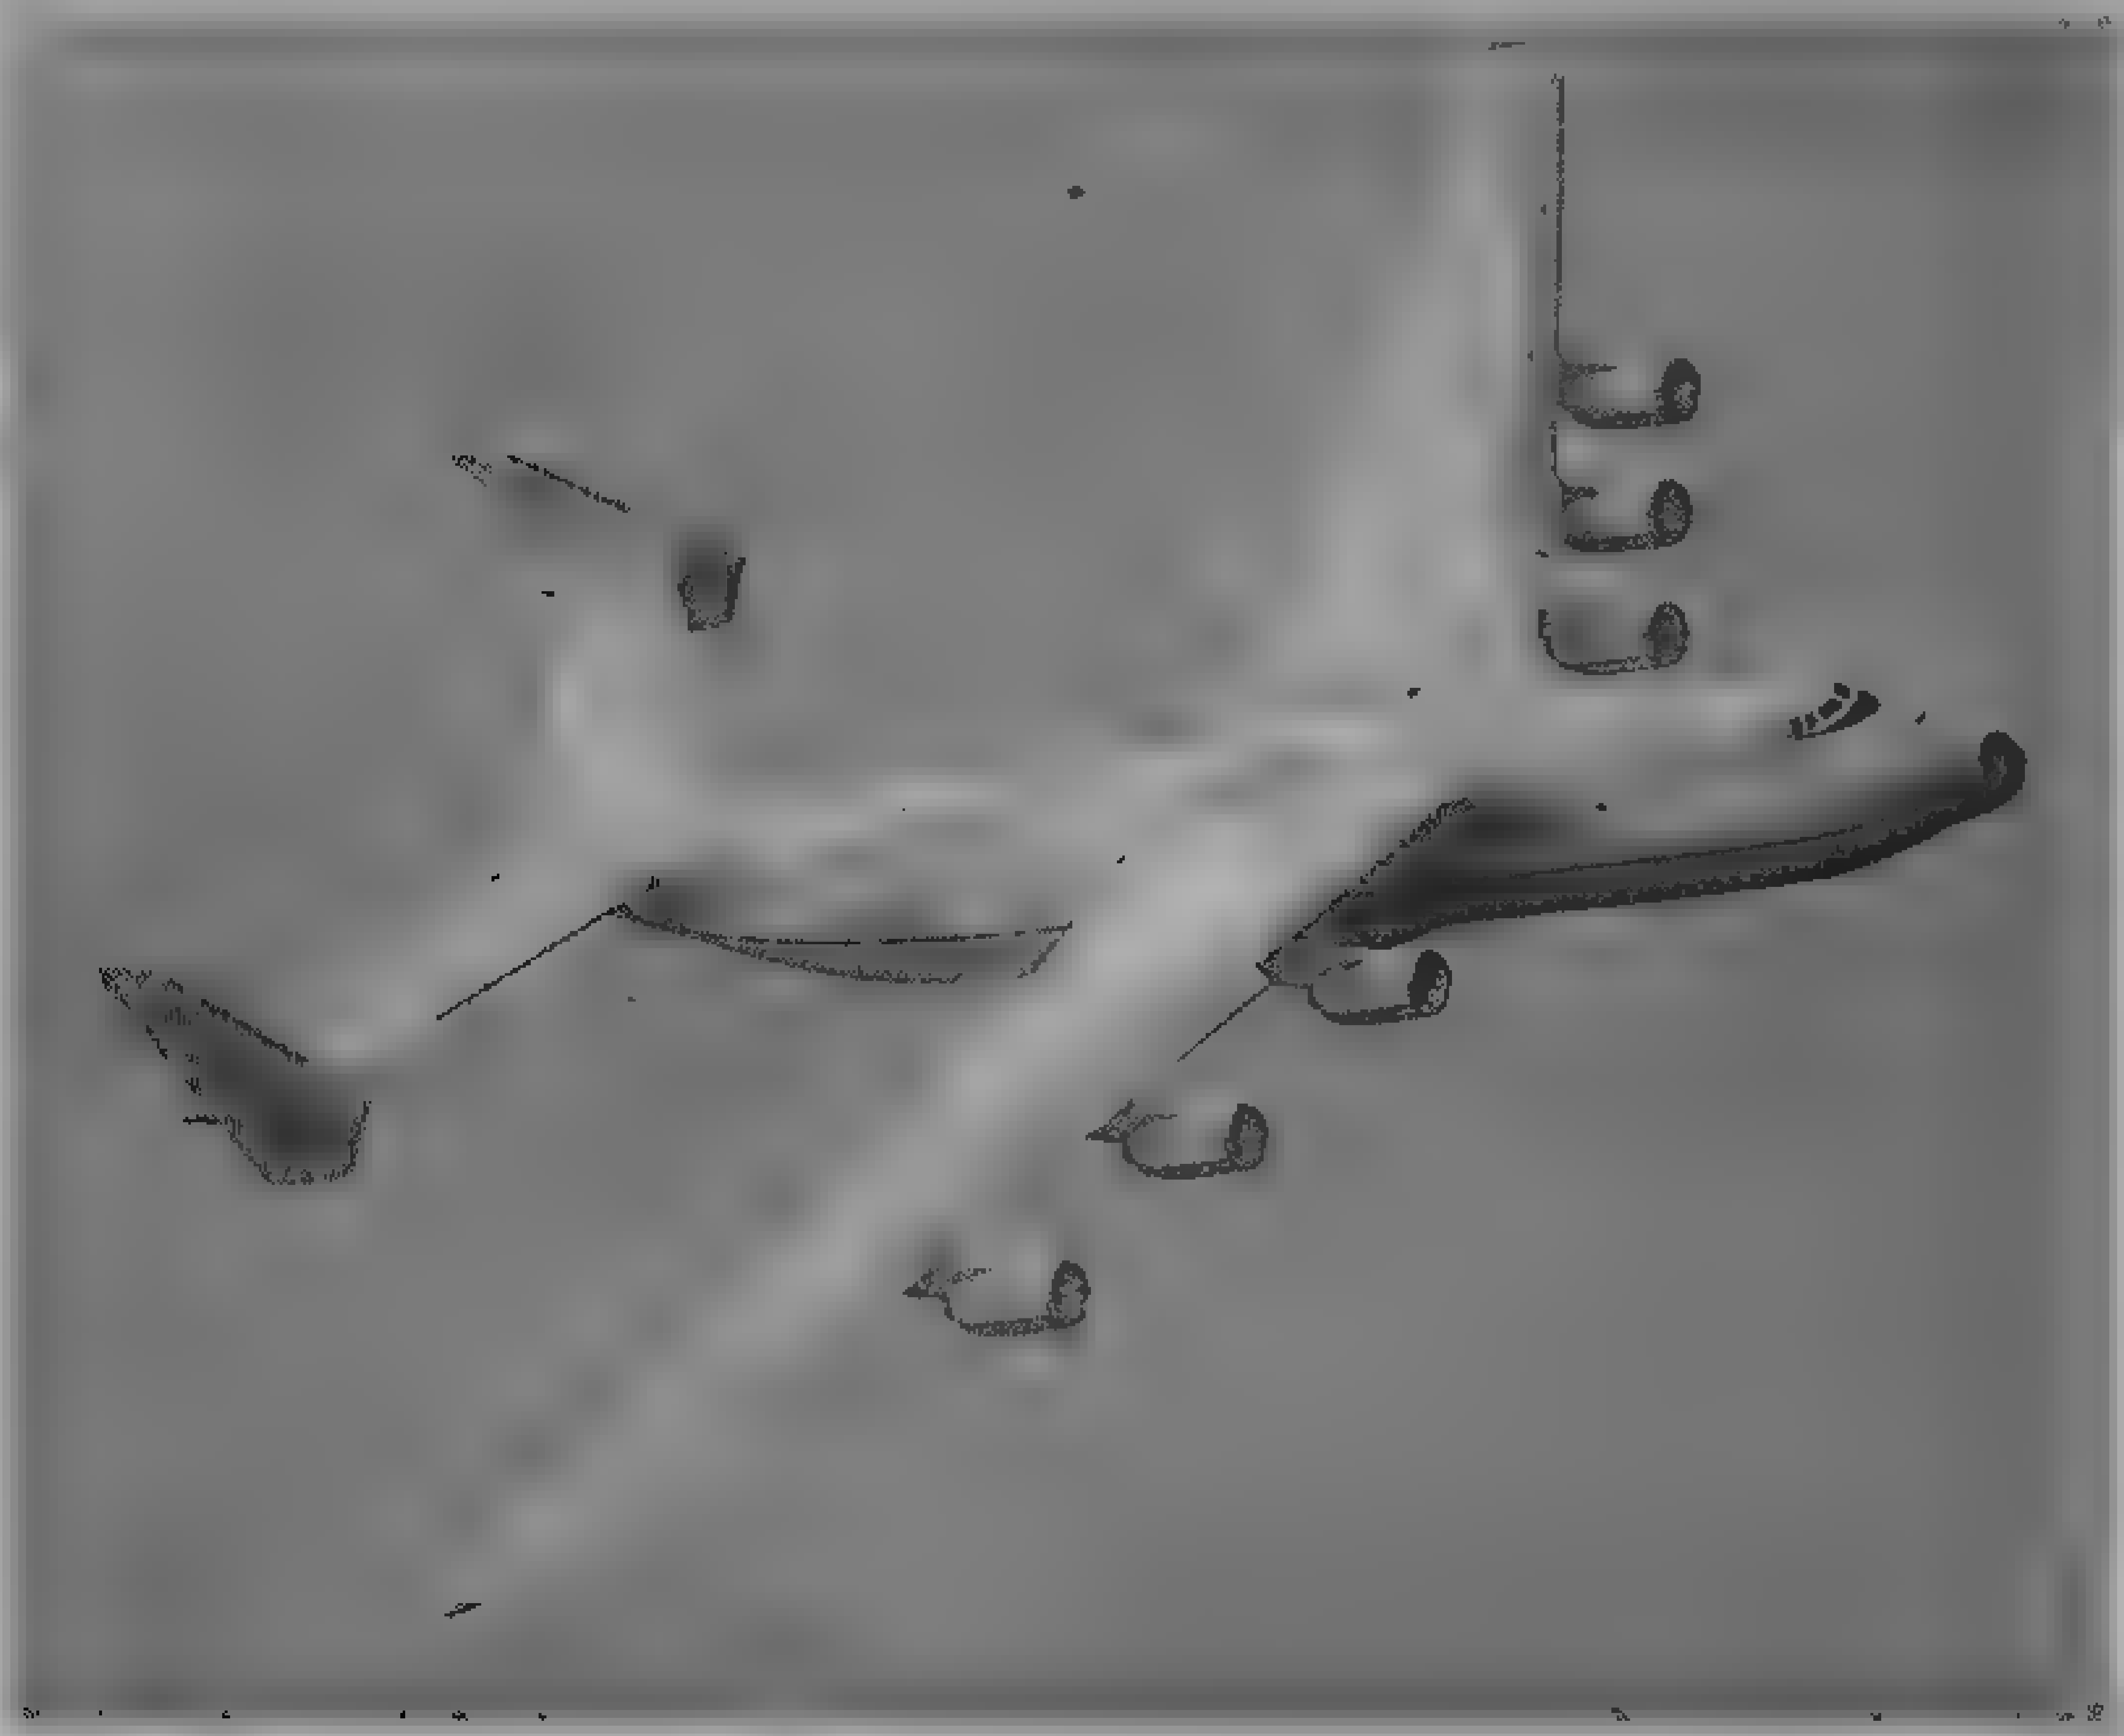
TYPE: Six-turbofan heavy transport for internal/external payloads

PROGRAMME: Design studies began mid-1985; prototype (SSSR 480182, now UR 82060) made 75 minutes first flight "from 1,000 m (3,280 ft) runway" on 21 December 1988, three weeks after unveiling at Kiev; total of 106



Antonov An-218-100 transport (two ZMKB Progress D-18TM turbofans) *(Jane's/Dennis Punnett)*

1994



World's largest aeroplane, the Antonov An-225 Mriya heavy transport *(Paul Jackson)*

1995

Antonov An-225 Mriya (NATO 'Cossack') six-turbofan heavy freight transport *(Jane's/Dennis Punnett)*

1989

records set on 22 March 1989 during 3½ hours flight taking off at 508,200 kg (1,120,370 lb), with 156,300 kg (344,576 lb) payload, flew 2,000 km closed circuit at 438.75 knots (813.09 km/h; 505.24 mph), with maximum altitude of 12,340 m (40,485 ft) en route; first flight carrying *Buran* orbiter on back made 13 May 1989 from Baikonur. No more An-225s completed by early 1995, but second aircraft being manufactured for experimental tasks involving aerospace technologies. Projected derivatives, capable of employment as subsonic carrier vehicles to launch into orbit payloads of up to 10 tonnes, include the following:

MAeSS. Under study by Russia and Ukraine, offered to European Space Agency (ESA).

Svityaz. Under study since 1993. Upgraded units of Zenit launcher, produced in Ukraine, offered as space launch vehicle payloads.

Raduga. Testbed for proving and demonstration of aerospace technologies. Documentation submitted to ESA by companies from UK, Russia and Ukraine.

DESIGN FEATURES: First aircraft built to fly at gross weight exceeding one million lb, designed to replace Myasishchev VM-T Atlant as external load-carrier for space orbiters, components of Energiya rocket launch vehicles and other outsize loads; based on An-124, with extended wings and lengthened fuselage to permit 50 per cent increase in maximum T-O weight and payload; basic cabin cross-section and visor type nose door unchanged; rear loading ramp/door deleted and rear fuselage reconfigured with twin fins and rudders on dihedral tailplane to avoid air flow problems when carrying piggyback loads; main landing gear uprated from five to seven pairs of wheels on each side; six engines instead of four, of same type; basically standard An-124 wings attached to new centre-section; anhedral on outer wings only; sweepback 35° on inboard half-span, 32° outboard; all tail surfaces swept back.

FLYING CONTROLS: Fly-by-wire, with all surfaces hydraulically actuated; each wing has two-section aileron, three-section single-slotted Fowler flaps on outer panels and single section on centre-section, and six-section leading-edge flaps on outer panels only; eight airbrakes (inboard) and eight spoilers (outboard) on each wing upper surface and centre-section forward of flaps; no wing fences, vortex generators or tabs; two-section rudder and three-section elevator on each side; control runs (and other services) channelled along fuselage roof.

STRUCTURE: Generally as for An-124.

LANDING GEAR: Hydraulically retractable nosewheel type, made by Hydromash. Two independent forward-retracting and steerable twin-wheel nose units, side by side. Each main gear comprises seven independent inward-retracting twin-wheel units, with tyres size 1,270 × 510 mm. Rear four pairs of wheels on each side steerable. Each mainwheel bogie enclosed by separate upper and lower doors when retracted. Nosewheel doors and lower mainwheel doors close when gear extended. Aircraft can 'kneel', by retracting nosewheels and settling on two extendable 'feet', giving floor a slope to assist loading and unloading. Minimum turning radius about nosewheels 60.0 m (197 ft).

POWER PLANT: Six ZMKB Progress D-18T turbofans, each 229.5 kN (51,590 lb st) and fitted with thrust reverser. Engine cowlings of glassfibre. All fuel in integral tanks in wings, including additional tanks in new centre-section. Maximum capacity estimated at well over 300,000 kg (661,375 lb).

ACCOMMODATION: Flight crew of six, in pairs, on flight deck, with place for loadmaster in lobby area. Pilot and co-pilot on fully adjustable seats that rotate for improved access. Two flight engineers, on wall-facing seats on starboard side. Navigator and communications specialist behind pilot, on wall-facing seats. Rest area for relief crew slightly larger than that of An-124. Cabin for 60 to 70 persons above hold aft of wing carry-through. Primary access to flight deck via airstair door, with ladder extension, forward of wing on port side. Door to main hold aft of wing on starboard side. Hydraulically operated visor type upward-hinged nose takes 7 minutes to open fully, with simultaneous extension of folding nose loading ramp. Completely unobstructed lower deck freight hold, 43.0 m (141 ft) long, has titanium floor, attached 'mobilely' to lower fuselage structure to accommodate changes of temperature, with rollgangs and retractable attachments for cargo tiedowns. Interior can be heated with warm air from perforated tube above floor on each side of hold. Internal loads can include 16 standard containers, up to 80 Lada type cars, Belaz, Kamatsu and Euclid heavy dump trucks, ground test and field maintenance equipment required by external loads. Two longitudinal mounting beams for external loads above wing centre-section. Small blister fairings forward of beams and forward of tailplane cover load attachments. Under consideration is a scheme to use an eight-engined version of the An-225 as a launcher for future space vehicles like the British Interim Hotol or space combat aircraft.

AVIONICS: Generally similar to An-124.

DIMENSIONS, EXTERNAL:

Wing span	88.40 m (290 ft 0 in)
Wing aspect ratio	8.64
Length overall	84.00 m (275 ft 7 in)
Height overall	18.20 m (59 ft 8½ in)
Tailplane span	32.65 m (107 ft 1½ in)

Antonov An-225 at Farnborough Air Show *(Paul Jackson)*

1995

Wheel track 8 84 m (29 ft 0 in)
Wheelbase, from main landing gear mid-point
29 10 m (95 ft 5¾ in)

DIMENSIONS, INTERNAL:
Cargo hold: Length of floor 43 0 m (141 ft 0 in)
Max width 6.4 m (21 ft 0 in)
Max height 4 4 m (14 ft 5¼ in)

AREAS:
Wings, gross 905 0 m² (9,741 sq ft)
Vertical tail surfaces, total 141 7 m² (1,525 sq ft)
Horizontal tail surfaces, total 265 5 m² (2,858 sq ft)

WEIGHTS AND LOADINGS:
Max payload, internal or external
250,000 kg (551,150 lb)
Max T-O weight 600,000 kg (1,322,750 lb)
Max wing loading 663 kg/m² (135 8 lb/sq ft)
Max power loading 435 7 kg/kN (4 27 lb/lb st)

Established in 1926 as GAZ 135, Kharkov Aviation Corporation has built military, passenger and freight aircraft, including the Su-2, Yak-18, MiG-15, Tu-104 and Tu-134 It has exported its products since 1964

Current production is centred on the Antonov An-74 in various versions. It is preparing to manufacture the new An-140, described in Antonov entry

Company founded to manufacture the Chevvron range of light aircraft. (Note the two letter Vs in Chevvron, used in order to avoid any confusion with the Chevron Oil company and others.)

VERIFIED

AMF Chevvron 2-32 C two-seat microlight and trainer *(Ian Strachan)*

1995

AMF CHEVVRON 2 32 C

TYPE: Side by side two-seat microlight/trainer; conforms to BCAR Section S certificated in Germany, Japan and UK

PROGRAMME: First flight 1983, production began 1987; deliveries have been in assembled form

CUSTOMERS: Total of 41 delivered by March 1995 to customers in Belgium, France, Ireland, Italy, Japan, Netherlands and UK

COSTS: Assembled from £18 900 (+ VAT) basic Kits introduced in 1992

DESIGN FEATURES: Wortmann wing section

STRUCTURE: Glassfibre/carbonfibre/Kevlar and foam

FLYING CONTROLS: Conventional primary surfaces, trailing-edge drag flaps/airbrakes

LANDING GEAR: Non-retractable tricycle type, with hydraulic disc brakes Optional floats.

POWER PLANT: One 24 kW (32 hp) König SD 570 four-cylinder radial engine; one float version powered by a 35 8 kW (48 hp) König engine. Standard fuel capacity 30 litres (7 9 US gallons, 6.6 Imp gallons) One auxiliary fuel tank optional, of either 30 litres or 20 litres (5 3 US gallons, 4.4 Imp gallons) capacity

DIMENSIONS, EXTERNAL:
Wing span 13 41 m (44 ft 0 in)
Wing aspect ratio 10.24
Length overall 7 01 m (23 ft 0 in)
Height overall 1 60 m (5 ft 3 in)
Propeller diameter 1 52 m (4 ft 11¾ in)

AREAS:
Wings, gross 17.56 m² (189 0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 175 kg (386 lb)
Max T-O weight 382 kg (842 lb)
Max wing loading 21 75 kg/m² (4 45 lb/sq ft)
Max power loading (SD 570)
16.01 kg/kW (26.31 lb/hp)

PERFORMANCE:
Max level and max cruising speed
65 kts (120 km/h, 75 mph)
Econ cruising speed 55 kts (102 km/h, 63 mph)
Stalling speed 30 kts (56 km/h, 35 mph)
Max rate of climb at S/L 128 m (420 ft)/min
Service ceiling 3,050 m (10 000 ft)
T O run 91 m (300 ft)
Landing run 137 m (450 ft)
Range with standard fuel
200 n miles (370 km, 230 miles)
Endurance 3 h
g limits +4/-2

UPDATED

AMF CHEVVRON 2-45 CS

TYPE: Side by side two-seat microlight/trainer

DESIGN FEATURES: Slightly smaller span than 2-32 C, higher rate of roll; Limbach engine. *Description as for 2 32 C except the following*

POWER PLANT: One 33.6 kW (45 hp) Limbach L-550 flat four engine

DIMENSIONS, EXTERNAL:
Wing span 12.37 m (40 ft 7 in)
Wing aspect ratio 9 80
Length overall 6 86 m (22 ft 6 in)
Height overall 1.52 m (4 ft 11¾ in)

AREAS:
Wings, gross 15 61 m² (168 sq ft)

WEIGHTS AND LOADINGS:
Max T-O weight 390 kg (860 lb)
Max wing loading 25 0 kg/m² (5 1 lb/sq ft)
Max power loading 11 63 kg/kW (19 11 lb/hp)

PERFORMANCE, POWERED (at max T-O weight, ISA):
Never-exceed speed (VNE)
96 kts (177 km/h, 110 mph)
Max cruising speed 69 kts (128 km/h, 79 mph)
Stalling speed, power off, flaps down
31 kts (57 km/h, 36 mph)
Max rate of climb at S/L 167 m (550 ft)/min
Max rate of climb at S/L, single pilot 213 m (700 ft)/min
Max descent rate with airbrake 305 m (1 000 ft)/min
T O to 15 m (50 ft) 150 m (492 ft)
Landing from 15 m (50 ft) 250 m (820 ft)

PERFORMANCE, UNPOWERED:
Min rate of sink at 42 kts (78 km/h, 48 mph)
1 53 m (5 03 ft)/s
Best glide ratio 14

A wholly owned subsidiary of British Aerospace, BAe Airbus Ltd designs, manufactures and assembles primary structure of all wings for Airbus airliners; equips A320 and A321 wings, manufactures a fuselage section for A321 and supplies other Airbus components. Manufactures fuselage and wing for Hawker range of business aircraft for Raytheon Aircraft Company (Chester), and centre fuselage for all RJ aircraft for British Aerospace Regional Aircraft Ltd Avro International Aerospace Division (Filton). Has undertaken feasibility studies within European Supersonic Research Programme (ESRP) for new supersonic airliner to succeed Concorde and participated in international study group investigating feasibility of 600- to 800-seat Very Large Commercial Transport (VLCT).

BAe Airbus participated in Airbus Industrie-led study for A3XX very high-capacity aircraft, (study runs in parallel to VLCT), and in eight-nation Euroflag collaborative project to develop Future Large Aircraft (FLA) now under Airbus Industrie management.

Subsidiary company **British Aerospace Aviation Services** maintains Airbus and other large civil aircraft at Filton. Five VC10s converted to flight refuelling tankers for the Royal Air Force at Filton, completed in 1995; see *Jane's Aircraft Upgrades*.

BAe Military Aircraft's main activities include development of Eurofighter 2000 (EFA) with Germany, Italy and Spain; design, development, production and support of Panavia Tornado, with Daimler-Benz Aerospace and Alenia; design, development, production and support of Harrier, Sea Harrier and, with McDonnell Douglas, AV-8B/GR. Mk 5/7 Harrier II and studies of JAST (see International section); design, development, production and support of Hawk and with McDonnell Douglas, T-45A Goshawk. Also provides product support for earlier aircraft still in use and contributes to BAe 146/Avro International RJ and Airbus programmes; offers defence support services and overseas and specialist training facilities, including technical and management courses.

Eurocopter and BAe Defence agreed on 27 February 1992 to study single-source supply of helicopters to UK MoD. First venture is Eurocopter Tiger (see International section) armed with Trigat missiles. Later possibilities include a UK Wessex/Puma replacement. Participates in development and

Derived from British Aerospace (Dynamics) Ltd, which was formed on 1 January 1989, incorporating former Air Weapons Division (Hatfield and Lostock), Army Weapons Division (Stevenage), and Naval and Electronic Systems Division (Bristol, Bracknell, Plymouth and Weymouth).

Details of missiles and other weapon systems can be found in *Jane's Air-Launched Weapons*.

UPDATED

BAe HAWK (TWO-SEAT VERSIONS)

RAF designations: Hawk T Mks 1 and 1A
US Navy designation: T-45A Goshawk

TYPE: Two-seat basic and advanced jet trainer, with air defence and ground attack roles.

PROGRAMME: Early history of HS P1182 Hawk in 1989-90 *Jane's*; first generation Hawk remains in production and marketed with advanced 100 Series and single-seat 200 Series (detailed separately) to meet customers' requirements. Hawk design leadership transferred from Kingston to Brough 1988, and final assembly and flight test from Dunsfold to Warton 1989.

Hawk 50 Series main exports made December 1980 to October 1985. Hawk 100 enhanced ground attack export model announced mid-1982; first flight of 100 Series aerodynamic prototype (G-HAWK/ZA101 converted as Mk

British Aerospace Hawk 100 Series demonstrator

1995

100 demonstrator) 21 October 1987, trials of wingtip Sidewinder rails started at Warton in April 1990. Warton assembly line officially opened 24 October 1991. RAF Hawk re-wing programme began 1989 initial 85 wings completed by BAe in 1993, delivery of second batch of 59 began November 1993 for completion in June 1995

CURRENT VERSIONS: **Hawk T. Mk 1**: Basic two-seater for RAF flying and weapon training. 23 13 kN (5,200 lb st) Adour 151-01 (-02 in Red Arrows aircraft) non-afterburning turbofan; two dry underwing hardpoints, underbelly 30 mm gun pack, three-position flaps, simple weapon sight in some aircraft of No. 4 FTS, unarmed versions at Central Flying School. Following basic Tucano stage, future RAF fast-jet pilots undertake 100 hours of advanced flying, weapons and tactical training with No. 4 FTS. Hawks introduced to navigator training syllabus at No. 6 FTS, Finningley, first delivery 10 September 1992. No. 100 Squadron received 15 Mks 1/1A from September 1991, replacing Canberras in target-towing role; seven (to increase to 15) Mk 1s loaned to Royal Navy's Fleet Requirements and Air Direction Unit at Yeovilton, first arriving on 6 April 1994

Hawk T. Mk 1A: Contract January 1983 to wire 89 Hawks (including Red Arrows) for AIM-9L Sidewinder on each inboard wing pylon and optional activation of previously unused outer wing hardpoints; last conversion redelivered 30 May 1986, 72 (reduced to 50 by 1993 defence cuts) NATO-declared, for point defence and participation in RAF's Mixed Fighter Force, to accompany radar equipped Tornado ADVs on medium-range air defence sorties

Hawk T Mk 1W: Following re-winging, a small number of RAF Hawk T Mk 1s have gained the ability to carry stores on two underwing pylons, although not the centreline gun pod. The alternative designation T Mk 1 FTS is also used for this modification

Hawk 50 Series: Initial export version with 23 13 kN (5,200 lb st) Adour 851 turbofan, maximum operating weight increased by 30 per cent, disposable load by 70 per cent, range by 30 per cent; revised tailcone shape to improve directional stability at high speed, larger nose equipment bay: four wing pylons, all configured for single or twin store carriage, each pylon cleared for 515 kg (1,135 lb) load, wet inboard pylons for 455 litre (122 US gallon, 100 Imp gallon) fuel tanks, improved cockpit, with angle of attack indication, fully aerobatic twin gyro AHRS and new weapon control panel; optional brake-chute, suitable for day VMC ground attack and armed reconnaissance with camera/sensor pod

T-45A Goshawk: US Navy version (see McDonnell Douglas/BAe in International section).

Hawk 60 Series: Development of 50 Series with 25 35 kN (5,700 lb st) Adour 861 turbofan, leading-edge devices and four position flaps to improve lift capability low-friction nose leg, strengthened wheels and tyres, and adaptive anti-skid system, 591 litre (156 US gallon, 130 Imp gallon) drop tanks provision for Sidewinder or Magic AAMs, maximum operating weight increased by further 17 per cent over 50 Series, disposable load by 33 per cent and range by 30 per cent. improved field performance, acceleration, rate of climb and turn rate. Recent orders comprise seven (designated Mk 51A) for Finland, 20 Mk 67s ('long-nosed' version with nosewheel steering) ordered by South Korea, five improved Mk 60As for Zimbabwe and four Mk 63Cs for Abu Dhabi. Last mentioned has upgraded 15 surviving Mk 63s to Mk 63A from 1991, incorporating Adour Mk 871 and new combat wing (four pylons and wingtip AAM rails); first two rebuilds at Brough; remainder at Al Dhafra. *Description applies to Hawk 60 Series, except where otherwise specified*

Hawk 100 Series: Enhanced ground attack development of 60 Series, announced mid-1982, to exploit Hawk's stores carrying capability, two-seater, with perhaps pilot only on combat missions; 26.0 kN (5,845 lb st) Adour Mk 871 turbofan; new combat wing incorporating fixed leading-edge droop for increased lift and manoeuvrability from Mach 0 3 to 0.7, full-width flap vanes, manually selected combat flaps; detail changes to wing dressing, structural provision for wingtip missile pylons; MIL-STD-1553B databus, advanced Smiths Industries HUD/WAC and new air data sensor package with optional laser ranging and FLIR in extended nose; improved weapons management system allowing preselection in flight and display of weapon status, manual or automatic weapon release, passive radar warning, HOTAS controls, full colour multipurpose CRT display in each cockpit, provision for ECM pod Demonstrator ZA101 (see Programme). Production prototype Mk 102D (ZJ100) flown 29 February 1992 Orders from Abu Dhabi (placed 1989), Indonesia (signed June 1993), Malaysia (signed 10 December 1990) and Oman (signed 30 July 1990). FLIR, laser ranger and Sky Guardian RWR in Omani aircraft

Hawk 200 Series: Single-seat multirole version (described separately)

CUSTOMERS: See table Total 42 Hawks (including Series 200s) delivered in 1994. Additional prospects under negotiation include: Australia, MoU with ASTA March 1991 for licence production if Hawk 100/200 chosen for 30 to 50 aircraft RAAF trainer requirement, Brunei, 16 Hawk 100s, India, provisional selection of Hawk 60, July 1992, comprising 94 for IAF and 11 for Navy, Indonesia, collaborative production agreement with IPTN June 1991, in anticipation of orders eventually totalling 144 Mks 100/200, of which initial contract to be 20; Korea, considering up to 100 Hawks, including lead-in trainers to F-16Cs; Kuwait, six attrition replacements, Malaysia, further 12 Mk 203s, Philippines, commitment announced August 1991 for 12 Hawks

DESIGN FEATURES: Fully aerobatic two-seat advanced jet trainer, adaptable for ground attack and air defence, design capable of other optional roles, with wing improvements on developed Series to enhance combat efficiency: single non afterburning engine, elevated rear cockpit to enhance forward view, underwing hardpoints; wingtip AAM rails (100 Series)

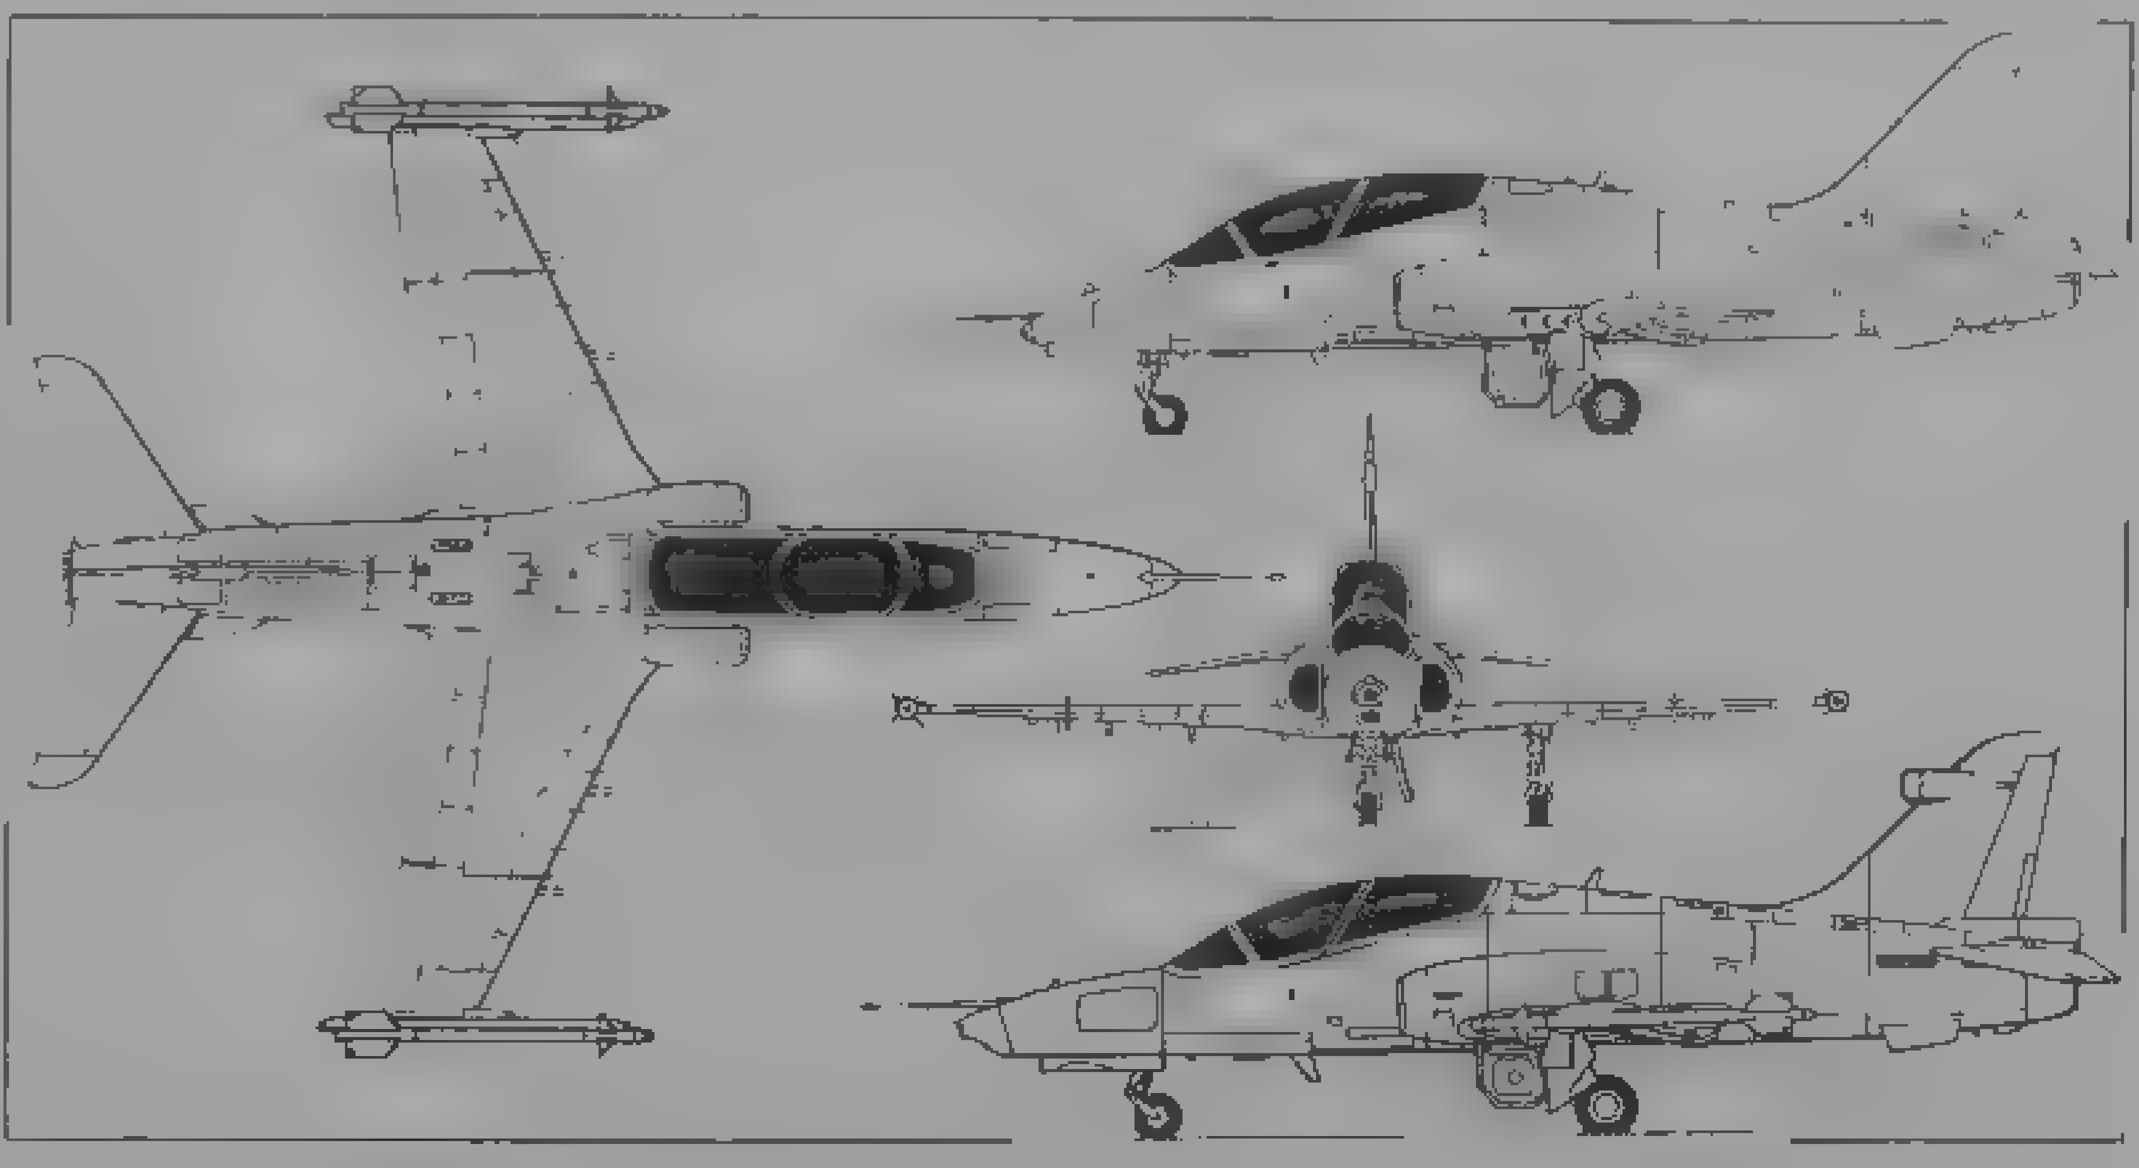
Wing thickness/chord ratio 10 9 per cent at root, 9 per cent at tip, dihedral 2°; sweepback 26° on leading-edge, 21° 30' at quarter chord. Anhedral tailplane

FLYING CONTROLS: Ailerons and one-piece all-moving tailplane actuated hydraulically by tandem actuators, rudder mechanically operated, with electrically actuated trim tab Hydraulically actuated double-slotted flaps, outboard 300 mm (12 in) of flap vanes normally deleted, small fence on each wing leading-edge, 100 and 200 Series use special combat wing with full width flap vanes (refer Hawk 200 entry); large airbrake under rear fuselage, aft of wings; two small ventral fins; smurfs (refer Hawk 200 entry) on 100 Series. Hydraulic yaw damper on 100 Series rudder

STRUCTURE: Aluminium alloy, one-piece wing, with machined torsion box of two main spars, auxiliary spar, ribs and skins with integral stringers, most of box forms integral fuel tank, honeycomb-filled ailerons; composites wing fences, frames and stringers fuselage, swept tail surfaces. Wing attached to fuselage by six bolts

LANDING GEAR: Wide track hydraulically retractable tricycle type, with single wheel on each unit. AP Precision Hydraulics oleos and jacks Main units retract inward into wing, ahead of front spar; castoring (optionally power-steered) nosewheel retracts forward Dunlop mainwheels, brakes and tyres size 6.50-10, pressure 9 86 bars (143 lb/sq in). Nosewheel and tyre size 4.4-16, pressure 8 27 bars (120 lb/sq in) Tail bumper fairing under rear fuselage. Anti-skid wheel brakes. Tail braking parachute, diameter 2 64 m (8 ft 8 in), on Mks 52/53 and all 60 and 100 Series aircraft

POWER PLANT: One Rolls-Royce Turbomeca Adour non-afterburning turbofan, as described under Current Versions. Adour Mk 861A for Switzerland assembled locally by Sulzer Bros. Air intake on each side of fuselage, forward of wing leading-edge Engine starting by Microturbo integral gas-turbine starter Fuel in one fuselage bag tank of 832 litres (220 US gallons, 183 Imp gallons) capacity and integral wing tank of 823 litres (217 US gallons 181 Imp gallons), total fuel capacity 1,655 litres (437 US gallons, 364 Imp gallons) Pressure refuelling point near front of port engine air intake trunk, gravity point on top of fuselage. Provision for carrying one 455 or 591 litre (120



British Aerospace Hawk 100 with wingtip Sidewinders and additional side view (top) of Hawk 60 Series *(Jane's/Dennis Punnett)*

1995

Malaysian Air Force Hawk Mk 108

First Hawk Mk 103 for the Royal Air Force of Oman

1995

or 156 US gallon, 100 or 130 Imp gallon) drop tank on each inboard underwing pylon, according to Series.

ACCOMMODATION: Crew of two in tandem under one-piece fully transparent acrylic canopy, opening sideways to starboard. Fixed front windscreen able to withstand a 0.9 kg (1.98 lb) bird at 454 knots (841 km/h, 523 mph). Improved front windscreen fitted retrospectively to RAF Hawks, able to withstand a 1 kg (2.2 lb) bird at 528 knots (978 km/h 607 mph); this installed on all current export aircraft. Separate internal screen in front of rear cockpit. Rear seat elevated. Martin-Baker Mk 10LH zero/zero rocket-assisted ejection seats, with MDC (miniature detonating cord) system to break canopy before seats eject. MDC can also be operated from outside the cockpit for ground rescue. Dual controls standard. Entire accommodation pressurised, heated and air conditioned.

SYSTEMS: BAe cockpit air conditioning and pressurisation systems, using engine bleed air. Two hydraulic systems; flow rate: System 1, 36.4 litres (9.6 US gallons, 8 Imp gallons)/min, System 2, 22.7 litres (6 US gallons; 5 Imp gallons)/min. Systems pressure 207 bars (3,000 lb/sq in). System 1 for actuation of control jacks, flaps, airbrake, landing gear and anti-skid wheel brakes. Compressed nitrogen accumulators provide emergency power for flaps and landing gear at pressure of 2.75 to 5.5 bars (40 to 80 lb/sq in). System 2 dedicated to powering flying controls. Hydraulic accumulator for emergency operation of wheel brakes. Pop-up Dowty ram air turbine in upper rear fuselage provides emergency hydraulic power for flying controls in event of engine or No. 2 pump failure. No pneumatic system. DC electrical power from single 12 kW brushless generator, with two static inverters to provide AC power and two batteries for standby power. Gaseous oxygen system for crew.

AVIONICS: *Comms:* Mk 1/Srs 50 includes Sylvania UHF and VHF. Cossor 2720 Mk 10A IFF in Finnish aircraft. Srs 60 has Collins UHF and VHF, Magnavox UHF and Cossor IFF; Srs 100 has Collins AN/ARC-182 U/VHF, Magnavox AN/ARC-164 UHF and Cossor 4720 IFF.

Flight: Mk 1/Srs 50 with Cossor CAT 7000 Tacan. Cossor ILS having CILS 75/76 localiser/glide slope receiver and marker receiver. Collins VOR/ILS and ADF, Collins Tacan, Smiths-Newmark 6000-05 AHRS and Smiths radar altimeter in Srs 60; Srs 100 has BAe INS300 inertial platform, Collins AN/ARC 118 Tacan, Collins VIR-31A VOR/ILS and Smiths 0103 KTX 1 radar altimeter, all integrated via dual redundant MIL-STD-1553B databus.

Instrumentation: Smiths-Newmark compass, GEC-Marconi gyros and inverter, two Honeywell RAI 4 4 in (10 cm) remote altitude indicators and magnetic detector system in Mk 1/Srs 50, Smiths 1500 Series HUDWAC in Srs 100; GEC-Marconi F 195 weapon sight in approximately 90 RAF aircraft, GEC-Marconi ISIS 195 sight in Srs 50 and Srs 60, except Saab RGS2 in Finnish Mk 51.

Mission: GEC-Marconi camera and recorder in F 195-equipped RAF aircraft, Vinten camera and recorder in Srs 50 and Srs 60. Srs 100 has Smiths 3000 Series colour MFD, GEC data transfer system and Vinten colour video recording system, plus GEC-Marconi Type 105H laser rangefinder, optional FLIR.

Self-defence: (Series 100 only) Racal Prophet (or GEC-Marconi Sky Guardian as in Omani aircraft) RWR and chaff/flare dispenser at base of fin.

ARMAMENT: Underfuselage centreline-mounted 30 mm Aden Mk 4 cannon with 120 rounds (VKT 12.7 mm machine gun beneath Finnish aircraft), and two or four hardpoints underwing, according to Series. Provision for pylon in place of ventral gun pack. In RAF training roles, normal maximum external load is about 680 kg (1,500 lb), but the uprated Hawk 60 and 100 Series are cleared for an external load of 3,000 kg (6,614 lb), or 500 kg (1,102 lb) at 8 g. Typical weapon loadings on 60 Series include 30 mm or 12.7 mm centreline gun pod and four packs each containing eighteen 68 mm rockets, centreline reconnaissance pod and four packs each containing twelve 81 mm rockets, five 1,000 lb free-fall or retarded bombs, four launchers each containing four 100 mm rockets, nine 250 lb or 250 kg bombs; thirty-six 80 lb runway denial or tactical attack bombs; five 600 lb cluster bombs, four Sidewinder or two Magic air-to-air missiles, four CBLS 100/200 carriers each containing four practice bombs and four rockets, or two 591 litre (156 US gallon; 130 Imp gallon) drop tanks and two Maverick air-to-surface missiles. Vinten reconnaissance pod available for centre pylon. Similar options on 100 Series, plus wingtip air-to-air missiles.

DIMENSIONS, EXTERNAL:

Wing span: Mk 1, Srs 50, Srs 60	9.39 m (30 ft 9¾ in)
Srs 100	9.08 m (29 ft 9½ in)
Srs 100 with Sidewinders	9.94 m (32 ft 7⅜ in)
Wing chord: at root	2.65 m (8 ft 8¼ in)
at tip	0.90 m (2 ft 11½ in)
Wing aspect ratio: Mk 1, Srs 50, Srs 60	5.28

Notes

* Built at Brough, Hamble and Samlesbury and assembled at Warton unless stated otherwise; remainder built at Kingston, assembled at Dunsfold (290) and Bitteswell (1)

1 Laser nose

2 46 assembled by Valmet in Finland

3 19 assembled by F + W in Switzerland

4 Production by McDonnell Douglas in USA, 84 on firm order

5 One assembled at Warton

6 Wingtip Sidewinders

7 89 converted to T Mk 1A

8 15 converted to 63A

9 Fixed refuelling probe

10 Radar warning receiver

Tailplane span 4.39 m (14 ft 4¾ in)
Wheel track 3.47 m (11 ft 5 in)
Wheelbase 4.50 m (14 ft 9 in)

AREAS:
Wings, gross 16.69 m² (179.6 sq ft)
Ailerons (total):
Mk 1, 50 and 60 Series 1.05 m² (11.30 sq ft)
100 Series 0.97 m² (10.44 sq ft)
Trailing-edge flaps (total) 2.50 m² (26.91 sq ft)
Airbrake 0.53 m² (5.70 sq ft)
Fin, Mk 1, 50 and 60 Series 2.51 m² (27.02 sq ft)
100 Series 2.61 m² (28.10 sq ft)
Rudder, incl tab 0.58 m² (6.24 sq ft)
Tailplane 4.33 m² (46.61 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: 60 Series 4,012 kg (8,845 lb)
100 Series 4,400 kg (9,700 lb)
Max weapon load (60, 100 Series) 3,000 kg (6,614 lb)
Max fuel weight:
internal (usable) 1,304 kg (2,875 lb)
external (usable) 932 kg (2,055 lb)
Max T-O weight: T Mk 1 5,700 kg (12,566 lb)
50 Series 7,350 kg (16,200 lb)
60, 100 Series 9,100 kg (20,061 lb)
Max landing weight: T Mk 1 4,649 kg (10,250 lb)
60 Series 7,650 kg (16,865 lb)
Max wing loading:
T Mk 1 341.5 kg/m² (69.97 lb/sq ft)
50 Series 440.4 kg/m² (90.2 lb/sq ft)
60,100 Series 545.2 kg/m² (111.7 lb/sq ft)
Max power loading:
T Mk 1 246.5 kg/kN (2.42 lb/lb st)
50 Series 318.18 kg/kN (3.12 lb/lb st)
60 Series 359.0 kg/kN (3.52 lb/lb st)
100 Series 350.0 kg/kN (3.43 lb/lb st)

PERFORMANCE:
Never-exceed speed (VNE), clean: at S/L
Mach 0.87 (575 kts, 1,065 km/h, 661 mph EAS)
at and above 5,180 m (17,000 ft)
Mach 1.2 (575 kts, 1,065 km/h, 661 mph EAS)
Max level speed at S/L:
50 Series 535 kts (990 km/h, 615 mph)
60 Series 545 kts (1,010 km/h; 627 mph)
100 Series 540 kts (1,001 km/h, 622 mph)
Max level flight Mach number 0.88
Stalling speed, flaps down 96 kts (177 km/h, 110 mph)
Max rate of climb at S/L 3,600 m (11,800 ft)/min
Time to 9,145 m (30,000 ft), clean: 60 Series 6 min 54 s
100 Series 7 min 30 s
Service ceiling: 60 Series 14,020 m (46,000 ft)
100 Series 13,565 m (44,500 ft)
T-O run (clean): 60 Series 710 m (2,330 ft)
100 Series 640 m (2,100 ft)
Landing run (10% fuel load): 60 Series 550 m (1,800 ft)
100 Series 605 m (1,980 ft)
Combat radius:
with 2,268 kg (5,000 lb) weapon load
538 n miles (998 km, 620 miles)
with 907 kg (2,000 lb) weapon load
781 n miles (1,448 km, 900 miles)
Ferry range:
60 Series, with two 591 litre (156 US gallon; 130 Imp gallon) drop tanks
1,575 n miles (2,917 km, 1,812 miles)
100 Series, as above
1,360 n miles (2,519 km; 1,565 miles)
Endurance, 100 n miles (185 km, 115 miles) from base:
60 Series approx 2 h 42 min
100 Series approx 2 h 6 min
g limits +8/–4

UPDATED

BAe HAWK 200 SERIES (SINGLE-SEAT VERSIONS)

TYPE: Single-seat multirole combat aircraft.

PROGRAMME: Intention to build demonstrator (ZG200) announced 20 June 1984, first flight 19 May 1986 but lost 2 July 1986 in g-induced loss of consciousness (GLOC) accident; replaced by first preproduction Hawk 200 (ZH200), first flown 24 April 1987; third demonstrator Series 200RDA (ZJ201) with full avionics and systems, including Westinghouse AN/APG-66H radar, flown 13 February 1992. First production Hawk Srs 200 (Oman 121) flew 11 September 1993, first for Malaysia (Mk 208 M40-21) flew 4 April 1994.

CURRENT VERSIONS: Missions can include:

Airspace denial: Four Sidewinders, gun and two 591 litre (156 US gallon, 130 Imp gallon) drop tanks enabling 2 hour loiter on station at 100 n miles (185 km; 115 miles) from base.

Close air support: Typically four 1,000 lb bombs precision-delivered up to 115 n miles (213 km, 132 miles) from base in lo-lo-lo-lo mission with gun and wingtip Sidewinder missiles also carried.

Battlefield interdiction: Typically 907 kg (2,000 lb) load on hi-lo-lo-hi mission over 290 n mile (537 km, 340 mile) radius with gun and wingtip Sidewinder missiles also carried.

BAe Hawk Mk 102 for Abu Dhabi

1995

British Aerospace Hawk 200 fitted with AN/APG-66H radar

1995

Long-range photo reconnaissance: 490 n mile (908 km, 564 mile) range with two external tanks, pod containing cameras and infra-red linescan and wingtip Sidewinder missiles for self-defence (rapid role change permits follow-on attack by the same aircraft).

Long-range deployment: 1,365 n mile (2,528 km, 1,571 miles) ferry range using two 591 litre (156 US gallon, 130 Imp gallon) external tanks, unrefuelled and with tanks retained (reserves allow 10 minutes over destination at 150 m, 495 ft).

Anti-shipping attack: Two rocket pods and two 591 litre (156 US gallon; 130 Imp gallon) external tanks plus wingtip Sidewinder missiles for self-defence, enabling ship attack and return with 10 per cent fuel reserves.

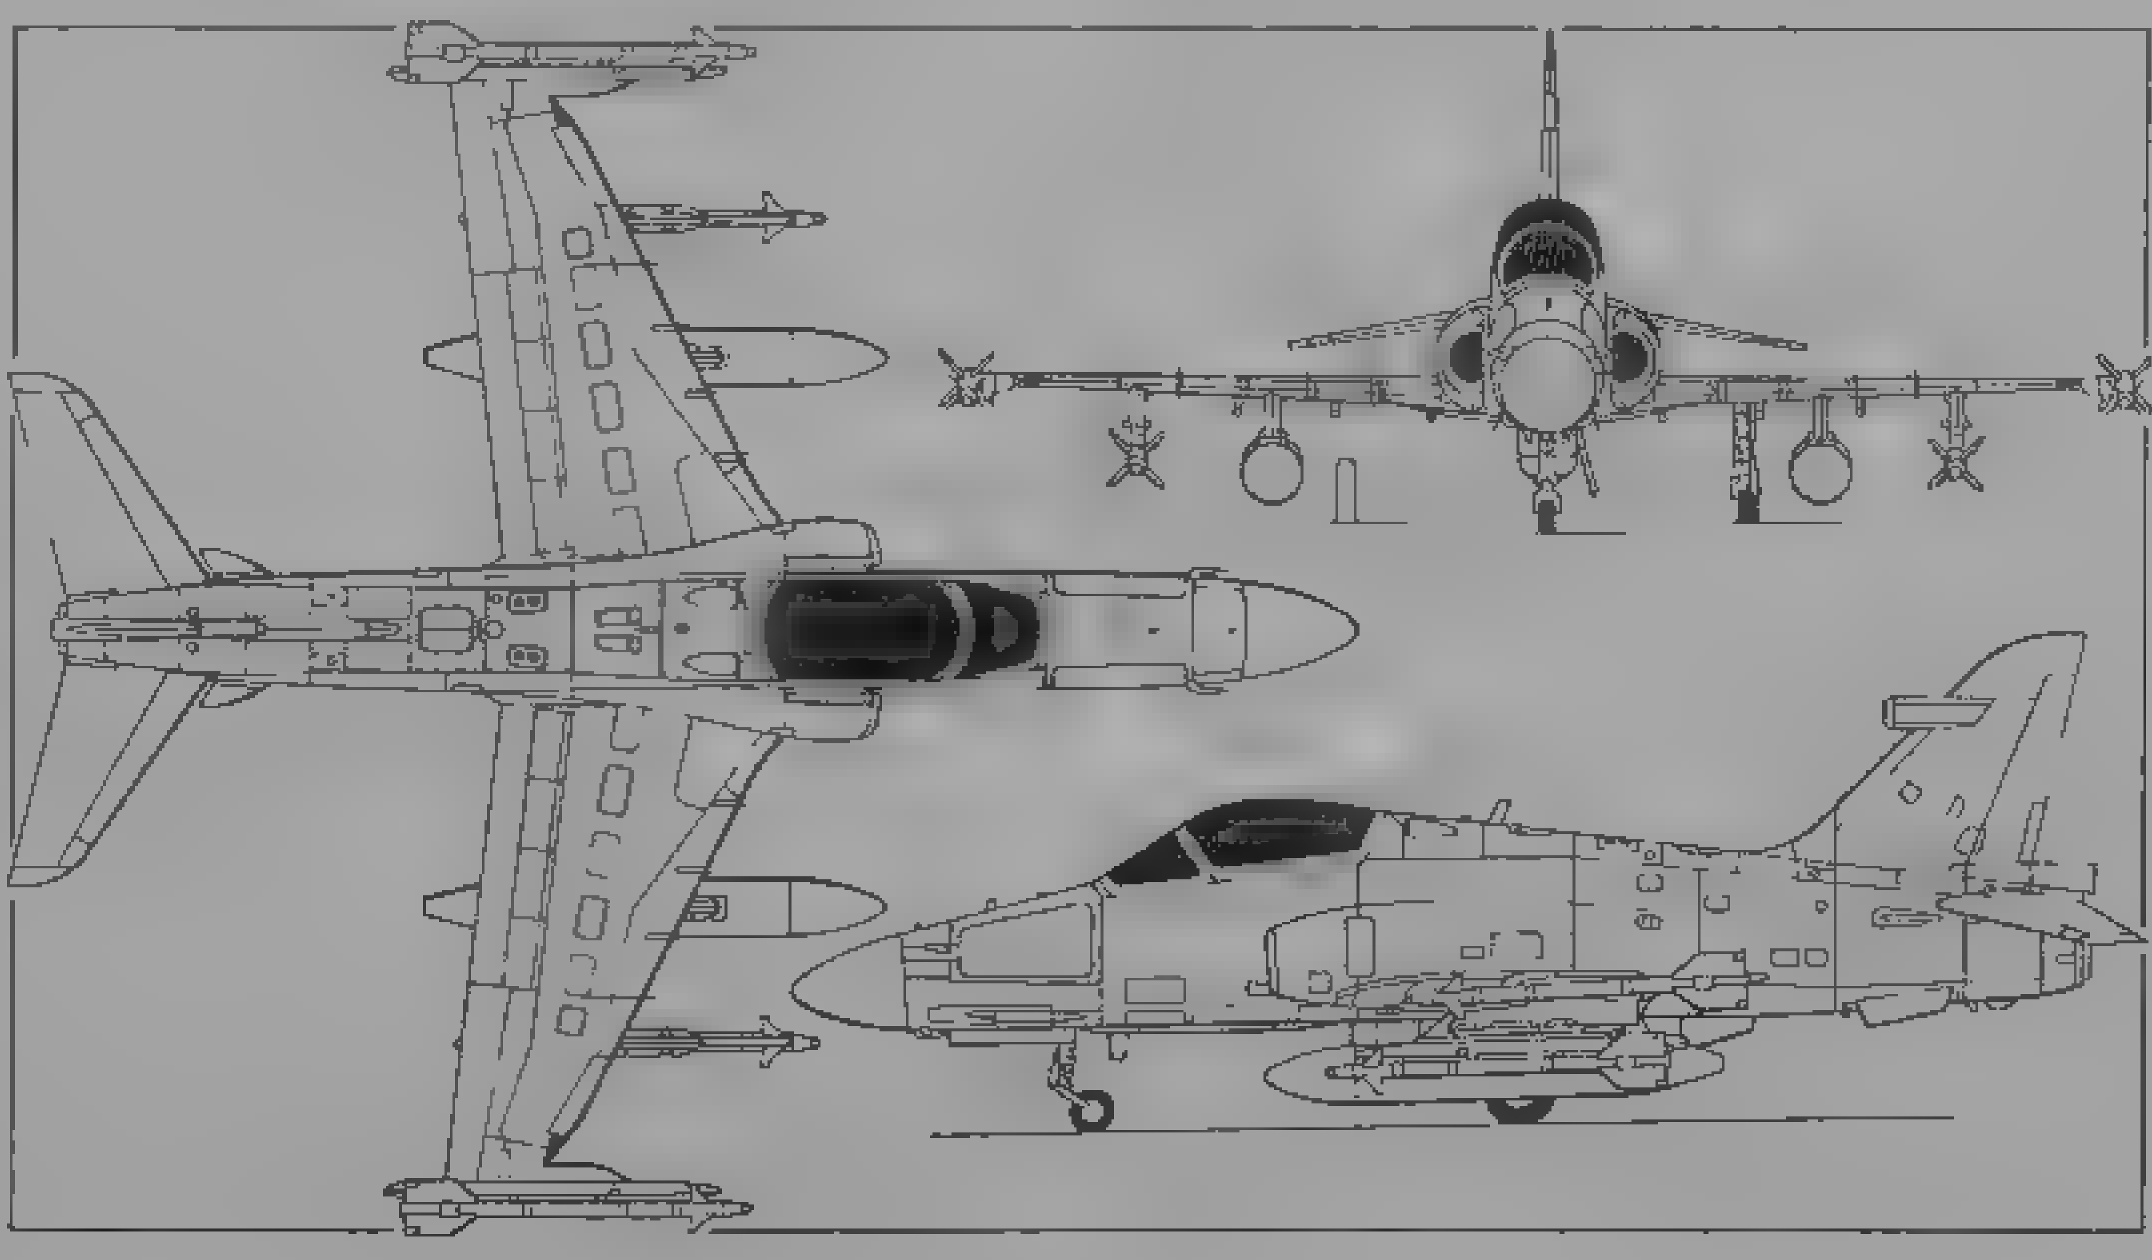
CUSTOMERS: See table. Oman (12 **Mk 203** ordered July 1990), Indonesia (12 ordered June 1993), Malaysia (18 **Mk 208** ordered December 1990, for delivery from July 1994.) Saudi Arabia signed MoU covering second batch of some 60 Hawks, substantial proportion **Mk 205** with APG-66H radar. All customers also ordered two-seat Hawks.

DESIGN FEATURES: Except for taller fin, fixed wing leading-edge droop to enhance lift and manoeuvrability at Mach 0.3 to 0.7, manually selected combat flaps (less than quarter flap setting) available below 350 knots (649 km/h, 403 mph) IAS to allow sustained 5 g+ at 300 knots (556 km/h, 345 mph) at sea level, full-width flap vanes reinstated and detail modifications to wing dressing, Hawk 200 virtually identical to current production Hawk two-seater aft of cockpit, giving 80 per cent airframe commonality. Intended to take advantage of new miniaturised low-cost avionics and intelligent weapons, Hawk 100 type avionics include INS, HUDWAC, IFF, RWR and optional HOTAS controls, Westinghouse AN/APG-66H advanced multimode radar for all-weather target acquisition and navigation fixes; proposed alternative FLIR/laser rangefinder nose no longer on offer, intended integral cannon also deleted, all four underwing pylons capable of 907 kg (2,000 lb) load, within maximum 3,493 kg (7,700 lb) external load, wingtip rails make possible four Sidewinders or similar AAMs (inboard pylons not cleared for these missiles).

FLYING CONTROLS: See Hawk two-seater; smurfs (strake ahead of each half of tailplane to restore control authority at high angles of attack).

LANDING GEAR: Mainwheel tyres size 559 × 165-279, pressure 16.2 bars (235 lb/sq in). Nosewheel tyre size 457 × 140-203, pressure 7.24 bars (105 lb/sq in).

POWER PLANT: One Rolls-Royce Turbomeca Adour Mk 871 non-afterburning turbofan, with uninstalled rating of 26.0 kN (5,845 lb st). Optional fixed refuelling probe on starboard side of windscreen.



The single-seat British Aerospace Hawk 200 Series with nose-mounted radar (*Jane's/Mike Keep*)

1992

First radar-equipped Hawk 200RDA carrying two Sidewinder AAMs plus telemetry pods

1995

ACCOMMODATION: Pilot only, on Martin-Baker Mk 10LH zero/zero ejection seat, under starboard-hinged canopy.

SYSTEMS: 25 kVA generator with DC transformer-rectifier. Fairey Hydraulics yaw control system added, comprising rudder actuator and servo control system, incorporating an autostabiliser computer. Lucas Aerospace artificial feel system. 12 kVA APU for engine starting, ground running and emergency power.

AVIONICS: Similar to Hawk 100.

Radar: Westinghouse AN/APG-66H multimode radar.

Flight: Smiths HUDWAC.

Instrumentation: GEC-Marconi multifunction display in cockpit, combined com/nav interface allows control of all functions from one panel. HOTAS controls optional.

Self-defence: GEC-Marconi Defence Systems Sky Guardian 200 RWR in aircraft for Oman and Abu Dhabi Mk 102s. Chaff/flare dispenser (Vinten Vicon 78 Srs 300 or equivalent) at base of fin.

ARMAMENT: None internally. All weapon pylons cleared for 8 g manoeuvres with 500 kg (1,102 lb) loads.

DIMENSIONS, EXTERNAL: As Hawk Series 100, except:

Span: 200RDA	9.39 m (30 ft 9¾ in)
Length: fuselage: 200	10.95 m (35 ft 11 in)
200 with chaff/flare dispenser	11.01 m (36 ft 1⅜ in)
200RDA	10.99 m (36 ft 0¾ in)
200RDA with chaff/flare dispenser	11.05 m (36 ft 3 in)
overall: 200	11.34 m (37 ft 2½ in)
200RDA	11.38 m (37 ft 4 in)
Height overall: 200	4.130 m (13 ft 6⅝ in)
200RDA	3.98 m (13 ft 0¾ in)
Wheelbase	3.56 m (11 ft 8 in)

WEIGHTS AND LOADINGS:

Basic weight empty	4,450 kg (9,810 lb)
Max fuel: internal (usable)	1,360 kg (3,000 lb)
external (usable)	932 kg (2,055 lb)
Max weapon load	3,000 kg (6,614 lb)
Max T-O weight	9,100 kg (20,061 lb)
Max wing loading	545.3 kg/m² (111.7 lb/sq ft)
Max power loading	350.04 kg/kN (3.43 lb/lb st)

PERFORMANCE (estimated, no external stores or role equipment unless stated):

Never-exceed speed (VNE): at S/L	Mach 0.87 (575 kts, 1,065 km/h, 661 mph EAS)
at and above 5,180 m (17,000 ft)	Mach 1.2 (575 kts, 1,065 km/h, 661 mph EAS)
Max level speed at S/L	540 kts (1,000 km/h, 621 mph)
Econ cruising speed at 12,500 m (41,000 ft)	430 kts (796 km/h, 495 mph)
Stalling speed, flaps down	96 kts (177 km/h, 110 mph) IAS
Max rate of climb at S/L	3,508 m (11,510 ft)/min
Time to 9,145 m (30,000 ft)	7 min 24 s
Service ceiling	13,720 m (45,000 ft)
Runway LCN: flexible pavement	15
rigid pavement	10
T-O run	630 m (2,070 ft)
Landing run	598 m (1,960 ft)
Ferry range (with two drop tanks)	1,365 n miles (2,528 km, 1,570 miles)
g limits	+8/-4

UPDATED

BAe HARRIER

Production of the first generation Harrier continues only as the Sea Harrier (see next entry); final RAF Harrier GR. Mk 3 retired May 1994, T. Mks 4/4A continued as RAF trainers, until late 1995 replacement by BAe/McDonnell Douglas Harrier T. Mk 10; Royal Navy T. Mks 4/4N being modified to T. Mk 8 for compatibility with Sea Harrier F/A. Mk 2, first flight (ZB605) 27 July 1994. Full details of Mk 3 Harrier last appeared in the 1988-89 *Jane's*, brief details of two-seat versions in 1993-94 edition.

UPDATED

BAe SEA HARRIER

Royal Navy designations: FRS. Mk 1 and F/A. Mk 2
Indian Navy designation: FRS. Mk 51

TYPE: V/STOL fighter, reconnaissance and strike aircraft.

PROGRAMME: Development of P1184 Sea Harrier announced by UK government 15 May 1975, first flight (XZ450) 20 August 1978, first delivery to Royal Navy (XZ451) 18 June 1979; first ship trials (HMS *Hermes*) November 1979.

Ski jump launching ramp (proposed by Lt Cmdr D. R. Taylor RN) take-off trials ashore 1977, and at sea from 30 October 1980: HMS *Invincible* and *Illustrious* first fitted with 7° ramps, HMS *Ark Royal* 12°; latter allows 1,135 kg (2,500 lb) increased load for same take-off run or 50 to 60 per cent shorter run at same weight; HMS *Invincible* recommissioned with 13° ramp 18 May 1989, HMS *Illustrious* received similar re-work, May 1991 to April 1994.

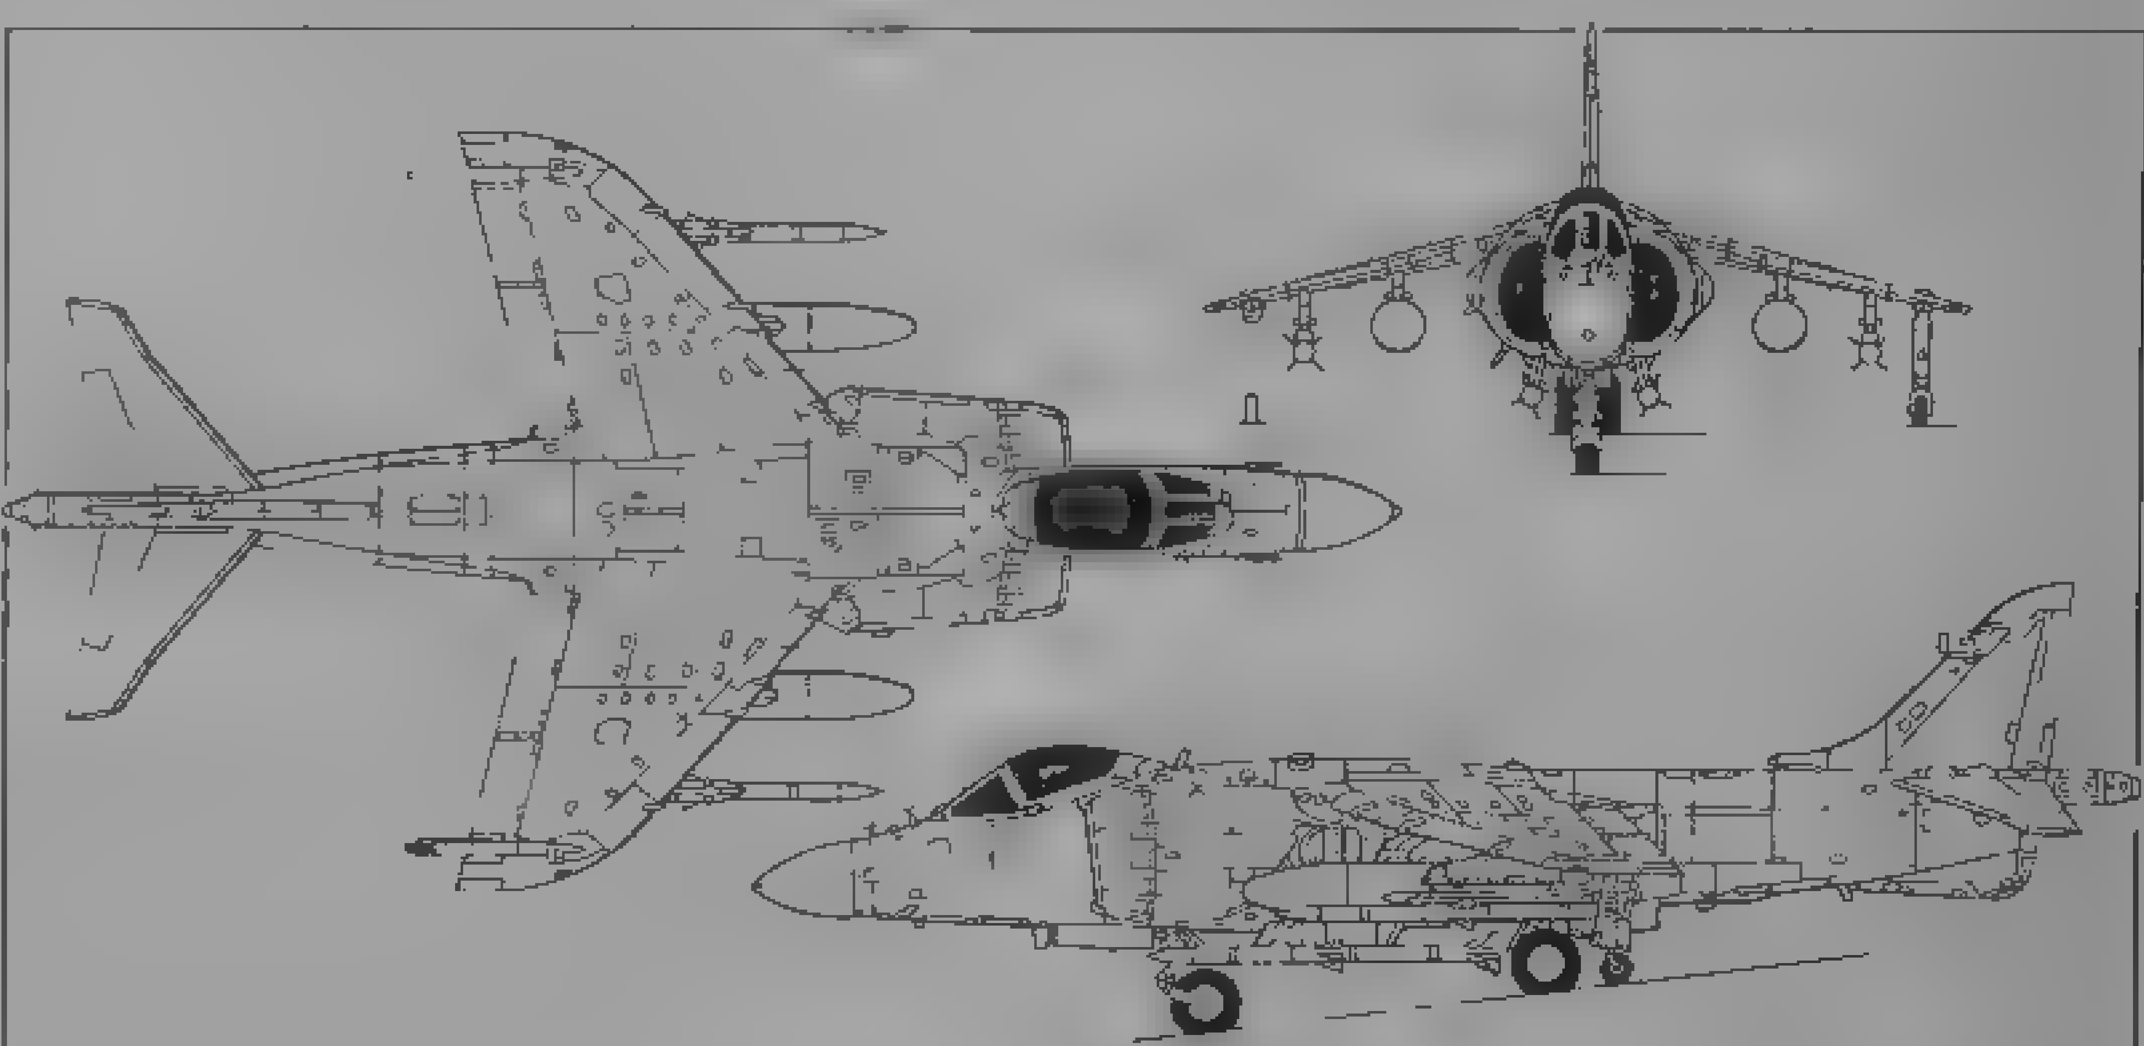
UK MoD gave BAe project definition contract January 1985 for mid-life update of RN Sea Harrier FRS. Mk 1s, upgraded aircraft redesignated FRS. Mk 2, aerodynamic development FRS. Mk 2 (redesignated F/A. Mk 2 in May 1994) converted at Dunsfold from Mk 1 ZA195, first flight 19 September 1988, first flight of second development aircraft (XZ439) 8 March 1989; contract for conversion of further 29 Mk 1s to Mk 2s signed by UK MoD 7 December 1988, modifications begun at Kingston October 1990, continuing at Dunsfold, Samlesbury and Brough, redelivery from 2 April 1993, for later augmentation by newly built Mk 2s, additional four conversions funded in 1994, representing all 35 Mk 1s and former Mk 1s extant by May 1994.

New F/A. Mk 2 AAM launch rail first tested by live AIM-9L (from Mk 1) 2 November 1988, AMRAAM trials began in USA (using XZ439) with first launch on 29 March 1993, flying from Eglin AFB, airborne testing of Blue Vixen radar began in RAE One-Eleven (ZF433), completing 114 hour/121 sortie programme November 1987; development work transferred to RAE BAe 125 (XW930), first flown with A-model radar version 26 August 1988; second 125-600B (ZF130) given full F/A. Mk 2 weapon system, including representative cockpit in co-pilot's position and Sidewinder acquisition round on underwing pylon (first flight at Woodford 20 May 1988, began development flying at Dunsfold December 1988, not fitted with B-model Blue Vixen radar until September 1989); first flight of B-model radar in Sea Harrier XZ439 24 May 1990. First Mk 2 deck landing, by ZA195 on HMS *Ark Royal*, 7 November 1990. First look-down firing of AIM-120 AMRAAM, 28 April 1993, series of 10 test firings completed May 1994. Operational Evaluation Unit for Mk 2 formed at Boscombe Down, 1 June 1993.

CURRENT VERSIONS: **FRS. Mk 1**: Initial Royal Navy version, Pegasus 104 engine; first used operationally during Falkland Islands campaign 1982, from HMS *Hermes* and *Invincible* (29 flew 2,376 sorties, destroying 22 enemy aircraft in air-to-air combat without loss, four lost in accidents and two to ground fire). *Following description applies to Sea Harrier FRS. Mk 1, except where indicated otherwise.*

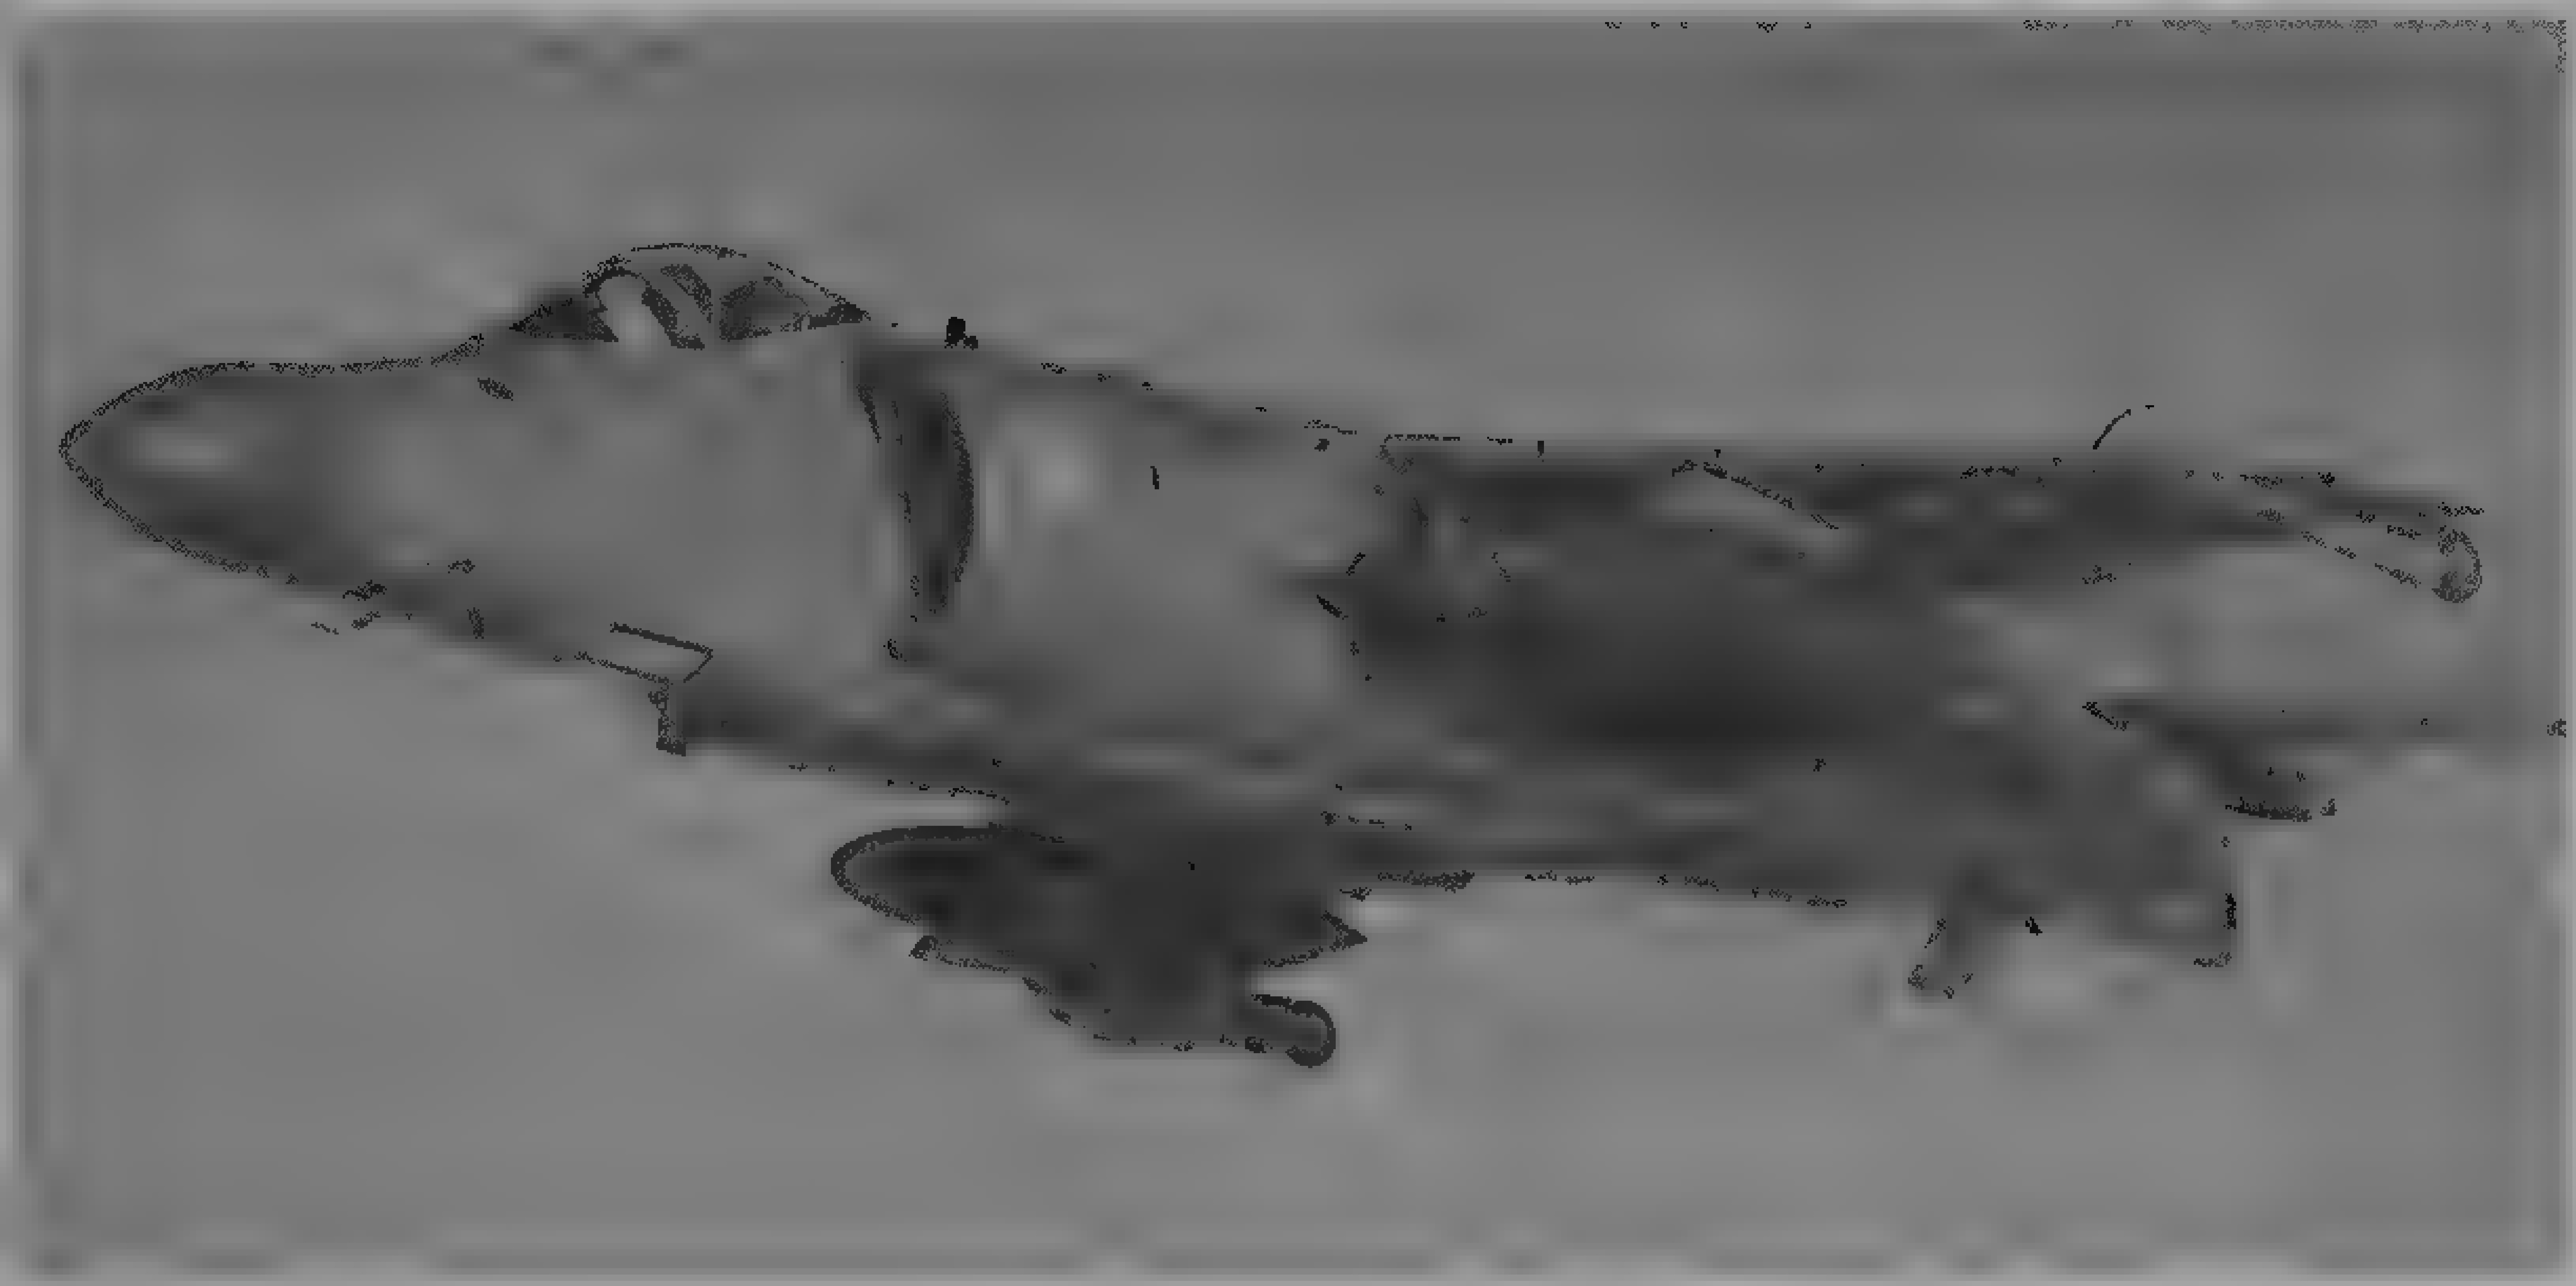
FRS. Mk 51: Similar to Mk 1, for Indian Navy. Upgrade for 22 remaining aircraft under discussion with BAe in 1994-95, retrofit with Blue Vixen radar possible.

F/A. Mk 2: Differs externally from Mk 1 by less pointed nose radome; longer rear fuselage, resulting from 35 cm (1 ft 1¾ in) plug aft of wing trailing-edge; revisions of



BAe Sea Harrier F/A. Mk 2 V/STOL fighter, reconnaissance and attack aircraft *(Jane's/Mike Keep)*

1993



BAe Sea Harrier F/A. Mk 2 fitted with strakes in place of cannon

1995

antennae and external stores Internal changes include GEC-Marconi Blue Vixen pulse Doppler radar, offering all-weather look-down/shoot-down capability, with inherent track-while-scan, multiple target engagement greatly increased missile launch range, enhanced surface target acquisition, and improved ECCM performance Current weapons plus AIM-120 AMRAAM on Airscrew Howden (Frazer-Nash) rail launchers and McDonnell Douglas LAU-106A eject launchers

Improved, integrated weapons built around MIL-STD-1553B databus, with dual redundant data highway, allowing computerised time-sharing of information processed in databus control and ...

Redesign of cockpit includes existing HUD and new dual multipurpose HDDs; proposed JTIDS terminal delayed following cancellation by US Navy of ... proposed equipment, JTIDS/Sea Harrier integration study (for retrofit) undertaken by BAe, 1992-... All ... weapon systems controls positioned on upfront control panel, or on throttle and stick (HOTAS)

Wingtip extensions of 20 cm (8 in) and 30 cm (1 ft 0 in) test-flown to enhance stability carrying AMRAAM, but proved unnecessary by 1990 trials

CUSTOMERS. Royal Navy ordered three development aircraft plus batches of 21, 10, 14 and nine by September 1984, all built as Mk 1s, last completed June 1988, intent to order at least 10 Mk 2s revealed March 1990, converted to firm order for 18 in January 1994 Naval Intensive Flying Trials Unit (No. 700A Squadron) commissioned at RNAS Yeovilton 18 September 1979 and became normally shore-based No. 899 HQ Squadron, April 1980; front-line units Nos. 800 and 801 Squadrons with eight aircraft each (previously five), non-radar T Mk 4N two-seat trainers (three) also received

First 'production' conversion to Mk 2 (XZ497) retained by BAe, second aircraft (ZE695) was first delivered 2 April 1993; nine delivered by end of 1993, 19 by January 1995; final Mk 1 (ZD581) withdrawn from 800 Squadron 17 March 1995 Operational Evaluation Unit formed at Boscombe Down 1 June 1993, 899 Squadron stood-down December 1993, in preparation for Mk 2 pilot training, initial loss sustained 5 January 1994, four Mk 2s of 899 Squadron/OEU to HMS *Invincible* 24 August 1994, operational 29 August for patrols over Bosnia 801 Squadron stood-down with Mk 1s August 1994, received first Mk 2s (ZA176 and XZ455) 5 October 1994; embarked HMS *Illustrious* 26 January 1995 for first full deployment of Mk 2

Six FRS Mk 51s (similar to FRS Mk 1) handed over to Indian Navy from January 1983, used by No. 300 (White Tiger) Squadron from INS *Vikrant*, two T Mk 60 two-seat trainers also received, 10 more FRS. Mk 51s and one T. Mk 60 ordered by Indian government November 1985 letter of intent for seven more FRS Mk 51s and ... T Mk 60 issued September 1986, to equip INS *Viraat* (former HMS *Hermes*). Total orders 98 (see table)

DESIGN FEATURES: Single-engined V/STOL system with four rotatable exhaust nozzles that can be set through 98.5° from fully aft position, short take-off made with nozzles initially fully aft, then turned partially downward for lift-off and continued forward acceleration, nozzles can be vectored at high speed to tighten turn radius or decelerate suddenly; control at less than wingborne airspeed automatically transferred to reaction control valves at wingtips, nose and tail also enhancing combat manoeuvres

Main differences from land based Harriers include elimination of magnesium components, introduction of raised cockpit, revised operational avionics, and installation of multimode GEC-Marconi radar with air-to-air intercept and air-to-surface modes in redesigned nose that folds to port. Pegasus 104 turbofan of Mk 1 incorporates additional anti-corrosion features and generates more electrical power than land-based Pegasus 103. See Current Versions for F/A Mk 2 features

Wing section BAe (HS) design, thickness/chord ratio 10 per cent at root, 5 per cent at tip, anhedral 12°, incidence 1° 45', and sweepback at quarter-chord 34°

FLYING CONTROLS. Plain ailerons irreversibly operated by tandem hydraulic jacks; one-piece variable incidence tailplane, with 15° anhedral, irreversibly operated by tandem hydraulic jacks, manually operated rudder with trim tab, flaps; jet reaction control valve built into front of each outrigger wheel fairing and in nose and tailcone; large air brake under fuselage; ventral fin under rear fuselage

STRUCTURE One-piece aluminium alloy three-spar safe-life wing with integrally machined skins (Brough built); entire wing unit removable to provide access to engine, revised inboard one-third of F/A. Mk 2 wing incorporates additional fence, kinked leading-edge, re-positioning of dog-tooth fillet closer to fuselage, and reduction of overwing vortex generators from 12 to 11, 67.3 cm (2 ft 2½ in) wing extensions available for ferrying, ailerons, flaps, rudder and tailplane trailing-edge of bonded aluminium alloy honeycomb construction safe-life fuselage of frames and stringers, mainly aluminium alloy but with titanium skins at rear and some titanium adjacent engine and other special areas, access to power plant through top of fuselage, ahead of wings, F/A Mk 2 has deepened and stiffened nose structure, plus extended rear fuselage, lengthened by 35 cm (1 ft 1¾ in), fin tip carries suppressed VHF aerial

LANDING GEAR Retractable bicycle type of Dowty Aerospace manufacture, permitting operation from rough unprepared surfaces of CBR as low as 3 to 5 per cent Hydraulic actuation, with nitrogen bottle for emergency extension of landing gear Single steerable nosewheel retracts forward, twin coupled mainwheels rearward, into fuselage. Small outrigger units retract rearward into fairings slightly inboard of wingtips. Nosewheel leg of levered suspension liquid spring type Dowty telescopic oleo-pneumatic main and outrigger gear Dunlop wheels and tyres, size 26.00 × 8.75-11 (nose unit), 27.00 × 7.74-13 (main units) and 13.5 × 6.4 (outriggers). Dunlop multidisc brakes and Dunlop-Hytrol adaptive anti-skid system

POWER PLANT One Rolls-Royce Pegasus Mk 104 or (retrofit option) Mk 106 vectored thrust turbofan (95.6 kN; 21,500 lb st), with four exhaust nozzles of the two-vane cascade type, rotatable through 98.5° from fully aft position Engine bleed air from HP compressor used for jet reaction control system and to power duplicated air motor for nozzle actuation. Low drag intake cowls each have eight automatic suction relief doors aft of leading-edge to improve intake efficiency by providing extra engine air at low forward or zero speeds. A 227 litre (60 US gallon, 50 Imp gallon) tank supplies demineralised water for thrust restoration in high ambient temperatures for STO, VTO and vertical landings Fuel in five integral tanks in fuselage and two in wings, with total capacity of approximately 2 865 litres (757 US gallons, 630 Imp gallons). This can be supplemented by two 455 litre (120 US gallon, 100 Imp gallon) jettisonable combat tanks, or two 864 litre (228 US gallon, 190 Imp gallon) tanks, or two 1,500 litre (396 US gallon; 330 Imp gallon) ferry tanks on the inboard wing pylons. Ground refuelling point in port rear nozzle fairing. Provision for fixed in-flight refuelling probe above the port intake cowl

ACCOMMODATION Pilot only, on Martin-Baker Mk 10H zero/zero rocket ejection seat which operates through the miniature detonating cord equipped canopy of the pressurised, heated and air conditioned cockpit Seat raised 28 cm (11 in) compared with Harrier GR. Mk 3 Manually operated rearward-sliding canopy Birdproof windscreen, with hydraulically actuated wiper Windscreen washing system

SYSTEMS. Three-axis limited authority autostabiliser for V/STOL flight Pressurisation system of BAe design, with Normalair-Garrett and Delaney Gallay major components, maximum pressure differential 0.24 bar (3.5 lb/sq in). Two hydraulic systems, flow rate: System 1, 36 litres (9.6 US gallons, 8 Imp gallons)/min System 2, 23 litres (6 US gallons, 5 Imp gallons)/min. Systems, pressure 207 bars (3,000 lb/sq in), actuate Fairey flying control and general

Landing approach by Sea Harrier F/A. Mk 2 of 899 Squadron ***(Paul Jackson)***

1995

services and a retractable ram air turbine inside top of rear fuselage, driving a small hydraulic pump for emergency power. Ram air turbine deleted from F/A. Mk 2. Hydraulic reservoirs nitrogen pressurised at 2.75 to 5.5 bars (40 to 80 lb/sq in). AC electrical system with transformer rectifiers to provide required DC supply. Two 15 kVA generators. Two 28 V 25 Ah batteries, one of which energises a 24 V motor to start Lucas Mk 2 gas-turbine starter/APU. This unit drives a 6 kVA auxiliary alternator for ground readiness servicing and standby. Bootstrap cooling unit for equipment bay, with intake at base of dorsal fin. Automatic flight control system consisting of two-axis autopilot (attitude and height hold) and three-axis autostabiliser. British Oxygen liquid oxygen system of 4.5 litres (1.2 US gallons, 1 Imp gallon) capacity in Royal Navy aircraft, Indian Navy has gaseous oxygen system.

AVIONICS: *Comms:* Plessey PTR 446 D-band IFF transponder and Thomson Thorn ARI 5983 I-band transponder. Radio com by multichannel Magnavox AN/ARC-164 UHF and GEC-Marconi AD 120 VHF with VHF standby via Dowty D 403M transceiver. Intended 1994 retrofit of Mk XII IFF.

Radar: Nose-mounted GEC-Marconi Blue Fox (Blue Vixen in F/A. Mk 2) multimode radar.

Flight: UHF homing, GEC-Marconi AD 2770 Tacan with offset facility, Thomson Thorn Microwave Airborne Digital Guidance Equipment (MADGE); radar altimeter, Racal Doppler 72, GEC-Marconi self-aligning attitude and heading reference platform and digital navigation computer, upfront control panel and multifunction display. Retrofit planned in 1997 of GPS.

Instrumentation: Radar and flight information overlaid on daylight-readable TV raster display; Smiths electronic HUD.

Mission: Vinten video recording system for HUD and HDD. Smiths digital weapon-aiming computer, bus control unit and missile control system. JTIDS installation planned in 1997. Optically flat panel in nose, on port side, for F 95 oblique camera, which is carried as standard. A cockpit voice recorder with in-flight playback facility supplements the reconnaissance cameras, and facilitates rapid debriefing and mission evaluation.

Self-defence: GEC-Marconi Defense Systems Sky Guardian 200 RWR.

ARMAMENT: No built-in armament. Combat load carried on four underwing and three underfuselage pylons. Wing and centre-fuselage pylons fitted with ML ejector release units, other underfuselage pylons with McDonnell Douglas LAU-106/A missile eject launchers for AIM-120 AMRAAM. Inboard wing points and fuselage centreline point stressed for loads up to 907 kg (2,000 lb) each, and outboard underwing pair for loads up to 295 kg (650 lb) each, two strake fairings under the fuselage can each be replaced by a 30 mm Aden gun pod and ammunition or, on F/A. Mk 2, by two missile pylons. Aircraft cleared for operations with maximum external load exceeding 2,270 kg (5,000 lb), and has flown with weapon load of 3,630 kg (8,000 lb). F/A. Mk 2 outboard pylons re-stressed to 454 kg (1,000 lb). Able to carry 30 mm guns, bombs, rockets and flares of UK and US designs. Alternative stores loads of RN Sea Harriers include free-fall (1,030 lb) and parachute-retarded (1,120 lb) bombs; Lepus flares; and ML CBLS 100 carriers for Portsmouth Aviation 3 kg and 14 kg practice bombs. Four AIM-9 Sidewinder missiles carried on the outboard underwing pylons (Matra Magic instead of Sidewinder on Indian Navy aircraft), two Sea Eagle missiles carried on inboard underwing pylons on BAe launchers. F/A. Mk 2 accommodates up to four AIM-120 AMRAAMs, or two AIM-120s and four AIM-9L/M Sidewinders, on McDonnell Douglas LAU-106 launchers (underfuselage AMRAAM), Airscrew Howden Common Rail Launchers (outboard wing AMRAAM) or Varo LAU-7 rail launchers (outboard Sidewinders). BAe ALARM anti-radiation missile may be integrated as alternative to AMRAAM. Missile control system by Smiths; guns and all other armament and ejector release units controlled by GEC-Marconi (Plessey) panel.

DIMENSIONS, EXTERNAL:
Wing span: normal 7.70 m (25 ft 3 in)
ferry 9.04 m (29 ft 8 in)
Length overall: FRS. Mk 1 14.50 m (47 ft 7 in)
F/A. Mk 2 14.17 m (46 ft 6 in)
Length overall, nose folded:
FRS. Mk 1 12.73 m (41 ft 9 in)
F/A. Mk 2 13.16 m (43 ft 2 in)
Height overall 3.71 m (12 ft 2 in)
Tailplane span 4.24 m (13 ft 11 in)
Outrigger wheel track 6.76 m (22 ft 2 in)
Wheelbase, nosewheel to mainwheels
approx 3.45 m (11 ft 4 in)

AREAS:
Wings, gross 18.68 m² (201.1 sq ft)
Rudder, incl tab 0.49 m² (5.3 sq ft)
Tailplane 4.41 m² (47.5 sq ft)

WEIGHTS AND LOADINGS (FRS. Mk 1):
Operating weight empty 6,374 kg (14,052 lb)
Max fuel: internal 2,295 kg (5,060 lb)
external 2,404 kg (5,300 lb)
Max weapon load: STO 3,630 kg (8,000 lb)
VTO 2,270 kg (5,000 lb)
Max T-O weight 11,880 kg (26,200 lb)
Max wing loading 636.0 kg/m² (130.3 lb/sq ft)
Max power loading 124.27 kg/kN (1.22 lb/lb st)

PERFORMANCE (FRS. Mk 1):
Max Mach number at high altitude 1.25
Max level speed at low altitude
above 640 kts (1,185 km/h; 736 mph) EAS
Typical cruising speed:
high-altitude, for well over 1 h on internal fuel
above Mach 0.8
low altitude
350-450 kts (650-833 km/h, 404-518 mph),
with rapid acceleration to
600 kts (1,110 km/h; 690 mph)
STO run at max T-O weight, without ski-jump
approx 305 m (1,000 ft)
Time from alarm to 30 n miles (55 km; 35 miles) combat area under 6 min
High-altitude intercept radius, with 3 min combat and reserves for VL 400 n miles (750 km, 460 miles)
Attack radius 250 n miles (463 km, 288 miles)
g limits +7.8/–4.2

COMBAT PROFILES (F/A. Mk 2, from carrier fitted with a 12° ski-jump ramp, at ISA + 15°C and with a 20 kt, 37 km/h, 23 mph wind over the deck):

Combat air patrol: Up to 1 hour 30 minutes on station at a radius of 100 n miles (185 km, 115 miles), carrying four AMRAAMs, or two AMRAAMs and two 30 mm guns, plus two 864 litre (228 US gallon, 190 Imp gallon) combat drop tanks.

Reconnaissance: Low level cover of 130,000 n miles² (446,465 km², 172,380 sq miles) at a radius of 525 n miles (970 km; 600 miles) from the carrier, with outward and return flights at medium/high level, carrying two 30 mm guns and two 864 litre (228 US gallon; 190 Imp gallon) combat drop tanks. Overall flight time 1 hour 45 minutes.

Surface attack (hi-lo-hi): Radius of action to missile launch 200 n miles (370 km; 230 miles), carrying two Sea Eagle missiles and two 30 mm guns.

Take-off deck run for the above missions is 137 m, 107 m and 92 m (450 ft, 350 ft and 300 ft) respectively, with vertical landing.

Interception. A typical deck-launched interception could be performed against a Mach 0.9 target at a radius of 116 n miles (215 km, 133 miles), or a Mach 1.3 target at 95 n miles (175 km, 109 miles), after initial radar detection of the approaching target at a range of 230 n miles (425 km, 265 miles), with the Sea Harrier at 2 minutes alert status, carrying two AMRAAM missiles.

UPDATED

V-22 OSPREY

BAe and Bell/Boeing concluded MoU in 1987 covering examination by British company of latter's V-22 tilt-rotor aircraft in both military and civilian applications within European NATO area. In 1989, Aeritalia (now Alenia) and Dornier (now DASA) reached agreement with BAe to pursue prospects of V-22 tilt-rotor aircraft within Europe on collaborative tri-national basis, with support of Bell/Boeing.

Potential applications for a tilt-rotor aircraft in UK military service are foreseen by BAe as shore-based anti-submarine warfare (four Sting Ray torpedoes), ship-based AEW, commando assault (24 troops), air mobility and special forces (12 troops and extra fuel). Civilian uses include resource development (carrying 30+ oil/gas rig workers) and commuter transport.

VERIFIED

BAe ADVANCED AIRCRAFT STUDIES

TYPE: Low-observables (LO) combat aircraft to replace Tornado GR. Mk 4.

PROGRAMME: £100 million spent in 1992-94 on stealth aircraft development, purpose-built research and development facility, including secure hangar, nearing completion at Warton plant in 1995. BAe urging government go-ahead for stealth demonstrator in 1997, production aircraft then to be available in 2013, international collaboration likely.

Note: US press reports, quoting Washington sources, allege UK already proceeding with LO aircraft programme optimised for frontal area stealthiness.

UK media allege LO aircraft (assumed to be American) destroyed in accident at Boscombe Down on night of 26 September 1994. No evidence available to substantiate either claim.

NEW ENTRY

Fax: 44 (1582) 797999

BAe Regional Aircraft Limited (BAe RAL) Asset Management Organisation (AMO) deals with BAe 146 fleet leasing and sales, 60 aircraft were leased or purchased through AMO during 1994. BAe 146 now out of production but AMO holds portfolio of 112 aircraft. The design continues as the Avro Regional Jet series (see following entry) and is built at Woodford factory south of Manchester.

AVRO INTERNATIONAL AEROSPACE LTD

(Division of British Aerospace Regional Aircraft)

Woodford Aerodrome, Chester Road, Stockport, Cheshire SK7 1QR
Telephone: 44 (161) 439 5051
Fax: 44 (161) 955 4570
MANAGING DIRECTOR: Michael Donovan
SALES AND MARKETING: Jeffrey Marsh
PUBLIC RELATIONS: Howard Borrington

Avro International Aerospace assembles the RJ Avroliner family of aircraft at its headquarters in Woodford, Cheshire. 185 ha (459 acre) site includes over 93,000 m² (1,001,000 sq ft) of assembly hangars, not including flight test facilities. Workforce 2,000.

Agreement reached in January 1995 (and formally signed on 6 June 1995) for Avro to join Franco-Italian ATR (see International Section) and Jetstream Aircraft (this section) in single integrated organisation, eventually leading to development of new products. Resultant Aero International Regional (AIR) merges marketing, sales and customer support of ATR 42/72, Avro RJ and Jetstream 41 with HQ at Toulouse, France, logistics centre at Weybridge, UK, and training centre at Naples, Italy. Avro and Jetstream remain responsible for manufacture of existing products. New venture to become operational on 1 January 1996.

UPDATED

BAe RJ100 Avroliner of Turkish Airlines

1995

BAe RJ AVROLINER

TYPE: Four-turbofan short-range transport.

PROGRAMME: Developed from BAe 146 (1993-94 and earlier *Jane's*) with major changes including uprated engines and all-digital avionics; first development (RJ85) aircraft (G-ISEE) flown at Hatfield 23 March 1992 and first RJ100 (G-OIII) on 13 May 1992; formally announced June 1992; first production RJ (RJ85 for Crossair, G-CROS) made first flight at Woodford 27 November 1992, delivered 2 April 1993; CAA and FAA certification completed 1 October 1993 and 10 June 1994, respectively; final assembly of RJs is at Woodford. Customer support packages include an extended three-year warranty, guaranteed reliability and maintenance costs. Packages available include JetKey, a total fleet management package. Target weight saving of 680 kg (1,500 lb) announced September 1994, together with drag reduction improvements including fairing at fin/tailplane junction and deletion of tail bumper; drag modifications, standard from 1996, reduce fuel consumption by 2 per cent. Cabin pressure differential to be increased from 1996 to raise cruising altitude by 610 m (2,000 ft) to 10,065 m (33,000 ft).

CURRENT VERSIONS: **RJ70**: Shortest fuselage version, accommodating 70 to 94 passengers, choice of power plant between 31.14 kN (7,000 lb st) LF 507 or derated 27.27 kN (6,130 lb st) LF 507 engines. Three delivered in 1994, 8 further orders at March 1995.

RJ85: Lengthened version for 85 to 112 passengers. 31.14 kN (7,000 lb st) LF 507 engines. Seven delivered in 1994, 10 further orders at March 1995.

RJ100: Longest current model, for 100 to 128 passengers (100 at five-abreast seating), engines as for RJ85. Seven delivered in 1994, 16 further orders at March 1995.

RJ115: Same fuselage dimensions as RJ100 but featuring mid-cabin exits, increased capacity air conditioning packs and higher design weights and fuel capacity as standard, 116 to 128 passengers in six-abreast configuration, same engines as RJ100.

QT Quiet Trader: Freighter version.

RJ AVROLINER ORDERS
(June 1995)

Air Malta	RJ70	4	4
Business Express (USA)	RJ70	12	3
Crossair (Switzerland)	RJ85	4	4
	RJ100	12	0
Lufthansa	RJ85	10	6
Pelita Air Service (Indonesia)	RJ85	1	1
SAM (Colombia)	RJ100	8	8
Turkish Airlines	RJ100	10	8
Total		**61**	**34**

QC Quick Change: Versions configured for quick change from passenger to freight and vice versa.

Combi: Versions configured for carriage of both freight and passengers.

CUSTOMERS: Total of 61 orders (and 34 deliveries, including 17 in 1994) by June 1995, see table.

DESIGN FEATURES: Low operating noise levels; ability to operate from short or semi-prepared airstrips with minimal ground facilities; 'Spaceliner' interior; LF 507 FADEC controlled engines, digital flight deck with Cat. IIIa all-weather landing capability.

High lift aerofoil section, thickness/chord ratio 15.3 per cent at root, 12.2 per cent at tip; anhedral 3° at trailing edge; incidence 3° 6' at root, 0° at tip; sweepback 15° at quarter-chord.

FLYING CONTROLS: Mechanically actuated ailerons and elevators, with trim and servo tabs; powered rudder. Single section hydraulically actuated Fowler flaps, spanning 78 per cent of trailing edges, with Dowty actuators; 33° flap setting under development in 1995 for RJ100; hydraulically operated roll spoiler outboard of three automatically actuated lift dumpers on each wing; no leading-edge lift devices; petal airbrakes form tailcone when closed. Honeywell automatic flight control/flight guidance system.

STRUCTURE: All-metal, fail-safe wings with machined skins, integrally machined spars and ribs; fail-safe fuselage with chemically etched skins; strengthened centre-section developed initially for RJ100 (will be standard on all RJ70s); nose free of stringers, remainder of fuselage has top hat stringers bonded to skins above keel area, Z section stringers wet assembled with bonding agent and riveted to skin in keel area. T tail with chemically etched skins bonded to top hat section stringers; fixed incidence tailplane.

LANDING GEAR: Hydraulically retractable tricycle type of Dowty design, with twin Dunlop wheels on each unit. Main units retract inward into fairings on fuselage sides; steerable (±70°) nose unit retracts forward. Oleo-pneumatic shock-absorbers with wheels mounted on trailing axle. Simple telescopic nosewheel strut. Mainwheel tyres size 12.50-16 Type III, pressure (RJ70) 8.41 bars (122 lb/sq in). Nosewheel tyres size 7.50-10 Type III, pressure (RJ70) 7.79 bars (113 lb/sq in). Low-pressure tyres optional. Dunlop multidisc carbon brakes operated by duplicated hydraulic systems. Anti-skid units in both primary and secondary brake systems. Minimum ground turning radius about nosewheels: RJ70, 11.53 m (37 ft 10 in); RJ85, 12.55 m (41 ft 2 in); RJ100, 13.97 m (45 ft 10 in).

POWER PLANT: Four AlliedSignal LF 507 turbofans, each rated at 31.14 kN (7,000 lb st), installed in underwing pylon pods on RJ85, RJ100 and RJ115. RJ70 previously had derated LF 507 engines as standard, providing 27.27 kN (6,130 lb st); these now optional. No reverse thrust. Fuel in two integral wing tanks and integral centre-section tank (latter with vented and drained sealing diaphragm above passenger cabin), combined usable capacity 11,728 litres (3,098 US gallons, 2,580 Imp gallons). Optional auxiliary tanks in wingroot fairings, combined capacity 1,173 litres (310 US gallons, 258 Imp gallons), giving total capacity of 12,901 litres (3,408 US gallons, 2,838 Imp gallons). Single-point pressure refuelling, with coupling situated in starboard wing outboard of outer engine.

ACCOMMODATION: Crew of two pilots on flight deck, and two or three cabin staff. Standard observer's seat. RJ70 accommodates 70 passengers five-abreast and up to 94 six-abreast at 74 cm (29 in) pitch. RJ85 accommodates 85 passengers five-abreast, maximum 112 passengers six-abreast at 74 cm (29 in) pitch. RJ100 standard accommodation for 100 passengers five-abreast at 79 cm (31 in) pitch, and maximum 112 passengers. RJ115 accommodates 116 passengers six-abreast; maximum of 128. One outward-opening passenger door forward and one aft on port side of cabin. Built-in airstairs optional. Service doors, one forward and one aft on starboard side of cabin. Freight and baggage holds under cabin floor. All accommodation pressurised and air conditioned.

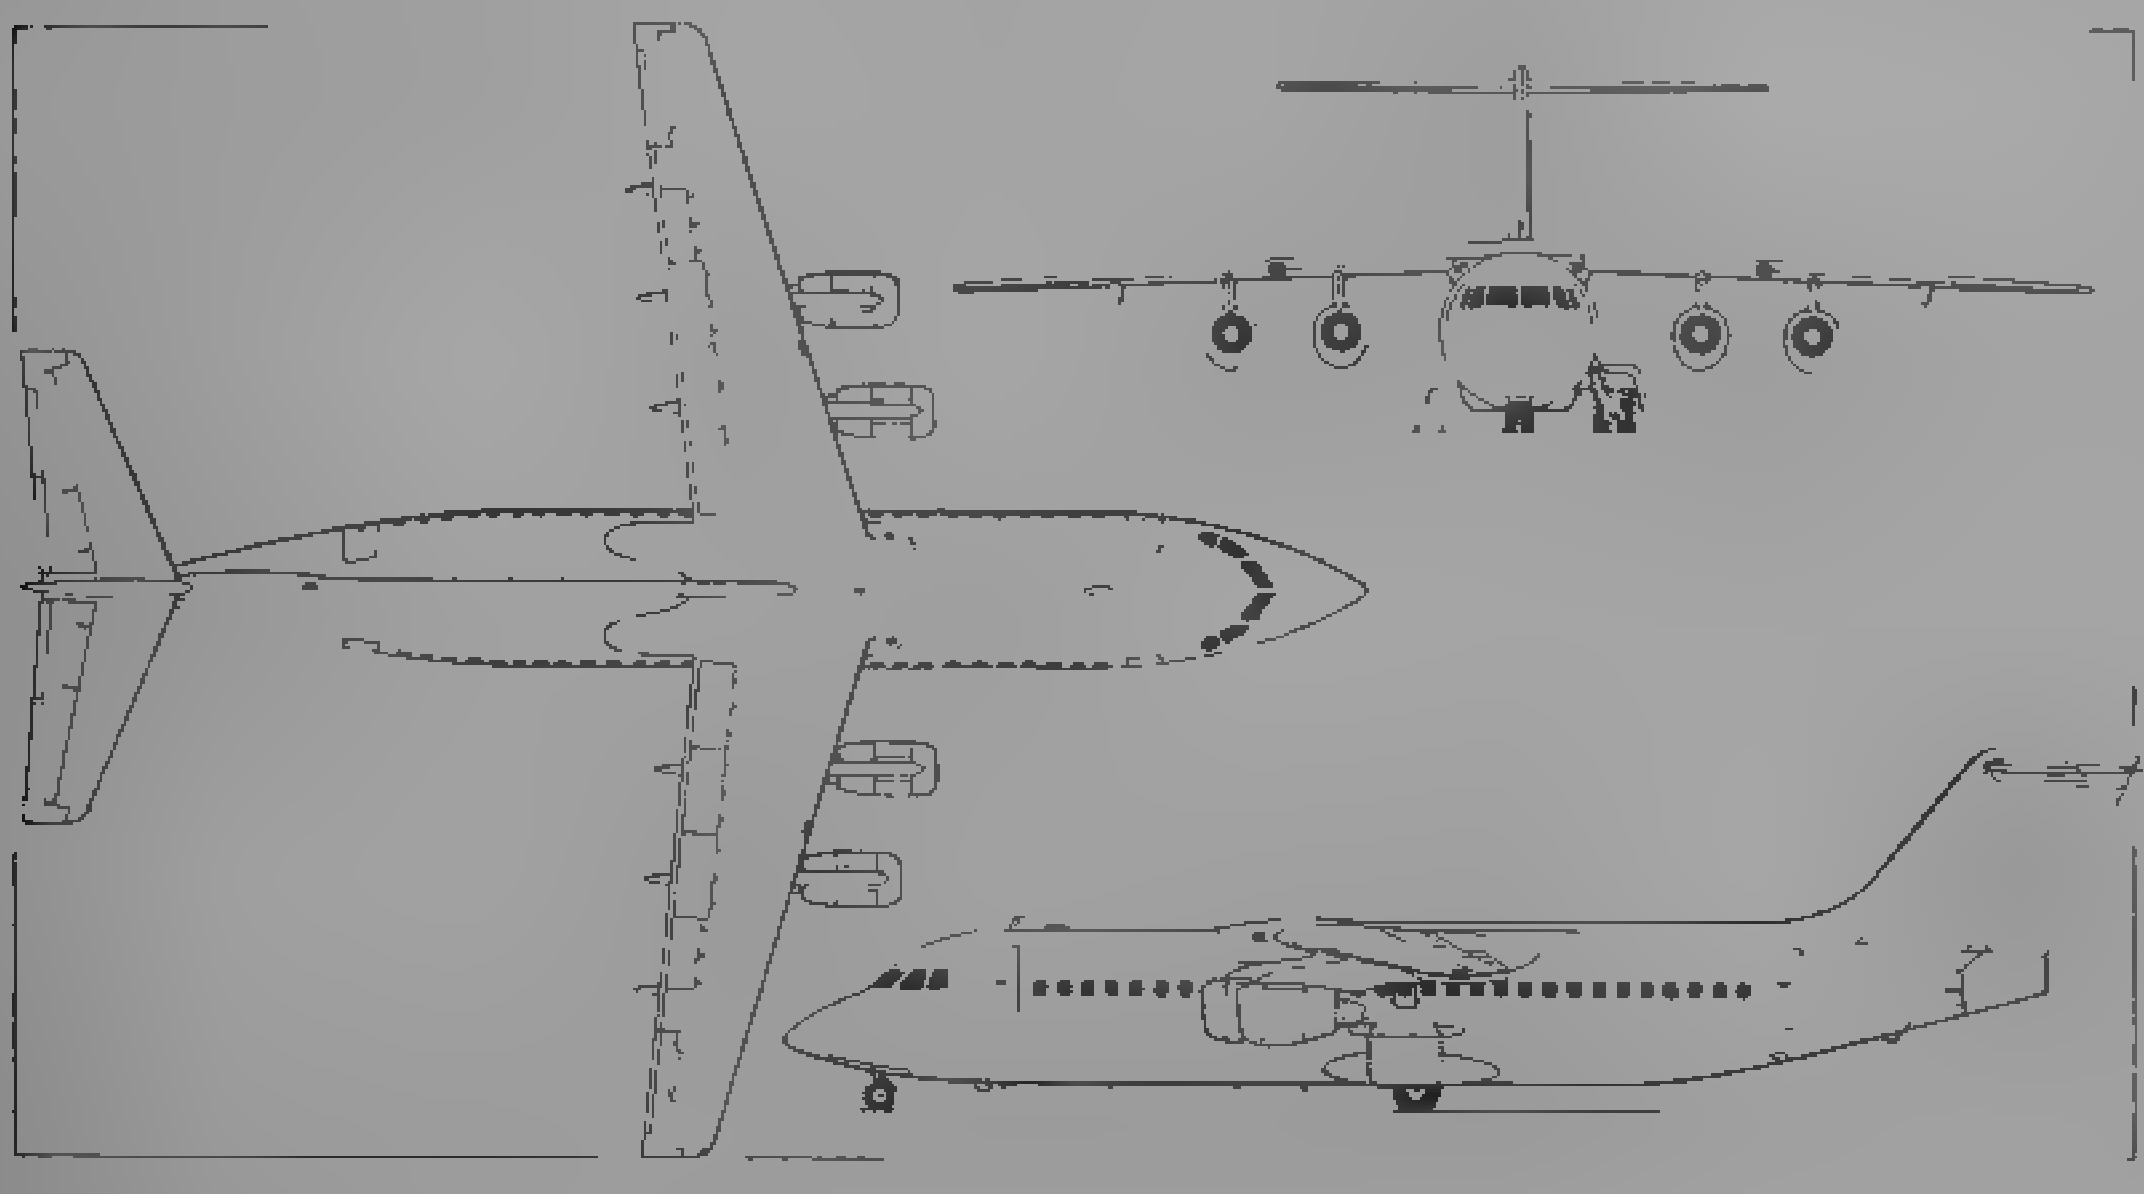
SYSTEMS: Normalair-Garrett cabin air conditioning and pressurisation system, using engine bleed air. Electropneumatic pressurisation control with discharge valves at front and rear of cabin. Maximum differential 0.47 bar (6.75 lb/sq in), giving 2,440 m (8,000 ft) equivalent altitude at 9,450 m (31,000 ft). Hydraulic system, duplicated for essential services, for landing gear, flaps, rudder, roll and lift spoilers, airbrakes, nosewheel steering, brakes and auxiliary fuel pumps, pressure 207 bars (3,000 lb/sq in). Electrical system powered by two 40 kVA integrated-drive alternators to feed 115/200 V three-phase 400 Hz primary systems. 28 V DC power supplied by transformer-rectifier in each channel. Hydraulically powered emergency electrical power unit. AlliedSignal GTCP 36-150 APU for ground and air usable air conditioning and electrical power generation, Sundstrand/APIC 1000 APU standard from 1994. Chemical oxygen system. Stall warning and identification system, comprising stick shaker (warning) and stick force (identification) elements, providing soft and hard corrective stick forces at the approach of stall conditions. Hot air de-icing of wing and tailplane leading-edges; windscreen electric anti-icing and demisting standard; rain repellent system.

AVIONICS: *Comms*: Dual VHF radios with ARINC 700 interface, Selcal, HF radios, PA system, CVR.

Radar: Choice of weather radars.

Flight: Honeywell digital flight guidance system incorporates fail-passive Cat. IIIa autopilot, autothrottle, yaw damper and windshear detection and protection. Marker beacon receiver, dual radio altimeters, ground proximity warning system, dual DME, dual ATC transponders, dual VHF nav and dual ADF.

Instrumentation: Full IFR.



Avroliner RJ115 with up to 128 seats (*Jane's/Dennis Punnett*)

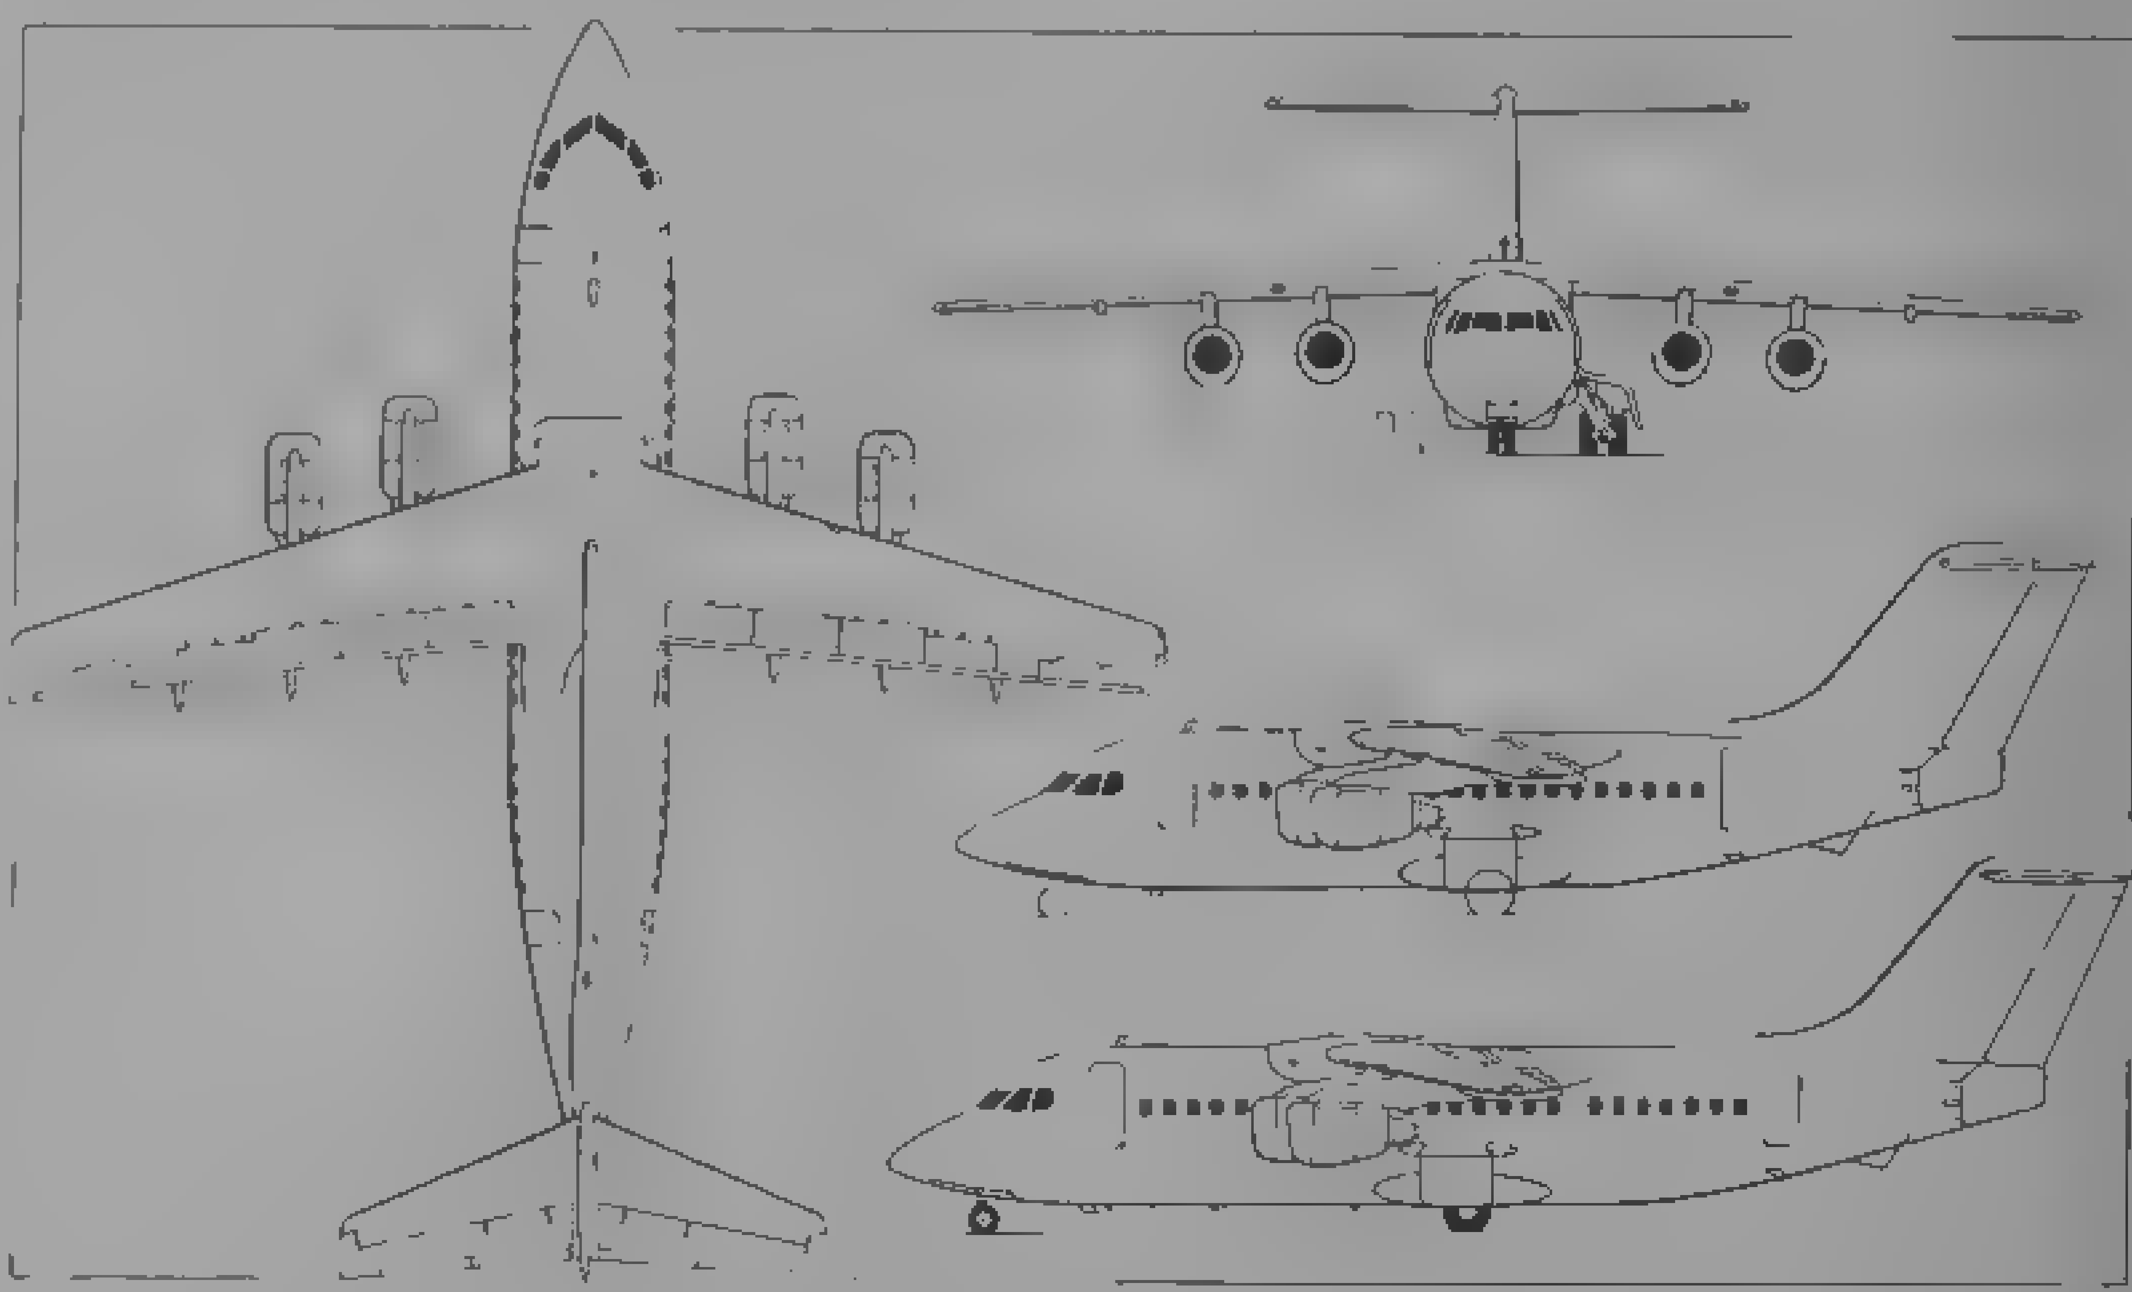
RJ85	569.2 kg/m² (116.6 lb/sq ft)
RJ100, RJ115	595.7 kg/m² (122.0 lb/sq ft)
Max power loading: RJ70*	345.98 kg/kN (3.39 lb/lb st)
RJ85	353.26 kg/kN (3.46 lb/lb st)
RJ100, RJ115	369.65 kg/kN (3.63 lb/lb st)

* *Fully rated engines*



RJ85 with additional side view (upper) of RJ70. Tail bumpers will be removed in 1996
(Jane's/Dennis Punnett) *1995*

PERFORMANCE (at ISA and max standard T-O weight, except where indicated):

Max operating Mach number (M_{MO}): all versions	0.73
Max operating speed (V_{MO}):	
RJ70, RJ85	300 kts (555 km/h; 345 mph) IAS
RJ100, RJ115	305 kts (565 km/h; 351 mph) IAS
Cruising speed at 9,455 m (31,000 ft):	
RJ70: high speed	432 kts (801 km/h; 498 mph)
long range	368 kts (681 km/h; 423 mph)
RJ85: high speed	432 kts (801 km/h; 498 mph)
long range	376 kts (696 km/h; 433 mph)
RJ100, RJ115:	
high speed	432 kts (801 km/h; 498 mph)
long range	384 kts (711 km/h; 442 mph)
Stalling speed, 30° flap:	
RJ70	97 kts (179 km/h; 111 mph) EAS
RJ85	101 kts (187 km/h; 116 mph) EAS
RJ100	104 kts (192 km/h; 119 mph) EAS
RJ115	106 kts (197 km/h; 122 mph) EAS
Stalling speed, 33° flap, at max landing weight:	
RJ70, RJ85	93 kts (172 km/h; 107 mph) EAS
RJ100, RJ115	95 kts (176 km/h; 109 mph) EAS
T-O to 10.7 m (35 ft), S/L, ISA: RJ70	1,192 m (3,910 ft)
RJ85	1,466 m (4,810 ft)
RJ100	1,655 m (5,430 ft)
RJ115	1,811 m (5,940 ft)
FAR landing distance from 15 m (50 ft), S/L, ISA, at max landing weight: RJ70	1,173 m (3,850 ft)
RJ85	1,189 m (3,900 ft)
RJ100, RJ115	1,268 m (4,160 ft)
Range with max fuel:	
RJ70	1,600 n miles (2,963 km; 1,841 miles)
RJ85	1,500 n miles (2,778 km; 1,726 miles)
RJ100	1,400 n miles (2,593 km; 1,611 miles)
RJ115	1,330 n miles (2,463 km; 1,530 miles)
Range with max payload:	
RJ70	1,230 n miles (2,278 km; 1,415 miles)
RJ85	960 n miles (1,778 km; 1,104 miles)
RJ100, RJ115	990 n miles (1,833 km; 1,139 miles)

OPERATIONAL NOISE LEVELS (FAR Pt 36-12):

T-O: RJ70	81.9 EPNdB
RJ85	83.0 EPNdB
RJ100	84.7 EPNdB
RJ115	86.1 EPNdB
Approach: RJ70	97.5 EPNdB

CFM

COOK FLYING MACHINES
(Trading as CFM Metal-Fax Ltd)

Unit 2D, Eastlands Industrial Estate, Leiston, Suffolk IP16 4LL
Telephone: 44 (1728) 832353/833076
Fax: 44 (1728) 832944
Telex: 9877703 CHACOM G
MANAGING DIRECTOR: David G Cook

While continuing to produce Shadow series of aircraft from its Suffolk works, CFM has licensed Laron Aviation Technologies of Portalis, New Mexico, to produce Shadow kits for North and South American and Canadian market, and has been negotiating for licensed production at a plant at Durban, Natal, for African, Australasian and Far Eastern markets.

VERIFIED

CFM SHADOW SERIES C and C-D

TYPE: Tandem two-seat microlight, conforms to FAI and UK CAA requirements (BCAR CAP 482 Section S).

PROGRAMME: Shadow first flew as prototype in 1983; in production since 1984, type approval to BCAR CAP 482 Section S gained May 1985. Current standard Shadow designated Series C, with C-D having dual controls, although Series B/B-D can still be bought. ULV cropspraying trials carrying 64 litre (16.8 US gallon; 14 Imp gallon)

chemical tank, multifunction surveillance fit for photography (Hasselblad survey camera), video recording, linescan or thermal imagery, or closed-circuit TV microwave transmission to a command vehicle/station also available.

COSTS (early 1995): Assembled: Series B, £15,410; Series B-D, £15,900; Series C, £16,370; Series C-D, £16,860. Kit: Series B, £9,625; Series B-D, £9,900; Series C, £10,425; Series C-D, £10,700. (All prices exclusive of VAT.)

CUSTOMERS: Total 14 new Shadows registered in UK during 1994, including two built under PFA auspices. Sales by early 1995 totalled 280.

DESIGN FEATURES: Design claimed to have no 'defined stall' and is spin-resistant. Options include agricultural spraygear and other specialised equipment.

STRUCTURE: Wings of aluminium alloy and wood, with foam/glassfibre ribs, plywood covering on forward section and polyester fabric aft. Fuselage pod of Fibrelam, aluminium tube tailboom.

LANDING GEAR: Non-retractable tricycle landing gear, with brakes. Options include floats.

POWER PLANT: One 38 kW (51 hp) Rotax 503 2V. Standard fuel capacity 23 litres (6 US gallons; 5 Imp gallons). Options include a 73 litre (19.2 US gallon, 16 Imp gallon) auxiliary fuel tank.

DIMENSIONS, EXTERNAL:

Wing span	10.03 m (32 ft 11 in)
Wing aspect ratio	6.69
Length overall	6.40 m (21 ft 0 in)
Height overall	1.75 m (5 ft 9 in)
Propeller diameter	1.30 m (4 ft 3 in)

AREAS:

Wings, gross	15.0 m² (162.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	158 kg (349 lb)
Pilot/passenger weight range:	
front cockpit	54.5-100 kg (120-220 lb)
rear cockpit	0-100 kg (0-220 lb)
Max T-O weight	348 kg (767 lb)
Max wing loading	23.09 kg/m² (4.73 lb/sq ft)
Max power loading	9.16 kg/kW (15.04 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Max level speed	89 kts (164 km/h; 102 mph)
Econ cruising speed	65 kts (121 km/h; 75 mph)
Min flying speed	22 kts (41 km/h; 25 mph)
Max rate of climb at S/L:	
pilot only	335-366 m (1,100-1,200 ft)/min
dual	213-244 m (700-800 ft)/min
Service ceiling	7,620 m (25,000 ft)
T-O run from metalled surface	90 m (295 ft)
Landing run, with brakes	75 m (246 ft)
Range, standard fuel	139 n miles (257 km; 160 miles)
Endurance, standard fuel	2 h
g limits	+6/-3 static, ultimate

UPDATED

CFM STREAK SHADOW

TYPE: Tandem two-seat ultralight/homebuilt, dual controls standard.

PROGRAMME: Construction of prototype started 1987 and this first flew June 1988; first flight of production aircraft October 1988; 75 kits delivered by January 1995.

COSTS (1995): Assembled: by application. Kits: Series S-A1, £11,750; Series S-A, £12,200. (All prices exclusive of VAT.)

CFM Starstreak (Hirth F30 engine)

1995

DESIGN FEATURES: Derivative version of Shadow, designated a microlight in Europe and Experimental homebuilt in USA. has new wing design, light airframe weight and more powerful engine; fuel capacity similar to latest C version of Shadow; no 'defined stall' and is spin-resistant.

FLYING CONTROLS: See Structure. Electric trim.

STRUCTURE: Similar to Shadow but with foam/glassfibre wings (CFM aerofoil section), and control surfaces with aluminium alloy ribs and polyester fabric covering (ailerons, flaps, rudder and elevators).

POWER PLANT: One 47.7 kW (64 hp) Rotax 582, or optional MWAE 622. Standard fuel capacity 54.6 litres (14.4 US gallons, 12 Imp gallons). Optional 73 litre (19.2 US gallon, 16 Imp gallon) auxiliary fuel tank.

DIMENSIONS, EXTERNAL:

Wing span	8.53 m (28 ft 0 in)
Wing aspect ratio	5.60
Length overall	6.40 m (21 ft 0 in)
Height overall	1.75 m (5 ft 9 in)
Propeller diameter	1.32 m (4 ft 4 in)

AREAS:

Wings, gross	13.01 m² (140.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	176 kg (388 lb)
Max T-O weight	408 kg (900 lb)
Max wing loading	31.39 kg/m² (6.43 lb/sq ft)
Max power loading	8.55 kg/kW (14.06 lb/hp)

PERFORMANCE (at ISA and max T-O weight):

Max level speed	105 kts (195 km/h; 121 mph)
Cruising speed:	
75% power	87 kts (161 km/h; 100 mph)
50% power	65 kts (121 km/h; 75 mph)
Min flying speed, engine idling	28 kts (52 km/h; 32 mph)
Max rate of climb at S/L:	
pilot only	549 m (1,800 ft)/min
dual	335-396 m (1,100-1,300 ft)/min
Service ceiling	9,150 m (30,000 ft)
Range	347 n miles (643 km; 400 miles)
Endurance, standard fuel	4 h 30 min
g limits	+6/-3 static, ultimate

UPDATED

CFM SHADOW II

This specialised single-seat version of Shadow is marketed by Mission Technologies Inc (Mi Tex) of Hondo, Texas, USA, as manned surveillance system aircraft for day and night use. Uses one 44.7 kW (64 hp) Rotax 532 engine, and has wing span of 8.53 m (28 ft 0 in).

VERIFIED

CFM STARSTREAK

As Streak Shadow but with 9.14 m (30 ft) span wing and Hirth F30 four-cylinder two-stroke engine of 70.8 kW (95 hp). Prototype flew in 1992, first deliveries February 1994. Cost of kit with engine £15,500.

CHAIRMAN: Ian Chichester-Miles

Ian Chichester-Miles, formerly Chief Research Engineer of BAe Hatfield, established Chichester-Miles Consultants to develop Leopard high-performance light business jet.

UPDATED

CMC LEOPARD

TYPE: Four-seat light business aircraft.

PROGRAMME: Design began January 1981; mockup completed early 1982; detail design and construction of prototype by Designability Ltd of Dilton Marsh, Wiltshire, began July 1982 under CMC contract; first flight of unpressurised prototype (001/G-BKRL) 12 December 1988 at RAE Bedford; by December 1991 had made 50 flights investigating basic handling qualities at speeds up to 200 knots (371 km/h; 230 mph) IAS; new tailplane incorporating AS&T liquid anti-icing system on leading-edge subsequently installed on prototype prior to resumption of flight testing aimed at expanding airspeed, altitude and CG envelopes. Testing halted due to Noel Penny engine company going out of business; change of engine for second prototype.

Design of second (preproduction) aircraft, 002, began April 1989. Features strengthened structure, new landing gear, pressurised cabin, de-icing, reprofiled nose for EFIS avionics, substitution of oleo-pneumatic main landing gear legs for current rubber-in-compression units, and powered by Williams International FJX-1 turbofans. Second Leopard exhibited in incomplete condition at 1994 Farnborough Air Show.

DESIGN FEATURES: All composites airframe, sweptback supercritical wings, sweptback tail unit, twin low-cost turbofans, pressurised cabin, AS&T liquid anti-icing and decontamination system on wing and tailplane leading-edges of production aircraft (see Programme), warm air de-icing of engine intake leading-edges. First prototype has lower powered engines, lacks full pressurisation/air conditioning system, anti-icing, advanced avionics and instrumentation of second aircraft and planned production model.

ARA designed wing section and 3D profiles combining laminar flow and supercritical technology; thickness/chord ratio 14 per cent at root, 11 per cent at tip; wing sweepback at quarter-chord 25°.

FLYING CONTROLS: All-moving fin; two independent tailplane sections operated collectively for pitch control and differentially for roll control, no ailerons. Full span electrically actuated trailing-edge plain flaps, with ±45° deflections for high drag landing and airbraking/lift dumping; no spoilers.

STRUCTURE: Two spar wings, primarily of GFRP, with some carbonfibre reinforcement, carbonfibre flaps; fuselage built in three sections as unpressurised nose housing avionics and nosewheel gear, pressurised cabin (production aircraft), and unpressurised rear housing baggage bay, with fuel tanks below and equipment bays to rear; fuselage primarily GFRP with some carbonfibre reinforcement (fore and aft bulkheads, engine and tailplane axle frames moulded in), pressure cabin section divided approximately along aircraft horizontal datum, with upper section formed by electrically actuated upward-opening canopy hinged at windscreen leading-edge; bonded-in acrylic side windows carry pressurisation tension; nose opens for access to avionics; light alloy engine nacelles, with stainless steel firewalls; composites fin and tailplane; fin sternpost projects to bottom of rear fuselage; low set tailplane in two independent sections, each mounted on steel axle projecting from side of rear fuselage; carbonfibre tabs.

LANDING GEAR: Electrically retractable tricycle type, main units retracting inward into wingroot wells, nosewheels forward. Gravity extension assisted by bias springs and aerodynamic drag. Long stroke shock absorber in each unit, using synthetic elastomers in compression. CMC designed oleo-pneumatic main landing gear installed in 002 and for production aircraft. Main units, each with single Cleveland wheel, size 5.00-5, have tyres size 11 × 4, pressure 4.82 bars (70 lb/sq in) on prototype, 11.56 bars (170 lb/sq in) on production aircraft. Unpowered steerable twin-wheel nose unit has wheels size 4.00-3 and tyres size 8.5 × 2.5 in, pressure 2.75 bars (40 lb/sq in) on prototype, 3.8 bars (55 lb/sq in) on production aircraft. Hydraulic disc brakes. Parking brake.

POWER PLANT: Prototype 001 has two Noel Penny Turbines NPT 301-3A turbojets each of nominal 1.33 kN (300 lb st) rating. Aircraft 002 has two Williams FJX-1 turbofans each of 3.11 kN (700 lb st). Production aircraft will have two Williams International FJX-2 turbofans, each of 4.23 kN (950 lb st). Each engine in nacelle, mounted on crossbeam located in rear fuselage. Fuel tanks in fuselage, below baggage bay. First prototype has total fuel capacity of 455 litres (120 US gallons, 100 Imp gallons). Production aircraft will have maximum capacity of 673 litres (178 US gallons, 148 Imp gallons). Refuelling point on upper surface of fuselage.

ACCOMMODATION: Cabin seats four, in two pairs, on semi-reclining (35°) seats beneath upward opening jettisonable canopy. Options include dual controls, and accommodation for pilot, stretcher and attendant in medevac role. Unpressurised baggage bay aft of cabin, capacity 63 kg (140 lb), with external door in upper surface of fuselage.

SYSTEMS (production aircraft): Air conditioning and pressurisation (maximum differential 0.66 bar; 9.6 lb/sq in) by engine bleed air. Electrical system powered by dual

engine-driven 3 kVA starter/generators. Hydraulic system for brakes only. Anti-icing

AVIONICS (production aircraft): Bendix/King avionics mounted in nose bay.

Radar: Weather radar.

Instrumentation: Two CRTs in pilot's instrument panel. Electromechanical standby flight instruments.

DIMENSIONS, EXTERNAL:	
Wing span	7.16 m (23 ft 6 in)
Wing chord: at root	1.14 m (3 ft 9 in)
at tip	0.36 m (1 ft 2 in)
Wing aspect ratio	8.78
Length overall	7.54 m (24 ft 9 in)
Height overall	2.06 m (6 ft 9 in)
to canopy sill	0.76 m (2 ft 6 in)
Tailplane span	3.91 m (12 ft 10 in)
Wheel track	3.45 m (11 ft 4 in)
Wheelbase	3.20 m (10 ft 6 in)
DIMENSIONS, INTERNAL:	
Cabin: Length	2.74 m (9 ft 0 in)
Max width	1.14 m (3 ft 9 in)
Max height	0.94 m (3 ft 1 in)
Baggage bay volume	0.40 m³ (14 cu ft)
AREAS:	
Wings, gross	5.85 m² (62.9 sq ft)
Trailing-edge flaps (total)	1.24 m² (13.3 sq ft)
Fin	0.86 m² (9.3 sq ft)
Tailplane (incl tabs)	2.14 m² (23.0 sq ft)
WEIGHTS AND LOADINGS (A: first prototype, B: production aircraft, estimated):	
Weight empty, equipped: A	862 kg (1,900 lb)
B	998 kg (2,200 lb)
Max fuel weight: A	367 kg (810 lb)
B	544 kg (1,200 lb)
Max T-O weight: A	1,156 kg (2,550 lb)
B	1,814 kg (4,000 lb)
Max zero-fuel weight: A	1,043 kg (2,300 lb)
B	1,361 kg (3,000 lb)
Max landing weight: A	1,156 kg (2,550 lb)
B	1,701 kg (3,750 lb)
Max wing loading: A	197.7 kg/m² (40.5 lb/sq ft)
B	310.3 kg/m² (63.6 lb/sq ft)
Max power loading: A	433.7 kg/kN (4.25 lb/lb st)
B	240.1 kg/kN (2.35 lb/lb st)
PERFORMANCE (production aircraft, estimated, ISA, max T-O weight):	
Never-exceed speed (VNE)	Mach 0.81 (300 kts, 556 km/h, 345 mph EAS)
Max level speed at 9,450 m (31,000 ft)	469 kts (869 km/h; 540 mph)
Max and econ cruising speed at 13,715 m (45,000 ft)	434 kts (804 km/h; 500 mph)
Stalling speed, full flap, at AUW of 1,497 kg (3,300 lb)	84 kts (156 km/h; 97 mph)
Max rate of climb at S/L	1,960 m (6,430 ft)/min
Rate of climb at S/L, OEI	631 m (2,070 ft)/min
Service ceiling	16,765 m (55,000 ft)
Service ceiling, OEI	9,145 m (30,000 ft)
T-O to 15 m (50 ft)	727 m (2,385 ft)
T-O balanced field length	838 m (2,750 ft)
Landing factored field length	854 m (2,800 ft)
Landing from 15 m (50 ft) at AUW of 1,497 kg (3,300 lb)	778 m (2,550 ft)
Range, max payload, with reserves	1,500 n miles (2,778 km; 1,726 miles)
max fuel and reduced payload	1,915 n miles (3,547 km; 2,204 miles)

EUROPA

EUROPA AVIATION LTD

Unit 2A, Dove Way, Kirby Mills Industrial Estate, Kirkbymoorside, North Yorkshire YO6 6NR
Telephone: 44 (1751) 431773
Fax: 44 (1751) 431706
CHAIRMAN: Ivan Shaw

Formed to develop Europa light aircraft. Ivan Shaw previously built three Rutan canards before designing Europa for European environment including operating from grass strips. Don Dykins, formerly British Aerospace Chief Aerodynamicist, defined aerodynamics, Barry Meliers (Chief Designer of Slingsby Aviation Ltd) made structural calculations, and has much experience in use of composite materials in light aircraft design.

VERIFIED

EUROPA AVIATION EUROPA

TYPE: Two-seat light cabin monoplane.

PROGRAMME: Design started January 1990; prototype made first flight 12 September 1992 (G-YURO). PFA certification achieved May 1993; produced mainly in kit form under PFA auspices, but two assembled by Europa Aviation in 1994.

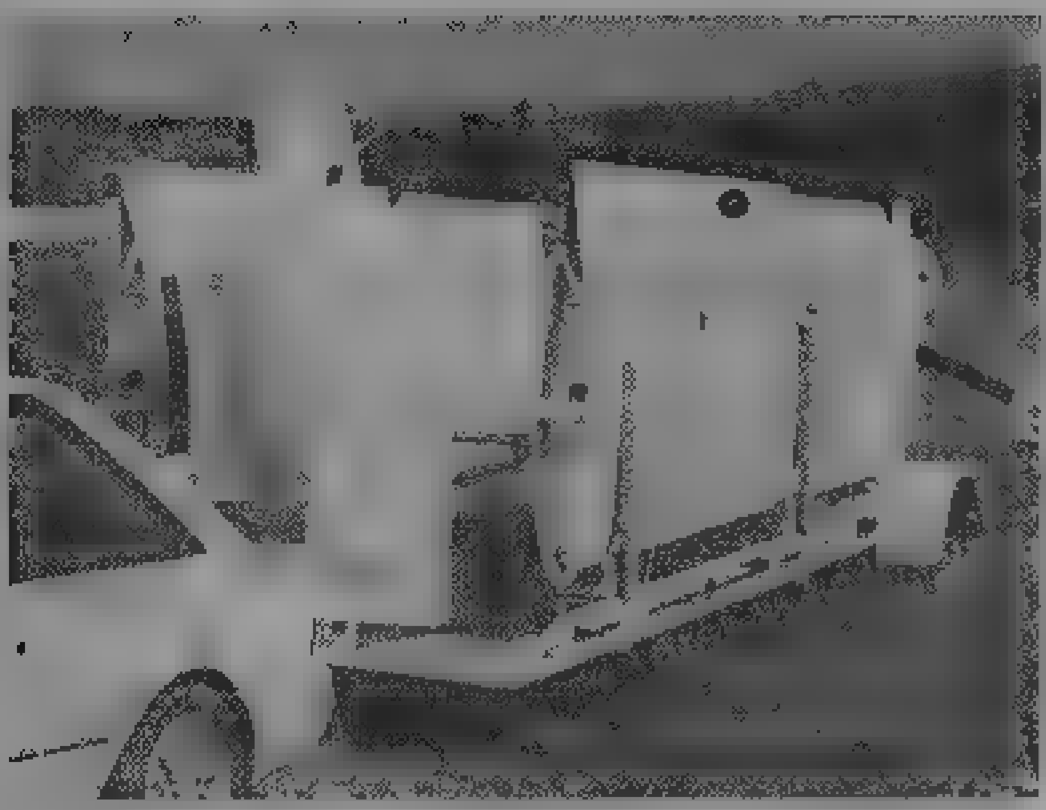
CURRENT VERSIONS: Options of Rotax 912 or 914 Turbo engines.

Company-assembled Europa G-KITS is test aircraft for tricycle landing gear *(Paul Jackson)* 1995

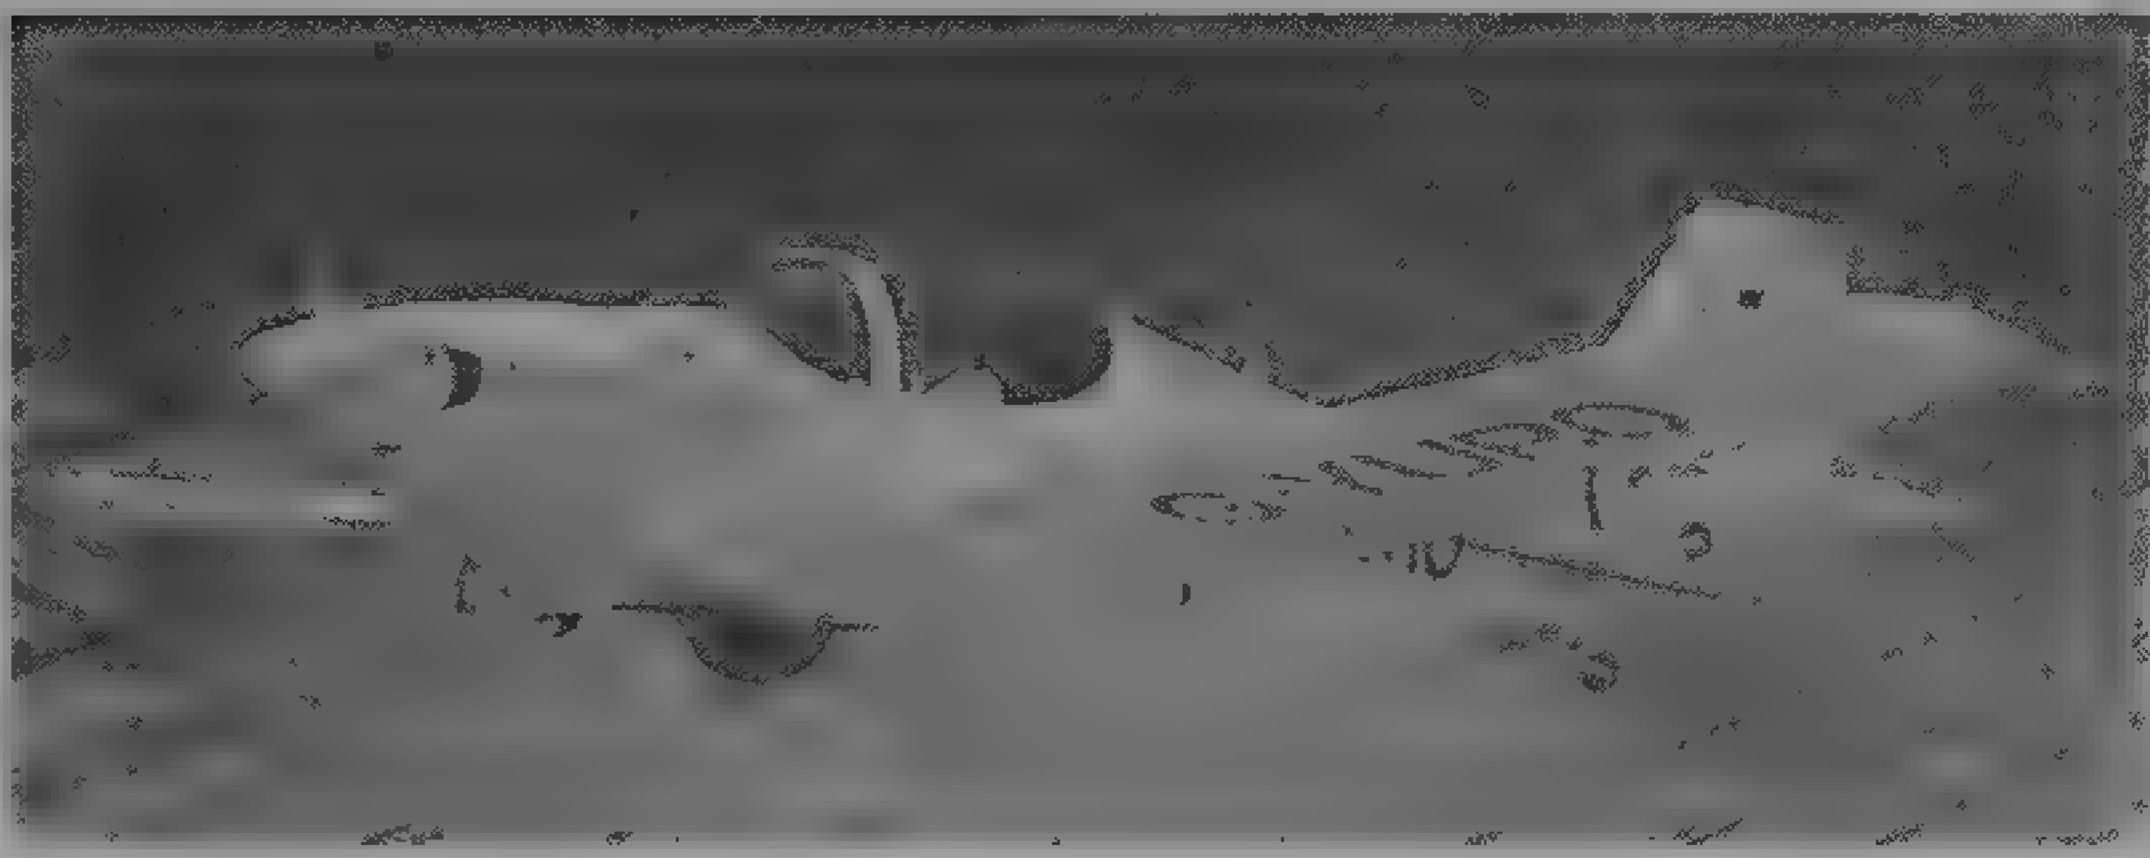
CUSTOMERS: Total of 164 kits sold by March 1995, including 27 added to UK register in 1994.

COSTS: Airframe kit £10,875 + VAT, Rotax 912 kit £7,200 + VAT; total £18,075 + VAT.

DESIGN FEATURES: Objectives included low-cost, economical cruise at IAS up to 120 knots (222 km/h; 138 mph) over 500 n miles (926 km; 575 miles), grass field capability, and ability to rig and de-rig quickly for storage in a trailer.



Europa de-rigged and loaded on its trailer in less than five minutes *1994*



Europa two-seat kitplane *1995*

similar to a shorter version of glider trailer. Rig/de-rig by six pip-pins, two for tail, two for each wing. Kit building time claimed to be 500 man-hours. Designed to JAR-VLA, stressed for maximum in-flight normal g of 4.3; proof factor of 2 used in design instead of the more usual 1.5, because of extensive use of composite materials in primary structure. Aerofoil, laminar flow Dykins design with 12 per cent thickness/chord ratio and 2° washout at tips. Wing dihedral 3°; no tail dihedral.

FLYING CONTROLS: Conventional ailerons and rudder; all-moving tailplane for pitch control with tab geared for balance, under pilot control for trim. Ground-adjustable tabs on ailerons and rudder. Two control columns, one centrally mounted at each seat; two pairs of rudder pedals. Central console between seats has throttle, gear and flap levers. Pitch trim switch next to throttle. Slotted flaps with settings of 0° and 25°.

STRUCTURE: General construction of GFRP with carbonfibre primary structure.

LANDING GEAR: Large single semi-retractable mainwheel and steerable tailwheel; outriggers at about half-span mounted on nylon stalks which retract with flaps. Mainwheel uses standard 6 in hub as in many light aircraft, and an 8.00-6 tundra tyre. Conventional fixed tricycle landing gear under evaluation since 1994.

POWER PLANT: One 59.7 kW (80 hp) Rotax 912 flat-four engine, directly driving a three-blade fixed-pitch propeller; propeller pitch is adjustable on ground to match operating environment (fine pitch for good take-off distances and rate of climb but higher noise and lower cruising speeds; reverse for coarse pitch). Alternative Subaru/NSI EA81 installation under test (G-NDOL) from mid-1995 in 73 kW (98 hp) and 88 kW (118 hp) form. Normal fuel capacity 73 litres (19.2 US gallons; 16 imp gallons).

ACCOMMODATION: Enclosed cabin seating two side by side under individual upward opening canopies, hinged on centreline. Baggage compartment at rear of cabin with maximum 36 kg (80 lb) capacity.

SYSTEMS: Hydraulics: mainwheel brake. Electrical: 12 V 30 Ah battery, alternator fit appropriate to engine.

AVIONICS: Customer choice.

DIMENSIONS, EXTERNAL:

Wing span	7.92 m (26 ft 0 in)
Width, wings removed	1.17 m (3 ft 10 in)
Wing aspect ratio	7.12
Length overall	5.85 m (19 ft 2½ in)
Height overall	1.32 m (4 ft 4 in)
Tailplane span	2.44 m (8 ft 0 in)
Propeller diameter	1.57 m (5 ft 2 in)
Propeller ground clearance	0.36 m (1 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.42 m (4 ft 8 in)
Max width	1.12 m (3 ft 8 in)
Max height	0.97 m (3 ft 2 in)

AREAS:

Wings, gross	8.83 m² (95.0 sq ft)
Ailerons (total)	0.57 m² (6.1 sq ft)
Trailing-edge flaps (total)	1.37 m² (14.7 sq ft)
Fin	1.03 m² (11.1 sq ft)
Rudder	0.48 m² (5.2 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	308 kg (680 lb)
Max T-O and landing weight	590 kg (1,300 lb)
Payload with full fuel	229 kg (505 lb)
Max wing loading	66.8 kg/m² (13.7 lb/sq ft)
Max power loading	9.89 kg/kW (16.2 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE)	160 kts (296 km/h; 184 mph)
Max level speed	135 kts (250 km/h; 155 mph)
Max cruising speed	130 kts (241 km/h; 150 mph)
Econ cruising speed, 75% power at 2,440 m (8,000 ft)	125 kts (232 km/h; 144 mph)
Stalling speed, power off: flaps up	48 kts (89 km/h; 55 mph)
flaps down	42 kts (78 km/h; 48 mph)
Rate of climb at S/L	244 m (800 ft)/min
T-O run	183 m (600 ft)
T-O to 15 m (50 ft)	274 m (900 ft)
Landing run	183 m (600 ft)
Range, normal fuel, 120 kts (222 km/h; 138 mph)	600 n miles (1,111 km; 690 miles)

FLS

FLS AEROSPACE (LIGHT AIRCRAFT) LTD

Bournemouth International Airport, Christchurch, Dorset BH23 6NW
Telephone: 44 (1202) 500200
Fax: 44 (1202) 580567
Telex: 41500, 41530

Wholly owned subsidiary of FLS Aerospace, division of F. L. Smidt Group, specialises in maintenance and overhaul of military and civil aircraft, particularly of BAC One-Eleven, Shorts 360 and Boeing 737. Acquired assets of Brooklands Aerospace Group 27 July 1990, including Optica observation aircraft originally developed by Edgley Aircraft Ltd. Responsibility transferred from Brooklands' Old Sarum factory to Lovaux at Bournemouth for further engineering and operational improvements prior to certification. Acquired SAH-1 from Orca Aircraft in October 1991, and renamed as Sprint.

FLS seeking buyer for Optica and Sprint programmes.

VERIFIED

FLS OPTICA OA7-300

1995

TYPE: Three-seat slow-flying observation and surveillance aircraft.

PROGRAMME: First flight 14 December 1979; production started 1983 but suspended after acquisition by FLS, aircraft redeveloped and prepared for FAA certification, which was awarded December 1991; intended production restart at Bournemouth in 1992 failed to materialise and programme offered for sale since 1994. Early history in 1990-91 *Jane's* under Brooklands Aviation, full description under FLS entry in 1994-95 edition.

UPDATED

FLS SPRINT

1995

TYPE: Two-seat aerobatic primary trainer.

PROGRAMME: Designed by Sydney A. Holloway as Trago Mills SAH-1, initiated October 1977, prototype (G-SAHI) flew 23 August 1983. UK certification obtained 12 December 1985. Orca Aircraft formed August 1988 to take over project but placed under administration in Summer 1989; design and manufacturing rights sold to FLS in October 1991. Production restarted with initial batch of five. FLS first production aircraft G-FLSI first flight 16 December 1993; three completed by March 1995, including first Club Sprint (G-BVNU) in May 1994. Programme then suspended and buyer sought. Full description in 1994-95 *Jane's*.

DIRECTOR, TECHNICAL ENGINEERING: Gordon McConnell
PRODUCT PROMOTIONS MANAGER: Robert Gillies
PUBLIC AFFAIRS: Peter Black

Jetstream Aircraft Limited is responsible for design, manufacture, marketing, sales and customer support for Jetstream family of twin-turboprop aircraft. Production, marketing and customer support of the ATP was moved to Prestwick (from Woodford) following reorganisation of BAe's commercial aircraft business. Jetstream 61, a development of ATP with more powerful PW127D engines (for improved hot and high performance) and 70 seats at 78 cm (31 in) pitch, was to have been added to the range from third quarter of 1994.

In January 1995, however, Jetstream and Avro (to which refer for fuller details) committed by BAe to join ATR (International section) in single marketing organisation; as consequence, promotion of Jetstream 61 immediately terminated.

UPDATED

JETSTREAM SUPER 31

Final Jetstream 31, G-31-984, first flown 30 November 1993. Total 381 delivered by June 1994 (220 Jetstream 31s, 161 Super 31s); one unsold and two demonstrators, remains available to order. By mid-1995 had flown 3.9 million hours in 5 million sorties. See 1994-95 *Jane's*.

UPDATED

JETSTREAM 41

TYPE: Regional airliner.

PROGRAMME: Development announced 24 May 1989; full-scale cabin mockup displayed at 1989 Paris Air Show. Risk-sharing partners Field Aircraft Ltd of UK (electrical and avionics looms, interior furnishings) and Pilatus

Jetstream 41 twin-turboprop regional airliner in colours of Impulse Transportation

1995

Flugzeugwerke AG of Switzerland (manufacture of tail assemblies and ailerons), Gulfstream Aerospace Technologies of Oklahoma, USA to build 200 wing sets for 1990-2000 delivery, ML Slingsby Group to produce large composite components. Roll-out 27 March 1991, first flight (G-GCJL) 25 September 1991, second aircraft (G-PJRT) flew February 1992, third (G-OXLI) 27 March 1992 and fourth (G-JMAC) 8 July 1992. Total of 1,790 hours flown during four aircraft certification programme. JAA certification awarded 23 November 1992; first deliveries 25 November 1992 to Loganair and Manx Airlines. FAA certification (FAR Pt 25 to Amendment 71) April 1993. First delivery to USA (N301UE) to Atlantic Coast Airlines May 1993. Approval for Cat II operations granted May 1995. Production rate of 42 per year.

In April 1993, Jetstream Aircraft announced payload/range and performance increases for Jetstream 41s delivered from early 1994. In addition, flat rating of engines increases to 1,230 kW (1,650 shp), and flapless take-off capability is introduced.

CURRENT VERSIONS: **Passenger**: Standard version. *Detailed description applies to 1994 version. for weights and performances for 1993 and previously delivered aircraft see 1993-94 Jane's.*

Corporate: Range of seating configurations, from 10-seat VIP to 16-seat executive. First example (c/n 30) delivered to US completion centre May 1994.

QC/Combi: Combi may be offered with 18 airliner or 10 executive shuttle seats, three containers loaded through rear baggage door. Incorporation of large freight door in parallel section of rear fuselage being evaluated, sized to accommodate standard containers. QC seat-rail mounted guide rollers and ball mats for restrained rigid containers stressed to 9 g deceleration.

CUSTOMERS: Total 57 completed and 50 delivered by June 1995 from 109 firm orders and 35 options then placed by nine operators. See table.

JETSTREAM 41 ORDERS
(June 1995)

Customer	Orders	Options

Trans-States Airlines (USA)	25	35
Totals	**109**	**35**

DESIGN FEATURES: Adapted from Jetstream Super 31. Fuselage cabin section stretched 4.88 m (16 ft 0 in); large inward-opening rear baggage door to 4.81 m³ (170 cu ft) hold. wing mounted below fuselage for clear cabin aisle, ventral baggage hold 1.35 m³ (45.5 cu ft). Wing span increased, Super 31 wing extended inboard from nacelles; revised ailerons, improved flaps, increased single-point chord, increased fuel capacity in wing, with single-point pressure refuelling. Lift spoilers inboard of nacelles. New nacelles for TPE331-14GR/HR turboprops with contrarotating five-blade McCauley propellers with increased propeller/fuselage clearance, forward-retracting main landing gear with twin wheels, increased chord rudder, increased tailplane area. V windscreen, duplicated control runs, floor-mounted control columns, Honeywell avionics with four-tube EFIS, Smiths engine management system.

FLYING CONTROLS: Manual ailerons, elevators and rudder, split elevator and aileron control with manual disconnect. Each wing has single spar double-slotted flaps, electronic control and single hydraulic actuator on each flap. Floor-mounted control wheel column and inverted pendulum type rudder pedals. Automatic hydraulically operated ground spoilers. Stall warning system with audible stick shaker, stick pusher and visual warning for each pilot.

STRUCTURE: Aluminium alloy construction, fail-safe wing structure of front, main and rear spars, with chordwise ribs, wing skins chemically etched and reinforced with bonded spanwise stringers, semi-monocoque fail-safe fuselage, with chemically milled skin panels.

LANDING GEAR: Dunlop wheels and tyres, twin wheels on each main leg, size 22 × 6.75, tyre pressure 8.27 bars (120 lb/sq in); twin nosewheels, size 17.5 × 6.25, tyre pressure 2.9 bars (42 lb/sq in). Dunlop three-rotor steel brakes, anti-skid standard. Steerable nosewheels (±45°). Minimum ground turning radius, based on nosewheel, 10.35 m (33 ft 11 in).

POWER PLANT: Two 1,230 kW (1,650 shp) AlliedSignal TPE331-14GR/HR flat rated turboprops, handed, each driving a McCauley five-blade constant-speed feathering metal propeller. Usable fuel capacity 3,305 litres (873 US gallons; 727 Imp gallons).

ACCOMMODATION: Flight crew of two, one attendant seated centrally at rear of cabin, and up to 29 passengers seated in 10 double seats on right of cabin and nine singles on left at minimum seat pitch of 76.2 cm (30 in). Externally serviced toilet at rear on port side. Standard light galley at rear on port side. Passenger door with integral airstair at front of cabin on port side. Emergency exit over wing on each side and at rear of cabin on starboard side. Stowage for carry-on baggage in forward cabin on starboard side. Main baggage hold at rear of cabin, with external door, additional stowage in ventral wingroot fairing.

SYSTEMS: Normalair-Garrett air conditioning system with cabin pressurisation at maximum differential of 0.39 bar (5.7 lb/sq in), providing 2,440 m (8,000 ft) cabin altitude at 7,925 m (26,000 ft) or 2,225 m (7,300 ft) at US maximum operating altitude of 7,620 m (25,000 ft). GEC Marconi active noise suppression system selected in June 1995 for later incorporation. Hydraulic system, pressure 138 bars (2,000 lb/sq in), with variable delivery pump on each engine, one pump capable of supplying all services, system operates landing gear, nosewheel steering, flaps, spoilers and wheelbrakes. Emergency system operated by hand pump under flight deck floor for flaps and landing gear. Electrical power by dual channel 28 V DC system, provided by starter/generator on each engine, rated at 550 A continuous, and two 27 Ah batteries, 26 V 400 Hz AC system powered by two 1.25 kVA static inverters for left- and right-hand instrument and navigation systems, either inverter capable of supplying 115 V AC to flight data recorder. Electric de-icing for propellers, pneumatic boot de-icing for wing, tailplane and fin leading-edges. Electric anti-icing for windscreen, pitot/static heads, air flow sensors and elevator horns. Engine intake bleed air anti-icing. Two-bottle fire extinguishing system in nacelles.

AVIONICS: *Comms*: Honeywell Primus II digital radios and dual transponders.

Flight: Dual nav/com with VOR/ILS/markers, ADF, DME, flight director.

Radar: Primus 650 colour weather radar.

Instrumentation: Honeywell SPZ-4500 digital AFCS including AH-600 AHRS, AZ-810 air data computer and EDZ-805 four-tube EFIS, five-tube optional.

DIMENSIONS, EXTERNAL:

Wing span	18.29 m (60 ft 0 in)

The 29-passenger Jetstream 41 regional airliner *(Jane's/Mike Keep)*

1992

Jetstream 41 delivered to Trans States Airlines in USA

1995

Max height 1.78 m (5 ft 10 in)
Volume 29.45 m³ (1,040 cu ft)
Baggage compartment volume:
rear 4.81 m³ (170 cu ft)
ventral wingroot fairing 1.35 m³ (47.5 cu ft)

AREAS:
Wings, gross 32.59 m² (350.8 sq ft)
Ailerons (total) 1.94 m² (20.90 sq ft)
Trailing-edge flaps (total) 5.28 m² (56.80 sq ft)
Spoilers (total) 0.91 m² (9.78 sq ft)
Rudder, incl tab 2.03 m² (21.87 sq ft)
Tailplane 8.58 m² (92.35 sq ft)
Elevators, incl tabs 2.43 m² (26.18 sq ft)

WEIGHTS AND LOADINGS (1994 production onwards):
Weight empty 6,416 kg (14,144 lb)
Max fuel weight 2,703 kg (5,960 lb)
Max T-O weight 10,886 kg (24,000 lb)
Max ramp weight 10,932 kg (24,100 lb)
Max zero-fuel weight 9,707 kg (21,400 lb)
Max landing weight 10,569 kg (23,300 lb)
Max wing loading 334.03 kg/m² (68.42 lb/sq ft)
Max power loading 4.43 kg/kW (7.27 lb/shp)

PERFORMANCE (at max T-O weight, ISA, except where indicated, 1994 production onwards):
Never-exceed speed (VNE):
S/L to 5,300 m (17,400 ft) 315 kts (583 km/h; 362 mph) CAS
above 5,300 m (17,400 ft) Mach 0.65
Max level and max cruising speed at 6,100 m (20,000 ft) 295 kts (547 km/h; 340 mph)
Econ cruising speed at 6,100 m (20,000 ft) 260 kts (482 km/h; 299 mph)
Max rate of climb at S/L 670 m (2,200 ft)/min
Service ceiling 7,925 m (26,000 ft)
Service ceiling, OEI 4,575 m (15,000 ft)
T-O run 1,523 m (4,997 ft)
Landing run 1,280 m (4,200 ft)
Range with 29 passengers, IFR reserves 774 n miles (1,433 km; 891 miles)

UPDATED

JETSTREAM ATP

TYPE: Twin-turboprop regional airliner.

PROGRAMME: ATP (HL5228) handed over to Seoul Air International in late 1994 was 63rd and last of type. Aircraft remodelled as Jetstream 61 (which see). By June 1995, ATPs had flown 375,000 hours and made 492,000 landings.

UPDATED

JETSTREAM 61

TYPE: Twin-turboprop airliner.

PROGRAMME: Announced 26 April 1993, developed from Jetstream ATP with more powerful PW127D engines, increased design weights and new interior.

Prototype, G-JLXI, constructed from 64th ATP airframe, first flown 10 May 1994 at Prestwick, to where programme transferred from Woodford. (Uncompleted 65th ATP to Prestwick, January 1994.) Merger of BAe regional aircraft activities with ATR, announced 26 January 1995, involves abandonment of Jetstream 61 although certification continued (awarded by CAA 15 June 1995) and up to six additional aircraft may be completed from components already well advanced on assembly line.

DESIGN FEATURES: Pratt & Whitney Canada PW127D engines combined with increased design weights to offer payload/range improvements and better hot and high and T-O field length performance; passenger loads in hot and high conditions increased by up to 11 compared to ATP. Revised 70-seat standard layout, new-look spacious interior modelled on Jetstream 41; extra-wide seats (42.5 cm; 17.8 in) and large overhead bins (combined volume 3.54 m³; 125 cu ft) claimed as largest in this class of aircraft. Package of operating cost and maintainability improvements.

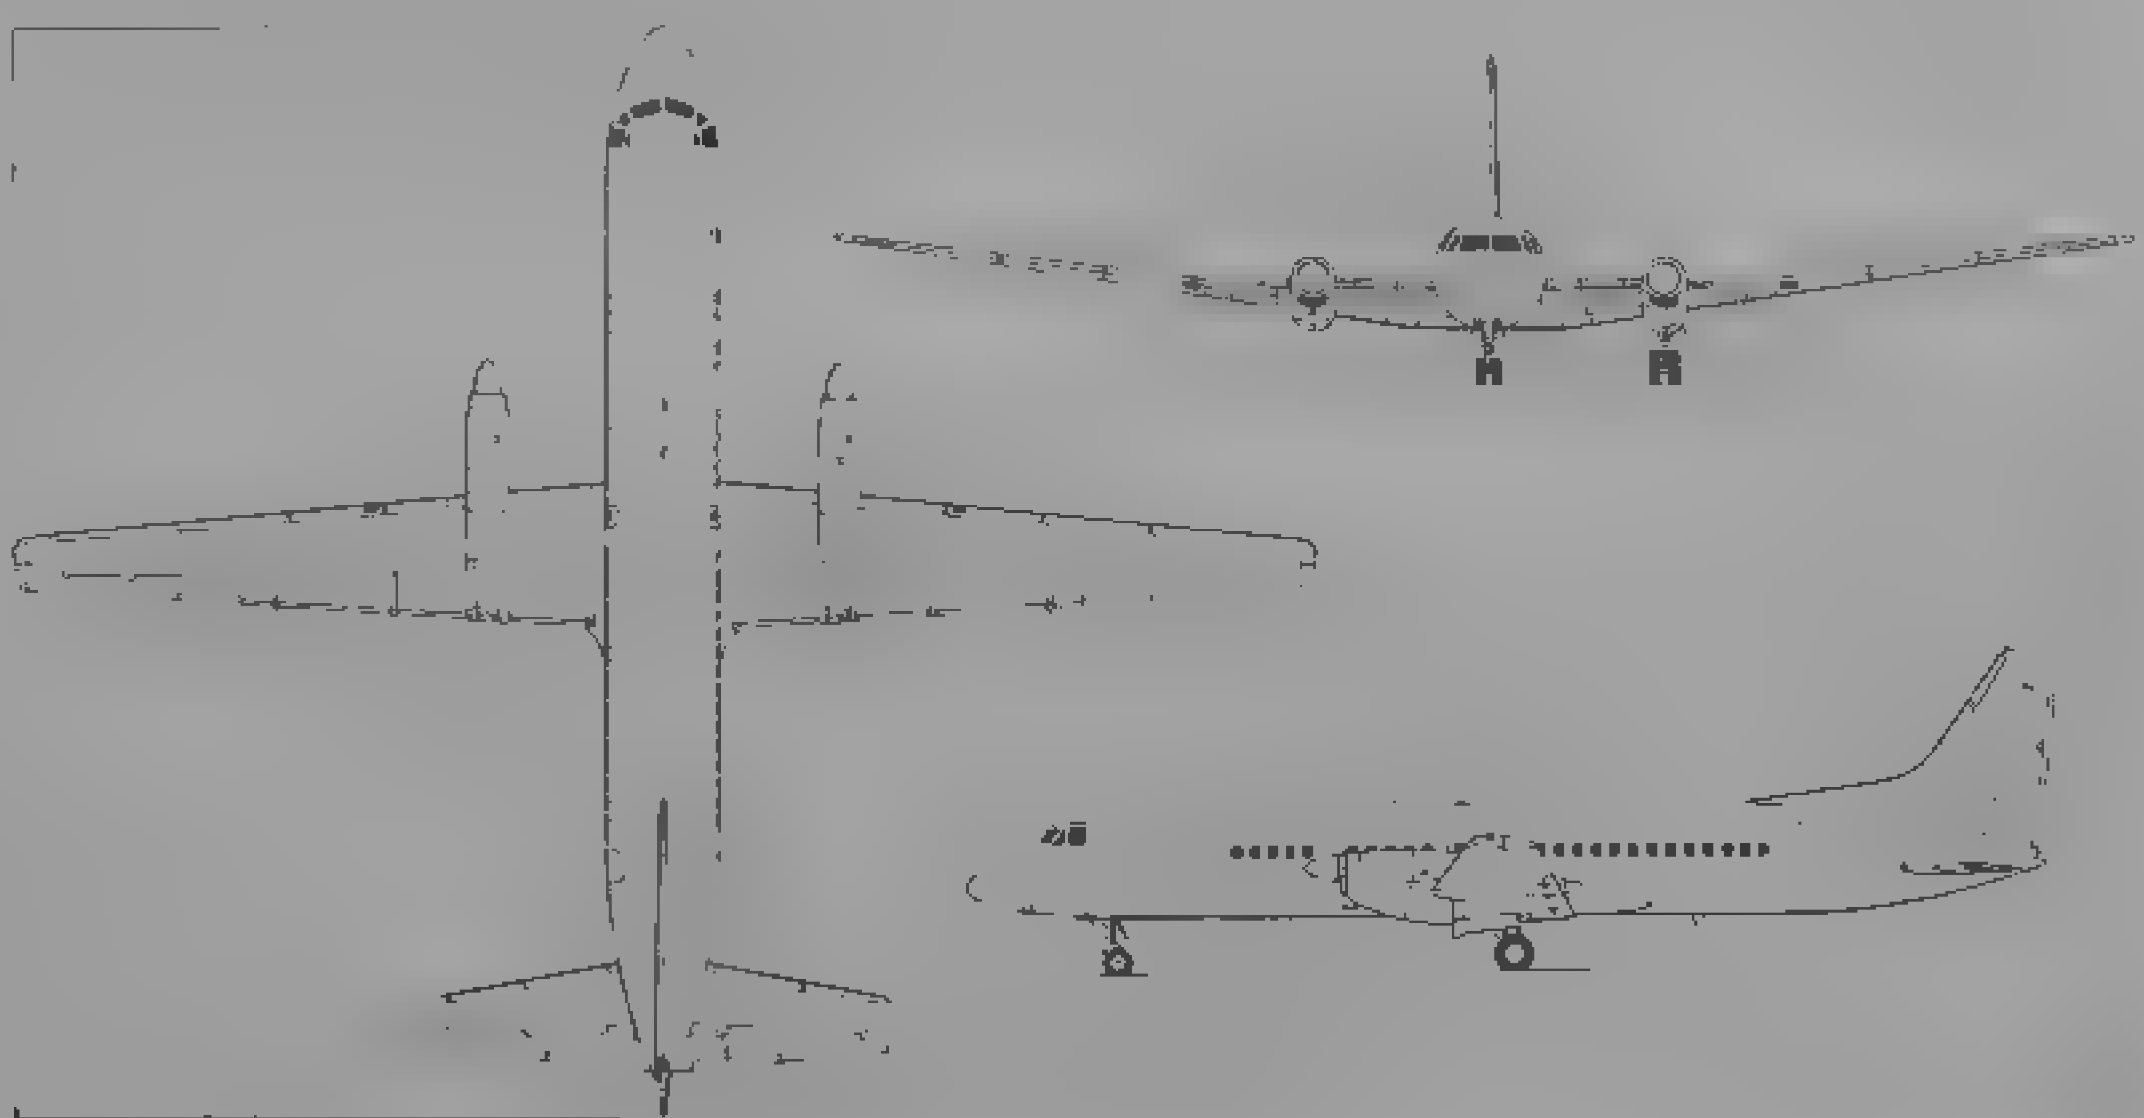
FLYING CONTROLS: Ailerons, elevators and rudder actuated mechanically; geared tab in each aileron, trim tab in each elevator, trim tab and spring tab in rudder. Fowler trailing-edge flaps. Dual AFCS.

STRUCTURE: All-metal. Two-spar fail-safe wings; spars do not intrude into passenger cabin. Circular section fail-safe fuselage. Slightly swept vertical and non-swept horizontal tail surfaces.

LANDING GEAR: Retractable tricycle type, of Dowty design with twin-wheel main units and twin-wheel steerable (±47°) nose unit. All units retract forward, main units into bottom of engine nacelles. Oleo-pneumatic shock absorbers. Mainwheels fitted with 34 × 12-14 tubeless tyres. Nosewheels fitted with 22 × 6.75-10 tubeless tyres. Mainwheels have fusible plugs operating at 199°C. All wheels have 'roll on rim' capability. Dunlop carbon brakes and Maxaret anti-skid units on mainwheels. Inner and outer brakes on each leg supplied from three independent hydraulic systems via engine-driven pump or standby DC pump. Minimum ground turning radius about nosewheel 9.75 m (32 ft 0 in).

POWER PLANT: Two Pratt & Whitney PW127D turboprops, each rated at 2,051 kW (2,750 shp). BAe Hamilton Standard slow-turning propellers, each having six blades of advanced aerodynamic profile and lightweight composite construction in a one-piece steel hub. Fuel in two integral wing tanks, with combined usable capacity of 6,364 litres (1,681 US gallons; 1,400 Imp gallons). Single pressure refuelling point under starboard outer wing.

ACCOMMODATION: Flight crew of two, plus two cabin attendants. Main cabin has standard pressurised accommodation for 70 passengers at a seat pitch of 79 cm (31 in), in four-abreast layout with central aisle. Cabin sidewalls contoured as continuous length armrest. Galley at rear of cabin on starboard side, toilet at rear on port side. Separate passenger doors, at front (with forward-stowing airstairs) and rear of cabin on port side. Compartments for carry-on baggage on starboard side, forward of front row of seats. Two baggage/freight compartments, one forward on starboard



Jetstream 61 twin-turboprop regional airliner *(Jane's/Dennis Punnett)*

1995

Jetstream 61 prototype in promotional livery for 1995 Farnborough Air Show

1995

side and one aft of main cabin, both with external access Overhead bins above passenger seats

SYSTEMS: Hamilton Standard ECS with twin packs offering sub-zero delivery temperature capability Automatic pressurisation system, giving altitude equivalent to 2,440 m (8,000 ft) at 7,620 m (25,000 ft) Pressure differential 0 38 bar (5 5 lb/sq in). Each engine drives an Abex variable delivery hydraulic pump providing hydraulic power at a regulated pressure of 169 bars (2,450 lb/sq in) for landing gear actuation, nosewheel steering, brakes and airstairs Auxiliary hydraulic power is supplied from a separate DC pump and reservoir for emergency operation of the landing gear and brakes The system also provides hydraulic pressure for servicing when the engines are not running. Main system has a flow rate of 41 litres (11 US gallons, 9 Imp gallons)/min controlled to 169 bars (2,450 lb/sq in), emergency system has a flow rate of 2.25 litres (0 6 US gallon, 0.5 Imp gallon)/min controlled to 172 4 bars (2,500 lb/sq in) Air/oil reservoirs pressurised to 1 25 bars (18 lb/sq in)

Electrical power provided by Lucas 200 V 30/45 kVA variable frequency alternator mounted on each engine 28 V DC subsystem from either two TRUs or two 36 Ah Ni/Cd batteries Second subsystem provides 1.5 kVA 200/115 V constant frequency power from two static inverters Optional Garrett GTCP36-150J APU for air conditioning on the ground, and electrical power for battery charging engine starting assist and other tasks. Pneumatic boot de-icing of wings (outboard of engine nacelles), fin and tailplane leading-edges

AVIONICS: Digital avionics system using ARINC 429 data transmission Bendix/King equipment

Comms. Twin VHF radios, transponder, CVR

Radar: RDS-86 colour weather radar, with checklist facility, can display weather on EFIS nav display Built-in test and recording facility

Flight: Twin VHF nav, scanning DME, R/Nav, ADF, FDR, digital GPWS Dual AFCS, each with Litton LTR 81-01 AHRS and Smiths digital DADS, for Cat. II ILS capability

Instrumentation: Smiths SDS 201 four-tube EFIS. Full IFR

DIMENSIONS, EXTERNAL:

Wing span	30.63 m (100 ft 6 in)
Wing aspect ratio	11 98
Length overall	26 00 m (85 ft 4 in)
Height overall	7 59 m (24 ft 11 in)
Wheel track	8 46 m (27 ft 9 in)
Wheelbase	9 70 m (31 ft 9¾ in)
Passenger doors (each): Height	1.73 m (5 ft 8 in)
Width	0.71 m (2 ft 4 in)
Height to sill: fwd door	1 96 m (6 ft 5 in)
rear door	1 71 m (5 ft 7½ in)

AREAS:

Wings, gross	78 32 m² (843 0 sq ft)

WEIGHTS AND LOADINGS:

NASH PETREL

TYPE: Two-seat light aircraft

PROGRAMME: First flight of prototype (G-AXSF) 8 November 1980 with O-320-D2A engine (replaced 1982 by 134 kW, 180 hp Textron Lycoming O-360-A3A), new high tailplane fitted 1983, upswept wingtips 1984 (further details in 1990-91 and earlier *Jane's*). Preproduction batch of five Petrels started in 1986, work towards certification proceeding, spinning trials needed. Second machine to be completed in 1995 Intention is to certificate in the Acrobatic category

DESIGN FEATURES: Optimised for club/touring use, especially ease of handling and for glider towing

FLYING CONTROLS: Manual operation of primary surfaces and NACA slotted flaps.

Prototype of the Nash Petrel two-seat light aircraft

1994

STRUCTURE: See 1990-91 *Jane's* for prototype, preproduction aircraft identical aerodynamically, but differ structurally

Pilatus Aircraft Ltd of Switzerland acquired Britten-Norman (Bembridge) Ltd 1979, including Isle of Wight facilities and former Fairey SA Islander/Trislander production hardware at Gosselies, Belgium

Previous company history appeared in 1978-79 and earlier *Jane's*.

VERIFIED

PILATUS BRITTEN NORMAN BN2B ISLANDER

TYPE: Twin-engined feederline transport.

PROGRAMME: Prototype (G-ATCT) first flight 13 June 1965 with two 157 kW (210 hp) Rolls-Royce Continental IO-360-B engines and 13 72 m (45 ft) span wings, subsequently re-engined with Textron Lycoming O-540s and flown 17 December 1965, wing span also increased by 1 22 m (4 ft) to initial production standard; production prototype BN2 (G-ATWU) flown 20 August 1966; domestic C of A received 10 August 1967, FAA type certificate 19 December 1967, Romanian manufacture (see Romaero entry) began 1969

CURRENT VERSIONS: **BN2 Islander:** Initial piston-engined production model (see earlier *Jane's*).

BN2A Islander: Piston version built from 1 June 1969 (see 1977-78 *Jane's*).

BN2B Islander: Current standard piston-engined version, higher maximum landing weight; improved interior design; available with two engine choices and optional wingtip fuel tanks as **BN2B-26** with O-540s and **BN2B-20** with IO-540s (BN2B-27 and -21 no longer available). Features include range of passenger seats and

covers, more robust door locks, improved door seals and stainless steel sills, redesigned fresh air system to improve ventilation in hot and humid climates, smaller diameter propellers to decrease cabin noise, and redesigned flight deck and instrument panel. *Detailed description applies to this version.*

Series of modification kits available as standard or option for new production aircraft and can be fitted retrospectively to existing aircraft, extended nose, incorporating 0.62 m³ (22 cu ft) additional baggage space, introduced as option 1972. Jonas Aircraft developed Rajay turbocharging installation, optional for 194 kW (260 hp) engines as bolt-on unit.

BN2B Defender: Described separately (several versions).

BN2T Turbine Islander: Described separately.

BN2T-4R MSSA: Described separately.

BN2T-4S Defender 4000: Described separately.

CUSTOMERS: By January 1995 deliveries of Islanders and Defenders totalled 1,194 (see table). Recent customers include Scilly Skybus (UK), Frivia Luftverkehr (Germany), BA Express (UK), Air Moorea (Tahiti), Nogaraki Airways (Japan) and Falkland Islands Air Service.

COST: BN2B, about £470,000.

DESIGN FEATURES: STOL characteristics; three-blade propellers available on version of BN2B-26 giving quieter noise signature; NACA 23012 wing section, no dihedral, incidence 2°, no sweepback.

FLYING CONTROLS: Slotted ailerons, with starboard ground adjustable tab, operated by pushrods and cables; mass balanced elevator; rudder and elevator actuated by pushrods and cables; trim tabs in rudder and elevator; single-slotted flaps operated electrically; fixed incidence tailplane. Dual controls standard.

STRUCTURE: L72 aluminium-clad aluminium alloys; two-spar wing torsion box in one piece; flared-up wingtips; integral fuel tanks in wingtips optional; four-longeron fuselage of pressed frames and stringers; two-spar tail unit with pressed ribs.

LANDING GEAR: Non-retractable tricycle type, with twin wheels on each main unit and single steerable nosewheel. Cantilever main legs mounted aft of rear spar. All three legs fitted with oleo-pneumatic shock-absorbers. All five wheels and tyres size 16 x 7-7, supplied by Goodyear. Tyre pressure: main 2.41 bars (35 lb/sq in), nose 2.00 bars (29 lb/sq in). Foot operated air-cooled Cleveland hydraulic brakes on main units. Parking brake. Wheel/ski gear available optionally. Minimum ground turning radius 9.45 m (31 ft 0 in).

POWER PLANT: Two Textron Lycoming flat-six engines, each driving a Hartzell HC-C2YK-2B or -2C two-blade constant-speed feathering metal propeller; optional three-blade Hartzell HC-C3YR-2UF/FC8468-8R for O-540-E4C5 engines. Propeller synchronisers optional. Standard power plant 194 kW (260 hp) O-540-E4C5, but 224 kW (300 hp) IO-540-K1B5 fitted at customer's option. Optional Rajay turbocharging installation on 194 kW (260 hp) engines, to improve high-altitude performance. Integral fuel tank between spars in each wing, outboard of engine. Total fuel capacity (standard) 518 litres (137 US gallons; 114 Imp gallons). Usable fuel 492 litres (130 US gallons; 108 Imp gallons). With optional fuel tanks in wingtips, total capacity is increased to 855 litres (226 US gallons; 188 Imp gallons). Additional pylon-mounted underwing auxiliary tanks, each of 227 litres (60 US gallons; 50 Imp gallons) capacity, available optionally. Refuelling point in upper surface of wing above each internal tank. Total oil capacity 22.75 litres (6 US gallons; 5 Imp gallons).

ACCOMMODATION: Up to 10 persons, including pilot, on side by side front seats and four bench seats. No aisle. Seat backs fold forward. Access to all seats via three forward opening doors, forward of wing and at rear of cabin on port side and forward of wing on starboard side. Baggage compartment at rear of cabin, with port side loading door in standard versions. Exit in emergency by removing door windows. Special executive layouts available. Can be operated as freighter, carrying more than a ton of cargo; in this configuration passenger seats can be stored in rear baggage bay. In ambulance role, up to three stretchers and two attendants can be accommodated. Other layouts possible including photographic and geophysical survey, parachutist transport or trainer (with accommodation for up to eight parachutists and dispatcher), firefighting, environmental protection and cropspraying.

SYSTEMS: Southwind cabin heater standard. 45,000 BTU Stewart Warner combustion unit, with circulating fan, provides hot air for distribution at floor level outlets and at windscreen demisting slots. Fresh air, boosted by propeller slipstream, is ducted to each seating position for on-ground ventilation. Electrical DC power, for instruments, lighting and radio, from two engine-driven 24 V 50 A self-rectifying alternators and a controller to main busbar and circuit breaker assembly. Emergency busbar is supplied by a 24 V 17 Ah heavy-duty lead-acid battery in the event of a twin alternator failure. Ground power receptacle provided. Optional electric de-icing of propellers and windscreen and pneumatic de-icing of wing and tail unit leading-edges. Oxygen system available optionally for all versions.

AVIONICS: *Comms:* Intercom, including second headset, and passenger address system are standard.

Flight: Standard items include autopilot and wide range of VHF and HF communications and navigation equipment.

Instrumentation: IFR standard.

DIMENSIONS, EXTERNAL:

Wing span	14.94 m (49 ft 0 in)
Wing chord, constant	2.03 m (6 ft 8 in)

UPDATED

PILATUS BRITTEN-NORMAN BN2T TURBINE ISLANDER

Army Air Corps designation: Islander AL. Mk 1

TYPE: Twin-turboprop development of piston-engined Islander.

PROGRAMME: First flight of prototype (G-BPBN) 2 August 1980 with two Allison 250-B17C turboprops; British CAA certification received end of May 1981; first production aircraft delivered December 1981; FAR Pt 23 US type approval 15 July 1982; full icing clearance to FAR Pt 25 gained 23 July 1984.

CUSTOMERS: Total 62 aircraft delivered by March 1995, mainly of the Defender variant.

DESIGN FEATURES: Turboprops enable use of available low-cost jet fuel, low operating noise level; available for same range of applications as Islander, including military versions (described separately).

Description of BN2B Islander applies also to BN2T, except as follows:

POWER PLANT: Two 298 kW (400 shp) Allison 250-B17C turboprops, flat rated at 238.5 kW (320 shp), and each driving a Hartzell three-blade constant-speed fully feathering metal propeller. Usable fuel 814 litres (215 US gallons; 179 Imp gallons). Pylon-mounted underwing tanks, each of 227 litre (60 US gallon; 50 Imp gallon) capacity, are available optionally for special purposes. Total oil capacity 5.7 litres (1.5 US gallons; 1.25 Imp gallons).

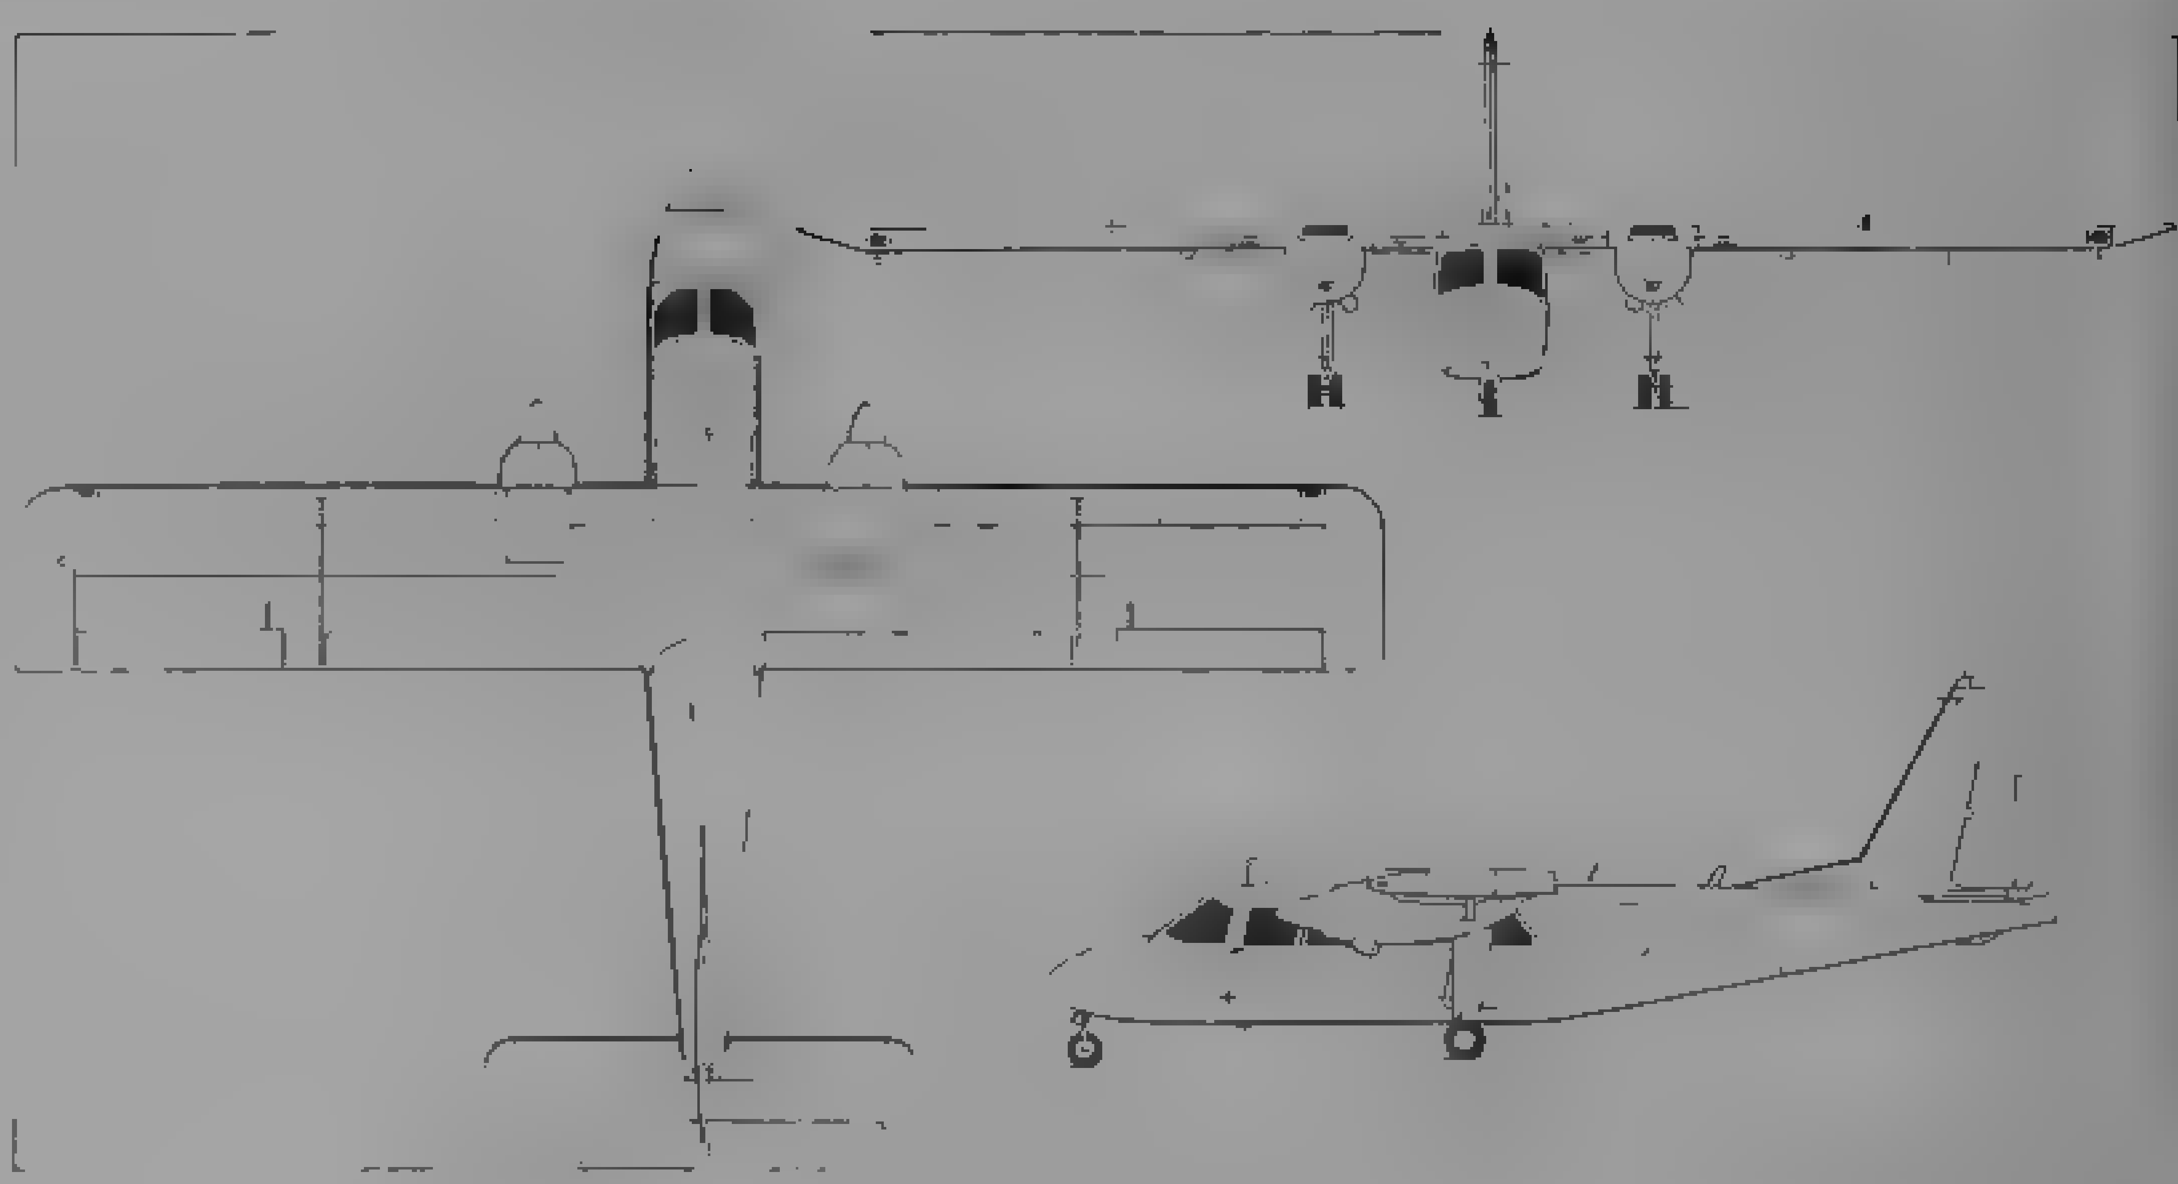
ACCOMMODATION: Generally as for BN2B. In ambulance role can accommodate, in addition to pilot, a single stretcher, one medical attendant and five seated occupants, or two stretchers, one attendant and three passengers, or three stretchers, two attendants and one passenger. Other possible layouts include photographic and geophysical survey, parachutist transport or trainer (with accommodation for up to eight parachutists and a dispatcher), and pest control or other agricultural spraying. Maritime Turbine Islander/Defender versions available for fishery protection, coastguard patrol, pollution survey, search and rescue, and similar applications. In-flight sliding parachute door optional.

AVIONICS: *Comms:* Optional maritime band and VHF transceivers.

Flight: VLF/Omega nav system, radar altimeter.

Self-defence: (Military versions) Army Air Corps Islander AL. Mk 1s have provision for AN/ALQ-144 IR jammer under fuselage.

EQUIPMENT: According to mission, can include fixed tail sting or towed bird magnetometer, spectrometer, or electromagnetic detection/analysis equipment (geophysical survey); one or two cameras, navigation sights and appropriate avionics (photographic survey); 188.7 litre (50 US gallon; 41.5 Imp gallon) Micronair underwing spraypods complete with pump and rotary atomiser (pest control/agricultural spraying versions); dinghies, survival equipment and special crew accommodation (maritime versions).



Pilatus Britten-Norman BN2T Turbine Islander *(Jane's/Dennis Punnett)*

1993

Pilatus Britten-Norman BN2T Islander AL. Mk 1 of British Army fitted with underfuselage AN/ALQ-144 IR jammer *(Paul Jackson)*

1995

DIMENSIONS, EXTERNAL: As for BN2B, except:
Length overall: standard nose 10.86 m (35 ft 7¼ in)
weather radar nose 11.07 m (36 ft 3¾ in)
Propeller diameter 2.03 m (6 ft 8 in)

WEIGHTS AND LOADINGS:
Weight empty, equipped 1,832 kg (4,040 lb)
Payload with max fuel 608 kg (1,340 lb)
Max T-O weight 3,175 kg (7,000 lb)
Max landing weight 3,084 kg (6,800 lb)
Max zero-fuel weight 2,994 kg (6,600 lb)
Max wing loading 105.17 kg/m² (21.54 lb/sq ft)
Max power loading 5.33 kg/kW (8.75 lb/shp)

PERFORMANCE (standard Turbine Islander/Defender, at max T-O weight, ISA, except where indicated):
Max cruising speed
at 3,050 m (10,000 ft) 170 kts (315 km/h, 196 mph)
at S/L 154 kts (285 km/h, 177 mph)
Cruising speed, 72% power
at 3,050 m (10,000 ft) 150 kts (278 km/h, 173 mph)
at 1,525 m (5,000 ft) 143 kts (265 km/h, 165 mph)
Stalling speed, power off:
flaps up 52 kts (97 km/h; 60 mph) IAS
flaps down 45 kts (84 km/h, 52 mph) IAS
Max rate of climb at S/L 320 m (1,050 ft)/min
Rate of climb at S/L, OEI 66 m (215 ft)/min
Service ceiling over 7,620 m (25,000 ft)
Absolute ceiling, OEI over 3,050 m (10,000 ft)
T-O run 255 m (837 ft)
T-O to 15 m (50 ft) 381 m (1,250 ft)
Landing from 15 m (50 ft) 339 m (1,110 ft)
Landing run 231 m (757 ft)
Range (IFR) with max fuel, reserves for 45 min hold plus 10% 590 n miles (1,093 km; 679 miles)
Range (VFR) with max fuel, no reserves
728 n miles (1,348 km, 838 miles)

UPDATED

PILATUS BRITTEN-NORMAN DEFENDER

TYPE: Variants of the civil BN2B and BN2T specially developed for military and paramilitary roles.

CUSTOMERS: For piston (BN2B) version, customers include Indian Navy, Belgian Army, Botswana Defence Forces and Jamaican Defence Force.

For turbine (BN2T) version, customers include Moroccan Ministry of Fisheries, Pakistan Maritime Security Agency, Belgian Gendarmerie, Dutch Police, UK Army Aviation and Mauritius Coastguard.

COSTS: BN2B (Piston) Defender, about £580,000; BN2T (Turbine) Defender, about £1,200,000. Exact cost dependent on fit, particularly sensors.

Pilatus Britten-Norman BN2T Defender of the Pakistan Maritime Security Agency

1995

DESIGN FEATURES: Similar to those of civil Islander, but with four underwing hardpoints for standard NATO pylons to attach fuel tanks, weapons and other stores; number of additional airframe options, including sliding door on rear port side which can be opened in flight are also offered. Concept of Defender is to provide a low-cost airframe which can be fitted with best available sensors to meet operational needs of customers.

UPDATED

PILATUS BRITTEN-NORMAN BN2T-4S DEFENDER 4000

TYPE: Twin-turboprop multirole surveillance and patrol aircraft.

PROGRAMME: Marketing experience with BN2T Defenders revealed that many military and government agencies expressed need for greater payload; announced 1994, prototype (G-SURV) made first flight 17 August 1994, public launch at Farnborough Air Show September 1994.

DESIGN FEATURES: Enlarged wing, based on that of Trislander, plus proportionately enlarged horizontal tail; fuselage stretched to seat up to 16, more powerful engines for greater sortie time and payload capacity, fuselage and landing gear strengthened, flight deck windows deepened for enhanced field of view, redesigned nose and tail unit, rear sliding door with blister window.

POWER PLANT: Two Allison 250-B17F turboprops, each flat rated at 298 kW (400 shp) and driving a three-blade propeller.

ACCOMMODATION: Flight crew of two on airline-type seats; sliding seat rails permit seat and equipment positioning anywhere within fuselage. Space for two or more consoles and operators in tandem along one side of cabin. Up to 16 troops/passengers in tactical transport role.

SYSTEMS: Electrical system includes two 200 A engine-driven generators.

AVIONICS: *Comms:* Full range of open or secure voice com radios from UHF, VHF, HF and VHF-FM.

Radar: Modified nose can accommodate 68.5 cm (27 in), 360° rotating antenna for maritime, simple search or weather radar (GEC-Marconi Seaspray 2000 in prototype Defender 4000).

Flight: Fully integrated autopilot. GPS nav system, integrated with Omega or INS.

Mission: Sensors can include thermal imagers and/or hand-held or podded video or film cameras. Prototype on debut fitted with Agema FLIR under fuselage on starboard side; alternatives could include GMAv pod or FLIR 2000. Appropriate radars could include GMAv Seaspray, Thomson Thorn Super Searcher, Thomson-CSF Ocean Master, Telephonics 143 or Litton 504(V)5.

ARMAMENT: Two hardpoints under each wing, inboard pair stressed for loads of up to 340 kg (750 lb) and outboard pair for up to 159 kg (350 lb) each. Typical weapons on inboard stations can include Sting Ray torpedo or Sea Skua anti-ship missile.

DIMENSIONS, EXTERNAL:
- Wing span: 16.15 m (53 ft 0 in)

AREAS:
- Wings, gross: 35.17 m² (378.6 sq ft)

WEIGHTS AND LOADINGS:
- Max usable internal fuel: 908 kg (2,002 lb)
- Payload with max fuel: 721 kg (1,590 lb)
- Max T-O and landing weight: 3,855 kg (8,500 lb)
- Max zero-fuel weight: 3,765 kg (8,300 lb)
- Max wing loading: 109.6 kg/m² (22.45 lb/sq ft)
- Max power loading: 6.46 kg/kW (10.63 lb/shp)

PERFORMANCE:
- Max cruising speed: 176 kts (326 km/h, 202 mph)
- Transit speed from base to patrol area: 160 kts (296 km/h, 184 mph)
- Econ cruising speed: 150 kts (278 km/h, 173 mph)
- Stalling speed, power off:
  - flaps up: 55 kts (102 km/h, 64 mph) IAS
  - flaps down: 44 kts (82 km/h, 51 mph) IAS
- Max rate of climb at S/L: 369 m (1,210 ft)/min
- Rate of climb at S/L, OEI: 68 m (223 ft)/min
- Absolute ceiling: 7,620 m (25,000 ft)
- Absolute ceiling, OEI: 3,050 m (10,000 ft)
- T-O run: 336 m (1,100 ft)
- T-O to 15 m (50 ft): 458 m (1,500 ft)
- Landing from 15 m (50 ft): 458 m (1,500 ft)
- Landing run: 305 m (1,000 ft)
- Max range on internal fuel:
  - with IFR reserves: 850 n miles (1,574 km, 978 miles)
  - with VFR reserves: 993 n miles (1,839 km, 1,143 miles)
- Max endurance on internal fuel: 8 h 20 min

UPDATED

PILATUS BRITTEN-NORMAN MSSA

TYPE: 'MultiSensor surveillance aircraft'.

PROGRAMME: Developed (as BN2T-4R) with Westinghouse Electric Corporation as low-cost, off-the-shelf system for surveillance, border and fisheries patrol, drug interdiction and special operations/low-intensity conflict applications. Demonstrator (G-MSSA, conversion of AEW Defender G-TEMI) rolled out at Baltimore on 10 September 1991.

Pilatus Britten-Norman BN2T-4S Defender 4000 prototype G-SURV on flight trials

1995

Raytheon company purchased BAe Corporate Jets on 6 August 1993 for $372 million, adding the Hawker 800 and 1000 types to the company's aircraft products offered by what was then its Beech aircraft unit. The Hawker variants were developed from the BAe 125 series, of which a total of 859 of all versions had been sold to 44 countries by early 1994. Production of the Hawker 800 and 1000 currently in UK, but intention announced 1994 to transfer production to new 17,190 m² (185,000 sq ft) assembly shop at Wichita, USA, beginning November 1995, for completion by 1997. Name changed January 1995 from Raytheon Corporate Jets Inc to Raytheon Aircraft. Raytheon Aircraft (which see in US section) includes the former Beech Aircraft Corporation, and is a subsidiary of the Raytheon Company which has its HQ at Lexington, Massachusetts.

UPDATED

RAYTHEON HAWKER 800

TYPE: Twin-turbofan business transport

PROGRAMME: First flight of prototype (G-BKTF) 26 May 1983 (maximum operating altitude achieved during the 3 hours 8 minute flight), type certificate gained 4 May 1984 and Public Transport Category C of A on 30 May 1984, FAA certification 7 June 1984, Russian certification May 1993.

CURRENT VERSIONS: **800**: Standard business transport; *detailed description applies to this version*.

800XP: Announced March 1995, when prototype G-BVYW completed, available from Autumn 1995. 'Extended Performance' version with 20.00 kN (4,496 lb st) AlliedSignal TFE731-5BR engines, giving enhanced performance, including 14 knot (26 km/h; 16 mph) increase in cruising speed at 11,800 kg (26,015 lb) at 10,790 m (39,000 ft), 225 kg (496 lb) payload increase with eight passengers; and 15 to 23 per cent reduction in time to cruising altitude.

800FI, MP, RA and SIG: Special missions versions, described separately.

CUSTOMERS: By January 1995, over 250 Series 800s sold and 273 built. Further 21 to be produced in 1995.

COSTS: $9.9 million (1995) for standard 800 and 800XP.

DESIGN FEATURES: Improvements compared with earlier 700 variant include curved windscreen, sequenced nosewheel doors, extended fin leading-edge, larger ventral fuel tank and increased wing span which reduces induced drag, improves aerodynamic efficiency and carries extra fuel; outboard 3.05 m (10 ft) of each wing redesigned. TFE731-5R-1H turbofans improve airfield/climb performance and increase maximum speed and range; redesigned interior, with increased headroom by relocating oxygen dropout units to sidewall panels, and 12.2 cm (4.8 in) extra width at shoulder level by sculpturing sidewall panels around fuselage frames; flight deck incorporates five-tube Collins EFIS-86, with centrally mounted multifunction display showing flight plans and checklists.

Wing thickness/chord ratio 14 per cent at root, 8.35 per cent at tip; dihedral 2°, incidence 2° 5′ 42″ at root, −3° 5′ 49″ at tip; sweepback 20° at quarter-chord; small fairings on tailplane undersurface eliminate turbulence around elevator hinge cutouts.

FLYING CONTROLS: Manually operated ailerons, elevators and rudder, each with geared tab; port aileron tab trimmed manually via screwjack. Hydraulically actuated four-position double-slotted flaps, mechanically operated hydraulic cutout prevents asymmetric flap operation; upper and lower airbrakes, with interconnected controls to prevent asymmetric operation, form part of flap shrouds and provide lift dumping for landing. Fixed incidence tailplane.

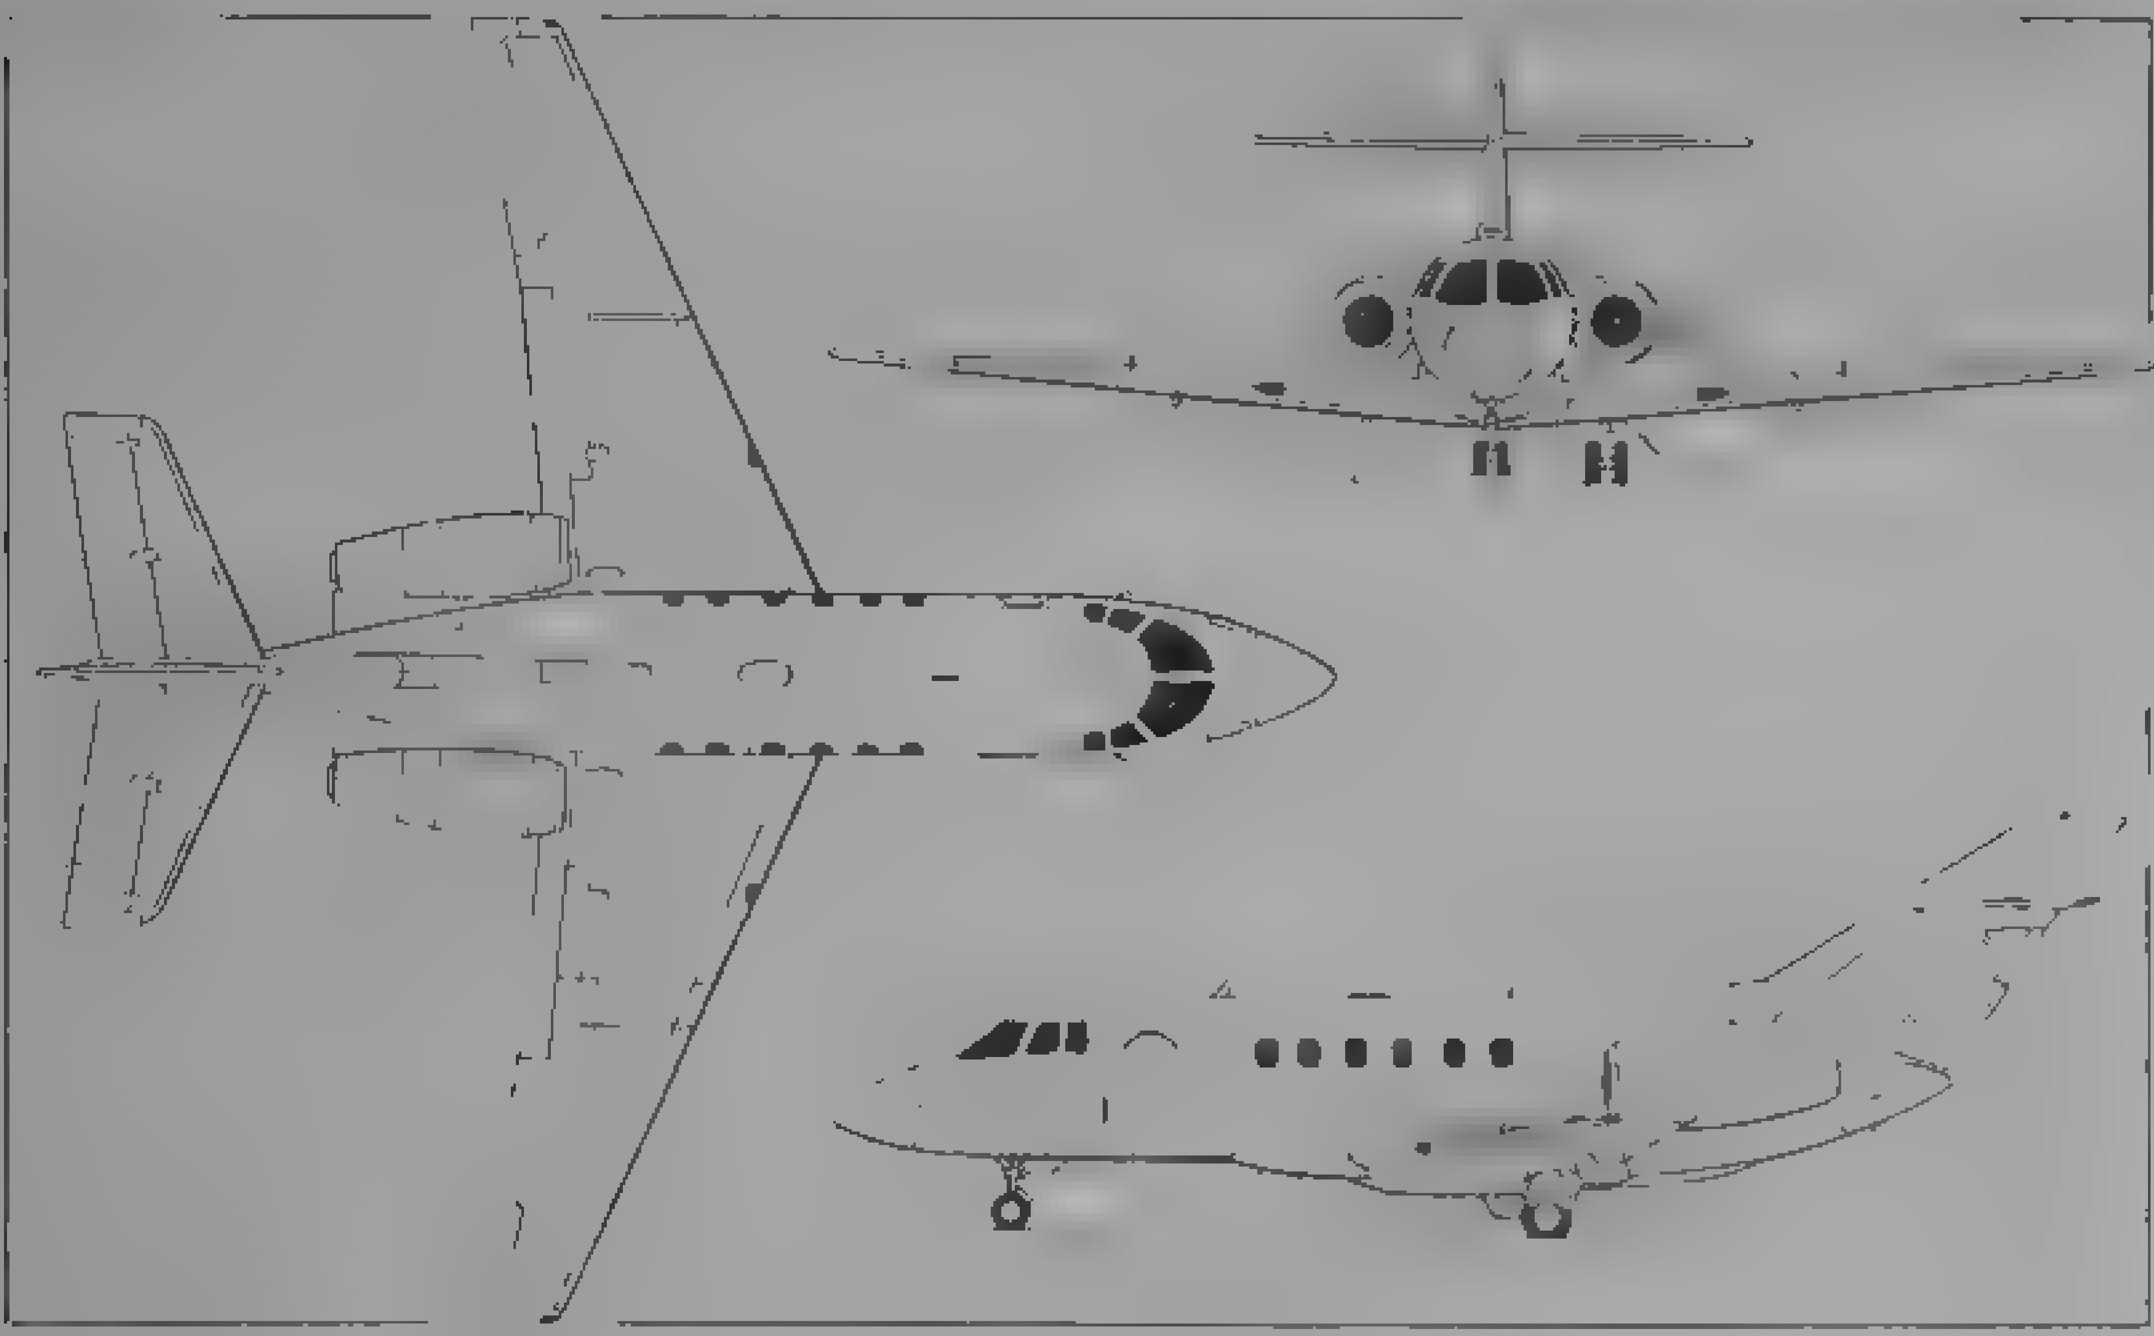
STRUCTURE: All-metal. One-piece wings, dished to pass under fuselage and attached by four vertical links, side link and drag spigot; two-spar fail-safe wings, with partial centre spar of approximately two-thirds span, to form integral fuel tankage; single-piece skins on each upper and lower wing semi-spans; detachable leading-edges; fail-safe fuselage structure of mainly circular cross-section, incorporating Redux bonding.

LANDING GEAR: Retractable tricycle type, with twin wheels on each unit. Hydraulic retraction, nosewheels forward, mainwheels inward into wings. Oleo-pneumatic shock-absorbers. Fully castoring nose unit, steerable ±45°. Dunlop mainwheels and 12 ply tubeless tyres, size 23 × 7-12. Dunlop nosewheels and 6 ply tubeless tyres, size 18 × 4.25-10. Dunlop triple-disc hydraulic brakes with Maxaret anti-skid units on all mainwheels. Minimum ground turning radius about nosewheel 9.14 m (30 ft 0 in).

POWER PLANT: Two 19.13 kN (4,300 lb st) AlliedSignal TFE731-5R-1H turbofans, mounted on sides of rear fuselage in pods designed and manufactured by Northrop Grumman. Thrust reversers developed by Dee Howard fitted as standard. Integral fuel tanks in wings, with combined capacity of 4,820 litres (1,273 US gallons; 1,060 Imp

Raytheon Hawker 800 *(Ian Strachan)*

1995



Raytheon Hawker 800 (two AlliedSignal TFE731-5R-1H turbofans) *(Jane's/Dennis Punnett)*

1993

gallons). Rear underfuselage tank of 854 litres (226 US gallons, 188 Imp gallons) capacity, giving total capacity of 5,674 litres (1,499 US gallons; 1,248 Imp gallons). Single pressure refuelling point at rear of ventral tank. Overwing refuelling point near each wingtip.

ACCOMMODATION: Flight deck crew of two. Dual controls standard. Seat for third crew member. Executive layout has forward baggage compartment, forward galley comprising heated Prepco units, and miscellaneous storage. Seats swivel through 360°. Seating for eight passengers, with club four seating at the front of the cabin, three-place settee on the right side rear cabin and single seat opposite. Airliner style toilet at rear with external servicing as standard. Maximum seating for 14. Interior options include different seating layouts, microwave oven, entertainment system including CD player and video LCD screen.

SYSTEMS: AiResearch air conditioning and pressurisation system. Maximum cabin differential 0.59 bar (8.55 lb/sq in). Oxygen system standard, with dropout masks for passengers. Hydraulic system, pressure 186 to 207 bars (2,700 to 3,000 lb/sq in), for operation of landing gear, mainwheel doors, flaps, spoilers, nosewheel steering, mainwheel brakes and anti-skid units. Two accumulators, pressurised by engine bleed air, one for main system pressure, other providing emergency hydraulic power for wheel brakes in case of main system failure. Independent auxiliary system for lowering landing gear and flaps in event of main system failure. DC electrical system utilises two 30 V 12 kW engine-driven starter/generators and two 24 V 23 Ah Ni/Cd batteries. A 24 V 4 Ah battery provides separate power for standby instruments. AC electrical system includes two 1.25 kVA static inverters, providing 115 V 400 Hz single-phase supplies, one 250 VA standby static inverter for avionics, and two engine-driven 208 V 7.4 kVA frequency-wild alternators for windscreen anti-icing. Ground power receptacle on starboard side at rear of fuselage for 28 V external DC supply. Turbomach T-62T-40C8D-1 APU. TKS liquid system de-icing/anti-icing on leading-edges of wings and tailplane. Engine ice protection system supplied by engine bleed air. Graviner triple FD Firewire fire warning system and two BCF engine fire extinguishers. Stall warning and stick pusher system fitted.

AVIONICS: Standard Honeywell SPZ 800; Collins fit as option.

Comms: Dual RCZ-850 integrated communication system, Motorola N1335B Selcal. Fairchild A110A CVR.

Radar: Primus 870 weather radar.

Flight: Dual DFZ-800 AFCS, dual Omega.

Instrumentation: Dual EDZ-818 EFIS, dual ADZ-810 air data system, dual AHZ-600 AHRS, AA-300 radio altimeter; Safeflight AoA system.

DIMENSIONS, EXTERNAL:

Wing span	15.66 m (51 ft 4½ in)
Wing chord (mean)	2.29 m (7 ft 6 in)
Wing aspect ratio	7.06
Length overall	15.60 m (51 ft 2 in)
Height overall	5.36 m (17 ft 7 in)
Fuselage: Max diameter	1.93 m (6 ft 4 in)
Tailplane span	6.10 m (20 ft 0 in)
Wheel track (c/l of shock absorbers)	2.79 m (9 ft 2 in)
Wheelbase	6.41 m (21 ft 0½ in)
Passenger door (fwd, port): Height	1.30 m (4 ft 3 in)
Width	0.69 m (2 ft 3 in)
Height to sill	1.07 m (3 ft 6 in)
Emergency exit (overwing, stbd):	
Height	0.91 m (3 ft 0 in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin (excl flight deck): Length	6.50 m (21 ft 4 in)
Max width	1.83 m (6 ft 0 in)
Max height	1.75 m (5 ft 9 in)
Floor area	5.11 m² (55.0 sq ft)
Volume	17.10 m³ (604.0 cu ft)
Baggage compartments:	
forward	0.74 m³ (26.0 cu ft)
rear	0.74 m³ (26.0 cu ft)
pannier (optional)	0.79 m³ (28.0 cu ft)

AREAS:

Wings, gross	34.75 m² (374.0 sq ft)
Ailerons (total)	2.05 m² (22.1 sq ft)
Airbrakes: upper (total)	0.74 m² (8.0 sq ft)
lower (total)	0.46 m² (5.0 sq ft)
Trailing-edge flaps (total)	4.83 m² (52.0 sq ft)
Fin (excl dorsal fin)	6.43 m² (69.2 sq ft)
Rudder	1.32 m² (14.2 sq ft)
Horizontal tail surfaces (total)	9.29 m² (100.0 sq ft)

WEIGHTS AND LOADINGS:

Basic weight empty	7,076 kg (15,600 lb)
Typical operating weight empty	7,257 kg (16,000 lb)
Max payload	907 kg (2,000 lb)
Max ramp weight	12,483 kg (27,520 lb)
Max T-O weight	12,428 kg (27,400 lb)
Max zero-fuel weight	8,165 kg (18,000 lb)
Max landing weight	10,591 kg (23,350 lb)
Max wing loading	357.69 kg/m² (73.26 lb/sq ft)
Max power loading	325.1 kg/kN (3.19 lb/lb st)

PERFORMANCE (at ISA, max T-O weight):

Max limiting Mach number	0.87
Max level speed and max cruising speed at 8,840 m (29,000 ft)	456 kts (845 km/h; 525 mph)
Econ cruising speed at 11,900-13,100 m (39,000-43,000 ft)	400 kts (741 km/h; 461 mph)
Stalling speed in landing configuration at typical landing weight	92 kts (170 km/h; 106 mph)
Max rate of climb at S/L	945 m (3,100 ft)/min
Time to 10,670 m (35,000 ft)	19 min
Service ceiling	13,100 m (43,000 ft)
T-O balanced field length at max T-O weight	1,713 m (5,620 ft)
Landing from 15 m (50 ft) at typical landing weight (six passengers and baggage)	1,372 m (4,500 ft)
Range:	
with max payload	2,580 n miles (4,778 km; 2,969 miles)
with max fuel, NBAA VFR reserves	2,825 n miles (5,232 km; 3,251 miles)

UPDATED

RAYTHEON HAWKER 800FI

US Air Force designation: C-29A

JASDF designation: U-125

TYPE: Twin-turbofan flight inspection aircraft.

CURRENT VERSIONS: **C-29A:** Development of Hawker 800 for US Air Force, fitted with fully automatic flight inspection system (FIS). First of six C-29As for USAF delivered on 24 April 1990, equipped with LTV (Sierra Technologies Inc) inspection system for combat flight inspection and navigation (C-FIN) mission, replacing CT-39A and C-140A calibration fleet with 1866th FCS at Scott AFB, Illinois. In September 1991 control of the six C-29As transferred to FAA Headquarters in Oklahoma City. They are currently deployed on a worldwide basis in support of FAA flight inspection operations.

U-125: Selected by Japan Air Self-Defence Force (JASDF) for its FC-X flight inspection requirement. First of three U-125s handed over 18 December 1992; delivery of second U-125 to JASDF took place 16 December 1993, third delivered 22 September 1994. See also KAC under Japan.

DESIGN FEATURES: Version of Hawker 800 with Collins EFIS-86 B2 avionics suite, and integrated inertial/GPS system for precision navigation in addition to dual VOR/DME/ADF. Maximum ramp weight up from 12,483 kg (27,520 lb) of standard Hawker 800 to 12,746 kg (28,100 lb); maximum take-off weight up from 12,428 kg (27,400 lb) to 12,701 kg (28,000 lb).

UPDATED

RAYTHEON HAWKER 800MP

JASDF designation: U-125A

TYPE: Twin-turbofan search and rescue maritime patrol aircraft.

CURRENT VERSIONS: **U-125A:** Selected by JASDF for its H-X search and rescue requirement (see KAC entry under Japan for photograph). JASDF requirement is for total of 27 aircraft for delivery beginning early 1995 through to 2004. First three ordered in FY92, one each in FY93 and 94, two in FY95. First aircraft (52-3001) flew 19 July 1994, 350 hours of development flying in UK, first delivery (52-3003) 11 December 1994 to Japan for completion by KAC; handover to JASDF March 1995.

DESIGN FEATURES: Hawker 800 fitted with two large observation windows in cabin, a 360° scan surveillance radar and retractable, steerable FLIR sensor. Capable of dropping marker flares and liferafts. Rear ventral fuselage fuel tank replaced by avionics pannier. Maximum zero-fuel weight increased from 8,165 kg (18,000 lb) of Hawker 800FI to 8,369 kg (18,450 lb).

UPDATED

RAYTHEON HAWKER 800RA and 800SIG

TYPE: Surveillance and sigint versions, currently under development.

CURRENT VERSIONS: **800RA:** Surveillance version of Hawker 800, to be equipped with synthetic aperture radar, defensive aids subsystem and military communications equipment, capable of high altitude (up to 13,100 m; 43,000 ft) and long endurance (6.5 h). Maximum take-off weight 12,701 kg (28,000 lb), maximum zero-fuel weight 8,369 kg (18,450 lb).

800SIG: Signals intelligence version to collect communications intelligence and electronic intelligence for airborne analysis or datalink to ground station for near real-time assessment or, with recording systems for onboard storage, for post-flight analysis, estimated performance as 800RA.

UPDATED

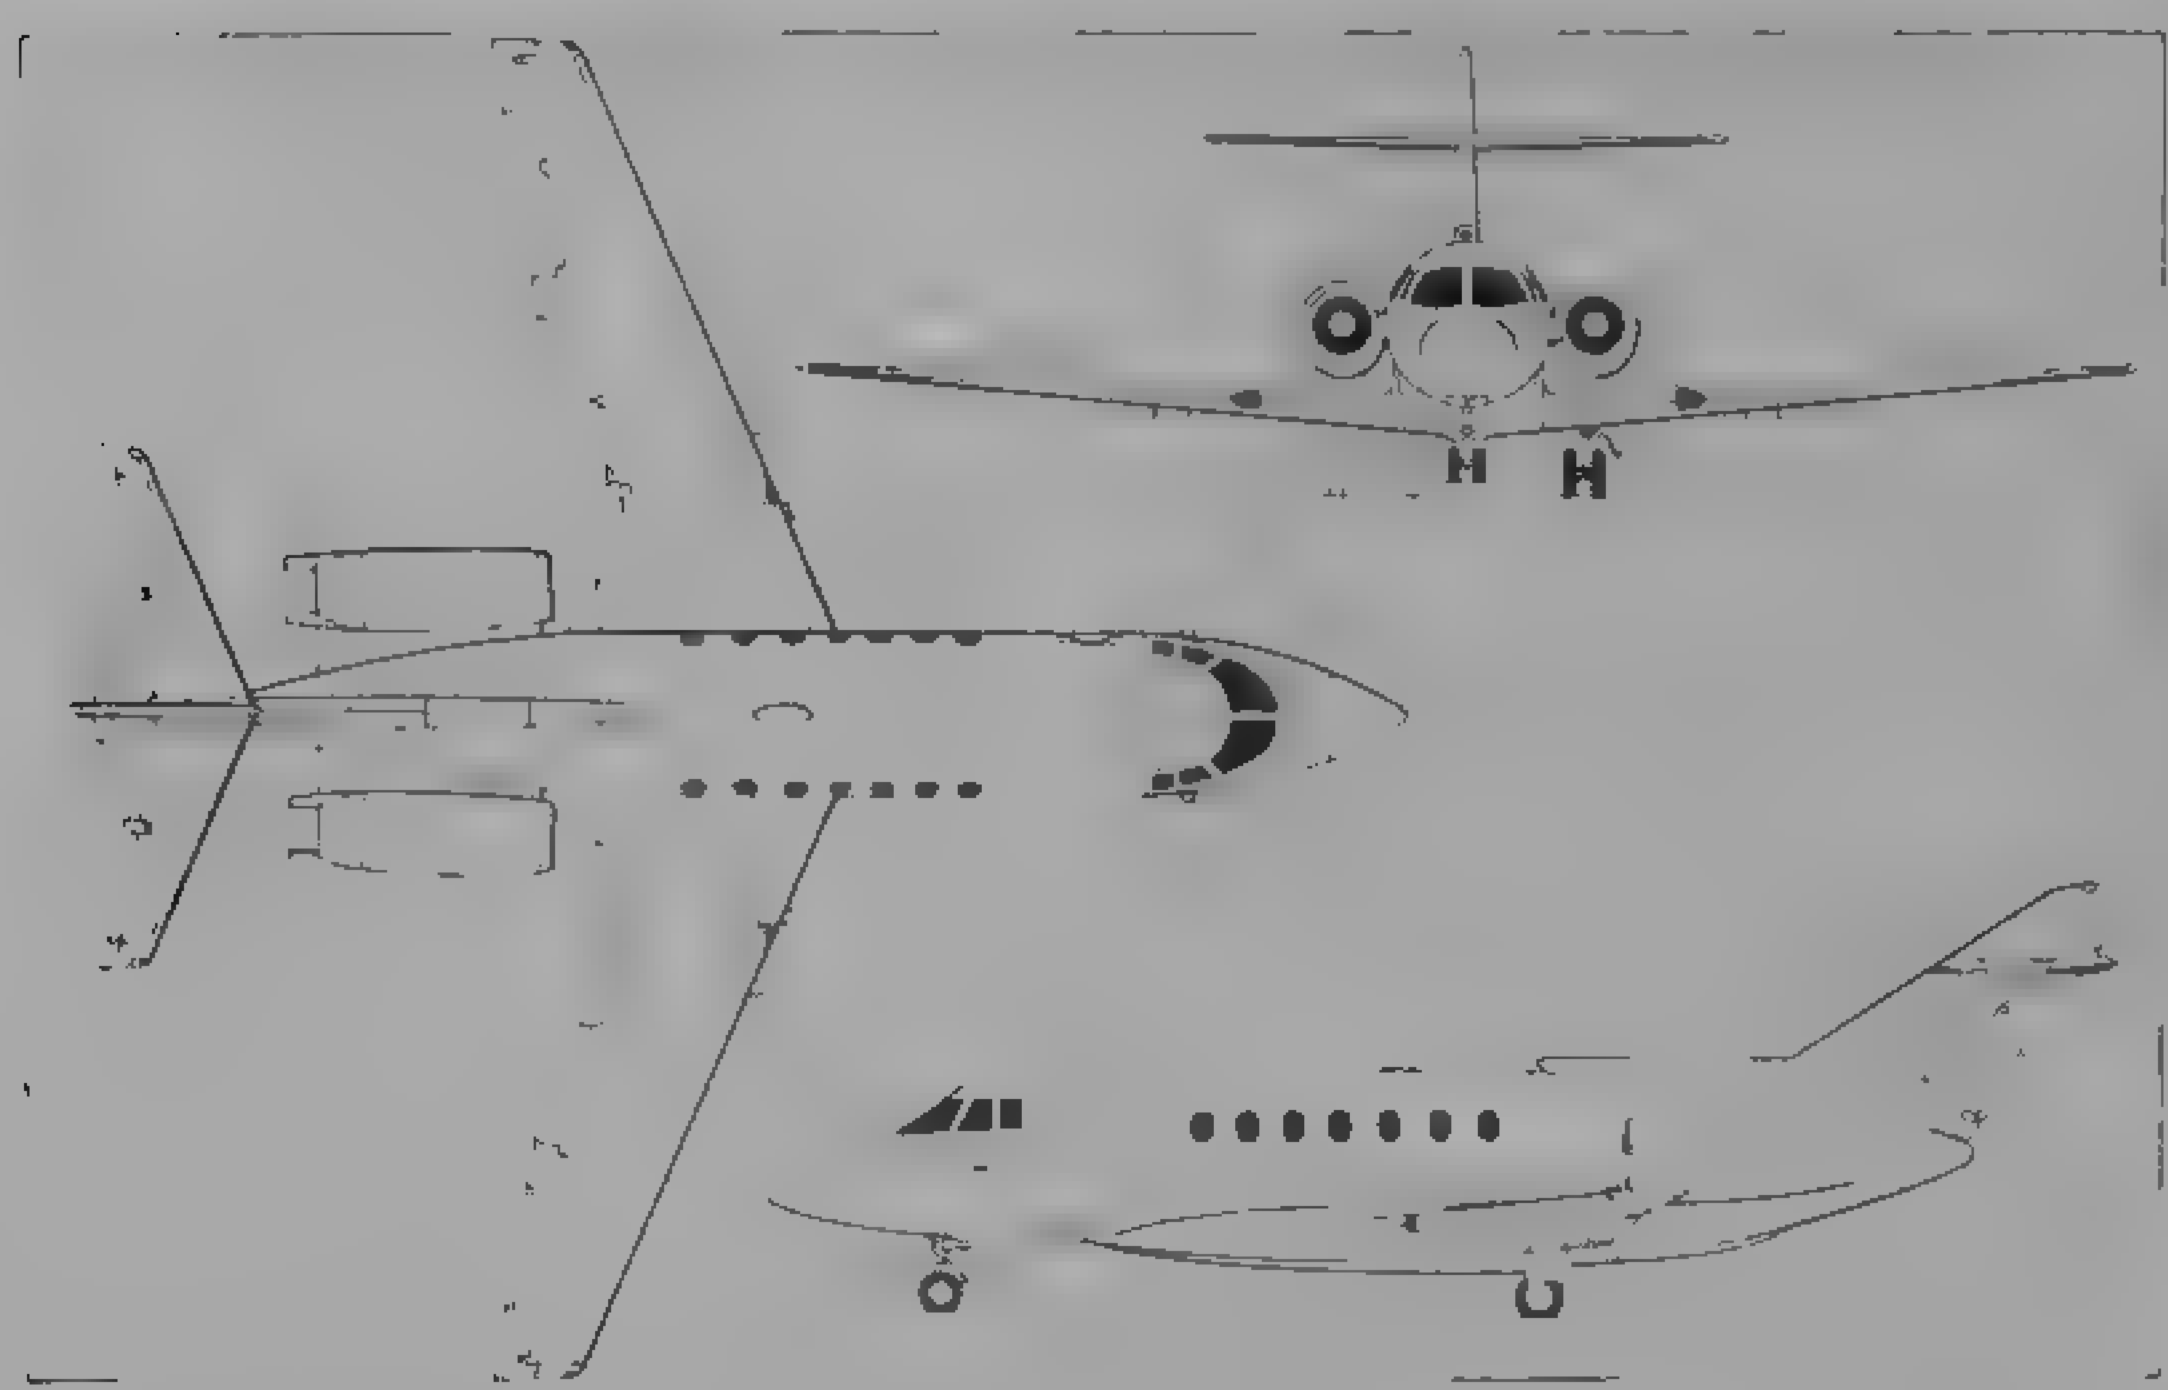
RAYTHEON HAWKER 1000

TYPE: Twin-turbofan business transport.

PROGRAMME: Development initiated 1988 as BAe 125 Series 1000, with larger cabin and increased range, substantial

Raytheon Hawker 1000 twin-turbofan business transport

1995



Raytheon Hawker 1000 (two P&WC PW305B turbofans) (*Jane's/Dennis Punnett*)

1990

structural and systems changes, and modifications to meet latest FAR and JAR certification requirements, launched as BAe 1000 October 1989; first flight (G-EXLR) 16 June 1990 and of second aircraft 26 November 1990. 800 hours flight development programme with three aircraft achieved certification on 21 October 1991, followed by FAA certification on 31 October and initial customer deliveries in December same year.

CUSTOMERS: Launch customers were J. C. Bamford Excavators Ltd (two) and The Yeates Group (one) in UK, United Technologies in USA (three, plus one for subsidiary Pratt & Whitney Canada), Aravco Ltd in UK ordered two for business jet charter; orders totalled 45 by March 1995, 47 built by January 1995; further three to be produced during 1995. Largest corporate operator is Executive Jet Aviation of Columbus, Ohio, which has ordered 1, with options on a further nine.

DESIGN FEATURES: Intercontinental development of Hawker 800 to offer increase in range and improvement in field performance particularly for hot and high airfields; 0.84 m (2 ft 9 in) fuselage stretch via plugs forward and aft of wings, additional cabin windows, PW305B turbofans with thrust reversers standard, fuel tank in extended forward wing fairing capacity 623 litres (164 US gallons; 137 Imp gallons); ventral fuel tank capacity increased by 150 litres (39.6 US gallons, 33 Imp gallons); restyled cabin interior; improved modular galley facilities; external baggage hatch; Honeywell SPZ8000 digital avionics, underwing vortillons.

BAe wing sections. Wing thickness/chord ratio 14 per cent at root, 8.35 per cent at tip; dihedral 2°; incidence 2° 5′ 42″ at root, −3° 5′ 49″ at tip; sweepback 20° at quarter-chord.

FLYING CONTROLS: Similar to Hawker 800. Split elevator circuit with normally locked break-out struts which split automatically in event of control jam.

STRUCTURE: Similar to Hawker 800 but with upper fence on each wing replaced by underwing vortillon, intermediate fuselage frames fitted to meet latest FAR/JAR requirement; secondary rear pressure bulkhead forms forward bulkhead of rear baggage area (with baggage access door) allowing altitude certification to 13,100 m (43,000 ft) in USA: push-in/slide-up plug type exterior baggage access door (63.5 × 35.5 cm; 25 × 14 in) on port side, interlocked to prevent engine start up if open.

LANDING GEAR: Retractable tricycle type, with twin wheels on each unit. Hydraulic retraction, nosewheels forward, mainwheels inward into wings. Oleo-pneumatic shock absorbers. Fully castoring nose unit, steerable ±45°. Dunlop mainwheels and 12 ply tubeless tyres, size 23 × 7-12. Dunlop nosewheels and 6 ply tubeless tyres, size 18 × 4.25-10. Dunlop triple-disc hydraulic brakes with Maxaret anti-skid units on mainwheels.

POWER PLANT: Two 23.13 kN (5,200 lb st) Pratt & Whitney Canada PW305B turbofans on sides of rear fuselage, in Rohr Aerospace pods. Rohr target-type thrust reversers standard. Integral fuel tanks in wings, with combined capacity of 4,819 litres (1,273 US gallons, 1,060 Imp gallons). Rear underfuselage ventral tank of 1,023 litres (270 US gallons, 225 Imp gallons) capacity and forward underfuselage ventral tank forming wingroot fairing, capacity 623 litres (164 US gallons, 137 Imp gallons), giving total capacity of 6,465 litres (1,707 US gallons, 1,422 Imp gallons). Single pressure refuelling point at rear of aft ventral tank. Overwing refuelling point near each wingtip.

ACCOMMODATION: As described for Hawker 800 but with maximum of 15 seats in executive layout.

SYSTEMS: Hydraulic system also operates thrust reversers. Three accumulators, pressurised by engine bleed air, are for emergency hydraulic power for wheel brakes in case of main system failure. DC electrical system utilises two 30 V 12 kW (restricted to 9 kW) engine-driven starter/generators and two 26 V 43 Ah Ni/Cd batteries. A 24 V 5 Ah battery provides separate power for standby instruments. The AC system is deleted on the 1000 version, those instruments requiring AC having their own dedicated inverter. Two engine-driven 208 V 7.4 kVA frequency-wild alternators for windscreen anti-icing can also provide DC power through a standby transformer-rectifier unit in emergency. Otherwise as described for Hawker 800.

AVIONICS: Standard Honeywell SPZ8000 avionics fit, as Hawker 800 with addition of dual Laseref III inertial reference system; DG1086 GPS, LSZ-850 lightning detection system, FMZ 900 FMS with colour displays.

DIMENSIONS, EXTERNAL: As for Hawker 800 except:

Length overall	16.42 m (53 ft 10½ in)
Height overall	5.21 m (17 ft 1 in)
Wheelbase	6.91 m (22 ft 8 in)
Baggage door: Height	0.64 m (2 ft 1 in)
Width	0.36 m (1 ft 2 in)

DIMENSIONS, INTERNAL: As for Hawker 800 except:

Cabin (excl flight deck): Length	7.44 m (24 ft 5 in)
Floor area	5.85 m² (62.95 sq ft)
Volume	approx 19.26 m³ (680.0 cu ft)
Baggage compartments, volume:	
rear (main)	1.33 m³ (47.0 cu ft)
forward (wardrobe)	0.28 m³ (10.0 cu ft)
optional (wardrobe extension)	0.28 m³ (10.0 cu ft)

AREAS: As for Hawker 800

WEIGHTS AND LOADINGS:

Weight empty	7,811 kg (17,220 lb)
Typical operating weight empty	8,165 kg (18,000 lb)
Max payload	1,043 kg (2,300 lb)
Max T-O weight	14,060 kg (31,000 lb)
Max ramp weight	14,105 kg (31,100 lb)
Max zero-fuel weight	9,208 kg (20,300 lb)
Max landing weight	11,340 kg (25,000 lb)
Max wing loading	404.7 kg/m² (82.89 lb/sq ft)
Max power loading	304.1 kg/kN (2.98 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated):

Max limiting Mach number	0.87
Max level and max cruising speed at 8,840 m (29,000 ft)	468 kts (867 km/h, 539 mph)
Econ cruising speed at 11,890-13,100 m (39,000-43,000 ft)	402 kts (745 km/h, 463 mph)
Stalling speed in landing configuration at typical landing weight	89 kts (165 km/h, 103 mph)
Time to 10,670 m (35,000 ft)	22 min
Service ceiling	13,100 m (43,000 ft)
T-O balanced field length	1,798 m (5,900 ft)
Landing from 15 m (50 ft) at typical landing weight (six passengers and baggage)	1,280 m (4,200 ft)
Range:	
with max payload	3,105 n miles (5,750 km; 3,573 miles)
with max fuel, NBAA VFR reserves	3,350 n miles (6,204 km; 3,855 miles)

Shorts acquired in October 1989 by Bombardier of Canada is European Group of Bombardier Aerospace, which also comprises North American Group (see Canadian section); operates from headquarters in Belfast, Northern Ireland, with subsidiary offices in London, Washington, Kuala Lumpur and Bahrain, currently employs over 9,000 personnel worldwide.

Major new investment by Shorts in plant, facilities and machinery carried out since 1989; now has modern

First Learjet 45 fuselage designed and built at Belfast being loaded on 18 October 1994 for delivery to USA inside an earlier Shorts aircraft, the Belfast

1995

equipment, extended capacity, new systems, and updated working practices. Production of Shorts 330 and 330-UTT (total 136 built) ended in September 1992, manufacturer of S312 (Embraer licence) Tucano completed early 1993

Two manufacturing centres, Newtownabbey and Dunmurry, cater for advanced composites programme; over 27,871 m² (300,000 sq ft) production floor area allocated to manufacture of components for Boeing, Rolls-Royce International Aero Engines, Fokker and British Aerospace Shorts has major partnership role in Canadair Regional Jet responsible for designing and manufacturing 9.75 m (32 ft) long centre section of fuselage, including forward and aft fuselage extension plugs, as well as wing flaps, ailerons, spoilers and spoilerons, vanes and nacelles. In September 1992 it was announced that Shorts would build complete fuselage and tail unit for new Learjet 45 mid size business jet in Belfast, first fuselage delivered October 1994

Shorts designed, developed and now produces Fokker 70 and 100 wing as risk sharing partner with Fokker of Netherlands and Daimler-Benz Aerospace Airbus of Germany Shorts also currently supplies components for Boeing 737, 747, 757 and 777. Announced 28 March 1994 that Shorts will undertake 10 per cent of BAe work-share in European Future Large Aircraft (see under Euroflag in International section)

Company is teamed with Westland to produce Apache attack helicopters for the UK MoD, and also owns Airwork Ltd, the international aviation support company with HQ at Bournemouth UK

Nacelle Systems Division specialises in design and manufacture of engine nacelle and turbofan components and makes a significant contribution to many Rolls Royce power plant programmes

Specialises in application of composite materials, formerly manufacturer of sailplanes but now concentrating on development and production of T67 Firefly series of military training aircraft, currently producing 113 T67M260 (T-3A) for US Air Force, all to be delivered by November 1995

Other activities include design and manufacture of hovercraft in composite materials, and design, development and manufacture of high-performance composite structures for marine and aerospace industries. Supplier to Jetstream 41 programme, supplying ventral fairing assembly and baggage bay, oil cooler ducts, wingtip fairings and other composites components

Work for UK MoD includes technical support for RAF Air Cadet gliders and operation and management of full scale dynamic fatigue test of RAF Grob Viking glider

Airship activities sold to Westinghouse in 1993

VERIFIED

SLINGSBY T67 FIREFLY

TYPE: Two-seat aerobatic training and sporting aircraft

PROGRAMME: Current composites constructed Firefly developed from wooden Slingsby T67A (licence built version of French Fournier RF6B — see 1982-83 *Jane's*). T67B gained CAA certification 18 September 1984; T67C was CAA certificated 15 December 1987

CURRENT VERSIONS: **T67B.** Basic version, 86.5 kW (116 hp) Textron Lycoming O-235-N2A engine and two-blade fixed-pitch propeller, no longer produced

T67C: Similar to T67B, but 119 kW (160 hp) Textron Lycoming O-320-D2A engine, metal fixed-pitch propeller, 24 V 70 A engine-driven alternator and 24 V 15 Ah battery Subvariants **T67C1** with normal fuselage fuel tank and one-piece canopy, **T67C2** with fuselage tank and two-piece canopy, **T67C3** with wing fuel tanks and two-piece canopy. *Detailed description applies to T67C*

T67M. Military variants, described separately

CUSTOMERS: Over 160 civil/military T67s delivered to customers in 13 countries by early 1995. Nine T67C3s purchased by Netherlands government Civil Aviation Flying School for KLM and Royal Netherlands Navy pilot training; 12 T67C3s for Canadian Department of National Defence for military primary flying training, plus other T67C variants for UK schools, including CSE and Bristow Helicopters

DESIGN FEATURES: Wing section NACA 23015 at root, 23013 at tip, dihedral 3° 30', incidence 3

FLYING CONTROLS: Manually operated mass balanced Frise type ailerons, without tabs, mass balanced elevators with manually operated port trim tab (electric trim optional), rudder, trailing edge fixed hinge flaps, spin strakes forward of tailplane roots

STRUCTURE: GFRP, single-spar wings with double skin (corrugated inner skin bonded to plain outer skin) and conventional ribs in heavy load positions, conventional frame and top-hat stringer fuselage; stainless steel firewall between cockpit and engine; fixed incidence tailplane of similar construction to wings (built-in VOR antenna); fin incorporates VHF antenna

LANDING GEAR: Non-retractable tricycle type. Oleo-pneumatic shock-absorber in each unit. Steerable nosewheel. Main wheel tyres size 6.00-6, pressure 1.4 bars (20 lb/sq in) Nosewheel tyre size 5.00-5, pressure 2.5 bars (37 lb/sq in) Hydraulic disc brakes. Parking brake

POWER PLANT: One flat-four engine as described under Current Versions. Fuselage fuel tank, immediately aft of firewall, in T67C1 and T67C2, capacity 114 litres (30 US gallons; 25 Imp gallons). Refuelling point on fuselage upper surface, forward of windscreen. T67C3, wing fuel tanks as T67M. Oil capacity 4 litres (1.06 US gallons, 0.88 Imp gallon). Oil system permits short periods of inverted flight

ACCOMMODATION: Two seats side by side, originally (T67C1) under one-piece transparent canopy, which swings upward and rearward for access to cockpit. T67C2/C3 have fixed windscreen and rearward-hinged upward-opening rear section. Dual controls standard. Adjustable rudder pedals Cockpit heated and ventilated. Baggage space aft of seats

SYSTEMS: Hydraulic system for brakes only. Vacuum system for blind flying instrumentation. Electrical power supplied by 28 V 70 A engine-driven alternator and 24 V 15 Ah battery

AVIONICS: Optional avionics, available to customer requirements, include equipment by Becker, Bendix/King and Narco, up to full IFR standard

Instrumentation: Standard avionics include artificial horizon and directional gyro, with vacuum system and vacuum gauge, electric turn and slip indicator, rate of climb indicator, recording tachometer, stall warning system, clock, outside air temperature gauge, accelerometer

EQUIPMENT: Includes tiedown rings and towbar; cabin fire extinguisher, crash axe, heated pitot, instrument, landing, navigation and strobe lights. Optional equipment includes T67M type blue tinted canopy, external power socket, and wingtip-mounted smoke system

DIMENSIONS, EXTERNAL:

Wing span	10.59 m (34 ft 9 in)
Wing chord: at root	1.53 m (5 ft 0¼ in)
at tip	0.83 m (2 ft 8¾ in)
Wing aspect ratio	8.88
Length overall	7.32 m (24 ft 0¼ in)
Height overall	2.36 m (7 ft 9 in)
Tailplane span	3.40 m (11 ft 1¾ in)
Wheel track	2.44 m (8 ft 0 in)
Wheelbase	1.50 m (4 ft 11 in)
Propeller diameter	1.88 m (6 ft 2 in)

DIMENSIONS, INTERNAL:

Cockpit: Length	2.05 m (6 ft 8¾ in)
Max width	1.08 m (3 ft 6½ in)
Max height	1.08 m (3 ft 6½ in)

AREAS:

Wings, gross	12.63 m² (136.0 sq ft)
Ailerons (total)	1.24 m² (13.35 sq ft)
Trailing-edge flaps (total)	1.74 m² (18.73 sq ft)
Fin	0.80 m² (8.61 sq ft)
Rudder	0.82 m² (8.8 sq ft)
Tailplane	1.65 m² (17.76 sq ft)
Elevators (incl tab)	0.99 m² (10.66 sq ft)

WEIGHTS AND LOADINGS:

Weight empty (basic): T67C2	649 kg (1,430 lb)
T67C3	685 kg (1,510 lb)
Max fuel: T67C1/C2	82 kg (181 lb)
T67C3	114 kg (252 lb)
Max baggage: T67C	30 kg (66 lb)
Max T-O, landing and aerobatic weights	
T67C2	907 kg (2,000 lb)
T67C3	975 kg (2,150 lb)
Max wing loading: T67C2	71.82 kg/m² (14.71 lb/sq ft)
T67C3	77.18 kg/m² (15.81 lb/sq ft)
Max power loading: T67C2	7.62 kg/kW (12.50 lb/hp)
T67C3	8.18 kg/kW (13.44 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (V_{NE})	180 kts (334 km/h, 207 mph)
Max level speed at S/L	127 kts (235 km/h, 146 mph)
Max cruising speed (75% power) at 2,440 m (8,000 ft)	116 kts (215 km/h, 134 mph)
Stalling speed, power off, flaps up: T67C2	52 kts (97 km/h, 60 mph)
T67C3	53 kts (99 km/h, 61 mph)
Stalling speed, power off, flaps down	49 kts (91 km/h, 57 mph)
Max crosswind	25 kts (46 km/h, 29 mph)
Max rate of climb at S/L: T67C2	274 m (900 ft)/min
Service ceiling	3,660 m (12,000 ft)
T-O run: T67C3	335 m (1,100 ft)
T-O to 15 m (50 ft): T67C3	550 m (1,805 ft)
Landing from 15 m (50 ft): T67C3	565 m (1,854 ft)
Landing run: T67C3	348 m (1,142 ft)
Range with max fuel (65% power at 2,440 m, 8,000 ft), allowances for T-O and climb, 30 min reserves at 45% power: T67C2	360 n miles (666 km, 414 miles)
T67C3	554 n miles (1,026 km, 638 miles)
Endurance at best econ setting to 20 min fuel remaining: T67C2	4 h 10 min
T67C3	7 h 0 min
g limits	+6/−3

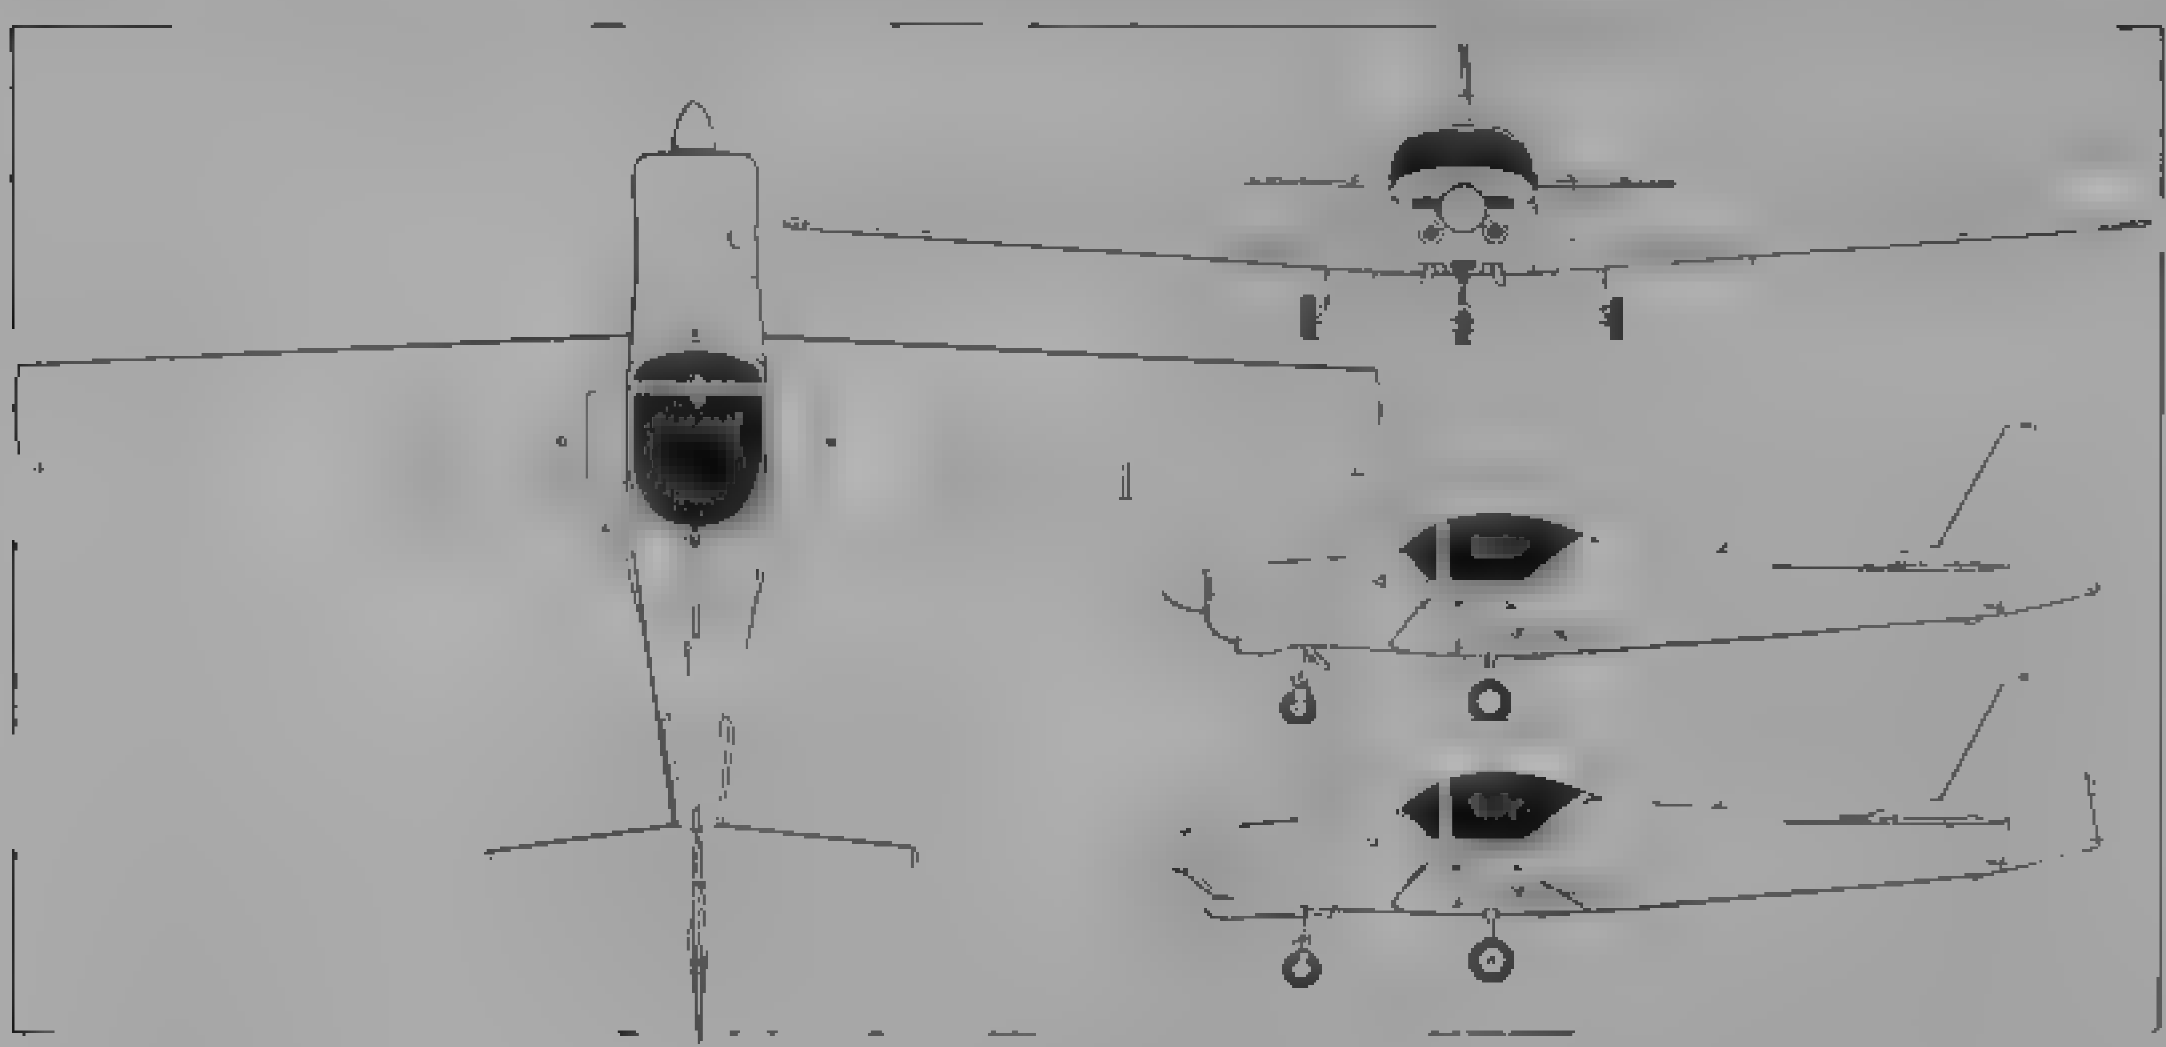
Slingsby T67M Fireflies in formation (*John Dignan*)

1995



Slingsby T67M Mk II Firefly (Textron Lycoming AEIO-320-D1B engine) with additional side view (bottom) of T67M260 (*Jane's/Dennis Punnett*)

1992

SLINGSBY T67M Mk II FIREFLY

TYPE: Two-seat military basic trainer

PROGRAMME: First flight of T67M Firefly 160 (G-BKAM) 5 December 1982, CAA certification 20 September 1983, designation changed to T67M Mk II as two-piece canopy introduced

CUSTOMERS: Sold to Holland for military grading, Japan and UK for airline training, and Switzerland for aerobatic and general flying training. Used by RAF and RN for elementary flying training, Joint Elementary FTS formed at Topcliffe, July 1993 with first of 17 Fireflies operated under contract by Hunting Aircraft Ltd, transferred to Barkston Heath in April 1995

DESIGN FEATURES: T67M based on T67C, except as detailed

STRUCTURE: Generally as T67C

LANDING GEAR: Generally as T67C

POWER PLANT: One 119 kW (160 hp) Textron Lycoming AEIO-320-D1B flat-four engine, driving a Hoffmann HO-V72 two-blade constant speed composite propeller. Fuel and oil systems suitable for inverted flight. Fuel tanks in leading-edge of wings, capacity 159 litres (42 US gallons, 35 Imp gallons). Refuelling point in upper wing surface. Oil capacity 7.7 litres (2.0 US gallons, 1.675 Imp gallons)

ACCOMMODATION: As for T67C, except that current aircraft have blue tinted canopy with fixed windscreen and upward-hinged, rearward-opening rear section. Inertia reel lockable shoulder harness standard, air conditioning optional

AVIONICS: Avionics to customer requirements. Blind-flying instrumentation standard

DIMENSIONS, EXTERNAL: As for T67C

AREAS: As for T67C

WEIGHTS AND LOADINGS:

Weight empty, equipped	685 kg (1,510 lb)
Max fuel weight	114 kg (252 lb)
Max T-O, aerobatic and landing weight	975 kg (2,150 lb)
Max wing loading	77.18 kg/m² (15.81 lb/sq ft)
Max power loading	8.18 kg/kW (13.44 lb/hp)

PERFORMANCE (at max T-O weight except where indicated):

Never-exceed speed (VNE)	180 kts (334 km/h; 207 mph)
Max level speed at S/L	130 kts (241 km/h; 150 mph)
Max cruising speed, 75% power at 2,440 m (8,000 ft)	121 kts (224 km/h; 139 mph)
Stalling speed, power off, flaps down	49 kts (91 km/h, 57 mph)
Max crosswind for T-O and landing	25 kts (46 km/h, 29 mph)
Max rate of climb at S/L	305 m (1,000 ft)/min
Service ceiling	4,575 m (15,000 ft)
T-O run	218 m (718 ft)
T-O to 15 m (50 ft)	444 m (1,458 ft)
Landing from 15 m (50 ft)	546 m (1,794 ft)
Landing run	258 m (847 ft)
Range with max fuel at 65% power, at 2,440 m (8,000 ft), allowances for T-O, climb and 30 min reserves at 45% power	486 n miles (901 km; 631 miles)
Endurance, at best econ setting to 20 min fuel remaining	6 h 30 min
g limits at 884 kg (1,950 lb) AUW	+6/−3

UPDATED

SLINGSBY T67M200 FIREFLY

TYPE: Two-seat military basic trainer

PROGRAMME: First flight 16 May 1985, CAA certification 13 October 1985, representative airframe underwent long term fatigue test to simulate 75,000 flying hours.

CUSTOMERS: 29 used in five countries by January 1992, first customer Turkish Aviation Institute, Ankara (16 delivered from 1985), Dutch operator King Air (three T67M200s, plus one T67M Mk II) as screening trainers for prospective RNethAF pilots, Royal Hong Kong Auxiliary Air Force (now Government Flying Service) (four), Norwegian government's Flying Academy (six)

DESIGN FEATURES: Development of T67M; 149 kW (200 hp) Textron Lycoming AEIO-360-A1E engine, Hoffman HO-V123 three-blade variable-pitch composite propeller; fuel/oil systems for inverted flight

DIMENSIONS, EXTERNAL: As for T67C/M except

Propeller diameter	1.80 m (5 ft 10¾ in)

WEIGHTS AND LOADINGS:

Weight empty	700 kg (1,543 lb)
Max fuel	114 kg (252 lb)
Max baggage	30 kg (66 lb)
Max T-O weight: Utility	1,020 kg (2,250 lb)
Aerobatic	975 kg (2,150 lb)
Max landing weight	975 kg (2,150 lb)
Max wing loading	80.75 kg/m² (16.54 lb/sq ft)
Max power loading	6.85 kg/kW (11.25 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE)	180 kts (334 km/h, 207 mph)
Max level speed at S/L	135 kts (250 km/h, 155 mph)
Max cruising speed (75% power at 2,440 m, 8,000 ft)	125 kts (232 km/h, 144 mph)
Stalling speed, power off, flaps down	49 kts (91 km/h, 57 mph)
Max crosswind for T-O and landing	25 kts (46 km/h, 29 mph)
Max rate of climb at S/L	333 m (1,091 ft)/min
T-O run	295 m (967 ft)
T-O to 15 m (50 ft)	467 m (1,531 ft)
Landing from 15 m (50 ft)	575 m (1,888 ft)
Landing run	329 m (1,078 ft)
Range with max fuel (65% power at 2,440 m; 8,000 ft), allowances for T-O and climb, 30 min reserves at 45% power	469 n miles (869 km, 540 miles)
Endurance at best econ setting, 20 min fuel remaining	6 h 0 min
g limits	+6/−3

UPDATED

SLINGSBY T67M260 FIREFLY

US Air Force designation: T-3A Firefly

TYPE: Two-seat military basic trainer

PROGRAMME: Selected by USAF to meet Enhanced Flight Screener (EFS) requirement. Slingsby prime contractor for both acquisition contract and seven year contractor logistic support (CLS) contract. Northrop Grumman is subcontractor for final assembly at Hondo, Texas, and for operation of CLS activities at Hondo and USAF Academy at Colorado Springs. Prototype (G-BLUX) flown May 1991, evaluated at Wright-Patterson AFB, hot and high trials at USAF Academy in Summer 1991. Preproduction aircraft (G-EFSM) flown September 1992. First flight of first USAF aircraft (92-0625/N7020D) 4 July 1993. T-3A type certificate awarded by CAA and FAA December 1993. Official USAF acceptance 25 February 1994; student pilot training at 1st Flight Screening Squadron of 12th Flying Training Wing, Hondo, began March 1994.

CUSTOMERS: US Air Force, 113 aircraft in three lots (38, 42 and 33) to replace Cessna T-41. USAF pilot conversion completed September 1993. Deliveries January 1994 to November 1995. 50 aircraft in service by beginning of 1995. Second and final operating unit (with 57 aircraft) is 557th FTS of USAF Academy at Colorado Springs, deliveries to this unit from August 1994, operational January 1995. All T-3As wear dual military/civilian identities

Slingsby T-3A Firefly military basic trainer (*John Dignan*)

1995

COSTS: Initial programme costs (including CLS) $54.8 million plus extra options for air conditioning and UHF radios
DESIGN FEATURES: Development of T67M, higher powered Lycoming engine; cabin air conditioning system added, higher maximum T-O and aerobatic weights, to allow 227 kg (500 lb) for two pilots and equipment plus full fuel load
POWER PLANT: One 194 kW (260 hp) Textron Lycoming AEIO-540-D4A5 flat-six engine, driving a Hoffmann HO-V123K X/180 DT three-blade constant-speed composite propeller. Fuel capacity 159 litres (42 US gallons, 35 Imp gallons)
Data as for T67C/M except:

DIMENSIONS, EXTERNAL:
Length overall 7.57 m (24 ft 10 in)
WEIGHTS AND LOADINGS (with air conditioning installed):
Weight empty 807 kg (1,780 lb)
Max fuel 114 kg (252 lb)
Max T-O weight, Utility/Aerobatic 1,145 kg (2,525 lb)
Max wing loading 90.8 kg/m² (18.6 lb/sq ft)
Max power loading 5.89 kg/kW (9.69 lb/hp)
PERFORMANCE (at max T-O weight, ISA):
Never-exceed speed (VNE) 195 kts (361 km/h, 224 mph)
Max level speed at S/L 152 kts (281 km/h, 175 mph)
Max cruising speed (75% power at 2,590 m; 8,500 ft) 140 kts (259 km/h, 173 mph)
Stalling speed, power off 52 kts (98 km/h, 68 mph)
Max rate of climb at S/L 480 m (1,380 ft)/min
T-O run, 18° flap 278 m (913 ft)
T-O to 15 m (50 ft), 18° flap 476 m (1,562 ft)
Landing from 15 m (50 ft), full flap 877 m (2,877 ft)
Landing run, full flap 374 m (1,226 ft)
Range with max fuel, 65% power at 2,440 m (8,000 ft), allowances for T-O, climb and 30 min reserves 408 n miles (755 km, 469 miles)
Endurance at best econ setting, 20 min fuel remaining 5 h 20 min

SPEEDTWIN

SPEEDTWIN DEVELOPMENTS LTD

Upper Cae Garw Farm, Trellech, Monmouth, Gwent
Telephone: (44) 1600 860165
Fax: (44) 1600 860813
CHAIRMAN: Peter J C Phillips

The company was formed to market the Speedtwin twin-engined aerobatic light sporting aircraft designed by Peter Phillips, a former demonstration pilot with Britten-Norman and test pilot with the Norman Aeroplane Company.

NEW ENTRY

Speedtwin aerobatic sporting aircraft designed by Peter Phillips *(Paul Jackson)* *1995*

SPEEDTWIN E2E SPEEDTWIN

TYPE: Twin-engined, tandem-seat sporting aircraft.
PROGRAMME: Design started 1981, prototype first flew 1992, production rate about six kits per year after certification. Construction requirements arranged to meet the '51 per cent rule'.
CURRENT VERSIONS: **Mk I** with Continental engines. **Mk II** with Lycoming engines.
COSTS: Kit, £38,000, information pack £15, demonstration flight £300.
DESIGN FEATURES: Designed to meet FAR Pt 23 and BCAR 23 standards for sporting flying and aerobatics. World's only aerobatic light twin. Low-wing twin-engined monoplane with fixed tailwheel undercarriage. VMCA of Mk I version claimed to be at or below the stall.
FLYING CONTROLS: Conventional mechanical ailerons, elevator and rudder. Elevator tab for pitch trim. Fixed tabs on ailerons and rudder for adjustments before flight.
STRUCTURE: General construction of metal, flush riveted and butt jointed. Carbonfibre control surfaces.
LANDING GEAR: Tailwheel type, spats on mainwheels.
POWER PLANT: Mk I Speedtwin, two 74.6 kW (100 hp) Continental O-200 or, Mk 2 Speedtwin, two 119.3 kW (160 hp) Textron Lycoming IO-320. Dynafocal engine mounts. Fuel capacity 363 litres (96.0 US gallons, 79.9 Imp gallons).
ACCOMMODATION: Two in tandem.
SYSTEMS: Electrical system, 12 V 30 Ah battery, alternator fit appropriate to engine.
AVIONICS: Customer specified.
DIMENSIONS, EXTERNAL:
Wing span 7.92 m (26 ft 0 in)
Wing aspect ratio 5.63
Length overall 6.96 m (22 ft 10 in)
Width, wing outer panels removed for stowage 4.88 m (16 ft 0 in)
Height overall 2.08 m (6 ft 10 in)
DIMENSIONS, INTERNAL:
Cabin:
Min width 0.63 m (2 ft 1 in)
AREAS:
Wings, gross 11.15 m² (120.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty: Mk I 640 kg (1,410 lb)
Mk II 680 kg (1,500 lb)
Max T-O weight: US FAA rules 1,111 kg (2,450 lb)
UK CAA rules 1,020 kg (2,250 lb)
Max weight for aerobatics 907 kg (2,000 lb)
Max wing loading at aerobatic weight 81.4 kg/m² (16.7 lb/sq ft)
Max power loading at aerobatic weight:
Mk I 6.09 kg/kW (10.00 lb/hp)
Mk II 3.80 kg/kW (6.25 lb/hp)
PERFORMANCE (at max UK T-O weight, ISA):
Never-exceed speed (VNE) 214 kts (397 km/h, 247 mph)
Max level speed at S/L:
Mk I 155 kts (286 km/h, 178 mph)
Mk II 187 kts (346 km/h, 215 mph)
Economical cruising speed at 75% power:
Mk I 139 kts (257 km/h, 160 mph)
Mk II 174 kts (322 km/h, 200 mph)
Stalling speed, power off:
flaps up 59 kts (110 km/h, 68 mph)
flaps down 53 kts (97 km/h, 60 mph)
Max rate of climb at S/L, aerobatic weight:
Mk I 365 m (1,200 ft)/min
Mk II 929 m (3,050 ft)/min
Service ceiling, OEI, aerobatic weight:
Mk I 915 m (3,000 ft)
Mk II 3,505 m (11,500 ft)
T-O run, aerobatic weight: Mk I 165 m (540 ft)
Mk II 101 m (330 ft)
Landing run, aerobatic weight 156 m (510 ft)
Landing crosswind limit 30 kts (55 km/h, 34 mph)
Range with max internal fuel, 61% power:
Mk I 1,129 n miles (2,092 km, 1,300 miles)
Mk II 955 n miles (1,770 km, 1,100 miles)
g limits: aerobatic weight +6/−3
max T-O weight +3.8/−1.5

CHAIRMAN: Sir Leslie Fletcher, DSC, FCA
DEPUTY CHAIRMAN: Alec Daly
CHIEF EXECUTIVE: Alan Jones, MA, FEng, FIProdE, FRAeS
PUBLIC RELATIONS DIRECTOR: Christopher Loney

Westland Aircraft Ltd (now Westland Group plc) formed July 1935, taking over aircraft branch of Petters Ltd (known previously as Westland Aircraft Works) that had designed/built aircraft since 1915, entered helicopter industry having acquired licence to build US Sikorsky S-51 as Dragonfly 1947; developed own Widgeon from Dragonfly, technical association with Sikorsky Division of United Technologies continued after decision to concentrate on helicopter design, development and construction.

Acquisition of Saunders-Roe Ltd 1959, Helicopter Division of Bristol Aircraft Ltd and Fairey Aviation Ltd 1960, and British Hovercraft Corporation's Aerospace Division 1983, plus subsequent restructuring into Divisions, detailed in 1989-90 *Jane's*.

Financial reconstruction package approved February 1986, with United Technologies (USA) and Fiat (Italy) acquiring minority shareholdings. Fiat withdrew 1988. GKN acquired 22 per cent holding in Westland, later increasing to 45 per cent with buy-out of United Technologies' holding and eventually gaining overall control on 18 April 1994. Westland Group then placed in newly formed GKN Aerospace and Defence division.

Westland Group has five principal subsidiary companies: Westland Aerospace, specialising in composites and metallic structures; Westland Engineering, producing transmission systems and rotor blades; Westland Helicopters (see below); Westland Industries, producing a wide range of components and subassemblies; and Westland Technologies, which includes Normalair-Garrett, a supplier of control systems. Westland Group employs 8,700 persons.

Current programmes include construction of composite engine cowlings for Lockheed C-130J Hercules (Allison AE 2100 installation, including cowling design), Saab 340, de Havilland Dash 8, Jetstream 41 and Dornier 328, composite structures for Airbus, Boeing and McDonnell Douglas aircraft, Learjet 45 fuselage frames (subcontract to Short Brothers), and Saab 2000 rear fuselage structure and engine nacelles.

EH Industries Ltd (see EHI in International section) is joint Westland/Agusta (Italy) management company developing EH 101 helicopter; collaboration with Agusta extended to include design, manufacture and marketing across joint product range. EHI Inc (USA) and EHI Canada are subsidiaries of EHI Ltd. Westland Group activities in USA and Central America represented by wholly owned subsidiary, Westland Inc.

Sea King and Lynx in production. Westland and Agusta of Italy collaborate on EH 101 development and manufacture (see EHI in International section); agreement with United Technologies permits Sikorsky Black Hawk production as WS 70.

Under June 1989 agreement, Westland obtained co-production rights for McDonnell Douglas AH-64 Apache; this selected for British Army Air Corps July 1995, Westland to be prime contractor to UK MoD.

Pending full production of EH 101, Westland continues low-rate production of existing products; delivered four helicopters in 1993, none in 1994.

UPDATED

WESTLAND APACHE

TYPE: Day/night twin-engined attack helicopter.
PROGRAMME: Westland selected 13 July 1995, to build McDonnell Douglas AH-64D Apache for Army Air Corps,

First Mk 3A version of Sea King for the RAF undertaking its maiden flight

1995

total 67 to be ordered, although original requirement was for 91, programme involves some 180 UK companies. Apache description in US section, UK version similar, including Longbow radar.

NEW ENTRY

WESTLAND SEA KING

TYPE: Anti-submarine, search and rescue and airborne early warning helicopter.

PROGRAMME: Licence to develop/manufacture Sikorsky S-61 obtained 1959; developed initially for Royal Navy as advanced ASW helicopter with prolonged endurance, SAR, tactical troop transport, casualty evacuation, cargo carrying, long-range self-ferry secondary roles; ordered for RN 1967, first flight of production HAS Mk 1 (XV642) 7 May 1969. Westland built Sea King airborne time reached 1 million hours in 1993.

CURRENT VERSIONS: **Sea King AEW. Mk 2A**: Ten conversions of HAS Mk 2A with externally mounted radar; 849 Squadron, Culdrose. See also AEW Mk 5. Planned late 1990s upgrade with new IFF, enhanced communications and radar video recorder.

Sea King HAR Mk 3/3A: SAR version for RAF; first flight (Mk 3) 6 September 1977; 16 HAR Mk 3s delivered by 1979, plus three in 1985; intention to order additional six officially announced 19 February 1992 and effected in October 1992; first flight (ZH540) 9 February 1995 (deliveries, two in 1995 and four in 1996). Designated HAR Mk 3A, these latter have Racal RNAV2 computer, Racal Doppler 91, BAe CM9 compass, Smiths-Newmark SN500 flight control system, Collins HF9000 HF radio, Cossor STR2000 series GPS, Motorola MX 1000(R) mountain rescue radio, Thomson Thorn ARI5955/2 search radar, Rockwell Collins AN/ARC-182 VHF/UHF, Bendix/King VOR/ILS and Bendix/King DME/ADI.

Operated by No. 202 Squadron at Boulmer (HQ) and detachments at Boulmer, Lossiemouth and Leconfield; No 22 Squadron with detachments at Chivenor (from July 1994), Valley (from mid-1996) and Wattisham (from 18 July 1994); and Sea King OCU at St Mawgan (from April 1993). Further two aircraft with No 78 Squadron on Falkland Islands. Accommodation comprises two flight crew, air electronics/winch operator and loadmaster/winchman; up to six stretchers, or two stretchers and 11 seated survivors, or 19 persons; nav system of initial production Mk 3 includes Decca TANS F computer, accepting Mk 19 Decca nav receiver and Type 71 Doppler inputs. Thomson Thorn ARI5955 radar. No. 78 Squadron helicopters fitted with RWR and chaff/flare dispensers. UK-based flights converted to night vision goggles, 1992-93.

Sea King HAS Mk 5: Updated ASW/SAR version for Royal Navy; 30 new aircraft handed over 2 October 1980 to July 1986; one HAS Mk 1, 20 HAS Mk 2s and 35 HAS Mk 2As brought to same standard by 1987 at Fleet Air Arm workshops; four became HAR Mk 5s and others HAS Mk 6s and AEW Mk 5s (which see); nav/attack system utilises TANS G coupled to Decca 71 Doppler and Sea Searcher radar (in larger radome), Racal MIR 2 Orange Crop ESM, passive sonobuoy dropping equipment, and associated GEC Marconi LAPADS acoustics processing and display equipment; four crew, with sonar operator also monitoring LAPADS as additional crew station; cabin enlarged by moving rear bulkhead 1.72 m (5 ft 7¾ in) aft; max T-O weight 9,525 kg (21,000 lb).

Equipment allows pinpoint of enemy submarine at greater range and attack with torpedoes; can monitor signals from own sonobuoys and those dropped by RAF Nimrod in joint search.

Sea King HAR Mk 5: Four HAS Mk 5s with ASW equipment removed for SAR; 771 Squadron, Culdrose.

Sea King AEW. Mk 5: Three aircraft converted from HAS Mk 5 in 1995, generally as HAS Mk 2A, with external Thomson Thorn Searchwater radar.

Sea King HAS Mk 6: Uprated RN ASW version; large blade aerial under starboard side of nose; five new aircraft ordered from October 1987 and delivered January-August 1990; 25 HAS Mk 5s being retrofitted to standard at RN Fleetlands workshop using Westland-supplied kits; further batch of 44 kits followed; first flight of conversion (Mk 5 XZ581) 15 December 1987; first flight of new Mk 6 (ZG816) 7 December 1989; entered service (ZA136) with Intensive Flight Trials Unit within No. 824 Squadron (detached from Culdrose to Prestwick) 15 April 1988; squadron later disbanding; issued to 819 Squadron, Prestwick, April 1989; and Culdrose squadrons 810 (November 1989), 820 (January 1990), 826 (February 1990; disbanded 30 July 1993), 814 (October 1990) and 706 (June 1991). Mk 6 Operational Evaluation Unit at Boscombe Down is detachment of 810 Squadron. By early 1995, 810, 814, 819 and 820 Squadrons wholly Mk 6; training unit, 706 Squadron reverted to Mk 5s.

AQS-902G-DS enhanced sonar system (31 ordered from GEC-Marconi under 1987 contract, plus upgrade to standard of 112 previous AQS-902C sonobuoy processing systems), replacing Mk 5's analog computing element of Plessey 195 dipping sonar with digital processor (changing designation to GEC-Marconi 2069; 44 ordered initially in June 1989 and delivered from August 1991), and presenting integrated information from sonobuoys and dipping sonar on single CRT display; sonar dunking depth increased from 75 m (245 ft) to about 213 m (700 ft); GEC-Plessey PTR 446 improved IFF; upgraded ESM to Orange Reaper standard; two GEC-Marconi AD3400 VHF/UHF secure speech radios; CAE Electronics internal AIMS (advanced integrated magnetic anomaly detection system) retrofit contract awarded to Westland December 1991 for 73 conversion kits (clearance trials completed 1989); 227 to 363 kg (500 to 800 lb) weight-saving offers improved performance (equivalent to 30 minutes extra fuel).

Sea King AEW. Mk 7: Proposed upgrade of AEW Mk 2 with new radar (Searchwater 2000 competing against GEC-Marconi Blue Vixen variant), JTIDS datalink and new central tactical system with colour displays. Tenders submitted May 1995; service entry in 2000.

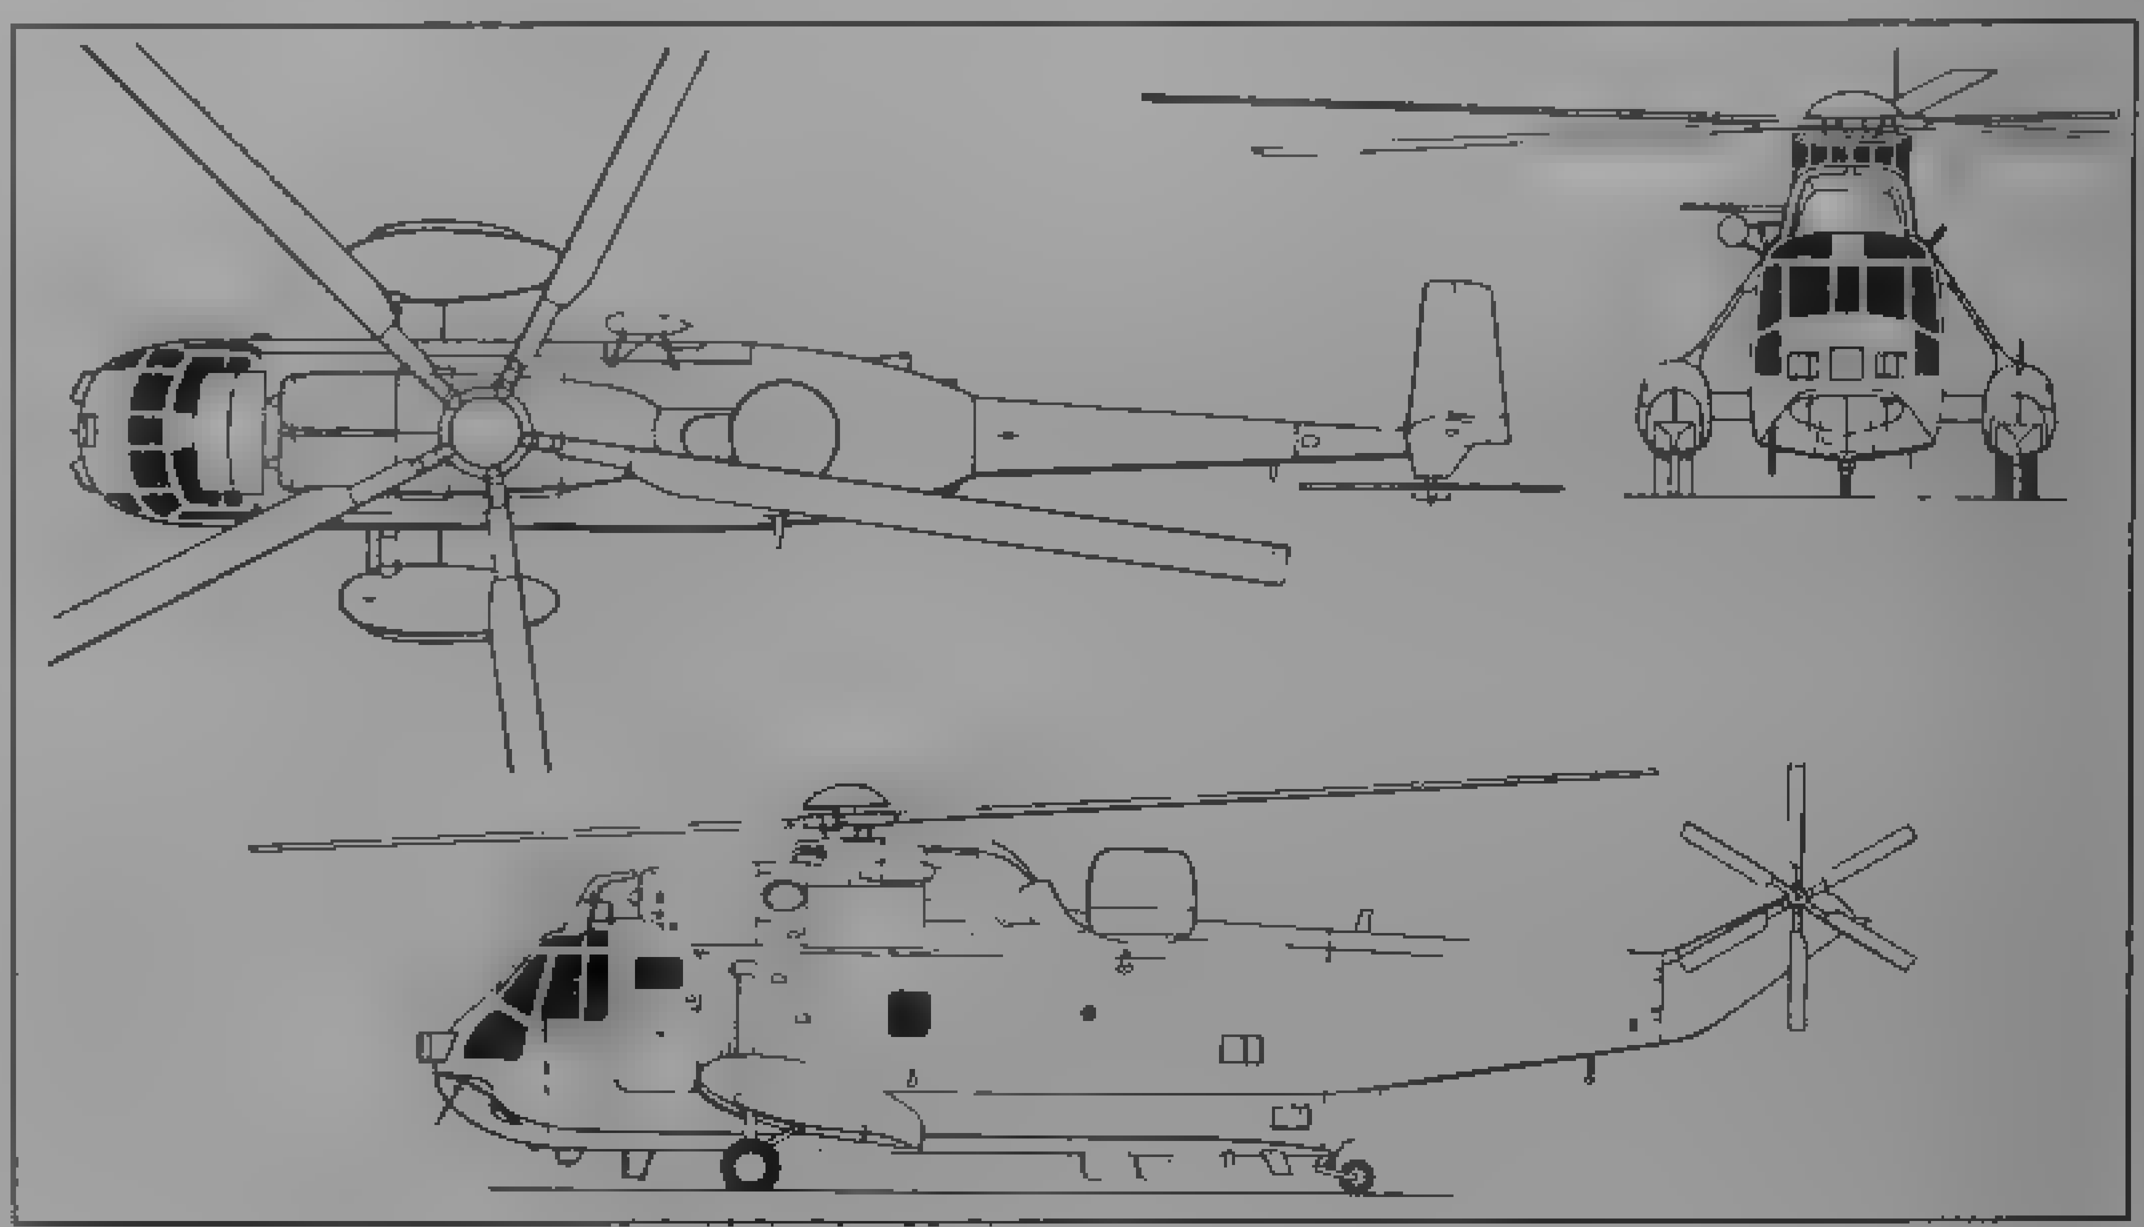
Advanced Sea King: 1,092 kW (1,465 shp) Rolls-Royce Gnome H 1400-1T engines; uprated main gearbox with emergency lubrication and strengthened main lift frames; composite main and tail rotor blades, improved search radar; maximum AUW 9,752 kg (21,500 lb), for improved payload/range; through-life costs reduced. *Following details apply to Advanced Sea King and, in airframe and power train features, to new production of earlier versions.*

Sea King Mk 43B: Norwegian Air Force SAR helicopter; one (322, temporarily ZH566) delivered 28 July 1992, supplementing 11 Mk 43s received 1972-78. Bendix King RDR-1500 spine radar. Nine survivors being upgraded to Mk 43B standard with additional Bendix/King RDR 1300C nose radar, Racal Doppler 91, RNAV2 and Mk 32 Decca, plus FLIR Systems Inc 2000F FLIR; redelivery began, also on 28 July 1992, with 071. Further two Mk 43Bs ordered November 1993 for 1995 delivery from new production.

Sea King Mk 48: Contract of January 1994 to Westland for update of all five Belgian Sea Kings with Bendix/King RDR-1500B radar in spine position, FLIR Systems FLIR 2000F, and Racal RNS252 navigation.

Westland Sea King HAR. Mk 5 of 771 Squadron, Royal Navy *(Paul Jackson)*

1995



Westland Sea King HAS. Mk 6 anti-submarine helicopter *(Jane's/Dennis Punnett)*

1995

Westland Sea King HAS Mk 6 conversion from Mk 5 *(Paul Jackson)*

1995

Sea King Mk 50 £27 6 million contract in July 1994 for Westland to update avionics and airframes of seven remaining Australian Navy Sea Kings by 1996

CUSTOMERS: Royal Navy 56 HAS Mk 1s, 21 HAS Mk 2s, 30 HAS Mk 5s and five HAS Mk 6s delivered, but progressively modified; fleet in January 1995 comprised 10 AEW Mk 2As, 13 HAS Mk 5s, five HAR Mk 5s, three AEW Mk 5s (under conversion) and 55 HAS Mk 6s Royal Air Force 25 HAR Mk 3/3As, of which six being delivered See table for exports and for further 89 built as Commandos (which see) including 49 officially designated 'Sea King', plus two lost on trials prior to delivery

Total Sea King/Commando planned production 328 of which 321 built by March 1995 (Royal Navy also received four Sikorsky S-61Ds for development 1966-67; one remains) Further details of previous variants in earlier editions of *Jane's*; details of upgrades in *Jane's Aircraft Upgrades*.

COSTS: £15 million for two SAR Sea Kings, 1993, Norway

DESIGN FEATURES: Based on Sikorsky S-61/SH-3 airframe and rotor system; Rolls-Royce Gnome turboshaft engines, specialised equipment to UK requirements; composite rotor blades, new six-blade tail rotor for increased capability in side wind, unbraced tail stabiliser; increased fuel capacity Automatic main rotor blade folding and spreading is standard for shipboard operation the tail pylon can also be folded

FLYING CONTROLS: Mk 31 AFCS provides radio altitude displays for both pilots artificial horizon displays three-axis stabilisation in pilot controlled manoeuvres, attitude hold heading hold and height hold in cruising flight, controlled transition manoeuvres to and from the hover, automatic height control and plan position control in the hover, and an auxiliary trim facility

POWER PLANT: Two 1,238 kW (1 660 shp) (maximum contingency rating) Rolls-Royce Gnome H 1400-1T turboshafts, mounted side by side above cabin Transmission rating 2,013 kW (2 700 shp). Fuel in six underfloor bag tanks, total capacity 3,714 litres (981 US gallons, 817 Imp gallons). Internal auxiliary tank, capacity 863 litres (228 US gallons, 190 Imp gallons), may be fitted for long range ferry purposes. Pressure refuelling point on starboard side, two gravity points on port side Flat plate debris guard for engine air intakes Optional Centrisep air cleaner unit

ACCOMMODATION: Crew of four in ASW role accommodation for up to 22 survivors - or 18 if radar fitted - in SAR role, and up to 28 troops in utility role Alternative layouts for nine stretchers and two attendants, or 15 VIPs Two-section airstair door at front on port side, cargo door at rear on starboard side Entire accommodation heated and ventilated. Cockpit doors and windows, and two windows each side of cabin, can be jettisoned in an emergency

SYSTEMS: Three main hydraulic systems. Primary and auxiliary systems operate main rotor control System pressure 103 5 bars (1,500 lb/sq in), flow rate 22 7 litres/min at 87 9 bars (6 US gallons, 5 Imp gallons/min at 1,275 lb/sq in) Unpressurised reservoir. Utility system for main landing gear, sonar and rescue winches, blade folding and rotor brake. System pressure 207 bars (3,000 lb/sq in), flow rate 41 litres/min at 186.2 bars (10 8 US gallons, 9 Imp gallons/min at 2,700 lb/sq in). Unpressurised reservoir Electrical system includes two 20 kVA 200 V three-phase 400 Hz engine-driven generators, 26 V single phase AC supply fed from aircraft's 40 Ah Ni/Cd battery through an inverter, and DC power provided as secondary system from two 200 A transformer-rectifier units.

AVIONICS (ASW models): Fully integrated all-weather hunter/killer weapon system, capable of operating independently of surface vessels.

Comms. Radio equipment in HAS Mk 6 comprises GEC-Marconi AD 3400 UHF/VHF, AD 13304 UHF homer, Chelton 700 VHF homer, Ultra D 403M standby UHF, Collins 618T 3 HF radio, Racal B693 intercom,

Westland Sea King Mk 43B of the Royal Norwegian Air Force

1997

Telebrief system and Pilkington ARI 5954/2 I-band transponder GEC Plessey PTR 446 D-band transponder

Radar: Thomson Thorn Super Searcher radar in dorsal radome of Mk 6

Flight: Racal Doppler 71 navigation, Honeywell AN/APN-171 radar altimeter, BAe GM9B Gyrosyn compass system, Smiths-Newmark Mk 31 AFCS GPS installation due in 1997

Mission: Sea King HAS Mk 6 has GEC Marconi 2069 dipping sonar and associated AQS 902 processor (both of which being updated under July 1994 contract), GEC Plessey Type 195, Bendix/King AN/AQS-13B or Alcatel HS 312 optional on other versions Observer/navigator has GEC Marconi AQS-902G acoustic processing and display system on which sonar contacts are integrated with search radar and navigational information Racal Orange Reaper ESM CAE Electronics AN/ASQ-504(V) internal MAD ordered for RN Sea Kings in 1987 and fitted from 1988 onwards. Ericsson Radar Electronics AN/ALQ-167 Yellow Veil modular jamming equipment installed internally in Mk 5 from about 1986, retained in Mk 6

AVIONICS (non ASW models): Wide range of radio and navigation equipment installed, including VHF/UHF communications, VHF/UHF homing, radio compass, Doppler navigation system, radio altimeter VOR/ILS, radar and transponder, of Collins, GEC-Plessey, Honeywell and GEC Marconi manufacture

Radar: Thomson Thorn ARI5955 spine radar in most SAR versions (Bendix/King RDR 1500 optional) plus Bendix/King RDR-1300C nose radar for Norwegian Mk 43B

Flight: Honeywell compass system and Smiths-Newmark AFCS

EQUIPMENT: Two No. 4 marine markers, four No 2 Mk 2 smoke floats, Ultra Electronics mini-sonobuoys, in ASW versions Sea Kings equipped for search and rescue have Breeze BL 10300 variable speed hydraulic rescue hoist of 272 kg (600 lb) capacity mounted above starboard side cargo door Second electric hoist optional

ARMAMENT: Up to four Mk 46, Whitehead A244S or Sting Ray homing torpedoes, or four Mk 11 depth charges or one Clevite simulator, two BAe Sea Eagle or Aerospatiale Exocet anti-ship missiles For secondary role a mounting is provided on the rear frame of the starboard door for a general purpose machine gun

DIMENSIONS, EXTERNAL	
Main rotor diameter	18 90 m (62 ft 0 in)
Tail rotor diameter	3 16 m (10 ft 4 in)
Distance between rotor centres	11 10 m (36 ft 5 in)
Main rotor blade chord	0 46 m (1 ft 6¼ in)
Length	
overall, rotors turning	22 15 m (72 ft 8 in)
main rotor folded	17.42 m (57 ft 2 in)
rotors and tail folded	14 40 m (47 ft 3 in)
Height overall, rotors turning	5 13 m (16 ft 10 in)
rotors spread and stationary	4 85 m (15 ft 11 in)
to top of rotor head	4 72 m (15 ft 6 in)
Fuselage Length	17 02 m (55 ft 10 in)
Max width	2 16 m (7 ft 1 in)
Width overall, rotors folded	
with flotation bags	4 98 m (16 ft 4 in)
without flotation bags	4 77 m (15 ft 8 in)
Wheel track (c/l of shock absorbers)	3.96 m (13 ft 0 in)
Wheelbase	7 14 m (23 ft 5 in)
Cabin door (port) Height	1 68 m (5 ft 6 in)
Width	0 91 m (3 ft 0 in)
Cargo door (stbd) Height	1 52 m (5 ft 0 in)
Width	1 73 m (5 ft 8 in)
Height to sill	1 14 m (3 ft 9 in)
DIMENSIONS, INTERNAL	
Cabin Length	7 59 m (24 ft 11 in)
Max width	1 98 m (6 ft 6 in)
Max height	1 92 m (6 ft 3½ in)
Floor area (incl area occupied by radar, sonar and so on)	13 94 m² (150 sq ft)
Volume	28 03 m³ (990 cu ft)
AREAS	
Main rotor disc	280 6 m² (3,020 3 sq ft)
Tail rotor disc	7 8 m² (83 9 sq ft)

WEIGHTS AND LOADINGS (A anti-submarine, B, anti-surface vessel, C airborne early warning, D: SAR, E. troop transport, F external cargo, G VIP)

Basic weight with sponsons	5,447 kg (12,009 lb)
without sponsons	5 426 kg (11,963 lb)
Weight empty, equipped (typical): A	7,331 kg (16,163 lb)
B	7,625 kg (16 810 lb)
C	7 418 kg (16,353 lb)
D	6,082 kg (13,409 lb)
E, F	5,582 kg (12,308 lb)
G	6,998 kg (15,429 lb)
Max underslung or internal load	3 628 kg (8,000 lb)
Max T-O weight	9,752 kg (21,500 lb)
Max disc loading	34.75 kg/m² (7 12 lb/sq ft)
Max power loading	4 44 kg/kW (7 29 lb/shp)

PERFORMANCE (at max T-O weight, ISA)

Never exceed speed (V_{NE}, British practice) at S/L	122 kts (226 km/h 140 mph)
Cruising speed at S/L	110 kts (204 km/h, 126 mph)
Max rate of climb at S/L	564 m (1,850 ft)/min
Max vertical rate of climb at S/L	246 m (808 ft)/min

Service ceiling, OEI 1,220 m (4,000 ft)
Max contingency ceiling (1 h rating)
1,067 m (3,500 ft)
Hovering ceiling: IGE 1,705 m (5,600 ft)
OGE 1,065 m (3,500 ft)
Radius of action:
A (2 h on station, incl three torpedoes)
125 n miles (231 km; 144 miles)
B (2 h on station, incl two Sea Eagles)
110 n miles (204 km; 126 miles)
C (2 h 24 min on station)
100 n miles (185 km; 115 miles)
D (picking up 20 survivors)
220 n miles (407 km; 253 miles)
E (28 troops) range 300 n miles (556 km; 345 miles)
F (1,814 kg, 4,000 lb external load)
225 n miles (417 km; 259 miles)
G 580 n miles (1,075 km; 668 miles)
Range with max standard fuel, at 1,830 m (6,000 ft)
800 n miles (1,482 km; 921 miles)
Ferry range with max standard and auxiliary fuel, at 1,830 m (6,000 ft)
940 n miles (1,742 km; 1,082 miles)

PERFORMANCE (at typical mid-mission weight):
Never-exceed speed (VNE, British practice) at S/L
146 kts (272 km/h; 169 mph)
Cruising speed at S/L 132 kts (245 km/h; 152 mph)

UPDATED

WESTLAND LYNX

TYPE: Twin-engined multipurpose helicopter

PROGRAMME: Developed within Anglo-French helicopter agreement confirmed 2 April 1968, Westland given design leadership; first flight of first of 13 prototypes (XW835) 21 March 1971, first flight of fourth prototype (XW838) 9 March 1972, featuring production type monobloc rotor head; first flights of British Army Lynx prototype (XX153) 12 April 1972, French Navy prototype (XX904) 6 July 1973, production Lynx (RN HAS Mk 2 XZ229) 20 February 1976; first RN operational unit (No. 702 Squadron) formed on completion of intensive flight trials December 1977; AH. Mk 5 first flew (ZE375) 23 February 1985; other development details and records in 1975-76 and subsequent *Jane's*. Production shared 70 per cent Westland, 30 per cent Aerospatiale; for details of G-LYNX's 1986 world helicopter absolute speed record, and Lynx AH. Mk 7 XZ170's 1989 agility trials, see 1990-91 *Jane's*.

CURRENT VERSIONS: **Lynx AH Mk 1:** British Army general purpose and utility version, 113 built and most converted to Mk 7 (see below). Described in 1986-87 and earlier *Jane's*.

Lynx HAS. Mk 3: Second Royal Navy version for advanced shipborne anti-submarine and other duties, similar to Mk 2, with GEC-Marconi Seaspray search and tracking radar in modified nose, capable of anti-submarine classification and strike, air to surface vessel search and strike, SAR, reconnaissance, troop transport, fire support, communications and fleet liaison, and vertrep; can carry Sea Skua. Mk 2's Gem 2 engines replaced by two 835 kW (1,120 shp) Gem 41-1 engines; 23 delivered March 1982 to April 1985; seven more in **HAS. Mk 3S** configuration (first flight, ZF557, 12 October 1987) delivered November 1987 to November 1988; this version has two GEC-Marconi AD3400 UHF radios with secure speech facility; additionally, ZD560 built in approximately Mk 7 configuration, delivered to Empire Test Pilots' School April 1988, further 53 obtained through modification of all existing HAS Mk 2s by 1989. **Lynx HAS Mk 3ICE** is Mk 3 lacking some operational equipment for general duties aboard Antarctic survey vessel, HMS *Endurance*; two converted.

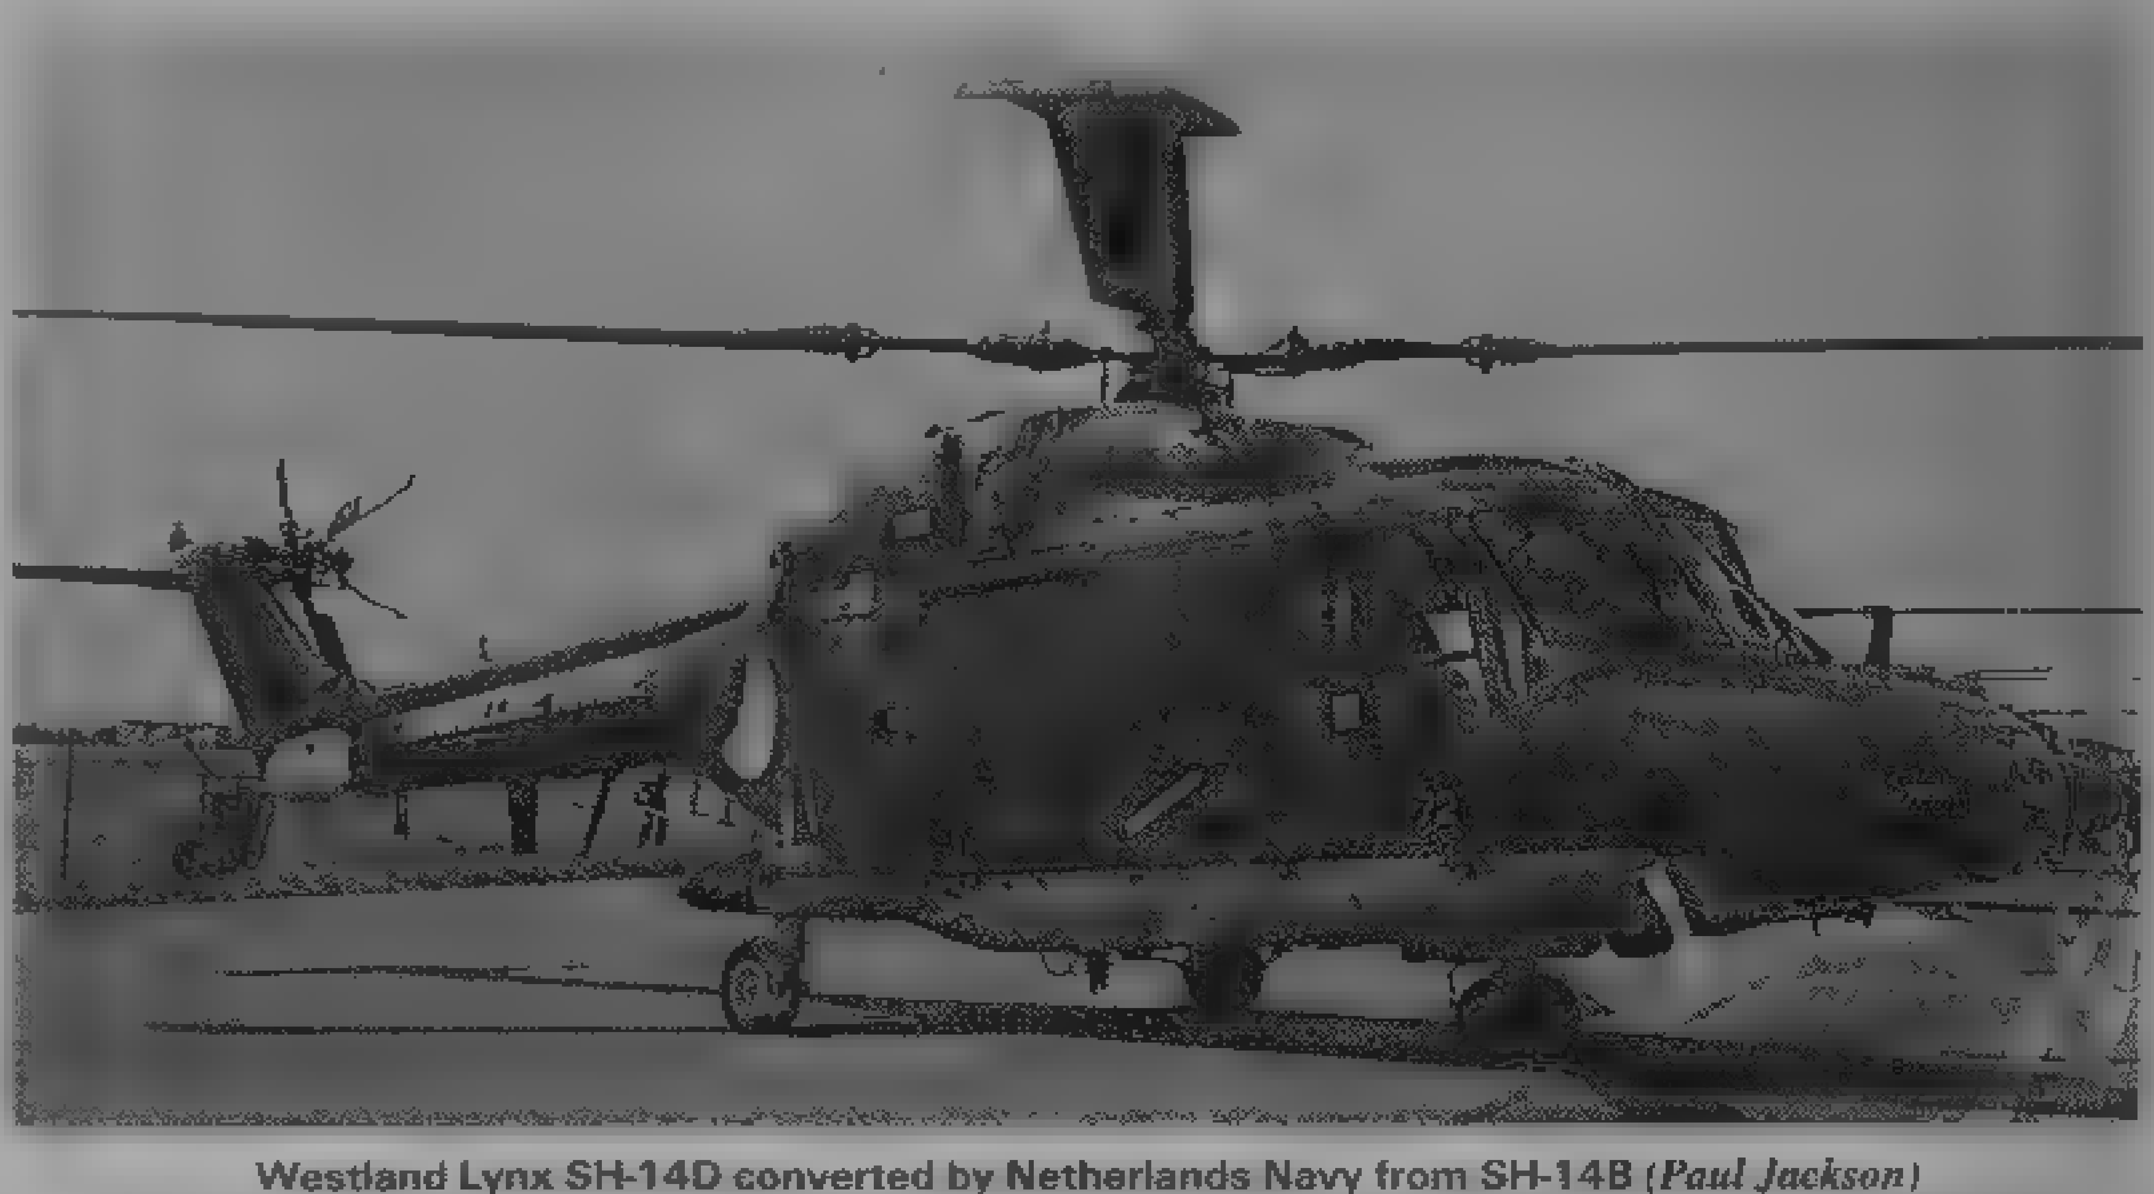
Main RN operators, Nos 815 and 829 Squadrons, combined on 26 March 1993 as No. 815 Squadron. Those used by Armilla Patrol in Arabian Gulf modified to **HAS Mk 3GM** (Gulf Mod), with better cooling, or **HAS Mk 3S/GM**, also with Mk 3S modifications (to which standard all 3GMs being converted). Augmenting new-build Mk 3Ss, 36 modified by RN Aircraft Yard at Fleetlands from April 1989; Mk 3S is Phase 1 of Mk 8 conversion programme, involving GEC-Marconi AD 3400 secure speech radios (blade aerial beneath mid point of tail boom) and upgraded ESM; programme continues, including Mk 3S/GM. Phase 2 is Lynx **HAS. Mk 3CTS**, adding RAMS 4000 central tactical system; prototype (XZ236 ex Mk 3) flew 25 January 1989; further six for RN trials (one ex-Mk 3, five ex Mk 3S), deliveries to Operational Flight Trials Unit, Portland, from April 1989; unit became No. 700L Squadron 6 July 1990 with three Lynx; remaining three deployed to destroyers and frigates at sea from 3 December 1990 (HMS *Newcastle*); CTS service clearance granted August 1991; Mk 3CTS has flotation bag each side of nose. RN Lynx status January 1995: nine Mk 3, three Mk 3GM, 36 Mk 3S, seven Mk 3CTS, 14 Mk 3S/GM, two Mk 3ICE and seven Mk 8. (Excludes two Mk 3S sold to Portugal as Mk 95s in 1993 and two Mk 3s sold to Pakistan in August 1994, with one more to follow in 1995.)

Lynx AH Mk 7: Uprated British Army version, meeting GSR 3947, with improved systems, reversed-direction tail rotor with improved composite blades to reduce noise and enhance extended period hover at high weights, 4,876 kg (10,750 lb) AUW; 13 ordered, eight from Mk 5 contract (two cancelled); first flight (ZE376) 7 November 1985, 11th delivered July 1987.

RN workshops at Fleetlands converted Mk 1s to Mk 7s, first (XZ641) redelivered 30 March 1988; box-type exhaust diffusers added from early 1989; last conversion mid-1994; 104 ex-Mk 1s in service at January 1995. Interim version was Lynx **AH. Mk 1GT** with uprated engines and rotors, but lacking Mk 7's improved electronic systems; first conversion (XZ195) 1991. GEC-Marconi AWARE-3 radar warning receiver selected 1989 for retrofit, designated ARI23491 Rewarder; Mk 1 XZ668 to Westland for trial installation 22 November 1991. (GEC-Marconi Sky Guardian Mk 13 installed in some Lynx AH Mk 7s for Gulf War, 1990-91, later uprated to Mk 15.) BERP (extended tip chord) blades retrofitted to Mk 7 from 1993.

Lynx HAS. Mk 8: For RN, equivalent to export **Super Lynx** (see separate entry); passive identification system, engines uprated to Gem 42 Srs 200 (686 kW; 920 shp), 5,125 kg (11,300 lb) maximum T-O weight (although increase planned to 5,334 kg; 11,760 lb), improved (reversed-direction) tail rotor control, BERP composite main rotor blades, Racal RAMS 4000 central tactical system (CTS eases crew's workload by centrally processing sensor data and presents mission information on multifunction CRT display; 15 systems ordered 1987, 106 September 1989), original Seaspray Mk 1 radar repositioned in new chin radome, GEC-Marconi Sea Owl thermal imager (×5 or ×30 magnifying system on gimballed mount, with elevation +20 to −30° and azimuth +120 to −120°, ordered October 1989) in former radar position, MIR-2 ESM updated; three Mk 3s used in development programme as tactical system (XZ236), dummy Sea Owl/chin radome (ZD267) and avionics (ZD266) testbeds; see Lynx Mk 3 for Phases 1 and 2 of Lynx Mk 8 programme.

Definitive Mk 8 (Phase 3) conversions begun 1992 with addition of Sea Owl, further radar and navigation



Westland Lynx SH-14D converted by Netherlands Navy from SH-14B *(Paul Jackson)*

* Army version

† Super/Battlefield Lynx

upgrades, (including Racal RNS252 'Super TANS' with associated TNL8000 GPS), composites BERP main rotor blades and reversed direction tail rotor (internal MAD not adopted for economy reasons).

Conversion planned of 45 Mks 3/3S/3CTS to Mk 8, contract award to Westland, May 1992 for first seven conversions; initial delivery (XZ732) in July 1994 to Operational Evaluation Unit within 815 Squadron at Portland, four received by January 1995. Others for conversion by RN at Fleetlands, first Westland-produced conversion kit for RN delivered in early 1995, initial contract covers 18 kits, conversions to be completed by 2001.

Lynx AH. Mk 9: UK Army Air Corps equivalent of export **Battlefield Lynx** (see separate entry); tricycle wheel landing gear; maximum T-O weight 5,125 kg (11,300 lb); advanced technology composites main rotor blades, exhaust diffusers, no TOW capability, first flight of prototype (converted company demonstrator XZ170) 29 November 1989; 16 new aircraft (beginning ZG884, flown 20 July 1990) ordered for delivery from 1991, plus eight Mk 7 conversions (contract awarded November 1991), for support of 24th Airmobile Brigade, five outfitted as advanced command posts (with two secure radios and Tacan), remainder for tactical transport role. Deliveries to A&AEE Boscombe Down from 22 May 1991 (ZG884), to No. 672 Squadron from 19 December 1991 (ZG889), No. 664 Squadron from June 1992; final aircraft (ZG923) flown 30 June 1992; first 'production' conversion (ZF538) to Westland for modifications 3 February 1992, all Mk 9s reassigned to 653 and 659 Squadrons in late 1993.

Other versions and operators where orders completed, see 1990-91 *Jane's*.

CUSTOMERS: Production totalled 367 by January 1994 (including two demonstrators but not 13 prototypes); no deliveries in 1994, further nine ordered by Brazil late 1993, together with six upgrades of Mk 21s, (first for upgrade, N3027, arrived at Yeovil on 1 February 1995) these and any further orders to be Super Lynx/Battlefield Lynx standard; production details in table.

COSTS: £3.5 million (1991) to upgrade eight Mk 7s to Mk 9s. £20 million (1992) to convert seven Mk 3s to Mk 8s, £150 million for nine new Lynx and five upgrades, 1993 (Brazil).

Following description applies to military general purpose and naval versions with Gem 2 engines, except where indicated:

DESIGN FEATURES: Compact design suited to hunter-killer ASW and missile-armed anti-ship naval roles from frigates or larger ships (superseding ship-guided helicopters), armed/unarmed land roles with cabin large enough for squad, or other tasks, manually folding tail pylon on naval versions, single four-blade semi-rigid main rotor (foldable), each blade attached to main rotor hub by titanium root plates and flexible arm, rotor drives taken from front of engines into main gearbox mounted above cabin ahead of engines; in flight, accessory gears (at front of main gearbox) driven by one of two through shafts from first stage reduction gears; four-blade tail rotor, drive taken from main ring gear, single large window in each main cabin sliding door, provision for internally mounted armament, and for exterior universal flange mounting each side for other weapons/stores.

FLYING CONTROLS: Rotor head controls actuated by three identical tandem servojacks and powered by two independent hydraulic systems, control system incorporates simple stability augmentation system; each engine embodies independent control system providing full authority rotor speed governing, pilot control being limited to selection of desired rotor speed range; in event of one engine failure system restores power up to single-engine maximum contingency rating, main rotor can provide negative thrust to increase stability on deck after touchdown on naval versions, hydraulically operated rotor brake mounted on main gearbox, sweptback fin/tail rotor pylon, with starboard half-tailplane.

STRUCTURE: Conventional semi-monocoque pod and boom, mainly light alloy; glassfibre access panels, doors, fairings, pylon leading/trailing-edges, and bullet fairing over tail rotor gearbox, composites main rotor blades, main rotor hub and inboard flexible arm portions built as complete unit, as titanium monobloc forging, tail rotor blades have light alloy spar, stainless steel leading-edge sheath and rear section as for main blades.

LANDING GEAR (general purpose military version): Non-retractable tubular skid type. Provision for a pair of adjustable ground handling wheels on each skid. Flotation gear optional.

LANDING GEAR (naval versions): Non-retractable oleo-pneumatic tricycle type. Single-wheel main units, carried on sponsons, fixed at 27° toe-out for deck landing; can be manually turned into line and locked fore and aft for movement of aircraft into and out of ship's hangar. Twin-wheel nose unit steered hydraulically through 90° by the pilot to facilitate independent take-off into wind. Sprag brakes (wheel locks) fitted to each wheel prevent rotation on landing or inadvertent deck roll. These locks disengaged hydraulically and re-engage automatically in event of hydraulic failure. Maximum vertical descent 2.29 m (7½ ft)/s, with lateral drift 0.91 m (3 ft)/s for deck landing. Flotation gear, and hydraulically actuated harpoon deck lock securing system, optional.

POWER PLANT: Two Rolls-Royce Gem 2 turboshafts, each with maximum contingency rating of 671 kW (900 shp) in Lynx AH. 1, HAS. 2 and early export variants. Later versions have Gem 41-1, 41-2, or 42-1 engines, all with maximum contingency rating of 835 kW (1,120 shp). Transmission rating 1,372 kW (1,840 shp). Engines of British and French Lynx in service converted to Mk 42 standard during regular overhauls from 1987 onwards. Danish, Netherlands and Norwegian Lynx similarly retrofitted. Fuel in five internal tanks; usable capacity 957 litres (253 US gallons; 210 Imp gallons) when gravity-refuelled, 985 litres (260 US gallons, 217 Imp gallons) when pressure-refuelled. For ferrying, two tanks each of 441 litres (116 US gallons, 97 Imp gallons) in cabin, replacing bench tank. Maximum usable fuel 1 867 litres (493 US gallons, 411 Imp gallons). Engine oil tank capacity 6.8 litres (1.8 US gallons, 1.5 Imp gallons). Main rotor gearbox oil capacity 28 litres (7.4 US gallons, 6.2 Imp gallons).

ACCOMMODATION: Pilot and co-pilot or observer on side by side seats. Dual controls optional. Individual forward-hinged cockpit door and large rearward-sliding cabin door on each side; cockpit doors jettisonable, windows of cabin doors also jettisonable. Cockpit accessible from cabin area. Maximum high density layout (military version) for one pilot and 10 armed troops or paratroops, on lightweight bench seats in soundproofed cabin. Alternative VIP layouts for four to seven passengers, with additional cabin soundproofing. Seats can be removed quickly to permit

Westland Lynx HAS. Mk 8 with Sea Owl thermal imager and chin radome

664 Squadron Westland Lynx AH Mk 7 conversion from Mk 1 after further modification with BERP main rotors *(Paul Jackson)*

1994

carriage of up to 907 kg (2,000 lb) of freight internally. Tiedown rings provided. In casualty evacuation role, with a crew of two, Lynx can accommodate up to six Alphin stretchers and a medical attendant. Both basic versions have secondary capability for search and rescue (up to nine survivors) and other roles.

SYSTEMS: Two independent hydraulic systems, pressure 141 bars (2,050 lb/sq in). Third hydraulic system provided in naval version when sonar equipment, MAD or hydraulic winch system installed. No pneumatic system. 28 V DC electrical power supplied by two 6 kW engine-driven starter generators and an alternator. External power sockets. 24 V 23 Ah (optionally 40 Ah) Ni/Cd battery fitted for essential services and emergency engine starting. 200 V three-phase AC power available at 400 Hz from two 15 kVA transmission driven alternators. Cabin heating and ventilation system. Optional supplementary cockpit heating system. Electric anti-icing and demisting of windscreen, and electrically operated windscreen wipers standard; windscreen washing system.

AVIONICS (general): Avionics common to all roles (general purpose and naval versions):

Comms: Collins VOR/ILS, DME, Collins AN/ARN-118 Tacan, I-band transponder (naval version only). GEC-Plessey PTR 446, Collins APX 72, Siemens STR 700/375 or Italtel APX 77 IFF.

Flight: GEC-Marconi duplex three-axis automatic stabilisation equipment, BAe GM9 Gyrosyn compass system, Decca tactical air navigation system (TANS), Decca 71 Doppler. E2C standby compass. GEC-Marconi Mk 34 AFCS. Additional units fitted in naval version when sonar is installed, to provide automatic transition to hover and automatic Doppler hold in hover.

AVIONICS (Army): *Mission:* British Army Lynx equipped with TOW missiles have roof-mounted Hughes sight manufactured under licence by British Aerospace. Roof sight upgraded with night vision capability in far infra-red waveband; first test firing of TOW with added GEC Marconi thermal imager took place in October 1988. Optional equipment, according to role, can include lightweight sighting system with alternative target magnification, vertical and/or oblique cameras, flares for night operation, low-light level TV, infra-red linescan, searchlight, and specialised communications equipment. Some have infra-red formation flying lights and provision for crew's NVGs. For surveillance, some AAC Lynx carry Chancellor Heli-tele in external (port) ball housing, complete with datalink.

Self-defence: Sanders AN/ALQ-144 infra-red jammer installed beneath tailboom of some British Army Lynx from 1987, later augmented by exhaust diffusers. Requirement for RWR satisfied by 1989 selection of GEC Marconi AWARE-3 (ARI23491) system. GEC Marconi Sky Guardian Mk 13 (later Mk 15) on some aircraft from 1990.

AVIONICS (Navy): *Comms:* RN helicopters have two GEC Marconi AD 3400 VHF/UHF transceivers, Dowty D403M standby UHF radio, Collins 718U-5 HF transceiver, Plessey PTR446 D-band transponder and Pilkington ARI 5983 I-band transponder.

Radar: GEC-Marconi ARI5979 Seaspray Mk 1 lightweight search and tracking radar, for detecting small surface targets in low visibility/high sea conditions.

Flight: GPS on Royal Navy Lynx from 1991.

Mission: Detection of submarines by dipping sonars or magnetic anomaly detector. Dipping sonars operated by hydraulically powered winch and cable hover mode facilities within the AFCS. Racal MIR-2 Orange Crop passive radar detection system in RN Lynx; similar Racal Kestrel retrofitted to Danish Mk 90. CAE Electronics AN/ASQ-504(V) internal MAD ordered for RN Lynx in 1990. Matra AF 530 or APX 334 stabilised sight in French naval Lynx. Optional GEC Sandpiper FLIR on RN Lynx. FLIR Systems 2000HP specified for Netherlands SH-14D upgrade; FLIR Systems Safire optional for Danish Lynx.

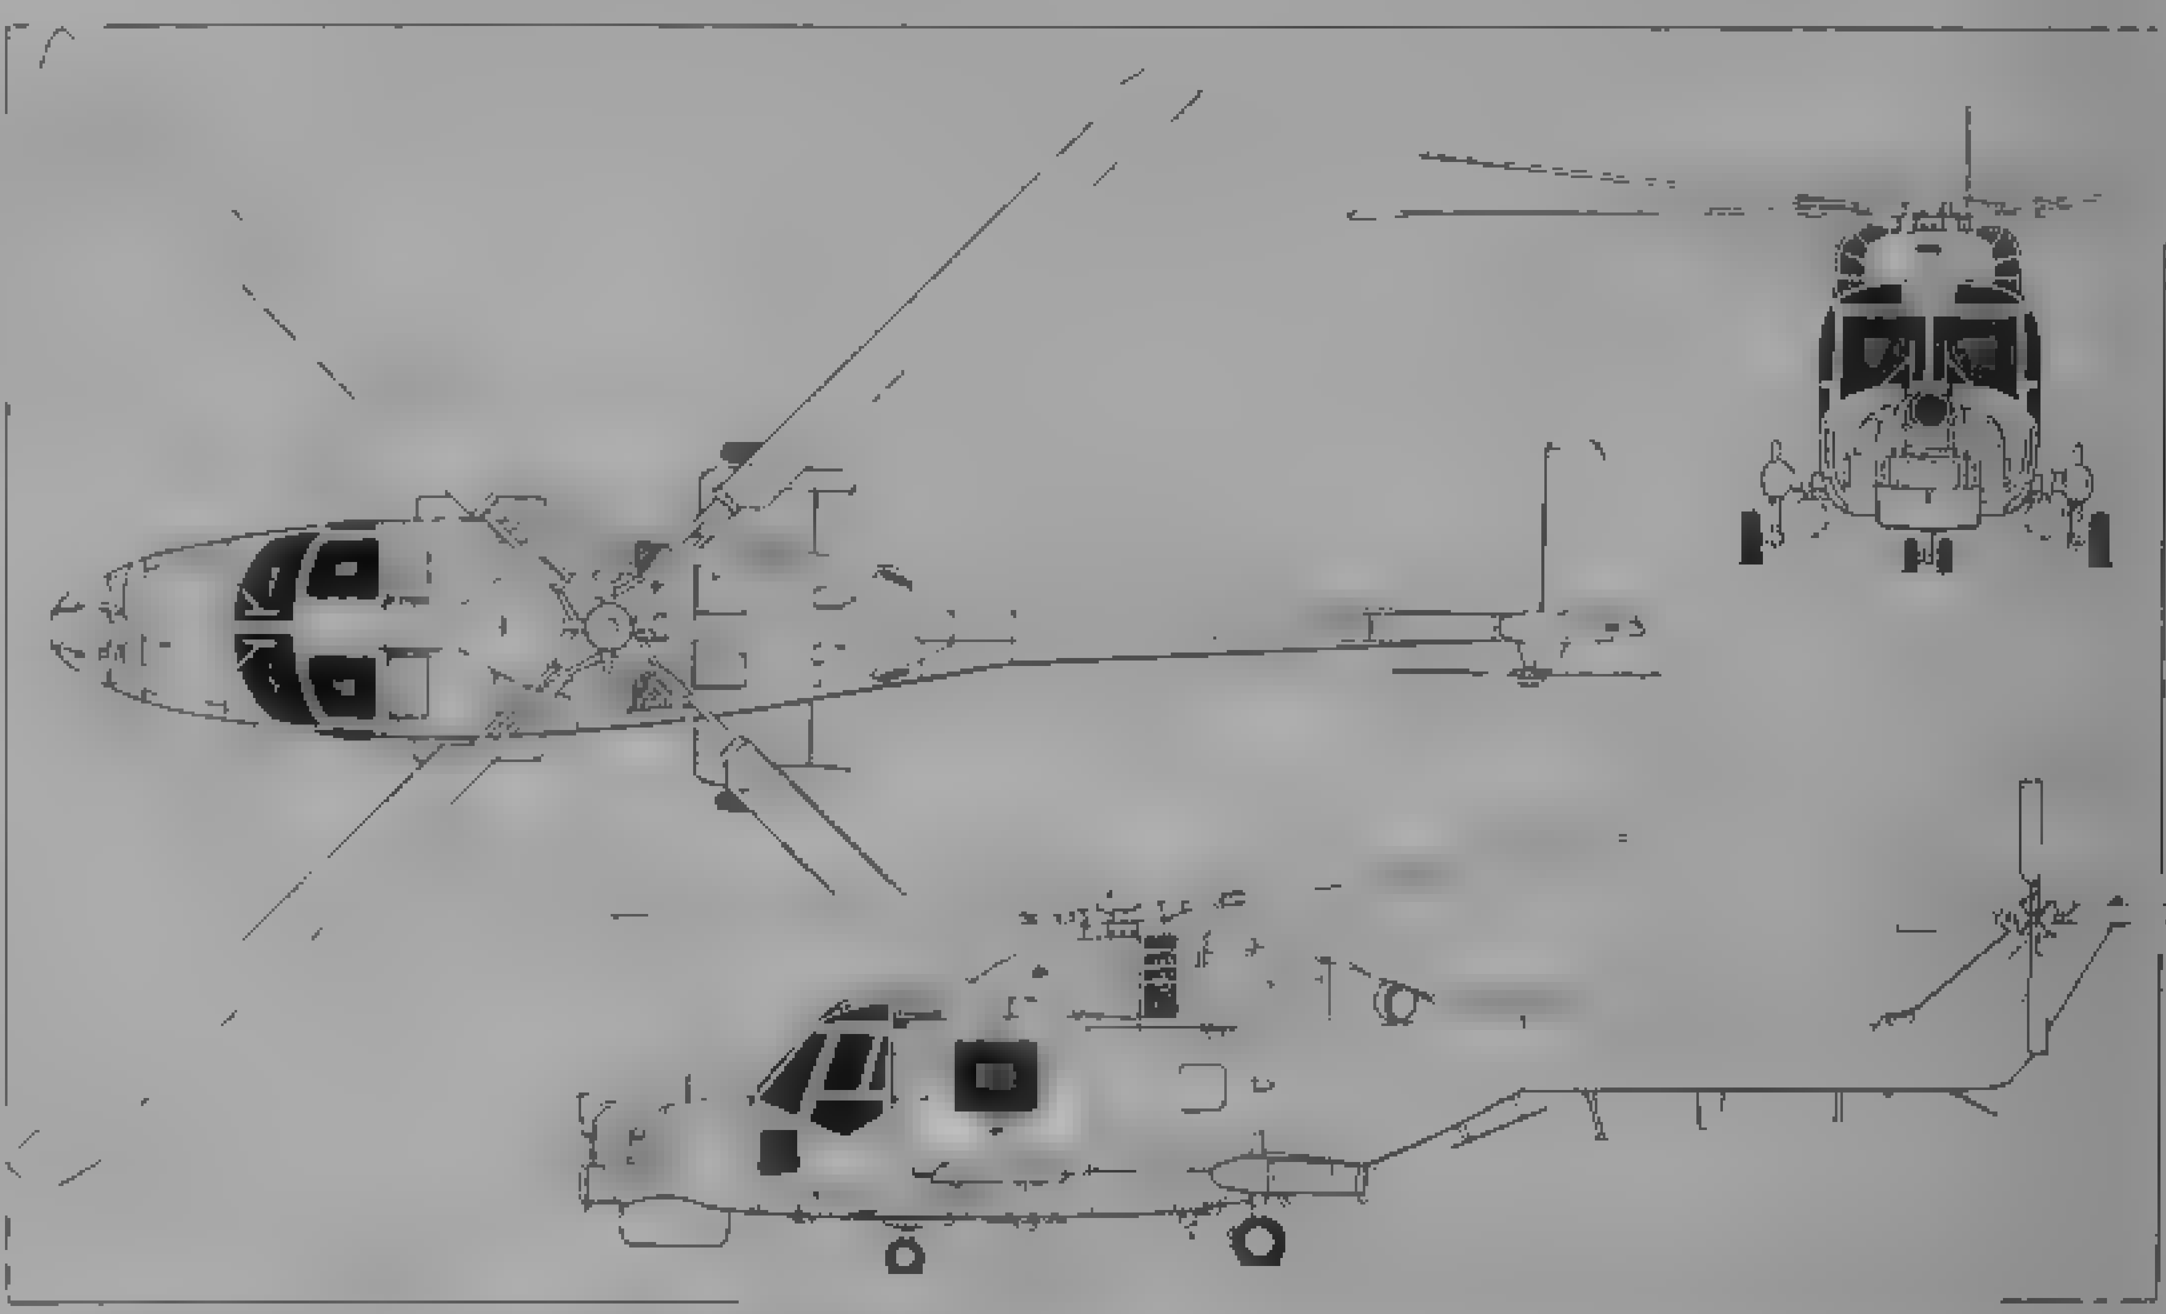
Self-defence: Tracor M-130 chaff/flare dispensers and Ericsson Radar Electronics AN/ALQ-167(V) D- to J-band anti-ship missile jamming pods installed on RN Lynx patrolling Arabian Gulf 1987. Two Loral Challenger IR jammers above cockpit of RN Lynx during 1991 Gulf War.

EQUIPMENT: All versions equipped as standard with navigation, cabin and cockpit lights, adjustable landing light under nose and anti-collision beacon. For search and rescue, with three crew, both versions can have a waterproof floor and a 272 kg (600 lb) capacity clip-on hydraulic hoist on starboard side of cabin. Cable length 30 m (98 ft).

ARMAMENT: For armed escort, anti-tank or air-to-surface strike missions, army version can be equipped with two 20 mm cannon mounted externally so as to permit carriage also of anti-tank missiles or pintle-mounted 7.62 mm machine gun inside cabin. External pylon can be fitted on each side of cabin for variety of stores, including two Minigun or other self-contained gun pods; two rocket pods, or up to eight HOT, Hellfire, TOW, or similar air-to-surface missiles. Additional six or eight missiles carried in cabin. For ASW role, armament includes two Mk 44, Mk 46, A244S or Sting Ray homing torpedoes, one each on an external pylon on each side of fuselage, and six marine markers, or two Mk 11 depth charges. Alternatively, up to four Sea Skua semi-active homing missiles; on French Navy Lynx, four AS 12 or similar wire-guided missiles. Self-protection FN HMP 0.50 in machine gun pod optional on RN Lynx.

DIMENSIONS, EXTERNAL (A: military version, N: naval version):

Main rotor diameter (A, N)	12.80 m (42 ft 0 in)
Tail rotor diameter (A, N)	2.21 m (7 ft 3 in)
Length overall:	
A, N, both rotors turning	15.165 m (49 ft 9 in)
N, main rotor blades and tail folded	10.62 m (34 ft 10 in)



Westland Lynx HAS Mk 8, based on the Super Lynx advanced export version *(Jane's/Dennis Punnett)*

1987

Westland Lynx AH Mk 9s of the Army Air Corps

1995

Westland Lynx HAS. Mk 3CTS (rear) with BERP blades and HAS Mk 3GM of Royal Navy *(Paul Jackson)*
1995

Width overall, main rotor blades folded
  A 3.75 m (12 ft 3⅝ in)
  N 2.94 m (9 ft 7¾ in)
Height overall, both rotors stopped
  A 3.505 m (11 ft 6 in)
  N 3.48 m (11 ft 5 in)
 main rotor blades and tail folded
  N 3.20 m (10 ft 6 in)
Tailplane half-span 1.78 m (5 ft 10 in)
Skid track: A 2.032 m (6 ft 8 in)
Wheel track: N 2.78 m (9 ft 1½ in)
Wheelbase: N 2.94 m (9 ft 7¾ in)
DIMENSIONS, INTERNAL:
Cabin, from back of pilots' seats
  Min length 2.057 m (6 ft 9 in)
  Max width 1.778 m (5 ft 10 in)
  Max height 1.42 m (4 ft 8 in)
  Floor area 3.72 m² (40.04 sq ft)
  Volume 5.21 m³ (184 cu ft)
 Cabin doorway: Width 1.37 m (4 ft 6 in)
  Height 1.19 m (3 ft 11 in)
AREAS:
 Main rotor disc 128.7 m² (1,385.4 sq ft)
 Tail rotor disc 3.84 m² (41.28 sq ft)
WEIGHTS AND LOADINGS (A and N as above):
 Manufacturer's empty weight: A 2,578 kg (5,683 lb)
  N 2,740 kg (6,040 lb)
 Manufacturer's basic weight: A 2,658 kg (5,860 lb)
  N 3,030 kg (6,680 lb)
 Operating weight empty, equipped
  A, troop transport (pilot and 10 troops)
   2,787 kg (6,144 lb)
  A, anti-tank strike (incl weapon pylons, firing equipment and sight) 3,072 kg (6,772 lb)
  A, search and rescue (crew of three)
   2,963 kg (6,532 lb)
  N, anti-submarine strike 3,343 kg (7,370 lb)
  N, reconnaissance (crew of two) 3,277 kg (7,224 lb)
  N, anti-submarine classification and strike
   3,472 kg (7,654 lb)
  N, air to surface vessel search and strike (crew of two and four Sea Skuas) 3,414 kg (7,526 lb)
  N, search and rescue (crew of three)
   3,416 kg (7,531 lb)
  N, dunking sonar search and strike
   3,650 kg (8,047 lb)
 Max T-O weight: A 4,535 kg (10,000 lb)
  N (Gem Mk 41) 4,763 kg (10,500 lb)
  N (Gem Mk 42) 4,876 kg (10,750 lb)
 Max disc loading: A 35.24 kg/m² (7.22 lb/sq ft)
  N (Gem Mk 41) 37.00 kg/m² (7.58 lb/sq ft)
  N (Gem Mk 42) 37.88 kg/m² (7.76 lb/sq ft)
 Max power loading: A 3.31 kg/kW (5.43 lb/shp)
  N (Gem Mk 41) 3.47 kg/kW (5.71 lb/shp)
  N (Gem Mk 42) 3.55 kg/kW (5.84 lb/shp)
PERFORMANCE (at normal max T-O weight at S/L, ISA, except where indicated, A and N as above):
 Max continuous cruising speed
  A 140 kts (259 km/h, 161 mph)
  N 125 kts (232 km/h; 144 mph)
  A (ISA + 20°C) 130 kts (241 km/h, 150 mph)
  N (ISA + 20°C) 114 kts (211 km/h, 131 mph)
 Speed for max endurance
  A, N (ISA and ISA + 20°C)
   70 kts (130 km/h, 81 mph)
 Max forward rate of climb: A 756 m (2,480 ft)/min
  N 661 m (2,170 ft)/min
  A (ISA + 20°C) 536 m (1,760 ft)/min
  N (ISA + 20°C) 469 m (1,540 ft)/min
 Max vertical rate of climb
  A 472 m (1,550 ft)/min
  N 351 m (1,150 ft)/min
  A (ISA + 20°C) 390 m (1,280 ft)/min
  N (ISA + 20°C) 244 m (800 ft)/min
 Hovering ceiling OGE: A 3,230 m (10,600 ft)
  N 2,575 m (8,450 ft)
 Typical range, with reserves
  A, troop transport 292 n miles (540 km, 336 miles)
 Radius of action, out and back at max sustained speed, allowances for T-O and landing, 30 min loiter in search area, 3 min hover for each survivor, and 10% fuel reserves at end of mission
  N, search and rescue (crew of three and two survivors)
   115 n miles (212 km, 132 miles)
  N, search and rescue (crew of three and seven survivors)
   96 n miles (178 km, 111 miles)
 Time on station at 50 n miles (93 km, 58 miles) radius, out and back at max sustained speed, with two torpedoes, smoke floats and marine markers, allowances for T-O and landing and 10% fuel reserves at end of mission
  N, anti-submarine classification and strike, loiter speed on station 2 h
  N, anti-submarine strike, loiter on station 2 h 29 min
  N, dunking sonar search and strike, 50% loiter speed and 50% hover on station 1 h 5 min
 Time on station at 50 n miles (93 km, 58 miles) radius, out and back at max sustained speed, with crew of two and four Sea Skuas, allowances and reserves as above:
  N, air-to-surface vessel strike, en route radar search and loiter speed on station 1 h 36 min
 Max range: A 340 n miles (630 km, 392 miles)
  N 320 n miles (593 km, 368 miles)
 Max endurance: A 2 h 57 min
  N (ISA + 20°C) 2 h 50 min
 Max ferry range with auxiliary cabin tanks
  A 724 n miles (1,342 km, 834 miles)
  N 565 n miles (1,046 km, 650 miles)

1994

Army Air Corps Westland Lynx: three AH. Mk 7s and four AH. Mk 9s, plus two Gazelles *(Paul Jackson)*
1995

WESTLAND SUPER LYNX and BATTLEFIELD LYNX

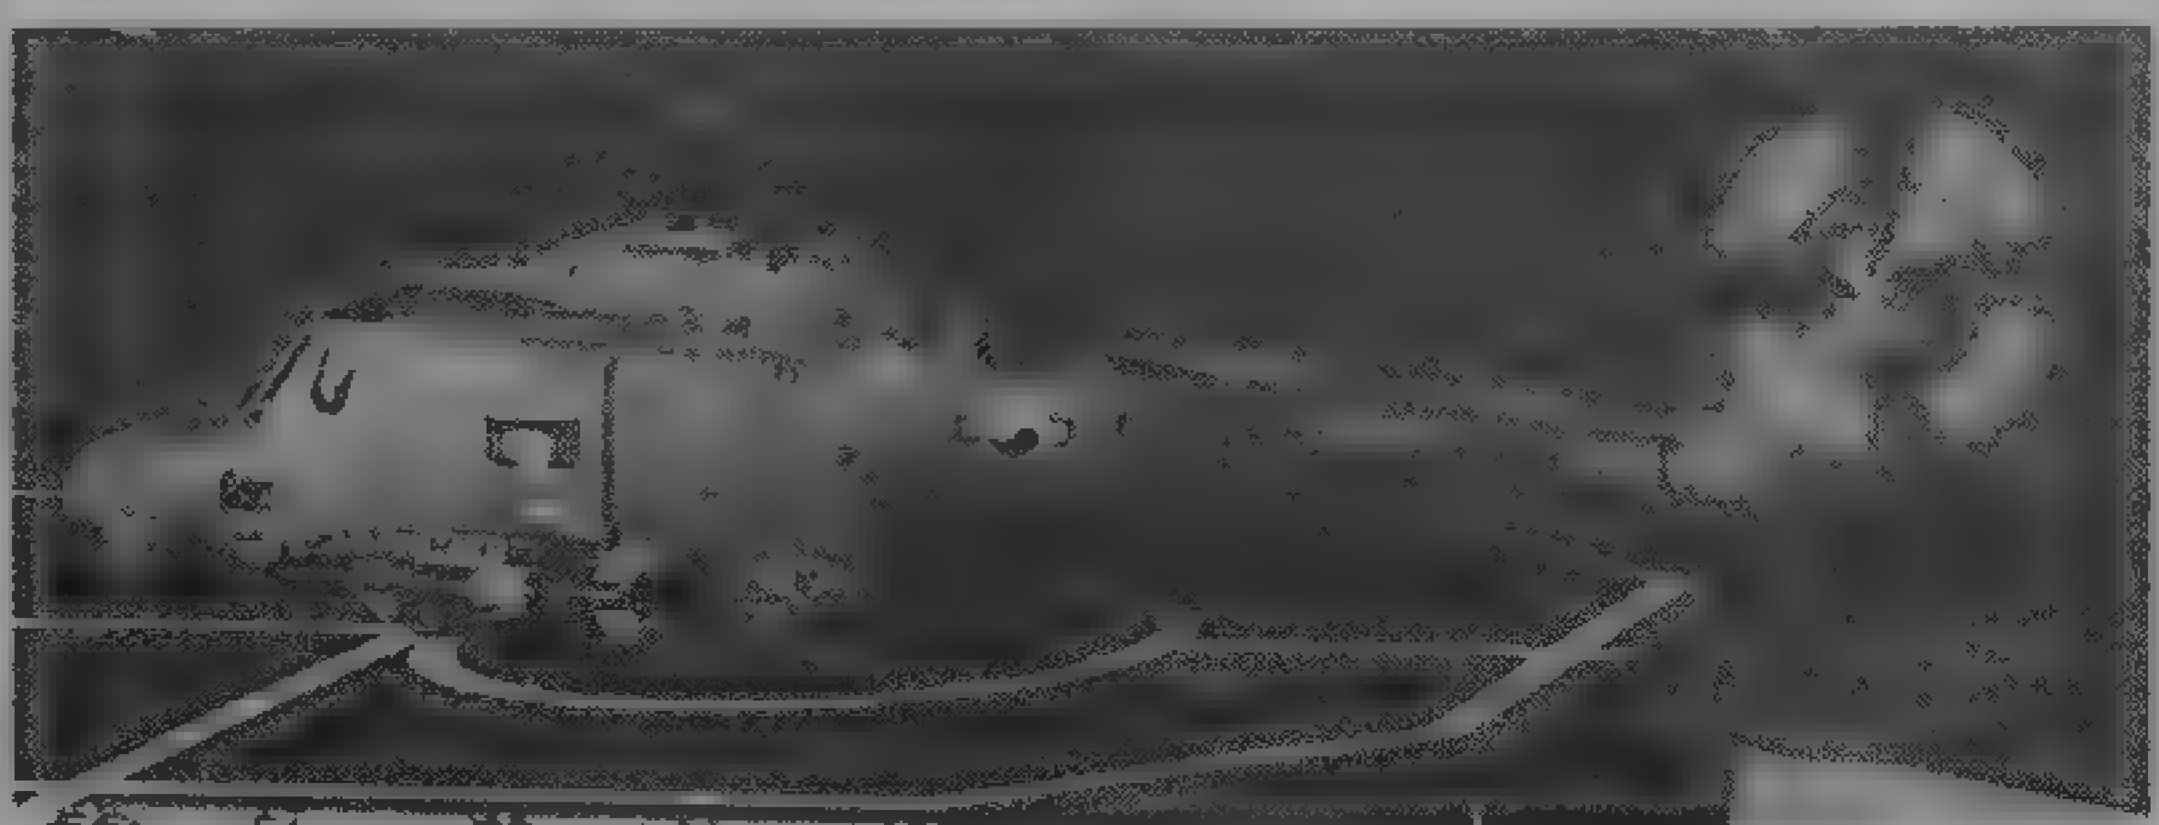
TYPE: Twin-engined multipurpose export helicopters.

PROGRAMME: Battlefield Lynx mockup displayed at 1988 Farnborough Air Show (converted demonstrator G-LYNX), featuring wheeled landing gear, exhaust air diffusers and provision for anti-helicopter missiles each side of fuselage; first flight of wheeled prototype (converted trials AH. Mk 7 XZ170) 29 November 1989; first flight of South Korean Super Lynx (90-0701, temporarily ZH219) 16 November 1989 (also first Lynx with Seaspray Mk 3); first flight of Portuguese Lynx (9201, temporarily ZH580, ex-RN ZF559) 27 March 1992.

CURRENT VERSIONS: **Super Lynx**: Upgraded export naval Lynx, approximately equivalent to Lynx HAS. Mk 8 (see previous entry).

Battlefield Lynx: Upgraded export army Lynx, approximately equivalent to Lynx AH. Mk 9 (see previous entry). Demonstrator G-LYNX fitted with two 1,007 kW (1,350 shp) LHTEC T800 turboshafts as **Battlefield Lynx 800** private venture (LHTEC funding power plants and gearboxes, Westland providing airframe for full flight demonstration programme); first flight 25 September 1991, programme terminated early 1992 after 17 hours.

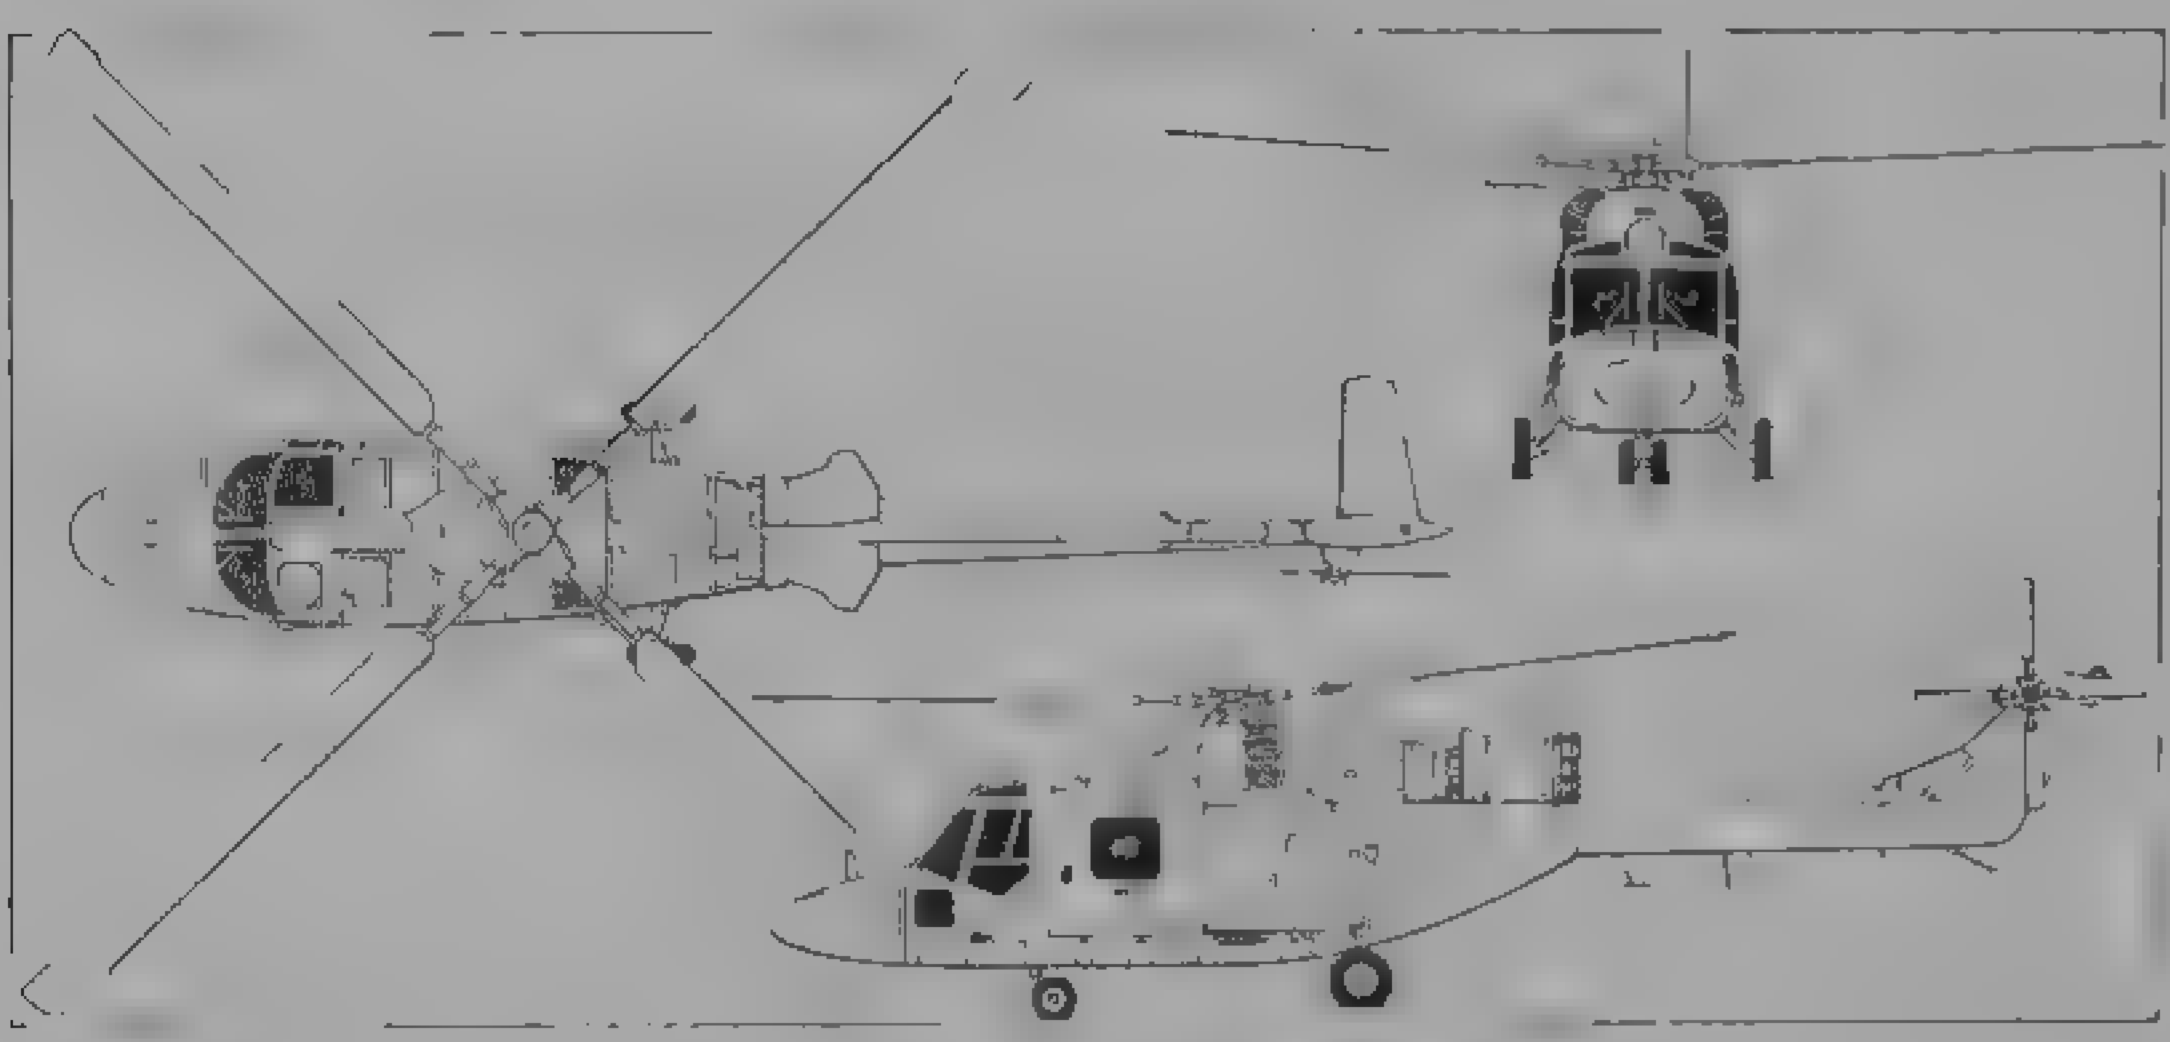
CUSTOMERS: Super Lynx ordered by South Korea 1988 (12 **Mk 99** with Racal Avionics Doppler 71/TANS N nav system, Seaspray Mk 3 360° radar, AN/AQS-18 dipping sonar and Sea Skua), handed over between 26 July 1990 and May 1991 for 'Sumner' and 'Gearing' class destroyers. Portugal ordered five (first two ex-Royal Navy modified airframes) Super Lynx **Mk 95** 1990 (plus three options) with Racal RNS252 GPS-aided INS and Doppler 91 navigation systems and some US equipment including AN/AQS-18 sonar and Bendix/King RDR 1500 radar; first two handed over 29 July 1993 for 'Vasco da Gama' class (MEKO 200) frigates; final two delivered 16 November 1993. Brazil ordered nine **Mk 21As** plus six conversions from Mk 21 for delivery from 1996. Mk 21A avionics include 360°



Westland Super Lynx Mk 99 in service with South Korean Navy
1995

Westland Super Lynx Mk 95 of Portuguese Navy

1995



Westland Battlefield Lynx for export, equivalent to the British Army's Lynx AH. Mk 9
(Jane's/Dennis Punnett)

1990

Seaspray 3000 radar, RNS252 INS and Doppler 71, armament includes Sea Skua missiles

DESIGN FEATURES: Upgraded export Lynx, maximum T-O weight 5,125 kg (11 300 lb); all-weather day/night capability, extended payload/range, advanced technology swept-tip (BERP) composite main rotor blades offering improved speed and aerodynamic efficiency and reduced vibration, Mk 7's dynamic improvements (reversed direction tail rotor for improved control, and so on); non-retractable wheeled landing gear

STRUCTURE: Composite main and tail rotor blades

LANDING GEAR: Non-retractable tricycle type. Twin nosewheels, single mainwheels. Oleo-pneumatic struts capable of absorbing 1 83 m (6 ft)/s descent rate.

POWER PLANT: Two Rolls-Royce Gem 42-1 turboshafts, each rated at 835 kW (1,120 shp) Transmission rating 1,372 kW (1,840 shp). Exhaust diffusers for infra-red suppression optional on Battlefield Lynx

AVIONICS (Naval): *Radar:* Super Lynx has Seaspray Mk 3000 or Bendix/King RDR 1500 360° scan radar in chin fairing. (UK Mk 8 has original Seaspray Mk 1 upgraded to Mk 3000 under 1994 contract and re-packaged below fuselage, leaving space for GEC Marconi Sea Owl thermal imaging equipment above nose.)

Mission: Vinten Vipa 1 reconnaissance pod, or Agiflite reconnaissance camera system. Optional Bendix/King AN/AQS-18 or Thomson Sintra HS-312 sonars

AVIONICS (Army): *Comms:* Secure speech radio.

Flight: Decca Doppler 91 and RNS252 navigation Honeywell/Smiths AN/APN 198 radar altimeter; Collins 206A ADF, Collins VIR 31A VOR/ILS

Mission: Sextant 250 sight for fixed armament

ARMAMENT: Super Lynx as standard naval Lynx, including four Sea Skua or two Penguin anti-ship missiles. Battlefield Lynx may carry two Giat 20 mm cannon pods, two FN Herstal pods with two 7 62 mm machine guns each, or two M 159C pods containing nineteen 2 75 in rockets each

DIMENSIONS, EXTERNAL (A: Battlefield Lynx, N: Super Lynx)

Tail rotor diameter	2 36 m (7 ft 9 in)
Length overall	
A, N, both rotors turning	15 24 m (50 ft 0 in)
A, rotors folded	13 24 m (43 ft 5¼ in)
N, main rotor blades and tail folded	10 85 m (35 ft 7¼ in)
Width overall, main rotor blades folded	
A	3 02 m (9 ft 10⅞ in)
N	2 94 m (9 ft 7¾ in)
Height overall, tail rotor turning	
A	3.73 m (12 ft 3 in)
N	3 67 m (12 ft 0½ in)
main rotor blades and tail folded	
N	3 25 m (10 ft 8 in)
Tailplane half span: A, N	1 32 m (4 ft 4 in)
Wheel track: A, N	2.80 m (9 ft 2¼ in)
Wheelbase: A, N	3.02 m (9 ft 10⅞ in)

AREAS

Tail rotor disc	4 37 m² (47.04 sq ft)

WEIGHTS AND LOADINGS

Basic weight empty: A	3,178 kg (7,006 lb)
N	3,291 kg (7,255 lb)
Operating weight empty (including crew and appropriate armament)	
A, anti-tank (eight TOW)	3,949 kg (8,707 lb)
A, reconnaissance	3,444 kg (7,592 lb)
A, transport (unladen)	3,496 kg (7,707 lb)
N, ASW (two torpedoes)	4,618 kg (10,181 lb)
N, ASV (four Sea Skuas)	4,373 kg (9,641 lb)
N, surveillance and targeting	3,708 kg (8,174 lb)
N, search and rescue	3,778 kg (8,329 lb)
Max underslung load	1,361 kg (3 000 lb)
Max T-O weight	5 125 kg (11,300 lb)
Max disc loading	39 82 kg/m² (8 16 lb/sq ft)
Max power loading	3 74 kg/kW (6 14 lb/shp

PERFORMANCE

Never-exceed speed (VNE), Mk 9,	
clean	156 kts (289 km/h; 180 mph)
IR exhaust diffusers fitted	145 kts (269 km/h; 167 mph)
Max continuous cruising speed	
A	138 kts (256 km/h, 159 mph)
Radius of action	
A, anti-tank, 2 h on station with four TOWs	25 n miles (46 km, 29 miles)
N, anti-submarine, 2 h on station, dipping sonar and one torpedo	20 n miles (37 km, 23 miles)
N, point attack with four Sea Skuas	125 n miles (232 km, 143 miles)
N, surveillance, 3 h 50 min on station	75 n miles (139 km, 86 miles
Range	
A, tactical transport	370 n miles (685 km, 426 miles)

UPDATED

WESTLAND WS 70L

TYPE: Combat assault squad transport helicopter

PROGRAMME: After full partnership agreement with United Technologies (USA), Westland received US State Department approval to produce Sikorsky Black Hawk as WS 70, demonstrator (ZG468) assembled from Sikorsky kit to US Army UH-60A battlefield transport standards, first flight 1 April 1987 (used for training and market support). Remains operational (1995)

CURRENT VERSIONS: **WS 70L**. Equivalent to US UH-60L (see Sikorsky entry in US section), except as detailed below

CUSTOMERS: Saudi Arabia signed provisional agreement for 88 WS 70Ls July 1988 (part of larger equipment deal with UK government), firm contract failed to materialise.

COSTS: Westland board assigned £3 million for demonstrator (ZG468).

POWER PLANT: Two 1,224 kW (1,641 shp) General Electric T700-GE-701C turboshafts

AVIONICS (recommended): Communications equipment includes UHF and V/UHF and VHF/FM homing. Navigation equipment includes AN/ASN 43 compass, Doppler, plus customer specified equipment.

WEIGHTS AND LOADINGS

Weight empty	4,964 kg (10,943 lb)
Max T-O weight	9,979 kg (22,000 lb)

PERFORMANCE

Range with 1,814 kg (4 000 lb) payload	300 n miles (556 km, 345 miles)
Ferry range	1,145 n miles (2,122 km, 1,318 miles)

UPDATED

OTHER AIRCRAFT

Westland **Commando** is similar to Sea King (which see for production details) but detailed description appears in *Jane's Aircraft Upgrades*. **EH 101** programme, in which Westland partners Agusta, will be found in International section

AASI succeeded Aerodynamics and Structures Inc (ASI), formed by former airline pilot Darius Sharifzadeh to develop Jetcruzer. Factory being extended to 18,580 m² (200,000 sq ft) in readiness for production at rate of 15 aircraft per year. Workforce 300.

UPDATED

AASI JETCRUZER 450 and 500P

TYPE: Six-seat turboprop business and utility transport.

PROGRAMME: Design began March 1983, aerodynamic design undertaken in UK 1984-85 by 'Sandy' Burns, layout prepared by Ladislao Pazmany, structural design by David Kent of Light Transport Design in UK, wind tunnel tests by University of San Diego, prototype construction started June 1988, first exhibited at NBAA show October 1988 with 313 kW (420 shp) Allison 250-C20S engine; first flight 11 January 1989 (N5369M); preproduction prototype (N102JC) made first flight April 1991 and first flight in production form 13 September 1992; certification to FAR Pt 23 on 14 June 1994, intending single-engine FAA Pt 135 public transport IFR certification. Final assembly of aircraft for customers in the Asia-Pacific region may be undertaken in Taiwan.

CURRENT VERSIONS: **Jetcruzer 450**: Unpressurised model, *as detailed below*. Freight and air ambulance configurations available.

Jetcruzer 500P: Pressurised model with smaller windows and 634 kW (850 shp) PT6A-42 engine.

Jetcruzer ML-1: Unmanned military model.

Jetcruzer ML-2: Piloted military model.

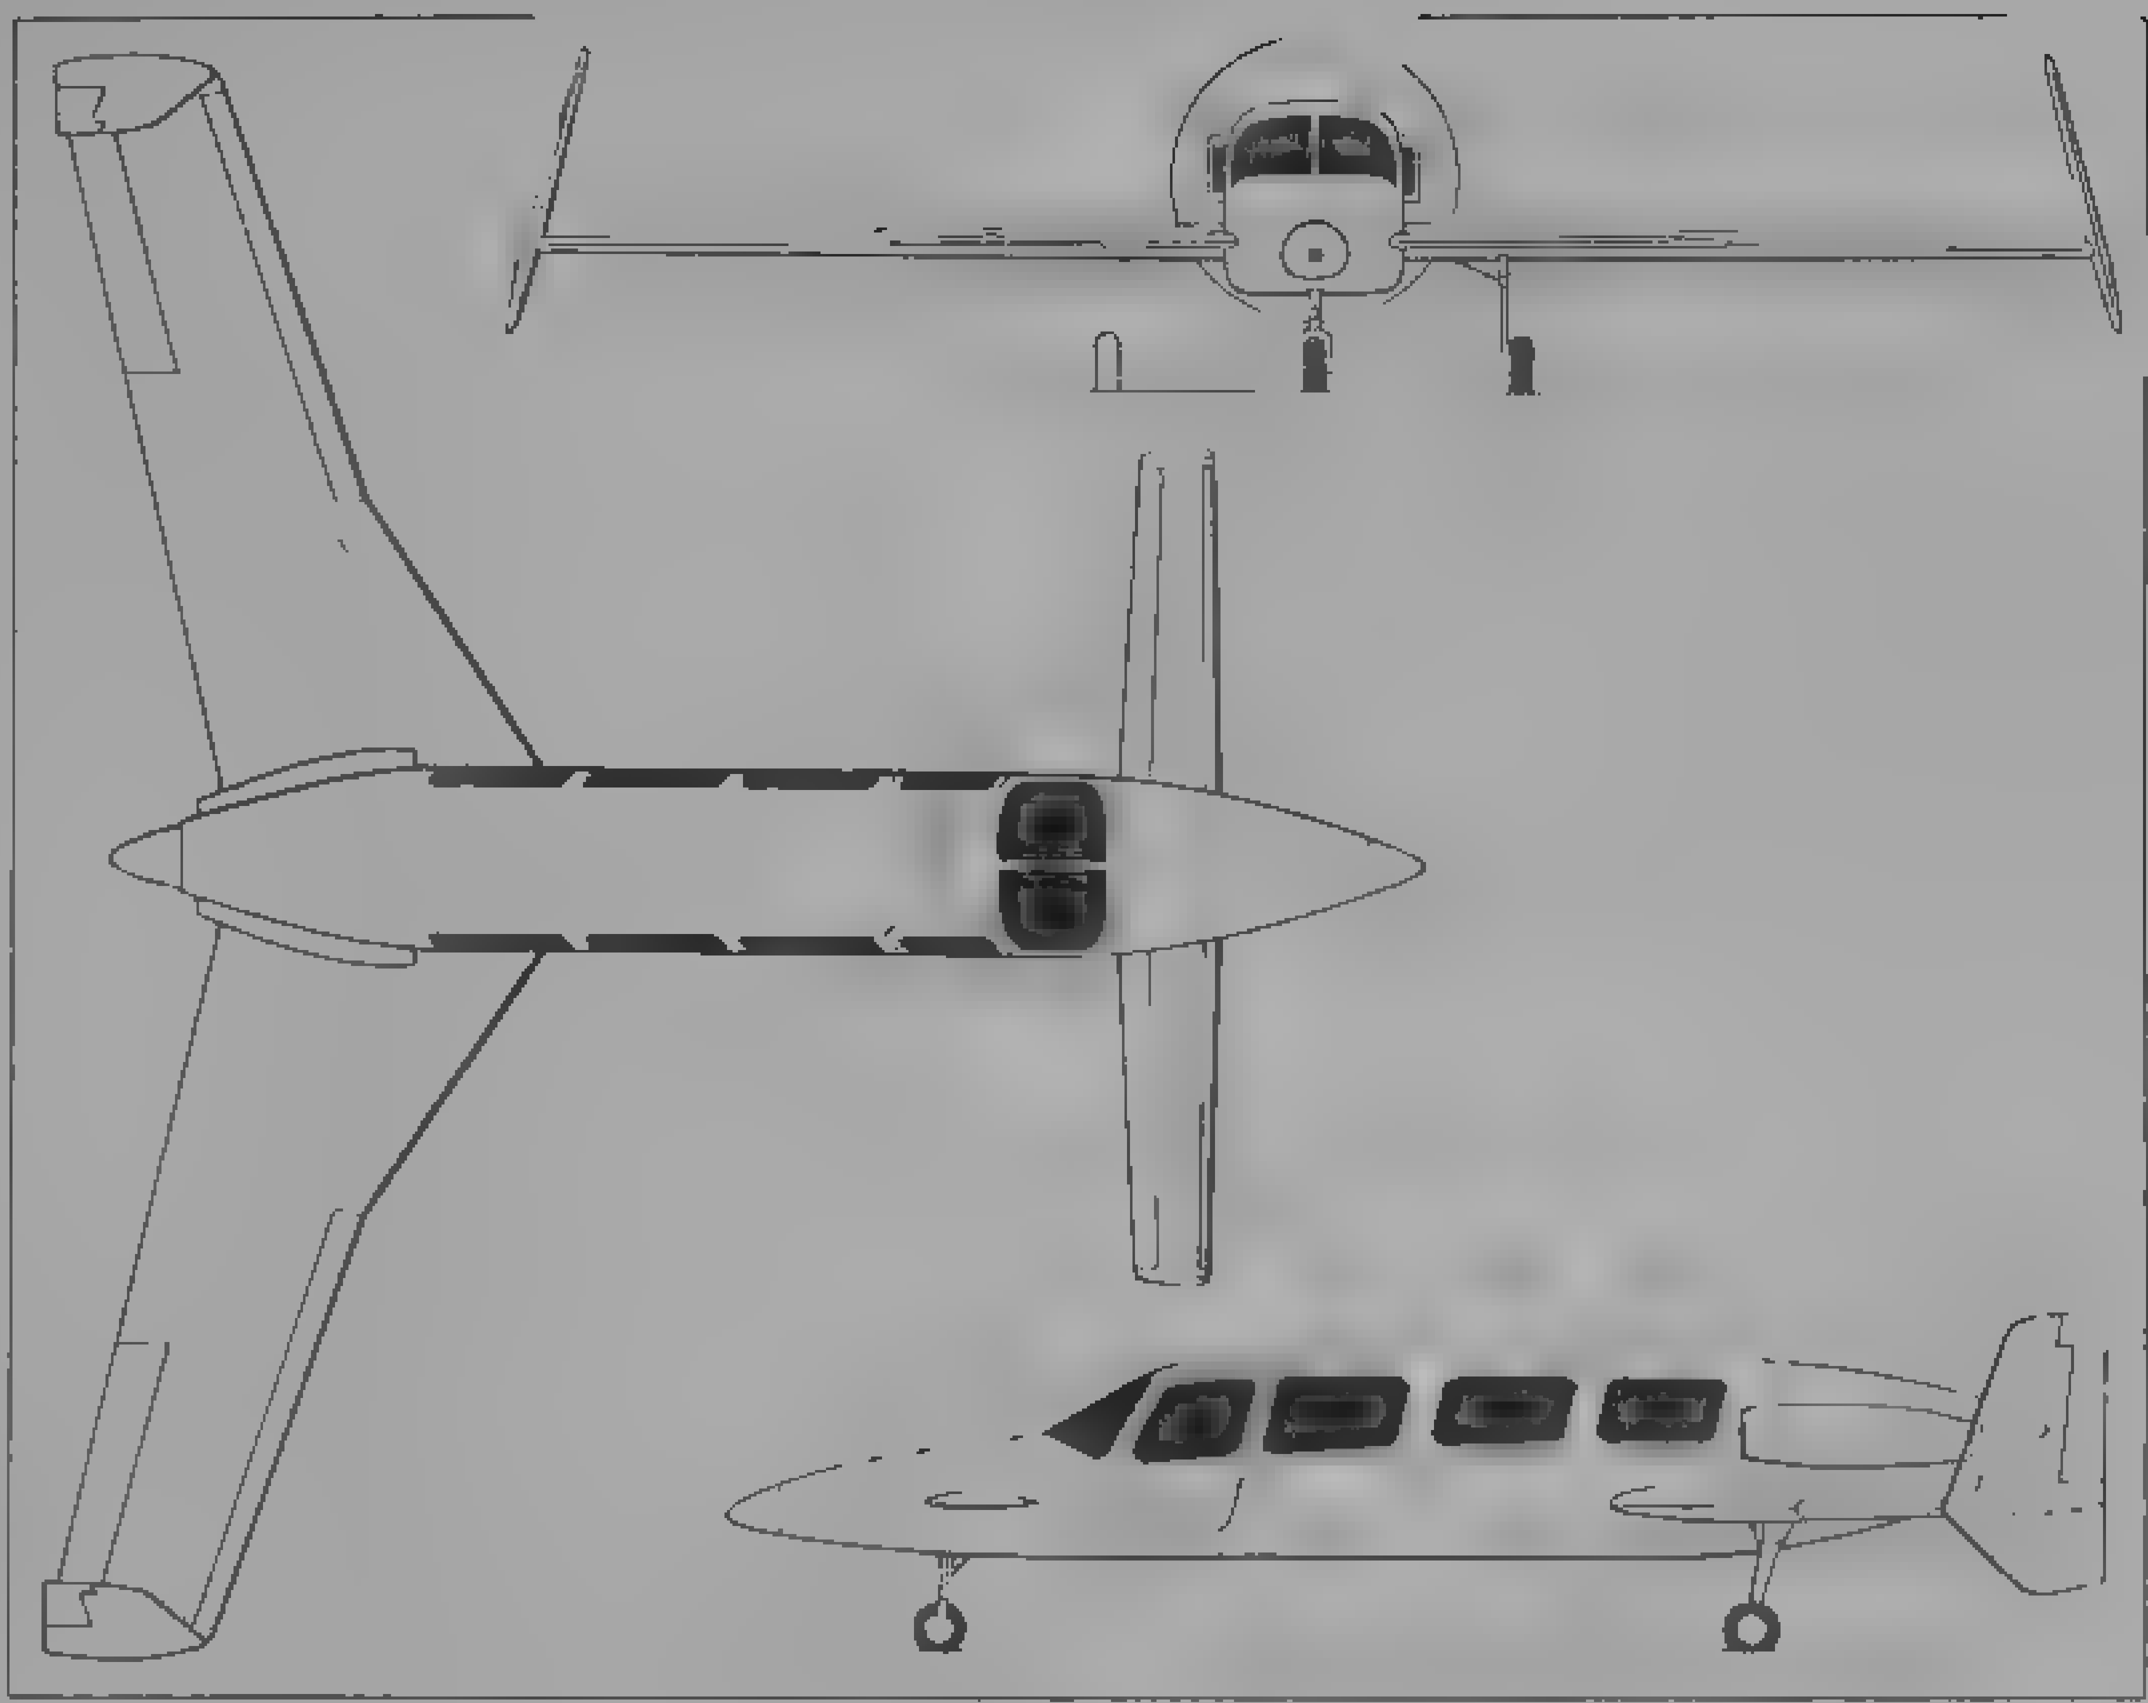
CUSTOMERS: Total of 26 firm orders and 27 options for Jetcruzer 450 by late 1994.

COSTS: $995,000 for 450.

DESIGN FEATURES: Canard layout; spin-resistant design, high speed, short field T-O/landing performance, all-CAD, rear-mounted main wing using NACA 2412 aerofoil, with 20° sweepback at quarter-chord and 4° dihedral, tip-mounted fins, unswept foreplane using NASA LS 0417 (Mod) section. Compared to prototype, production Jetcruzer 500P has 25 cm (10 in) fuselage stretch, addition of fuel carrying strakes at wingroots with 34° sweepback, 43 cm (17 in) nose extension to allow forward retraction of nosewheel, and vertical tail surfaces canted 5° inboard to improve aileron control.

FLYING CONTROLS: Pushrod actuated; ailerons in main wing, elevators on foreplane, rudders in tip-mounted fins.

STRUCTURE: Aluminium alloy wings, foreplane and vertical tail surfaces, monocoque fuselage of graphite composite/Nomex honeycomb sandwich with embedded aluminium mesh.



AASI Jetcruzer 650 commuter and utility transport (P&WC PT6A-135A turboprop engine) *(Jane's/Dennis Punnett)*

1993

LANDING GEAR: Retractable tricycle oleo-pneumatic type with steerable nosewheel.

POWER PLANT: One 507 kW (680 shp) Pratt & Whitney Canada PT6A-27 turboprop, driving a Hartzell three-blade constant-speed pusher propeller at 2,200 rpm (with reverse and autofeathering). Fuel capacity 946 litres (250 US gallons; 208 Imp gallons).

ACCOMMODATION: Standard and club seating for six, including pilot, stressed to new FAA 26 g load limit. Three cabin windows on each side. Airstep gullwing door on each side.

SYSTEMS: Pressurisation (500P), air conditioning, de-icing and anti-icing.

AVIONICS: *Comms:* Standard Bendix/King suite includes KX 165 VHF com, KT 70 transponder and KMA 24H audio-control console.

Radar: Bendix/King RDS-82UP colour weather radar or Collins weather radar optional. 3M Stormscope optional.

Flight: Bendix/King KX 165 nav, KR 87 ADF and KN 63 DME standard, KLN Loran and GPS optional. Bendix/King KI 256 flight director (ADI) and ED 461 HSI standard; Bendix/King KC 192 or Collins autopilot optional.

Instrumentation: EFIS standard.

DIMENSIONS, EXTERNAL:	
Wing span	12.85 m (42 ft 2 in)
Wing aspect ratio	9.23
Foreplane span	5.77 m (18 ft 11 in)
Length overall	7.52 m (24 ft 8 in)
Fuselage length	7.49 m (24 ft 7 in)
Height overall	2.62 m (8 ft 7 in)
Propeller diameter	2.03 m (6 ft 8 in)
Propeller ground clearance	0.71 m (2 ft 4 in)
Cabin doors (each): Height	1.09 m (3 ft 7 in)
Width	0.97 m (3 ft 2 in)
DIMENSIONS, INTERNAL:	
Cabin: Length	3.40 m (11 ft 2 in)
Volume	4.15 m³ (146.5 cu ft)
AREAS:	
Wings, gross	17.89 m² (192.6 sq ft)
Ailerons (total)	0.81 m² (8.75 sq ft)
Foreplane, incl elevators	3.71 m² (39.90 sq ft)
Elevators (total, incl tabs)	0.42 m² (4.53 sq ft)
Fins (total)	0.81 m² (8.75 sq ft)
Rudders (total)	0.33 m² (3.60 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty	1,111 kg (2,450 lb)
Max T-O weight	2,496 kg (5,500 lb)
Max wing loading	139.4 kg/m² (28.56 lb/sq ft)
Max power loading	4.92 kg/kW (8.09 lb/shp)
PERFORMANCE (at max T-O weight, ISA):	
Max operating speed (VMO) and max cruising speed at 6,700 m (22,000 ft)	262 kts (486 km/h; 302 mph)
Stalling speed	59 kts (109 km/h; 68 mph)
Service ceiling	7,620 m (25,000 ft)
T-O to 15 m (50 ft)	436 m (1,430 ft)
Landing from 15 m (50 ft)	594 m (1,950 ft)
Max range at 3,050 m (10,000 ft)	1,344 n miles (2,490 km; 1,547 miles)

UPDATED

AASI Jetcruzer 450 six-seat business and utility aircraft (preproduction prototype)

1994

AASI JETCRUZER 650

TYPE: 10/13-seat turboprop commuter and utility transport.

PROGRAMME: Construction of prototype and first production aircraft began December 1992; no further information available.

CURRENT VERSIONS: **Jetcruzer 650**: *As detailed below*, for commuter, freight carrying and air ambulance uses.

ML-4: Military version.

CUSTOMERS: Seven ordered by mid-1994.
COSTS: $1.1 million (1994).
DESIGN FEATURES: Enlarged version of Jetcruzer 450/500P, with greatly increased accommodation; 260 knot (483 km/h; 300 mph) cruising speed and short field performance, economical operation, low maintenance costs, low noise.
FLYING CONTROLS: As for Jetcruzer 450/500P.
STRUCTURE: As for Jetcruzer 450/500P.
POWER PLANT: One 691 ekW (927 ehp) Pratt & Whitney Canada PT6A-135A turboprop, driving a Hartzell three-blade pusher propeller. Fuel capacity 757 litres (200 US gallons; 166.5 Imp gallons) in wing tanks.
ACCOMMODATION: Thirteen persons (including one or two pilots) in international models or 10 for US market, on standard or club seats. Two airstep gullwing doors. Air conditioning and optionally pressurised.
SYSTEMS: Optional pressurisation, air conditioning, de-icing and anti-icing.
AVIONICS: IFR dual nav/com, EFIS, radar, GPS and Loran.
DIMENSIONS, EXTERNAL:

Wing span	11.33 m (37 ft 2 in)
Foreplane span	5.49 m (18 ft 0 in)
Fuselage: Length	10.36 m (34 ft 0 in)
Max depth	1.55 m (5 ft 1 in)
Max width	1.52 m (5 ft 0 in)
Height overall	2.44 m (8 ft 0 in)
Wheel track	3.66 m (12 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin: Length	5.49 m (18 ft 0 in)
Max width	1.50 m (4 ft 11 in)
Max height	1.52 m (5 ft 0 in)

WEIGHTS AND LOADINGS:

Weight empty	1,588 kg (3,500 lb)
Max T-O weight	2,948 kg (6,500 lb)
Max power loading *	4.27 kg/ekW (7.01 lb/ehp)

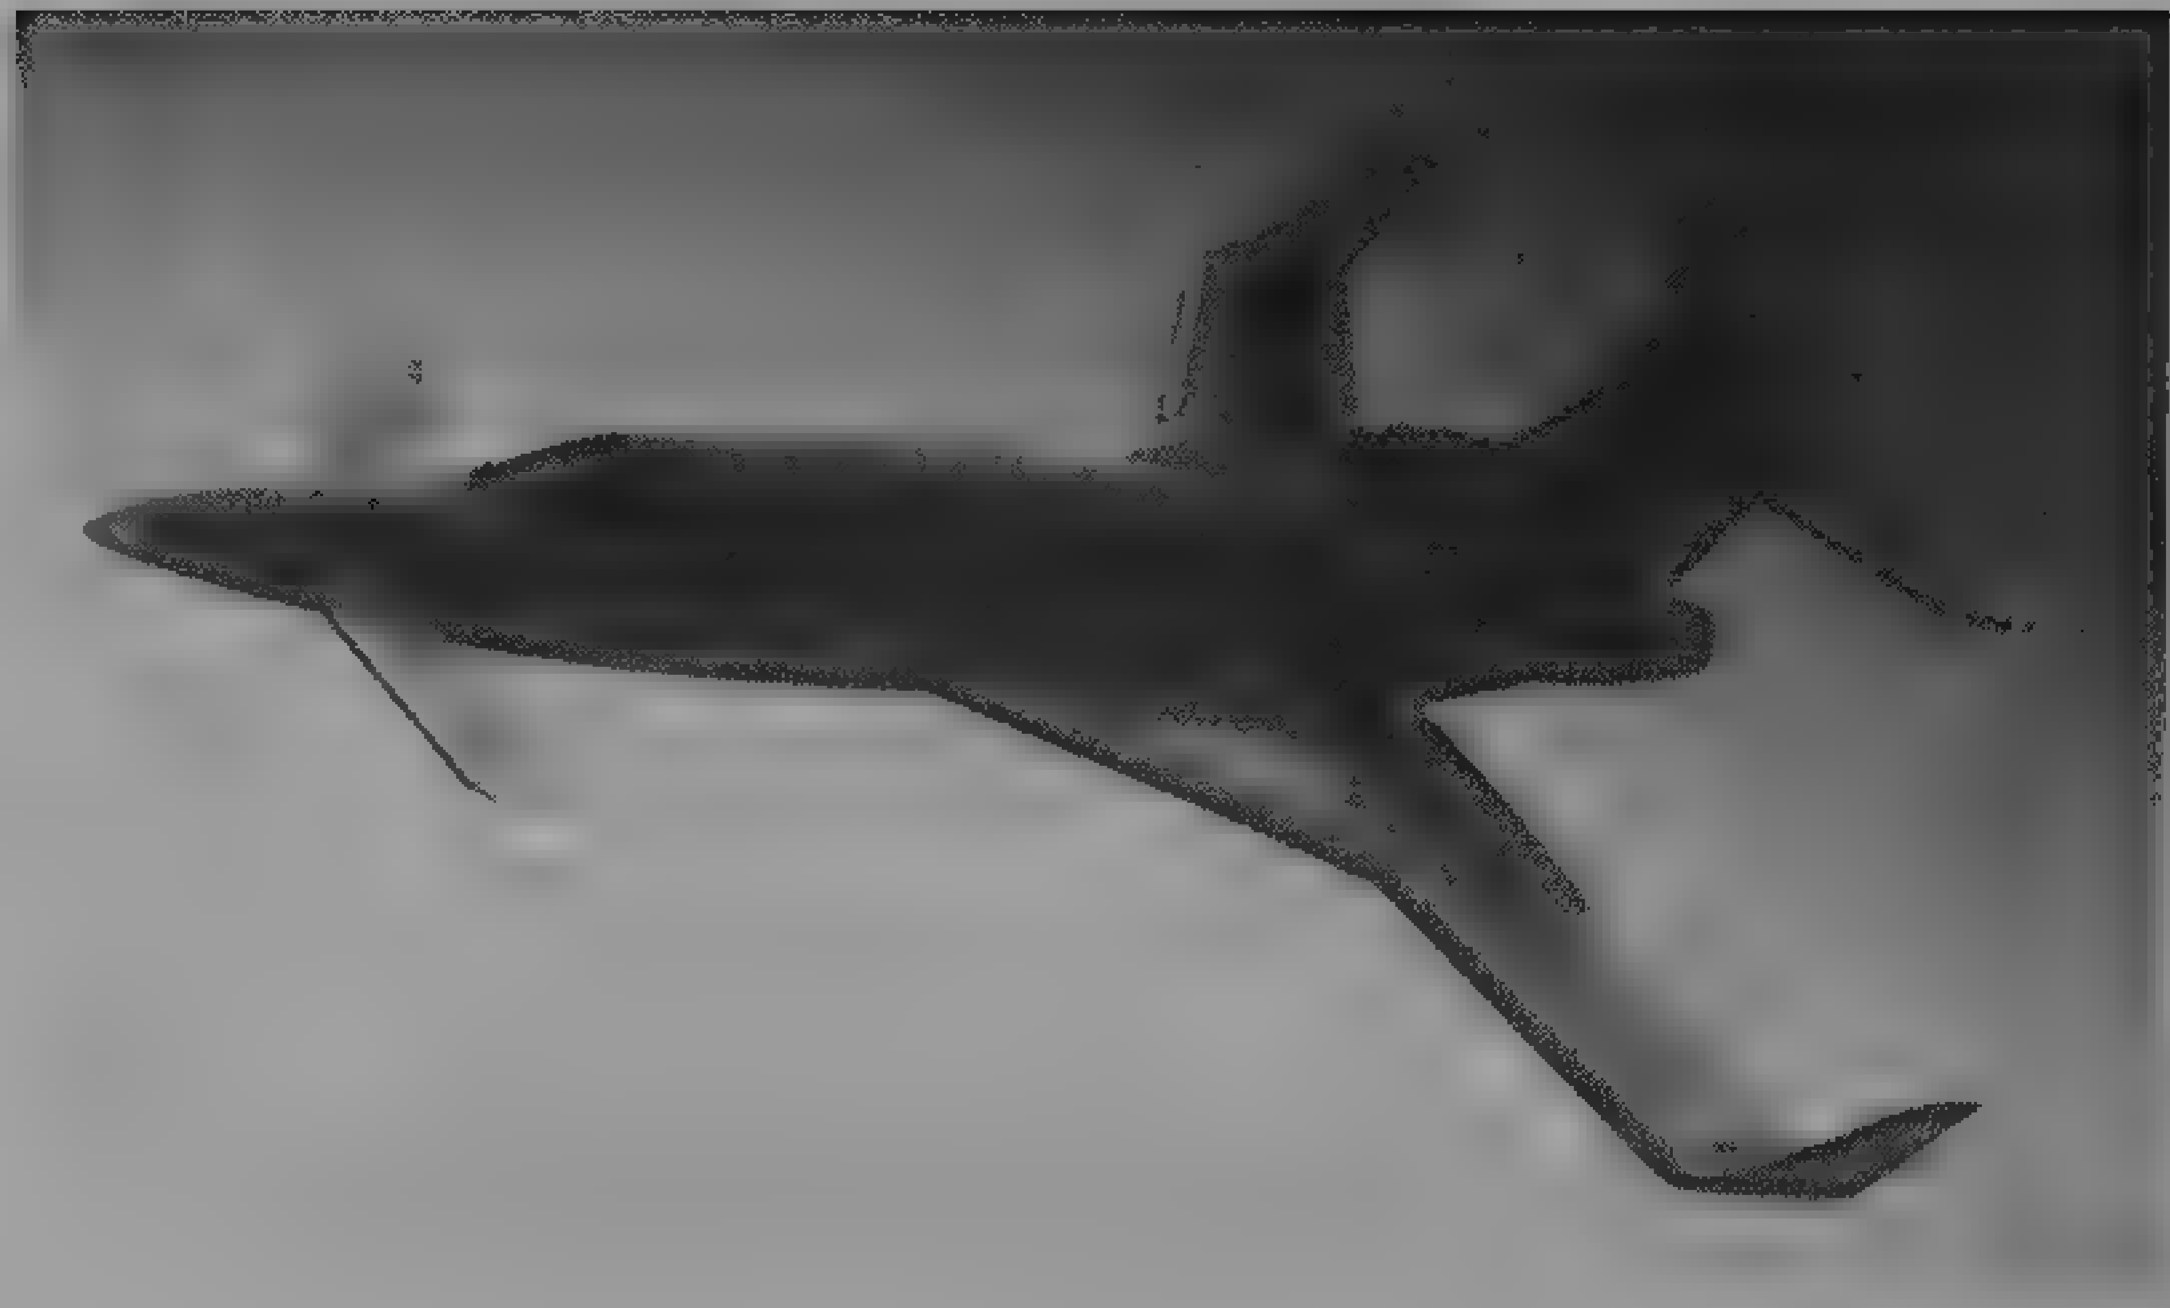
PERFORMANCE (estimated):

Max cruising speed at 6,700 m (22,000 ft)	260 kts (483 km/h; 300 mph)
Stalling speed, flaps down, power off	69 kts (128 km/h; 79 mph)
Max rate of climb at S/L	716 m (2,350 ft)/min
Service ceiling	9,150 m (30,000 ft)
T-O run	391 m (1,280 ft)
Landing run	412 m (1,352 ft)
Range	1,000 n miles (1,852 km; 1,151 miles)

UPDATED

AASI STRATOCRUZER 1250-ER

TYPE: 10/13-seat pressurised twin-turbofan transport.
PROGRAMME: Design started September 1991.
CURRENT VERSIONS: **Stratocruzer 1250-ER**: Intercontinental civil version, *as detailed below*. Can be used for commercial operations, corporate transportation, freight carrying, medevac and other roles.
ML-5: Military version; envisaged SAR layout has two pilots plus three other crew and two radar scanner consoles.
COSTS: $3.2 million.



Artist's impression of the AASI Stratocruzer 1250-ER long-range transport (two Williams-Rolls FJ44 turbofans) *1993*

DESIGN FEATURES: Intercontinental range, high speed, low cost and maintenance. Design based on Jetcruzer general configuration, but with pressurisation for high altitude flight, swept foreplanes, extended inboard wing leading-edges, winglets, fin with high-mounted swept tailplane, and twin turbofans pod-mounted on pylons at fin root.
FLYING CONTROLS: All pushrod actuated, ailerons on main wings with trim tabs, elevators on tailplane, and rudder; foreplane elevator trim, wing leading-edge flaps, dual yaw dampers, mechanical trim system, autopilot.
STRUCTURE: As for Jetcruzer.
LANDING GEAR: Similar arrangement to Jetcruzer, but with twin wheels on each unit, hydraulically actuated, nosewheel steering, mainwheel disc brakes, anti-skid brake system, parking brake, emergency brake system and speed brake system.
POWER PLANT: Two 8.45 kN (1,900 lb st) Williams Rolls FJ44 turbofans; AASI requested 10 to 15 per cent thrust increase to improve engine-out performance. Four fuel tanks in fuselage and wings; fuel jettison system.
ACCOMMODATION: Thirteen persons (including one or two pilots) on international models or 10 for US market. Alternative layouts are for two pilots and four executives plus rest room, two pilots plus two stretcher patients and three attendants for medevac role; or single pilot plus freight. Galley, toilet, standard or club seating are among customer options. Two doors.
SYSTEMS: Cabin pressurisation, air conditioning and heating, ram air ventilation, and oxygen with crew masks and passenger drop-down masks, electrical power from two starter generators, dual 24 V batteries and solid-state voltage regulators, de-icing and anti-icing, including wing and foreplane leading-edges, fin, winglets, engine inlets and windscreen, heated static ports and pitot tubes.
DIMENSIONS, EXTERNAL:

Wing span	14.02 m (46 ft 0 in)
Length overall	10.97 m (36 ft 0 in)
Fuselage length	10.36 m (34 ft 0 in)
Diameter of fuselage	1.55 m (5 ft 1 in)
Height overall	4.04 m (13 ft 3 in)

WEIGHTS AND LOADINGS:

Weight empty	2,654 kg (5,850 lb)
Fuel weight	2,585 kg (5,700 lb)
Max T-O weight	5,670 kg (12,500 lb)
Max power loading	335.5 kg/kN (3.29 lb/lb st)

PERFORMANCE (estimated, ISA):

Max cruising speed at 11,275 m (37,000 ft)	422 kts (781 km/h; 485 mph)
Stalling speed, flaps down	81 kts (150 km/h; 94 mph)
Max rate of climb at S/L	1,115 m (3,650 ft)/min
Max cruising altitude	13,715 m (45,000 ft)
T-O run	1,250 m (4,100 ft)
Landing run	1,115 m (3,650 ft)
Range, with 20 min VFR reserves	3,240 n miles (6,000 km; 3,728 miles)

Aero Designs is designer and manufacturer of Pulsar range of light aircraft manufactured in kit form for homebuilding. All parts are oven-cured composites.

UPDATED

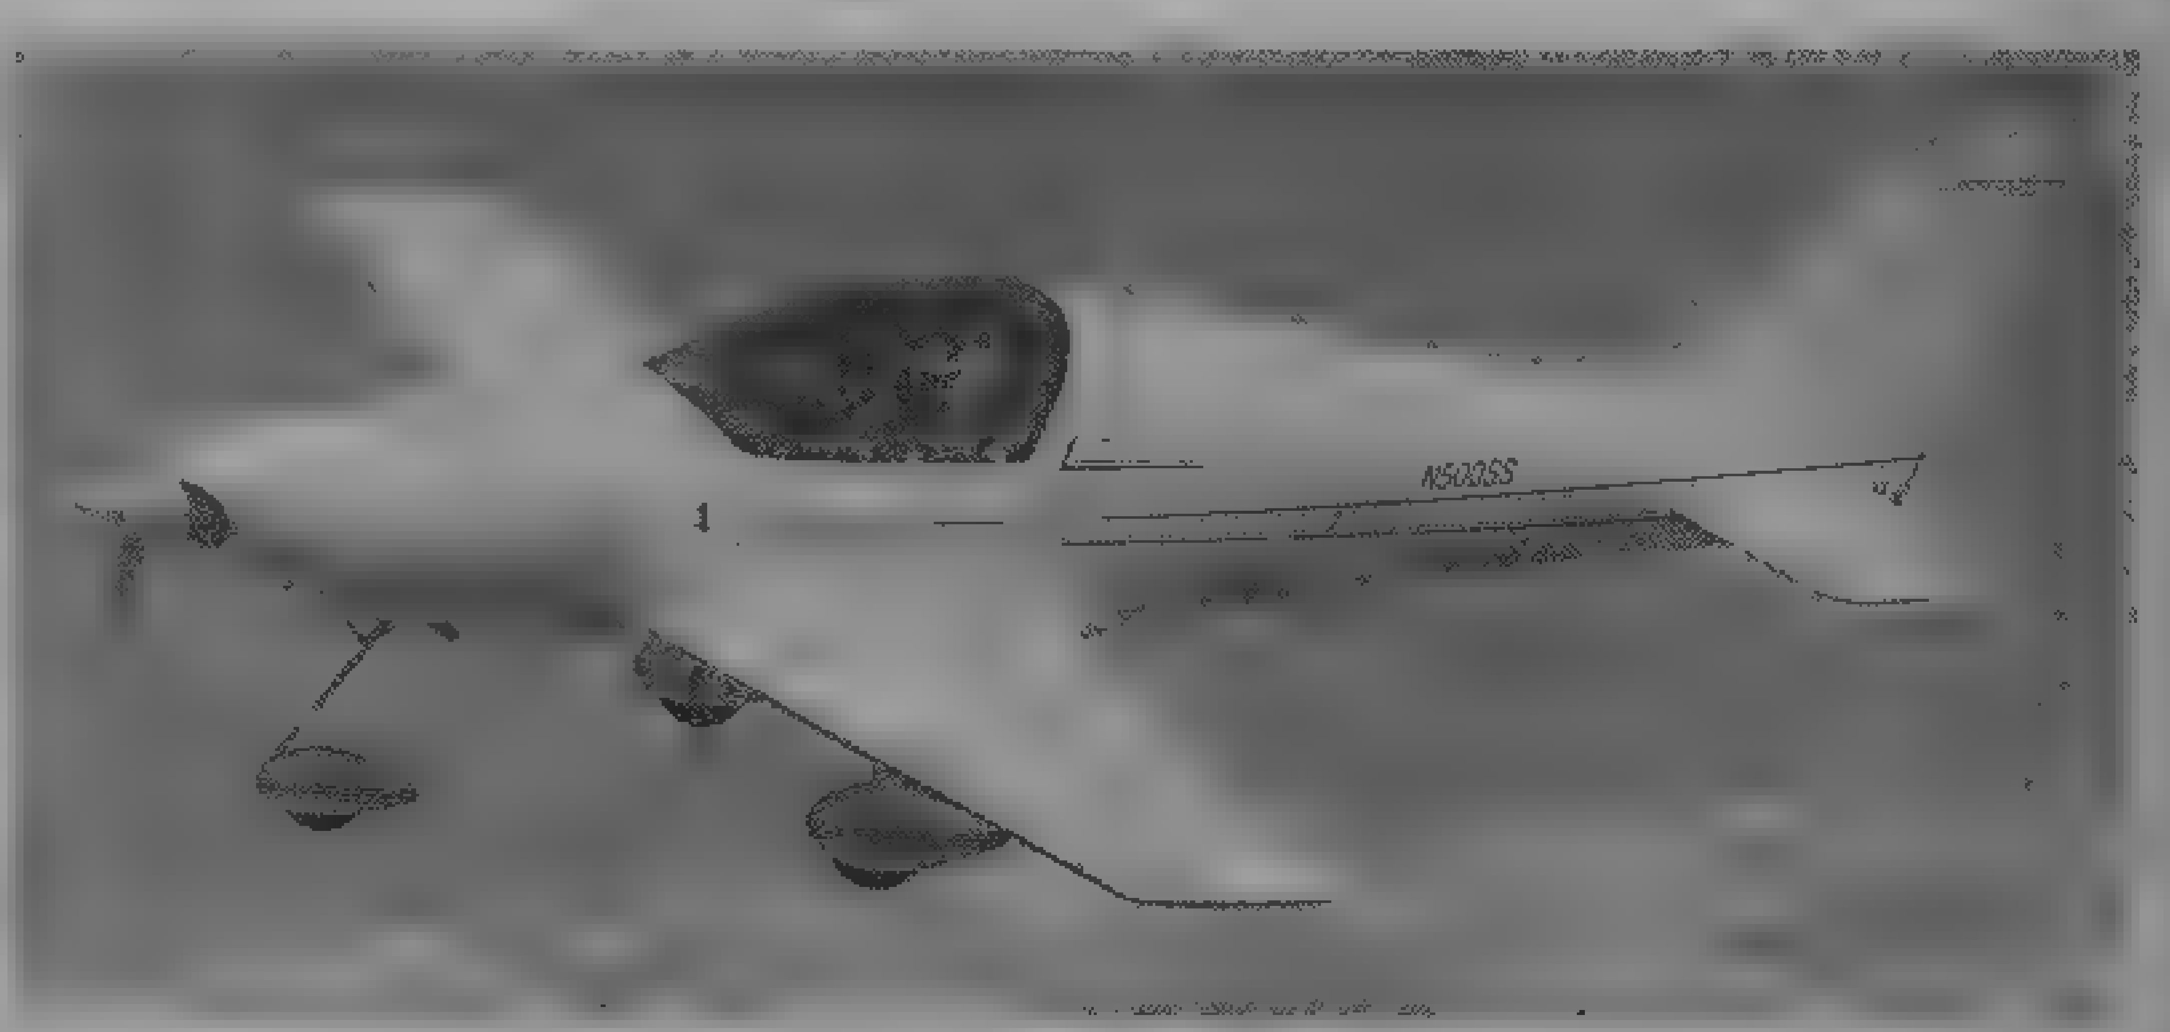
AERO DESIGNS PULSAR

TYPE: Two-seat light cabin monoplane.
CURRENT VERSIONS: Both nosewheel and tailwheel versions available; original version fitted with 49 kW (66 hp) Rotax 582 engine.

Pulsar with wings folded on trailer ready to move *(Alan Gill)* *1994*

Pulsar XP: With 59.7 (80 hp) Rotax 912 engine. *Details apply to this version unless signified otherwise.*
CUSTOMERS: Total of 73 flying by Spring 1995, 60 in USA, eight in UK, two in France, one each in Denmark, Germany and Holland.
COSTS: Kit complete with airframe, engine and basic instruments: $21,500 for basic version, $27,500 for Pulsar XP.
DESIGN FEATURES: Designed for ease of home construction with premoulded components where possible. Wings removable in about 15 minutes for mounting on trailer.
FLYING CONTROLS: Conventional controls operated by rods and cables.

Tailwheel version of Pulsar XP *(Paul Jackson)* *1995*



ADI Pulsar (Rotax 582 engine) *1995*

STRUCTURE: General construction of GFRP with carbonfibre structure and foam cores. Wing skins are composite.
LANDING GEAR: Tricycle or tailwheel options available.
POWER PLANT: One 49 kW (66 hp) Rotax 582 engine in basic Pulsar, directly driving a two-blade fixed-pitch propeller. Rotax 912 engine (59.7 kW, 80 hp) with optional variable-pitch propeller in Pulsar XP. Maximum fuel capacity (XP) 72 litres (19 US gallons, 15.8 Imp gallons).
ACCOMMODATION: Enclosed cabin seating two side by side beneath forward-sliding, one-piece canopy; baggage compartment at rear of cabin.
SYSTEMS: Hydraulics for mainwheel brakes only. Electrical: 12 V battery, 14 V alternator fit appropriate to engine.
AVIONICS: Customer choice.

DIMENSIONS, EXTERNAL:	
Wing span	7.62 m (25 ft 0 in)
Wing aspect ratio	7.81
Length overall	5.94 m (19 ft 6 in)
Height overall	1.93 m (6 ft 4 in)
Propeller diameter	1.52 m (5 ft 0 in)
AREAS:	
Wings, gross	7.43 m² (80.0 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty, equipped	231 kg (510 lb)
Max payload	249 kg (550 lb)
Max T-O and landing weight	481 kg (1,060 lb)
Max wing loading	64.69 kg/m² (13.25 lb/sq ft)
Max power loading	8.06 kg/kW (13.25 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Never exceed speed (VNE)	139 kts (257 km/h; 160 mph)
Max cruising speed (75% power):	
fixed-pitch propeller	122 kts (225 km/h; 140 mph)
variable-pitch propeller	130 kts (241 km/h; 150 mph)
Stalling speed, power off	40 kts (74 km/h; 46 mph)
Max rate of climb at S/L	366 m (1,200 ft)/min
Service ceiling	4,575 m (15,000 ft)
T-O and landing run	244 m (800 ft)
Range with max fuel at 120 kts (222 km/h; 138 mph)	521 n miles (965 km; 600 miles)

UPDATED

AFI

AVIATION FRANCHISING INTERNATIONAL

San Antonio, Texas
CHAIRMAN: Tom Prescott

AFI established to produce the Prescott Pusher in kit form under the new name of Prescott II.

PRESCOTT II

TYPE: Four-seat kitbuilt.
PROGRAMME: Prototype Prescott Pusher (N41PP) first flew 9 July 1985; second prototype (N42PP) represented definitive design, offered in kit form only as a complete airframe with retractable landing gear, including the hydraulic system and components for the landing gear and flaps; first kit-built Pusher flew on 8 April 1988. Marketing transferred to ASI and aircraft renamed Prescott II. Two further development aircraft under construction in 1995; certification to FAA Primary Category anticipated by 1996.
DESIGN FEATURES: Wings, ailerons and flaps of aluminium alloy construction; cambered glassfibre wingtips. Wing section NLF (1)-0215.
STRUCTURE: Fuselage of welded square-section steel tubing covered by non-structural glassfibre shells in two parts plus a nose section. T tail of aluminium alloy construction.
LANDING GEAR: Retractable tricycle type, with tailskid to protect propeller in tail-down attitude.
POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-A2A, driving a pusher propeller. Fuel capacity 214 litres (56.5 US gallons, 47 Imp gallons).

DIMENSIONS, EXTERNAL:	
Wing span	8.94 m (29 ft 4 in)
Length overall	6.18 m (20 ft 3½ in)
Height overall	2.67 m (8 ft 9 in)
Propeller diameter (max)	1.57 m (5 ft 2 in)
AREA:	
Wings, gross	10.29 m² (110.8 sq ft)
WEIGHTS:	
Weight empty	703 kg (1,550 lb)
Baggage capacity	45 kg (100 lb)
Max T-O weight	1,088 kg (2,400 lb)
PERFORMANCE (O-360 engine):	
Max level speed at S/L	184 kts (340 km/h; 212 mph)
Max cruising speed at S/L	174 kts (322 km/h; 200 mph)
Stalling speed: flaps up	63 kts (116 km/h; 72 mph)
flaps down	58 kts (106 km/h; 66 mph)
Max rate of climb at S/L	290 m (950 ft)/min
Service ceiling	5,485 m (18,000 ft)
T-O to 15 m (50 ft)	526 m (1,725 ft)

Second prototype of the Prescott Pusher
1995

Landing from 15 m (50 ft)	473 m (1,550 ft)
Range: with max fuel	869 n miles (1,609 km; 1,000 miles)
with max payload	738 n miles (1,368 km; 850 miles)

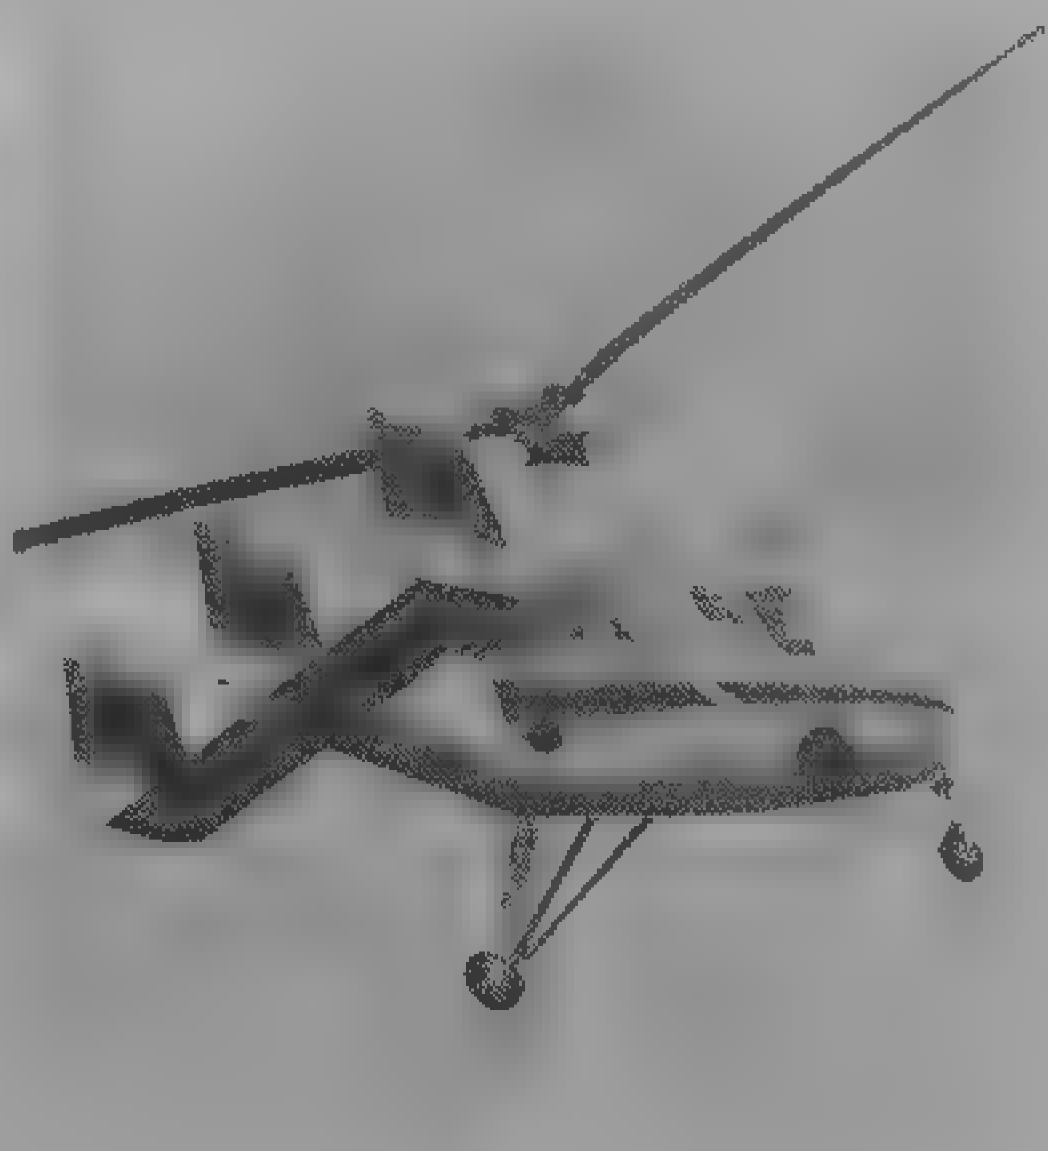
AIR & SPACE 18A

TYPE: Two-seat autogyro.
PROGRAMME: Original aircraft (68 built) produced in mid-1960s (certificated 1965) until Air & Space Manufacturing Inc declared bankrupt in 1966. Farrington Aircraft announced in June 1990 that 30 of these had been modernised under seven STCs and that it intended to restart production in this improved form; first new production aircraft (N902AS) granted Standard Airworthiness Certificate 2 April 1991 and sold; prototype flown with 149 kW (200 hp) IO-360, to be offered as optional engine; to be followed by maximum T-O weight increase to 907 kg (2,000 lb), which provides empty weight of 601 kg (1,325 lb), an anticipated useful load of 306 kg (675 lb), and possibility of three-seat interior. Proposed applications for 18A include patrol/surveillance, environmental monitoring, law enforcement, pipeline inspection and broadcasting as well as private flying.
CUSTOMERS: Four (three and one) sold to two South African customers in 1993, three sold in 1994.
COSTS: Standard VFR equipped $119,995 in March 1995.
DESIGN FEATURES: Three-blade rotor, fully enclosed tandem-seat cabin, non-retractable tricycle landing gear, three-fin tail unit (all-moving central and two fixed outer). Original aircraft described in 1967-68 *Jane's*. Farrington improvements include trimmable two-position collective pitch control, improved engine cowling, noise-reduced exhaust and strengthened nosewheel leg.

Line-up of Air & Space 18A autogyros
1995

POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360 flat four engine with Hartzell two-blade pusher propeller. Fuel capacity 113.5 litres (30 US gallons; 25 Imp gallons).

DIMENSIONS, EXTERNAL:	
Rotor diameter	10.67 m (35 ft 0 in)
Length, without rotor	6.06 m (19 ft 10¾ in)
Height overall	2.95 m (9 ft 8 in)
DIMENSIONS, INTERNAL:	
Cabin length	2.78 m (9 ft 1½ in)
AREAS:	
Rotor disc	89.38 m² (962.1 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty	596 kg (1,315 lb)
Max baggage weight	45 kg (100 lb)



Air & Space 18A two-seat autogyro
1992

Max T-O weight	816.5 kg (1,800 lb)
Max disc loading	9.13 kg/m² (1.87 lb/sq ft)
PERFORMANCE (ISA):	
Never-exceed speed (VNE)	95 kts (177 km/h; 110 mph)
Cruising speed (75% power) at 2,135 m (7,000 ft)	80 kts (148 km/h; 92 mph)
Min level flight speed	24 kts (44 km/h; 27 mph)
Range with reserves	173 n miles (322 km; 200 miles)
Endurance with 30 min reserves	2 h 30 min

AIR TRACTOR

AIR TRACTOR INC

PO Box 485, Municipal Airport, Olney, Texas 76374
Telephone: 1 (817) 564 5616
Fax: 1 (817) 564 2348
PRESIDENT: Leland Snow
VICE PRESIDENT FINANCE: David Ickert

Air Tractor agricultural aircraft based on 41 year experience of Leland Snow, who produced Snow S-2 series, which later became Rockwell S-2R (see earlier *Jane's*). 1,267 aircraft delivered by early 1995, seven models available powered by various P&W PT6A and R-1340 engines

UPDATED

AIR TRACTOR AT-401B AIR TRACTOR

TYPE: Single-seat agricultural aircraft

PROGRAMME: AT-401 developed 1986 from AT-301 (see *Jane's Aircraft Upgrades*), with increased wing span and larger hopper, total of 85 built in 1994. AT-401A version with Polish PZL-3S radial engine has been abandoned with just one aircraft produced (see 1992-93 *Jane's*). AT-401B version replaces the 401 and has Hoerner wingtips and increased wing span

CUSTOMERS: By early 1995, 200 AT-401s delivered to Argentina, Australia, Brazil, Canada, Colombia, Mexico, Spain and USA

COSTS: Standard AT-401 $190,500, with customer supplied engine $158,000

DESIGN FEATURES: Wing aerofoil NACA 4415, dihedral 3° 30', incidence 2°

FLYING CONTROLS: Ailerons, elevators and rudders with balance tabs, ailerons droop 10° when electrically operated Fowler flaps deflected to their maximum of 26°

STRUCTURE: Two-spar wing structure of 2024-T3 light alloy, with alloy steel lower spar cap, bonded doubler inside wing leading edge to resist impact damage, glassfibre wingroot fairings and skin overlaps sealed against chemical ingress, wing ribs and skins zinc chromated before assembly, flaps and ailerons of light alloy. Fuselage of 4130N steel tube, oven stress relieved and oiled internally, with skin panels of 2024-T3 light alloy attached by Camloc fasteners for quick removal; rear fuselage lightly pressurised to prevent chemical ingress; cantilever fin and strut-braced tailplane of light alloy, metal-skinned and sealed against chemical ingress

LANDING GEAR: Non-retractable tailwheel type. Cantilever heavy-duty E-4340 spring steel main gear, thickness 28.6 mm (1.125 in), flat spring suspension for castoring and lockable tailwheel. Cleveland mainwheels with tyre size 8.50-10 (8 ply), pressure 2.83 bars (41 lb/sq in). Tailwheel tyre size 5.00-5. Cleveland four-piston brakes with heavy-duty discs. Optional 29.00-11 Cleveland mainwheels with six piston brakes

POWER PLANT: One remanufactured 447 kW (600 hp) Pratt & Whitney R-1340 air-cooled radial engine with speed ring cowling, driving a Hamilton Standard 12D40/6101A-12 propeller, optional propellers include a Pacific Propeller 22D40/AG200-2 Hydromatic two-blade constant-speed metal and Hydromatic 23D40 three-blade propeller. Air Tractor has designed and is producing new FAA approved replacement crankshaft for R-1340; other new replacement parts available include main and thrust bearings, master rod bearings and blower (impeller) bearings. Over 175 replacement crankshafts delivered by early 1995

ACCOMMODATION: Single seat with nylon mesh cover in enclosed cabin which is sealed to prevent chemical ingress. Downward-hinged window/door on each side. 'Line of sight' instrument layout, with swing-down lower instrument panel for ease of access for instrument maintenance. Baggage compartment in bottom of fuselage, aft of cabin, with door on port side. Cabin ventilation by 0.10 m (4 in) diameter air scoop

SYSTEMS: 24 V electrical system, supplied by 35 A engine-driven alternator, 60 A alternator optional.

AVIONICS: Optional avionics include Bendix/King KX 155 nav/com and Narco ELT-10 emergency locator transmitter

EQUIPMENT: Agricultural dispersal system comprises a 1,514 litre (400 US gallon, 333 Imp gallon) Derakane vinylester resin/glassfibre hopper mounted in forward fuselage with hopper window and instrument panel-mounted hopper quantity gauge; 0.97 m (3 ft 2 in) wide Transland gatebox, Transland 5 cm (2 in) bottom loading valve; Agrinautics 6.4 cm (2½ in) spraypump with Transland on/off valve and either two-blade wooden or five-blade variable-pitch plastics fan, and 41-nozzle stainless steel spray system with streamlined booms. Ground start receptacle and three-colour polyurethane paint finish standard

Optional equipment includes night flying package comprising strobe and navigation lights, night working lights, retractable 600 W landing light in port wingtip, and ferry fuel system. Alternative agricultural equipment includes Transland 22358 extra high volume spreader, Transland 54401 NorCal Swathmaster, and 40 extra spray nozzles for high volume spraying. Hopper rinse system also available

DIMENSIONS, EXTERNAL:
Wing span: 15.57 m (51 ft 1¼ in)
Wing chord, constant: 1.83 m (6 ft 0 in)
Wing aspect ratio: 8.53
Length overall: 8.23 m (27 ft 0 in)
Height overall: 2.59 m (8 ft 6 in)
Propeller diameter: standard: 2.77 m (9 ft 1 in)
optional: 2.59 m (8 ft 6 in)

AREAS:
Wings, gross: 28.43 m² (306.0 sq ft)
Ailerons (total): 3.55 m² (38.2 sq ft)
Trailing-edge flaps (total): 3.75 m² (40.4 sq ft)
Fin: 0.90 m² (9.7 sq ft)
Rudder: 1.30 m² (14.0 sq ft)
Tailplane: 2.42 m² (26.0 sq ft)
Elevators, incl tabs: 2.36 m² (25.4 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, spray equipped: 1,905 kg (4,200 lb)
Max T-O weight: 3,565 kg (7,860 lb)
Max landing weight: 2,721 kg (6,000 lb)
Max wing loading: 125.4 kg/m² (25.69 lb/sq ft)
Max power loading: 7.97 kg/kW (13.1 lb/hp)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max cruising speed at S/L, hopper empty: 135 kts (251 km/h, 156 mph)
Cruising speed at 1,220 m (4,000 ft): 124 kts (230 km/h, 143 mph)
Typical working speed: 104-122 kts (193-225 km/h, 120-140 mph)
Stalling speed at 2,721 kg (6,000 lb):
flaps up: 64 kts (118 km/h, 73 mph)
flaps down: 53 kts (99 km/h, 61 mph)
Stalling speed as usually landed: 47 kts (87 km/h, 54 mph)
Max rate of climb at S/L:
at max landing weight: 335 m (1,100 ft)/min
at max T-O weight: 158 m (520 ft)/min
T-O run: 402 m (1,318 ft)
Range, econ cruising speed at 2,440 m (8,000 ft), no reserves: 547 n miles (1,014 km, 630 miles)

UPDATED

AT-402B TURBO AIR TRACTOR

TYPE: Turboprop agricultural aircraft

PROGRAMME: Following on from AT-400. AT-402 first flight August 1988, certificated November 1988, first delivery late 1988. Current model 402B has Hoerner wingtips and increased span

CURRENT VERSIONS: **AT-402B:** Combines fuselage, tail surfaces and landing gear of AT-400 with turboprop engine and wing of AT-401B

CUSTOMERS: Total of 86 AT-400s (earlier shorter-span model), 82 AT-402s and two 402Bs delivered by early 1995

COSTS: Standard AT-402 $431,900; or $194,500 with customer supplied PT6A-15AG, -27, -28, -34AG engine

DESIGN FEATURES: All models have steel alloy lower wing spar caps for unlimited fatigue life and reinforced leading edges to prevent bird strike damage. Size 29-11 high-flotation tyres and wheels as standard. 250 A starter/generator and two 24 V 21 Ah batteries

POWER PLANT: One 507 kW (680 shp) P&WC PT6A-15AG, -27 or -28, either new or customer-furnished, driving a Hartzell three-blade constant-speed reversible-pitch propeller. Standard fuel capacity 644 litres (170 US gallons, 142 Imp gallons), optional fuel tankage 818 litres (216 US gallons; 180 Imp gallons) or 886 litres (234 US gallons, 195 Imp gallons).

EQUIPMENT: Hopper and gatebox size as for AT-401, optional equipment includes Transland extra high volume dispersal system

DIMENSIONS, EXTERNAL:
Wing span: 15.57 m (51 ft 1¼ in)

WEIGHTS AND LOADINGS:
Weight empty, spray equipped: 1,733 kg (3,820 lb)
Certificated gross weight (FAR 23): 2,721 kg (6,000 lb)
Typical operating weight (CAM 8): 3,565 kg (7,860 lb)
Max wing loading: 125.4 kg/m² (25.69 lb/sq ft)
Max power loading: 7.04 kg/kW (11.56 lb/shp)

PERFORMANCE (at max T-O weight except where indicated):
Max level speed at S/L:
clean: 174 kts (322 km/h, 200 mph)
with dispersal equipment: 160 kts (298 km/h, 185 mph)
Cruising speed at 283 kW (380 shp) at 2,440 m (8,000 ft): 142 kts (264 km/h; 164 mph)
Typical working speed: 113-126 kts (209-233 km/h, 130-145 mph)
Stalling speed at 2,721 kg (6,000 lb) AUW:
flaps up: 64 kts (118 km/h, 73 mph)
flaps down: 53 kts (99 km/h, 61 mph)
Stalling speed at 2,041 kg (4,500 lb) typical landing weight: 46 kts (86 km/h; 53 mph)
Max rate of climb at S/L, dispersal equipment installed:
AUW of 2,721 kg (6,000 lb): 495 m (1,625 ft)/min
AUW of 3,565 kg (7,860 lb): 305 m (1,000 ft)/min
T-O run at AUW of 3,565 kg (7,860 lb): 247 m (810 ft)
Landing run at 2,041 kg (4,500 lb): 122 m (400 ft)

UPDATED

AIR TRACTOR AT-502B

TYPE: Turboprop agricultural aircraft

PROGRAMME: First flight April 1987; certificated 23 June 1987. 43 sold in 1994

CURRENT VERSIONS: **AT-502:** Original version. *Described below*

AT-502A: Similar to AT-502B but with 820 kW (1,100 shp) PT6A-45R, slow turning (1,425 rpm) five-blade Hartzell propeller, enlarged vertical tail surfaces. For operation in mountainous terrain. Prototype first flight February 1992, certificated April 1992, 15 delivered in 1994.

AT-502B: Thicker wing with 0.61 m (2 ft) longer span and Hoerner wingtips, which claimed to increase width of spray pattern by 0.91 m (3 ft)

CUSTOMERS: 267 AT-502s delivered by January 1995

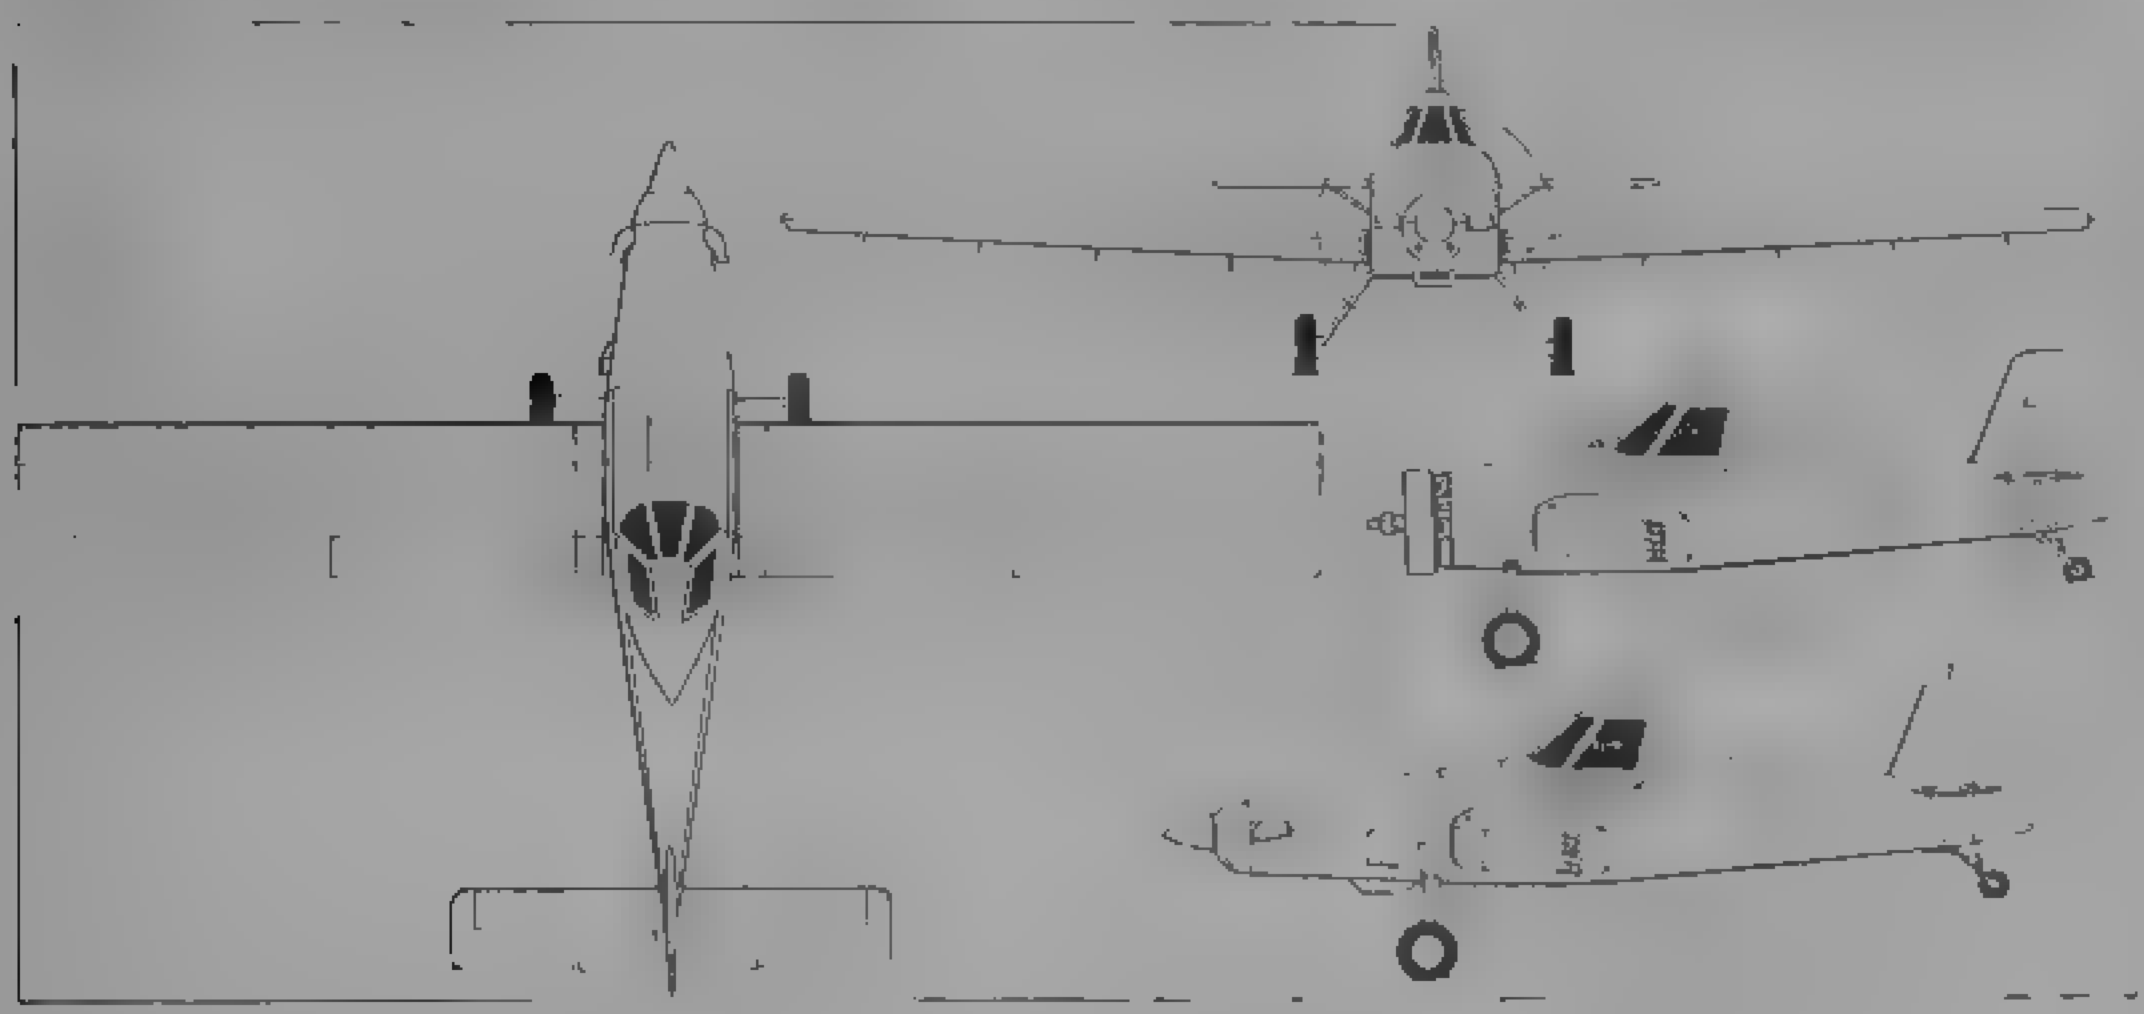
COSTS: Standard AT-502 $441,000, or $204,900 with customer supplied PT6A-15AG, -27, -28, -34AG

DESIGN FEATURES: Larger chemical hopper than AT-400 to handle low-density nitrogen based fertilisers such as urea, safety glass centre windscreen with wiper. Differences

Air Tractor AT-402B (P&WC PT6A turboprop)

Air Tractor AT-502 showing the spraybars under the wings and the windmill generator under the fuselage

1995



Air Tractor AT-502 agricultural aircraft, with extra side view (top) of AT-401 *(Jane's/Dennis Punnett)*

1993

from AT-400 include approximately 1.52 m (5 ft 0 in) increase in wing span, alloy steel lower spar cap and bonded doubler on inside of wing leading-edge for increased resistance to impact damage, and glassfibre wingroot fairings, fuselage length increased by 0.56 m (1 ft 10 in), width increased by 0.25 m (10 in), and larger diameter tubular frame members used to cater for increased maximum T-O weight.

LANDING GEAR: Non-retractable tailwheel type. Heavy-duty E-4340 spring steel main gear, thickness 37.2 mm (1.31 in), flat spring for castoring and lockable tailwheel. Cleveland mainwheels, tyre size 29.00-11, pressure 3.45 bars (50 lb/sq in); tailwheel tyre size 5.00-5. Cleveland six-piston brakes with heavy-duty discs.

POWER PLANT: One 507 kW (680 shp) Pratt & Whitney Canada PT6A-15AG, PT6A-27 or PT6A-28, or 559 kW (750 shp) PT6A-34 or PT6A-34AG turboprop, driving a Hartzell HC-B3TN-3D/T10282+4 three-blade metal propeller. Standard fuel capacity 644 litres (170 US gallons; 142 Imp gallons). Optional capacities 818 litres (216 US gallons; 180 Imp gallons) and 886 litres (234 US gallons; 195 Imp gallons).

ACCOMMODATION: As for AT-400, but with new quick detachable instrument panel and removable fuselage skin panels for ease of maintenance.

SYSTEMS: Two 24 V 42 Ah batteries and 250 A starter/generator.

AVIONICS: *Comms:* Optional avionics include Bendix/King KX 155 nav/com and KR 87 ADF, KY 196 com radio, KT 76A transponder and Narco ELT-10 emergency locator transmitter.

EQUIPMENT: Agricultural dispersal system comprises a 1,900 litre (502 US gallon, 418 Imp gallon) hopper mounted in forward fuselage with hopper window and instrument panel-mounted hopper quantity gauge; 0.97 m (3 ft 2 in) wide Transland gatebox; Transland 6.4 cm (2½ in) bottom loading valve, Agrinautics 6.4 cm (2½ in) spraypump with Transland on/off valve and five-blade variable-pitch plastics fan and 40-nozzle stainless steel spray system with streamlined booms. Optional dispersal equipment includes 7.6 cm (3 in) spray system with 119 spray nozzles, and automatic flagman. Standard equipment includes safety glass centre windscreen panel, ground start receptacle, three-colour polyurethane paint finish, strobe and navigation lights, windscreen washer and wiper; and twin nose-mounted landing/taxi lights. Optional equipment includes night flying package, comprising night working lights, retractable 600 W landing light in port wingtip; fuel flowmeter, fuel totaliser and ferry fuel system. Alternative agricultural equipment includes Transland 22356 extra high volume spreader, Transland 54401 NorCal Swathmaster, 41 extra spray nozzles for high-volume spraying and eight- or 10-unit Micronair Mini Atomiser unit; an optional hopper rinse tank can be fitted.

DIMENSIONS, EXTERNAL:

Wing span: AT-502A/502B	15.85 m (52 ft 0 in)
Wing chord, constant	1.83 m (6 ft 0 in)
Wing aspect ratio	8.67
Length overall	9.91 m (32 ft 6 in)
Height overall	2.99 m (9 ft 9½ in)
Wheel track	3.11 m (10 ft 2½ in)
Wheelbase	6.64 m (21 ft 9½ in)
Propeller diameter	2.69 m (8 ft 10 in)

AREAS:

Wings, gross: AT-502A/502B	28.99 m² (312.0 sq ft)
Ailerons (total)	3.53 m² (38.0 sq ft)
Trailing-edge flaps (total)	3.75 m² (40.4 sq ft)
Fin	0.90 m² (9.7 sq ft)
Rudder	1.30 m² (14.0 sq ft)
Tailplane	2.41 m² (26.0 sq ft)
Elevators (total, incl tab)	2.44 m² (26.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, spray equipped	1,950 kg (4,300 lb)
Max T-O weight	4,309 kg (9,500 lb)
Max landing weight	3,629 kg (8,000 lb)
Max wing loading: AT-502A/502B	148.66 kg/m² (30.45 lb/sq ft)
Max power loading: 502A	5.26 kg/kW (8.64 lb/shp)
502B (PT6A-34AG)	7.71 kg/kW (12.67 lb/shp)
502B (PT6A-15AG)	8.50 kg/kW (13.97 lb/shp)

PERFORMANCE (AT-502B at max T-O weight, ISA, except where indicated, with spray equipment installed):

Never-exceed speed (VNE) and max level speed at S/L, hopper empty: 156 kts (290 km/h, 180 mph)

Cruising speed at 2,440 m (8,000 ft), 283 kW (380 shp): 136 kts (253 km/h, 157 mph)

Typical working speed: 104-126 kts (193-233 km/h, 120-145 mph)

Stalling speed at 3,629 kg (8,000 lb):

flaps up	72 kts (134 km/h, 83 mph)
flaps down	60 kts (111 km/h, 69 mph)

Stalling speed at 1,978 kg (4,360 lb), typical landing weight: 46 kts (86 km/h, 53 mph)

Max rate of climb at S/L, AUW of 3,629 kg (8,000 lb):

with PT6A-15AG	311 m (1,020 ft)/min
with PT6A-34AG	360 m (1,180 ft)/min

Max rate of climb at S/L, AUW of 4,309 kg (9,500 lb):

with PT6A-15AG	232 m (760 ft)/min
with PT6A-34AG	282 m (925 ft)/min

T-O run at AUW of 3,629 kg (8,000 lb):

with PT6A-15AG	244 m (800 ft)
with PT6A-34AG	222 m (730 ft)

T-O run at AUW of 4,309 kg (9,500 lb):

with PT6A-15AG	356 m (1,170 ft)
with PT6A-34AG	302 m (990 ft)

Range with max fuel: 435 n miles (805 km, 500 miles)

UPDATED

AIR TRACTOR AT-802

TYPE: Two-seat agricultural and firefighting aircraft.

PROGRAMME: Design started July 1989; first flight of prototype (N802LS) 30 October 1990; second aircraft flew November 1991, with PT6A-45R and configured as agricultural model with spraybooms, pump and Transland gatebox. Production deliveries started second quarter 1993.

CUSTOMERS: 15 delivered by early 1995 to Argentina. Production of 10 aircraft planned in 1995.

CURRENT VERSIONS: **AT-802**: Two-seater powered by P&WC PT6A-45R, certificated for gross weight of 6,804 kg (15,000 lb) 27 April 1993. PT6A-65R and -67R versions certificated April 1993 at maximum T-O weight of 7,257 kg (16,000 lb).

AT-802A: Single-seat version, third production aircraft in this configuration, can be powered by used PT6A-45R, PT6A-65B or PT6A-65AG engine. First flight 6 July 1992. FAA certification gained 17 December 1992, certificated for gross weight of 6,804 kg (15,000 lb) with PT6A-45R on 27 April 1993. PT6A-65R and -67R versions certificated March 1993 at maximum T-O weight of 7,257 kg (16,000 lb).

AT-802AF: Single-seat firefighting version, PT6A-67AF engine. FAA certification at 5,670 kg (12,500 lb) maximum T-O weight 17 December 1992, certificated at 7,257 kg (16,000 lb) on 27 April 1993, giving useful load of 4,232 kg (9,330 lb). *Data apply to this version except where indicated.*

COSTS: Standard AT-802A $795,000 with factory refurbished PT6A-67AG, with customer supplied PT6A-45R, -65AG or -67R $331,000. Standard AT-802AF $905,000.

DESIGN FEATURES: Largest model built by company to date, full dual controls for training, also designed for firefighting; programmable logic computer with cockpit control panel and digital display enables pilot to select coverage level and opens hydraulically operated 'bomb bay' drop doors to prescribed width, closing them when selected amount of retardant released. Drop doors adjust automatically for changing IAS and aircraft acceleration to provide a constant flow rate and even ground coverage. Wing aerofoil section NACA 4415; dihedral 3° 30'; incidence 2°.

FLYING CONTROLS: Manually operated ailerons, elevators and rudder with balance tabs; electrically operated Fowler trailing-edge flaps deflect to maximum 30°.

STRUCTURE: Two-spar wing of 2024-T3 light alloy with alloy steel upper and lower spar caps and bonded doubler on inside of leading-edge for impact damage resistance; ribs and skins zinc chromated before assembly; glassfibre wingroot fairing and skin overlaps sealed against chemical ingress; flaps and ailerons of light alloy. Fuselage of welded 4130N steel tube, oven stress relieved and oiled internally, with skin panels of 2024-T3 light alloy attached by Camloc fasteners for quick removal; rear fuselage lightly pressurised to prevent chemical ingress. Cantilever fin and strut braced tailplane of light alloy, metal skinned and sealed against chemical ingress.

LANDING GEAR: Non-retractable tailwheel type. Cantilever heavy duty E-4340 spring steel main legs, thickness 39.6 mm (1.56 in); flat spring suspension for castoring and lockable tailwheel. Cleveland mainwheels with tyre size 11.00-12 (10 ply), pressure 4.14 bars (60 lb/sq in). Tailwheel tyre size 6.00-6. Cleveland eight piston brakes with heavy-duty discs.

POWER PLANT: One Pratt & Whitney Canada PT6A-67AG or -67AF turboprop, rated at 1,007 kW (1,350 shp) at 37°C driving a Hartzell five-blade feathering and reversible-pitch constant speed metal propeller. (Used engine options for AT-802A: see Current Versions.) Fuel in two integral wing tanks, total usable capacity 946 litres (250 US gallons, 208 Imp gallons); optional tanks to increase capacity to 1,438 litres (380 US gallons, 317 Imp gallons). Engine air is filtered through two large pleated paper industrial truck filters.

ACCOMMODATION: Two seats in tandem in enclosed cabin which is sealed to prevent chemical ingress and protected with overturn structure. Four downward hinged doors, two on each side. Windscreen is safety-plate auto glass, with washer and wiper. Air conditioning system standard.

Air Tractor AT-802 two-seat agricultural and firefighting aircraft

1994

SYSTEMS: Hydraulic system, pressure 207 bars (3,000 lb/sq in)
AVIONICS: Advanced nav/com, including Loran
EQUIPMENT: Two removable Derakane vinylester hoppers forward of cockpit and 227 litre (60 US gallon; 50 Imp gallon) gate tank in ventral bulge, for agricultural chemical, fire retardant or water; total capacity 3,066 litres (810 US gallons; 674 Imp gallons)
DIMENSIONS, EXTERNAL:

Wing span	17.68 m (58 ft 0 in)
Wing chord constant	2.07 m (6 ft 9½ in)
Wing aspect ratio	8.60
Length overall	11.07 m (36 ft 4 in)
Height overall	3.35 m (11 ft 0 in)
Wheel track	3.11 m (10 ft 2½ in)
Wheelbase	7.25 m (23 ft 9½ in)
Propeller diameter	2.92 m (9 ft 7 in)

AREAS:

Wings, gross	36.33 m² (391.0 sq ft)
Ailerons (total)	4.61 m² (49.6 sq ft)
Trailing-edge flaps (total)	5.54 m² (59.6 sq ft)
Fin	1.24 m² (13.4 sq ft)
Rudder	1.57 m² (16.9 sq ft)
Tailplane	3.44 m² (37.0 sq ft)
Elevators (total, incl tab)	3.00 m² (32.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped: sprayer	2,858 kg (6,300 lb)
firefighter	3,025 kg (6,670 lb)
Max T-O and landing weight	7,257 kg (16,000 lb)
Max wing loading	199.8 kg/m² (40.92 lb/sq ft)
Max power loading	6.83 kg/kW (11.24 lb/shp)

PERFORMANCE (at max T-O weight, ISA, except where indicated):

Max level speed at S/L	182 kts (338 km/h, 210 mph)
Max cruising speed at 1,675 m (5,500 ft)	169 kts (314 km/h, 195 mph)
Stalling speed, power off, flaps down, at max landing weight	79 kts (147 km/h, 91 mph)
Max rate of climb at S/L	244 m (800 ft)/min
Service ceiling	3,960 m (13,000 ft)
T-O run	549 m (1,800 ft)
Range with max fuel	434 n miles (804 km; 500 miles)

1995

AMERICAN CHAMPION 7GCBC EXPLORER

TYPE: Two-seat light cabin monoplane, suitable for training and touring. Formerly Citabria 150S (7GCBC).
PROGRAMME: Certified late 1993.
CUSTOMERS: Two aircraft added to US civil register in 1994.
COSTS: Standard aircraft $60,000.
DESIGN FEATURES: Include modified instrument panel, new window and door, and improved ventilation and heating system. Options include streamline wheel fairings and voltage regulator. Braced high-wing monoplane with NACA 4412 aerofoil section. Dihedral 2°, incidence 1°.
FLYING CONTROLS: Ailerons, elevators and rudder conventional mechanical, elevator trim tab, fixed incidence tailplane. Trailing-edge flaps.
STRUCTURE: Fuselage and wire-braced tail unit are welded chromoly steel tube with Dacron covering, two-spar wing has Sitka spruce spars, aluminium ribs, Dacron covering. GFRP tips and steel tube V struts.
LANDING GEAR: Non-retractable tricycle type. Cantilever spring steel main gear with 6.00-6 wheels and 4 ply tyres as standard. Steerable tailwheel. Disc brakes and parking brake.
POWER PLANT: One 112 kW (150 hp) Textron Lycoming O-320 series flat-four engine, McCauley 1C172AGM two-blade fixed-pitch metal propeller. Fuel in two wing tanks, combined capacity 136 litres (36 US gallons, 30 Imp gallons), overwing refuelling point for each tank. Oil capacity 7.5 litres (2 US gallons, 1.7 Imp gallons).
ACCOMMODATION: Two seats in tandem in fully enclosed cabin. Dual controls. Space for 45 kg (100 lb) of baggage. Door on starboard side.
SYSTEMS: Hydraulic for mainwheel brakes only. Electrical system (12 V DC) powered by engine-driven alternator and battery.
AVIONICS: To customer's choice.
DIMENSIONS, EXTERNAL:

Wing span	10.49 m (34 ft 5 in)
Wing chord, constant	1.52 m (5 ft 0 in)
Wing aspect ratio	6.97
Length overall	6.92 m (22 ft 8½ in)
Height overall	2.35 m (7 ft 8½ in)
Wheel track	1.93 m (6 ft 4 in)
Wheelbase	4.90 m (16 ft 1 in)

AREAS:

Wings, gross	15.79 m² (170.0 sq ft)
Ailerons (total)	1.53 m² (16.50 sq ft)
Fin	0.65 m² (7.02 sq ft)
Rudder	0.63 m² (6.83 sq ft)
Tailplane	1.14 m² (12.25 sq ft)
Elevators (total, incl tab)	1.35 m² (14.58 sq ft)

WEIGHTS AND LOADINGS (7GCBC, Explorer similar):

Weight empty, equipped	522 kg (1,150 lb)
Max T-O and landing weight	748 kg (1,650 lb)
Max wing loading	47.3 kg/m² (9.7 lb/sq ft)
Max power loading	6.68 kg/kW (11.0 lb/hp)

PERFORMANCE (7GCBC at max T-O weight; Explorer similar):

Never-exceed speed (V_{NE})	140 kts (261 km/h, 162 mph)
Max level speed at S/L	113 kts (209 km/h, 130 mph)
Max cruising speed (75% power) at optimum height	111 kts (206 km/h, 128 mph)
Cruising speed (65% power)	107 kts (198 km/h, 123 mph)
Stalling speed, flaps down	39 kts (72 km/h, 45 mph)
Max rate of climb at S/L	349 m (1,145 ft)/min
Service ceiling	5,180 m (17,000 ft)
T-O run	93 m (305 ft)
T-O to 15 m (50 ft)	173 m (567 ft)
Landing from 15 m (50 ft)	210 m (690 ft)
Landing run	95 m (310 ft)
Range with max fuel, allowance for start, taxi, S/L T-O, climb and descent, no reserves: at 75% power	431 n miles (799 km, 496 miles)
at 55% power	521 n miles (966 km, 600 miles)
g limits	+5/−2

UPDATED

AMERICAN CHAMPION 8KCAB SUPER DECATHLON

TYPE: Two-seat light cabin monoplane and aerobatic competition aircraft.
PROGRAMME: FAA certification under FAR Pt 23, for both Normal and Aerobatic categories, granted 1970.
CURRENT VERSIONS: **Super Decathlon**: Constant-speed propeller.

Super Decathlon Fixed Pitch: Fixed-pitch propeller, new paint scheme, offers economy of Explorer with all aerobatic manoeuvres of Super Decathlon.
COSTS: Standard price $69,900.
CUSTOMERS: Approximately 25 built in 1993 and 14 in 1994, total 95 built 1990-94.
DESIGN FEATURES: Higher rated engine than Decathlon, cleared for limited inverted flight, choice of constant-speed or fixed-pitch propeller. Wing section NACA 1412 (modified), dihedral 1°, incidence 1° 30'.
FLYING CONTROLS: Ailerons, elevators with port trim tab, and rudder.
STRUCTURE: Wing has wooden spars and aluminium alloy ribs, Dacron covered, GFRP wingtips, Dacron covered ailerons, aluminium alloy (front) and steel tube (aft) bracing struts. Fuselage and tail unit are welded steel tube structures, Dacron covered.
LANDING GEAR: Non-retractable tailwheel type; cantilever spring steel main legs; mainwheel tyres size 17 × 6.6, pressure 1.66 bars (24 lb/sq in); tailwheel tyre size 8.30 × 2.50-2.80, pressure 2.07 bars (30 lb/sq in); Cleveland disc brakes, optional wheel fairings.
POWER PLANT: One 134 kW (180 hp) Textron Lycoming AEIO-360-H1A flat-four engine, driving a Hartzell constant-speed or fixed-pitch propeller. Fuel capacity 151.4 litres (40 US gallons, 33.3 Imp gallons). Oil capacity 7.5 litres (2 US gallons, 1.7 Imp gallons).
ACCOMMODATION: Tandem seats in enclosed cabin.
DIMENSIONS, EXTERNAL:

Wing span	9.75 m (32 ft 0 in)
Wing chord, constant	1.63 m (5 ft 4 in)
Wing aspect ratio	6.06
Length overall	6.98 m (22 ft 10¾ in)
Height overall	2.36 m (7 ft 9 in)
Tailplane span	3.10 m (10 ft 2¼ in)

AREAS:

Wings, gross	15.71 m² (169.1 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	596 kg (1,315 lb)
Max T-O weight	816 kg (1,800 lb)
Max wing loading	51.75 kg/m² (10.6 lb/sq ft)
Max power loading	6.08 kg/kW (10.0 lb/hp)

PERFORMANCE:

Max level speed at 2,315 m (7,000 ft)	137 kts (254 km/h, 158 mph)
Cruising speed at 75% power	130 kts (241 km/h, 150 mph)
Stalling speed	47 kts (87 km/h, 54 mph)
Max rate of climb at S/L	375 m (1,230 ft)/min
Service ceiling	4,875 m (16,000 ft)
Range, no reserves: at 75% power	509 n miles (944 km, 587 miles)
at 55% power	542 n miles (1,006 km, 625 miles)
g limits	+6/−5

UPDATED

AMERICAN CHAMPION 8GCBC SCOUT

TYPE: Two-seat light utility aircraft.
PROGRAMME: Original 8GCBC version with 134 kW (180 hp) engine received type approval 1974.
CUSTOMERS: Five built in 1993 and one in 1994, total 39 built 1991-94.
COSTS: $65,900 with 134 kW (180 hp) Textron Lycoming O-360-C2A engine and McCauley 1A200HFA8041 fixed-pitch propeller; $67,900 with O-360-C1A engine and Hartzell HC-C2YR 1BF/F7666A O constant-speed propeller. Retrofit metal spar wing for existing 8GCBC, $13,800 with 136 litre (36 US gallon; 30 Imp gallon) wing tank (usable capacity), $14,800 with optional 265 litre (70 US gallon, 58 Imp gallon) tank (usable).
DESIGN FEATURES: Upgraded version of Bellanca/Champion Scout, with new lighter and stronger metal spar wing with 300 per cent less deflection than previous wooden wings, circuit breakers; modern avionics, revised interior; and high gloss weather resistant exterior finish. Can operate from short fields while towing glider or banner, low speed assists pipeline, border patrol, forestry and wildlife management roles. Options include wheel fairings, cropduster package, long-range fuel tank, glider tow assembly, and new voltage regulator.

Wing section NACA 4412, dihedral 1°, incidence 1°. Hoerner wingtips.
FLYING CONTROLS: Ailerons, elevators and rudder; 27° droop trailing-edge flaps.
STRUCTURE: All-metal, with Dacron covering.
LANDING GEAR: Non-retractable tailwheel type. Cantilever spring steel main gear with wheels and tyres size 8.50 × 6 (4 ply), heavy-duty tailwheel, optional floats, skis or tundra tyres. Dual toe brakes, parking brake.
POWER PLANT: See Costs. Oil capacity 7.5 litres (2 US gallons; 1.7 Imp gallons).
ACCOMMODATION: Tandem seating for two, dual controls.

SYSTEMS: Heating and ventilation, vacuum pump system, electrical with starter, 60 A alternator, ammeter, 12 V Gel Cell battery, voltage regulator with overvolt protector, control panel with circuit breakers.

AVIONICS: Terra, Narco and Bendix/King suites available; include communications, intercom, emergency locator transmitter, and gyro panel groups; other instruments at customer's request.

DIMENSIONS, EXTERNAL (A: fixed-pitch propeller, B: constant-speed propeller):

Wing span	11.02 m (36 ft 2 in)
Wing chord, constant	1.52 m (5 ft 0 in)
Wing aspect ratio	7.27
Length overall: A	6.93 m (22 ft 9 in)
B	7.01 m (23 ft 0 in)
Height overall	2.64 m (8 ft 8 in)
Tailplane span	3.10 m (10 ft 2¼ in)
Propeller diameter: B	1.93 m (6 ft 4 in)

AREAS:

Wings, gross	16.70 m² (180.0 sq ft)

WEIGHTS AND LOADINGS (A and B as above):

Weight empty: A	597 kg (1,315 lb)
B	603 kg (1,330 lb)
Max T-O weight: A and B, Normal	975 kg (2,150 lb)
A, Restricted	1,179 kg (2,600 lb)
Max wing loading: Normal	58.3 kg/m² (11.94 lb/sq ft)
B, Restricted	70.5 kg/m² (14.4 lb/sq ft)
Max power loading: Normal	7.28 kg/kW (11.94 lb/hp)
B, Restricted	8.80 kg/kW (14.44 lb/hp)

PERFORMANCE (A and B as above):

Max level speed at S/L:	
A, B	117 kts (217 km/h, 135 mph)
Cruising speed, 75% power:	
A	106 kts (196 km/h, 122 mph)
B	113 kts (209 km/h, 130 mph)
Stalling speed, flaps down:	
A, B	45 kts (84 km/h, 52 mph)
Max rate of climb at S/L: A	329 m (1,080 ft)/min
B	311 m (1,020 ft)/min
T-O run: A, B	156 m (510 ft)
Range, no reserves:	
A, at 75% power	333 n miles (618 km; 384 miles)
A, at 75% power, optional fuel	680 n miles (1,260 km; 783 miles)
A, at 55% power, optional fuel	779 n miles (1,444 km; 897 miles)
B, at 75% power	343 n miles (636 km; 395 miles)
B, at 75% power, optional fuel	700 n miles (1,297 km; 806 miles)
B, at 55% power, optional fuel	802 n miles (1,487 km; 924 miles)

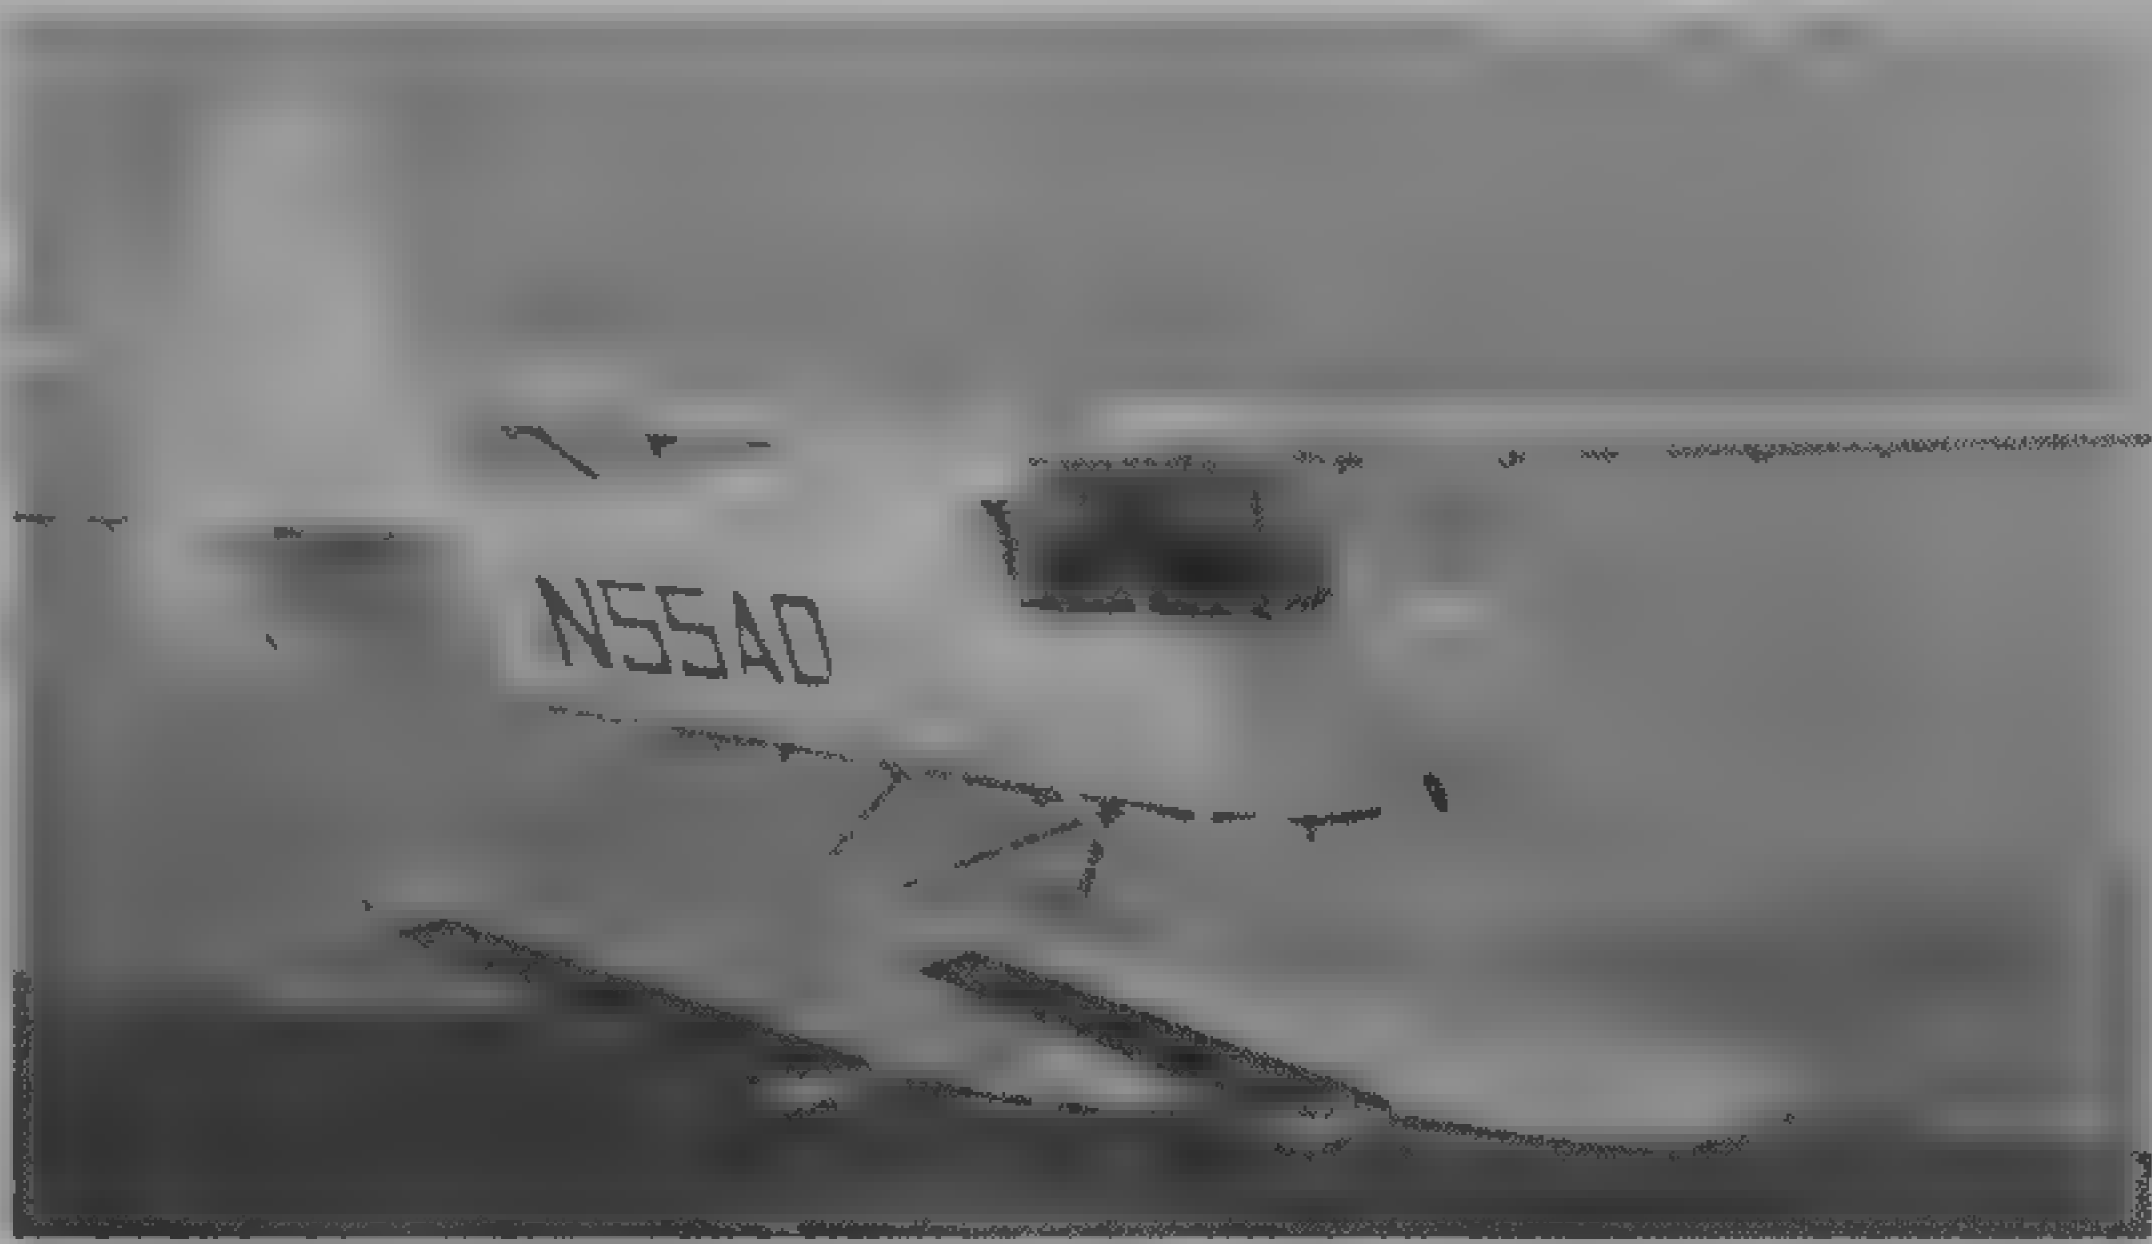
ARCTIC AIRCRAFT INTERSTATE S1B2 ARCTIC TERN

TYPE: Tandem two-seat sporting and general utility aircraft.

PROGRAMME: Updated and much improved version of Interstate S1A, first flown 1940. Built to CAR 04a (aerobatic) standard; certificated for operation on optional Edo floats 20 January 1981; production in response to individual orders. Full description in 1994-95 and earlier *Jane's*.

UPDATED



Arctic Aircraft Interstate S1B2 Arctic Tern

1993

ARCTIC AIRCRAFT INTERSTATE S-4 PRIVATEER

TYPE: Four-seat utility aircraft.

PROGRAMME: Certificated in 1994.

COSTS: Assembled $72,300.

CUSTOMERS: Four assembled aircraft and eight kits sold.

DESIGN FEATURES: Longer span version of Arctic Tern, with increased fuselage width to allow for four persons.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320-B2B flat-four engine. Fuel capacity 151 litres (40 US gallons; 33.3 Imp gallons). Optional underbelly auxiliary fuel tank.

DIMENSIONS, EXTERNAL:

Wing span	11.48 m (37 ft 8 in)
Wing aspect ratio	7.51
Length overall	7.01 m (23 ft 0 in)
Height overall	2.13 m (7 ft 0 in)

AREAS:

Wings, gross	17.56 m² (189.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	521 kg (1,148 lb)
Baggage capacity	45 kg (100 lb)
Max T-O weight	1,021 kg (2,250 lb)
Max wing loading	58.1 kg/m² (11.9 lb/sq ft)
Max power loading	8.58 kg/kW (14.06 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Cruising speed:	
75% power at 1,065 m (3,500 ft)	107 kts (198 km/h, 123 mph)
65% power at 1,065 m (3,500 ft)	103 kts (191 km/h, 119 mph)

Arctic Aircraft Interstate S-4 Privateer

1993

Stalling speed, flaps down	33 kts (61 km/h, 38 mph)
Max rate of climb at S/L	317 m (1,040 ft)/min
Service ceiling	4,575 m (15,000 ft)
T-O to, and landing from, 15 m (50 ft)	153 m (500 ft)
Range at 75% power at 915 m (3,000 ft), 45 min reserves	600 n miles (1,112 km; 691 miles)
at 65% power, reserves as above	650 n miles (1,204 km; 748 miles)

AMERICAN SPORTSCOPTER ULTRASPORT

TYPE: Single/two-seat ultralight/microlight helicopter.

PROGRAMME: Prototype (254 version) first flight 24 July 1993. Two prototypes built and tested. Supplied as five module kit taking 60 man-hours to assemble.

CURRENT VERSIONS: **Ultrasport 254**: Single-seat, ultralight category. Designation is empty weight in pounds.

Ultrasport 331: Microlight category FAR Pt 21.191(g); one or two seats, in design.

CUSTOMERS: Three 331s ordered by Georgia Tech Research Corporation for delivery in kit form in May/June 1995 for participation in US Army's Autonomous Scout Rotorcraft Testbed programme.

COSTS: 254 version between $25,000 and $35,000, depending on customer fit.

DESIGN FEATURES: Design objective of 254 was basic weight not to exceed 115 kg (254 lb) in order to comply with FAR Pt 103. Two-blade main rotor; shielded two-blade tail rotor; tailplane with fins at tip; tail rotor drive carried in narrow streamline tailboom.

FLYING CONTROLS: Conventional collective, cyclic and yaw pedals. Cyclic stick is top-mounted in cockpit.

STRUCTURE: Composites.

LANDING GEAR: Fixed skids or optional floats.

POWER PLANT: One 41 kW (55 hp) Gobler Hirth 2703 two-stroke engine with electric starter. Normal fuel capacity 38 litres (10 US gallons, 8.3 Imp gallons) in 254, 87.5 litres (23.1 US gallons, 19.2 Imp gallons) in 331.

ACCOMMODATION: Single open seat (254 version), side by side seating optional in 331 version.

SYSTEMS: Electrical: 12 V battery, 14 V alternator fit appropriate to engine.

AVIONICS: Customer choice.

DIMENSIONS, EXTERNAL:

Main rotor diameter	6.40 m (21 ft 0 in)
Main rotor blade chord	0.17 m (6¾ in)
Tail rotor diameter	0.76 m (2 ft 6 in)
Tail rotor blade chord	0.05 m (2 in)
Fuselage length (main rotor folded)	5.08 m (16 ft 8 in)
Height overall	2.29 m (7 ft 6 in)
Skid track	2.43 m (8 ft 0 in)

WEIGHTS AND LOADINGS:

Weight empty: 254	115 kg (254 lb)
331	150 kg (331 lb)
Payload (incl fuel): 254	113 kg (250 lb)
331	159 kg (350 lb)
Max T-O and landing weight: 254	236 kg (520 lb)
331	308 kg (680 lb)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE)	135 kts (250 km/h; 155 mph)
Max level speed: 254	55 kts (102 km/h; 63 mph)
331	90 kts (167 km/h; 104 mph)
Max cruising speed: 331	55 kts (102 km/h; 63 mph)
Rate of climb at S/L	305 m (1,000 ft)/min
Service ceiling	3,660 m (12,000 ft)
Hovering ceiling, 331: IGE	3,290 m (10,800 ft)
OGE	2,135 m (7,000 ft)
Range: normal fuel, 55 kts	130 n miles (241 km; 150 miles)
Endurance: 331	2 h 30 min

Pitts Aerobatics company plus manufacturing and marketing rights of Pitts Special aircraft acquired by Christen Industries November 1983. Pitts Aerobatics factory at Afton, Wyoming, became headquarters of Christen Industries, which in turn was acquired April 1991 by Aviat Inc of Delaware (wholly owned subsidiary of White International Ltd, Guernsey, Channel Islands). Aviat now owns production and type certificates for Christen range. Total 30 aircraft produced in 1994.

UPDATED

AVIAT A-1 HUSKY

TYPE: Two-seat light utility aircraft.

PROGRAMME: First flight (N6070H) 1986. FAA certification 1987, including Edo 2000 floats and skis, glider/banner towing hook approved.

CUSTOMERS: Total 286 delivered by early 1995, including two to US Department of Interior and four to US Department of Agriculture; also operated by US police agencies and in Kenya for wildlife protection patrols. Eight new Huskys added to US civil register in 1994.

COSTS: $74,995 basic; $86,500 typically equipped.

DESIGN FEATURES: Missions include bush flying, border patrol, fish and wildlife protection and pipeline inspection. Wing has modified Clark Y US 35B section, drooped Plane Booster wingtips.

FLYING CONTROLS: Symmetrical section ailerons with spade type mass balance, trim tabs in elevators, slotted flaps. Fixed tailplane, trim by adjustable bungee.

STRUCTURE: Wing has two aluminium spars, metal ribs and metal leading edge, Dacron covering overall. Twin bracing struts each side of wings and wire and strut-braced tail unit. Light alloy flaps and ailerons, with Dacron covering. Fuselage and tail have chrome molybdenum steel tube frames, covered in Dacron except for metal skin to rear fuselage.

LANDING GEAR: Non-retractable tailwheel type. Two faired side Vs and half-axles hinged to bottom of fuselage, with internal (under front seat) bungee cord shock-absorption. Cleveland mainwheels, tyres size 8.00-6 as standard; 6.00-6 or 8.50-6 tyres or 24 × 10-6 tundra tyres optional. Cleveland mainwheel brakes. Steerable leaf spring tailwheel. Wheel-replacement or wheel-retract skis and floats optional.

POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-C1G flat four engine, driving a Hartzell two-blade constant-speed metal propeller. Fuel in two metal tanks, one in each wing, total capacity 208 litres (52 US gallons, 45.75 Imp gallons), of which 189 litres (50 US gallons, 41.6 Imp gallons) are usable. Fuel filler point in upper surface of each wing, near root.

Aviat A-1 Husky two-seat utility aircraft on floats

1995

ACCOMMODATION: Enclosed cabin seating two in tandem, with dual controls. Downward-hinged door on starboard side, with upward-hinged window above. Skylight window in roof.

SYSTEMS: Electrical system includes lights and 60 A alternator.

DIMENSIONS, EXTERNAL:

Wing span	10.73 m (35 ft 2½ in)
Wing aspect ratio	6.89
Length overall	6.88 m (22 ft 7 in)
Height overall	2.01 m (6 ft 7 in)
Propeller diameter	1.93 m (6 ft 4 in)

AREAS:

Wings, gross	16.72 m² (180.0 sq ft)
Ailerons (total)	1.43 m² (15.4 sq ft)
Trailing-edge flaps (total)	2.09 m² (22.5 sq ft)
Fin	0.43 m² (4.66 sq ft)
Rudder	0.62 m² (6.76 sq ft)
Tailplane	1.48 m² (15.9 sq ft)
Elevators, incl tabs	1.31 m² (14.1 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	540 kg (1,190 lb)
Max T-O weight	816 kg (1,800 lb)
Max baggage weight	22.7 kg (50 lb)
Max wing loading	48.8 kg/m² (10.0 lb/sq ft)
Max power loading	7.45 kg/kW (10.0 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	132 kts (245 km/h; 152 mph)
Cruising speed: 75% power at 1,220 m (4,000 ft)	122 kts (226 km/h; 140 mph)
55% power	115 kts (212 km/h; 132 mph)
Stalling speed: flaps up	48 kts (80 km/h; 49 mph)
flaps down	37 kts (68 km/h; 42 mph)
Max rate of climb at S/L	457 m (1,500 ft)/min
Service ceiling	6,100 m (20,000 ft)
T-O run	46 m (150 ft)
T-O to 15 m (50 ft)	229 m (750 ft)
Landing from 15 m (50 ft)	427 m (1,400 ft)
Landing run, full flap	107 m (350 ft)
Range with max fuel, 75% power, 45 min reserves	550 n miles (1,019 km; 633 miles)

UPDATED

AVIAT ACRO-HUSKY

Shorter wing span with NACA 23012 section; 134 kW (180 hp) Textron Lycoming engine with full inverted-flight oil/fuel systems, symmetrical ailerons with spade type balance, no flaps, *g* limits +6/−3. In development, to fly during 1995.

UPDATED

PITTS S-1T SPECIAL

TYPE: Single-seat aerobatic biplane.

PROGRAMME: Original single-seat Pitts Special built and flown 1944, early factory built S-1S last described in 1987-88 *Jane's*. Production of current S-1T factory version started early 1981, FAA certification Autumn 1982.

CUSTOMERS: Total 63 delivered by early 1995, including three built in 1994. Available to order only.

COSTS: $97,845

DESIGN FEATURES: New features include more powerful engine and wings moved forward 11.5 cm (4.5 in) to compensate; symmetrical wing and aileron sections. Wing section M6, thickness/chord ratio 12 per cent, dihedral upper wings 0°, lower wings 3°, incidence upper wing 1° 30′, lower wings 0°; sweepback 6° 40′ upper wing only.

FLYING CONTROLS: Symmetrical ailerons on upper and lower wings, lower with spade-type aerodynamic balance; trim tab on each elevator, fixed tailplane, no flaps.

STRUCTURE: Fabric covered wooden wing and ailerons, single interplane strut and duplicated flying and landing wires, fabric covered steel tube fuselage with wooden stringers and aluminium top decking and side panels, remainder fabric covered, tail surfaces fabric covered steel tube. Cockpit floor is clear Plexiglas for improved vision when inverted.

LANDING GEAR: Non-retractable tailwheel type. Rubber cord shock-absorption. Cleveland mainwheels with 6 ply tyres, size 5.00-5, pressure 2.07 bars (30 lb/sq in). Cleveland hydraulic disc brakes. Steerable tailwheel. Glassfibre fairing on mainwheels.

POWER PLANT: One 149 kW (200 hp) Textron Lycoming AEIO-360-A1E flat-four engine, driving a Hartzell two-blade constant-speed propeller. Fuel tank aft of firewall, capacity 75 litres (20 US gallons; 16.6 Imp gallons). Refuelling point on upper surface of fuselage, forward of windscreen. Oil capacity 7.5 litres (2 US gallons; 1.7 Imp gallons). Inverted fuel and oil systems standard.

ACCOMMODATION: Single seat. Sliding cockpit canopy standard.

DIMENSIONS, EXTERNAL:

Wing span, upper	5.28 m (17 ft 4 in)
Wing chord (constant, both)	0.91 m (3 ft 0 in)
Wing aspect ratio	5.8
Length overall	4.72 m (15 ft 6 in)
Height overall	1.91 m (6 ft 3 in)
Tailplane span	1.98 m (6 ft 6 in)
Propeller diameter	1.93 m (6 ft 4 in)

AREAS:

Wings, gross	9.15 m² (98.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	376 kg (830 lb)
Max T-O weight	521 kg (1,150 lb)
Max wing loading	57.05 kg/m² (11.68 lb/sq ft)
Max power loading	3.50 kg/kW (5.75 lb/hp)

PERFORMANCE (at max T-O weight):

Never-exceed speed (VNE)	176 kts (326 km/h, 203 mph)
Max level speed at S/L	161 kts (298 km/h, 185 mph)
Max cruising speed at S/L	152 kts (282 km/h, 175 mph)
Stalling speed	56 kts (103 km/h, 64 mph)
Max rate of climb at S/L	853 m (2,800 ft)/min
Range with max fuel, 55% power, 30 min reserves	268 n miles (497 km, 309 miles)
g limits	+6/−3.5

1995

PITTS S-2B

TYPE: Two-seat aerobatic biplane, successor to S-2A.

PROGRAMME: Prototype completed September 1982; certificated in FAR Pt 23 Aerobatic category Spring 1983; won first place Advanced Category of 1982 US Nationals with two occupants.

CUSTOMERS: 315 delivered up to early 1995, including approximately 20 in 1994.

COSTS: $119,265

DESIGN FEATURES: 194 kW (260 hp) engine and wings moved 15 cm (6 in) forward to compensate; more front cockpit space. Wing sections NACA 6400 series on upper wing, 00 series on lower wings. See 1987-88 and earlier *Jane's*.

FLYING CONTROLS: Ailerons on upper and lower wings with aerodynamic spade-type balances on lower ailerons, trim tab on each elevator, fixed tailplane; no flaps.

STRUCTURE: Wings generally as S-1T, fuselage 4130 steel tube with wooden stringers, aluminium top decking and side panels; remainder Dacron covered. Steel tube, metal skinned fixed tail surfaces. Dacron covered control surfaces.

LANDING GEAR: Non-retractable tailwheel type. Rubber cord shock absorption. Steerable tailwheel. Streamline fairings on mainwheels.

POWER PLANT: One 194 kW (260 hp) Textron Lycoming AEIO-540-D4A5 flat-six engine, driving a Hartzell two-blade constant-speed metal propeller. Fuel tank in fuselage, immediately aft of firewall, capacity 110 litres (29 US gallons; 24 Imp gallons). Refuelling point on fuselage upper surface forward of windscreen. Oil capacity 11.35 litres (3 US gallons; 2.5 Imp gallons). Inverted fuel and oil systems standard.

ACCOMMODATION: Two seats in tandem cockpits, with dual controls. Sideways opening one-piece canopy covers both cockpits. Space for 9.1 kg (20 lb) baggage aft of rear seat when flown in non-aerobatic category.

SYSTEMS: Electrical system powered by 12 V 40 A alternator and non-spill 12 V battery.

DIMENSIONS, EXTERNAL:

Wing span, upper	6.10 m (20 ft 0 in)
lower	5.79 m (19 ft 0 in)
Wing chord (constant, both)	1.02 m (3 ft 4 in)
Length overall	5.71 m (18 ft 9 in)
Height overall	2.02 m (6 ft 7½ in)

AREAS:

Wings, gross	11.6 m² (125.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	521 kg (1,150 lb)
Max T-O weight	737 kg (1,625 lb)
Max wing loading	63.55 kg/m² (13.0 lb/sq ft)
Max power loading	3.80 kg/kW (6.25 lb/hp)

PERFORMANCE (at max T-O weight):

Never-exceed speed (VNE)	182 kts (338 km/h, 210 mph)
Max cruising speed	152 kts (282 km/h, 175 mph)
Stalling speed	52 kts (97 km/h, 60 mph)
Max rate of climb at S/L	823 m (2,700 ft)/min
Service ceiling	6,400 m (21,000 ft)
Range with max fuel, 55% power, 30 min reserves	277 n miles (513 km, 319 miles)

UPDATED

PITTS S-2S

TYPE: Single-seat version of S-2B aerobatic biplane.

PROGRAMME: First flight of prototype 9 December 1977, production began late 1978, full certification June 1981.

CUSTOMERS: Total 36 delivered by early 1995, including two in 1994. Available to order only.

COSTS: $112,575

DESIGN FEATURES: Forward fuselage shortened by 0.36 m (14 in) to accommodate 194 kW (260 hp) Textron Lycoming AEIO-540-D4A5 flat-six engine, driving Hartzell two-blade constant-speed metal propeller, fuel capacity increased to 132.5 litres (35 US gallons; 29.1 Imp gallons); oil capacity as for S-2B.

FLYING CONTROLS: Generally as for S-2B.

STRUCTURE: Generally as for S-2B.

DIMENSIONS, EXTERNAL: As for S-2B except:

Length overall	5.28 m (17 ft 4 in)

WEIGHTS AND LOADINGS:

Weight empty	499 kg (1,100 lb)
Max T-O weight	680 kg (1,500 lb)
Max wing loading	58.6 kg/m² (12.0 lb/sq ft)
Max power loading	3.51 kg/kW (5.77 lb/hp)

PERFORMANCE (at max T-O weight):

Never-exceed speed (VNE)	176 kts (326 km/h, 203 mph)
Max level speed at S/L	162 kts (301 km/h, 187 mph)
Max cruising speed at S/L	152 kts (282 km/h, 175 mph)
Stalling speed	51 kts (94 km/h, 58 mph)
Max rate of climb at S/L	853 m (2,800 ft)/min
g limits	+6/[illegible]

UPDATED

PITTS SUPER STINKER

Curtis Pitts produced a longer fuselage biplane design which flew in March 1994, 186 kW (250 hp) Textron Lycoming engine driving Hartzell constant-speed propeller. Weight 485 kg (1,069 lb), power loading 2.60 kg/kW (4.28 lb/hp), stalling speed 57 knots (106 km/h [illegible]) maximum speed 177 knots [illegible] be able to recover from a six-turn spin in one [illegible]. The 5.49 m (18 ft) long fuselage gives more stability and is also said to enable aerobatic judges assess manoeuvres more accurately. No plans for immediate manufacture because of US liability laws.

UPDATED

AVID AIRCRAFT AVID FLYER MARK IV

TYPE: Two-seat, dual-control homebuilt.

PROGRAMME: First flown 1983; takes from 200 to 400 working hours to assemble; available as single kit, or six separate kits to spread cost of purchase. Strongly influenced design of Indaer Peru Chuspi light aircraft (see under Peru in 1992-93 *Jane's*), and the SkyStar series of kit built aircraft.

CUSTOMERS: More than 1,600 kits delivered.

COSTS: Kit $17,995

DESIGN FEATURES: Strut-braced wings, two forms available (interchangeable), as original **High Gross STOL** with unique near full span auxiliary aerofoil flaperons, and shorter span **Aerobatic Speedwing** using new wing section, cruising and stalling speeds raised with Aerobatic Speedwing fitted. Wings fold for storage. Baggage compartment with external door. Cabin heating.

FLYING CONTROLS: Flaperons (see Design Features), elevators with adjustable trim tab, and rudder.

STRUCTURE: Aluminium wing spars and plywood ribs, covered with heat shrunk Dacron. Welded steel tube fuselage, rudder, tailplane and elevators, Dacron covered except for fuselage nose which has premoulded GFRP cowlings. Fin integral with fuselage.

LANDING GEAR: Non-retractable tricycle or tailwheel landing gear, with tundra tyres and brakes. Optional Aqua 1500 floats, skis and wheel skis.

POWER PLANT: One 48.5 kW (65 hp) Rotax 582 two-stroke engine, driving a two- or three-blade propeller; fixed-pitch propeller for STOL, three-blade ground adjustable for Speedwing. Fuel capacity 53 litres (14 US gallons; 11.7 Imp gallons) for High Gross STOL and 68 litres (18 US gallons; 15 Imp gallons) for Aerobatic Speedwing. Similar capacity [illegible] may be added in port wing.

ACCOMMODATION: Two seats side by side, upward opening doors each side.

AVIONICS: *Instrumentation:* Altimeter, airspeed indicator, compass, slip indicator, tachometer, water temperature gauge and dual EGT.

Avid Aircraft Avid Flyer Speedwing Mark IV *(Paul Jackson)* 1995

Tricycle version of Avid Flyer Speedwing with enlarged, rectangular rudder *(Paul Jackson)* 1995

DIMENSIONS, EXTERNAL (A: STOL, B: Aerobatic Speedwing)

Wing span: A	9.11 m (29 ft 10½ in)
B	7.30 m (23 ft 11½ in)
Wing chord	
A, B without flaperons	1.07 m (3 ft 6 in)
A, B with flaperons	1.30 m (4 ft 3 in)
Wing aspect ratio: A	7.03
B	5.50
Length overall	5.46 m (17 ft 11 in)
Height overall	1.80 m (5 ft 10¾ in)
Propeller diameter: A	1.88 m (6 ft 2 in)
B	1.73 m (5 ft 8 in)

AREAS (A and B as above)

Wings, gross: A	11.38 m² (122.46 sq ft)
B	9.04 m² (97.31 sq ft)

WEIGHTS AND LOADINGS (A and B as above)

Weight empty: A	200-231 kg (440-510 lb)
B	231 kg (510 lb)
Baggage capacity	16 kg (35 lb)
Max T-O weight: A	522 kg (1,150 lb)
B	476 kg (1,050 lb)
Max wing loading: A	45.85 kg/m² (9.39 lb/sq ft)
B	52.68 kg/m² (10.79 lb/sq ft)
Max power loading: A	10.76 kg/kW (17.69 lb/hp)
B	9.8 kg/kW (16.15 lb/hp)

PERFORMANCE (at max T-O weight, ISA, A and B as above)

Never-exceed speed (V_{NE})	
A	117 kts (217 km/h; 135 mph)
B	130 kts (241 km/h; 150 mph)
Max level speed at 1 525 m (5,000 ft)	
A	91 kts (169 km/h; 105 mph)
Max cruising speed: A	78 kts (145 km/h; 90 mph)
B	104 kts (193 km/h; 120 mph)
Stalling speed: A, flaps down, engine idling	
	32 kts (58 km/h; 36 mph)
B	40 kts (74 km/h; 46 mph)
Max rate of climb at S/L: A	305 m (1,000 ft)/min
B	259 m (850 ft)/min
Service ceiling: A, B	more than 3 810 m (12,500 ft)
T-O run: A	43 m (140 ft)
B	92 m (300 ft)
T-O to 15 m (50 ft): A	61 m (200 ft)
B	183 m (600 ft)
Landing run: A	61 m (200 ft)
B	183 m (600 ft)
Range, no reserves: A	295 n miles (547 km; 340 miles)
B	491 n miles (910 km; 566 miles)
g limits	+6/−3

UPDATED

AVID AIRCRAFT MAGNUM

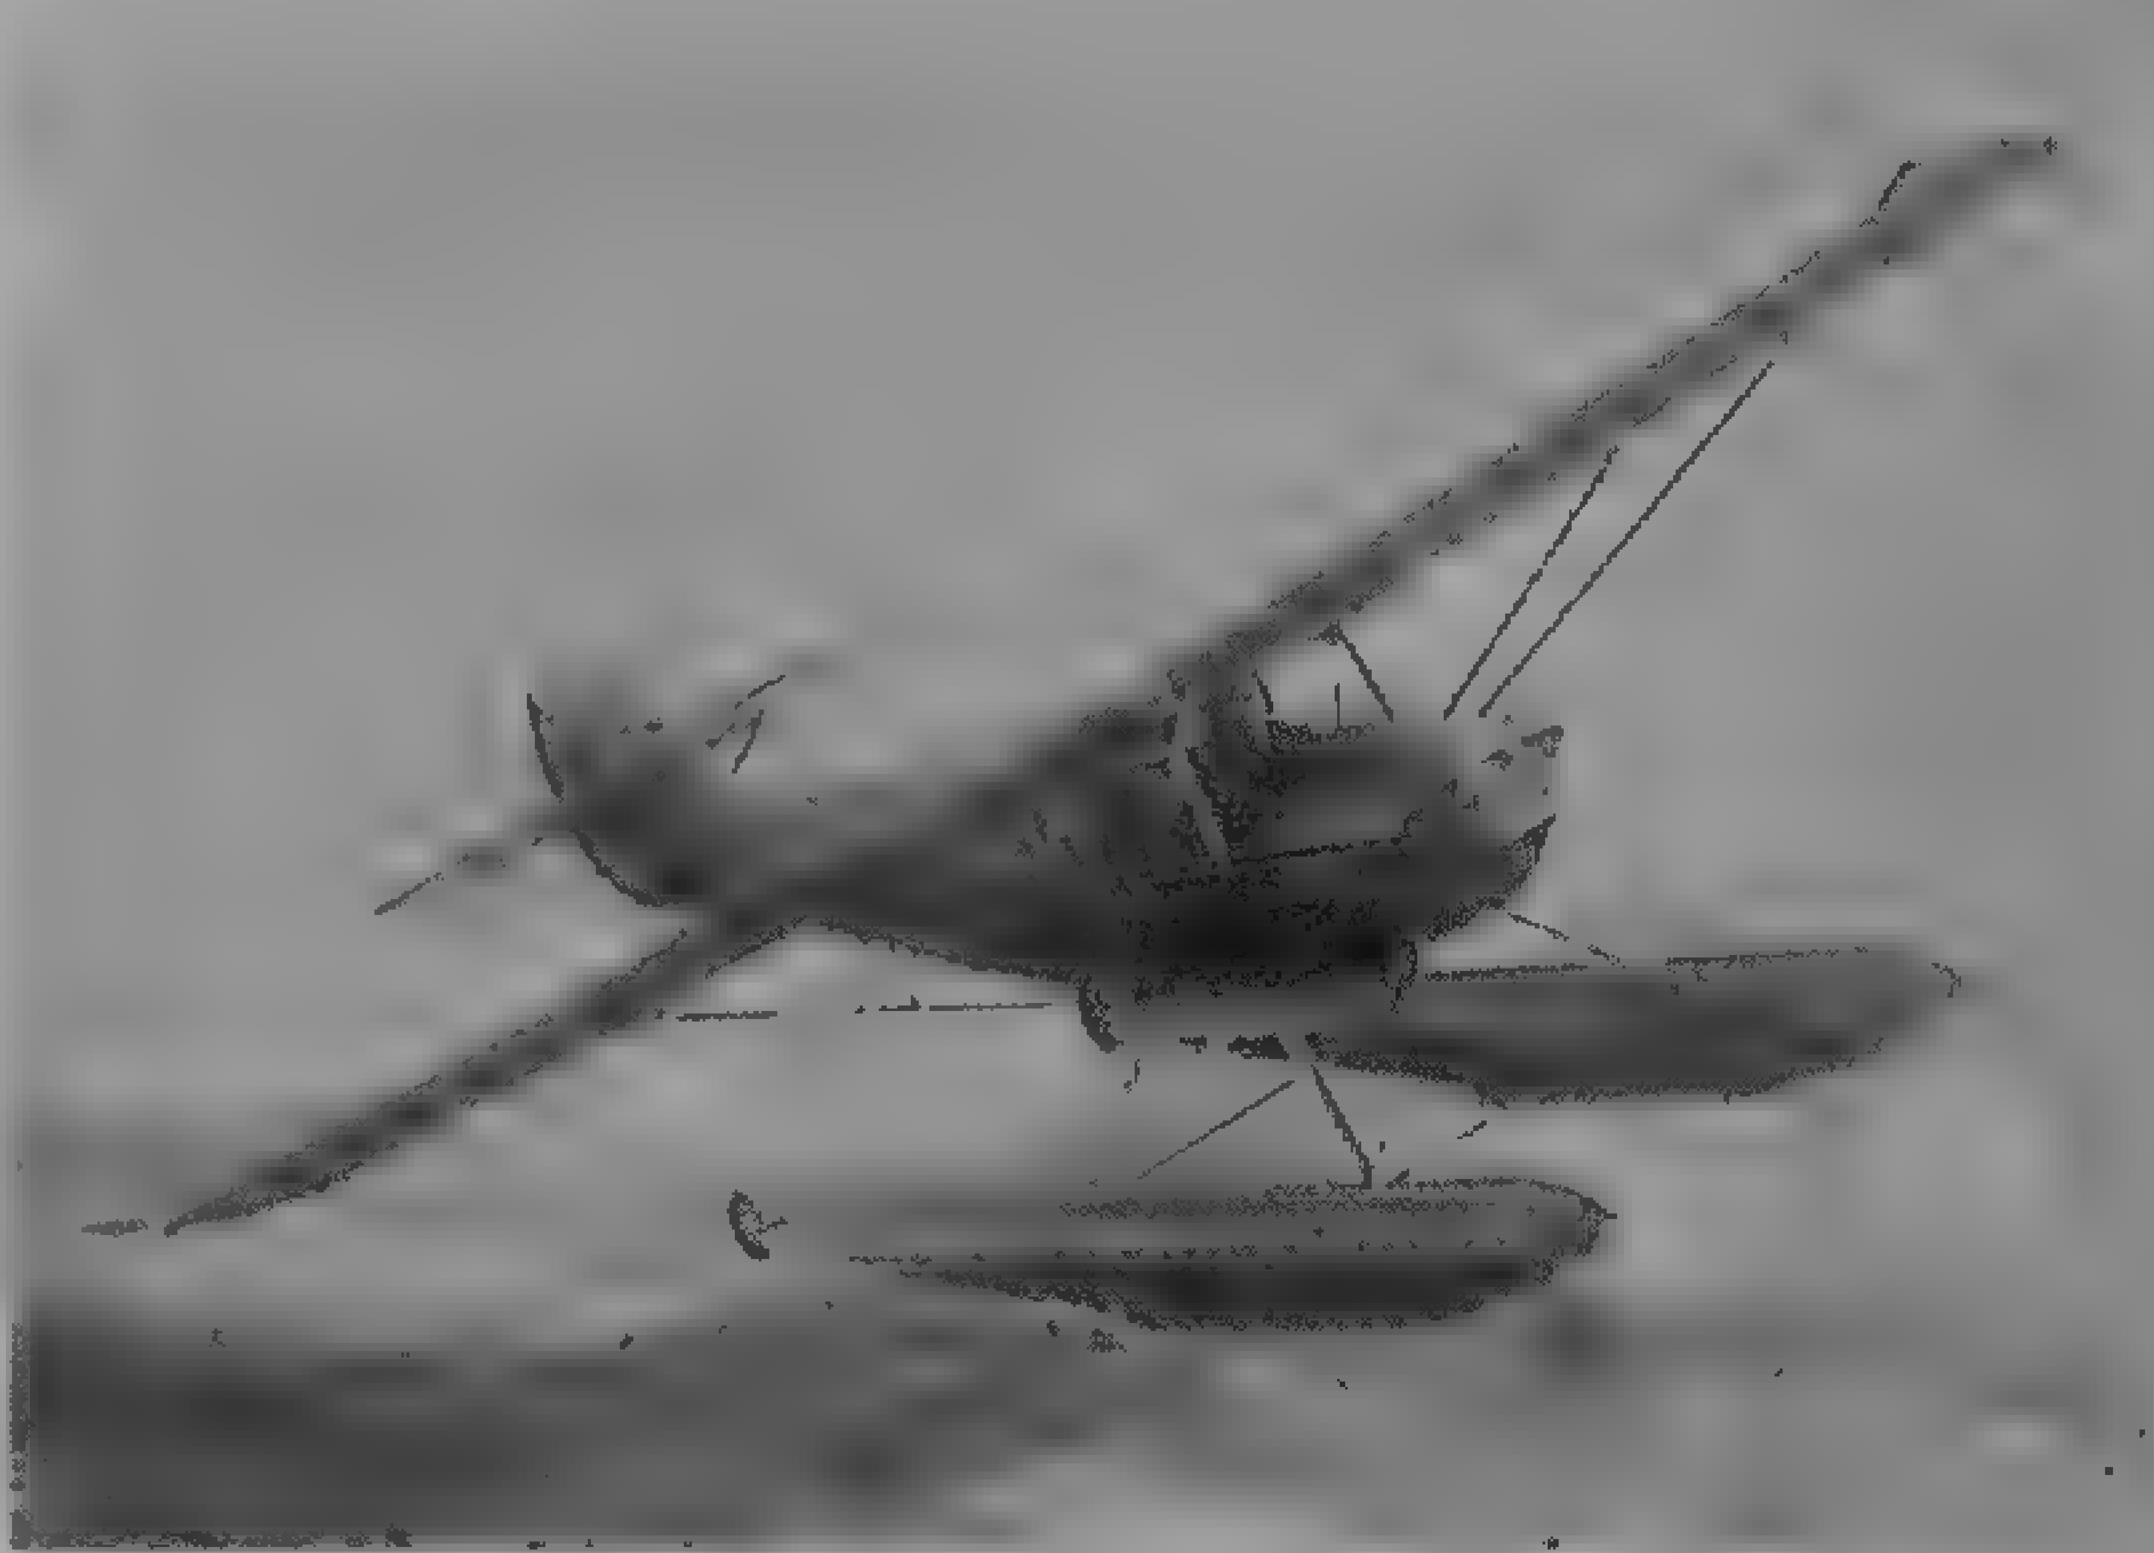
TYPE: Side by side two-seat homebuilt with dual control.

CUSTOMERS: About 800 flying.

COSTS: Kit $18,995 without engine.

DESIGN FEATURES: Similar layout to Avid Flyer but using Textron Lycoming engine and having baggage area large enough to fit optional jump seat for small adult or two children.

FLYING CONTROLS: Similar to Avid Flyer.



Avid Aircraft Magnum with floats 1995

STRUCTURE: Similar to Avid Flyer, but with Ceconite covering.

LANDING GEAR: Non-retractable tailwheel type, with Cleveland wheels and brakes, wheel fairings.

POWER PLANT: One Textron Lycoming engine in 85.75 to 134 kW (115 to 180 hp) range, including O-235, O-320 and O-360. Fuel capacity 106 litres (28 US gallons; 23.3 Imp gallons). Optional 38 litre (10 US gallon; 8.3 Imp gallon) wingtip tanks available.

ACCOMMODATION: Two seats side by side, plus optional jump seat for small adult or two children in 0.81 m³ (28.5 cu ft) baggage area.

DIMENSIONS, EXTERNAL

Wing span	10.06 m (33 ft 0 in)
Wing chord, constant	1.30 m (4 ft 3 in)
Wing aspect ratio	7.76
Length overall	6.40 m (21 ft 0 in)
Height overall	1.86 m (6 ft 1¼ in)

DIMENSIONS, INTERNAL

Cabin: Width	1.12 m (3 ft 8 in)

AREAS

Wings, gross	13.03 m² (140.25 sq ft)

WEIGHTS AND LOADINGS

Weight empty	465 kg (1,025 lb)
Baggage capacity	68 kg (150 lb)
Max T-O weight	794 kg (1,750 lb)
Max wing loading	57.44 kg/m² (11.76 lb/sq ft)
Power loading (119 kW, 160 hp)	
	6.29 kg/kW (10.31 lb/hp)

PERFORMANCE (at max T-O weight, ISA, 119 kW, 160 hp O-320 engine)

Never-exceed speed (V_{NE})	130 kts (241 km/h; 150 mph)
Cruising speed	113 kts (209 km/h; 130 mph)
Stalling speed	32 kts (58 km/h; 36 mph)
Max rate of climb at S/L	457 m (1,500 ft)/min
Service ceiling	more than 5 335 m (17,500 ft)
T-O run	approx 77 m (250 ft)
T-O to 15 m (50 ft)	99 m (325 ft)
Landing run	77 m (250 ft)

UPDATED

OTHER AIRCRAFT

Avid Catalina amphibian remains available to order (see 1992-93 *Jane's* Private Aircraft section). **Avid Bandit** under development.

Company founded 1982 to develop Avtek 400A; investors include Valmet Aviation (Finland), Air Rotor GmbH (Germany), Nomura Securities (Japan) and Dow Chemical (USA).

UPDATED

AVTEK 400A

TYPE: Six/10-seat all-composite turboprop twin.

PROGRAMME: Design started March 1981; proof of concept aircraft N400AV (see 1985-86 *Jane's*) flew 17 September 1984; N400AV then fitted with P&WC PT6A-135M engines (PT6A-35s with counterrotating gearboxes from PT6A-66); extensive changes made Spring 1985, including fuselage stretch 20 cm (8 in) forward and 76 cm (2 ft 6 in) aft of front pressure bulkhead, widened cabin, new outer wing and enlarged fuel tanks in forward-swept root extensions, foreplane with greater span and reduced chord, ventral strakes (known as delta fins), relocated main landing gear legs, and specially developed P&WC PT6A-3x mounted closer to wings. Preproduction second prototype expected to fly 1995, FAA certification planned for late 1996.

CURRENT VERSIONS: **400A**: Basic version, *as detailed below*.

Explorer: Valmet purchased option on 20 March 1985 to build Explorer derivative of Avtek 400A for maritime surveillance, liaison, coastal patrol, aerial survey, search and reconnaissance and ESM, tailored to individual customer requirements. Fuel capacity increased by 208 litres (55 US gallons; 45.8 Imp gallons) and maximum T-O weight raised to 3,402 kg (7,500 lb).

419 Express: 19-passenger commuter version, PT6A-45 engines, to be certificated after FAR 23 gained by 400A. Length increased to 16.62 m (54 ft 5 in) and maximum T-O weight raised to 5 669 kg (12,499 lb).

CUSTOMERS: 80 on order

COSTS: Standard 400A $1.75 million, Explorer $2 million plus sensors and systems, 419 Express $4.2 million.

DESIGN FEATURES: Twin-engine pusher configuration with foreplane. Initial design by Al W. Mooney, founder of Mooney Aircraft, refined by Niels Andersen, Ford Johnston and Irvin Culver; computer analysis of configuration and wind tunnel testing by NASA; materials research by Dow Chemical and Dr Leo Windecker. Dow Chemical basic patents on Windecker Eagle (first all-composites aircraft to receive civil certification) licensed to Avtek. Avtek 12 aerofoil section; anhedral 2° 30′ from roots, sweepback 50° inboard, 15° 30′ outboard; foreplane dihedral 1°; fuselage pressurised.

FLYING CONTROLS: Actuation by pushrods and cranks throughout; mass balanced elevators on foreplane; mass balanced rudder without trim tab; two-section ailerons, with inboard sections also electrically actuated as pitch-axis trim surfaces; no flaps.

STRUCTURE: All-composite structure, 72 per cent Kevlar and Nomex, 16 per cent graphite/carbonfibre, smaller quantities of R-glass, S-glass, aluminium and nickel fibres; wire mesh incorporated to protect against lightning.

LANDING GEAR: Hydraulically retractable tricycle type, main units retracting inward and nosewheel forward. Emergency extension system. Oleo-pneumatic shock-absorber in each unit. Single wheel on each unit; mainwheels size 6.00-6 with Goodyear tyres size 17.5 6.25 × 7.5, pressure 7.0 bars (102 lb/sq in). Steerable nosewheel unit with wheel size 5.00-5 and Goodyear tyre size 14.2-5.5 × 6.5, pressure 5.0 bars (73 lb/sq in). Cleveland hydraulic disc brakes.

POWER PLANT: Two Pratt & Whitney Canada PT6A-3L/R turboprops derived from PT6A-135 and each flat rated at 507 kW (680 shp), one mounted within nacelle above each wing. Hartzell four-blade constant speed fully feathering reversible-pitch pusher propellers (metal blades on prototype, Kevlar on production version). Propellers are opposite rotating, with automatic synchrophasing, full Beta control, reversing and autofeathering. In-flight start capability. Integral fuel tank in each wingroot leading-edge. Total fuel capacity 1,003 litres (265 US gallons, 221 Imp gallons), of which 984 litres (260 US gallons, 216.5 Imp gallons) are usable. Refuelling point in upper surface of each wing.

ACCOMMODATION: Pilot and five to nine passengers according to interior layout. Optional configurations include eight-passenger Pullman or Salon, eight-passenger Lounge, six-passenger Conference, Ambulance with stretcher, medical equipment and seats for three ambulatory patients or medical attendants, and Cargo with seats for pilot and one passenger. Two-section door on port side of cabin, with step incorporated in lower half. Emergency exit on starboard side opposite cabin door. Baggage compartment at rear of cabin with internal access. Unpressurised baggage compartment in nose with external door on port side. Accommodation pressurised, air conditioned, heated and ventilated.

SYSTEMS: AiResearch bleed air pressurisation system with maximum differential of 0.52 bar (7.6 lb/sq in), and air cycle air conditioning system. Electrically driven hydraulic pump provides pressure of 138 bars (2,000 lb/sq in) for landing gear actuation. Electrical system includes dual 28 V 300 A engine-driven generators, dual 29 Ah storage batteries and external power socket. Oxygen system of 1.39 m³ (49 cu ft) capacity, pressure 128 bars (1,850 lb/sq in), provides constant flow for passengers and demand flow for pilot. Anti-icing of windscreen by electrical system, of propellers by engine efflux; electrically heated pitot. Engine fire extinguishing system optional. Choice of wing and foreplane pneumatic, alcohol, electric or engine bleed de-icing. Dual anti-icing inlets for each engine.

AVIONICS: Wide range of optional avionics by Bendix/King, Collins and Honeywell, including EFIS and EICAS, and Honeywell colour weather radar. Full IFR instrumentation optional.

DIMENSIONS, EXTERNAL:

Wing span	10.67 m (35 ft 0 in)
Wing aspect ratio	8.50
Foreplane span	6.92 m (22 ft 8½ in)
Length: overall	11.99 m (39 ft 4 in)
fuselage	10.41 m (34 ft 2 in)
Height overall	3.47 m (11 ft 4¾ in)
Propeller diameter	1.93 m (6 ft 4 in)
Passenger door (port): Height	1.17 m (3 ft 10 in)
Width	0.76 m (2 ft 6 in)
Height to sill	0.76 m (2 ft 6 in)
Baggage door (port, nose): Height	0.51 m (1 ft 8 in)
Width	0.56 m (1 ft 10 in)
Height to sill	0.79 m (2 ft 7 in)
Emergency exit (stbd): Height	0.51 m (1 ft 8 in)
Width	0.67 m (2 ft 2½ in)

DIMENSIONS, INTERNAL:

Cabin: Length	3.14 m (10 ft 3½ in)
Max width	1.40 m (4 ft 7 in)
Max height	1.37 m (4 ft 6 in)
Baggage hold volume: nose	0.62 m³ (22.0 cu ft)
cabin	1.24 m³ (44.0 cu ft)

AREAS:

Wings, gross	13.40 m² (144.2 sq ft)
Foreplane, gross	4.52 m² (48.7 sq ft)
Elevators (total)	0.92 m² (9.9 sq ft)
Ailerons (total)	0.60 m² (6.5 sq ft)
Fin	1.16 m² (12.5 sq ft)
Rudder	0.90 m² (9.7 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,714 kg (3,779 lb)
Max ramp weight	2,976 kg (6,560 lb)
Max T-O and landing weight	2,948 kg (6,500 lb)
Max wing loading	220.1 kg/m² (45.08 lb/sq ft)
Max power loading	2.91 kg/kW (4.78 lb/shp)

PERFORMANCE (estimated, at max T-O weight, ISA):

Max level speed at S/L	255 kts (473 km/h, 294 mph)
Max cruising speed: at 3,050 m (10,000 ft)	297 kts (550 km/h, 342 mph)
at 6,700 m (22,000 ft)	364 kts (675 km/h, 419 mph)
at 12,500 m (41,000 ft)	338 kts (626 km/h, 389 mph)
Stalling speed	83 kts (154 km/h, 96 mph)
Max rate of climb at S/L	1,411 m (4,630 ft)/min
Rate of climb at S/L, OEI	578 m (1,897 ft)/min
Service ceiling	12,950 m (42,500 ft)
Service ceiling, OEI	10,060 m (33,000 ft)
T-O to 15 m (50 ft)	463 m (1,520 ft)
Landing from 15 m (50 ft)	390 m (1,280 ft)
Range with max fuel: no reserves	2,276 n miles (4,218 km, 2,621 miles)
NBAA IFR reserves	1,922 n miles (3,562 km, 2,213 miles)

UPDATED

AYRES THRUSH S2R-R1340

TYPE: Single/two-seat agricultural aircraft.

PROGRAMME: In production.

CURRENT VERSIONS: **Thrush S2R-R1340**: Basic version, powered by Pratt & Whitney R-1340 Wasp air-cooled radial engine and with one or two seats. *Description applies to this version.*

Ayres Thrush S2R-R1340 (600 hp Pratt & Whitney R-1340 Wasp engine)

1993

Thrush S2R-R1820: Powered by Wright R-1820 air-cooled radial (described separately).

Turbo-Thrush S2R: Basic S2R powered by Pratt & Whitney Canada PT6A-11, -15, -34 or -65AG, described separately.

CUSTOMERS: Operating in 70 countries. In small-scale production, approximately five 1340/1820s built during 1994.

COSTS: About $300,000, depending on engine and customer fit.

DESIGN FEATURES: Cantilever wing with 3° 30′ dihedral, wingroots sealed against chemical entry, wing extensions adding 2.79 m² (30 sq ft) standard, deflector cable from cockpit to tip of fin.

FLYING CONTROLS: Plain ailerons, servo tab in each elevator, electrically actuated flaps.

STRUCTURE: Two-spar light alloy wing with 4130 chrome molybdenum steel spar caps, welded chrome molybdenum steel tube fuselage structure covered with quickly removable light alloy skin panels, underfuselage skin of stainless steel; all-metal tail surfaces with strut-braced tailplane, metal ailerons and flaps.

LANDING GEAR: Non-retractable tailwheel type. Main units have rubber in compression shock absorption and 29 × 11.00-10 wheels with 10 ply tyres. Hydraulically operated disc brakes. Parking brakes. Wire cutters on main gear. Steerable, locking tailwheel, size 12.5 × 4.5 in.

POWER PLANT: One 447 kW (600 hp) Pratt & Whitney R-1340 Wasp nine-cylinder air-cooled radial engine, driving a Hamilton Standard 12D40/EAC AG-100-2 two-blade constant-speed metal propeller. Fuel contained in wing tanks with combined capacity of 401 litres (106 US gallons, 88.3 Imp gallons).

ACCOMMODATION: Single adjustable mesh seat in 'safety pod' sealed cockpit enclosure, with steel tube overturn structure. Tandem seating optional, with forward-facing second seat. Dual controls optional with forward-facing rear seat, for pilot training. Adjustable rudder pedals. Downward-hinged door on each side. Tempered safety glass windscreen. Cockpit wire cutter. Dual inertia reel safety harness with optional second seat. Baggage compartment standard on single-seat aircraft. Windscreen wiper and washer.

SYSTEM: Electrical system powered by a 24 V 50 A alternator. Lightweight 24 V 35 Ah battery.

AVIONICS: To customer's requirements.

EQUIPMENT: GFRP hopper forward of cockpit can hold 1,514 litres (400 US gallons, 333 Imp gallons) of liquid or 1,487 kg (3,280 lb) of dry chemical. Hopper has a 0.33 m² (3.56 sq ft) lid, openable by two handles, and cockpit viewing window. Standard equipment includes Universal spray system with external 50 mm (2 in) stainless steel plumbing, 50 mm pump with wooden fan, Transland gate, 50 mm valve, quick disconnect pump mount and strainer. Streamlined spraybooms with outlets for 68 nozzles. Micro-adjust valve control (spray) and calibrator (dry). A 63 mm (2.5 in) side-loading system is installed on the port side. Stainless steel rudder cables. Navigation lights, instrument lights and two strobe lights. Optional equipment includes a rear cockpit to accommodate forward-facing seat for passenger, or flying instructor if optional dual controls installed, space can be used alternatively for cargo. Other optional items are a Transland high-volume spreader, agitator installation, 10-unit AU 5000 Micronair installation in lieu of standard booms and nozzles, Transland gatebox with stiffener casting, quick disconnect flange and kit, night working lights including landing light and wingtip turn lights, cockpit fire extinguisher, and water bomber configuration.

DIMENSIONS, EXTERNAL:

Max T-O weight: CAR 3	2,721 kg (6,000 lb)
CAM 8	3,130 kg (6,900 lb)
Max wing loading	103.0 kg/m² (21.1 lb/sq ft)
Max power loading	7.0 kg/kW (11.5 lb/hp)

PERFORMANCE (with spray equipment installed and at CAR 3 max T-O weight, except where indicated):

Max level speed	122 kts (225 km/h, 140 mph)
Max cruising speed, 70% power	108 kts (200 km/h; 124 mph)
Working speed, 70% power	91-100 kts (169-185 km/h, 105-115 mph)
Stalling speed: flaps up	58 kts (108 km/h, 67 mph)
flaps down	55 kts (101 km/h, 63 mph)
Stalling speed at normal landing weight: flaps up	47 kts (87 km/h, 54 mph)
flaps down	45 kts (84 km/h, 52 mph)
Max rate of climb at S/L	317 m (1,040 ft)/min
Service ceiling	4,575 m (15,000 ft)
T-O run	215 m (705 ft)
Landing run	139 m (455 ft)
Ferry range with max fuel at 70% power	350 n miles (648 km; 403 miles)

UPDATED

AYRES THRUSH S2R-R1820/510

TYPE: Single/two-seat agricultural aircraft.

DESIGN FEATURES: As S2R-R1340 except for bigger hopper and more powerful engine.

CUSTOMERS: In small scale production during 1994.

Details as for S2R-R1340 except as follows:

POWER PLANT: One 895 kW (1,200 hp) Wright R-1820 Cyclone nine-cylinder air-cooled radial engine, driving a Hamilton Standard three-blade constant-speed metal propeller. Fuel system as for S2R-R1340, but total usable fuel capacity 863 litres (228 US gallons, 190 Imp gallons).

EQUIPMENT: Generally as for S2R-R1340, except that chemical hopper is of 1,930 litres (510 US gallons, 425 Imp gallons) capacity.

DIMENSIONS, EXTERNAL: As for S2R-R1340, except:

Wing span	13.54 m (44 ft 5 in)
Wing aspect ratio	6.04
Length overall	9.60 m (31 ft 6 in)
Height overall	2.92 m (9 ft 7 in)
Wheel track	2.74 m (9 ft 0 in)

DIMENSIONS, INTERNAL:

Hopper volume	1.93 m³ (68.2 cu ft)

AREAS:

Wings, gross	30.34 m² (326.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	2,263 kg (4,990 lb)
Typical operating weight (CAM 8)	4,536 kg (10,000 lb)
Max wing loading	149.5 kg/m² (30.62 lb/sq ft)
Max power loading	5.07 kg/kW (8.33 lb/hp)

PERFORMANCE (with spray equipment, at CAM 8 T-O weight, except where indicated):

Max level speed	138 kts (256 km/h, 159 mph)
Cruising speed, 50% power	135 kts (249 km/h; 155 mph)
Working speed, 30-50% power	87-130 kts (161-241 km/h, 100-150 mph)
Stalling speed: flaps up	61 kts (113 km/h, 70 mph)
flaps down	58 kts (107 km/h, 66 mph)
Stalling speed at normal landing weight: flaps up	52 kts (95 km/h, 59 mph)
flaps down	50 kts (92 km/h; 57 mph)
Max rate of climb at S/L	620 m (2,033 ft)/min
Service ceiling	8,535 m (28,000 ft)
T-O run	168 m (550 ft)
Landing run at normal landing weight	290 m (950 ft)
Ferry range at 40% power	582 n miles (1,078 km, 670 miles)

UPDATED

AYRES TURBO-THRUSH S2R

TYPE: Single/two-seat turboprop agricultural and multirole aircraft.

CURRENT VERSIONS: **S2R-T11:** 373 kW (500 shp) PT6A-11AG turboprop, standard 1,514 litre (400 US gallon, 333 Imp gallon) chemical hopper.

S2R-T15: 507 kW (680 shp) P&WC PT6A-15AG turboprop; standard or optional 1,930 litre (510 US gallon, 425 Imp gallon) hopper.

S2R-T34: 559 kW (750 shp) P&WC PT6A-34AG turboprop; standard or optional hoppers.

S2R-T65 NEDS: Narcotics Eradication Delivery System; 1,026 kW (1,376 shp) P&WC PT6A-65AG turboprop and 2.82 m (9 ft 3 in) five-blade propeller; 19 delivered to US State Department (see Customers). NEDS equipment includes Bendix/King VLF/Omega 660, ADF, VOR, HF and VHF avionics.

S2R-G6: Introduced 1992, 559 kW (750 shp) TPE331-6 turboprop; standard or optional hopper.

S2R-G10: First flown November 1992, CAM 8 certification, 701 kW (940 shp) TPE331-10 turboprop, two 435 litre (115 US gallon, 95.75 Imp gallon) fuel tanks, with 863 litres (228 US gallons, 190 Imp gallons) usable, hopper capacity 1,930 litres (510 US gallons, 425 Imp gallons); pilot, with dual cockpit option.

Vigilante: Surveillance and close air support version; TPE331 turboprop as in S2R-G6 and S2R-G10 versions. Still carries hopper, has five-blade propeller for quiet operation; can be fitted with range of equipment including loudspeaker systems for policing duties.

CUSTOMERS: US State Department ordered 19 S2R-T65 NEDS during 1983-88 for use by International Narcotics Matters Bureau. Vigilante sales (early 1994) worth $30.5 million, for use in Africa for game and poacher surveillance. Total 17 production T65s built by early 1995; five G6s built in 1994 along with six T34s and two each of sub-variants identified as G5 and G10.

COSTS: About $600,000, depending on engine and customer fit.

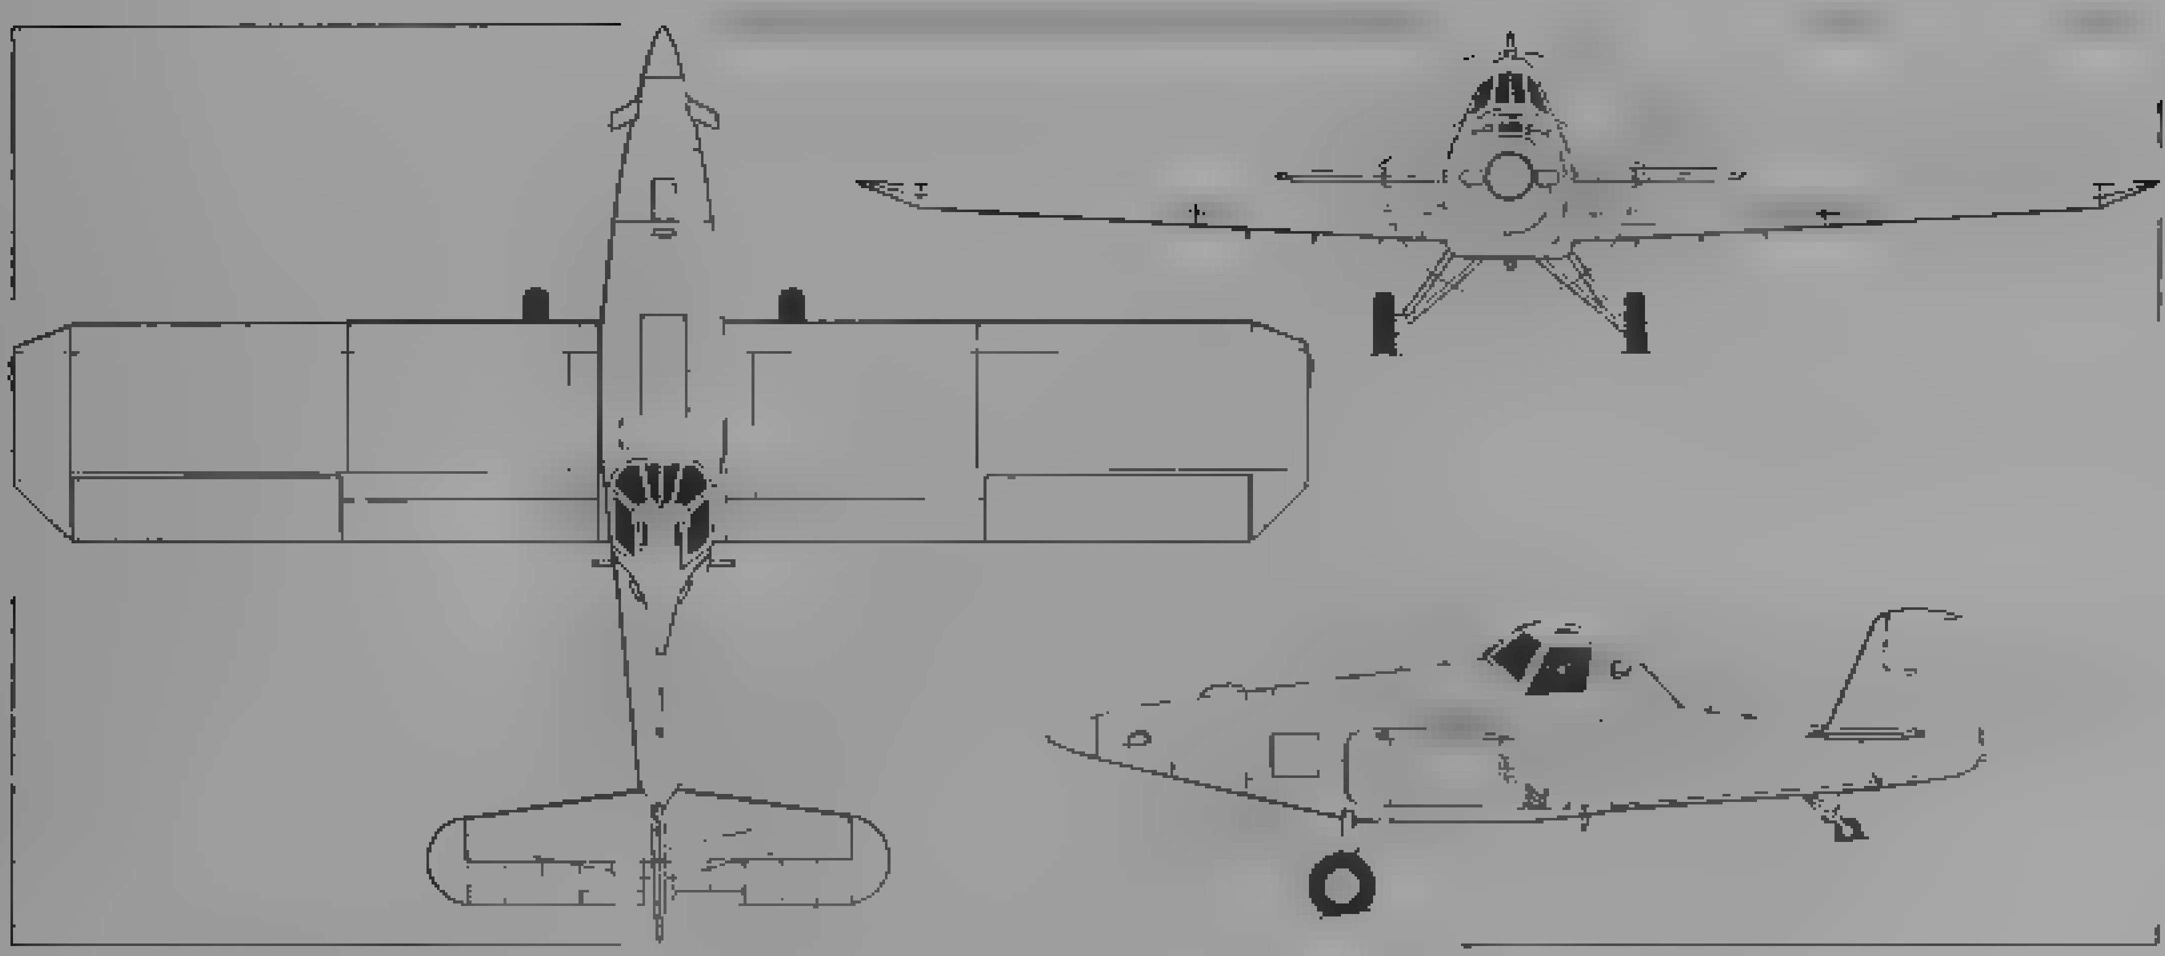
DESIGN FEATURES: All but NEDS variant have Hartzell three-blade, constant-speed, feathering and reversing propellers; usable fuel capacity 863 litres (228 US gallons; 190 Imp gallons); claimed advantages include much improved take-off and climb, 454 kg (1,000 lb) higher payload because of lower engine weight, operation on aviation turbine fuel or diesel, 3,500 hour TBO, quieter operation and ability to feather propeller without stopping engine while refuelling and reloading. Wing extensions (see S2R-R1340) optional on Turbo-Thrush.

DIMENSIONS, EXTERNAL: As for S2R-R1820 except:

Length overall	10.06 m (33 ft 0 in)
Height overall	2.79 m (9 ft 2 in)

Ayres Turbo-Thrush S2R-T34 with optional dual cockpit

1992



Ayres Turbo-Thrush S2R-T34 with optional 1,930 litre (510 US gallon, 425 Imp gallon) hopper *(Jane's/Dennis Punnett)* *1993*

Ayres Turbo-Thrush S2R-G10 (AlliedSignal TPE331-10 turboprop) *1993*

AREAS: As for S2R-R1820

WEIGHTS AND LOADINGS (A: standard hopper and PT6A, B: optional hopper and PT6A, C: with TPE331-6, D: with TPE331-10):

Weight empty: A 1,633 kg (3,600 lb)
B 1,769 kg (3,900 lb)
C 1,905 kg (4,200 lb)
D 2,041 kg (4,500 lb)
Max T-O weight (CAR 3): A, B 2,721 kg (6,000 lb)
Typical operating weight (CAM 8):
A 3,719 kg (8,200 lb)
B 3,856 kg (8,500 lb)
C 4,400 kg (9,700 lb)
D 4,082 kg (9,000 lb)
CAM 8 wing loading: A 122.6 kg/m² (25.11 lb/sq ft)
B 127.1 kg/m² (26.03 lb/sq ft)
C 145.0 kg/m² (26.70 lb/sq ft)
D 134.5 kg/m² (27.56 lb/sq ft)

PERFORMANCE (A and B with PT6A-34AG engine at max T-O weight except where indicated, C with TPE331-6, D with TPE331-10):

Never exceed speed (VNE):
D 138 kts (256 km/h, 159 mph)
Max level speed with spray equipment:
A, B, D 138 kts (256 km/h, 159 mph)
Cruising speed:
A and B, 50% power 130 kts (241 km/h, 150 mph)
C, 55% power 130 kts (241 km/h, 150 mph)
Working speed, 30-50% power
82-130 kts (153-241 km/h, 95-150 mph)
Stalling speed: flaps up 61 kts (113 km/h, 70 mph)
flaps down 57 kts (106 km/h, 66 mph)
Stalling speed at normal landing weight:
flaps up 51 kts (95 km/h, 59 mph)
flaps down 50 kts (92 km/h, 57 mph)
Max rate of climb at S/L: A, B, C 530 m (1,740 ft)/min
D 762 m (2,500 ft)/min
Service ceiling: A, B, C 7,620 m (25,000 ft)
D 3,660 m (12,000 ft)
T-O run: A, B, D 183 m (600 ft)
C at 4,400 kg (9,700 lb) 366 m (1,200 ft)
Landing from 15 m (50 ft) 366 m (1,200 ft)
Landing run: A, B, C 152 m (500 ft)
D 244 m (800 ft)
Landing run with propeller reversal:
A, B, C 91 m (300 ft)
Range: D 500 n miles (926 km, 575 miles)
Ferry range at 40% power
664 n miles (1,231 km; 765 miles)

UPDATED

AYRES LOADMASTER

A future project, intending to use Vigilante wings and a new box-section fuselage, for carrying freight. Powered by a single AlliedSignal TPE331-14 giving powers between 746 and 1,462 kW (1,000-1,960 shp) depending on the variant chosen. Possibility of passenger seating also being studied. Intended for operations from short and/or rough strips.

BELL

BELL HELICOPTER TEXTRON INC
(Subsidiary of Textron Inc)

PO Box 482, Fort Worth, Texas 76101
Telephone: 1 (817) 280 8415
Fax: 1 (817) 280 8221
PRESIDENT: Webb F. Joiner
EXECUTIVE VICE-PRESIDENT: Lloyd Shoppa
SENIOR VICE-PRESIDENT, MARKETING: Peter H. Parsinen
SENIOR VICE-PRESIDENT, PRODUCT SUPPORT AND US GOVERNMENT BUSINESS: John R. Murphey
VICE-PRESIDENT, RESEARCH AND ENGINEERING:
Troy M. Gaffey
DIRECTOR, PUBLIC AFFAIRS AND ADVERTISING:
Carl L. Harris

From 1970-81, Bell Helicopter Textron was unincorporated division of Textron Inc, became wholly owned subsidiary of Textron Inc from 3 January 1982. Bell Helicopter Canada (see Canada) formed at Montreal/Mirabel under contract with Canadian government October 1983, transfer to Mirabel completed January 1987 of Bell 206B JetRanger and 206L LongRanger production to make room for V-22 Osprey. Production of Bell 212/412 transferred mid-1988 and early 1989 respectively; Bell 230, 430, 407 and 442 programmes also undertaken in Canada. Bell TH-206 JetRanger variant selected March 1993 (as TH-67 Creek) for US Army NTH requirement, further details under Bell in Canadian section.

More than 32,000 Bell helicopters manufactured worldwide, including over 9,000 commercial models.

Bell helicopters built in USA detailed here. Those currently built in Canada listed under Canada; other models built under licence by IPTN in Indonesia, Agusta in Italy and Fuji in Japan (which see); Bell Helicopter Korea (BHK) is planning to co-produce helicopters with Bell Helicopter Textron

in Republic of Korea. Bell Helicopter de Venezuela CA, joint venture with Maquinarias Mendoza CA and Aerotecnica SA established early 1984 in Caracas for marketing and support. Bell Helicopter Asia (Pte) Ltd is wholly owned Singapore-based company for marketing and support in Southeast Asia.

UPDATED

BELL 209 HUEYCOBRA (MODERNISED VERSIONS)

US Army designations: AH-1E, AH-1F, TAH-1F, AH-1P, AH-1S and TH-1S

US production of the single-engined HueyCobra completed on execution of South Korean contract last described fully in 1993-94 *Jane's*. Remains in production by Fuji of Japan, which see for technical data

VERIFIED

BELL 209 and SUPERCOBRA

US Navy/Marine Corps designation: AH-1W

TYPE: Two-seat, twin-engined close support and attack helicopter

CURRENT VERSIONS: All surviving US Marine Corps AH-1J SeaCobras withdrawn and 42 AH-1T Improved SeaCobras converted to AH-1W to augment new production

AH-1W SuperCobra: Bell flew AH-1T powered by two GE T700-GE-700; first flight of proposed improved AH-1T+ including GE T700-GE-401 engines, 16 November 1983. Production for USMC and export; former also received one composite maintenance trainer

AH-1W IWS: Integrated Weapon System. Proposed Marine Corps retrofit for 225 AH-1Ws launched 1993 for redelivery from 1999 at cost of $2-3 million per upgrade. Phase I is Night Targeting System (NTS - see Design Features) plus GPS/INS/RLG navigation system; Phase II is Integrated Weapon System (IWS) in form of 'glass cockpit' with advanced mission computer, digital map, multi-purpose colour displays, new stores management system, onboard systems monitoring, mission data loader and HOTCC (hands on throttle, collective and cyclic) controls and new EW suite including AN/APR-39A(XE2) RWR and AN/AAR-47 MAWS. Phase III to involve four-blade rotor (70 per cent vibration reduction) and extension of wings to carry six universal weapon pylons for (130 per cent) increase in ordnance carrying. RFP for IWS issued 9 August 1994, but IWS abandoned, July 1995

Venom: See separate entry

CUSTOMERS: US Marine Corps (see under Current Versions), target procurement of 190 (including two Gulf War attrition replacements) reduced to 154 by 1994 defence review. Deliveries began 27 March 1986 to Camp Pendleton, California, for HML/A-169, -267, -367 and -369, plus HMT-303 for training; further aircraft issued to USMC Reserve, beginning with HMA-775 at Camp Pendleton from June 1992, followed by HMA-773 at Atlanta, Georgia; total of 36 for Reserves. Surviving 42 AH-1Ts upgraded to AH-1W for HML/A 167 and 269 at New River, North Carolina, last seven completed 1992. 100th new/converted AH-1W delivered 8 August 1991, over 180 in service by mid 1995

Turkish Land Forces received five AH-1Ws in 1990 and five in 1993, all diverted from USMC contracts. Taiwan signed letter of offer and acceptance February 1992, for 18 (of which nine taken up in April 1993 and eight in FY95) plus 24 options, deliveries began 1993 for training with USMC; first aircraft 501 (ex Bu Aer 164913)

COSTS: $10.7 million (1992) projected unit cost

DESIGN FEATURES: Two-blade main rotor similar to that of Bell 214 with strengthened rotor head incorporating Lord Kinematics Lastoflex elastomeric and Teflon faced bearings. Blade aerofoil Wortmann FX-083 (modified), normal 311 rpm. Tail rotor also similar to that of Bell 214 with greater diameter and blade chord, normal 1,460 rpm. Rotor brake standard. Stub-wings, NACA 0030 section at root, NACA 0024 at tip; incidence 14°; sweepback 14.7

Missions of AH-1W include anti-armour, escort, multiple-weapon fire support, including air-to-air with Sidewinder, armed reconnaissance, search and target acquisition. US AH-1Ws being fitted with Israeli Tamam laser night targeting system (NTS) for dual TOW/Hellfire day and night capability, prototype conversion authorised December 1991, initial 25 sets built by Tamam and delivered from January 1993, further production jointly with Kollsman approved May 1994; total of 250 required by USMC, additional 12 sets for Turkey and 53 for Taiwan ordered 1994. Testing of enhanced electronic warfare system began August 1989. Hughes AGM-65D Maverick ASM test fired in August 1990, up to 12 Maverick-capable SuperCobras required

STRUCTURE: Main rotor blades have aluminium spar and aluminium faced honeycomb aft of spar, tail rotor has aluminium honeycomb with stainless steel skin and leading-edge. Airframe conventional all-metal semi-monocoque

1995

LANDING GEAR: Non-retractable tubular skid type. Ground handling wheels optional.

POWER PLANT: Two General Electric T700-GE-401 turboshafts, each rated at 1,285 kW (1,723 shp). Transmission rating 1,515 kW (2,032 shp) for take-off, 1,286 kW (1,725 shp) continuous. Fuel (JP5) contained in two interconnected self-sealing rubber fuel cells in fuselage, with protection from damage by 0.50 in ballistic ammunition, total usable capacity 1,162 litres (306.8 US gallons, 255.7 Imp gallons). Gravity refuelling point in forward fuselage, pressure refuelling point in rear fuselage. Provision for carriage on underwing stores stations of two or four external fuel tanks each of 291 litres (77 US gallons, 64 Imp gallons) capacity, or two 378 litre (100 US gallon, 83 Imp gallon) tanks, or two 100 and two 77 US gallon tanks, larger tanks on outboard pylons only. Oil capacity 19 litres (5 US gallons, 4.2 Imp gallons).

ACCOMMODATION: Crew of two in tandem, with co-pilot/gunner in front seat and pilot at rear. Cockpit is heated, ventilated and air conditioned. Dual controls; lighting compatible with night vision goggles, and armour protection standard. Forward crew door on port side and rear crew door on starboard side, both upward-opening.

SYSTEMS: Three independent hydraulic systems, pressure 207 bars (3,000 lb/sq in), for flight controls and other services. Electrical system comprises two 28 V 400 A DC generators, two 24 V 34.5 Ah batteries and three inverters: main 115 V AC, 1 kVA, single-phase at 400 Hz, standby 115 V AC, 750 VA, three-phase at 400 Hz and a dedicated 115 V AC 365 VA single-phase for AIM-9 missile system. AiResearch environmental control unit.

AVIONICS: *Comms:* Two AN/ARC-182(V) radios, KY-58 TSEC secure voice set, AN/APX-100(V) IFF.

Flight: AN/ASN-75B compass set, AN/ARN-89B ADF, AN/ARN-118 Tacan, AN/APN-154(V) radar beacon set, and AN/APN-194 radar altimeter. From January 1991, new-build AH-1Ws have Teledyne AN/APN-217 Doppler-based navigation system with Collins CDU-800 control/display unit and dual Collins RCU-800 processors.

Instrumentation: Kaiser HUD compatible with PNVS-5 and ANVIS-6 night vision goggles.

Mission: Tamam/Kollsman Night Targeting System (NTSF-65) comprising FLIR, laser rangefinder/designator, TV camera, day/night video tracker and full in-flight boresighting, being retrofitted (within M-65 sighting system for TOW missiles) from 1993 (see Design Features); first re-delivery in June 1994; alternative McDonnell Douglas Electronic Systems NightHawk system also offered for export SuperCobras, following 1992-93 flight testing.

Self-defence: AN/APR-39(V) pulse radar signal detecting set, AN/APR-44(V) CW radar warning system, and AN/ALQ-144(V) IR countermeasures set. Dual AN/ALE-39 chaff system with one MX-7721 dispenser mounted on top of each stub-wing. Improved countermeasures suite in USMC AH-1Ws will replace AN/APR-39 and AN/APR-44 by AN/APR-39(XE2) radar warning and adds AN/AVR-2 laser warner and AN/AAR-47 plume detecting set.

ARMAMENT: Electrically operated General Electric undernose A/A49E-7(V4) turret housing an M197 three-barrel 20 mm gun. A 750-round ammunition container is located in the fuselage directly aft of the turret; firing rate is 650 rds/min; a 16-round burst limiter is incorporated in the firing switch. Gun can be tracked 110° to each side, 18° upward, and 50° downward, but barrel length of 1.52 m (5 ft 0 in) makes it imperative that the M197 is centralised before wing stores are fired. Underwing attachments for up to four LAU-61A (19-tube), LAU-68A, LAU-68A/A, LAU-68B/A or LAU-69A (seven-tube) 2.75 in Hydra 70 rocket launcher pods, two CBU-55B fuel-air explosive weapons, four SUU-44/A flare dispensers, two M118 grenade dispensers, Mk 45 parachute flares, or two GPU-2A or SUU-11A/A Minigun pods. Provision for carrying totals of up to eight TOW missiles, eight AGM-114 Hellfire missiles, two AIM-9L Sidewinder or AGM-122A Sidearm missiles, on outboard underwing stores stations. Canadian Marconi TOW/Hellfire control system enables AH-1W to fire both TOW and Hellfire missiles on same mission. Hughes AGM-65D Maverick capability demonstrated 1990; under consideration for USMC. Addition planned of further two pylons (total six) with proportional increase in weapons capability.

DIMENSIONS, EXTERNAL:

Main rotor diameter	14.63 m (48 ft 0 in)
Main rotor blade chord	0.84 m (2 ft 9 in)
Tail rotor diameter	2.97 m (9 ft 9 in)
Tail rotor blade chord	0.305 m (1 ft 0 in)
Distance between rotor centres	8.89 m (29 ft 2 in)
Wing span	3.28 m (10 ft 9 in)
Wing aspect ratio	3.74
Length: overall, rotors turning	17.68 m (58 ft 0 in)
fuselage	13.87 m (45 ft 6 in)
Width overall	3.28 m (10 ft 9 in)
Height: to top of rotor head	4.11 m (13 ft 6 in)
overall	4.44 m (14 ft 7 in)
Ground clearance, main rotor, turning	2.74 m (9 ft 0 in)
Elevator span	2.11 m (6 ft 11 in)
Width over skids	2.24 m (7 ft 4 in)

AREAS:

Main rotor blades (each)	6.13 m² (66.0 sq ft)
Tail rotor blades (each)	0.45 m² (4.835 sq ft)

Main rotor disc	168 11 m² (1,809 56 sq ft)
Tail rotor disc	6 94 m² (74.70 sq ft)
Vertical fin	2.01 m² (21.70 sq ft)
Horizontal tail surfaces	1 41 m² (15 20 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	4,634 kg (10,216 lb)
Mission fuel load (usable)	946 kg (2,086 lb)
Max useful load (fuel and disposable ordnance)	2,065 kg (4,552 lb)
Max T-O and landing weight	6,690 kg (14,750 lb)
Max disc loading	39 80 kg/m² (8.15 lb/sq ft)
Max power loading	4.42 kg/kW (7 26 lb/shp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE)	190 kts (352 km/h, 219 mph)
Max level speed at S/L	152 kts (282 km/h, 175 mph)
Max cruising speed	150 kts (278 km/h, 173 mph)
Rate of climb at S/L, OEI	244 m (800 ft)/min
Service ceiling	more than 4,270 m (14,000 ft)
Service ceiling, OEI	more than 3,660 m (12,000 ft)
Hovering ceiling: IGE	4,495 m (14,750 ft)
OGE	915 m (3,000 ft)
Range at S/L with standard fuel, no reserves	317 n miles (587 km, 365 miles)

UPDATED

BELL AH-1W VENOM

Venom was version of AH-1W offered by Bell Helicopter with GEC-Marconi as prime contractor for British Army attack helicopter requirement, completion of 'green' airframes would have been at Rochester, UK. Avionics borrowed from proposed AH-1W IWS (refer above) and included night vision and new sensors for day/night all-weather operation, autonomous navigation (GPS, possibly augmented by Doppler) and linked defensive aids, colour multifunction flat panel displays, integrated night vision helmets with night trackers and combined situation and digital map displays. Systems included APU. Bid submitted to UK MoD 2 November 1993, rejected in favour of McDonnell Douglas AH-64 Apache, 13 July 1995

UPDATED

BELL 406 (AHIP)

US Army designations: OH-58D Kiowa and Kiowa Warrior

TYPE: Two-seat scout and attack helicopter

PROGRAMME: Bell won US Army Helicopter Improvement Program (AHIP) 21 September 1981, first flight of OH-58D 6 October 1983, deliveries started December 1985, first based in Europe June 1987. Production running at minimum economic rate of three a month, compared with capacity for 12.

CURRENT VERSIONS: **Prime Chance:** Fifteen special armed OH-58Ds (86-8908 to -8922) modified from September 1987 under Operation Prime Chance for use against Iranian high-speed boats in Gulf; delivery started after 98 days, in December 1987, firing clearance for Stinger, Hellfire, 0.50 in gun and seven-tube rocket pods completed in seven days. Further conversion (85-24716) for development trials. All currently operated by 4-17th Cavalry at Fort Bragg, North Carolina

Detail of OH-58D Kiowa Warrior armed with Stinger AAMs *(Paul Jackson)*

1995

Kiowa Warrior: Armed version, to which all planned OH-58Ds are being modified, integrated weapons pylons, uprated transmission and engine, lateral CG limits increased, raised gross weight, EMV protection of avionics bays, localised strengthening, RWR, IR jammer, video recorder, SINCGARS radios, laser warning receiver and tilted vertical fin, armament same as Prime Chance, integrated avionics and lightened structure. See illustration for stealth kit modification (details of kit in 1992-93 *Jane's*), converted aircraft (of which 89-0090 was first) reportedly have since reverted to standard, but low-observable OH-58Ds of 1-17th Cavalry at Fort Bragg, North Carolina, operating with undisclosed modifications by 1993; changes include coated rotor blades, new windscreen material and modified rotor sail, rotor cuffs and hubs for substantial reduction in frontal radar signature

Further modifications for Warrior, currently under consideration, include undernose FLIR turret (tested late 1993), 227 litre (60 US gallon, 50 Imp gallon) conformal fuel tanks on flanks of rear cabin, radio frequency interferometer RWR; INS/GPS, digital map display, integrated helmet display, and 19 5 per cent power plant uprating for OGE hover at 1,220 m (4,000 ft) at 35°C (95°F) with four Hellfire ATMs

MultiPurpose Light Helicopter (MPLH): Further modification of Kiowa Warrior; features include squatting landing gear, quick folding rotor blades, horizontal stabiliser and tilting fin to allow helicopter to be transported in cargo aircraft and flown to cover 10 minutes after unloading from C-130. Later additions include cargo hook for up to 907 kg (2,000 lb) slung load and fittings for external carriage of six outward facing troop seats or four stretchers.

OH-58X Light Utility Variant: Contender for anticipated US Army requirement, fourth development OH-58D (69-16322) modified in 1992 with partial stealth features (including chisel nose); chin-mounted McDonnell Douglas Electronic Systems turret for night piloting system, Kodak FLIR with 30° field of view, 907 kg (2,000 lb) capacity cargo hook, Allison T703-AD-700 power plant with 429 kW (575 shp) transmission, and Honeywell avionics including ring laser INS with GPS, colour map and integrated helmet display system. Avionics relocated to nose, freeing two passenger seats, third seat available if mast sight avionics removed, target empty weight 1,400 kg (3,085 lb). Cockpit doors have full length transparencies, bulged for extra elbow room

CUSTOMERS: US Army: initial plan to modify 592 OH-58A to OH-58D reduced to 477, again reduced to 207, but Congressionally mandated re-orders increased total to 376 (excluding five prototypes) by 1995 from new goal of 507, as under

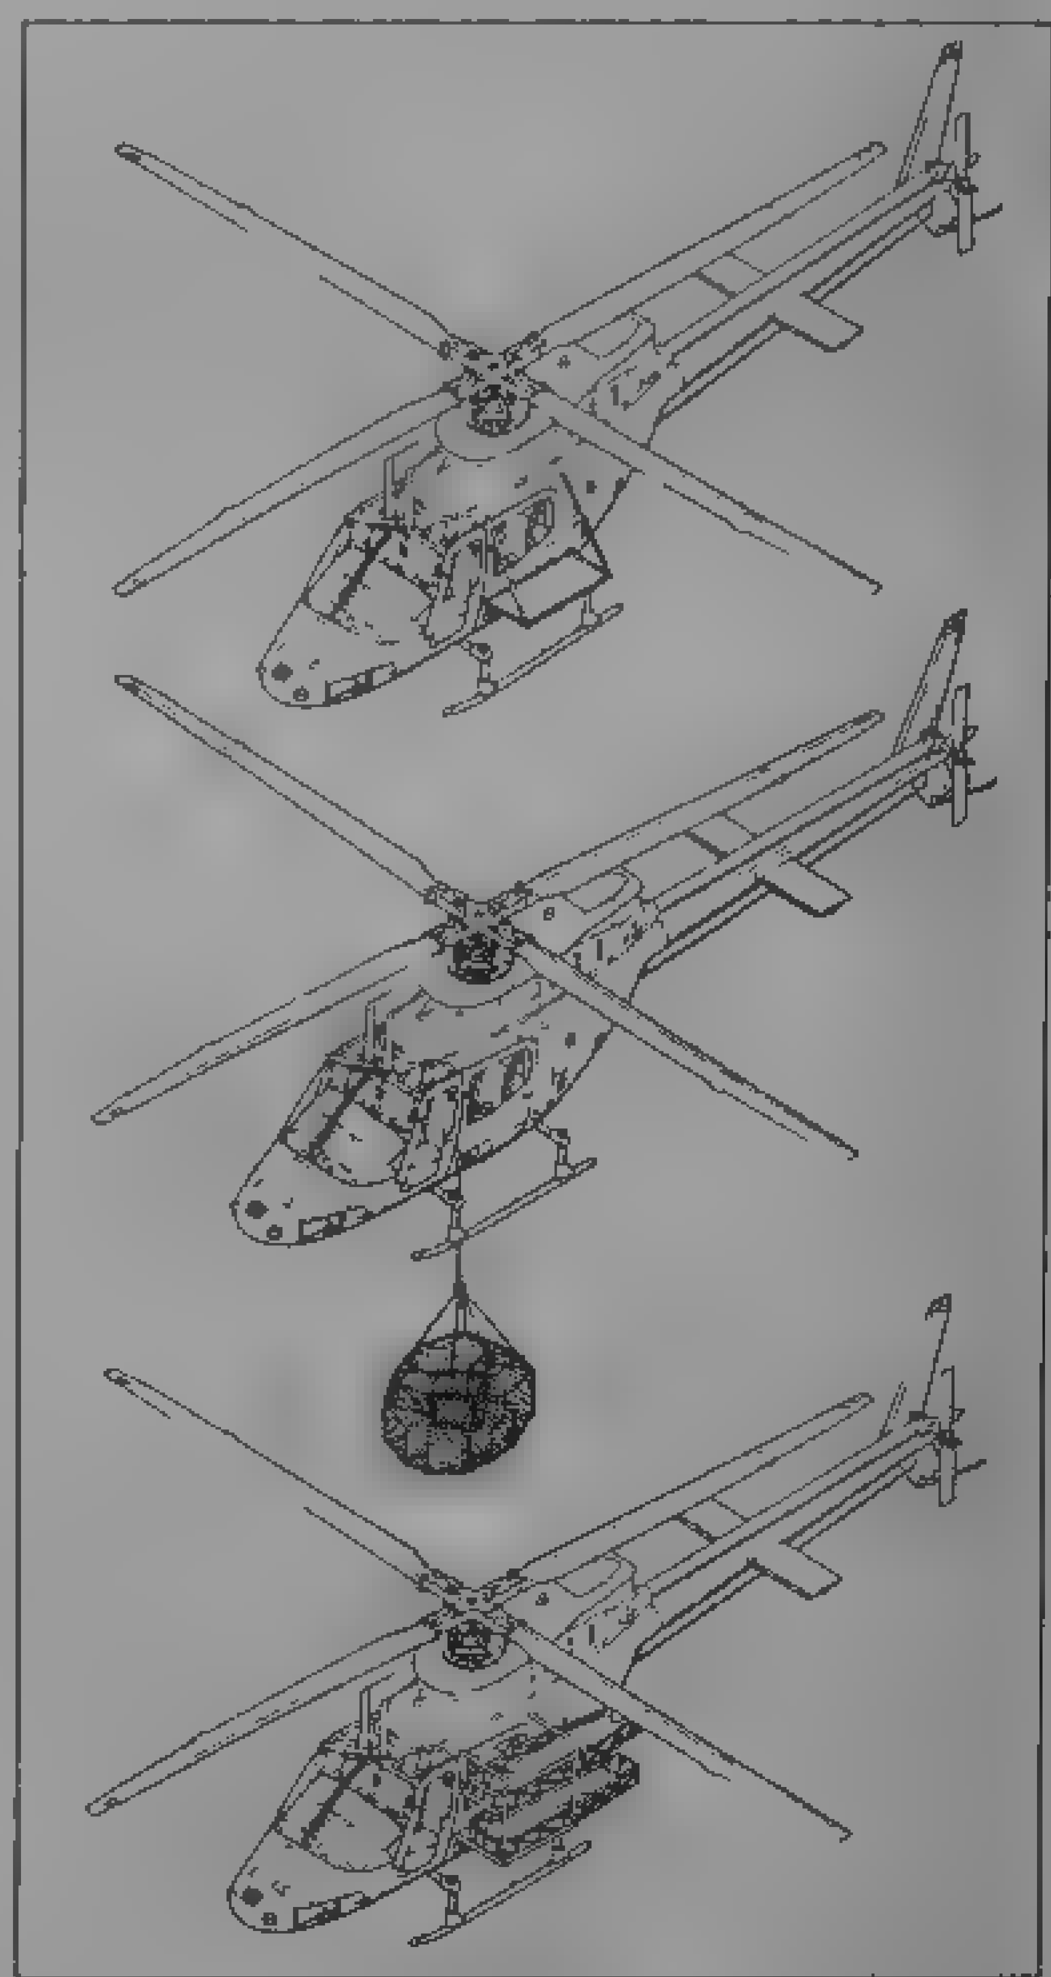
FY	Lot	Qty	First aircraft
83	1	16	83-24129
85	2	44	85-24690
86	3	39	86-8901
87	4	36	87-0725
88	5	36	88-0285
89	6	36	89-0082
90	7	36	90-0346
91	8	36	91-0536
92	9	36	
92	10	12*	
93	11	15	
94	12	18	
95	13	16	
Total		**376†**	

*Gulf War attrition replacements
†Plus five prototypes

First 117 conversions at Amarillo, from 87-0743 at Fort Worth, produced as Kiowa Warrior from 202nd aircraft (89-0112), May 1991; initially to 'C' and 'D' Troops of 4-17 Aviation, Fort Bragg. First Warrior retrofit contract (28 helicopters) to Bell January 1992, further 75 in FY93 budget and 38 in FY95. Taiwan ordered 12 OH-58Ds plus maintenance trainer in February 1992 and reserved 14 options, deliveries from July 1993 (s/n 601). Taiwanese helicopters are new-build, US Army aircraft are ex-OH-58As with new serial numbers. Main effort now is provision for armament and accompanying upgrades in new aircraft and retrofitting existing OH-58D to armed Kiowa Warrior configuration, 81 Kiowa Warriors to be raised to ultimate MultiPurpose Light Helicopter (MPLH) standard for use by US Army quick reaction forces of XVIII (32 aircraft) and 82nd (49 aircraft) Airborne Divisions.

COSTS: $9 42 million (1990) programme unit cost. Flyaway $4 9 million (Kiowa) or $6.7 million (Kiowa Warrior). Retrofit to Warrior configuration $1 34 million (1992-93 average)

DESIGN FEATURES: Four-blade Bell soft in plane rotor with carbon composites yoke, elastomeric bearings and composites blades. Main rotor rpm 395, tail rotor rpm 2,381



Bell OH-58D potential configurations. (top) six external troops, one internal with equipment; (centre) 907 kg (2,000 lb) underslung load, (bottom) four casualties and one internal medical attendant

1993

Stealth Kiowa Warrior (89-0090) with chisel nose, blade root cuffs, composites side door, tail rotor hub cover, modified engine fairing and radar-absorbent coatings

1993

McDonnell Douglas/Northrop Grumman mast-mounted sight containing TV and IR optics and laser designator/ranger. Honeywell integrated control of mission functions, navigation, communications, systems and maintenance functions based on large electronic primary displays for pilot and observer/gunner, hands-on cyclic and collective controls for all combat functions; automatic target hand-off system in some OH-58Ds operates air-to-air as well as air-to-ground using digital frequency hopping, system indicates location and armament state of other helicopters, some OH-58Ds have real-time video downlink capable of relaying to US Army Guardrail aircraft, to headquarters 22 n miles (40 km; 25 miles) away or, via satellite, to remote locations.

Stage 1 of MultiStage Improvement Program (MSIP) includes fitting GPS receiver, improved Doppler, digital data loader and MIL-STD-1750 processors.

FLYING CONTROLS: Fully powered controls, including tail rotor, with four-way trim and trim release; stability and control augmentation system (SCAS) using AHRS gyro signals; automatic bob-up and return to hover mode, Doppler blind hover guidance mode, co-pilot/observer's cyclic stick can be disconnected from controls and locked centrally.

STRUCTURE: Basic OH-58 structure reinforced, armament cross-tube fixed above rear cabin floor; avionics occupy rear cabin area, baggage area and nose compartment.

LANDING GEAR: Light alloy tubular skids bolted to extruded cross-tubes.

1994

POWER PLANT: One Allison 250-C30R (T703-AD-700) turboshaft (C30R/3 in Kiowa Warrior), with an intermediate power rating of 485 kW (650 shp) at S/L ISA. Transmission rating: Kiowa 339 kW (455 shp) continuous; Kiowa Warrior 410 kW (550 shp) continuous. One self-sealing crash resistant fuel cell, capacity 424 litres (112 US gallons, 93 Imp gallons), located aft of cabin area. Refuelling point on starboard side of fuselage. Oil capacity 5.7 litres (1.5 US gallons; 1.2 Imp gallons).

ACCOMMODATION: Pilot and co-pilot/observer seated side by side. Door on each side of fuselage. Accommodation is heated and ventilated.

SYSTEMS: Dual hydraulic system with three-axis SCAS, pressure 69 bars (1,000 lb/sq in), for main and tail rotor controls. Maximum flow rate 11.36 litres (3 US gallons, 2.5 Imp gallons)/min. Open-type reservoir. Primary electrical power provided by 10 kVA 400 Hz three-phase 120/208 V AC alternator with 200 A 28 V DC transformer rectifier unit for secondary DC power. Back-up power provided by 500 VA 400 Hz single-phase 115 V AC solid-state inverter and 200 A 28 V DC starter/generator.

AVIONICS: *Comms*: Five com transceivers, datalink and secure voice equipment. Phase 1 additions, introduced on production line in 1990 in preparation for Kiowa Warrior, include AN/ARC-201 SINCGARS secure voice/data radio and Have Quick II radio.

Flight: Plessey (PESC) AN/ASN-157 Doppler strapdown INS.

Instrumentation: Equipped for day/night VFR. Multifunction displays for vertical and horizontal situation indication, mast-mounted sight day/night viewing and communications control, with selection via control column handgrip switches.

Mission: Mast-mounted sight houses 12× magnification TV camera, autofocusing IR thermal imaging sensor and laser rangefinder/designator, with automatic target tracking and in-flight automatic boresighting; turret may be trained 190° port and 190° starboard in azimuth, ±30° in elevation. Night vision goggles, AHRS, and airborne target handoff subsystem (ATHS). Germany-based OH-58Ds have real-time video downlink which can be relayed via Guardrail-capable aircraft. Phase 1 additions include doubled computer capacity to 88 kbits, added weapons selection/aiming and multitarget acquisition/track displays, video recorder, data transfer system, ANVIS display and symbology system and EMV hardening.

Self-defence: AN/APR-39(V)1 or -39A(V)1 RWR. Phase 1 adds AN/ALQ-144 IR jammer, second RWR (AN/APR-44(V)3) and AN/AVR-2 laser detection system.

EQUIPMENT: M-43 NBC mask in Phase 1 and Warrior aircraft.

ARMAMENT: Four Stinger air-to-air or Hellfire air-to-surface missiles, or two seven-round 2.75 in rocket pods, or one Global Helicopter Technology CFD-5000 pod for 7.62 mm and 0.50 in machine guns, mounted on outriggers on cabin sides (port side only for gun). IR jammer standard on armed version.

DIMENSIONS, EXTERNAL:

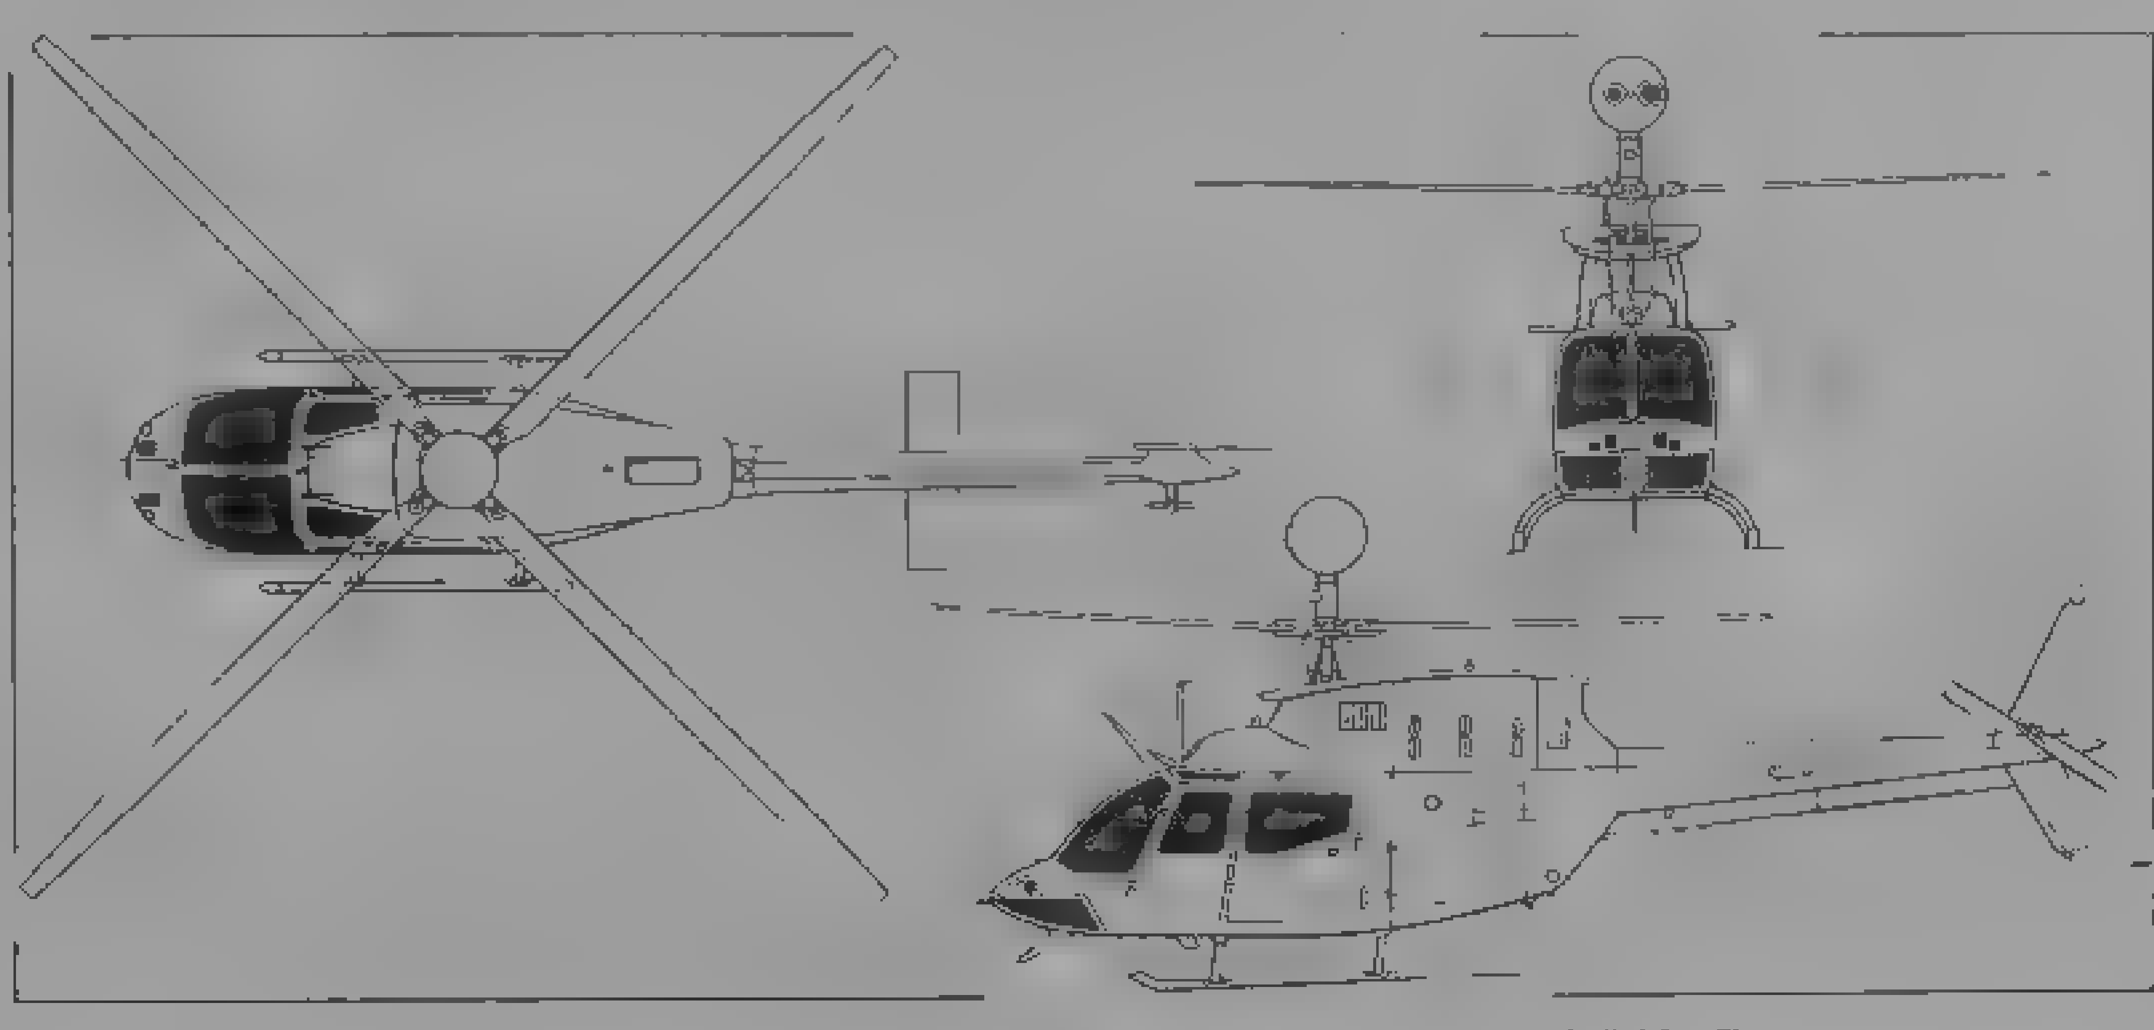
Main rotor diameter	10.67 m (35 ft 0 in)
Main rotor blade chord (mean)	0.24 m (9½ in)
Tail rotor diameter	1.65 m (5 ft 5 in)
Length: overall, rotors turning	12.85 m (42 ft 2 in)
fuselage (pitot to skid)	10.48 m (34 ft 4¾ in)
fin tilted for air transport	10.29 m (33 ft 9¼ in)
Width: rotors folded, clean	1.97 m (6 ft 5½ in)
armament fitted, pylons folded for air transport (MPLH)	2.39 m (7 ft 10 in)
Height: overall	3.93 m (12 ft 10⅝ in)
squatting and folded for air transport (MPLH)	2.73 m (8 ft 11⅝ in)
Horizontal stabiliser span	2.29 m (7 ft 6 in)
Skid track	1.88 m (6 ft 2 in)
Cabin doors (port and stbd, each):	
Height	1.04 m (3 ft 5 in)
Width	0.91 m (3 ft 0 in)
Height to sill	0.66 m (2 ft 2 in)

AREAS:

Main rotor blades (each)	1.38 m² (14.83 sq ft)
Tail rotor blades (each)	0.13 m² (1.43 sq ft)
Main rotor disc	89.37 m² (962.0 sq ft)
Tail rotor disc	2.14 m² (23.04 sq ft)
Horizontal stabiliser	1.11 m² (11.92 sq ft)
Fin	0.87 m² (9.33 sq ft)

WEIGHTS AND LOADINGS (K: OH-58D Kiowa, KW: armed Kiowa Warrior):

Weight empty: K	1,381 kg (3,045 lb)
KW	1,492 kg (3,289 lb)



Bell OH-58D Kiowa Warrior scout and attack helicopter (*Jane's/Mike Keep*)

1994

OH-58X prototype receives adjustments to night piloting system turret *(Kenneth Munson)*

1994

Max external load: KW 907 kg (2,000 lb)
Max fuel weight: K, KW 341 kg (752 lb)
Mission weight: KW 2,359 kg (5,200 lb)
Max T-O and landing weight: K 2,041 kg (4,500 lb)
KW 2,495 kg (5,500 lb)
Max disc loading: K 22.84 kg/m² (4.68 lb/sq ft)
KW 27.91 kg/m² (5.72 lb/sq ft)
Max power loading: K 6.02 kg/kW (9.89 lb/shp)
KW 5.82 kg/kW (9.56 lb/shp)

PERFORMANCE (at max T-O weight, clean, K, or at mission weight, KW):
Never-exceed speed (VNE) 130 kts (241 km/h; 149 mph)
Max level speed at 1,220 m (4,000 ft) 128 kts (237 km/h; 147 mph)
Max cruising speed: K 118 kts (219 km/h; 136 mph)
KW 114 kts (211 km/h; 131 mph)
Econ cruising speed at 1,220 m (4,000 ft) 110 kts (204 km/h; 127 mph)
Max rate of climb: at S/L, ISA 469 m (1,540 ft)/min
at 1,220 m (4,000 ft), 35°C (95°F) over 366 m (1,200 ft)/min
Vertical rate of climb:
at S/L, ISA: K 232 m (760 ft)/min
KW 4,875 m (1,600 ft)/min
at 1,220 m (4,000 ft), 35°C (95°F):
K over 152 m (500 ft)/min
Service ceiling: KW 4,575 m (15,000 ft)
Hovering ceiling:
IGE, ISA: K over 3,660 m (12,000 ft)
KW 3,050 m (10,000 ft)
OGE, ISA: K 3,415 m (11,200 ft)
KW 2,105 m (6,900 ft)
OGE, 35°C (95°F): K 1,735 m (5,700 ft)
KW* 1,220 m (4,000 ft)
Range: K 250 n miles (463 km; 288 miles)
KW 223 n miles (413 km; 257 miles)
Endurance: K and KW 2 h 24 min
*at 2,176 kg (4,798 lb)

UPDATED

BELL/BOEING V-22 OSPREY

TYPE: Twin-engined tilt-rotor multimission aircraft.

PROGRAMME: Based on Bell/NASA XV-15 tilt-rotor; initiated as US Department of Defense Joint Services Advanced Vertical Lift Aircraft (JVX), run by US Army; FY82, programme transferred to US Navy January 1983; 24 month US Navy preliminary design contract 26 April 1983; aircraft named V-22 Osprey January 1985; seven year full-scale development (FSD) began 2 May 1986 with order for six prototypes (Nos. 1, 3 and 6 by Bell at Arlington, Texas; Nos. 2, 4 and 5 by Boeing at Wilmington, Delaware) plus static test airframes.

No. 1/Bu Aer No. 163911: Rolled out at Arlington 23 May 1988; first flight 19 March 1989; flight envelope expansion and flight loads examination; achieved first transition from helicopter to aeroplane mode 14 September 1989; grounded July 1992 and not returned to flying duties.

No. 2/163912: First flight at Arlington 9 September 1989; to Wilmington 6 May 1990; fly-by-wire development; grounded July 1992, modified and resumed flying at Wilmington, November 1993; hot/cold weather trials early 1994; to Patuxent River, where initial operational flight testing by USMC and USAF undertaken July 1994 (20 hours 15 minutes in 27 days); flight-ready storage from October 1994; painted grey overall and flight demonstrated at Paris Air Show, June 1995 (first V-22 to fly outside USA).

No. 3/163913: First flight at Arlington 9 May 1990; flight loads, vibration and sea trials, USS *Wasp* 4-7 December 1990; grounded July 1992, modified and resumed flying at Arlington 17 June 1993; to Patuxent River: aerodynamic trials, external loads, sea trials 1994; trials of anti-buffet forebody strake from September 1994; flight testing continuing in 1995.

No. 4/163914: First flight at Wilmington 21 December 1989; first with full avionics and ejection seats; shipboard compatibility and propulsion trials: USS *Wasp* 4-7 December 1990; four months of weather testing (–54 to +49°C, –65 to +120°F) completed 7 June 1992; lost on 94th sortie (103 hours) 21 July 1992 due to engine nacelle fire.

No. 5/163915: First flight at Wilmington ended with crash due to avionics mis-wiring, 11 June 1991.

No. 6/163916: Construction abandoned, became mockup for EMD configuration, cabin evacuation trials 1993.

Initial government trials, April 1990, involved 15 hours' flying by three military test pilots in No. 2. Sea trials aboard USS *Wasp*, 4 to 7 December 1990, involved No. 3 in landing and take-off tests and No. 4 in fit and function tests. By end 1990, trials included transition landings and take-offs, wing stall tests, single-engine tests and flights up to 349 knots (647 km/h; 402 mph). V-22 awarded National Aeronautic Association's Collier Trophy in 1990 for greatest achievement in aeronautics in past year. Aimed to meet or exceed 32 multiservice mission requirements. Trials programme is 4,000 hours, of which 763 hours flown in 643 sorties up to July 1992 temporary grounding. Flying resumed in 1993 with Nos. 2 and 3, these having been modified with improved firewalls, nacelle drains and pylon driveshaft heatshields as consequence of No. 4's crash. Nos. 2 and 3 assigned to envelope expansion and concept demonstration until 1996; both based at Patuxent River NAS, instead of contractors' two airfields.

Original schedule called for delivery to US Marines late 1991/early 1992, US Air Force 1993 and US Navy 1995. Production funding cut FY90, but development contract maintained, some long-lead items for production aircraft funded FY91; 12 serial numbers (164389-164400) reserved, then cancelled. Congress appropriated FY92 funding for three of additional six 'production representative' engineering and manufacturing development (EMD) aircraft (164939-164944), second three planned for FY93 funding; however, programme revised in late 1992, and six to comprise four new and two rebuilt prototypes; operational testing deferred until these new aircraft available.

Osprey passed critical design review 13 December 1994 with minor provisions, including addition of forebody strake to eliminate buffeting and provision for nose-mounted gun; simultaneous defence review authorised V-22 production for both Marines and special forces.

EMD Ospreys, to begin flying in 1997, have significant changes from earlier aircraft, including 1,000 kg (2,205 lb) reduction in empty weight to approximately 15,100 kg (33,290 lb); aluminium cockpit cage, replacing titanium, but with smaller windows to preserve structural strength; upgraded flight controls, enhanced engine and drive system, improved tail unit construction (built by Bell in place of Northrop Grumman) including fibre placement aft fuselage, redesigned rotor system, absence of fin tuning weights, improved wing constructional techniques, redesigned wiring, and pyrotechnic escape hatches. Four EMD aircraft are:

No. 7: First flight December 1996; structural, load and vibration testing to be completed by April 1998.

No. 8: First flight February 1997; propulsion and systems testing and high AoA trials.

No. 9: First flight May 1997; government technical

evaluation, USMC evaluation August 1998 to January 1999

No. 10: First flight April 1997 (sic), rough sea trials USMC evaluation August 1998 to January 1999

Marine Corps downgraded requirements for CH-46 replacement, 1992, making conventional helicopter solution possible, production decision, due December 1993 postponed to November 1994 for new assessment of post Cold War requirements for assault transports; MV-22A IOC remains unchanged at 1999

CURRENT VERSIONS **MV-22A** Basic US Marine Corps transport, original requirement for 552 (now 425) to replace CH-46 Sea Knight and CH-53 Sea Stallion. Three-man crew and 24 combat-equipped troops or cargo carried at 250 knots (463 km/h, 288 mph) over radius of 200 n miles (370 km, 230 miles), with ability to hover mid-way at 915 m (3,000 ft) OGE at 33°C (91 4°F)

HV-22A: US Navy combat search and rescue (CSAR), special warfare and fleet logistics model to replace HH-3s Requirement for 48 (originally 50) IOC 2006

CV-22A. US Air Force long-range special missions aircraft. Original requirement for 80 reduced to 55, then 50, should carry 12 troops or 1,306 kg (2,880 lb) internal cargo over 520 n mile (964 km; 599 mile) radius at 250 knots (463 km/h, 288 mph), with ability to hover OGE at 1,220 m (4,000 ft) at 35°C (95°F)

SV 22A. Tentative US Navy ASW version to replace S-3 Viking Original requirement for up to 300 Required to deposit and pick up recoverable large ASW sensors and operate them from high altitude

US Army: Original requirement for 231 V-22s, based on USMC transport, withdrawn Documented requirement remains for V-22 in medevac, special operations and combat assault support roles

CUSTOMERS. See above First four production aircraft to be funded in FY97 Also European marketing co-operation with British Aerospace (which see), Dornier and Alenia Japan Maritime Self-Defence Force provisional commitment to fund four SAR Ospreys

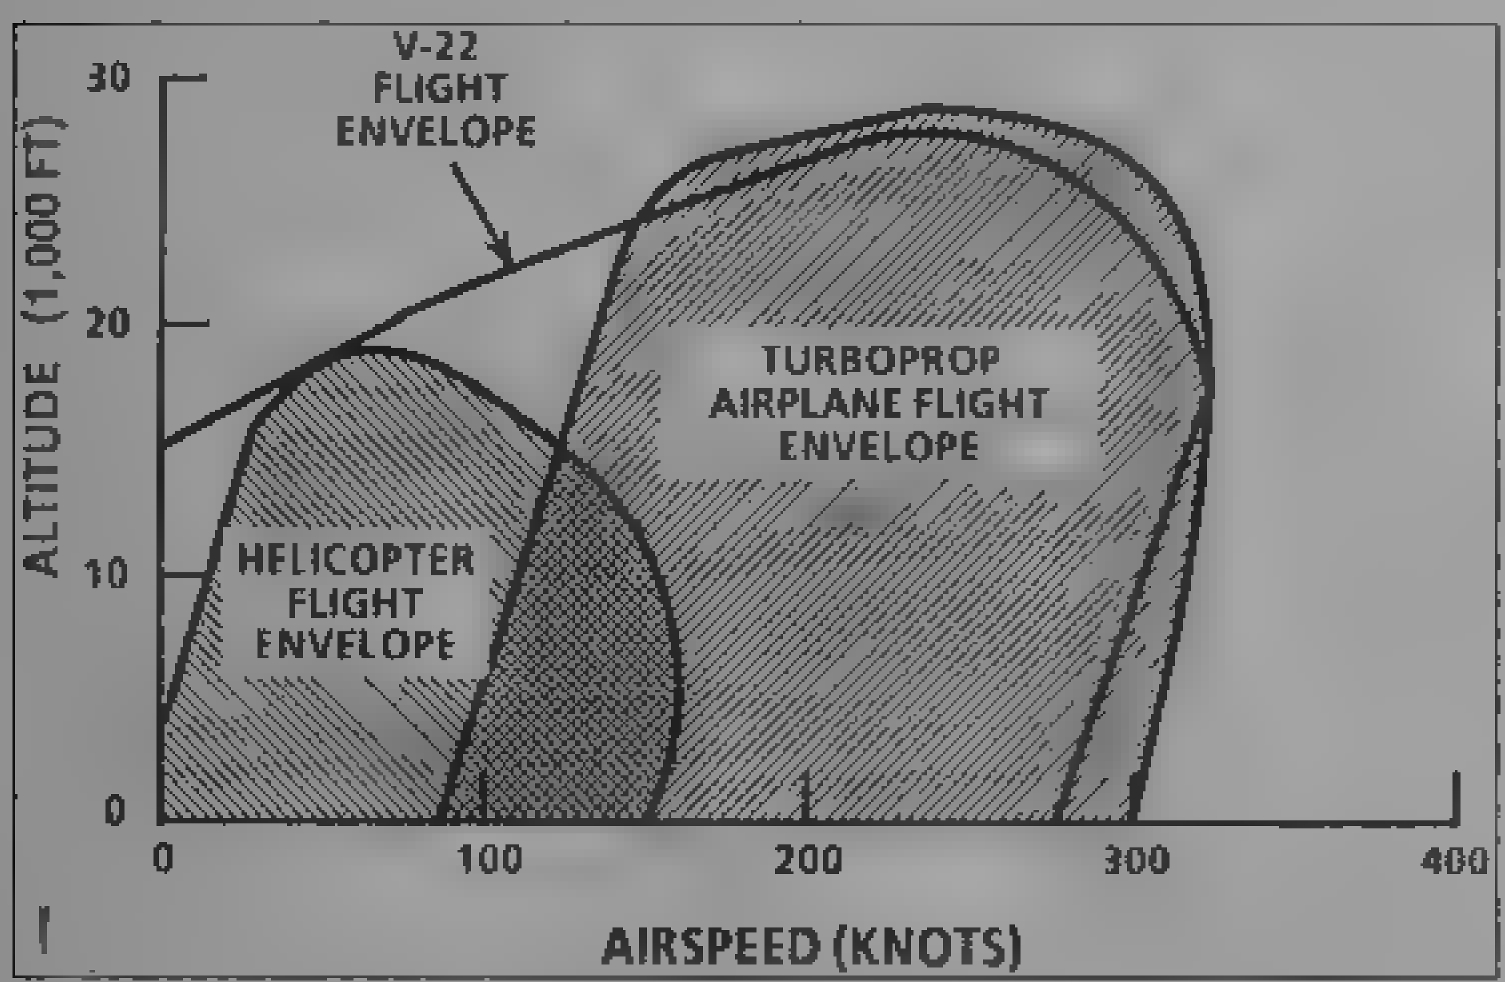
COSTS. FSD contract awarded 2 May 1986, valued at $1 810 million over seven years, terminated 22 October 1993 and replaced same day by EMD contract, initially funded at $550 million but expected to total $2 000 million, of which $1 540 million appropriated in FY92-93, no request in FY94 as sufficient remained from previous years. Production launch planned in FY96 with $50 million, followed by $700 million in FY97 $800 million in FY98 and $1 000 million in FY99 towards Marines' requirement for 425 Estimated cost (1991) to complete full-scale development $2 100 million Unit cost $33 4 million (December 1994. target is $29 million (1993) over total production of 612. FY97 budget draft includes $640 million for four V 22s

DESIGN FEATURES Engines, transmission and proprotors tilt through 97° 30' between forward flight and steepest approach gradient or tail-down hover; cross-shaft keeps both proprotors turning after engine loss Three-blade, graphite/fibreglass, contrarotating proprotors have special high-twist tapered format blades with elastomeric bearings and powered folding mechanisms, separate swashplates produce respectively yaw and fore-and-aft translation in hover and sideways flight in level attitude Rotation speed 333 rpm; tip speed 201 75 m (662 ft)/s Wing-fold sequence from helicopter mode involves power-folding of blades parallel to wing leading edge. tilting engine nacelles down to horizontal and rotating entire wing engine/proprotor group clockwise on stainless steel carousel to lie over fuselage

FLYING CONTROLS Three line fly-by-wire (Moog actuators) with automatic stabilisation, full autopilot and formation flying modes Automatic control of configuration change during transition and of transfer of control from aerodynamic surfaces to rotor-blade pitch changing, flaperons and ailerons droop during hover to reduce negative lift of wing

Rotors have separate cyclic control swashplates for sideways flight and fore-and-aft control (symmetrical for forward and rearward flight and differential for yaw) in hover Lateral attitude controlled in hover by differential rotor thrust, but lateral swashplate allows sideways flight in level attitude controlled by button on control column Integrated electronic cockpit with six electronic display screens, helicopter-style control columns rather than aileron wheels, but left-handed power levers move forward to full power in opposite sense to helicopter collective lever

STRUCTURE Approximately 59 per cent of airframe is composites and just 454 kg (1,000 lb) of empty weight is metal, main composites are Hercules IM-6 graphite/epoxy in wing and AS4 in fuselage and tail, nacelle cowlings and



Advantages of tilt-rotor include flight envelope combining those of turboprop aeroplane and helicopter

1995

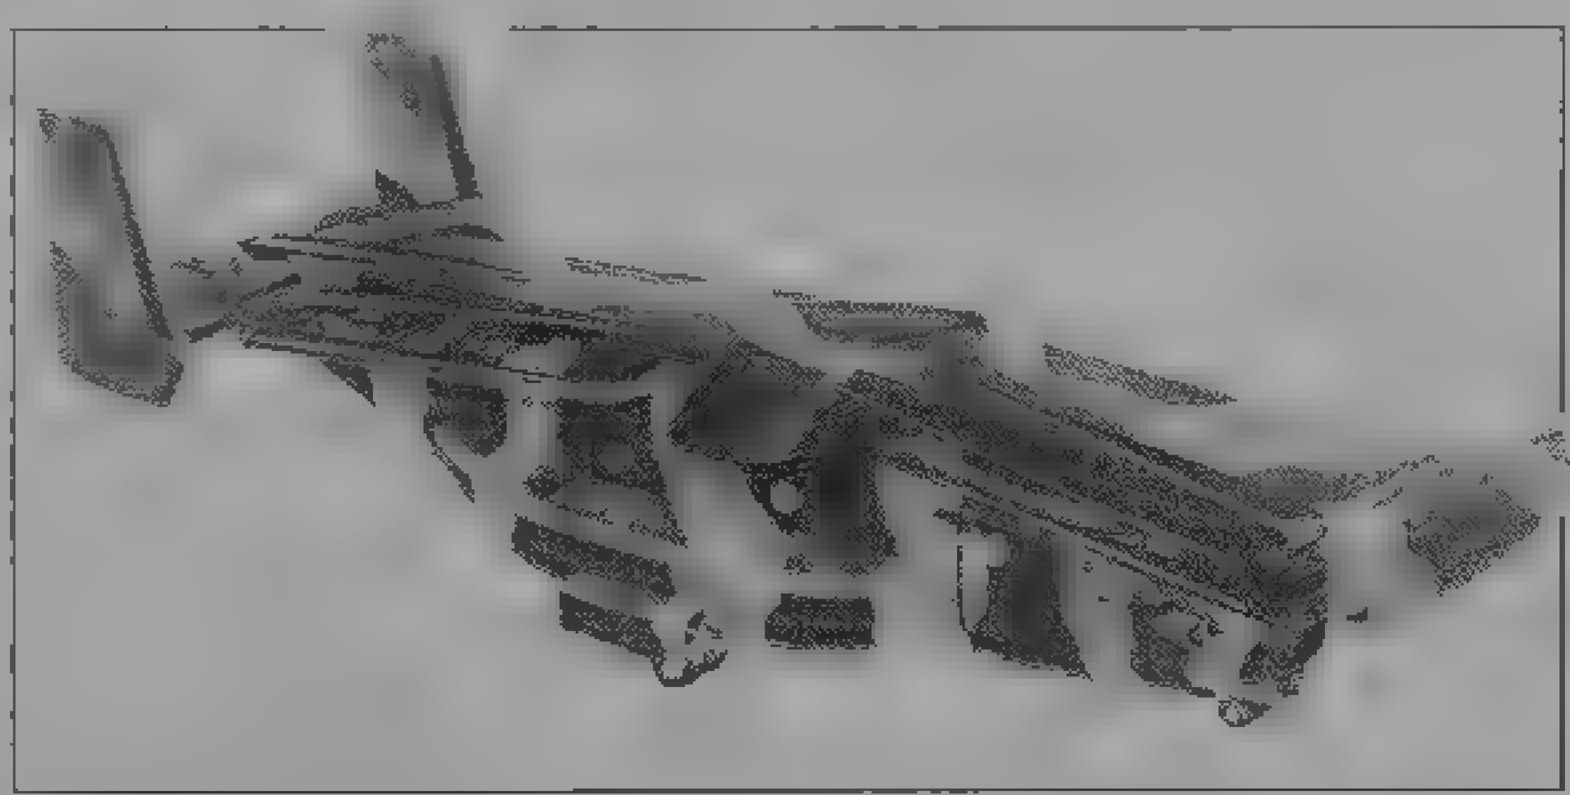


Diagram illustrating the V-22 with wing and rotor blades in the stowed position

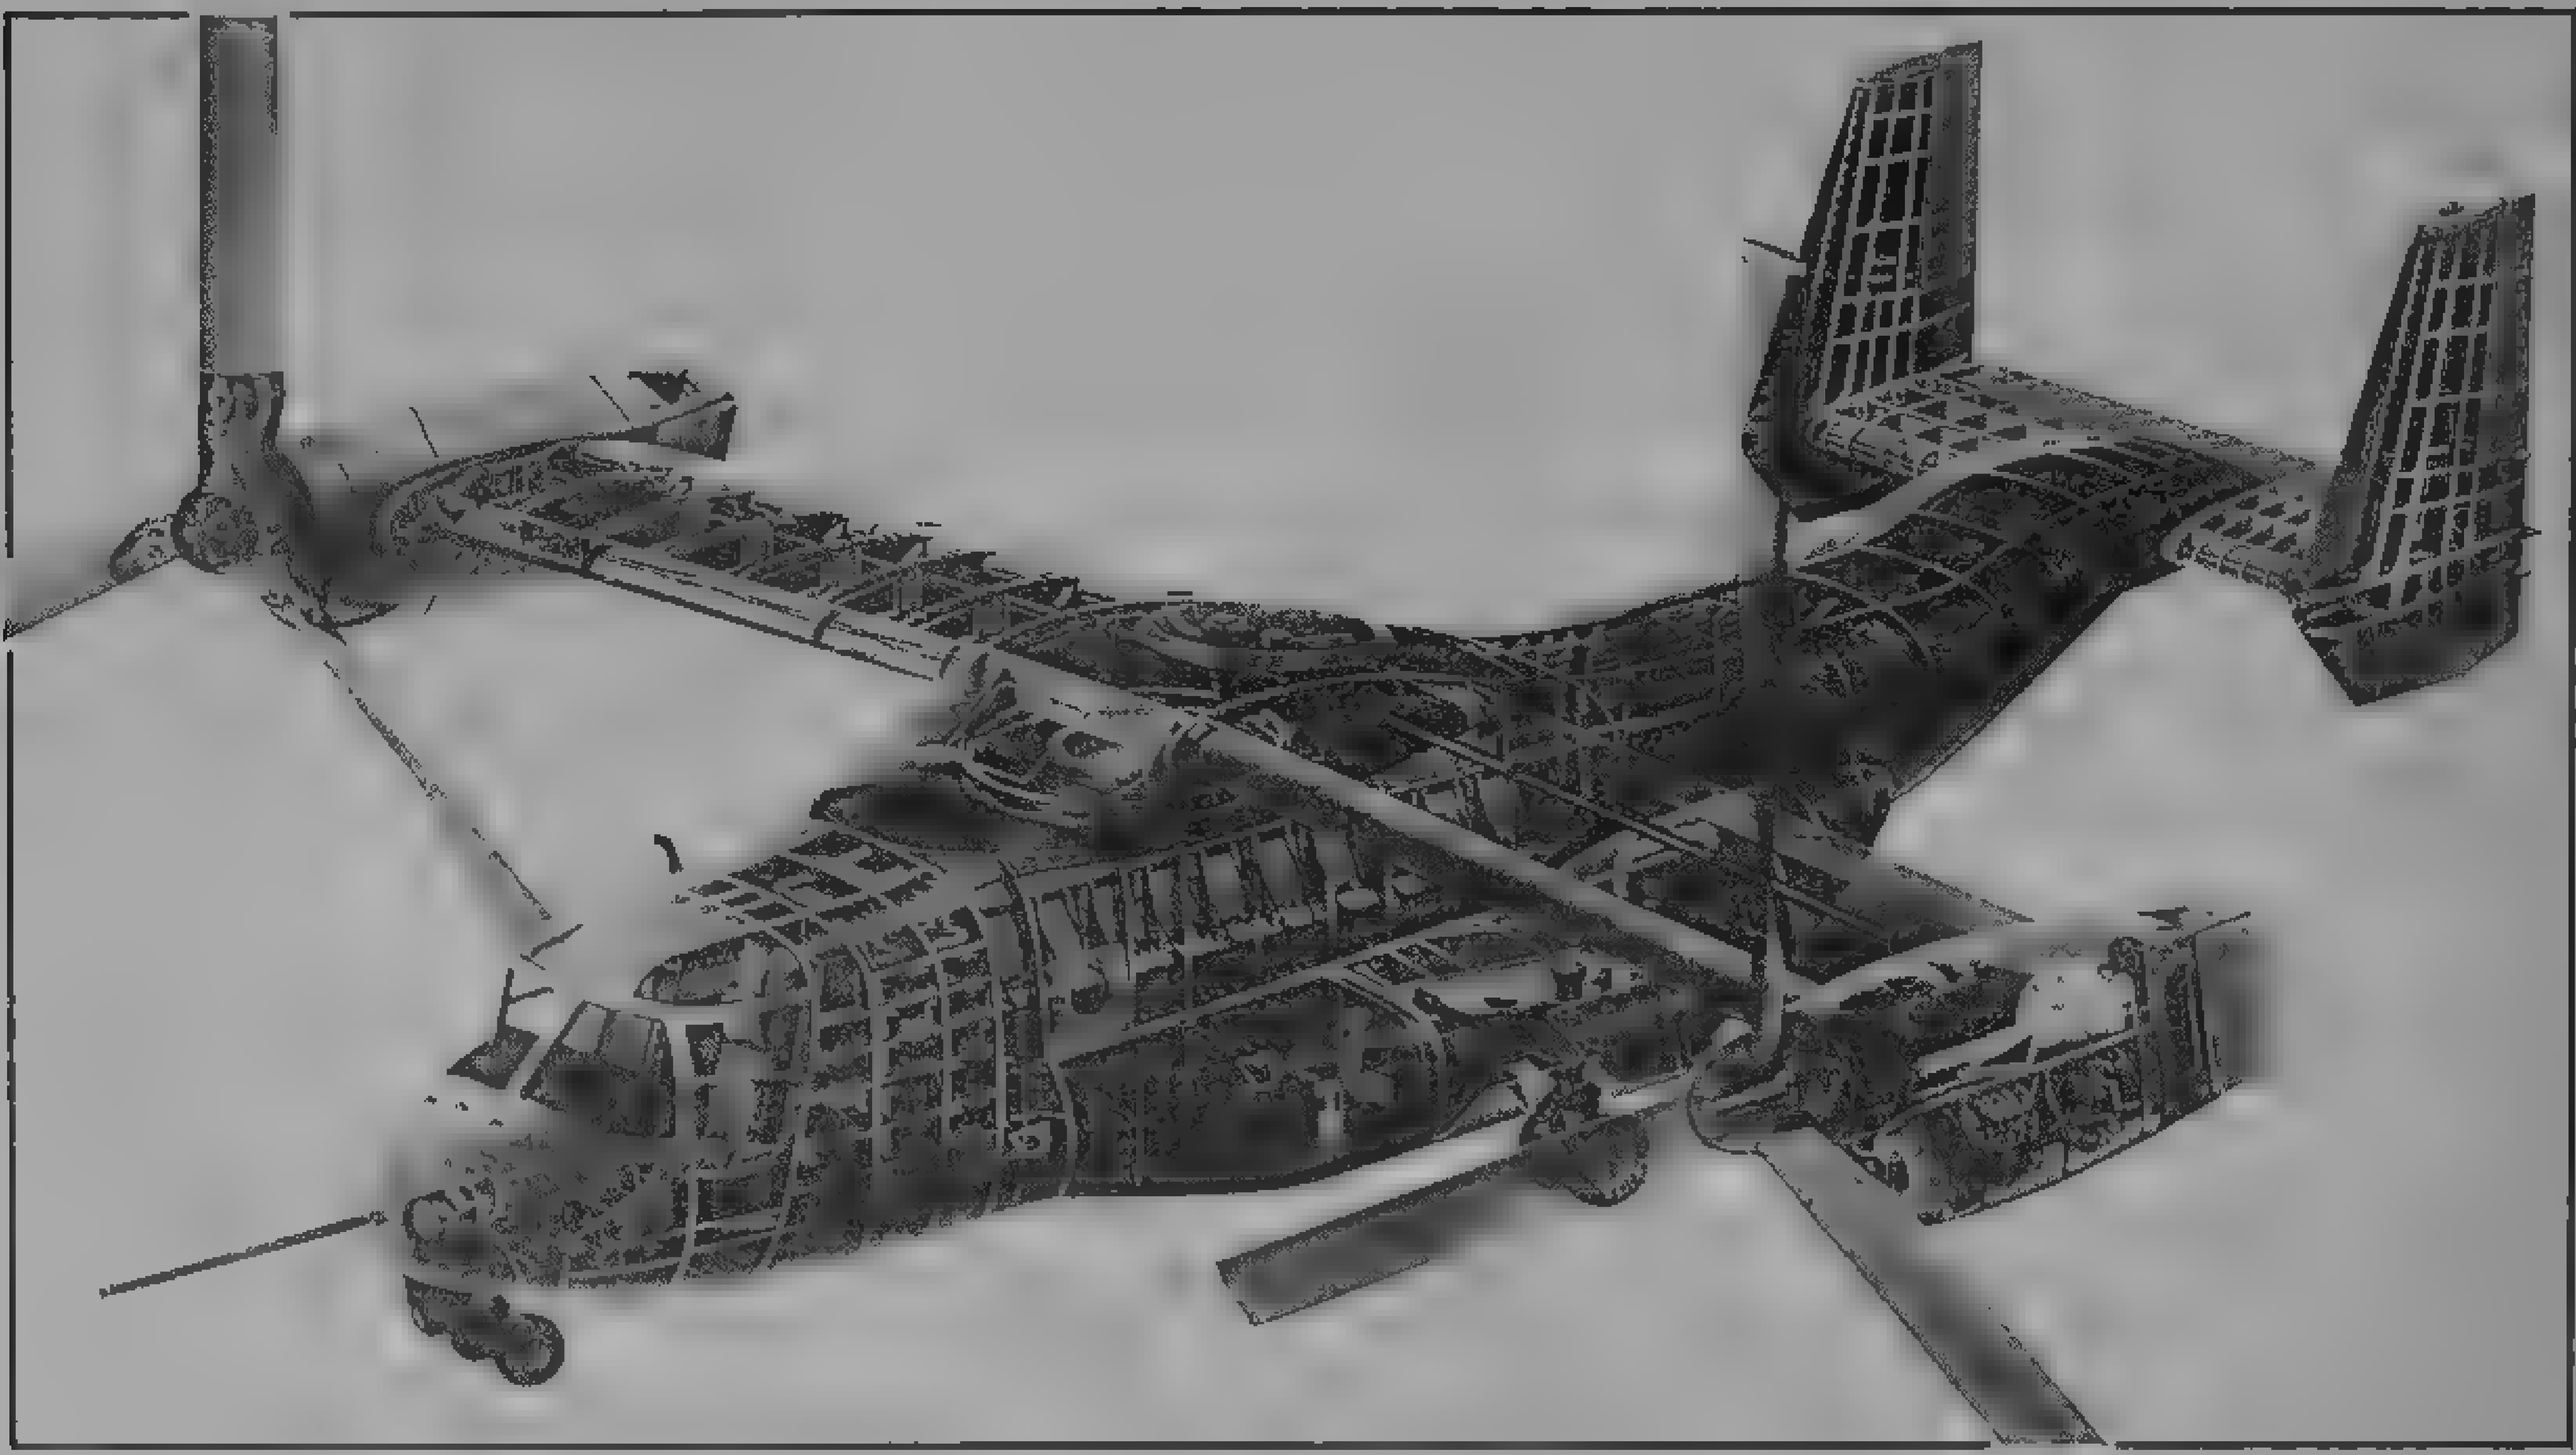
1993



Construction details of Bell/Boeing V-22 Osprey

1995

pylon supports are of GFRP. Fuselage mainly 'black aluminium' consisting of conventional stringers, frames and preformed skin, all in composites, assembled with metal fasteners. Main cabin has composites floor panels and titanium window frames. Crew seats of boron carbide/polyethylene laminate.

Wing box is high-strength, very stiff torsion box made up from one-piece upper and lower skins with moulded ribs and bonded stringers, two-segment graphite single slotted flaperons with titanium fittings, three-segment detachable leading-edge of aluminium alloy with Nomex honeycomb core. Wing locking and unlocking with Lucas Aerospace actuators, fuselage sponsons contain landing gear, air conditioning unit and fuel, tail unit of Hercules AS4 graphite/epoxy built by Bell from No. 7 onwards. Bell also contributes wing, nacelles, proprotor and transmission systems and integrates engines. Boeing responsible for fuselage, landing gear and fairings and integrates avionics.

LANDING GEAR: Dowty hydraulically actuated retractable tricycle type, with twin wheels and oleo-pneumatic shock absorbers on each unit. Menasco Canada steerable nose unit. Dowty Toronto two-stage shock-absorption in main gear is designed for landing impacts of up to 3.66 m (12 ft)/s normal, 4.48 m (14.7 ft)/s maximum, and has been drop tested to 7.32 m (24 ft)/s. All units retract rearward, main gear into sponsons on lower sides of centre-fuselage. Manual and nitrogen pressurised standby systems for emergency extension. Parker Bertea wheels and multidisc hydraulic carbon brakes.

POWER PLANT: Two Allison T406-AD-400 (501-M80C) turboshafts, each with T-O and intermediate rating of 4,586 kW (6,150 shp) and maximum continuous rating of 4,392 kW (5,890 shp), installed in Bell built tilting nacelles at wingtips and driving a three-blade proprotor.

Transmission rating 3,706 kW (4,970 shp) USN/USAF T-O, 3,408 kW (4,570 shp) USMC T-O, emergency (OEI) rating (all) 4,415 kW (5,920 shp). Each nacelle has a AiResearch infra-red emission suppressor at rear. Air particle separator and Lucas inlet/spinner ice protection system for each engine. Lucas Aerospace FADEC for each engine, with analog electronic back-up control. Pratt & Whitney originally named as second production source for engines, starting with production lot 5. Internal fuel (JP-5) in up to 13 crash-resistant self sealing (nitrogen pressurised) ILC Dover cells: one 1,115 litre (295 US gallon; 245 Imp gallon) forward cell in each sponson, a 2,417 litre (638.5 US gallon; 532 Imp gallon) cell in rear of starboard sponson, four 319 litre (84.2 US gallon, 70.2 Imp gallon) auxiliary cells in each wing leading-edge, and a 428 litre (113 US gallon; 94 Imp gallon) engine feed cell outboard of the auxiliary tanks in each wing. Total capacity 7,627 litres (2,015 US gallons, 1,678 Imp gallons). (Not all versions have all tanks.) Pressure refuelling point in starboard sponson leading-edge; gravity point in upper surface of each wing. Simmonds fuel management system. Provision for a further 9,221 litres (2,436 US gallons, 2,028 Imp gallons) of fuel to be carried in four additional joint services auxiliary fuel tanks, each 2,305 litres (609 US gallons, 507 Imp gallons), in main cabin for self-deployment mission. In-flight refuelling probe in lower starboard side of forward fuselage.

ACCOMMODATION: Normal crew complement of pilot (in starboard seat), co-pilot and crew chief in USMC variant. Flight crew accommodated on Simula Inc crashworthy armoured seats capable of withstanding strikes from 0.30 in armour piercing ammunition, 30 *g* forward and 14.5 *g* vertical decelerations. Flight deck has overhead and knee-level side transparencies in addition to large windscreen and main side windows, plus an overhead rearview mirror.

Main cabin can accommodate up to 24 combat-equipped troops, on inward-facing crashworthy foldaway seats, plus two gunners, up to 12 litters plus medical attendants, or an equivalent cargo load with energy absorbing tiedowns. Cargo handling provisions include a 907 kg (2,000 lb) capacity cargo winch and pulley system and removable roller rails. Main cabin door at front on starboard side, top portion of which opens upward and inward, lower portion (with built-in steps) downward and outward. Full width rear-loading ramp/door in underside of rear fuselage, operated by Parker Bertea hydraulic actuators. Emergency exit windows on port side; escape hatch in fuselage roof aft of wing.

SYSTEMS: Environmental control system, utilising engine bleed air; control unit in rear of port main landing gear sponson. Three hydraulic systems (two independent main systems and one standby), all at operating pressure of 345 bars (5,000 lb/sq in), with Parker Bertea reservoirs.

Electrical power supplied by two 40 kVA constant frequency AC generators, two 50/80 kVA variable frequency DC generators (one driven by APU), rectifiers, and a 15 Ah battery.

GE Aerospace triple redundant digital fly-by-wire flight control system, incorporating triple primary FCS (PFCS) and triple automatic FCS (AFCS) processors, and triple flight control computers (FCC) each linked to a MIL-STD-1553B databus; two PFCSs and one AFCS are fail operational. FBW system signals hydraulic actuation of flaperons, elevator and rudders, controls aircraft transition between helicopter and aeroplane modes, and can be programmed for automatic management of airspeed, nacelle tilting and angle of attack. FCCs provide interfaces for swashplate conversion actuator, flaperon, elevator, rudder and pylon primary actuators, flight deck central drive, force feel, and nosewheel steering. Dual 1750A processors for PFCS and single 1750A for AFCS incorporated in each FCC. Non-redundant standby analog computer (in development aircraft only) provides control of aircraft, including FADEC and pylon actuation, in the event of FBW system failure.

Sundstrand Turbomach 261 kW (350 shp) APU, in rear portion of wing centre-section, provides power for mid wing gearbox which, in turn, drives two electrical generators and an air compressor. Anti-icing of windscreens and engine air intakes, de-icing of proprotors and spinners. Clifton Precision combined oxygen (OBOGS) and nitrogen (OBIGGS) generating systems for cabin and fuel tank pressurisation respectively. Systron Donner pneumatic fire protection systems for engines, APU and wing dry bays.

AVIONICS: VHF/AM-FM, HF/SSB and (USAF only) UHF secure voice com. IFF.

Radar: (USAF and USN only) Texas Instruments AN/APQ-174 terrain-following multifunction radar in offset (to port) nose thimble.

Flight: Tacan, VOR/ILS, AHRS, radar altimeter and digital map displays. Jet Inc ADI-350W standby attitude indicator; Aydin Vector data acquisition and storage system. Two Control Data AN/AYK-14 mission computers, with Boeing/IBM software.

Instrumentation: Pilots' night vision system and Honeywell integrated helmet display system. Radar-equipped aircraft have two Bendix/King IP-1555 full colour multifunction displays.

Mission: Variant of Hughes Aircraft AN/AAQ-16 FLIR in undernose fairing.

Self-defence: Honeywell AN/AAR-47 missile warning system; radar/infra-red warning system; chaff/flare dispensers.

EQUIPMENT: Provision for rescue hoist over forward (starboard) cabin door.

ARMAMENT: Provision stipulated in December 1994 for nose [redacted]

DIMENSIONS, EXTERNAL:

Rotor diameter, each	11.58 m (38 ft 0 in)
Rotor blade chord: at root	0.90 m (2 ft 11½ in)
at tip	0.56 m (1 ft 10 in)
Wing span: excl nacelles	14.02 m (46 ft 0 in)
incl nacelles	15.52 m (50 ft 11 in)
Width: rotors turning	25.55 m (83 ft 10 in)
stowed	5.61 m (18 ft 5 in)

Distance between proprotor centres	14.25 m (46 ft 9 in)
Width: overall, rotors turning	25.78 m (84 ft 7 in)
folded	5.61 m (18 ft 5 in)
Length: fuselage, excl probe	17.47 m (57 ft 4 in)
overall, wings stowed/blades folded	19.09 m (62 ft 7½ in)
Height: over tailfins	5.38 m (17 ft 7¾ in)
wings stowed/blades folded	5.51 m (18 ft 1 in)
overall, nacelles vertical	6.63 m (21 ft 9 in)
Tail span, over fins	5.61 m (18 ft 5 in)
Wheel track (c/l of outer mainwheels)	4.62 m (15 ft 2 in)
Wheelbase	6.59 m (21 ft 7½ in)
Nacelle ground clearance, nacelles vertical	1.31 m (4 ft 3¾ in)
Proprotor ground clearance, nacelles vertical	6.35 m (20 ft 10 in)
Dorsal escape hatch: Length	1.02 m (3 ft 4 in)
Width	0.74 m (2 ft 5 in)

DIMENSIONS, INTERNAL:

Cabin: Length	7.37 m (24 ft 2 in)
Max width	1.80 m (5 ft 10¾ in)
Max height	1.83 m (6 ft 0 in)
Usable volume	24.3 m³ (858 cu ft)

AREAS:

Rotor discs, each	105.4 m² (1,134 sq ft)

Rotor blades (each) 12.15 m² (130.76 sq ft)
Wing, total incl flaperons and fuselage centre-section 35.49 m² (382.0 sq ft)
Flaperons, total 8.25 m² (88.8 sq ft)
Tailplane 8.22 m² (88.5 sq ft)
Elevators, total 4.79 m² (51.54 sq ft)
Fins (each) 10.81 m² (116.4 sq ft)
Rudders (each) 1.64 m² (17.6 sq ft)

WEIGHTS AND LOADINGS (provisional):
Weight empty 15,032 kg (33,140 lb)
Max fuel weight: standard 6,215 kg (13,700 lb)
with self-ferry cabin tanks 13,641 kg (30,074 lb)
Max internal payload (cargo) 9,072 kg (20,000 lb)
Cargo hook capacity: single 4,536 kg (10,000 lb)
two hooks (combined weight) 6,804 kg (15,000 lb)
Rescue hoist capacity 272 kg (600 lb)
Normal mission T-O weight: VTO 21,545 kg (47,500 lb)
STO 24,947 kg (55,000 lb)
Max STO weight for self-ferry 27,442 kg (60,500 lb)
Max floor loading (cargo) 1,464 kg/m² (300 lb/sq ft)
Max power loading 8.06 kg/kW (13.23 lb/shp)

PERFORMANCE (estimated):
Max cruising speed
at S/L, helicopter mode 100 kts (185 km/h; 115 mph)
at S/L, aeroplane mode 275 kts (509 km/h; 316 mph)
at optimum altitude, aeroplane mode 314 kts (582 km/h; 361 mph)
Max forward speed with max slung load 130 kts (241 km/h; 150 mph)
Max rate of climb at S/L: vertical 332 m (1,090 ft)/min
inclined 707 m (2,320 ft)/min
Service ceiling 7,925 m (26,000 ft)
Service ceiling, OEI 3,441 m (11,300 ft)
Hovering ceiling OGE 4,331 m (14,200 ft)
T-O run at normal mission STO weight less than 152 m (500 ft)
Range
Amphibious assault 515 n miles (935 km; 592 miles)
VTO at 21,146 kg (46,619 lb) gross weight, incl 5,443 kg (12,000 lb) payload 1,200 n miles (2,224 km; 1,382 miles)
STO at 24,947 kg (55,000 lb) gross weight, incl 9,072 kg (20,000 lb) payload 1,800 n miles (3,336 km; 2,073 miles)
STO at 27,442 kg (60,500 lb) self-ferry gross weight, no payload 2,100 n miles (3,892 km; 2,418 miles)

BOEING

THE BOEING COMPANY

PO Box 3707, Seattle, Washington 98124
Telephone: 1 (206) 655 2121
Fax: 1 (206) 655 1171
CHAIRMAN AND CEO: Frank A. Shrontz
PRESIDENT: Philip M. Condit
VICE-PRESIDENT, CORPORATE PUBLIC RELATIONS AND ADVERTISING: Harold Carr

Company founded July 1916. On 2 January 1990, Boeing Defense & Space Group formed to co-ordinate Aerospace & Electronics, Helicopters, Military Airplanes and Advanced Systems divisions of The Boeing Company. Simultaneously, former Military Airplanes division at Wichita reduced in size by transfer of some activities to Boeing Commercial Airplane Group.

Operating components of The Boeing Company include:

BOEING COMMERCIAL AIRPLANE GROUP
Follows this entry

BOEING DEFENSE & SPACE GROUP
Electronic Systems Division
Follows Commercial Airplane Group
Helicopters Division
Follows Electronic Systems Division
Military Airplanes Division
Follows Helicopters Division
Product Support Division
Boeing Computer Services

EXECUTIVE VICE-PRESIDENTS:
Richard R. Albrecht
Robert L. Dryden (Manufacturing)
Bruce Gissing (Operations)
VICE-PRESIDENT, GENERAL MANAGER BOEING 777 DIVISION: Alan R. Mulally
VICE-PRESIDENT, NEW SMALL AIRPLANE STUDY: Richard L. James
VICE-PRESIDENT, ENGINEERING: Robert A. Davis
SENIOR VICE-PRESIDENT, GOVERNMENT AND INTERNATIONAL AFFAIRS: L. W. Clarkson
VICE-PRESIDENT, COMMUNICATIONS: Gerald A. Hendin
**Also corporate Senior Vice-President, The Boeing Company*

Boeing Commercial Airplane Group, headquarters at Renton, near Seattle, reorganised into three divisions in 1983. Renton Division produced 707 (until 1991) and produces 737 and 757; Everett Division produces 747, 767 and 777. Fabrication Division provides manufacturing for other divisions. Materiel Division, created 1984, covers purchasing, quality control and vendor supplies.

Output in 1994 (1993 figures in parentheses) was 1 (0) 707 (deferred delivery, production ended in 1991), 121 (152) 737s, 40 (56) 747s, 69 (71) 757s and 40 (51) 767s. New orders covered 70 (110) 737s, 16 (2) 747s, 12 (40) 757s and 22 (66) 767s. Slowdown in airliner deliveries and reduction in defence orders caused Boeing to reduce its total workforce by 28,000 by mid-1994, of which about 19,000 in Seattle airliner production area and by a further 7,000 in 1995, monthly airliner production declining from 23 to 21 in early 1994, to 19½ in November, 18½ in January 1995 and 17 in November 1995.

UPDATED

NEW SMALL AIRPLANE (NSA)

Announced in May 1994 when Richard L. James was appointed Boeing vice-president New Small Airplane study. Boeing working with Japan Aircraft Development Corporation representatives and observers from China's CATIC to determine market requirement and potential configuration of a new twin-engined airliner, smaller than the 737, for service entry in 2002. Boeing expects retirement of noisier Stage 2 airliners in the 70- to 170-passenger category to lead to purchase of up to 3,000 new smaller airliners during next 20 years. Engine candidates announced in June 1995 are BMW Rolls-Royce BR 715, CFM International CFM56 Lite and Pratt & Whitney/MTU Thrust (MTFE).

UPDATED

BOEING 737-100 and 737-200

USAF designation: T-43A

First flight of 737-100, 9 April 1967; FAA certification 15 December 1967; 30 built. Superseded by 737-200; first flight 8 August 1967, added to 737-100 type certificate 21 December 1967; first delivery to United Air Lines 29 December 1967. Last of 1,114 Boeing 737-200s (and 30 737-100s) delivered August 1988: total includes 19 **T-43A** navigation trainers for US Air Force and three **Surveillers** for Indonesian Air Force. Details of early versions and developments in 1974-75 *Jane's*; 737-200 last described in *Jane's* 1990-91.

VERIFIED

BOEING 737-300

TYPE: First of three 737 variants in current production.

PROGRAMME: Production go-ahead March 1981, first flight 24 February 1984, certificated 14 November 1984, first delivery (to USAir) 28 November 1984. 737-300 for Ansett Worldwide (and subsequent lease to British Midland Airways) rolled out at Renton 19 February 1990 (as 1,833rd 737); 737 orders passed 3,000 when Southwest Airlines ordered 34 in third quarter 1992. Approval for 120 minute ETOPS given November 1986, but withdrawn July 1989 due to concerns related to operation in heavy rain and hail; approval restored 14 September 1990. Commonwealth of Independent States Interstate Aviation Committee certificated Boeing 737 family with P&W or CFM engines 18 January 1993, first delivery for CIS registration (737-300 to National State Aviacompany Turkmenistan) 12 November 1992. Production rate for 737 series reduced from 21 to 14 a month in October 1992, to 10 in February 1994 to 8½ in October 1994 and to seven in November 1995. 2,500th 737 rolled out 16 June 1993; 1,500th current-generation 737 delivered 8 September 1994.

CURRENT VERSIONS: **737-300**: Basic airliner, *as detailed below.*

Executive: Typically for about 20 passengers, with conference room, bedroom, bathroom and full dining facilities. Three sold by 29 February 1992, including one to Royal Thai Air Force.

CUSTOMERS: See table for orders/deliveries.

DESIGN FEATURES: Fuselage stretched 2.64 m (8 ft 8 in) compared with 737-200 by means of 1.12 m (3 ft 8 in) plug forward of wing box and 1.52 m (5 ft 0 in) aft; underfloor freight volume increased by 5.47 m³ (193 cu ft); wing aerofoil modified by 4.4 per cent extension of leading-edge outboard of engines, new slats, new flap sections and track fairings aft of engines, additional lateral control spoilers outboard; each wingtip extended by 28 cm (11 in); increased dorsal fin area and tailplane span.

FLYING CONTROLS: All surfaces powered by two independent hydraulic systems with manual reversion for ailerons and elevator; elevator servo tabs unlock on manual reversion; rudder has standby hydraulic actuator and system. Three outboard powered overwing spoiler panels on each wing assist lateral control and also act as airbrakes. Variable incidence tailplane has two electric motors and manual standby.

Leading-edge Krueger flaps inboard and three sections of slats outboard of engines; two airbrake/lift dumper panels on each wing, inboard and outboard of engines; triple-slotted trailing-edge flaps inboard and outboard of engines.

FAA Cat. II landing minima system standard using SP-300 dual digital integrated flight director/autopilot; Cat. IIIa capability optional. Common pilot type ratings for 737-200, -300, -400 and -500.

STRUCTURE: Aluminium alloy dual-path fail-safe two-spar wing structure. Aluminium alloy two-spar tailplane. Graphite composite ailerons, elevators and rudder, latter built by Short Brothers (UK). Aluminium honeycomb spoiler/airbrake panels and trailing-edges of slats and flaps. Fuselage structure fail safe aluminium. Some fins made by Xian Aircraft Co in China. Elevators, rudder and aileron contain graphite/Kevlar and CFRP, other unstressed components in GFRP and CFRP.

LANDING GEAR: Hydraulically retractable tricycle type, with Boeing oleo-pneumatic shock absorbers; inward-retracting main units have no doors, wheels forming wheel well seal, nose unit retracts forward, free-fall emergency extension. Compared with 737-200, nose unit is repositioned downwards by 13 cm (5 in) and modified to ensure adequate ground clearance for larger engine nacelles. Twin nosewheels have tyres size 27 × 7.75. Main units have twin wheels, H40 × 14.5-19 heavy-duty tyres, and Bendix or Goodrich heavy-duty wheel brakes as standard. Mainwheel tyre pressure 13.45 to 14.00 bars (195 to 203 lb/sq in). Nosewheel tyre pressure 11.45 to 11.85 bars (166 to 172 lb/sq in).

POWER PLANT: Basic aircraft has two CFM International CFM56-3C-1 turbofans rated at either 88.97 kN (20,000 lb st) or 97.86 kN (22,000 lb st), introduced 1988. Engines pylon-mounted forward of wings, and higher than those of 737-200; each has external strake on inboard side. Standard fuel capacity up to 20,104 litres (5,311 US gallons; 4,422 Imp gallons) with integral fuel cells in wing centre-section and integral wing tanks. Fuel options up to 23,830 litres (6,295 US gallons; 5,242 Imp gallons) with Rogerson tanks in underfloor cargo bays (from 1989). Single-point pressure refuelling under leading-edge of starboard wing.

ACCOMMODATION: Crew of two side by side on flight deck. Alternative cabin layouts seat from 128 to 149 passengers. Typical arrangements offer eight first class seats four-abreast at 96.5 cm (38 in) pitch and 120 tourist class seats six-abreast at 81 cm (32 in) in mixed class, and 141 or 149 all tourist class at seat pitches of 81 cm (32 in) or 76 cm (30 in) respectively. One plug type door at each corner of cabin, with passenger doors on port side and service doors on starboard side. Airstair for forward cabin door optional. Overwing emergency exit on each side. One or two galleys and one lavatory forward, and one or two galleys and lavatories aft, depending on configuration. New lightweight interior, using advanced crushed core materials, providing total overhead baggage capacity of 6.80 m³ (240 cu ft), equivalent to 0.048 m³ (1.7 cu ft) per passenger. Underfloor freight holds forward and aft of wing, with doors on starboard side.

SYSTEMS: AiResearch bleed air control system for thermal anti-icing, air conditioning and pressurisation systems; maximum differential 0.52 bar (7.5 lb/sq in); two functionally independent hydraulic systems with a third standby system, using fire resistant hydraulic fluid, for flying controls, flaps, slats, landing gear, nosewheel steering and brakes, pressure 207 bars (3,000 lb/sq in). No pneumatic system. Electrical supply since 1991 from two 50 kVA variable-speed constant-frequency generators. AlliedSignal GTCP-5-129(C) APU (GTCP36-280 from 1988 and APS 2000 from 1991) for air supply and electrical power in flight and on ground as well as engine starting.

AVIONICS: Avionics fit is common to 737-300, -400 and -500.

Radar: Digital colour weather radar.

Flight: Flight management computer provides lateral, vertical and time navigation using pilot-set waypoints; dual digital flight management computers introduced 1993; dual ring laser gyro inertial system.

Instrumentation: EFIS screens show map, flight plan, full or partial compass rose, weather and, optionally, integrated airspeed scale; electronic engine instrument system has coloured LED dials, with secondary panel; secondary engine and hydraulics indications; windshear alerting with recovery guidance in attitude indicator; full flight regime autothrottle.

DIMENSIONS, EXTERNAL:

Wing span	28.88 m (94 ft 9 in)
Wing chord at root	4.71 m (15 ft 5.6 in)
Wing aspect ratio	7.91
Length overall	33.40 m (109 ft 7 in)

Flight spoilers (total)	2.64 m² (28.4 sq ft)
Fin	23.13 m² (249.0 sq ft)
Rudder	5.22 m² (56.2 sq ft)
Tailplane	31.31 m² (337.0 sq ft)
Elevators, incl tabs (total)	6.55 m² (70.5 sq ft)

Boeing 737-300 of Romanian airline, Tarom *(Peter J. Cooper)*

1994

WEIGHTS AND LOADINGS (A: basic aircraft, B: long-range option):

Operating weight empty: A	31,895 kg (70,320 lb)
B	up to 32,459 kg (71,560 lb)
Max T-O weight: A	56,470 kg (124,500 lb)
B	up to 62,820 kg (138,500 lb)
Max ramp weight: A	56,700 kg (125,000 lb)
B	up to 63,050 kg (139,000 lb)
optional, with controlled CG	63,500 kg (140,000 lb)
Max zero-fuel weight: A	47,625 kg (105,000 lb)
B	up to 49,715 kg (109,600 lb)
Max landing weight: A	51,720 kg (114,000 lb)
B	up to 52,890 kg (116,600 lb)
Max wing loading: A	535.6 kg/m² (109.7 lb/sq ft)
B	595.8 kg/m² (122.0 lb/sq ft)

PERFORMANCE (A: at brake release weight of 56,472 kg, 124,500 lb; B: at optional brake release weight of 62,822 kg, 138,500 lb):

T-O field length, S/L, at 29°C (84°F):	
A	2,027 m (6,650 ft)
B	2,749 m (9,020 ft)
Wet landing field length, 40° flap, at max landing weight:	
A, B	1,603 m (5,260 ft)
Still air range with 140 passengers, T-O at S/L:	
A	1,600 n miles (2,963 km; 1,841 miles)
B	2,600 n miles (4,815 km; 2,992 miles)

OPERATIONAL NOISE LEVELS: 737-300, -400 and -500 only exceed FAR Pt 36, Stage 3/ICAO Annex 16 Chapter 3 noise in approach with 40° flap setting.

UPDATED

BOEING 737-400

TYPE: Stretched version of 737-300.

PROGRAMME: Announced June 1986, rolled-out 26 January 1988, first flight 19 February 1988, certificated for up to 188 passengers 2 September 1988, first delivery (to Piedmont Airlines) 15 September 1988. High gross weight structure variant rolled-out 23 December 1988, certificated by FAA and delivered to first customer 21 March 1989. ETOPS approval granted 14 September 1990. CIS certification with CFM engines 18 January 1993, as for 737-300. See production rates under 737-300.

CURRENT VERSIONS: **Basic and long-range**: *As described.*

High gross weight structure: Optional strengthened centre-fuselage, wing and landing gear, slats and Kruegers, increased fuel capacity by means of Rogerson tanks in aft cargo bay.

CUSTOMERS: See table for orders/deliveries.

DESIGN FEATURES: Incorporates all the new technology of 737-300. Fuselage has 1.83 m (6 ft 0 in) plug forward of wing and 1.22 m (4 ft 0 in) aft, totalling 3.05 m (10 ft); outer wings and landing gear strengthened for maximum landing weights from 54,885 to 56,245 kg (121,000 to 124,000 lb). Tail bumper standard on all 737-400s. At gross weights above 63,049 kg (139,000 lb) loading must be controlled to preserve CG. Avionics and systems as for 737-300 except for modified avionics software and improved environmental control system.

POWER PLANT: Two CFM56-3C-1 turbofans, each rated at 97.86 kN (22,000 lb st) or 104.5 kN (23,500 lb st). Basic fuel capacity 20,104 litres (5,311 US gallons; 4,422 Imp gallons); maximum long-range option fuel capacity 23,830 litres (6,295 US gallons; 5,242 Imp gallons).

DIMENSIONS, EXTERNAL: As for 737-300 except:

Length overall	36.45 m (119 ft 7 in)

DIMENSIONS, INTERNAL: As for 737-300 except:

Cabin, incl galley and toilet:	
Length	27.18 m (89 ft 2 in)

WEIGHTS AND LOADINGS (A: basic aircraft, B: long-range option):

Operating weight empty: A	33,435 kg (73,710 lb)
B	34,270 kg (75,555 lb)
Max T-O weight: A	62,820 kg (138,500 lb)
B	68,040 kg (150,000 lb)
Max ramp weight: A	63,050 kg (139,000 lb)
B	68,265 kg (150,500 lb)
Max zero-fuel weight: A	51,255 kg (113,000 lb)
B	53,070 kg (117,000 lb)
Max landing weight: A	54,885 kg (121,000 lb)
B	56,245 kg (124,000 lb)

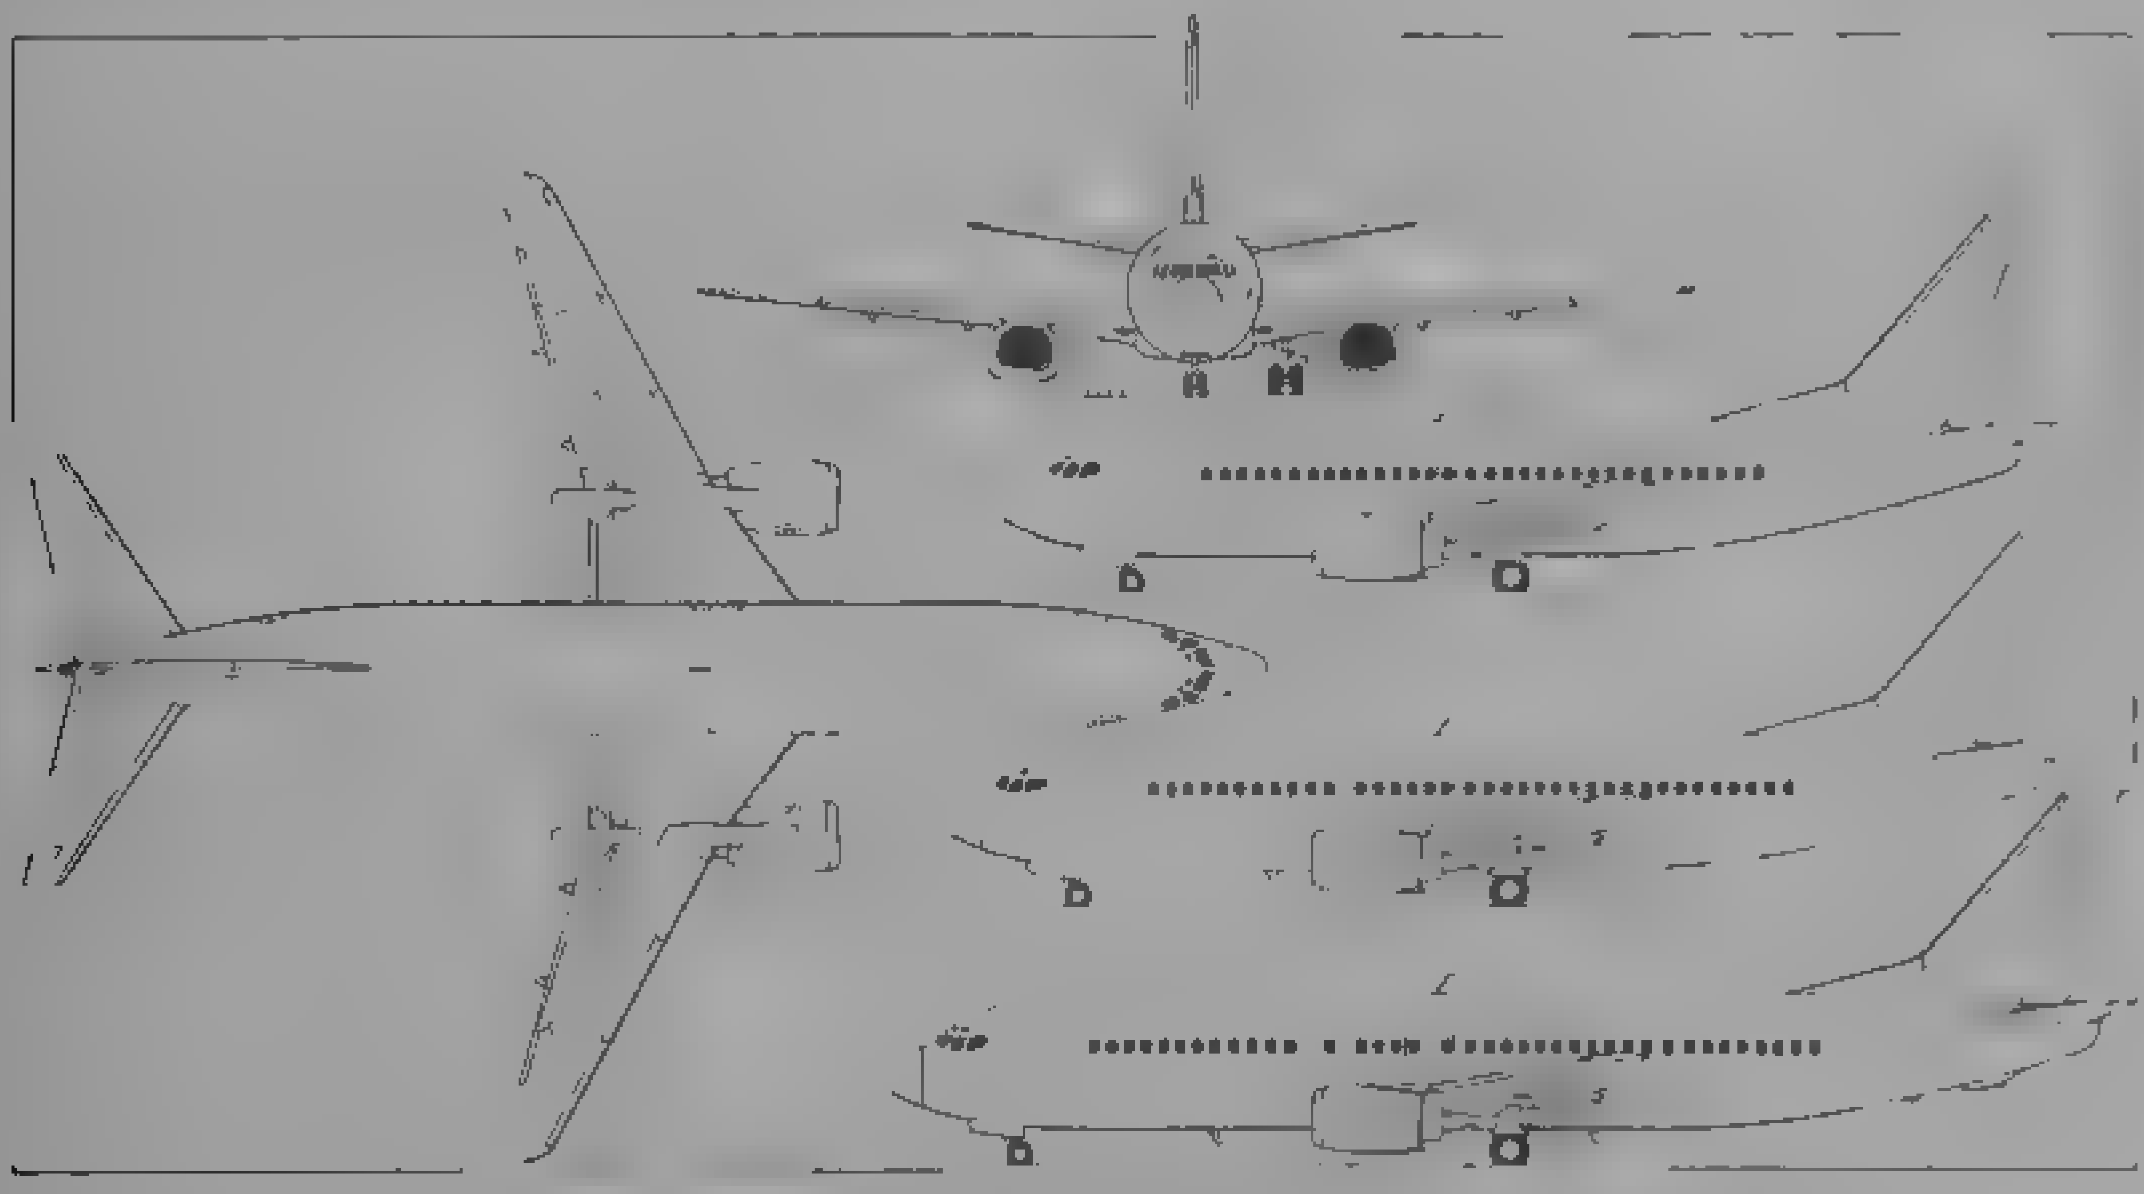
1994



Three-view drawing of Boeing 737-400, with additional side views of 737-500 (top) and 737-300 (centre) *(Jane's/Dennis Punnett)*

1988

Max wing loading A	595 8 kg/m² (122.0 lb/sq ft)
B	645.2 kg/m² (132.2 lb/sq ft)

PERFORMANCE (A at T-O weight of 62,822 kg, 138,500 lb, B at optional T-O weight of 68,039 kg, 150,000 lb)

T-O field length, S/L, at 30°C: A	2,315 m (7,600 ft)
B, with optional higher thrust engines	2,500 m (8,200 ft)
Wet landing field length, 40° flap	
A at 54,885 kg (121,000 lb) landing weight	1,725 m (5,650 ft)
B at 56,245 kg (124,000 lb) landing weight	1,850 m (6,070 ft)
Range with 146 passengers T-O at S/L	
A	2,200 n miles (4,074 km, 2,531 miles)
B	2,700 n miles (5,000 km, 3,107 miles)

UPDATED

BOEING 737-500

TYPE: Short-body version of 737-300, replacing 737-200

PROGRAMME: Initially known as 737-1000, announced as 737-500 on 20 May 1987; first flight 20 June 1989, certificated 12 February 1990 after 375 hour test programme, first delivery (to Southwest Airlines) 28 February 1990; ETOPS approval 14 September 1990. CIS certification with CFM engines 18 January 1993, as for 737-300 and -400. See 737-300 entry for production rates

CURRENT VERSIONS: Maximum T-O weights ranging from 52,390-60,554 kg (115,500-133,500 lb)

CUSTOMERS: Launch customers were Braathens SAFE of Norway (25 firm) and Southwest Airlines (20 firm and 20 optioned), see table for orders and deliveries

DESIGN FEATURES: Incorporates advanced technology of 737-300 and -400, but fuselage shortened. Engine thrust and fuel capacity options detailed below. New nosewheel tyres. Systems and avionics as for 737-300 with minor variations

POWER PLANT: Two CFM International CFM56-3C-1 turbofans each rated at 88.97 kN (20,000 lb st) or derated to 82.29 kN (18,500 lb st) according to gross weight. Electronic power control allows fixed-throttle climb and limits fan speed and EGT overshoots. Basic fuel capacity 20,104 litres (5,311 US gallons, 4,422 Imp gallons); long range option fuel capacity 23,830 litres (6,295 US gallons, 5,242 Imp gallons)

DIMENSIONS, EXTERNAL: As for 737-300 except

Length overall	31.01 m (101 ft 9 in)

WEIGHTS AND LOADINGS (A: basic aircraft, B: long range option)

Operating weight empty: A	30,955 kg (68,240 lb)
B	31,515 kg (69,480 lb)
Max T-O weight: A	52,390 kg (115,500 lb)
B	60,555 kg (133,500 lb)
Max ramp weight: A	52,615 kg (116,000 lb)
B	60,780 kg (134,000 lb)
Max zero-fuel weight: A	46,495 kg (102,500 lb)
B	46,720 kg (103,000 lb)
Max landing weight: A, B	49,895 kg (110,000 lb)
Max wing loading: A	496.8 kg/m² (101.8 lb/sq ft)
B	574.3 kg/m² (117.6 lb/sq ft)

PERFORMANCE

Range with 108 passengers	
A	1,700 n miles (3,148 km, 1,956 miles)
B	2,420 n miles (4,482 km, 2,785 miles)

UPDATED

BOEING 737-600, -700 and -800

TYPE: Developments of 737 family, originally called 737X; regarded as 'Next-Generation' 737s

PROGRAMME: Boeing asked more than 30 airlines to help define 737X in 1991; company board authorised offer for sale June 1993. Southwest Airlines ordered 63 737-700s (32 converted from options for 737-300s) plus 63 new options 18 November 1993; roll-out planned for December 1996; first deliveries in 1997, last of 63 Southwest aircraft delivered in 2001. 737-300/-400/-500 remain in production

CURRENT VERSIONS: Note: Unlike earlier 737s, the X series is numbered in ascending order of size; the smallest is designated 737-600

Computer-generated image of Next-Generation Boeing 737 800, launched September 1994

1995

737 600 Known as 737 500X until officially launched, smallest of family, seating 108 two-class passengers

737 700. First to be ordered and manufactured, mid-size version of family, equivalent to current 737-300, seating 128 two-class passengers

737 800 Known as 737 400X Stretch until launched in September 1994, largest variant, seating 164 to 189 passengers, first deliveries 1998

CUSTOMERS Lead customer for 737 700 is Southwest Airlines, which ordered 63 in November 1993, Maersk Air ordered six, Bavaria Fluggesellschaft ordered four Germania ordered 12 Orders for more than 40 737 800s held at time of launch, announced customers include Hapag Lloyd (16) and Air Berlin (six). Scandinavian Airline System is launch customer for 737-600, with 35 orders and 35 options announced March 1995, first deliveries scheduled for second half of 1998. By end of March 1995 total orders for Next-Generation 737s stood at 142

COSTS Price quoted as $36 to 40 million depending on configuration

DESIGN FEATURES: Greater range and speed than previous 737s, with less noise and fewer emissions, wing area increased by some 25 per cent by means of approximately 0.46 m (1 ft 6 in) increase in wing chord and about 4.88 m (16 ft 0 in) increase in wing span, larger tail surfaces increased tankage gives US transcontinental range, new aircraft can use same runways, taxiways, ramps and gates as preceding variants, new variant of CFM56 turbofan derated from nominal thrust to suit smaller versions of the family. Noise on ground reduced by new diffuser duct and cooling vent silencer on APU, new ECS fan and duct and new electrical/electronics cooling fan

FLYING CONTROLS As earlier 737s

POWER PLANT Two CFM International CFM56-7 (formerly CFM56-3XS), each rated at 116.54 kN (26,200 lb st) for the 737-800, 106.76 kN (24,000 lb st) for the 737-700 and 97.86 kN (22,000 lb st) for the 737 600 CFM56-7 combines core of CFM56-5 with improved low-pressure compressor of CFM56-3 and 1.55 m (61 in) fan

AVIONICS: Honeywell Air Transport Systems Common Display System (CDS) with flat-panel liquid crystal display (LCD) technology, will enable Next-Generation 737 operators to emulate 737 electromechanical 737/757/767 electronic flight instrument system (EFIS) and 747-400/777 primary flight display-navigation display (PFD-ND) flight deck formats. LCDs will be identical to those on 777. Honeywell autopilot will be standard on all models

DIMENSIONS, EXTERNAL

Wing span: all versions	34.31 m (112 ft 7 in)
Length 737-600	31.24 m (102 ft 6 in)
737-700	33.63 m (110 ft 4 in)
737-800	39.47 m (129 ft 6 in)

WEIGHTS AND LOADINGS

Max T-O weight 600	63,505 kg (140,000 lb)
700	67,585 kg (149,000 lb)
800	76,430 kg (168,500 lb)
Max power loading: 600	324.7 kg/kN (3.18 lb/lb st)
700	316.7 kg/kN (3.10 lb/lb st)
800	328.1 kg/kN (3.21 lb/lb st)

PERFORMANCE

Cruising speed	Mach 0.78-0.80
Max cruising altitude	12,500 m (41,000 ft)
Range	3,000 n miles (5,556 km, 3,452 miles)

UPDATED

BOEING 747-400

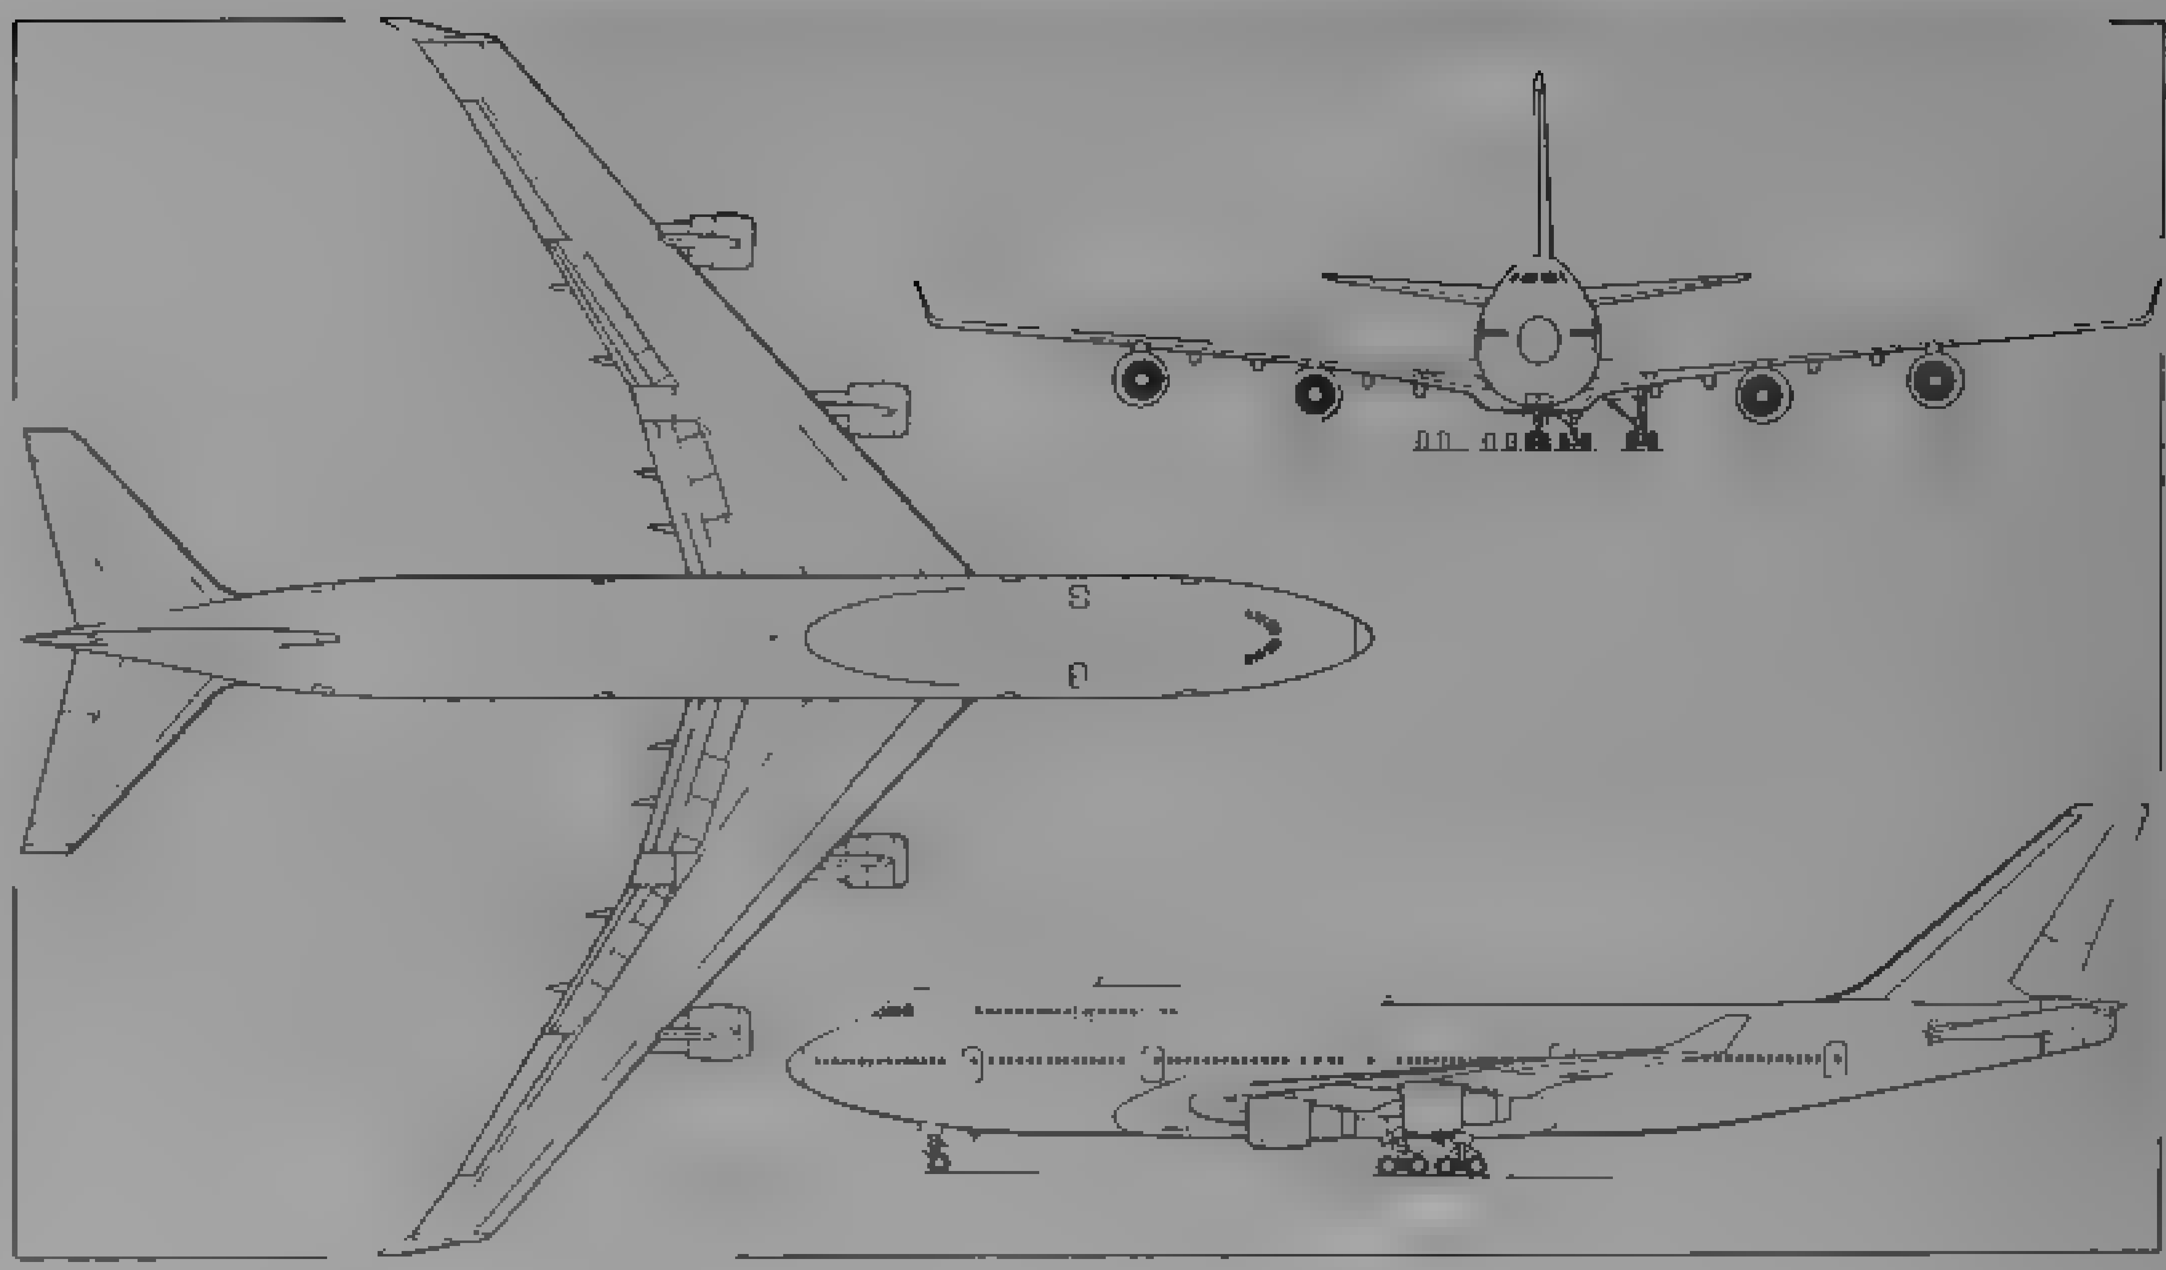
TYPE Wide-bodied airliner

PROGRAMME (original). Announced 13 April 1966 (first ever wide-body jet airliner), with Pan American order for 25 official programme launch 25 July 1966; first flight 9 February 1969; FAA certification 30 December 1969, first delivery (to Pan Am) 12 December 1969, first route service New York-London flown 22 January 1970. In May 1990 Boeing decided to market only the -400, last -200 (a -200F Freighter for Nippon Cargo Air Lines) delivered 19 November 1991

For all variants prior to 747-400, see *Jane's Aircraft Upgrades*. Production variants, listed in table on earlier page, totalled 724 (205 -100, 45 SP, 393 -200 and 81 -300). Nineteen Pan American 747s modified as passenger/cargo **C-19As** by Boeing Military Airplanes for Civil Reserve Air Fleet (see 1990-91 edition)

PROGRAMME (current). Series 400 announced May 1985 as 747 development with extended capacity and range; design go-ahead July 1985, roll-out 26 January 1988, first flight 29 April 1988 certificated with P&W PW4056 on 10 January 1989, certificated with GE CF6-80C2B1F on 8 May 1989; R-R RB211-524G on 8 June 1989; R-R RB211-524H on 11 May 1990 Since May 1990, -400 is the only 747 marketed. Thousandth 747 rolled out 10 September 1993 and delivered to Singapore Airlines 12 October Production reduced from five to three per month in February 1994 and two in January 1995 but to rise to three per month in second half of 1996

CURRENT VERSIONS: **747 400**: Basic passenger version, standard and three optional gross weights (see below) *Detailed description applies to this version, except where indicated*



Boeing 747-400 advanced long-range airliner (General Electric CF6-80C2 engines) *(Jane's/Dennis Punnett)* *1986*

747-400 Combi: Passenger/freight version, certificated 1 September 1989, maximum 266 three-class passengers with freight, 413 without; port-side rear freight door; main deck limit is seven pallets at 27,215 kg (60,000 lb); underfloor and fuel capacities as for passenger 747, 39 delivered by 31 December 1993. For all gross weights, maximum landing weight 285,763 kg (630,000 lb) and maximum zero-fuel weight 256,280 kg (565,000 lb). All three engine options available

747-400F: All-freight version. See separate entry

747-400 Domestic: Special high-density two-class 568-passenger version, certificated 10 October 1991, ordered by Japan Air Lines (six), All Nippon (six) and Japan Air System (one). Maximum T-O weight 272,155 kg (600,000 lb) but can be certificated to 394,625 kg (870,000 lb). Structurally reinforced, no winglets; lower engine thrust; five more upper deck windows; revised avionics software and cabin pressure schedule, brake cooling fans; five pallets, 14 LD-1 containers and bulk cargo under floor; GE or P&W engines

747-400 Performance Improvement Package (PIP): Announced April 1993, but implementation depends on customer demands, first stage includes gross weight increase of 907 kg (2,000 lb) or more, longer chord dorsal fin made of CFRP, slower transfer of fuel from tailplane trim tank to prolong trim drag alleviation, and wing spoilers held down more tightly to reduce profile drag and leakage; this stage to be applied to production aircraft as soon as ready and to be retrofittable; first-stage PIP flight tested in leased United Airlines 747 400 May 1993 Second PIP stage, potentially available by mid-1996, would increase gross weight to 421,840 kg (930,000 lb) and range to 8,000 nm (14 816 km, 9,206 miles). See also Boeing 747X

CUSTOMERS Northwest Orient Airlines ordered 10 -400s with PW4000s and 420-passenger interior October 1985; first delivery 26 January 1989

DESIGN FEATURES. Wing has Boeing aerofoil and 3.66 m (12 ft 0 in) greater span than 747-300; sweepback at quarter-chord 37° 30′, thickness/chord ratio 13.44 per cent inboard, 7.8 per cent at mid-span, 8 per cent outboard, dihedral at rest 7°; incidence 2°; winglets, canted 22° outward and swept 60°, increase range by three per cent; upper deck extended rearward by 7.11 m (23 ft 4 in)

FLYING CONTROLS: *Elevators*: four elevator sections mechanically linked with breakable shear devices and controlled mechanically from the control columns, each elevator has dual hydraulic powered control units, control feel and three individual autopilot input servos mounted on central elevator quadrant, all surfaces have position transmitters; feel computer operated by pitot pressure and tailplane angle

Rudder, upper rudder surface operated by three hydraulic actuators served by two hydraulic systems, lower surface by two actuators fed by remaining two hydraulic systems; each rudder has separate yaw damper module, left and right digital air data computers provide signals for controlling rudder ratio changer on each rudder surface according to air data and tailplane angle, combined feel actuator, rudder centring and trim actuator in rear servo area, mechanical cable linkage between rudder pedals and aft actuator area rudder trim control switches on centre console

Tailplane: Tailplane angle set by hydraulic motor-driven shaft and ball screw with primary and secondary

Singapore Airlines' Boeing 747-400 9V-SMU, the 1,000th 747 built *1995*

'Everything down' view of Boeing 747-400

1995

hydraulic brakes, flight control unit and air data computer signals sent to tailplane through dual stabiliser, trim and rudder ratio modules, which automatically apply Mach trim, and by dual stabiliser control modules; tailplane trim limits computed according to flap positions

Lateral control: Pilot and co-pilot aileron linkage can be physically separated if necessary, all four ailerons operate at low speeds; outboard ailerons are locked out at cruising speed, the inboard spoiler panel on each wing used on ground only; remainder have variable ratio response and spoiler mixer units; there are trim, centring and feel units

Leading-edge and trailing-edge devices: Krueger flaps inboard of engines; variable camber slats between and outboard of engines lie flat when retracted and adopt camber curvature when extended. Two flap assemblies on each wing, one inboard of engines and the other between engines, three sections, fore flap, mid-flap and aft flap, move rearwards as single flat panel up to 5° deflection, thereafter, three sections separate progressively to form three slots and camber angles relative to each other increase progressively

Automatic flight control system: combines autopilot, flight director and automatic tailplane trim and sends commands through triple independent flight control computers, system automates all flight phases except take-off, dual digital air data computers, pilots' primary flight and navigation displays are large-size cathode-ray tubes; two engine indicating and crew alerting screens, one on main panels, one on console; three multifunction control and display panels control flight management system, navigation and communications; flight control computers (autopilot) and inertial reference units are triplicated, new features include full time autothrottle and dual thrust management system included in flight management computer integrated radio control panels and automatic start and shutdown of APU

STRUCTURE: Wing and tail surfaces are aluminium alloy dual-path fail-safe structures, advanced aluminium alloys in wing torsion box save 2,721 kg (6,000 lb), advanced aluminium honeycomb spoiler panels, CFRP winglets and main deck floor panels, advanced graphite/phenolic and Kevlar/graphite in cabin fittings and engine nacelles, frame/stringer/stressed skin fuselage with some bonding Improved corrosion protection and further coverage with compound introduced from 1993

LANDING GEAR: Twin-wheel nose unit retracts forward, main gear consists of four four-wheel bogies; two mounted side by side under fuselage at wing trailing edge, retract forward; two, mounted under wings, retract inward, nosewheel steerable up to 70° left or right from tillers, full rudder pedal travel gives up to 7° for use at high speed, two centre main legs steer up to 13° when nosewheels are steered more than 20° and speed is less than 20 knots (37 km/h, 23 mph), carbon disc brakes on all mainwheels, with individually controlled digital anti-skid units; one of three brake pressure supplies automatically selected; mainwheel diameter increased to 56 cm (22 in), 125 cm (49 in) diameter low-profile tyres; new wheels save 816 kg (1,800 lb) weight. Minimum ground turning radius, with body gear steering, is 48.46 m (159 ft 0 in) at wingtip and 27.73 m (91 ft 0 in) at nosewheels

POWER PLANT: Four 252.4 kN (56,750 lb st) Pratt & Whitney PW4056, 258 kN (57,900 lb st) General Electric CF6-80C2B1F, 258 kN (58,000 lb st) Rolls-Royce RB211-524G or 270 kN (60,600 lb st) Rolls-Royce RB211-524H turbofans.

Further optional engines are 266.9 kN (60,000 lb st) PW4060, 275.8 kN (62,000 lb st) PW4062, 273.6 kN (61,500 lb st) CF6-80C2B1F1 or CF6-80C2B7F

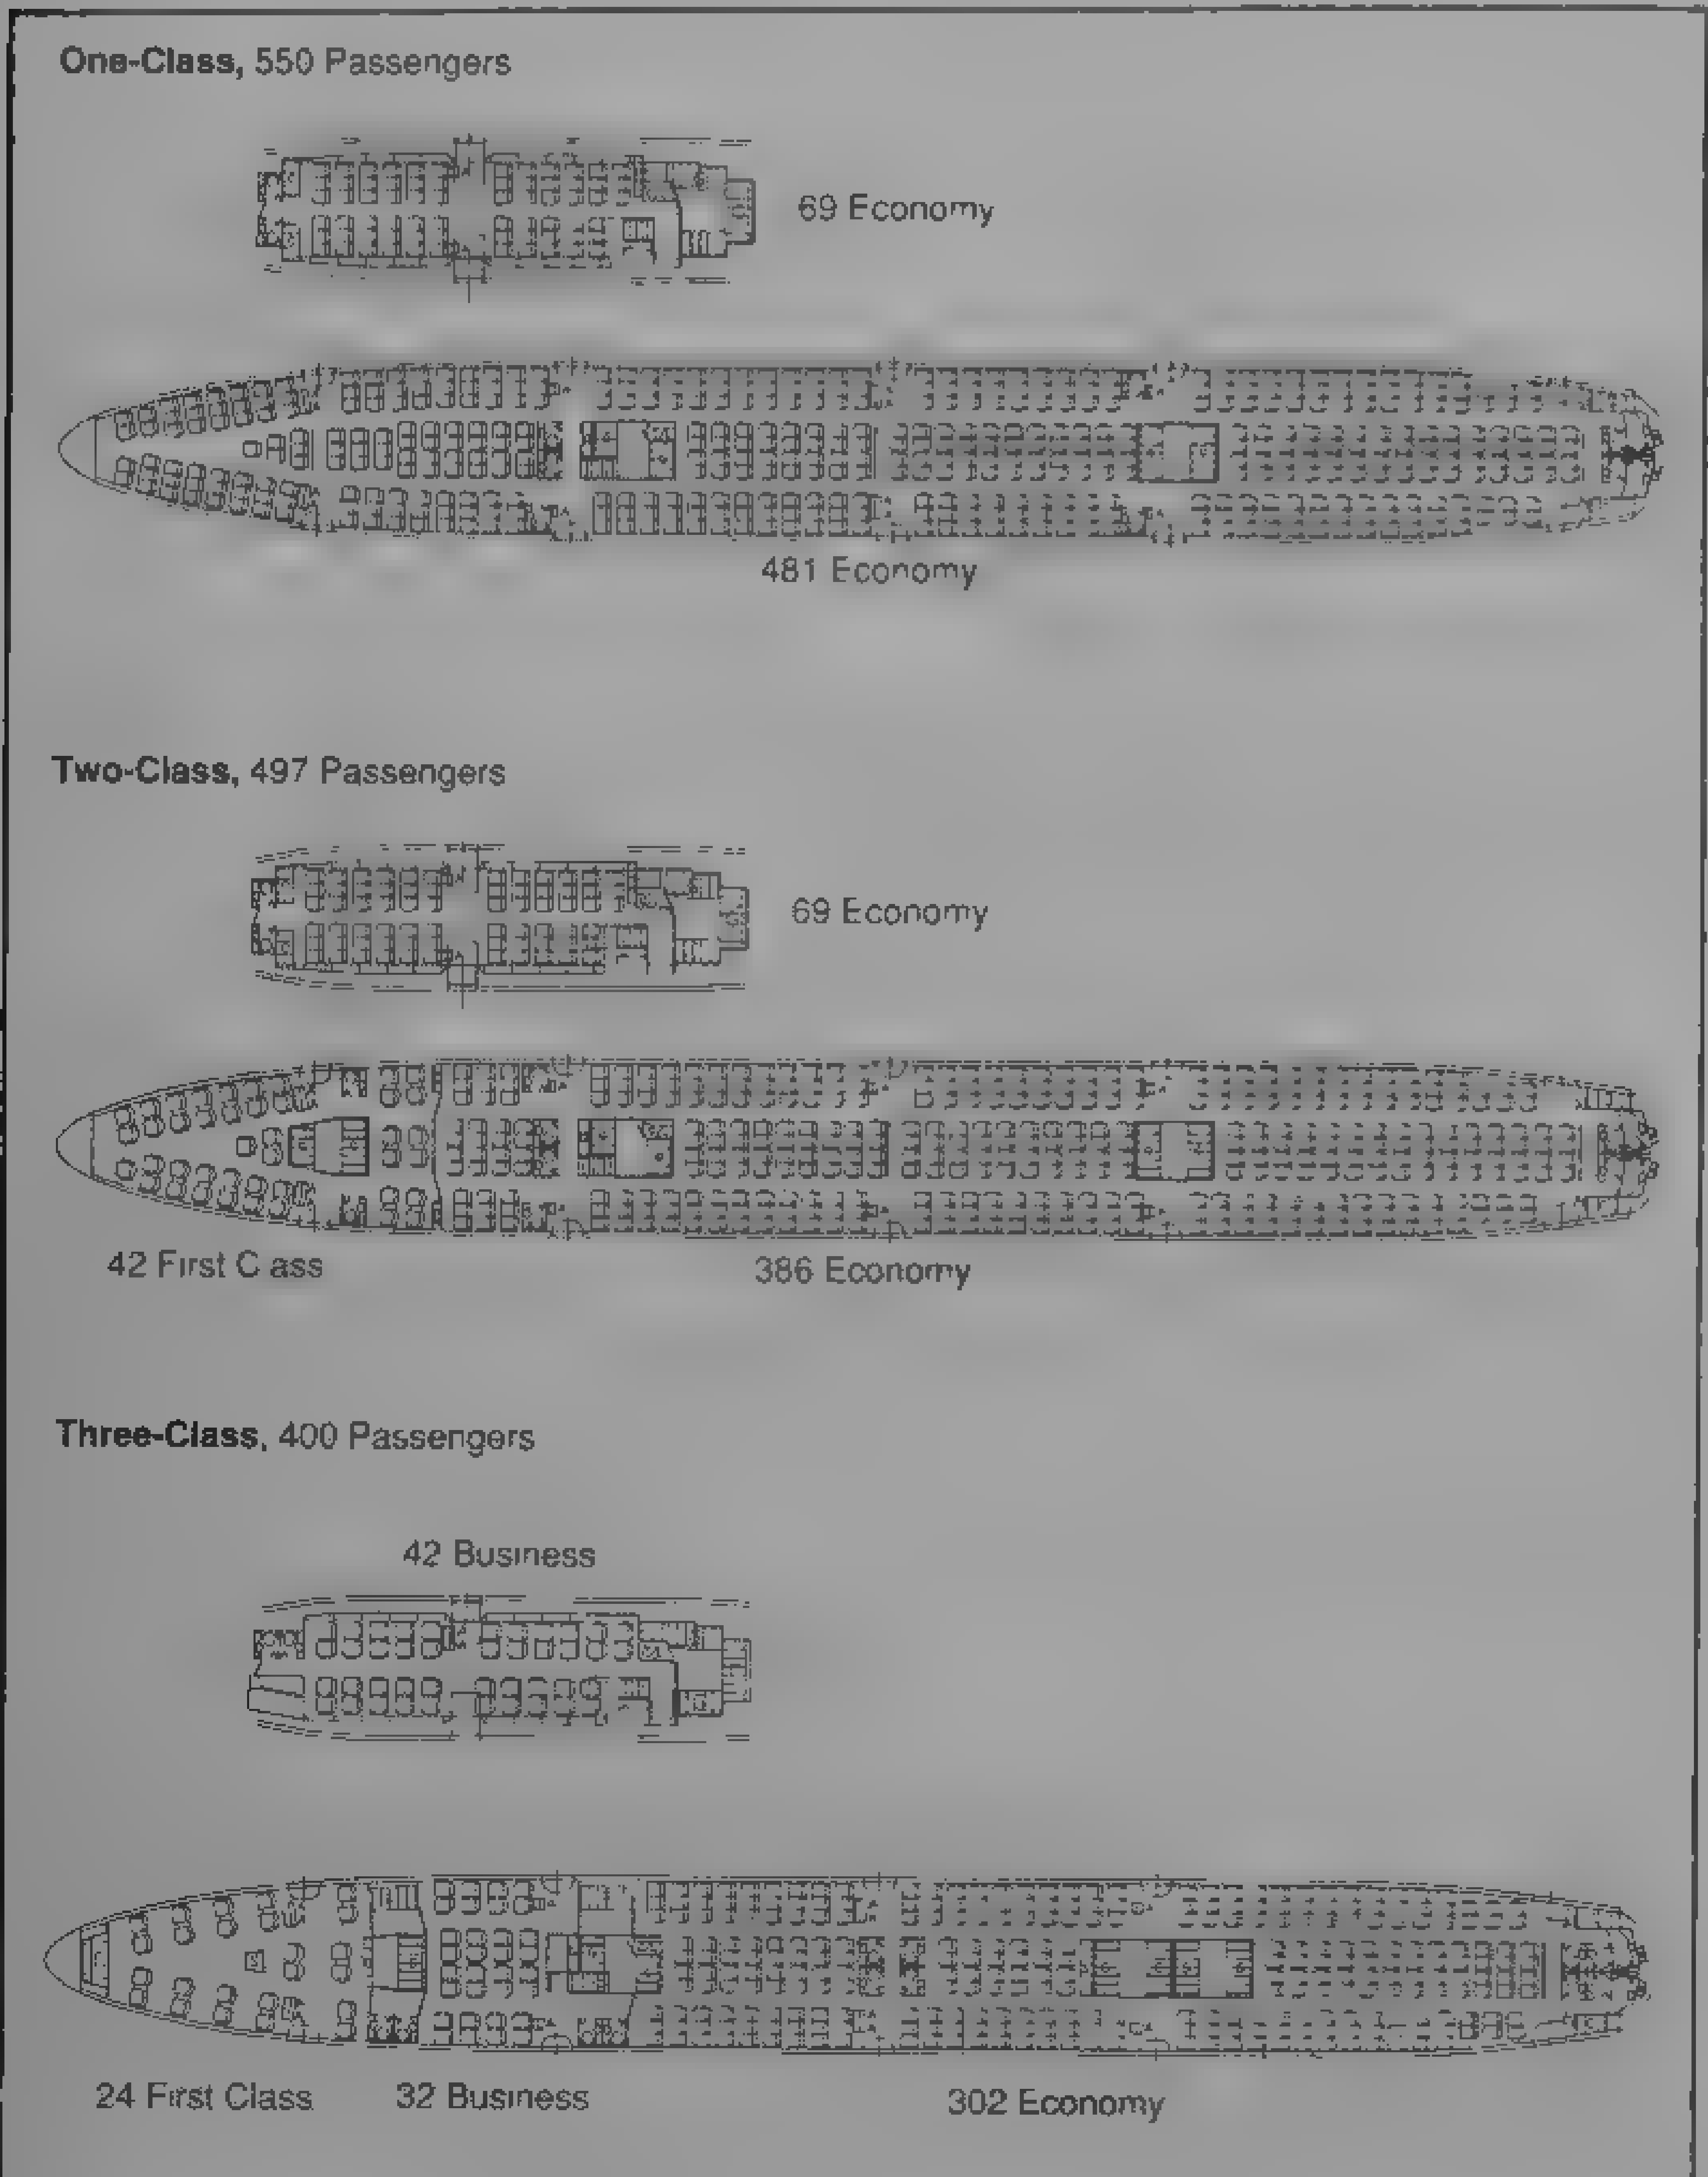
Fuel in four main tanks in wings can feed to any engine, in addition there is a centre-wing tank and reserve tanks in outer wing, optional tailplane tank, vent and surge tanks in outer wings and starboard tailplane, jettison pumps in inner main tanks; APU fed from port inner tank; automatic refuelling through two receptacles under each wing leading-edge between engines, automatic condensate scavenging and flame arresters in vent outlets

Fuel capacity 204,355 litres (53,985 US gallons, 44,952 Imp gallons) with P&W and R R engines; 203,523 litres (53,765 US gallons, 44,769 Imp gallons) with GE engines, at 377,842 kg (833,000 lb) and 394,625 kg (870,000 lb) T-O weights, fuel capacity including tailplane tank is 216,846 litres (57,285 US gallons; 47,700 Imp gallons) with P&W and R R engines and 216,013 litres (57,065 US gallons; 47,516 Imp gallons) with GE engines; optional tailplane tank holds 12,492 litres (3,300 US gallons, 2,748 Imp gallons) transferable fuel (must be full for take-off at 394,625 kg, 870,000 lb gross weight)

ACCOMMODATION: Two-crew flight deck, with seats for two observers, two-bunk crew rest cabin accessible from flight deck. Optional overhead cabin crew rest compartments above rear of main deck cabin (four bunks, four seats, eight bunks, two seats, two bunks, two seats, five sleeper seats) Typical 421-seat three-class configuration accommodates 42 business class on upper deck, 24 first class in front cabin, 29 business class in middle cabin and 326 economy class in rear cabin on main deck. Maximum upper deck capacity 69 economy class. Centre overhead stowage bins 0.16 m³ (5.7 cu ft) volume per 1.02 m (40 in) long bin, outboard bins 0.45 m³ (15.9 cu ft) volume per 1.52 m (60 in) long bin, 0.083 m³ (2.95 cu ft) bin volume per passenger (three-class). Two modular upper deck toilets, 14 on main deck, relocatable and vacuum-drained into four waste tanks. Basic galley configuration one on upper deck, seven centreline and two sidewall on main deck, toilets and galleys can be quickly relocated if required fittings are installed, advanced integrated audio/video/announcement system

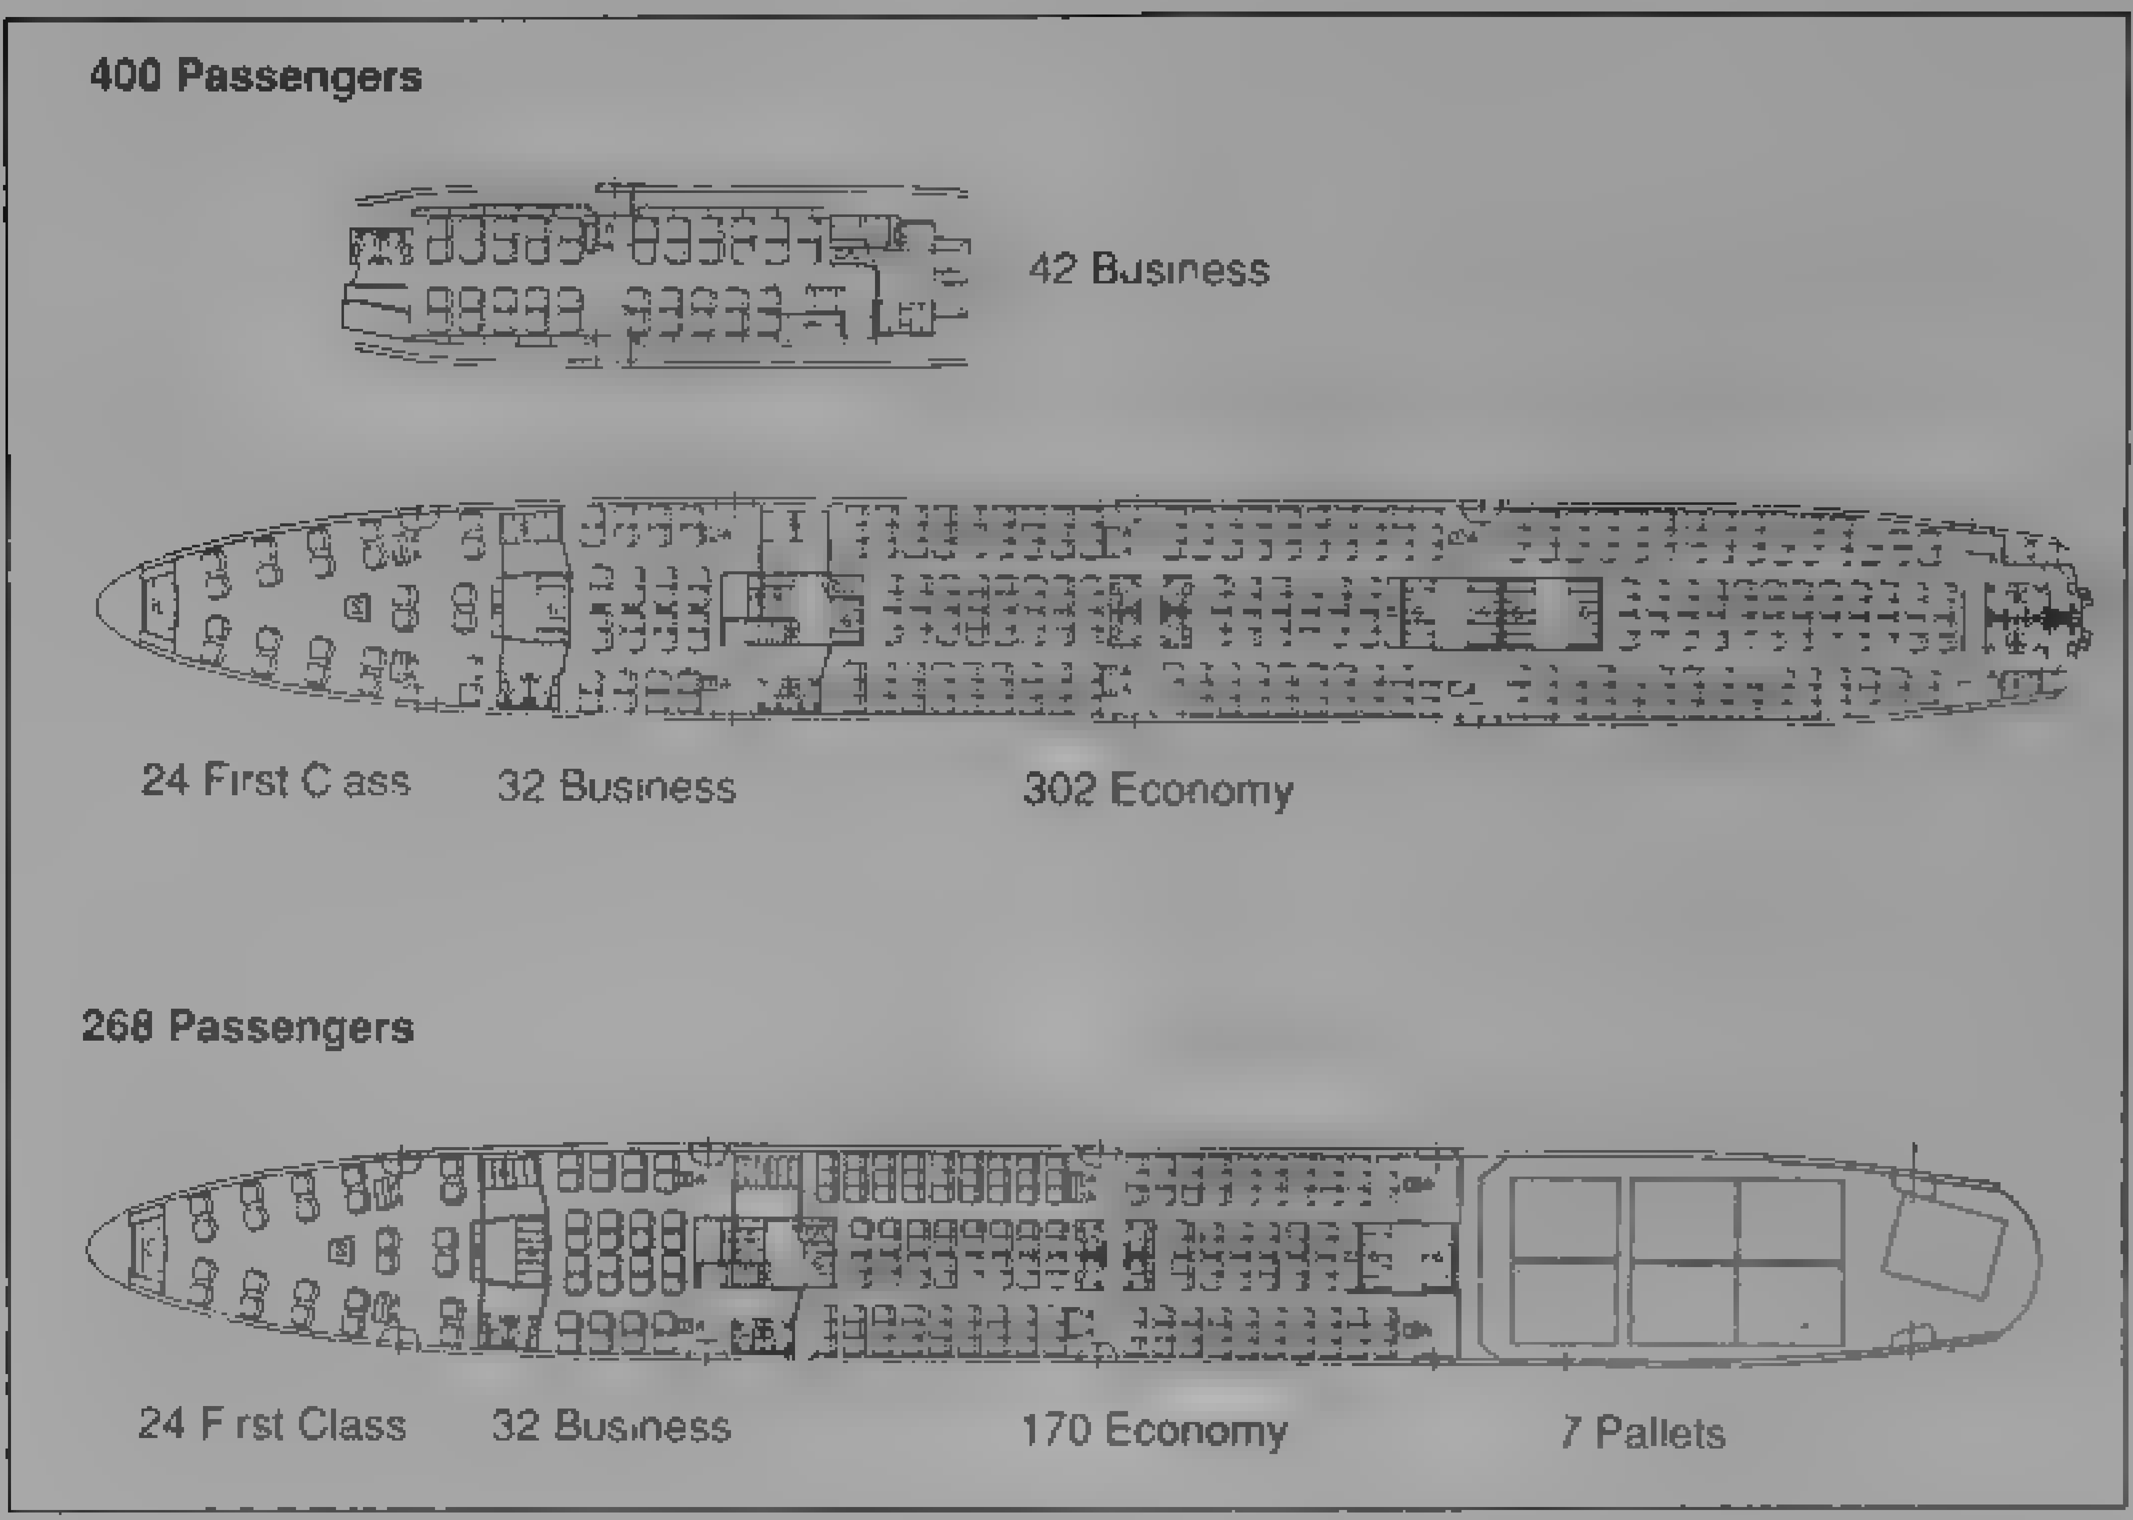
Underfloor freight: forward compartment, five 2.44 m (96 in) × 3.18 m (125 in) pallets or 16 LD-1 containers, aft compartment, 14 LD-1 containers and 23.6 m³ (835 cu ft) bulk cargo or 16 LD-1 and 13.9 m³ (490 cu ft) bulk cargo pallets and LD-1s can be interlined with Boeing 767

SYSTEMS: Each engine drives a hydraulic pump feeding an independent system, services are connected to supplies in such a way that loss of one supply cannot disable one system, two hydraulic systems also have air-driven pumps to maintain pressure and two have electric pumps, one electric pump can be run to provide braking when the aircraft is



Representative Boeing 747 interior configurations for single- or multiple-class travel

1995



Boeing 747 Combi interiors, showing all-passenger and passenger/freight arrangements

1995

being towed on the ground, all four hydraulic reservoirs can be filled from a single location in the port main landing gear bay

Hot air bled from the low-pressure and high-pressure compressors of all four engines is precooled by fan exit air and fed into a manifold to the cabin pressurisation and air conditioning, de-icing of wing leading-edge and engine nose cowling and to pressurise hydraulic tanks. Three conditioning packs in wing/fuselage fairing provide cabin air

Each engine drives an integrated drive generator supplying 90 kVA power to respective AC buses, three generators are a dispatch item, but one will supply essential loads; APU drives two further generators; automatic start-up, load transfers and load shedding reduce crew workload, power systems may be isolated from each other for triple-channel Cat. III autoland

Completely self contained P&WC PW901A APU, mounted clear of all flight-critical structure and flight controls in the extreme tail, drives two 90 kVA generators that can supply electrical power for whole aircraft also supplies compressed air to operate pneumatic components; can run at up to 6,100 m (20 000 ft) and supply compressed air below 4,575 m (15,000 ft)

Forward underfloor cargo compartment heated to 5°C by hot air exhausted from flight deck cooling equipment and avionics in main equipment centre, boosted as necessary by two electrical heaters; rear underfloor hold heated to minimum 5°C or 18°C (selected by crew) by engine bleed

Overheat detection and automatic extinguishing provided in all toilets, APU automatically shut down and fire extinguisher bottles initiated on detection of fire; each engine has three dual fire detectors in series and a fourth detector for overheating. Underfloor freight compartments and upper deck hold of Combi have smoke detectors and extinguisher systems, wheel wells have overheat detectors

AVIONICS Boeing launched development of new Flight Management Computer software in January 1993 to match existing aircraft to International Future Air Navigation System (FANS) during 1995. Standard avionics fit as follows.

Comms Dual VHF and HF transceivers with Selcal dual transponders, flight intercom with air to ground facility, connectible also to satcom system, cabin entertainment and passenger address and service units

Radar: Colour weather radar transmitting in X and C bands

Flight: Dual VOR, triple ILS receivers with single marker beacon receiver; dual ADF; dual DME, all nav radios automatically tuned by flight management computer system (FMCS). Automatic flight control system (AFCS) integrates autopilot, flight director and automatic stabiliser trim functions, dual digital air data computers with dual selectable pressure sensors, angle of attack sensors and total air temperature probes; flight management computer system (FMCS) allows crew to preselect flight plan using standard air traffic control language; FMCS incorporates database, updated every 28 days, which includes data on waypoints, airports, standard instrument departures (SIDs), standard terminal arrival routes (STARs), airline routes and information on specific geographic areas, triple ring laser gyro inertial reference units provide navigation input on EFIS, flight management displays or radio magnetic indicators, other systems include ground proximity warning, triple low-range radio altimeters and TCAS

Instrumentation Electronic flight instrument system (EFIS) comprising six (left/right inboard/outboard and central upper/lower) 20.3 x 20.3 cm (8 x 8 in) integrated display units (IDU), two each for primary flight display (PFD), navigation display (ND) and engine indicating and crew alerting (EICAS) functions, all IDUs receive data from all three EFIS/EICAS interface units (EIU), updated via software data loader; PFD and EICAS primary formats automatically switch to inboard and lower IDUs respectively, with facility for manual selection of formats on different IDUs as required

Central maintenance computer monitors electrical and electromechanical systems, performs tests and centralises maintenance data, failures are indicated in EICAS displays and stored for future reference for in-flight use or line or hangar maintenance

DIMENSIONS, EXTERNAL

Wing span	64.44 m (211 ft 5 in)
Wing span, fully fuelled	64 92 m (213 ft 0 in)
Length: overall	70.66 m (231 ft 10 in)
fuselage	68 63 m (225 ft 2 in)
Height overall	19 41 m (63 ft 8 in)
Tailplane span	22.17 m (72 ft 9 in)
Wheel track	11 00 m (36 ft 1 in)
Wheelbase	25 60 m (84 ft 0 in)
Passenger doors (10, each): Height	1.93 m (6 ft 4 in)
Width	1.07 m (3 ft 6 in)
Height to sill	approx 4 88 m (16 ft 0 in)
Baggage door (front hold). Height	1.68 m (5 ft 6 in)
Width	2.64 m (8 ft 8 in)
Height to sill	approx 2.64 m (8 ft 8 in)

Operating weight empty: P 180,985 kg (399,000 lb)
P at max optional T-O weight 181,485 kg (400,100 lb)
C 181,030 kg (399,100 lb)
C at max optional T-O weight 181,530 kg (400,200 lb)
R 182,255 kg (401,800 lb)
R at max optional T-O weight 182,755 kg (402,900 lb)
Max T-O weight: P, C, R 362,875 kg (800,000 lb)
or 385,555 kg (850,000 lb)
or 394,625 kg (870,000 lb)
Max ramp weight: P, C, R 364,235 kg (803,000 lb)
or 386,915 kg (853,000 lb)
or 395,985 kg (873,000 lb)
Max zero-fuel weight: P, C, R 242,670 kg (535,000 lb)
Max landing weight: at standard max T-O weight
P, C, R 260,360 kg (574,000 lb)
at alternative max T-O weights
P, C, R 285,765 kg (630,000 lb)

PERFORMANCE (engines as designated under Weights and Loadings):
Approach speed at basic landing weight
P, C, R 146 kts (270 km/h; 168 mph)
Approach speed at highest optional landing weight
P, C, R 153 kts (284 km/h; 176 mph)
Initial cruise altitude at highest optional T-O weight
P, C, R 10,030 m (32,900 ft)
FAR T-O field length at S/L, ISA, at highest optional T-O weight: P, C 3,322 m (10,900 ft)
R 3,352 m (11,000 ft)
FAR landing field length at max landing weight of 285,765 kg (630,000 lb): P, C, R 2,072 m (6,800 ft)
Design range, typical international rules, 420 three-class passengers, at highest optional T-O weight
P 7,165 n miles (13,269 km; 8,245 miles)
C 7,230 n miles (13,390 km; 8,320 miles)
R 7,100 n miles (13,149 km; 8,170 miles)

UPDATED

BOEING 747-400F

TYPE: All-freight version of 747-400

PROGRAMME: First flight (N6005C) 7 May 1993, FAA certification October 1993, JAR certification followed

CURRENT VERSIONS: **747-400F**: *As described*

Military freighter: Offered to USAF to meet [redacted] developmental airlift aircraft (NDAA) requirement for possible alternative to McDonnell Douglas C-17A, Pratt & Whitney PW4056 power plant chosen early 1995, USAF decision due November 1995, military 747 400F available 18 months from go-ahead

CUSTOMERS: Seven customers (Air France, Asiana, Cargolux, Cathay Pacific, KLM, Korean Airlines and Singapore Airlines) ordered 20 aircraft by December 1994: first 747-400F delivered to Cargolux November 1993

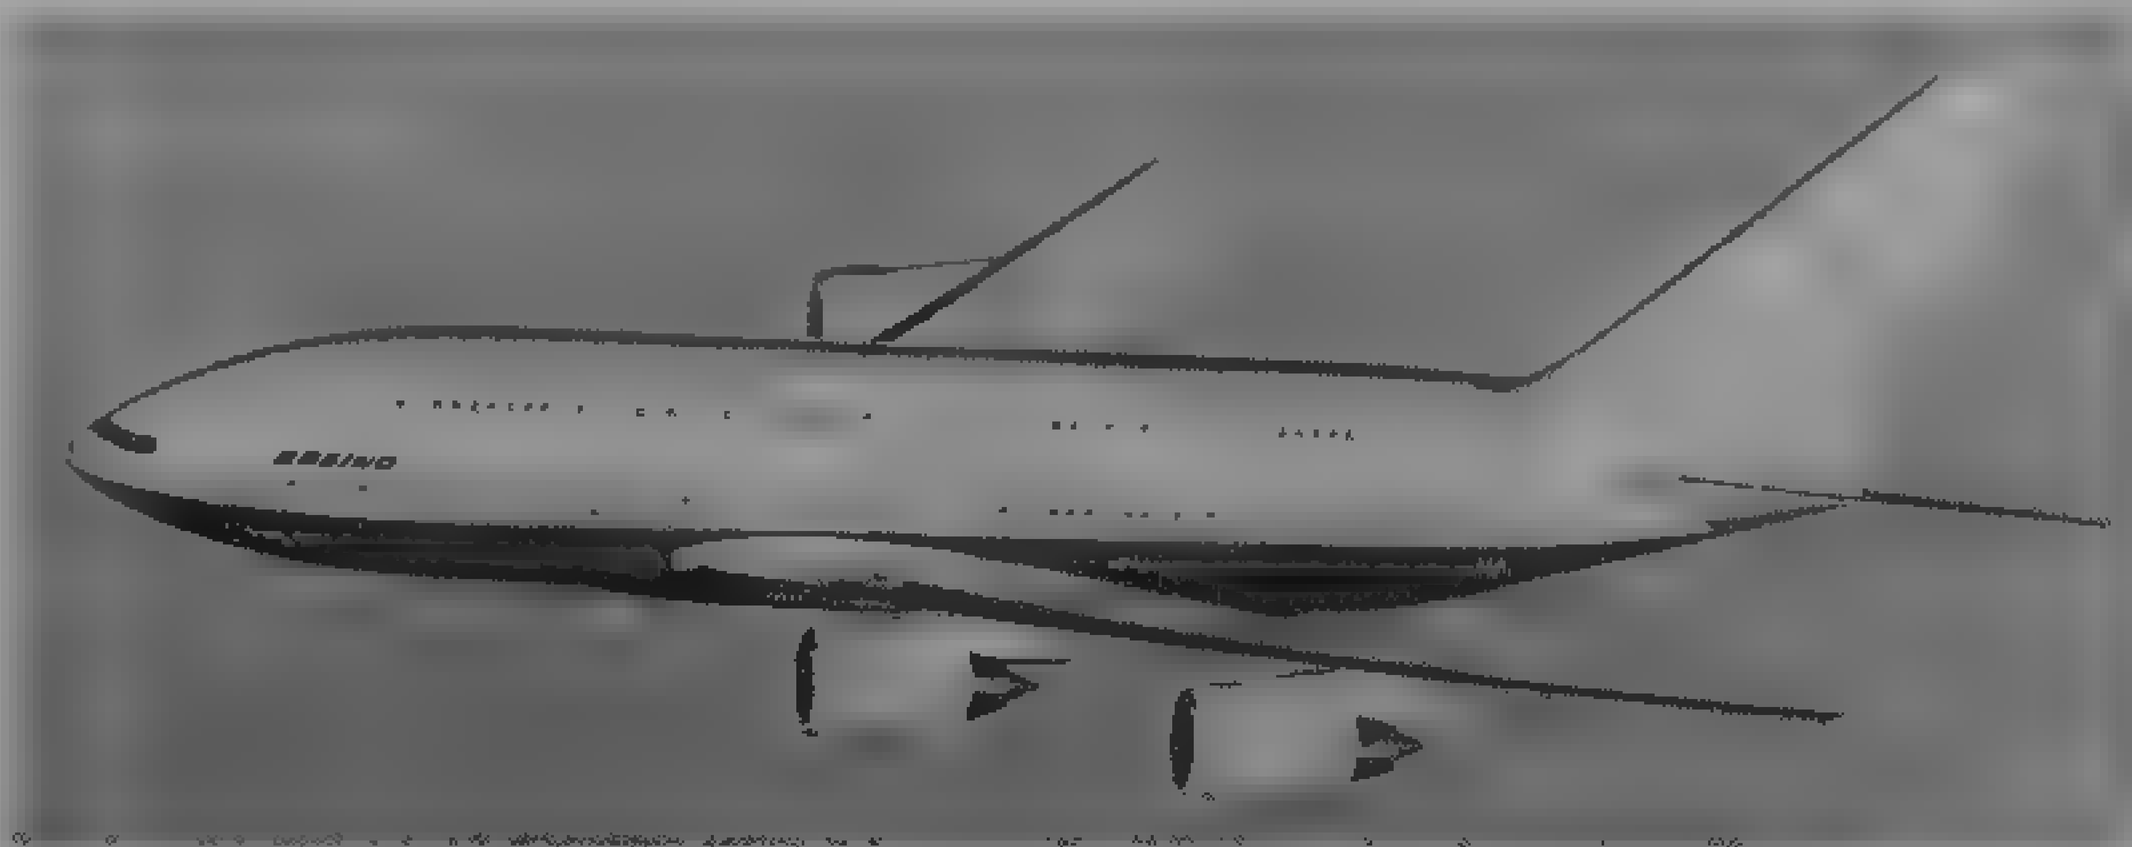
DESIGN FEATURES: 747-200F fuselage (short upper deck) with additional changes combined with stronger and larger 747-400 wing, strengthened floor of short upper deck, as offered for -200F, also integrated into 747-400F; further developed freight handling system, total cargo volume increased by 41.7 m³ (1,473 cu ft), empty weight saving of 2,000 kg (4,409 lb) has raised maximum revenue freight load to about 113,000 kg (249,122 lb), at which range is 4,400 n miles (8,149 km; 5,063 miles), fuel consumption is 14.2 per cent lower than 747-200F. Same gross weights as passenger 747-400; maximum landing weight at optional T-O weight, 302,090 kg (666,000 lb); maximum zero-fuel weight 276,690 kg (610,000 lb), can be increased on condition T-O weight is decreased

ACCOMMODATION: Two-pilot crew, as 747-400. Upward opening nose cargo door and optional port-side rear cargo door; underfloor cargo doors fore and aft of wing and bulk cargo door aft of rear underfloor door; two crew doors to port. Capacity for 30 pallets on main deck and 32 LD-1 containers plus bulk cargo under floor

UPDATED

BOEING 747X

Apart from the studies directed towards the UHCA/VLCT New Large Airplane (see under UHCA/VLCT in International section), Boeing also making preliminary design studies of stretched 747-400, sometimes known as 747X. Studies of several alternative extrapolations of 747 continued into 1993, but Boeing statements during first quarter of 1994 suggested that a new wing combined with a fuselage stretched to accommodate 80 more passengers could be an interim approach to NLA. Cost of development might prevent company from funding development of NLA until further into the next century. A 747 development would not become a multicompany project. Simultaneously, Boeing pursuing NLA studies with the four Airbus Industrie partner companies and Airbus Industrie itself



Artist's impression of hypothetical two-deck Boeing 747X

1994

Boeing 747 400F freighter takes off for first time from Paine Field, Washington, on 7 May 1993

1993

New wing would probably follow design approach of the 777, with more moderate sweep to afford good field performance and climb; cruising Mach number around 0.84, and fuel capacity of about 208,197 litres (55,000 US gallons, 45,797 Imp gallons). Seating for 500 or more passengers would be afforded by fuselage plugs forward and aft of wing, with forward plug extending both upper and main decks. Boeing says customers will determine any capacity or range stretch of 747-400.

UPDATED

BOEING 757

TYPE: Medium-range twin-turbofan airliner.

PROGRAMME: New technology family designated 757/767/777 announced early 1978, 757 has 707/727/737 fuselage cross-section and two large turbofans. Eastern Air Lines and British Airways ordered 21 firm and 24 optioned and 19+18 respectively 13 August 1978, first flight (N757A) 19 February 1982 powered by 166.4 kN (37,400 lb st) Rolls-Royce RB535Cs and designated 757-200, first Boeing airliner launched with foreign engine; FAA certification 21 December 1982. CAA certification 14 January 1983, revenue services began 1 January 1983 (EAL) and 9 February 1983 (BA). First flight of 757 powered by P&W PW2037s, 14 March 1984, certificated October 1984 and delivered to Delta, first 757 with RB535E4s delivered to EAL 10 October 1984, first extended-range model delivered to Royal Brunei Airlines May 1986; 757 with RB535E4 engines approved FAA ETOPS December 1986 (extended to 180 minutes July 1990); 757 with PW2037/2040 ETOPS approved April 1990 (180 minutes for PW2037 April 1992), Boeing windshear guidance and detection system approved by FAA January 1987. Certificated for operation in Russia and CIS September 1993.

First 757 kept by Boeing for flight test support, used as avionics testbed for Lockheed YF-22 (see below) and Boeing 777. Production rate of 757 reduced from 8½ per month to seven in June 1993 (instead of September) and then to five in October 1993 (instead of November), steady at four during 1995. Discussions in 1993 for possible assembly of 757 in China, leading towards full production, no decision announced.

CURRENT VERSIONS: **757-200:** Initial production passenger airliner, extended range available. *Main description applies to this version except where indicated.*

757-200PF Package Freighter: Developed for United Parcel Service. Large freight door forward, single crew door and no windows, up to 15 standard 2.24 × 3.18 m (88 × 125 in) cargo pallets on main deck, same higher operating weights as Freighters. UPS ordered 20 in 1985, total 65 ordered by December 1993 plus 36 on option, 52 delivered by February 1995.

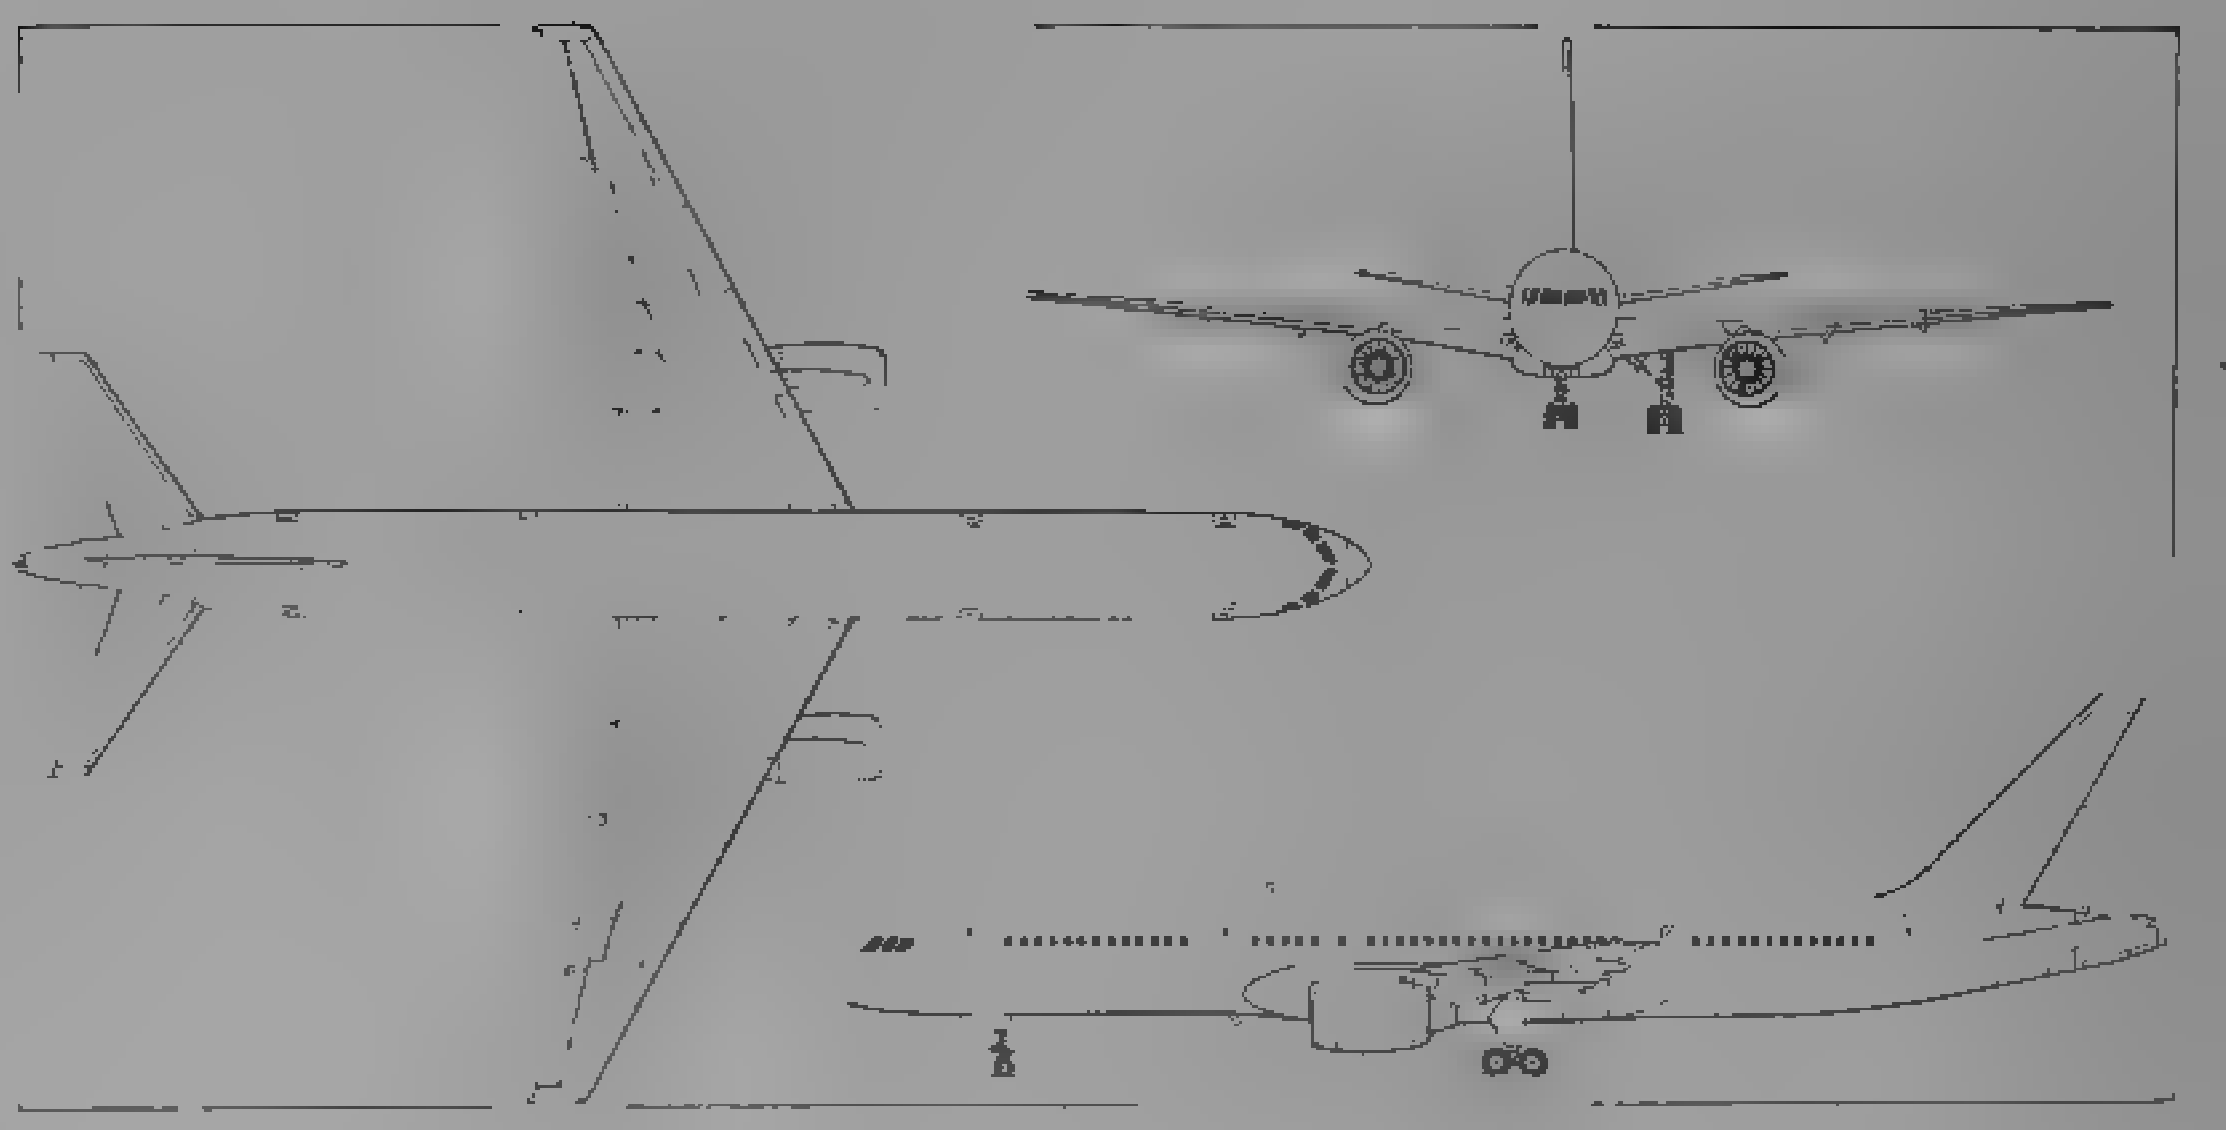
757-200M Combi: Boeing's mixed cargo/passenger configuration with windows, upward-opening cargo door to port (forward) 3.40 × 2.18 m (134 × 86 in), carries up to three 2.24 × 2.74 m (88 × 108 in) cargo containers and 150 passengers, one delivered to Royal Nepal Airlines.

757-200 Freighter: Developed by Pemco Aeroplex in 1992 as conversions of existing 757s, all freight, combi and quick-change versions available, same weights as Boeing 757-200PF Package Freighter (see data below), choice of more powerful engines, large freight door forward on port side.

757-200 'Catfish': Boeing's own 757-200 (N757A) being fitted with radar nose in F-22 profile and representative F-22 swept wing section above flight deck containing conformal radar antennae for advanced radar trials, first flight expected 1997. See also Lockheed Martin entry.

CUSTOMERS: See table at start of Boeing Commercial entry for orders/deliveries.

COSTS: Price of four 757s ordered by Shorouk in November 1992 reported as $240 million.



Boeing 757-200 twin-turbofan short/medium-range transport *(Jane's/Dennis Punnett)*

1983

DESIGN FEATURES: Boeing aerofoils; sweepback at quarter chord 25°; dihedral 5°; incidence 3° 12'.

FLYING CONTROLS: All-speed fully powered outboard ailerons assisted by five flight spoilers on each wing also acting variously as airbrakes and ground spoilers; one additional ground spoiler inboard on each wing, elevators and rudder; double-slotted trailing-edge flaps; full-span leading-edge slats, five sections each wing, variable incidence tailplane.

STRUCTURE: Aluminium alloy two-spar fail-safe wing box; centre-section continuous through fuselage, ailerons, flaps and spoilers extensively of honeycomb, graphite composites and laminates; tailplane has full-span light alloy torque boxes, fin has three-spar dual cell light alloy torque box, elevators and rudder have graphite/epoxy honeycomb skins supported by honeycomb and laminated spar and rib assemblies; CFRP wing/fuselage and flap track fairings. All landing gear doors of CFRP/Kevlar.

Subcontractors include Hawker de Havilland (wing inspar ribs), Shorts (inboard flaps), CASA (outboard flaps), Boeing Renton (leading-edge slats, main cabin sections), Boeing Helicopters (fixed leading-edges), Boeing Military Airplanes (flight deck), Northrop Grumman (overwing spoiler panels), Heath Tecna (wing/fuselage and flap track fairings), Schweizer (wingtips), Vought Aircraft (fin and tailplane, extreme rear fuselage), Rohr Industries (engine support struts), IAI (dorsal fin), Fleet Industries (APU access doors).

LANDING GEAR: Retractable tricycle type, with main and nose units manufactured by Menasco. Each main unit carries a four-wheel bogie, fitted with Dunlop or Goodrich wheels, carbon brakes and tyres. Twin-wheel nose unit, also with Dunlop or Goodrich tyres. Minimum ground turning radius 21.64 m (71 ft) at nosewheels, 29.87 m (98 ft) at wingtip.

POWER PLANT: Two 166.4 kN (37,400 lb st) Rolls-Royce 535C, 170 kN (38,200 lb st) Pratt & Whitney PW2037, 178.4 kN (40,100 lb st) Rolls-Royce 535E4/E4-B, or 185.5 kN (41,700 lb st) Pratt & Whitney PW2040 turbofans, mounted in underwing pods. Rolls-Royce 535C not offered for Freighters. Fuel capacity 42,597 litres (11,253 US gallons, 9,370 Imp gallons); fuel capacity of Freighters 42,684 litres (11,276 US gallons, 9,389 Imp gallons).

ACCOMMODATION: Crew of two on flight deck, with provision for an observer. Five to seven cabin attendants. Nine standard interior arrangements for 178 (16 first class/162 tourist), 186 (16 first class/170 tourist), 202 (12 first class/190 tourist), 208 (12 first class/196 tourist) mixed class passengers, or 214, 220, 223, 224 or 239 all tourist passengers. First class seats are four-abreast, at 96.5 cm (38 in) pitch; tourist seat pitch is 81 or 86 cm (32 or 34 in), mainly six-abreast, in mixed class arrangements. Large overhead bins of Kevlar provide approximately 0.054 m³ (1.9 cu ft) of stowage per passenger. Choice of two cabin door configurations, with either three passenger doors and two overwing emergency exits on each side (used with 186-, 208-, 220- and 224-seat interiors), or four doors on each side (used with 178-, 202-, 214-, 223- and 239-seat interiors). All versions have a galley at front on starboard side and another at rear (two on 178- and 186-passenger versions and three on 239 version plus one amidships), toilet at front on port side and three more at rear (186, 202, 208, 220, 224 passengers) or two at rear (239) or amidships (178, 214, 223 passengers). Coat closet at front of first class cabins and 214/220-passenger interiors. Baggage/cargo hold doors on starboard side.

SYSTEMS: AiResearch ECS, General Electric engine thrust management system; Honeywell-Vickers engine-driven hydraulic pumps, four Abex electric hydraulic pumps. Hydraulic system maximum flow rate 140 litres (37 US gallons; 30.8 Imp gallons)/min at T-O power on engine-driven pumps; 25.4 to 34.8 litres (6.7 to 9.2 US gallons; 5.6 to 7.7 Imp gallons)/min on electric motor pumps; 42.8 litres (11.3 US gallons; 9.4 Imp gallons)/min on ram air turbine. Independent reservoirs, pressurised by air from pneumatic system, maximum pressure 207 bars (3,000 lb/sq in) on primary pumps. Sundstrand electrical power generating system and ram air turbine. AlliedSignal GTCP331-200 APU. Wing thermally anti-iced.

AVIONICS: *Flight:* Honeywell inertial reference system (IRS) (first commercial application of laser gyros); IRS provides position, velocity and attitude information to flight deck displays, and the flight management computer system (FMCS) and digital air data computer (DADC) supplied by Honeywell. FMCS provides automatic en route and terminal navigation capability, and also computes and commands both lateral and vertical flight profiles for optimum fuel efficiency, maximised by electronic linkage of the FMCS with automatic flight control and thrust management systems; Boeing windshear detection and guidance system is optional.

Instrumentation: Collins EFIS-700 with engine indication and crew alerting system (EICAS), Collins FCS-700 autopilot flight director system (AFDS).

Boeing 757-200 for Iberia takes off from the Boeing airfield at Renton, Washington

Boeing 757 twin-turbofan airliner

1995

DIMENSIONS, EXTERNAL:
Wing span 38.05 m (124 ft 10 in)
Wing chord: at root 8.20 m (26 ft 11 in)
at tip 1.73 m (5 ft 8 in)
Wing aspect ratio 7.82
Length: overall 47.32 m (155 ft 3 in)
fuselage 46.96 m (154 ft 10 in)
Height overall 13.56 m (44 ft 6 in)
Tailplane span 15.21 m (49 ft 11 in)
Wheel track 7.32 m (24 ft 0 in)
Wheelbase 18.29 m (60 ft 0 in)
Passenger doors (two, fwd, port):
Height 1.83 m (6 ft 0 in)
Width 0.84 m (2 ft 9 in)
Passenger door (rear, port): Height 1.83 m (6 ft 0 in)
Width 0.76 m (2 ft 6 in)
Service door (fwd, stbd): Height 1.65 m (5 ft 5 in)
Width 0.76 m (2 ft 6 in)
Service door (stbd, opposite second passenger door):
Height 1.83 m (6 ft 0 in)
Width 0.84 m (2 ft 9 in)
Service door (rear, stbd): Height 1.83 m (6 ft 0 in)
Width 0.76 m (2 ft 6 in)
Emergency exits (four, overwing):
Height 0.97 m (3 ft 2 in)
Width 0.51 m (1 ft 8 in)
Emergency exits, optional (two, aft of wings):
Height 1.32 m (4 ft 4 in)
Width 0.61 m (2 ft 0 in)

DIMENSIONS, INTERNAL:
Cabin (aft of flight deck to rear pressure bulkhead):
Length 36.09 m (118 ft 5 in)
Max width 3.53 m (11 ft 7 in)
Max height 2.13 m (7 ft 0 in)
Floor area 116.04 m² (1,249 sq ft)
Passenger section volume 230.50 m³ (8,140 cu ft)
Underfloor cargo volume (bulk loading):
fwd 19.82 m³ (700 cu ft)
rear 30.87 m³ (1,090 cu ft)

AREAS:
Wings, gross 185.25 m² (1,994.0 sq ft)
Ailerons (total) 4.46 m² (48.0 sq ft)
Trailing-edge flaps (total) 30.38 m² (327.0 sq ft)
Leading-edge slats (total) 18.39 m² (198.0 sq ft)
Flight spoilers (total) 10.96 m² (118.0 sq ft)
Ground spoilers (total) 12.82 m² (138.0 sq ft)
Fin 34.37 m² (370.0 sq ft)
Rudder 11.61 m² (125.0 sq ft)
Tailplane 50.35 m² (542.0 sq ft)
Elevators (total) 12.54 m² (135.0 sq ft)

WEIGHTS AND LOADINGS (with 186 passengers. A: 535E4 engines, B: PW2037s, C: PW2040s, F1: Freighter with P&W engines, F2: Freighter with RR engines):
Operating weight empty: A 57,180 kg (126,060 lb)
B, C 57,040 kg (125,750 lb)
F1 50,960 kg (112,350 lb)
F2 51,165 kg (112,800 lb)
Freighter revenue payload, volume limited:
F1, F2 32,755 kg (72,210 lb)
Zero-fuel weight limited, containers:
F1 36,220 kg (79,850 lb)
F2 36,015 kg (79,400 lb)
Zero-fuel weight limited, pallets:
F1 38,260 kg (84,350 lb)
F2 38,055 kg (83,900 lb)
Max basic T-O weight: A, B, C 99,790 kg (220,000 lb)
Max T-O weight (medium-range):
A, B, C 104,325 kg (230,000 lb)
F1, F2 113,400 kg (250,000 lb)
Max T-O weight (long-range):
A, B, C 113,400 kg (250,000 lb)
F1, F2 115,665 kg (255,000 lb)
Max landing weight: A, B, C 89,810 kg (198,000 lb)
F1, F2 95,255 kg (210,000 lb)
Max zero-fuel weight: A, B, C 83,460 kg (184,000 lb)
F1, F2 90,720 kg (200,000 lb)
Max wing loading: A, B, C at max basic T-O weight
538.5 kg/m² (110.3 lb/sq ft)
A, B, C at long-range max T-O weight
587.8 kg/m² (120.4 lb/sq ft)
F1, F2 at long-range max T-O weight
624.3 kg/m² (127.8 lb/sq ft)
Max power loading:
at max basic T-O weight:
A 279.68 kg/kN (2.74 lb/lb st)
B 293.5 kg/kN (2.88 lb/lb st)
C 268.97 kg/kN (2.64 lb/lb st)
at long-range max T-O weight:
A 317.81 kg/kN (3.12 lb/lb st)
B 333.51 kg/kN (3.27 lb/lb st)
C 305.1 kg/kN (3.00 lb/lb st)
F1 311.8 kg/kN (3.05 lb/lb st)
F2 324.1 kg/kN (3.18 lb/lb st)

PERFORMANCE (with 186 passengers, at max basic T-O weight except where indicated):
Max operating speed: A, B, C Mach 0.86
Cruising speed: A, B, C Mach 0.80
Approach speed at S/L, flaps down, max landing weight:
A, B, C 132 kts (245 km/h; 152 mph) EAS
Initial cruising height: A 11,880 m (38,970 ft)
B, C 11,675 m (38,300 ft)
Runway LCN at ramp weight of 100,244 kg (221,000 lb), optimum tyre pressure and subgrade C flexible pavement, H40 × 14.5-19.0 tyres 36
T-O field length (S/L, 29°C):
at max basic T-O weight: A 1,646 m (5,400 ft)
B 1,791 m (5,875 ft)
C 1,637 m (5,370 ft)
at long range max T-O weight: A 2,134 m (7,000 ft)
B 2,792 m (9,160 ft)
C 2,118 m (6,950 ft)
Landing field length at max landing weight:
A 1,411 m (4,630 ft)
B, C 1,460 m (4,790 ft)
Range with 186 passengers:
at max basic T-O weight:
A 2,820 n miles (5,222 km; 3,245 miles)
B, C 2,980 n miles (5,519 km; 3,429 miles)
at long-range max T-O weight:
A 3,820 n miles (7,074 km; 4,396 miles)
B, C 4,000 n miles (7,408 km; 4,603 miles)
757-200PF, max long-range T-O weight, 22,680 kg (50,000 lb) payload:
A 3,700 n miles (6,852 km; 4,258 miles)
B, C 3,885 n miles (7,195 km; 4,471 miles)

OPERATIONAL NOISE LEVELS (FAR Pt 36 Stage 3):
T-O, at max basic T-O weight, cutback power:
A [illegible] EPNdB
B 86.2 EPNdB
C (estimated) 84.7 EPNdB
Approach at max landing weight, 30° flap:
A 95.[illegible] EPNdB
B, C 97.7 EPNdB
Sideline: A 93.3 EPNdB
B 94.0 EPNdB
C (estimated) 94.6 EPNdB

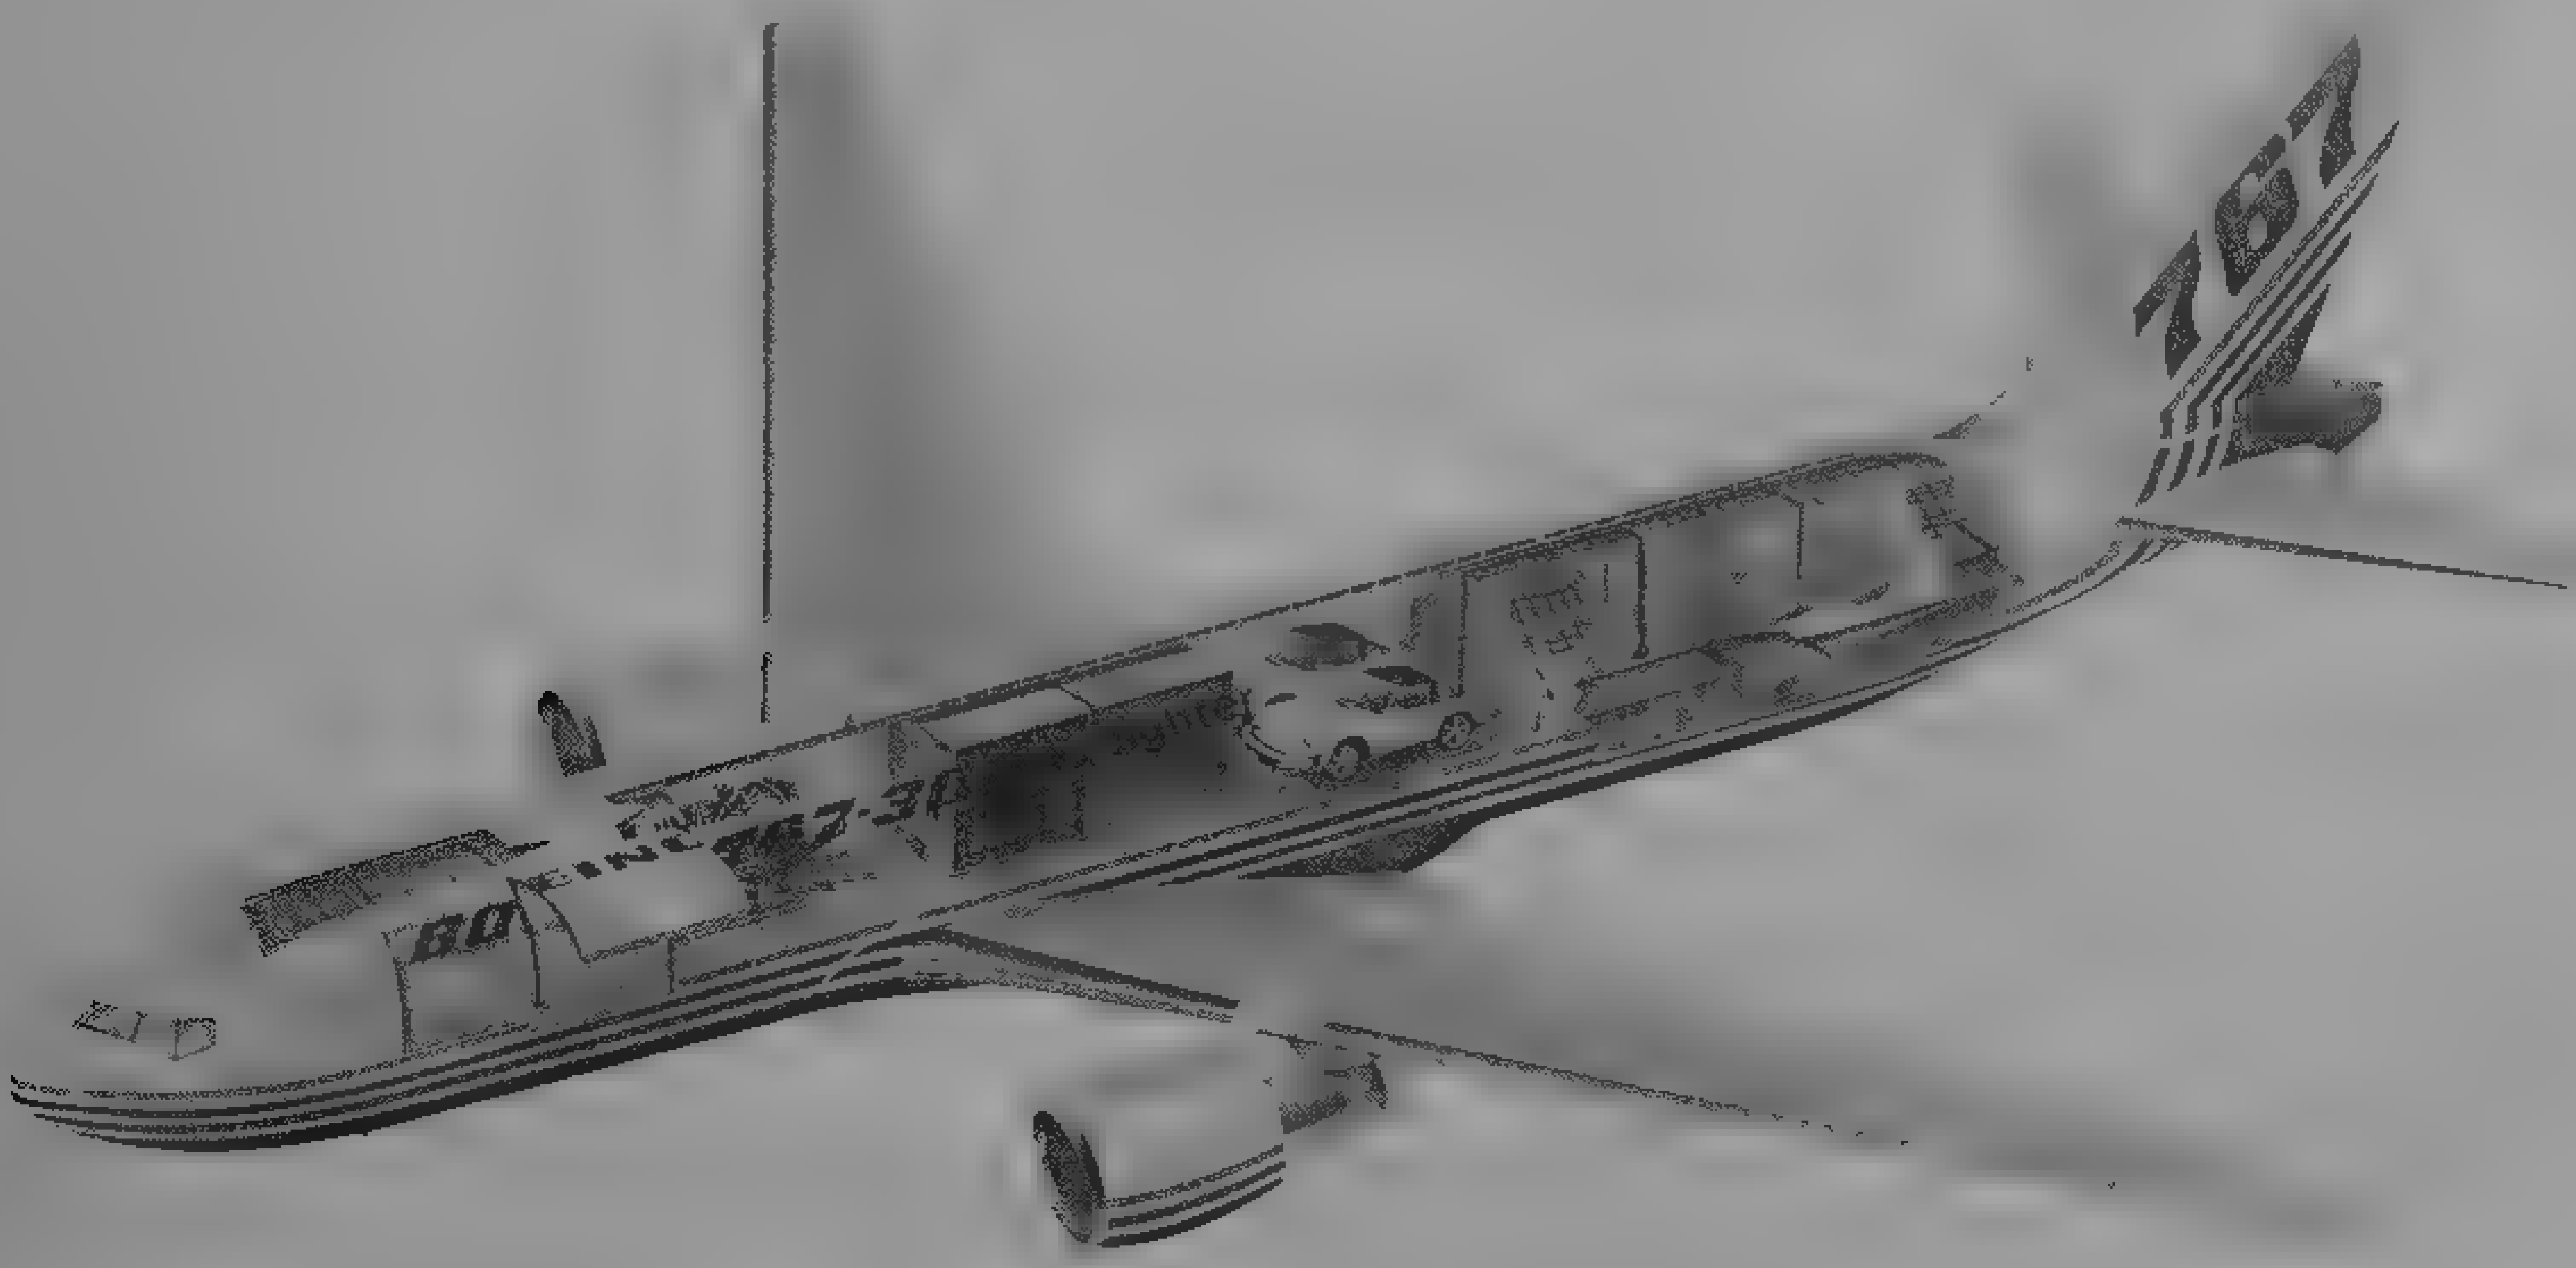
UPDATED

BOEING 767

TYPE: Medium/long-range twin-turbofan airliner.

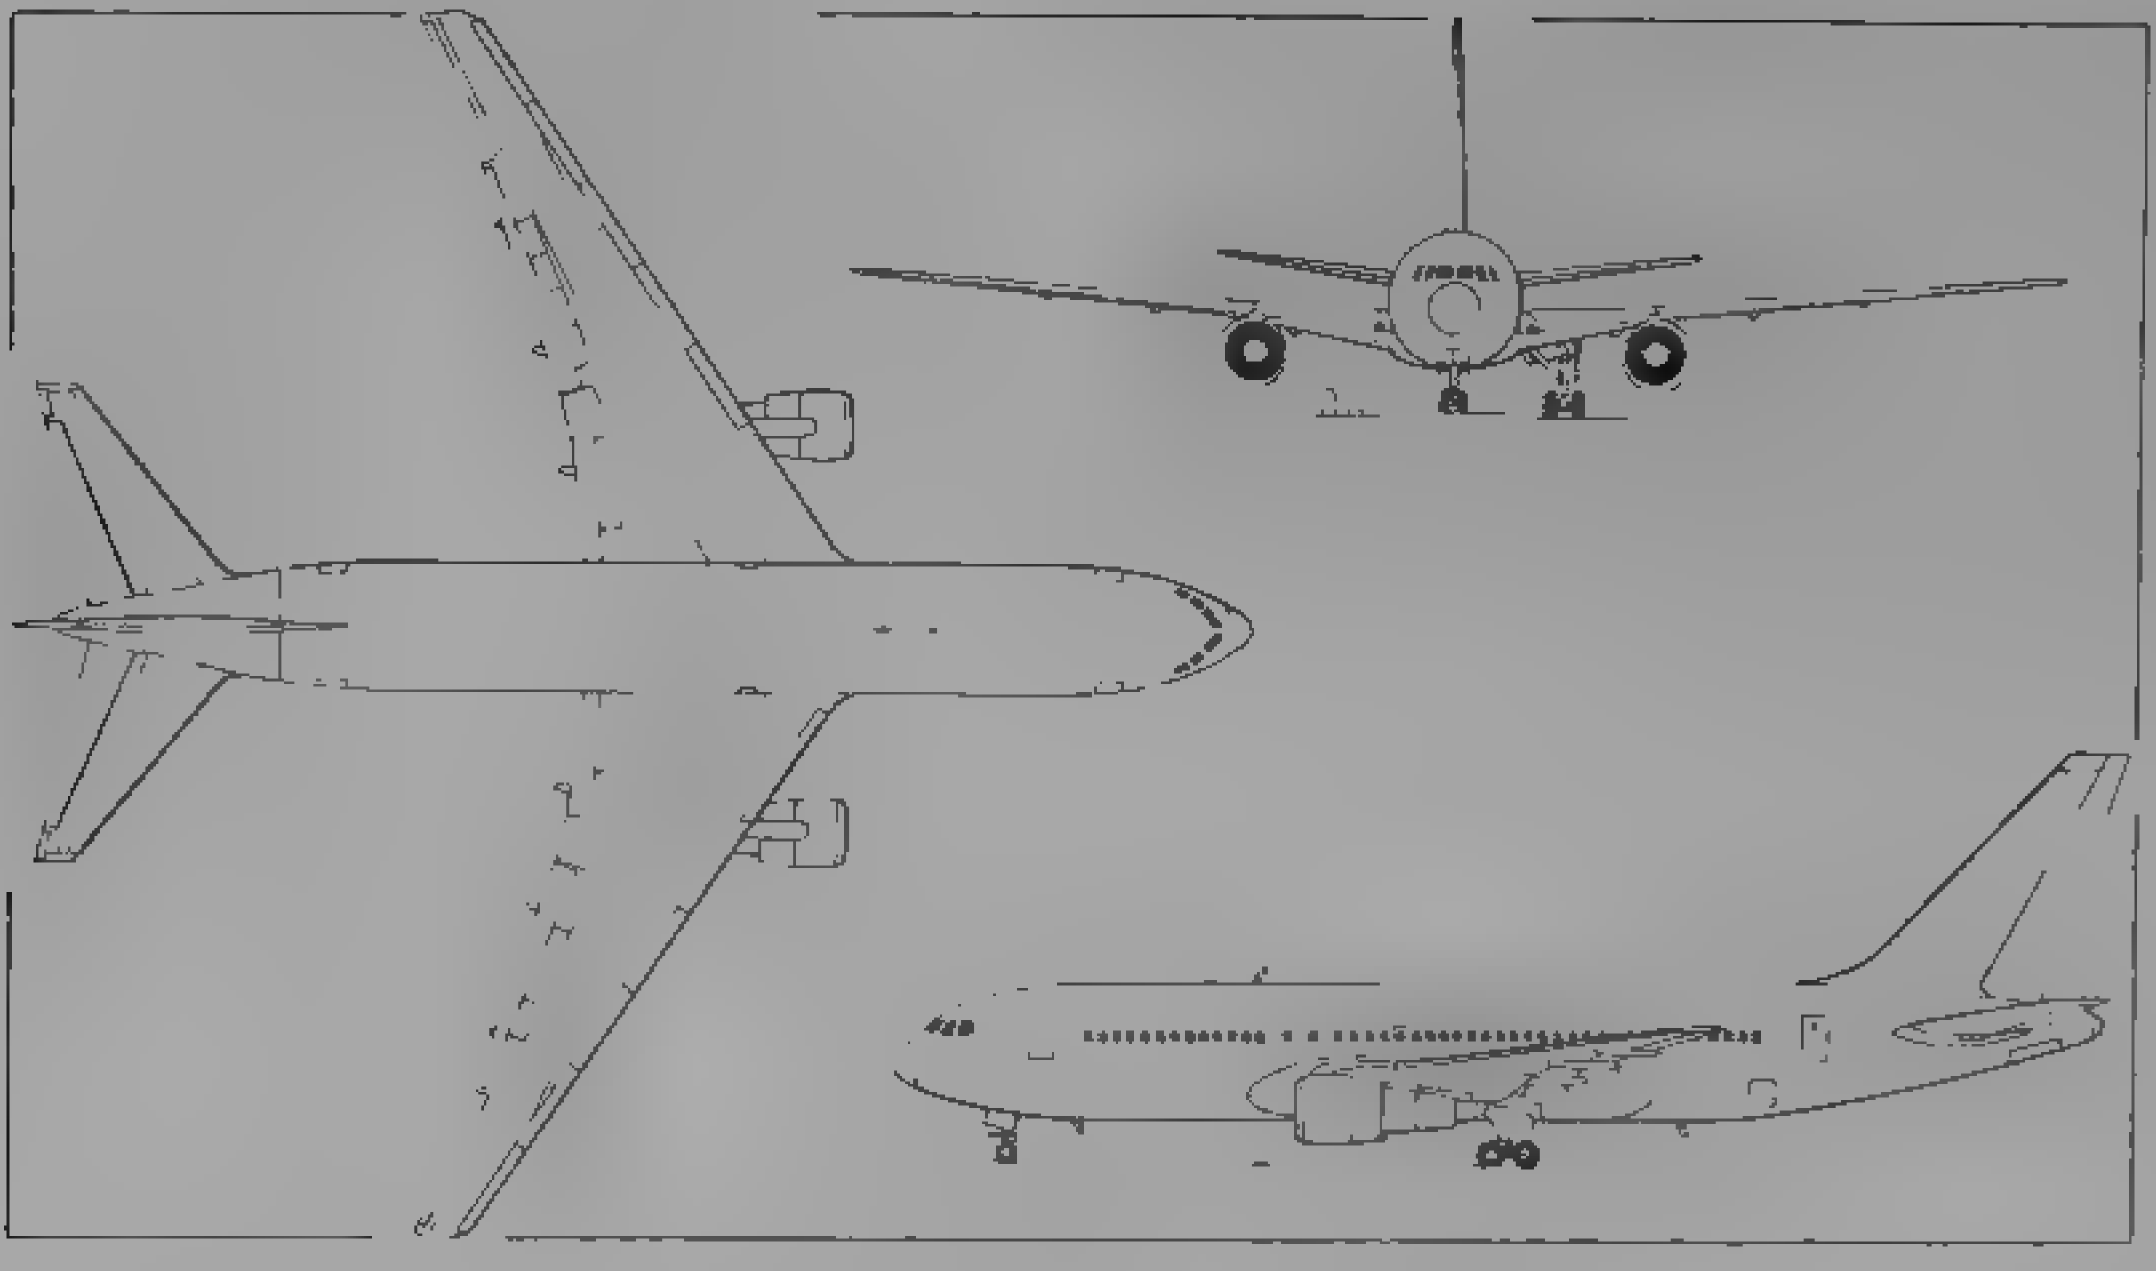
PROGRAMME: Launched on receipt of United Air Lines order for 30 on 14 July 1978; construction of basic 220-passenger 767-200 began 6 July 1979; first flight (N767BA) 26 September 1981 with P&W JT9D turbofans, first flight fifth aircraft with GE CF6-80A 19 February 1982; 767 with JT9D-7R4D certificated 30 July 1982, with CF6-80A 30 September 1982.

First delivery with JT9D (United Air Lines) 19 August 1982, first delivery with CF6 (Delta) 25 October 1982. ETOPS approval for 767-200 with JT9D-7R4 or CF6-80A or -80A2 granted January 1987, ETOPS approval for 767-200 and -300 with PW4000 obtained April 1990; 180 min ETOPS approval with PW4000 engines obtained August 1993. Boeing windshear detection and guidance system FAA approved for 767-200 and -300 February 1987; production reduced from five per month to three in October 1993 (instead of four in November), rising to four in April 1995, then reducing to 3½ in December 1995.



Interior layout of Boeing 767 300 Freighter

1994



Boeing 767 200 wide-bodied airliner (*Jane's/Dennis Punnett*)

1995

CURRENT VERSIONS: **767 200:** Basic model Medium-range variant has reduced fuel, higher gross weight variant certificated June 1983. *Description applies to basic 767 200, except where indicated.*

767-200ER: Extended range version, first flight 6 March 1984, basic -200ER with centre-section tankage and gross weight increased to 156,490 kg (345,000 lb) first delivered to Ethiopian Airlines 23 May 1984, optional higher gross weights are 159,211 kg (351,000 lb), 172,365 kg (380,000 lb) and 175,540 kg (387,000 lb)

767-300: Stretched 269-passenger version with 3 07 m (10 ft 1 in) plug forward of wing and 3 35 m (11 ft) plug aft, and same gross weight as 767-200, strengthened landing gear and thicker metal in parts of fuselage and underwing skin, same flight deck and systems as other 767s, same engine options as 767-200ER, first ordered 29 September 1983. First flight with JT9D-7R4D engines 30 January 1986, certificated with JT9D-7R4D and CF6-80A2 22 September 1986, British Airways ordered 11 in August 1987, later increased to total 25, with Rolls-Royce RB211-524H, for delivery from November 1989

767 300ER: Extended range, higher gross weight version, development began January 1985, optional gross weights 172,365 kg (380,000 lb), 175 540 kg (387,000 lb) and 181,437 kg (400,000 lb), further increased centre-section tankage. Engine choice CF6-80C2, PW4000, RB211-524H, structural reinforcement, certificated late 1987 Launch customer American Airlines (15), delivered from February 1988

767ERX/ERY: Possible long-range versions of 767 300. Boeing's initial 767ERX study of 1992 extended tail plane tankage to give additional 550 n mile (1,019 km, 633 mile) range, 767ERY would have wing area and tankage volume extended by increased wing chord, modified front spar, extended span and winglets, fuselage section 48, pressure bulkhead and landing gear would be reinforced, GE, P&W and RR studying 278 0 kN (62,500 lb st) engines. 767ERY could have payload improved by 5,987 kg (13,200 lb), range extended to more than 7,000 n miles (12,964 km; 8 055 miles), hot and high take-off performance improved and cruising speed pushed towards Mach 0 84. Boeing could produce 767-300ERX in two years and 767-300ERY in about three years from order

767-300 Freighter: See separate entry

767 AWACS. See Boeing 767 AWACS under Boeing Electronic Systems Division. Also under consideration are a tanker version for boom and hose-reel systems and a carrier for Joint STARS radar, see Boeing Military Airplanes entry

CUSTOMERS. See table on earlier page for orders/deliveries Original prototype became 767 Airborne Surveillance Testbed (formerly AOA) for US Army (see 1991-92 *Jane's*). One reconfigured by E Systems as medevac aircraft for Civil Reserve Air Fleet

COSTS: Two 767-300ER ordered by Airtours in August 1993 for delivery in Spring 1994, cost about $200 million including spares and support

DESIGN FEATURES Boeing aerofoils, quarter chord sweepback 31° 30′; thickness/chord ratio 15 1 per cent at root, 10 3 per cent at tip dihedral 6°; incidence 4° 15′

FLYING CONTROLS Inboard all-speed and outboard low-speed ailerons supplemented by flight spoilers also acting as airbrakes and lift dumpers, single-slotted, linkage supported outboard trailing edge flaps, double-slotted inboard, track-mounted leading-edge slats, variable incidence tailplane; no trim tabs, all control surfaces hydraulically powered, roll and yaw trim through spring feel system; triple digital flight control computers and EFIS. Boeing windshear detection and guidance system optional

STRUCTURE. Fail-safe structure; CFRP wing spoilers, tailplane and fin contain aluminium honeycomb. Subcontractors include Boeing Helicopters (wing fixed leading edges), Northrop Grumman (wing centre section and adjacent lower fuselage section, fuselage bulkheads), Vought Aircraft (horizontal tail); Canadair (rear fuselage), Alenia (wing control surfaces, flaps and leading-edge slats, wingtips, elevators, fin and rudder, nose radome). Fuji (wing fairings and main landing gear doors), Kawasaki (centre fuselage body panels, exit hatches; wing in-spar ribs), Mitsubishi (rear fuselage body panels, stringers, passenger and cargo doors, dorsal fin)

LANDING GEAR: Hydraulically retractable tricycle type, Menasco twin wheel nose unit retracts forward. Cleveland Pneumatic main gear, with two four-wheel bogies, retracts inward, oleo-pneumatic shock-absorbers, Bendix wheels and brakes, mainwheel tyres size 45 × 17-20, pressure 12 6 bars (183 lb/sq in); nosewheel tyres size 37 × 14-15, pressure 10.0 bars (145 lb/sq in), steel disc brakes on all mainwheels, electronically controlled anti-skid units

POWER PLANT: Two high bypass turbofans in pods, pylon-mounted on the wing leading-edges. Alternative engines available for all models are General Electric CF6-80A and Pratt & Whitney JT9D-7R4D, both rated at 213 5 kN (48,000 lb st), and CF6-80A2, JT9D-7R4E and JT9D-7R4E4, rated at 222 4 kN (50 000 lb st). Additionally, 767-200, 767-200ER and 767-300 are available with Pratt & Whitney PW4050 rated at 222 4 kN (50,000 lb st), PW4052 rated at 231 3 kN (52,000 lb st) and General Electric CF6-80C2B2 rated at 233.5 kN (52,500 lb st). General Electric CF6-80C2B4, rated at 257 5 kN (57,900 lb st), available on 767 200ER, 767 300 and 767-300ER Pratt & Whitney PW4056, rated at 252 4 kN (56,750 lb st), and PW4060 and General Electric CF6-80C2B6 rated at 266 9 kN (60,000 lb st), available only on extended range versions. Rolls Royce RB211 524G, rated at 269 6 kN (60,600 lb st), available on 767s since early 1990. Fuel in one integral tank in each wing, and in centre tank, with total capacity of 63,216 litres (16,700 US gallons, 13,905 Imp gallons) in 200/300, 767 200ER has additional 14,195 litres (3,750 US gallons; 3,122 Imp gallons) in second centre-section tank, raising total capacity to 77,412 litres (20,450 US gallons; 17,028 Imp gallons). 767 300ER has further expanded wing centre-section tank (optional on -200ER), bringing total capacity to 91,039 litres (24,050 US gallons, 20,026 Imp gallons). Refuelling point in port outer wing

ACCOMMODATION Normal operating crew of two on flight deck, with third position optional Basic accommodation in 200 models for 216 passengers, made up of 18 first class passengers forward in six abreast seating at 96.5 cm (38 in) pitch, and 198 tourist class in mainly seven-abreast seating at 87 cm (34 in) pitch. Type A inward-opening plug doors provided at both front and rear of cabin on each side of fuselage, with Type III emergency exit over wing on each side. Total of five toilets installed, two centrally in main cabin, two aft in main cabin, and one forward in first class section. Galleys situated at forward and aft ends of cabin. Alternative single class layouts provide for 230 tourist passengers, seven abreast at 86 cm (34 in) pitch, 242 passengers seven abreast at 81 cm (32 in) pitch, 255 passengers mainly seven-abreast (two-three-two) at 76 cm (30 in) pitch, or eight abreast (two-four-two) at 81 cm (32 in) pitch. Maximum seating capacity in -200 models (requiring additional overwing emergency exit) 290 passengers, mainly eight abreast, at 76 cm (30 in) pitch, capacity in -300 is 290 passengers seven-abreast.

Underfloor cargo holds of 200 versions can accommodate, typically, up to 22 LD2 or 11 LD1 containers, 767 300 underfloor cargo holds can accommodate 30 LD2 or 15 LD1 containers. Starboard side forward and rear cargo doors of equal size standard on 767-200 and 767-300 but larger port-side forward cargo door standard on 767-200ER and 767-300ER and optional on 767-200 and 767-300, to permit loading of Type 2 pallets, three such pallets being accommodated in -200/200ER and four in -300/300ER Bulk cargo door at rear on port side. Overhead stowage for carry-on baggage. Cabin air conditioned, cargo holds heated

SYSTEMS AiResearch dual air cycle air conditioning system Pressure differential 0 59 bar (8 6 lb/sq in). Electrical supply from two engine-driven 90 kVA three-phase 400 Hz constant frequency AC generators, 115/200 V output. 90 kVA generator mounted on APU for ground operation or for emergency use in flight. Three hydraulic systems at 207 bars (3,000 lb/sq in), for flight control and utility functions, supplied from engine-driven pumps and an AlliedSignal bleed air powered hydraulic pump or from APU Maximum generating capacity of port and starboard systems is 163 litres (43 US gallons, 35.8 Imp gallons)/min, centre system 185 5 litres (49 US gallons, 40 8 Imp gallons)/min, at 196 5 bars (2,850 lb/sq in). Reservoirs pressurised by engine bleed air via pressure regulation module, Reservoir relief valve pressure nominally 4 48 bars (65 lb/sq in). Additional hydraulic motor-driven generator, to provide essential functions for extended range operations, standard on 767-200ER and 767-300ER and optional on 767-200 and 767-300 Nitrogen chlorate oxygen generators in passenger cabin, plus gaseous oxygen for flight crew APU in tailcone to provide ground and in-flight electrical power and pressurisation. Anti-icing for outboard wing leading-edges (none on tail surfaces), engine air inlets, air data sensors and windscreen

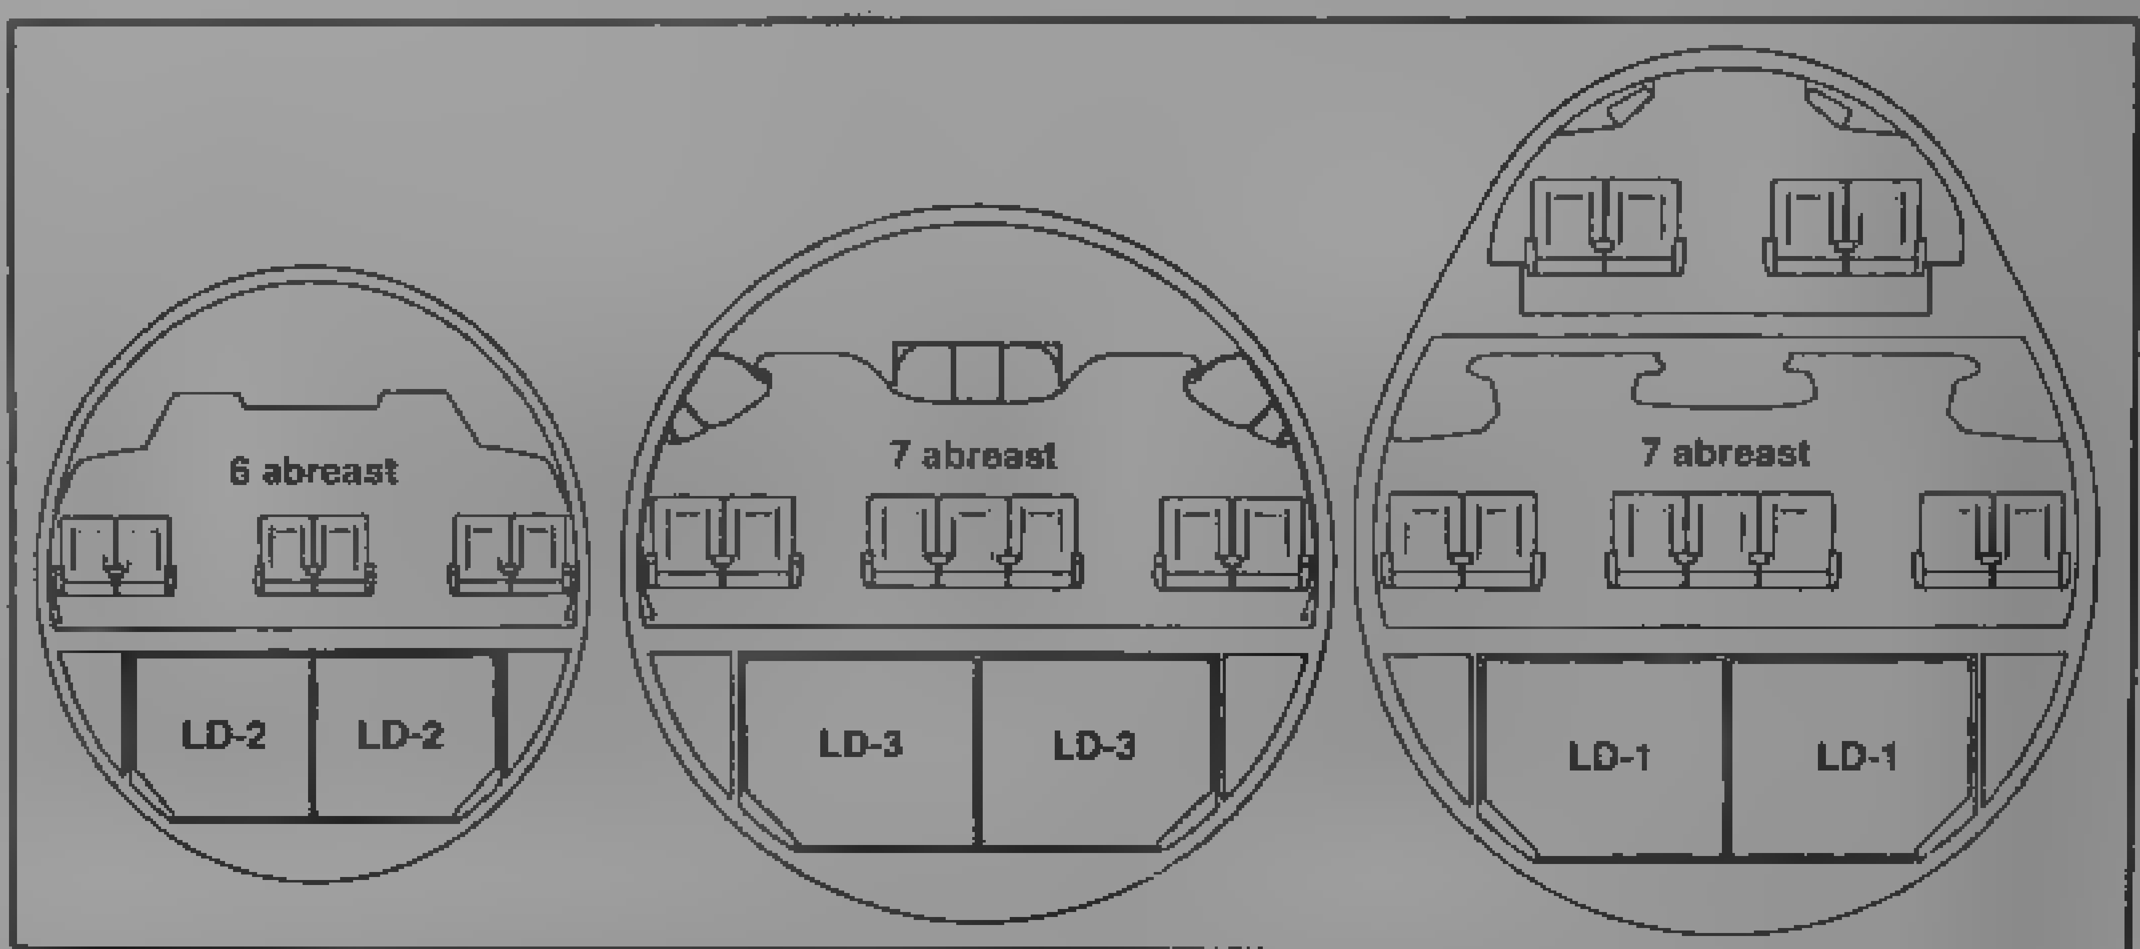
AVIONICS: *Radar:* Bendix/King RDR-4A colour weather radar in aircraft for All-Nippon, Britannia and Transbrasil

Flight Standard ARINC 700 series equipment, including Bendix/King VOR/ILS/marker beacon receivers, ADF, DME, RMI-743 radio magnetic indicator and radio altimeter Honeywell IRS, FMCS and DADC, as described in Boeing 757 entry, dual digital flight management systems, and triple flight control computers, including FCS-700 flight control system, options include Boeing's windshear protection and guidance system

Instrumentation. Bendix/King EFIS-700 electronic flight instrument system

DIMENSIONS, EXTERNAL.

Wing span	47.57 m (156 ft 1 in)
Wing chord, at root	8 57 m (28 ft 1¼ in)
at tip	2 29 m (7 ft 6 in)
Wing aspect ratio	7 99
Length overall 200/200ER	48 51 m (159 ft 2 in)
300/300ER	54 94 m (180 ft 3 in)



Cabin cross-sections of Boeing 767 (left), 777 (centre) and 747 show progression in size designed to afford greater scope in seating layout. External diameter of Boeing 767 is 5 03 m (16 ft 6 in); Boeing 777 is 6 20 m (20 ft 4 in), and Boeing 747 is 6 49 m (21 ft 3½ in). LD-1, 2 and -3 are international-size freight containers. Boeing 747 upper deck extends only part-way along the fuselage

1994

Boeing 767-300ER of Airtours International

1994

Fuselage 200/200ER — 47.24 m (155 ft 0 in)
300/300ER — 53.67 m (176 ft 1 in)
Fuselage: Max width — 5.03 m (16 ft 6 in)
Height overall — 15.85 m (52 ft 0 in)
Tailplane span — 18.62 m (61 ft 1 in)
Wheel track — 9.30 m (30 ft 6 in)
Wheelbase 200/200ER — 19.69 m (64 ft 7 in)
300/300ER — 22.76 m (74 ft 8 in)
Passenger doors (two, fwd and rear, port):
Height — 1.88 m (6 ft 2 in)
Width — 1.07 m (3 ft 6 in)
Galley service door (two, fwd and rear, stbd):
Height — 1.83 m (6 ft 0 in)
Width — 1.07 m (3 ft 6 in)
Emergency exits (two, each): Height — 0.97 m (3 ft 2 in)
Width — 0.51 m (1 ft 8 in)
Cargo doors (two, fwd and rear, stbd):
Height — 1.75 m (5 ft 9 in)
Width — 1.78 m (5 ft 10 in)
* Larger cargo door (fwd, port):
Height — 1.75 m (5 ft 9 in)
Width — 3.40 m (11 ft 2 in)
* *Standard on ER models, optional for -200/300*

DIMENSIONS, INTERNAL:
Cabin, excl flight deck:
Length: 200/200ER — 33.93 m (111 ft 4 in)
300/300ER — 40.36 m (132 ft 5 in)
Max width — 4.72 m (15 ft 6 in)
Max height — 2.87 m (9 ft 5 in)
Floor area: 200/200ER — 154.9 m² (1,667 sq ft)
300/300ER — 184.0 m² (1,981 sq ft)
Volume: 200/200ER — 428.2 m³ (15,121 cu ft)
300/300ER — 485.9 m³ (17,088 cu ft)
Volume, flight deck — 13.5 m³ (478 cu ft)
Baggage holds (containerised), volume:
200/200ER — 74.8 m³ (2,640 cu ft)
300/300ER — 101.9 m³ (3,600 cu ft)
Bulk cargo hold volume:
all models — 12.2 m³ (430 cu ft)
Combined baggage hold/bulk cargo hold volume:
200/200ER — 87.0 m³ (3,070 cu ft)
300/300ER — 114.1 m³ (4,030 cu ft)
Total cargo hold volume:
200/200ER — 111.3 m³ (3,930 cu ft)
300/300ER — 147.0 m³ (5,190 cu ft)

AREAS:
Wings, gross — 283.3 m² (3,050.0 sq ft)
Ailerons (total) — 11.58 m² (124.6 sq ft)
Trailing-edge flaps (total) — 36.88 m² (397.0 sq ft)
Leading-edge slats (total) — 28.30 m² (304.6 sq ft)
Spoilers (total) — 15.83 m² (170.4 sq ft)
Fin — 30.19 m² (325.0 sq ft)
Rudder — 15.95 m² (171.7 sq ft)
Tailplane — 59.88 m² (644.5 sq ft)
Elevators (total) — 7.81 m² (191.7 sq ft)

WEIGHTS AND LOADINGS (A: 767-200 basic/JT9D-7R4D engines, B: 767-200 basic/CF6-80A, C: medium-range version/JT9D-7R4D, D: medium-range version/CF6-80A, E: 767-200ER/PW4050, F: 767-200ER/CF6-80C2B2, G: 767-200ER/PW4056, H: 767-200ER/CF6-80C2B4, J: 767-300/PW4050, K: 767-300/CF6-80C2B2, L: 767-300 higher gross weight version/PW4050, M: 767-300 higher gross weight version/CF6-80C2B2, N: 767-300ER/PW4056, P: 767-300ER/CF6-80C2B4, Q: 767-300ER/PW4060):
Manufacturer's weight empty:
A, C — 74,750 kg (164,800 lb)

P — 89,130 kg (196,500 lb)
Q — 89,900 kg (198,200 lb)
Max payload (767-200, 216 passengers, 767-200ER, 174 passengers, 767-300, 261 passengers; 767-300ER, 210 passengers): A, B, C, D — 19,595 kg (43,200 lb)
E, F, G, H — 16,575 kg (36,540 lb)
J, K, L, M — 23,675 kg (52,200 lb)
N, P, Q — 20,005 kg (44,100 lb)
Max fuel weight:
A, B, C, D, J, K, L, M — 51,130 kg (112,725 lb)
E, F — 62,615 kg (138,040 lb)
G, H, N, P, Q — 73,635 kg (162,340 lb)
Max T-O weight: A, B — 136,080 kg (300,000 lb)
C, D — 142,880 kg (315,000 lb)
E, F, J, K — 156,490 kg (345,000 lb)
G, H, N, P — 175,540 kg (387,000 lb)
L, M — 159,210 kg (351,000 lb)
Q — 181,435 kg (400,000 lb)
Max ramp weight: A, B — 136,985 kg (302,000 lb)
C, D — 143,790 kg (317,000 lb)
E, F, J, K — 157,395 kg (347,000 lb)
G, H, N, P — 175,995 kg (388,000 lb)
L, M — 159,665 kg (352,000 lb)
Q — 181,890 kg (401,000 lb)
Max zero-fuel weight: A, B — 112,490 kg (248,000 lb)
C, D — 113,400 kg (250,000 lb)
E, F — 114,755 kg (253,000 lb)
G, H — 117,935 kg (260,000 lb)
J, K, L, M, N, P — 126,100 kg (278,000 lb)
Q — 130,635 kg (288,000 lb)
Max landing weight: A, B — 122,470 kg (270,000 lb)
C, D — 123,375 kg (272,000 lb)
E, F — 126,100 kg (278,000 lb)
G, H — 129,275 kg (285,000 lb)
J, K, L, M, N, P — 136,080 kg (300,000 lb)
Q — 145,150 kg (320,000 lb)
Max wing loading: A, B — 480.24 kg/m² (98.36 lb/sq ft)
C, D — 504.26 kg/m² (103.28 lb/sq ft)
E, F, J, K — 552.25 kg/m² (113.11 lb/sq ft)
G, H, N, P — 619.53 kg/m² (126.89 lb/sq ft)
L, M — 561.87 kg/m² (115.08 lb/sq ft)
Q — 640.33 kg/m² (131.15 lb/sq ft)

PERFORMANCE (at max T-O weight except where indicated):
Normal cruising speed, all versions — Mach 0.80
Approach speed at max landing weight:
A, B, C, D — 136 kts (252 km/h; 157 mph)
E — 138 kts (256 km/h; 159 mph)
F, G, H — 140 kts (259 km/h; 161 mph)
J, K, L, M, N, P — 141 kts (261 km/h; 162 mph)
Q — 145 kts (269 km/h; 167 mph)
Initial cruise altitude: A — 11,950 m (39,200 ft)
B — 12,100 m (39,700 ft)
C — 11,650 m (38,200 ft)
D — 11,800 m (38,700 ft)
E — 11,215 m (36,800 ft)
F — 11,460 m (37,600 ft)
G — 10,925 m (35,850 ft)
H — 10,850 m (35,600 ft)
J, M — 11,250 m (36,900 ft)
K — 11,340 m (37,200 ft)
L — 11,125 m (36,500 ft)
N, P — 10,600 m (34,800 ft)
Q — 10,400 m (34,100 ft)
Service ceiling, OEI: A, C — 6,525 m (21,400 ft)
B, D — 6,430 m (21,100 ft)
E — 6,850 m (22,500 ft)
F — 7,200 m (23,600 ft)
G — 7,250 m (23,800 ft)
H — 7,375 m (24,200 ft)
J, L — 6,035 m (19,800 ft)
K, M — 6,150 m (20,200 ft)
N, P — 6,615 m (21,700 ft)
Q — 6,550 m (21,500 ft)
T-O field length: A, B — 1,798 m (5,900 ft)
C — 1,951 m (6,400 ft)
D — 1,981 m (6,500 ft)
E — 2,347 m (7,700 ft)
F — 2,316 m (7,600 ft)
G, H — 2,774 m (9,100 ft)
J — 2,560 m (8,400 ft)
K — 2,469 m (8,100 ft)
L, M — 2,652 m (8,700 ft)
N — 2,926 m (9,600 ft)
P — 2,956 m (9,700 ft)
Q — 2,774 m (9,100 ft)
Design range: A — 3,160 n miles (5,852 km; 3,636 miles)
B — 3,220 n miles (5,963 km; 3,705 miles)
C — 3,795 n miles (7,028 km; 4,367 miles)
D — 3,850 n miles (7,130 km; 4,430 miles)
E — 5,365 n miles (9,936 km; 6,174 miles)
F — 5,410 n miles (10,019 km; 6,225 miles)
G — 6,770 n miles (12,538 km; 7,791 miles)
H — 6,805 n miles (12,603 km; 7,831 miles)
J — 4,000 n miles (7,408 km; 4,603 miles)
K — 4,020 n miles (7,445 km; 4,626 miles)
L — 4,230 n miles (7,834 km; 4,868 miles)
M — 4,260 n miles (7,889 km; 4,902 miles)
N — 5,740 n miles (10,630 km; 6,605 miles)
P — 5,760 n miles (10,667 km; 6,628 miles)
Q — 6,060 n miles (11,223 km; 6,974 miles)

OPERATIONAL NOISE LEVELS (FAR Pt 36, Stage 3):
T-O at max basic T-O weight: B — 87.1 EPNdB
H — 90.4 EPNdB
Approach at max landing weight: B — 101.6 EPNdB
H — 101.7 EPNdB
Sideline: B — 95.4 EPNdB
H — 96.6 EPNdB

BOEING 767-300 FREIGHTER

TYPE: Freighter version of 767-300ER.

PROGRAMME: First 767 specialised package freighter launched January 1993 by United Parcel Service order, mockup completed early 1994; first flight expected second quarter 1995. The 767-300F for general operation was ordered by Asiana in November 1993 and differs from austere UPS version in having mechanical freight handling on main and lower decks, air conditioning for animals and perishables on main and forward lower decks and more elaborate crew facilities.

CUSTOMERS: UPS ordered 30 (plus 30 options) parcel freighters January 1993, first delivery due October 1995; 11 to follow in 1996. Asiana ordered two 767-300F in November 1993 for delivery in 1996 and 1998.

DESIGN FEATURES: Modifications include reinforced landing gear and internal wing structure, main deck floor strengthened to take 24 containers, no passenger windows, 2.67 × 3.4 m (8 ft 9 in × 11 ft 1¾ in) freight door forward to port, pilot type rating and extensive component commonality with 757 Freighter.

POWER PLANT: In competition between Rolls-Royce RB211-524G and variety of P&W JT9D and PW4000 and GE

CF6-80A and C versions, thrusts between 213.5 kN (48,000 lb) and 269.6 kN (60,600 lb)

DIMENSIONS, INTERNAL:

Main deck container capacity	285.4 m³ (10,080 cu ft)
Lower deck cargo capacity	89.25 m³ (3,153 cu ft)

WEIGHTS AND LOADINGS:

Max payload	50,802 kg (112,000 lb)
Max T-O weight	185,065 kg (408,000 lb)
Planned alternative T-O weight	186,880 kg (412,000 lb)

PERFORMANCE:

Range: with 40,823 kg (90,000 lb) payload
4,000 n miles (7,408 km; 4,603 miles)
with 50,802 kg (112,000 lb) payload
3,000 n miles (5,556 km; 3,452 miles)

UPDATED

BOEING 777

TYPE: Long-range, high-capacity twin-turbofan airliner.

PROGRAMME: Formerly known as 767-X, now 777-200; Boeing board authorised firm offer for sale 8 December 1989; launch order by United Airlines 15 October 1990 (see Customers). Boeing launched production programme of A and B Market 777s and formed 777 Division 29 October 1990; Boeing signed final agreement with Mitsubishi, Kawasaki and Fuji, making them risk sharing programme partners for about 20 per cent of the 777 structure, on 21 May 1991; roll-out occurred 9 April 1994.

First flight (Line no. WA001/N7771), 12 June 1994, WA002 15 July, WA003 2 August, WA004 28 October, WA005 11 November; WA006/G-ZZZA (first with GE90, for British Airways) 2 February 1995, same day as FAA granted engine approval; by mid-February five PW4084- and one GE-90-powered test aircraft then flying had accumulated 1,950 hours of flight time in nearly 1,000 flights. PW-engined aircraft accumulated some 3,235 hours in 2,340 cycles, leading to joint FAA/JAA certification on 19 April 1995; flight test programme included 1,000-cycle service-ready ETOPS trial with aircraft WA004/N773UA fitted with high-time engines to reflect real-world operations, during which it performed eight single-engine diversions, each lasting full 180 minutes. FAA awarded 180 minute ETOPS approval 30 May 1995. United Airlines flight and ground crews partnered Boeing crews for the last 90 cycles of ETOPS trial, operating between representative city pairs on the carrier's routes. First delivery, to United Airlines, on 17 May 1995, service entry with United on 7 June 1995 with inaugural revenue flight (by N777NA) from London to Washington, DC. Second GE90 aircraft for British Airways (WA010/G-ZZZB) scheduled to join WA006 in 1,750 hour, 1,260 cycle test programme, airline personnel partnering Boeing crews on last 90, London-Heathrow-based, sectors of 1,000-cycle ETOPS trial, operating routes to Abu Dhabi, Washington, DC and Newark, New Jersey, certification with GE engine scheduled for August 1995, with deliveries commencing September.

Flight testing of Rolls-Royce Trent 800 on Boeing 747-100 testbed began late March 1995, with first flight of Trent-powered 777 (Boeing test aircraft) in May and Cathay Pacific aircraft in August, two Cathay Pacific aircraft (WA014/VR-HNC and WA019/VR-HND) will perform certification and service readiness trials for Trent, flying 1,700 hours in 1,220 cycles, including 1,000-cycle ETOPS trial operating Hong Kong-Sydney and Hong Kong-Singapore, culminating in certification and first delivery (to Thai International) in January 1996, with ETOPS clearance following two months later. Flight test programme ends March 1996 after planned 7,000 hours in 4,900 cycles; by 21 May 1995, seven aircraft had generated 3,798 hours in 1,973 flights.

CURRENT VERSIONS: **777-200 A Market**: Basic aircraft with maximum T-O weight of 229,520 kg (506,000 lb) and alternative maximum T-O weights 233,600 kg (515,000 lb) and 242,670 kg (535,000 lb); maximum payload 54,930 kg (121,100 lb); twin-aisle cabin layout; 375 to 400 two-class passengers or 305 to 328 three-class passengers or 418 to 440 all-economy depending on choice of nine- or 10-abreast in tourist class and seven- or eight-abreast in business class; range with 375 passengers for three T-O weights respectively 3,930 n miles (7,278 km; 4,522 miles), 4,200 n miles (7,778 km; 4,833 miles) and 4,785 n miles (8,862 km; 5,506 miles).

777-200 B Market: Maximum T-O weight 263,083 kg (580,000 lb) or 267,619 kg (590,000 lb) or 286,897 kg (632,500 lb); maximum payload 54,660 kg (120,500 lb); same passenger capacity as basic aircraft, ranges with 305 passengers for three T-O weights respectively 6,030 nm (11,167 km; 6,939 miles), 6,300 n miles (11,667 km; 7,250 miles) or 7,335 nm (13,584 km; 8,441 miles).

777-200 C Market: Proposed ultra long-range version, with range in excess of 7,000 n miles (12,964 km; 8,055 miles).

777-300: Initially known as 777 Stretch, revealed at Paris Air Show, 14 June 1995, launched by Boeing board 26 June 1995; will feature strengthened airframe, inboard wing and landing gear, and fuselage 10.13 m (33 ft 3 in) longer than that of 777-200 to increase passenger capacity to about 368 in three-class layout, or 550 in high-density configuration; maximum T-O weight 160,000 to 300,000 kg (352,750 to 661,375 lb). Launch commitments for 31 aircraft, valued at $3.1 billion, announced June 1995, comprising: All Nippon Airways (10, with de-rated PW4098 growth engines, for service entry in June 1998), Cathay Pacific Airways (seven, converted from 777-200 orders, with Rolls-Royce Trent 800 engines, for delivery starting May 1998), Korean Airlines (eight, four of which were converted from 777-200 orders, with PW4098 growth engines, for delivery starting June 1998), Thai Airways International (six, with Rolls-Royce Trent 800 engines, for service entry in September 1998). Compared with first-generation 747s, 777-300 carries same number of passengers, but at two-thirds of fuel cost and with 40 per cent less maintenance.

777-100X: Proposed 'shrink' variant, with capacity for 250 passengers, maximum range 8,634 n miles (16,000 km; 9,942 miles); would feature many of the structural modifications of 777-300 and share the same structural weights and engine ratings; launch decision expected by September 1996 with service entry possible by May 1999.

CUSTOMERS: First firm order 34 777-222s plus options for 34 from United Airlines 15 October 1990 (since modified), to be powered by 325 kN (73,000 lb st) Pratt & Whitney PW4073, United version has maximum T-O weight 234,000 kg (515,880 lb) carrying 363 passengers in two classes for up to 4,200 n miles (7,778 km; 4,833 miles), in

Three-class cabin layout and main structural features of Boeing 777 A Market/B Market

Second Boeing 777 in launch customer United Airliners' livery pictured with the Museum of Flight's Boeing 247

1995

April 1993, four A Market deliveries for 1996 converted to two B Market in 1998 and two in 1999, 11 A Market to be delivered during 1995, other launch customer was All Nippon Airways with 15, plus options for 10 placed 19 December 1990 (PW4074). Disclosed firm Series 200 orders listed in table; Series 300 detailed above

COSTS: Estimated development cost $4 billion (1990); aircraft cost $106 million to 129 million (1991)

DESIGN FEATURES: New wing of 31.6° sweepback at quarter chord incorporates new technology to allow Mach 0.83 cruise in combination with high thickness for economical structure and large internal volume, long span for improved take-off and payload/range and large area for high cruise altitude and low approach speed, no winglets. All features required for 180 minutes ETOPS incorporated and tested in basic aircraft design. Cylindrical fuselage wider than 767 to allow twin aisle seating for from six- to 10-abreast; toilets and overhead baggage bins designed to allow rapid change of layout. Outer 6.48 m (21 ft 3 in) of each wing can, as an option, be folded to vertical to reduce gate width requirement at airports

FLYING CONTROLS: Boeing's first airliner fly-by-wire system; hydraulic fully powered control surface actuators (31) by Teijin Seiki America) electrically signalled from full fly-by-wire system, this signals slats, flaps, spoilers, control feel unit and trimming tailplane as well as inboard flaperons, outboard ailerons, elevators and rudder; system provides flight envelope protection as well as stabilisation and autopilot inputs, but the normal control columns and rudder pedals in cockpit are back driven by the fly-by-wire system to give the pilots direct visual appreciation of the activity of the automatic system

In normal mode, flight guidance commands are generated by Rockwell Collins triple redundant digital autopilot/flight directors and the fly by wire control laws and envelope protection commands are shaped by the GEC-Marconi Avionics triple digital primary flight computers, each of the three primary flight computers contains three 32 bit microprocessors (a Motorola 68040, an Intel 80486 and an AMD 29050), all three programmed in Ada to perform all FBW functions; with power supply and ARINC 629 modules, each microprocessor module constitutes a lane and the three lanes constitute a channel, each lane is compared with the others in its channel, the system not only has high fault tolerance, but allows deferred maintenance, by which failures can be carried over until the next scheduled maintenance

Commands to the powered control units are produced by three Lear Astronics and Teijin Seiki actuator control electronics units, which have a fourth analog channel directly signalled from the sticks and pedals in the cockpit; normal operating mode is for the aircraft to be flown through autopilots, primary flight computers and actuator control electronics, which simultaneously back-drive the sticks and pedals in the cockpit, first degraded (secondary) mode is used if inertial units and standby attitude sensors all become disabled and the pilots take manual control through the digital primary flight computers, second degraded (direct) mode bypasses the main fly-by-wire system with the direct analog link between cockpit and actuator control electronics; ultimate standby is mechanical control of tailplane incidence for the pitch axis and two wing spoiler panels for lateral control. Some powered control units produced by Parker Bertea and Moog, tailplane trim module and hydraulic brake by E Systems

Pitch axis control law is C* U, effectively tending to make the aircraft hold an airspeed and to respond in pitch attitude to a departure from that airspeed, trim changes due to configuration changes are suppressed; the system returns the bank angle to 35° if that angle is exceeded by the pilots and the controls then released, the system prevents exceeding the limiting airspeed and stalling, asymmetric thrust is automatically countered; the variable feel system adjusts control forces to warn of approach to flight envelope limits in manual flight, the fly-by-wire system is linked to the ARINC 629 dual triplex digital databuses (see also aircraft information management system under Avionics heading)

STRUCTURE: Composites of carbon and toughened resin used in skins of tailplane and fin torsion boxes and cabin floor beams; CFRP used for rudder, elevators, ailerons, flaps, engine nacelles and landing gear doors, hybrid composites in wingroot fairing, GFRP in fixed wing leading-edge, tailplane and fin fore and aft panels, wing aft panels, engine pylon fairings and radome. Toughened materials have high damage resistance and allow simple low-temperature bolted repairs. Metal structure includes thick skins without need for tear straps, no bonding; single piece fuselage frames; wing top skin and stringers made in new 7055 aluminium alloy with greater compression strength; 10 per cent of structure weight is composites

Fully digital product definition with all parts created by Dassault/IBM CATIA CAD/CAM and communicated to manufacturing and publications, structure and systems integration, tube and cable run design completed before design release, 238 design/build teams have ensured that design, fabrication and test have proceeded concurrently for structure and systems. Whole aircraft defined in computer system; no mockup built

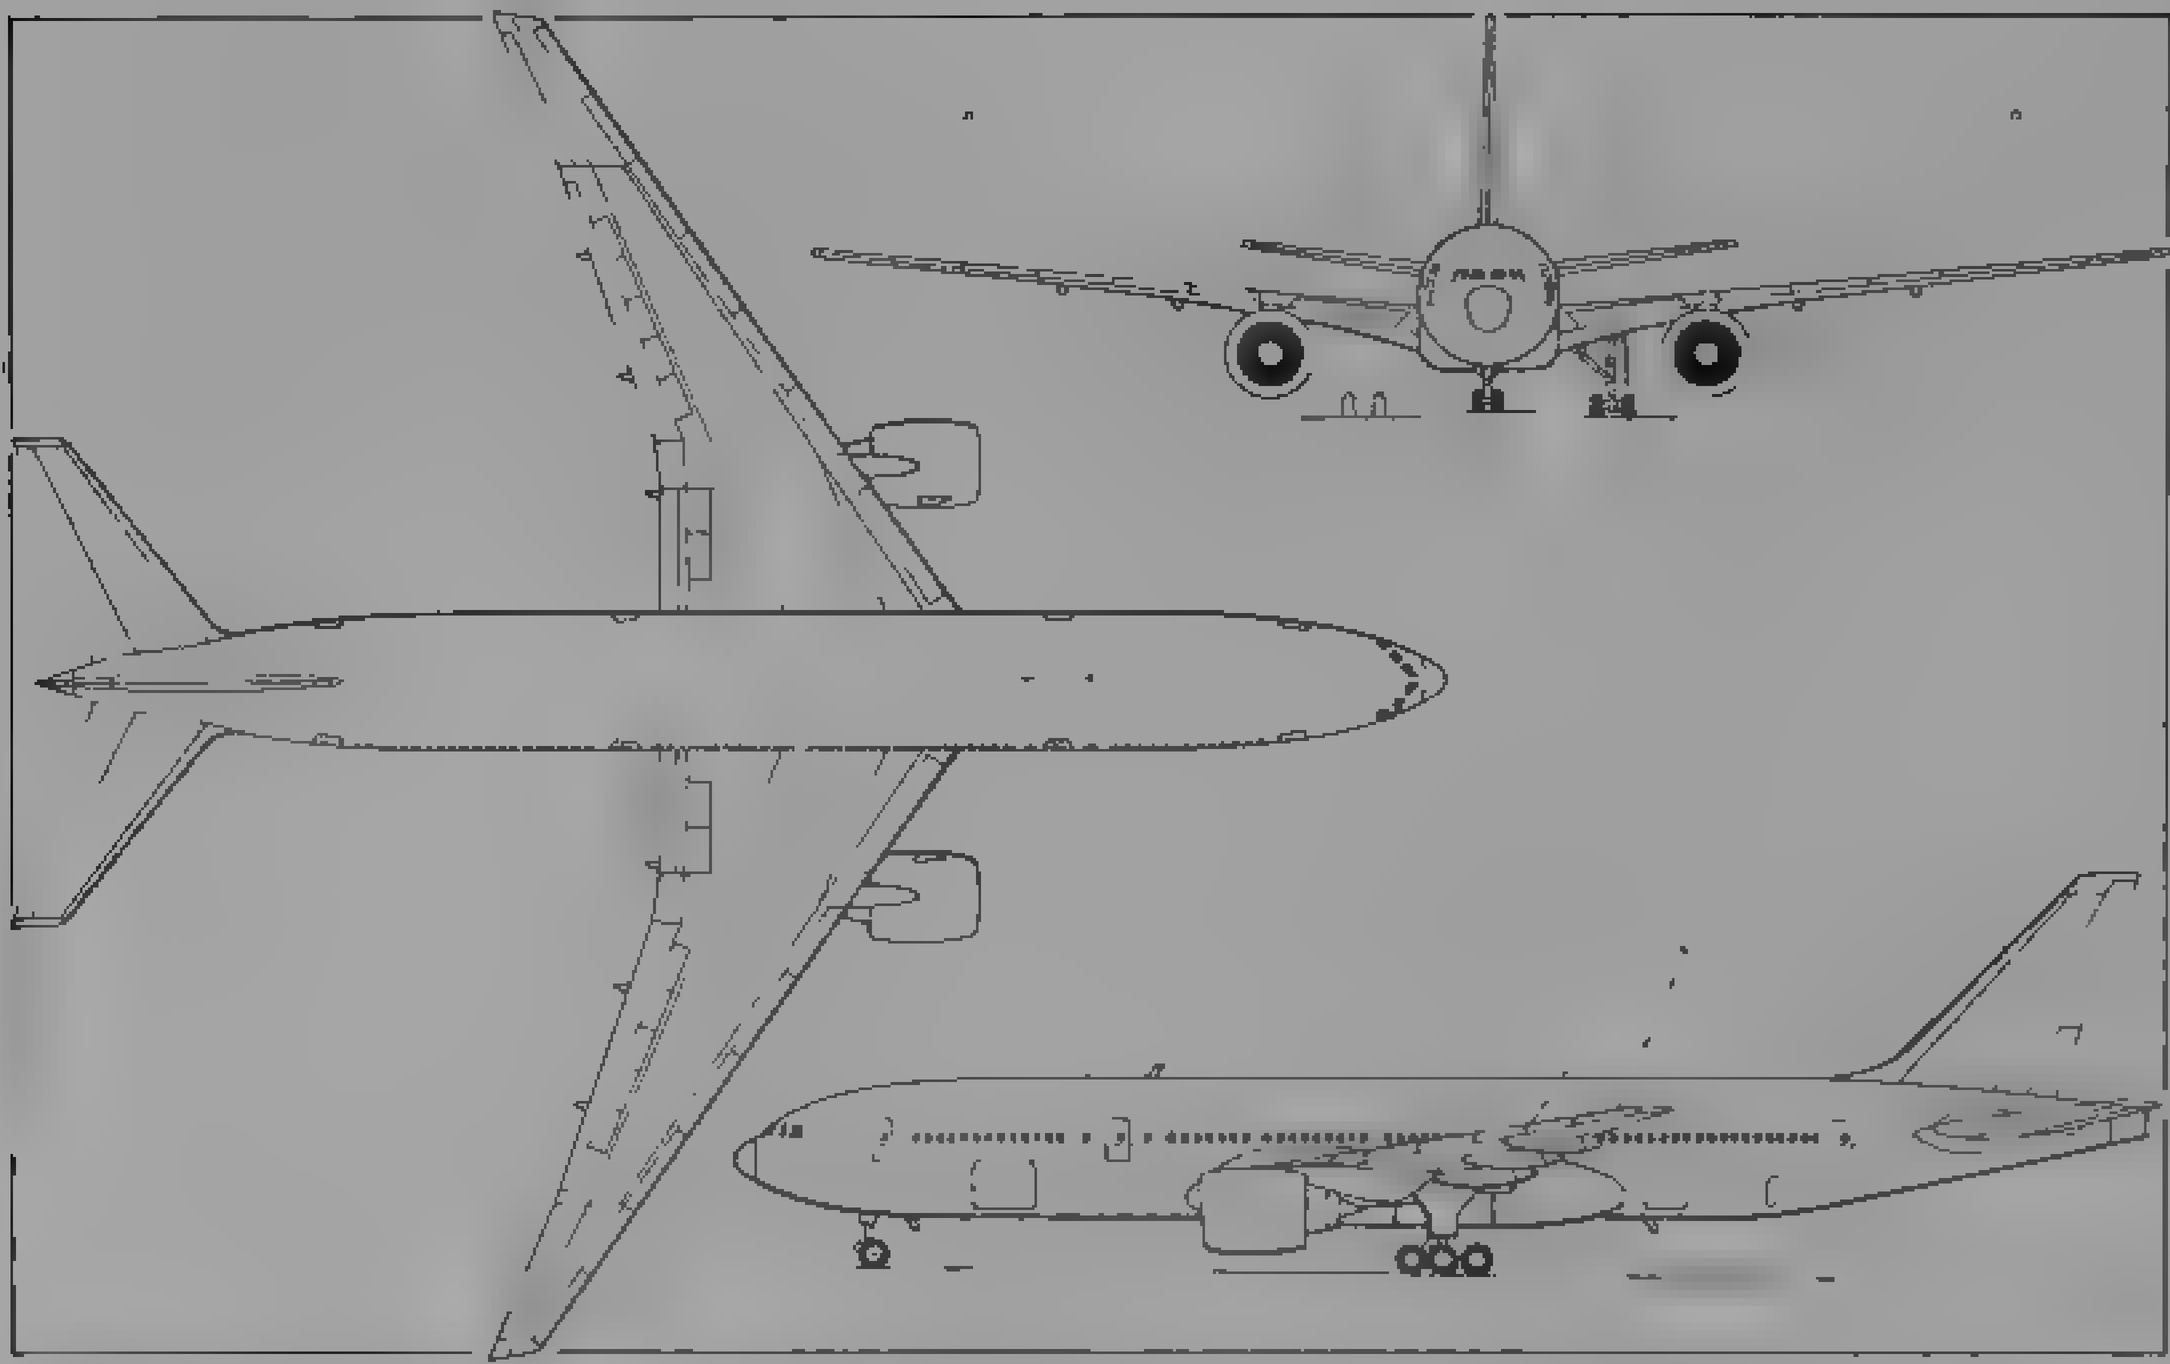
Centre and rear fuselage barrel sections, tailcone, doors, wingroot fairing and landing gear doors made in Japan. Wing and tail leading-edges and moving wing parts, landing gear, floor beams, nose landing gear doors, wingtips, dorsal fin and nose radome made by Rockwell, Northrop Grumman, Kaman, Alenia (Italy), Embraer (Brazil), Short Brothers (UK), Singapore Aerospace Manufacturing, HDH and ASTA (Australia), Korean Air and other subcontractors. Boeing manufactures flight deck and forward cabin, basic wing and tail structures and engine nacelles, assembles and tests completed aircraft

LANDING GEAR: Retractable tricycle type (Menasco/Messier-Bugatti joint design for main gear); two main legs carrying six-wheel bogies with steering rear axles automatically engaged by nose gear steering angle; six-wheel bogies avoid need for third leg in fuselage and simplify braking system, twin-wheel steerable nose gear; Goodyear mainwheel tyres H49 × 19-22 with 32 bias ply rating, Michelin radial nosewheel tyres 44 × 18-18 (24 ply), Bendix Carbenix 4000 mainwheel brakes arranged so that initial toe-pedal pressure used during taxying applies brakes to alternate sets of three wheels to save brake wear, full toe pedal pressure applies all six brakes together

POWER PLANT: 777 A Market at basic and first alternative T-O weights powered by either two P&W PW4074 or two GE GE90-75B or two RR Trent 875; 777 A Market at second alternative maximum T-O weight powered by either two P&W PW4077 or two GE GE90-76B or two RR Trent 877, these engines are variously rated at between 329.17 kN (74,000 lb st) and 342.52 kN (77,000 lb st); 777 B Market at all three alternative T-O weights powered by two P&W PW4084 or two GE GE90-85B or two RR Trent 884 with thrusts in the region of 373.66 kN (84,000 lb), or two PW4090 with thrust in excess of 400.35 kN (90,000 lb st) Growth version of GE90 with 409.24 kN (92,000 lb st) thrust being developed for B Market aircraft with engine certification anticipated in May 1996. All fuel contained in integral tanks in wing torsion box and wing centre-section with reserve tank, surge tank and fuel vent and jettison pipes all inboard of wing fold, combined capacity of main, centre and reserve tanks in A Market 777 is 117,348 litres (31,000 US gallons, 25,813 Imp gallons); B Market 777 fuel capacity is 169,208 litres (44,700 US gallons, 37,220 Imp gallons)

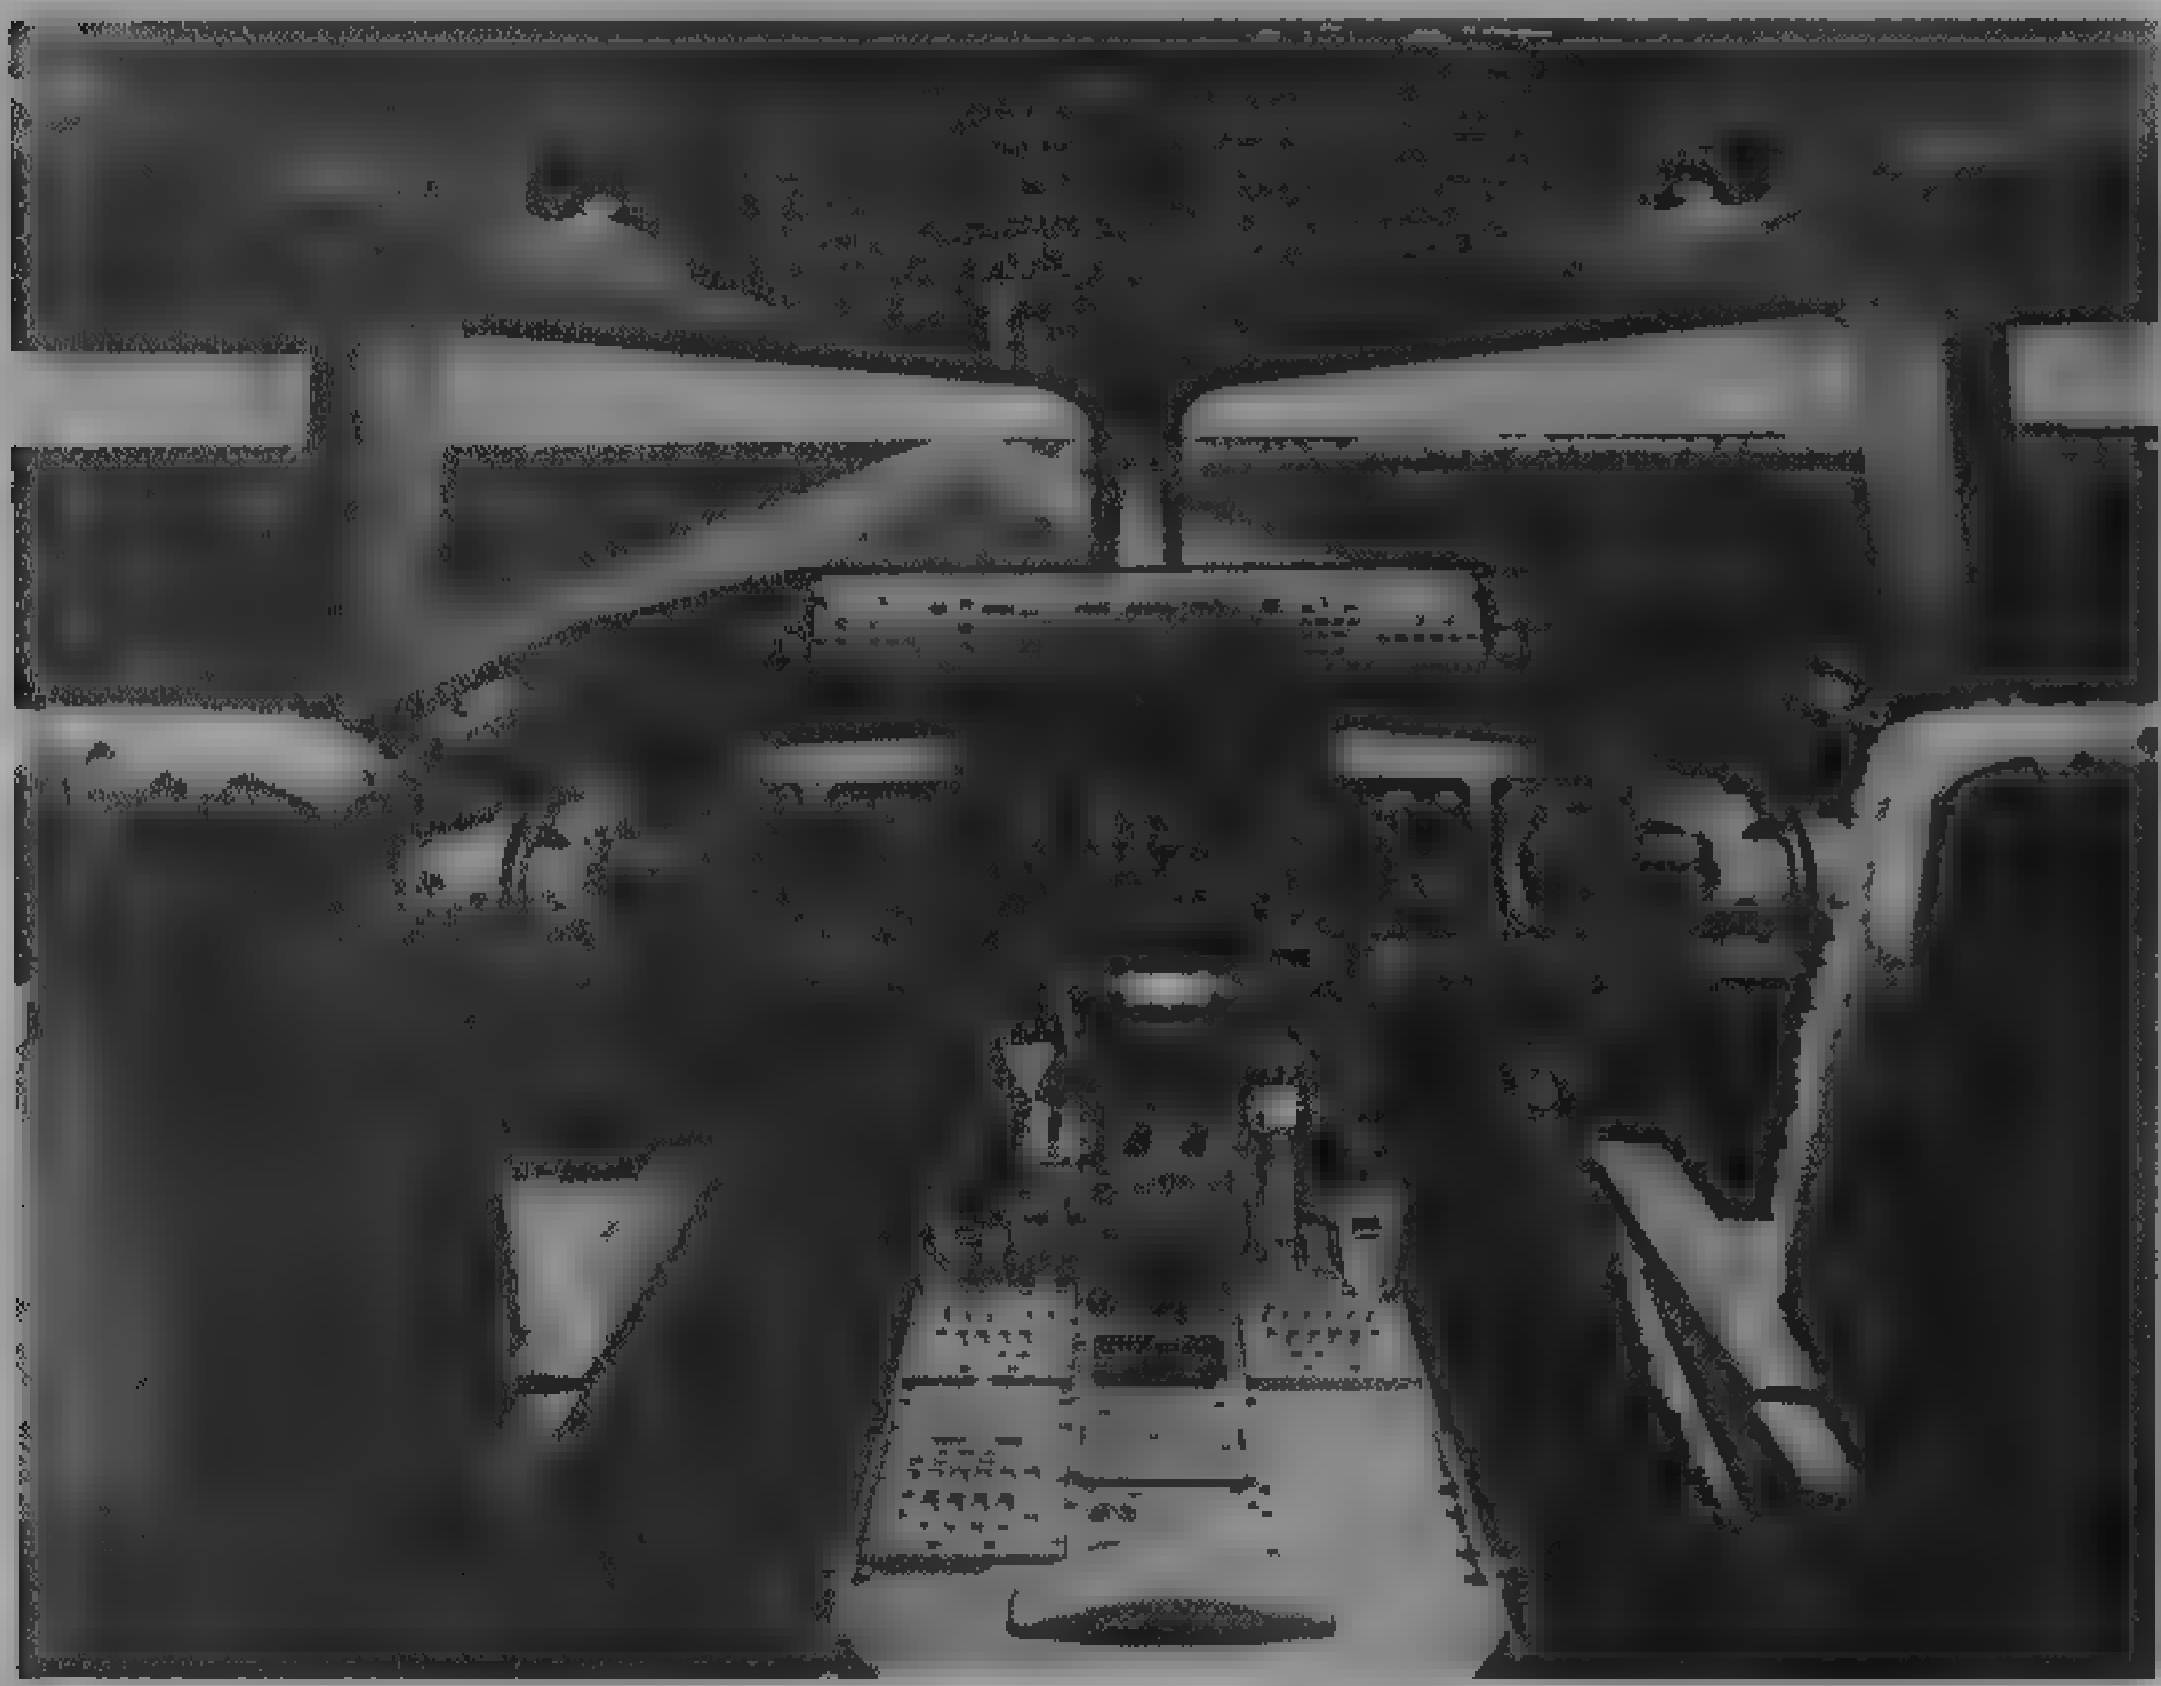
ACCOMMODATION: Two-pilot crew, see under Current Versions for choice of seating capacities, cabin cross-section, which is between that of 747 and 767 (see diagram, Boeing 767 entry), chosen to allow widest selection of twin-aisle class and seating layouts ranging from six- to 10-abreast galleys and toilets can be located at a selection of fixed points in front and rear cabins or freely positioned within large footprints in which they can be moved in 2.5 cm (1 in) increments and attached to prepositioned mounting, plumbing and electric fittings, overhead bins open downward and provide each passenger with 0.08 m³ (3 cu ft) volume; bins can be removed without disturbing ceiling panels, ducts or support structure, advanced cabin management system simplifies cabin management and includes digital sound system of hi-fi quality. Underfloor cargo compartments have mechanical handling system and can accommodate all LD formats and 88 in or 96 in width pallets, up to 33 LD-3 containers plus 17.0 m³ (600 cu ft) bulk cargo can be loaded, optional underfloor crew rest module with same footprint as 96 in pallet contains four bunks, two business class seats and stowage space and requires only electrical connection and hatch in passenger cabin floor

SYSTEMS: AlliedSignal air drive unit, using bleed air from engines, APU or ground supply, drives central hydraulic system, cabin air supply and pressure control by AiResearch. Sundstrand variable-speed, constant frequency AC electrical power generating system, with two 120 kVA integrated drive generators, one APU driven generator and



Boeing 777-200 twin-turbofan high-capacity airliner (*Jane's/Mike Keep*)

1992



Boeing 777 two-man flight deck has five flat panel displays in horizontal row on main panel and two FMS control and display panels and a multifunction display on the centre console

1993

AlliedSignal ram air turbine system AlliedSignal GTCP331-500 APU, Hamilton Standard air conditioning, Smiths Industries ultrasonic fuel quantity gauging system and electrical load management system, optional wingtip folding by E-Systems Montek Division and Frisby Airborne Hydraulics.

AVIONICS: *Radar*: Honeywell weather radar standard.

Flight: Main navigation system is Honeywell air data and inertial reference (ADIRS) containing the Hexad skewed axis arrangement of six ring laser gyros; standby system is the secondary attitude and air data reference unit (SAARU) containing interferometric fibre optic gyros (using light transmitted in two directions along fibre optic paths), which produces a secondary flight director attitude display, airspeed and altimeter, both are linked to the ARINC 629 digital databus, Bendix/King TCAS; Honeywell/Canadian Marconi global navigation satellite sensor with 12-channel receiver, Honeywell/Racal multichannel satcom system optional.

Dual Honeywell aircraft information management system (AIMS) contains the processing equipment required to collect, format and distribute onboard avionic information including the flight management system (FMS), engine thrust control, digital communications management, operation of flight deck displays and monitoring of aircraft condition; both pilots and ground engineers can assess the condition of all onboard avionics systems.

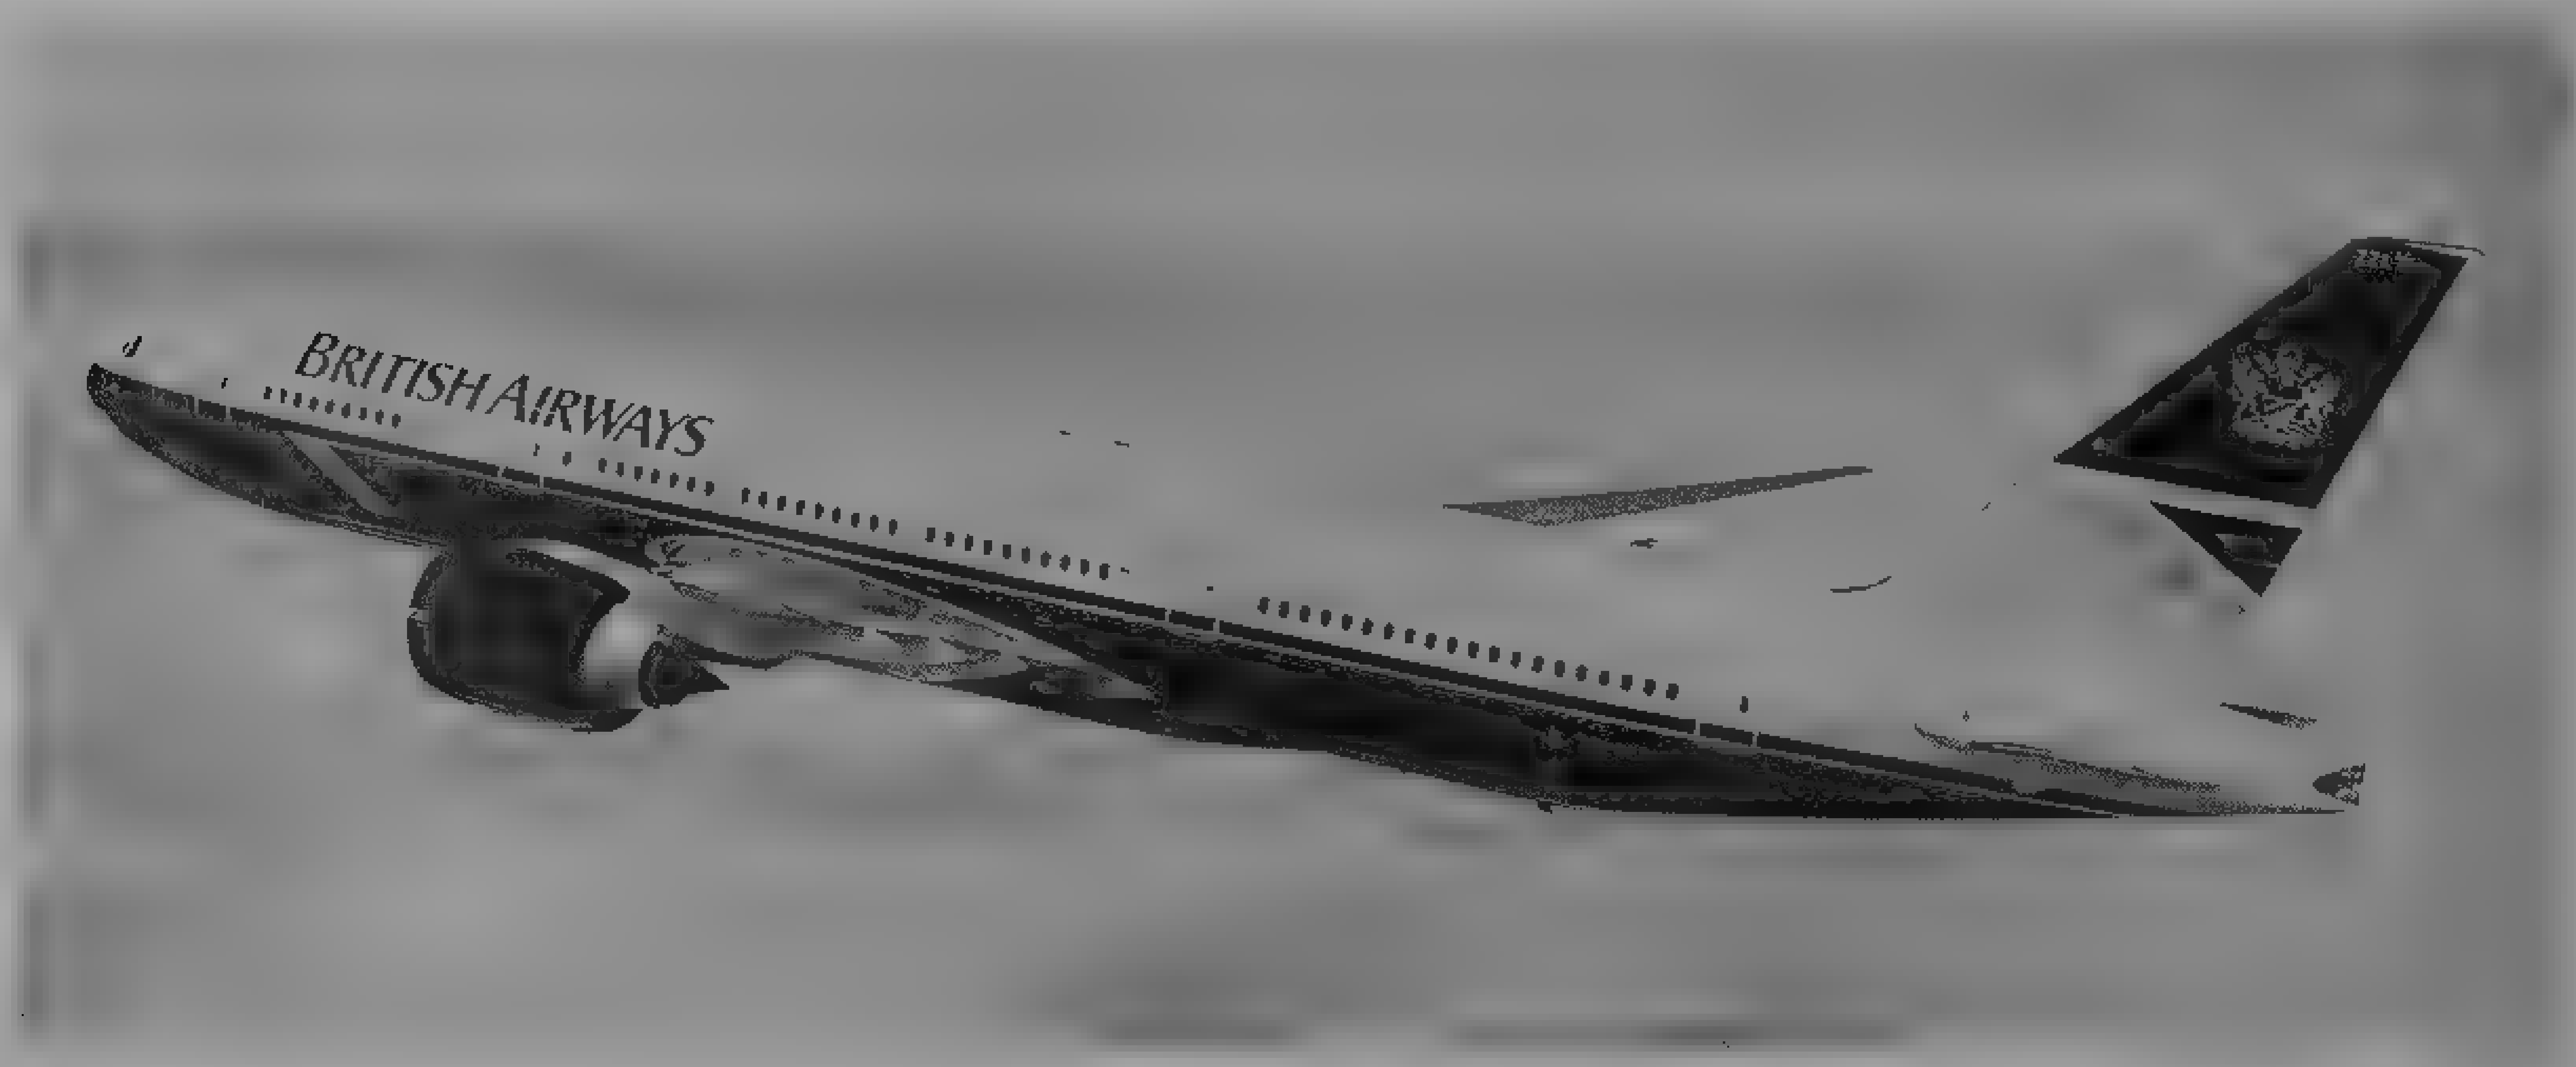
Instrumentation: Based on five-screen EFIS using Honeywell colour liquid crystal flat panel displays (two primary flight displays, two navigation displays and engine indication and crew alerting system display); three multipurpose control and colour display units on centre console provide interface with integrated aircraft information management system, which handles flight management, thrust control and communications control as well as all systems information.

DIMENSIONS, EXTERNAL:

Wing span	60.93 m (199 ft 11 in)
Wing span with tips folded	47.32 m (155 ft 3 in)
Wing aspect ratio	8.68
Length overall: Srs 200	63.73 m (209 ft 1 in)
Srs 300	73.86 m (242 ft 4 in)
Fuselage: Length	62.78 m (205 ft 11½ in)
Max diameter	6.20 m (20 ft 4 in)
Max height: overall	18.51 m (60 ft 9 in)
to tip of folded wing	14.22 m (46 ft 8 in)
Tailplane span	21.52 m (70 ft 7½ in)
Wheelbase	25.88 m (84 ft 11 in)
Wheel track	10.97 m (36 ft 0 in)
Passenger doors (four port, four stbd):	
Height	1.88 m (6 ft 2 in)
Width	1.07 m (3 ft 6 in)
Max height to sill	5.51 m (18 ft 1 in)
Forward cargo door, stbd: Height	1.70 m (5 ft 7 in)
Width	2.72 m (8 ft 11 in)
Max height to sill	3.05 m (10 ft 0 in)
Rear cargo door, stbd, standard:	
Height	1.88 m (6 ft 2 in)
Width	1.78 m (5 ft 10 in)
Max height to sill	3.40 m (11 ft 2 in)
Rear cargo door, stbd, optional: width	2.69 m (8 ft 10 in)
Bulk cargo door, stbd: Height	0.91 m (3 ft 0 in)
Width	1.14 m (3 ft 9 in)
Max height to sill	3.48 m (11 ft 5 in)

DIMENSIONS, INTERNAL:

Cabin: Length	48.97 m (160 ft 8 in)
Max width	5.87 m (19 ft 3 in)
Floor area	279.1 m² (3,004 sq ft)
Max underfloor cargo hold volume	160.16 m³ (5,656 cu ft)



First Boeing 777-236 for British Airways (and first with GE90 engines)

1995

AREAS

Wings, projected	427 8 m² (4,605 0 sq ft)
Horizontal tail surfaces, projected	101 26 m² (1,090 sq ft)
Vertical tail surfaces, projected	53 23 m² (573 sq ft)

WEIGHTS AND LOADINGS (A1, A2, A3: 777-200 A Market, at different max T-O weights. B1, B2, B3: 777-200 B Market, at different max T-O weights):

Operating weight empty: A1, A2	135,580 kg (298,900 lb)
A3	135,875 kg (299,550 lb)
B1, B2	138,120 kg (304,500 lb)
Max payload: A1, A2	54,930 kg (121,100 lb)
A3	54,635 kg (120,450 lb)
B1, B2	54,660 kg (120,500 lb)
Max T-O weight: A1	229,520 kg (506,000 lb)
A2	233,600 kg (515,000 lb)
A3	242,670 kg (535,000 lb)
B1	263,085 kg (580,000 lb)
B2	267,620 kg (590,000 lb)
B3	286,895 kg (632,500 lb)
Max ramp weight allowance: A, B	907 kg (2,000 lb)
Max zero-fuel weight:	
A1, 2, 3	190,510 kg (420,000 lb)
B1, 2, 3	195,045 kg (430,000 lb)
Max landing weight:	
A1, 2, 3	201,850 kg (445,000 lb)
B1, 2, 3	208,650 kg (460,000 lb)
Max fuel weight: A1, 2, 3	94,210 kg (207,700 lb)
B1, 2, 3	135,845 kg (299,490 lb)
Max wing loading: A1, 2, 3	537-566 kg/m² (110-116 lb/sq ft)
B1, 2, 3	615-669 kg/m² (126-137 lb/sq ft)

PERFORMANCE (estimated):

Max cruising speed: A, B	Mach 0.87
Econ cruising speed: A, B	Mach 0.83
Approach speed: A	138 kts (256 km/h; 159 mph)
B	140 kts (259 km/h; 161 mph)
Max certificated altitude: A, B	13,135 m (43,100 ft)
T-O run: A1, 2, 3	2,225-2,469 m (7,300-8,100 ft)
B1, 2, 3	2,652-3,962 m (8,700-13,000 ft)
Landing field length:	
A, B	1,661-1,707 m (5,450-5,600 ft)
Range with 375 two-class passengers: A1	3,970 n miles (7,352 km; 4,568 miles)
A2	4,240 n miles (7,852 km; 4,879 miles)
A3	4,820 n miles (8,926 km; 5,546 miles)
Range with 305 three-class passengers: B1	6,030 n miles (11,168 km; 6,939 miles)
B2	6,300 n miles (11,667 km; 7,250 miles)
B3	7,380 n miles (13,667 km; 8,493 miles)

VERIFIED

BOEING 767AWACS

Japan ASDF designation: E-767

TYPE: Airborne warning and control system successor to E-3.

PROGRAMME: Boeing announced, December 1991, definition studies for modified 767-200ER airliner (which see) with Westinghouse AN/APY-2 radar; project sustained by Japanese interest; engine selection October 1992. Japanese government purchase decision, December 1992, parliamentary approval given early 1993, total requirement for four; first two ordered November 1993; second two in October 1994.

First flight of 'clean' airframe (N767JA, 557th Boeing 767) 10 October 1994 at Seattle, to Wichita, November 1994, for installation of rotodome, new power-generating system and other modifications required by operational equipment, returned to Seattle for equipment integration and flight test, delivery of first two aircraft in 1998, second pair in 1999.

CUSTOMERS: Japan (Model 767-27C), four (two funded in 1993 budget; two in 1994); to be based at Hamamatsu. Boeing anticipates 20 sales, plus further 75 of other military 767 versions.

COSTS: Japan (1993) $840 million for two airframes, systems installation and testing, further $773 million for second pair (1994); unit cost $403 million.

DESIGN FEATURES: See Boeing 767 airliner entry. Additionally, substantial structural modifications (replaced two frames by bulkheads; deepened two frames, reinforced four floor beams) to accommodate rotodome, computer equipment and operators' consoles, ventral fins may be added on rear fuselage. Boeing 767 airframe offers twice floor space and three times internal volume of 707/E-3.

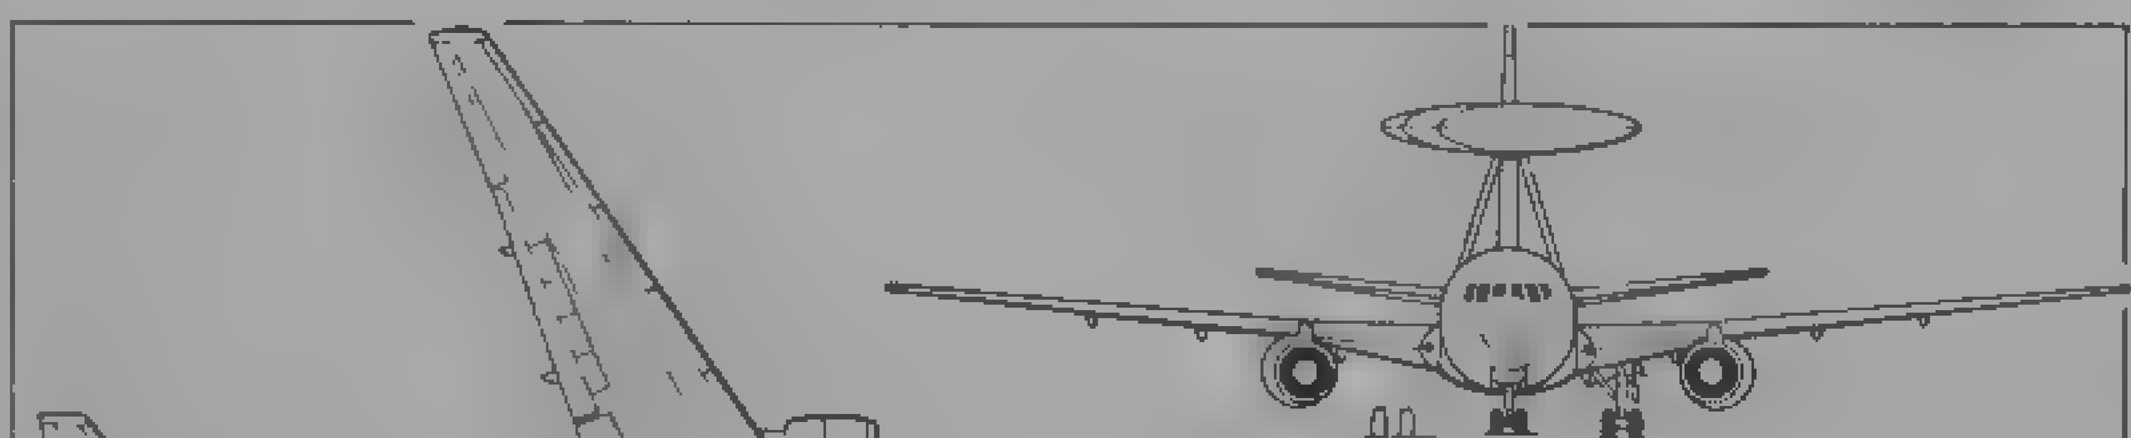
POWER PLANT: Two 273.6 kN (61,500 lb st) General Electric CF6-80C2 turbofans, modified for additional electrical generation. In-flight refuelling receptacle.

ACCOMMODATION: Two-man flight crew, up to 18 mission crew, though latter number can vary for tactical and defence missions. Full crew complement is two pilots, mission director, tactical director, fighter allocator, two weapon controllers, surveillance controller, link manager, seven surveillance operators, communications operator, radar technician, communications technician and computer display technician. Aft of flight deck, from front to rear of fuselage, are communications, data processing and other equipment bays, multipurpose consoles, communications, navigation and identification equipment, and crew rest area, galley and storage space.

SYSTEMS: Two 150 kVA generators on each engine replace single 90 kVA units, total 600 kVA. Typical additional systems in the E-3 Sentry include a liquid cooling system providing protection for the radar transmitter. An air cycle pack system, a draw-through system, and two closed loop ram-cooled environmental control systems to ensure a suitable environment for crew and avionics equipment. Distribution centre for mission equipment power and remote avionics in lower forward cargo compartment. Rear cargo compartment houses radar transmitter. External sockets allow intake of power when aircraft is on ground.

Model of Boeing 767AWACS in flying attitude

1993



AWACS version of Boeing 767 airliner *(Jane's/James Goulding)*

1995

AVIONICS: Based on those of E-3 Sentry, a description of which follows.

Comms: HF, VHF and UHF channels through which information can be transmitted or received in clear or secure mode, in voice or digital form.

Radar: Weather radar in nose. Main system is Westinghouse AN/APY-2, elliptical cross-section rotodome of 9.14 m (30 ft) diameter and 1.83 m (6 ft) maximum depth, mounted above fuselage, comprises four essential elements: a turntable, strut-mounted above rear fuselage, supporting rotary joint assembly to which are attached sliprings for electrical and waveguide continuity between rotodome and fuselage; strengthened centre-section supporting AN/APY-2 surveillance radar and IFF/TADIL-C antennae, radomes, auxiliary equipment for radar operation and environmental control of the rotodome interior liquid cooling of the radar antennae, and two radomes of multilayer glassfibre sandwich material, one for surveillance radar and one for IFF/TADIL-C array. In operation,

Cutaway model of Boeing 767AWACS showing four-abreast operators' consoles and other internal features

1994

rotodome is hydraulically driven at 6 rpm, but during non-operational flights it is rotated at only 1/4 rpm, to keep bearings lubricated

Radar operates in E/F-band and can function as both a pulse and/or a pulse Doppler radar for detection of aircraft targets. A similar pulse radar mode with additional pulse compression and sea clutter adaptive processing is used to detect maritime/ship traffic. Radar is operable in six modes PDNES (pulse Doppler non-elevation scan), when range is paramount to elevation data PDES (pulse Doppler elevation scan) providing elevation data with some loss of range, BTH (beyond the horizon), giving long-range detection with no elevation data, Maritime, for detection of surface vessels in various sea states Interleaved, combining available modes for all-altitude longer range aircraft detection, or for both aircraft and ship detection; and Passive, which tracks enemy ECM sources without transmission-induced vulnerability. Radar antennae, spanning about 7 32 m (24 ft), and 1.52 m (5 ft) deep, scan mechanically in azimuth, and electronically from ground level up into the stratosphere

Flight: Navigation by two modified Litton LN 100G INS/GPS platforms, providing position and velocity data

Mission Heart of the data processing capability is an IBM CC-2E computer with a main storage capacity of 3,145,725 words Data display and control are provided by Hazeltine high resolution colour situation display consoles (SDC) and auxiliary display units (ADU)

Identification is based on an Eaton (AIL) AN/APX 103 interrogator set with airborne IFF interrogator with AIMS Mk X SIF air traffic control and Mk XII military identification friend or foe (IFF) in a single integrated system Simultaneous Mk X and Mk XII multitarget and multimode operations allow the operator to obtain instantaneously the range, azimuth and elevation, code identification, and IFF status, of all targets within radar range. Options include AN/AYR-1 ESM, IRCM, Satcom, JTIDS and Have Quick secure radios

DIMENSIONS, EXTERNAL

Wing span	47 57 m (156 ft 1 in)
Length overall	48 51 m (159 ft 2 in)
Height overall	15 85 m (52 ft 0 in)
Radome diameter	9.14 m (30 ft 0 in)
thickness	1 83 m (6 ft 0 in)

WEIGHTS AND LOADINGS

Max T-O weight	171,255 kg (377,550 lb)

PERFORMANCE (estimated)

Max cruising speed	more than 434 kts (805 km/h; 500 mph)
Service ceiling	10,360-13,100 m (34,000-43,000 ft)
Range, unrefuelled	4,500-5,000 n miles (8,334-9,260 km; 5 178-5,754 miles)
Endurance	
at 1,000 n mile (1,852 km, 1,151 mile) radius	7 h
at 300 n mile (556 km, 345 mile) radius	10 h
with in-flight refuelling	22 h

PRESIDENT AND GENERAL MANAGER Denton Hanford

VICE PRESIDENT RESEARCH AND ENGINEERING
William Walls

PUBLIC RELATIONS MANAGER Jack Satterfield

Vertol Aircraft Corporation (formerly Piasecki Helicopter Corporation) purchased in 1960, becoming Vertol Division of Boeing, now Boeing Defense & Space Group (Helicopters Division) Produced more than 2,500 tandem-rotor helicopters for US military services and export Main production programme, modernisation of early CH 47s to CH 47D for US Army and new production of International Chinooks

Boeing Helicopters teamed with Bell Helicopter Textron in V-22 Osprey programme (see Bell/Boeing entry). Joined with Sikorsky Aircraft 3 June 1985 to compete for US Army LH (RAH-66 Comanche) light helicopter, with Boeing integrating avionics; declared competition winner in April 1991 (see under separate Boeing Sikorsky entry for details). All-composite rotor blade for Bell UH 1H developed for US Army; first blade delivered June 1989 to Army Engineering Flight Agency for interchangeability check with Bell produced blade

Boeing Helicopters produces fixed leading-edge components for Boeing 747/757/767/777 and metal leading-edge slats for 757

Manufacturing plant at Ridley Township, Pennsylvania, has 325,150 m² (3,500,000 sq ft) of covered floor space, flight test centre at Greater Wilmington, Delaware, has 8,565 m² (92,200 sq ft) An 11,055 m² (119,000 sq ft) development facility and 17,465 m² (188 000 sq ft) office/laboratory/computer centre added at Ridley Township early 1987

UPDATED

BOEING 114 and 414

US Army designations CH-47 and MH-47 Chinook
Royal Air Force designations Chinook HC. Mk 2 and HC. Mk 3
Spanish Army designation HT 17

TYPE Tandem-rotor, twin-turbine transport helicopter

PROGRAMME. Design of all-weather medium transport helicopter for US Army began 1956 first flight of first of five YCH-47As 21 September 1961; for details of CH-47A (354 built for US Army) and CH 47B (108 built for US Army) see 1974-75 *Jane's* Performance increased in CH-47C by uprated transmissions and 2,796 kW (3,750 shp) T55 L-11A, integral fuel capacity increased to 3,944 litres (1,042 US gallons; 867 6 Imp gallons), first flight 14 October 1967, 270 delivered to US Army from Spring 1968, 182 US Army CH 47Cs retrofitted with composite rotor blades; integral spar inspection system (ISIS) introduced 1973 together with crashworthy fuel system retrofit kit full details in 1980-81 *Jane's*. Transmissions of some As and Bs upgraded to CH 47C standard

CURRENT VERSIONS **CH-47D:** US Army contract to modify one each of CH-47A, B and C to prototype Ds placed 1976 first flight 11 May 1979 first production contract October 1980; first flight 26 February 1982 first delivery 31 March 1982; initial operational capability (IOC) achieved 28 February 1984 with 101st Airborne Division, second multi-year production contract for 144 CH-47Ds awarded 13 January 1989, bringing total CH 47D (and MH 47E) ordered to 472, further two Gulf War attrition replacements authorised August 1992 (these new build), seven ex Australian rebuilds funded June 1993 for delivery January to November 1995; deliveries reached 447 CH 47Cs by December 1993, with completion of main programme US regular Army deliveries mostly completed October 1990 with 17th operating unit (C Company, 228th Aviation Regiment, Fort Wainright, Alaska); remainder of CH 47Ds for Army Reserve and National Guard by late 1993; deliveries to National Guard (Texas) began 1988

CH 47D update included strip down to bare airframe, repair and refurbish, fit AlliedSignal T55 L-712 turboshafts, uprated transmissions with integral lubrication and cooling, composite rotor blades, new flight deck compatible with night vision goggles (NVG), new redundant electrical system, modular hydraulic system, advanced automatic flight control system, improved avionics and survivability equipment, Solar T62 T 2B APU operating hydraulic and electrical systems through accessory gear drive, single-point pressure refuelling, and triple external cargo hooks Principal external change is large, rectangular air intake in leading-edge of rear sail Composites account for 10 to 15 per cent of structure. About 300 suppliers involved

At maximum gross weight of 22,680 kg (50,000 lb), CH 47D has more than double useful load of CH-47A Sample loads include M198 towed 155 mm howitzer,

MYP1 First multiyear procurement contract, 8 April 1985

MYP2 Second MYP, 13 January 1989 (MH-47Es listed separately)

¹ Gulf War attrition replacements, 2 August 1992 (are sole new build aircraft in this table)

² Former Australian Air Force CH-47Cs, contract 2 June 1993

32 rounds of ammunition and 11-man crew, making internal/external load of 9,980 kg (22,000 lb); D5 caterpillar bulldozer weighing 11,225 kg (24,750 lb) on centre cargo hook. US Army Milvan supply containers carried at up to 130 knots (256 km/h; 159 mph); up to seven 1,893 litre (500 US gallon, 416 Imp gallon), 1,587 kg (3,500 lb) rubber fuel blivets carried on three hooks. Four CH-47Ds converted for in flight refuelling from C-130 at up to 120 knots (222 km/h, 138 mph) by day and night and in moderate turbulence, approved July 1988, graphite fuel boom at lower starboard side contains telescoping aluminium tube and can accept flow rate of 568 litres (150 US gallons, 125 Imp gallons)/min to refuel completely in 6 minutes, first delivery to US Army July 1988. Test programme begins late 1995 of Chinook with vibration-reducing dynamically tuned fuselage.

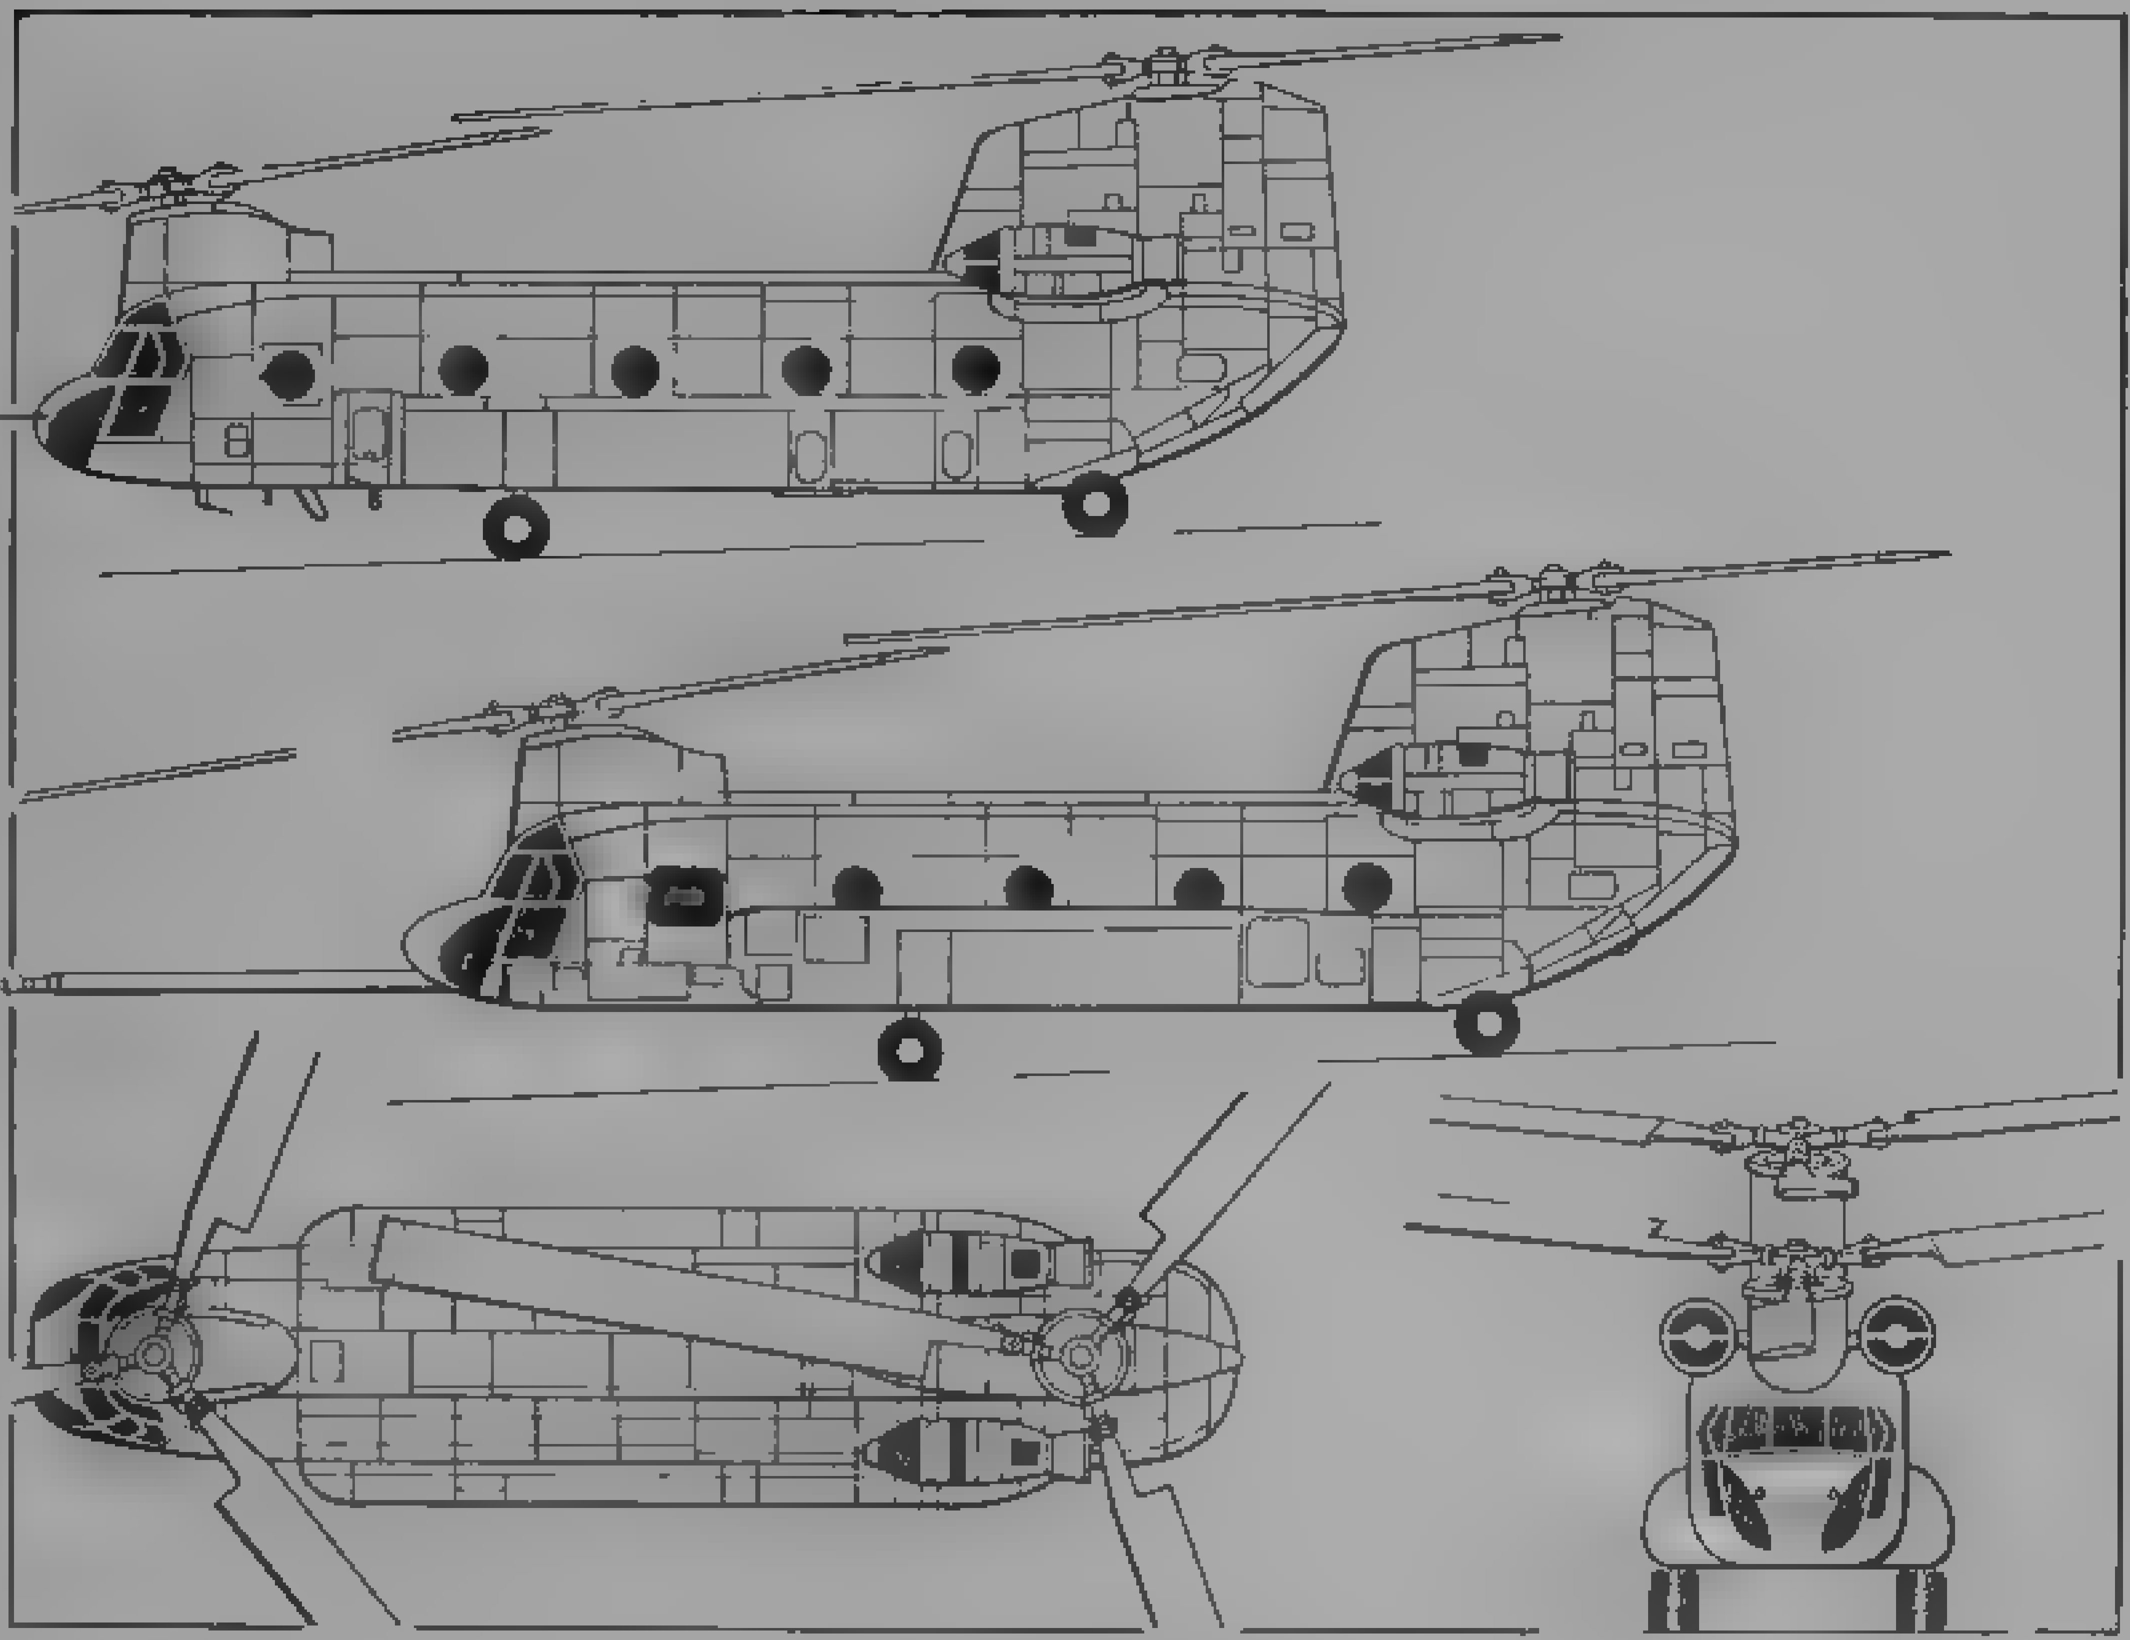
CH/MH-47D Special Operations Aircraft: Two battalions of 160th Special Operations Aviation Regiment (at Fort Campbell, Kentucky, and Hunter AAF, Georgia) equipped pending availability of MH-47E with 32 **CH-47D SOA** fitted with refuelling probes (first refuelling July 1988), thermal imagers, Bendix/King RDR-1300 weather radar, improved communications and navigation equipment, and two pintle-mounted 7.62 mm machine guns. Navigator/commander's station fitted in some SOAs. At least two (83-24110 and 83-24118) converted to **MH-47D**.

GCH-47D: At least 12 Chinooks grounded for engineer training.

JCH-47D: Two CH-47Ds modified for special testing.

MH-47E: Special Forces variant, planned procurement 51, deducted from total 472 CH-47D conversions, prototype development contract 2 December 1987; long lead items for next 11 helicopters authorised 14 July 1989, firm order for 11, plus option on next 14, awarded 30 June 1991, Lot 2 (14 helicopters) confirmed 23 June 1992, total 26 firm orders, plus further 25 required. Prototype (88-0267) flew 1 June 1990; delivered 10 May 1991; initial production aircraft (90-0414) flown 1992, first 11 (of 24 intended) originally due to be delivered from November 1992 to 2 Battalion of 160th Special Operations Aviation Regiment at Fort Campbell, Kentucky. Later helicopters earmarked for 3 Battalion/160 SOAR at Hunter AAF, Georgia, and 1/245th Aviation Battalion (SOA), Oklahoma National Guard, Lexington (eight and 16 MH-47Es respectively). Following mission software problems, deliveries began January 1994 with 91-0498 to Fort Campbell, last of 25 received April 1995.

Mission profile 5½ hour covert deep penetration over 300 n mile (560 km; 345 mile) radius in adverse weather, day or night, all terrain with 90 per cent success probability. Requirements include self-deployment to Europe in stages of up to 1,200 n miles (2,222 km, 1,381 miles), 44-troop capacity, powerful defensive weapons and ECM. Equipment includes IBM-Bendix/King integrated avionics with four-screen NVG compatible EFIS; dual MIL-STD-1553 digital databuses; AN/ASN-145 AHRS, jamming-resistant radios, Rockwell Collins CP1516-ASQ automatic target handoff system, inertial AN/ASN-137 Doppler, Rockwell Collins AN/ASN-149(V)2 GPS receiver and terrain-referenced positioning navigation systems; Rockwell Collins ADF-149, laser (Perkin-Elmer AN/AVR-2), radar (E-Systems AN/APR-39A) and missile (Honeywell AN/AAR-47) warning systems, ITT AN/ALQ-136(V) pulse jammer and Northrop Grumman AN/ALQ-162 CW jammer; Tracor M-130 chaff/flare dispensers; Texas Instruments AN/APQ-174A radar with modes for terrain-following down to 30 m (100 ft), terrain-avoidance, air-to-ground ranging and ground-mapping, Hughes AN/AAQ-16 FLIR in chin turret, digital moving map display, uprated T55-L-714 turboshafts with FADEC, increased fuel capacity; additional troop seating (44 maximum), OBOGS, rotor brake; 272 kg (600 lb) rescue hoist with 61 m (200 ft) usable cable, two M-2 0.50 in window mounted machine guns (port forward, starboard aft), provisions for Stinger AAMs using FLIR for sighting. This system largely common with equivalent Sikorsky MH-60K (which see).



Boeing CH-47D military transport helicopter with additional side view (lower) of MH-47E special forces' variant *(Jane's/James Goulding)*

1995

MH-47E has nose of Commercial Chinook to allow for weather radar, if needed; forward landing gear moved 1.02 m (3 ft 4 in) forward to allow for all-composite external fuel pods (also from Commercial Chinook) that double fuel capacity; Brooks & Perkins internal cargo handling system. See also Chinook HC. Mk 3, below.

MH-47E FUNDING

90	1	90-0414
91	6	91-0496
92	4	92-0400
93	14	93-
Total	25	

Notes: All included in MYP2 (see CH-47D Funding). Excludes prototype (88-0267), counted in CH-47D total

Chinook HC. Mk 2: RAF version; Mk 1 designation CH-47-352, all survivors of original 41 HC. Mk 1s upgraded to HC. Mk 1B (see 1989-90 and earlier *Jane's*): UK MoD authorised Boeing to update 33 (later reduced to 32) Mk 1Bs to Mk 2, equivalent to CH-47D, October 1989; changes include new automatic flight control system, updated modular hydraulics, T55-L-712F power plants, stronger transmission, improved Solar 71 kW (95 shp) T62-T-2B APU, airframe reinforcements, low IR paint scheme, long-range fuel system and standardisation of defensive aids package (IR jammers, chaff/flare dispensers, missile approach warning and machine gun mountings). Requirement exists for FLIR. Conversion continued from 1991 to July 1995. Chinook HC. Mk 1B ZA718 began flight testing Chandler Evans/Hawker Siddeley dual-channel FADEC system for Mk 2 in October 1989. Same helicopter to Boeing, March 1991, rolled out as first Mk 2 19 January 1993, arrived RAF Odiham 20 May 1993. C(A) clearance November 1993. Initial deliveries pooled at Odiham by Nos. 7 and 27 (Reserve) Squadrons, latter for training, first delivery to No. 18 Squadron at Laarbruch, Germany, 1 February 1994, to No. 78 Squadron, Falkland Islands, February 1994. Final Mk 1 withdrawn from service, May 1994, at which time 11 Mk 2s received. Further three new-build Mk 2s ordered 1993, for delivery from mid-1995, decision to order further 14 Mks 2/3 announced March 1995, total RAF procurement 58 CH-47C/D/Es.

Chinook HC. Mk 3: Nine of 14 additional RAF Chinooks announced March 1995 assigned to Special Forces, configuration not disclosed, but expected to be similar to MH-47E.

HT 17 Chinook: Spanish Army version.

Boeing 234: Commercial version, now out of production, described in 1991-92 *Jane's*.

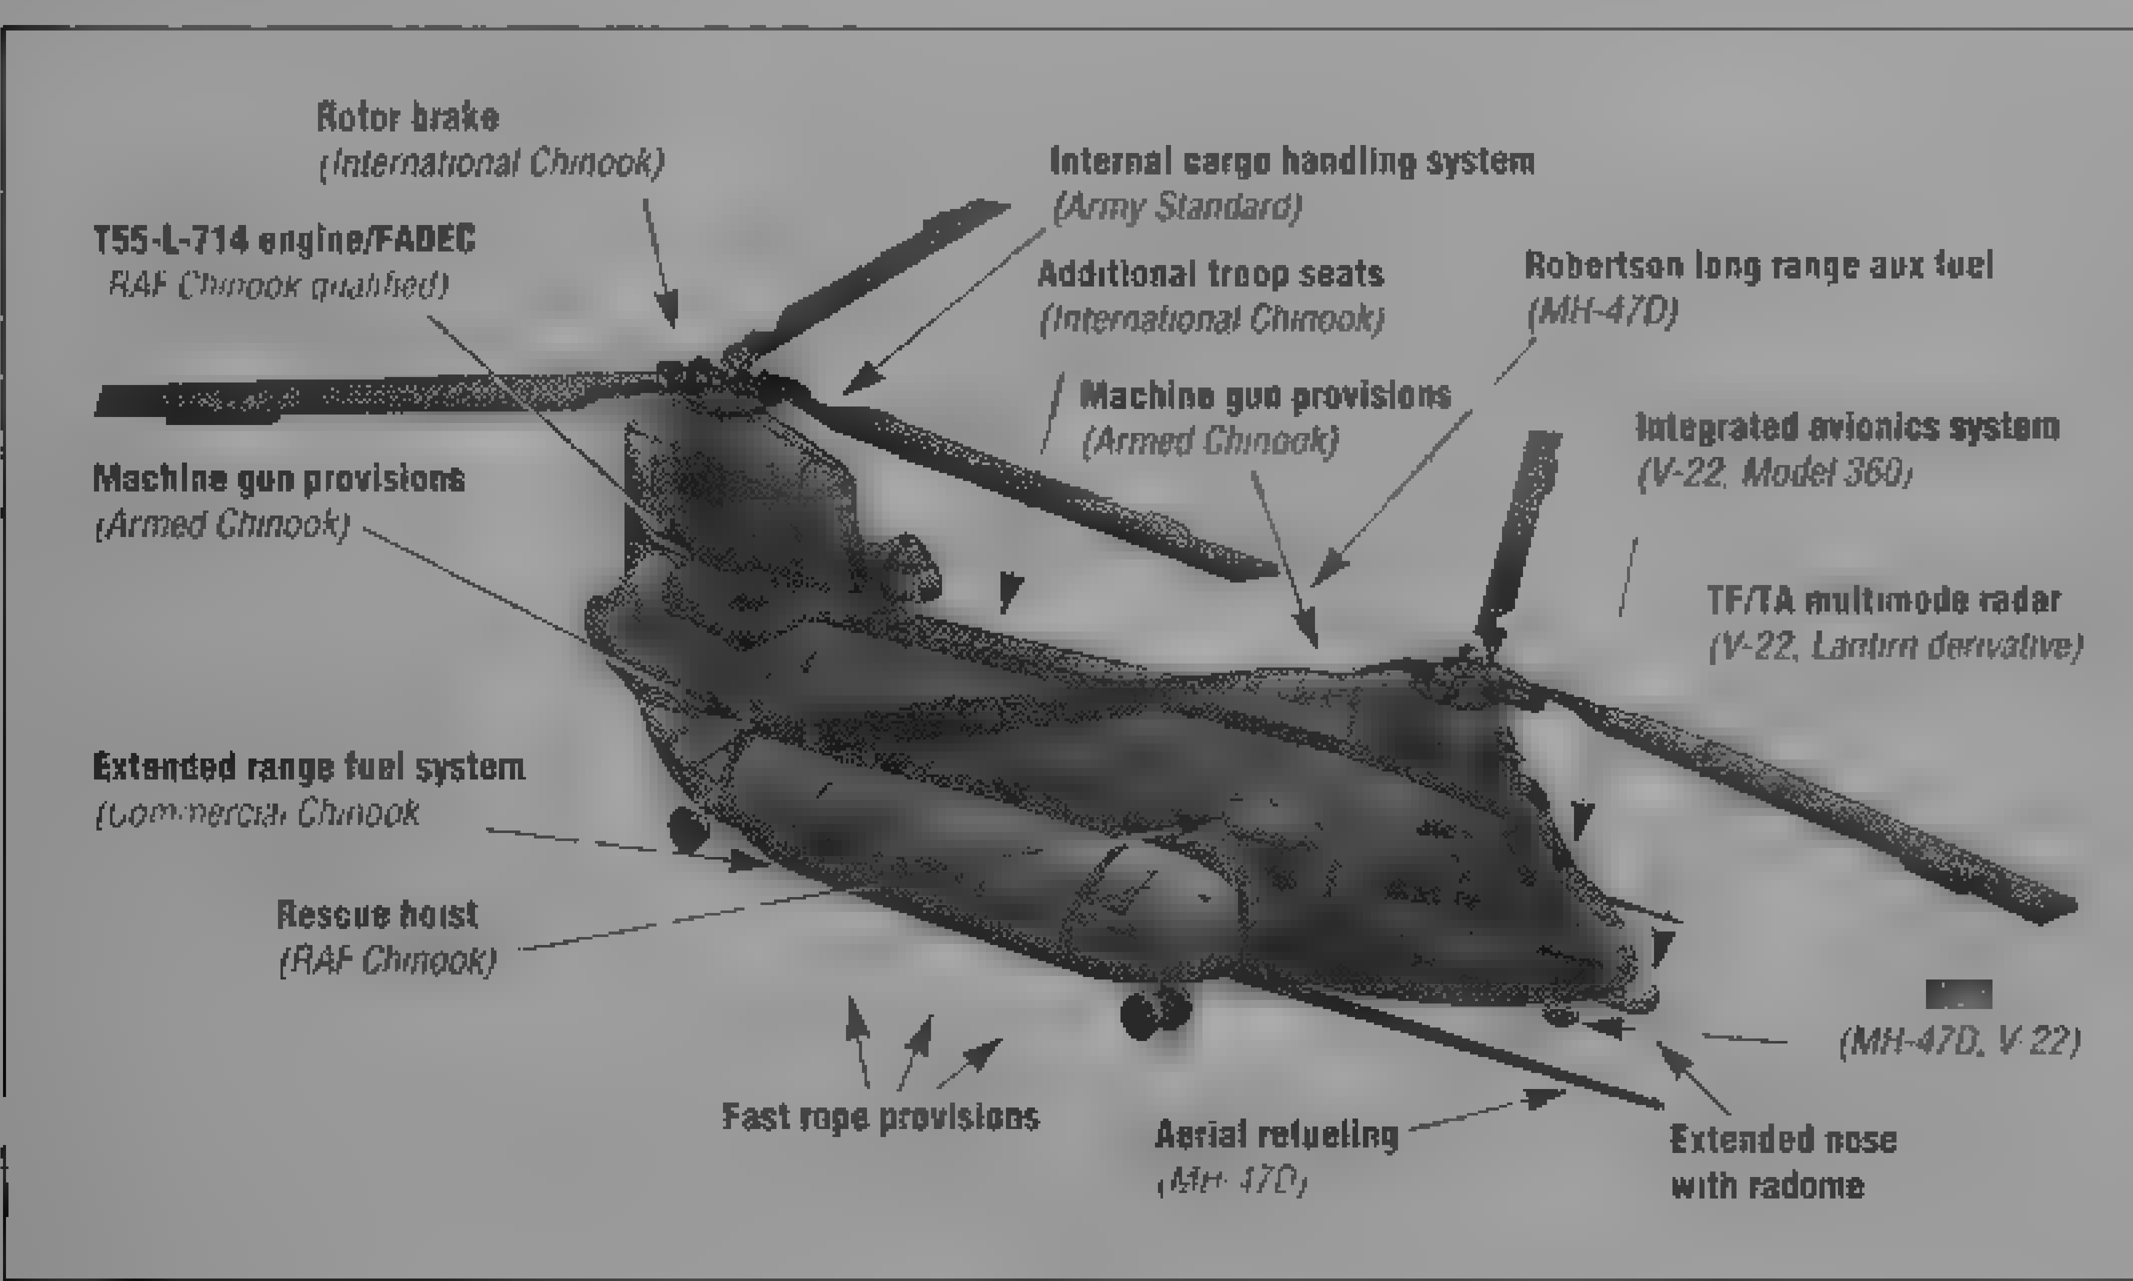
Boeing 414: Export military version, described in 1985-86 *Jane's*. Superseded by CH-47D International Chinook (see below).

CH-47D International Chinook: Boeing 414-100 first sold to Japan, Japan Defence Agency ordered two for JGSDF and one for JASDF Spring 1984, first flight (N7425H) January 1986 and with second machine, delivered to Kawasaki April 1986 for fitting out; co-production arrangement (see under Japan: Kawasaki **CH-47J**), by Spring 1995, 16 firm orders for JASDF and 40 for JGSDF. International Chinook available in four versions with combinations of standard or long-range (MH-47E type) fuel tanks and T55-L-712 SSB or T55-L-714.

CH-47F Advanced Chinook: Chinook upgrade study with 3,729 kW (5,000 shp) class engines, redesigned rotor blades and hubs, and additional (MH-47E) fuel.

CUSTOMERS: Total 732 CH-47A/B/C built and 479 CH-47D/MH-47E conversions authorised for US Army, excluding two new build Gulf War attrition replacements.

Exports (see also rapid reference table) include five CH-47Cs to Argentina (three air force; two army); Australia 12 CH-47Cs with crashworthy fuel system (four refurbished as CH-47D and redelivered from May 1995 to C Squadron of army's 5 Aviation Regiment at Townsville, seven sold to US Army for conversion), Canada nine CH-47Cs designated **CH-147**, delivered from September 1974 (details in 1985-86 *Jane's*), but withdrawn from use and seven sold to Netherlands in July 1993, Japan (two CH-47D International Chinooks, plus six kits to initiate licence production), Netherlands, six ordered in December 1993 for delivery in 1998-99, plus seven ex-Canadian CH-147s upgraded to CH-47D by Boeing and redelivered from 1995, Spanish



Operational enhancements to the MH-47E have been obtained from other programmes at low risk

Army 19, designated HT 17, of which 10 CH-47Cs (one lost) and nine CH-47D International Chinooks delivered to 5th Helicopter Transport Battalion (Bheltra-V) at Colmenar Viejo, Madrid (last six have Bendix King RDR-1400 weather radar), original nine upgraded by Boeing in USA to CH-47D between August 1990 and mid-1993, first redelivery to Spain on 27 September 1991, South Korea, total 24 International Chinooks, comprising 18 for army (six ordered 1987 plus 12 in 1988; deliveries from 1988) and six for air force (ordered early 1990; delivered by February 1992); Singapore, six ordered April 1994 for delivery in 1996-97; Taiwan (three, notionally civil Boeing 234MLR); Thailand, 12 for army (three ordered August 1988, three early 1990, deliveries 1990 to February 1992, all are International Chinook); UK (58, see entry for Chinook HC. Mk 2), 19 civilian, of which few left operating in original oilfield support role; two for trials; 46 in kits, comprising 40 for Italy and six for Japan

MH-47E special forces' variant of Chinook

1995

Agusta sold licence-built CH-47Cs to Egypt (15) Greece (10, of which nine converted to CH-47D by Boeing between March 1992 and 1995, first redelivery in October 1993), Iran (68), Italy (37, including 10 CH-47C Plus, to which standard 23 earlier helicopters converted, refer Italy), Libya (20), Morocco (nine) and Pennsylvania Army National Guard (11). Further six Italian helicopters to Civil Protection Agency. Kawasaki (which see) has firm orders for 56 (air force 16, army 40)

Total Chinook orders, including civil, 1,127. Six CH-47Ds, ordered by China January 1989, embargoed by US government

COSTS: First US Army MYP (1985) $1,200 million for 240 upgrades from CH-47C, second MYP (1989) $773 million for 144 upgrades, $67 million (1993) for 11 upgrades (four Australian Army, seven US Army); approximately $20 million for two new build CH-47Ds (1992)

MH-47E. $81 8 million (placed 1987) for development of MH-47E and conversion of one prototype, $422 million (1989-91) for 11 MH-47Es and option on further 14. £140 million upgrade for RAF aircraft (32 to Mk 2 standard, 1993-95

DESIGN FEATURES: Two three-blade intermeshing contrarotating tandem rotors; front rotor turns anti-clockwise, viewed from above; rotor transmissions driven by connecting shafts from combiner gearbox, which is driven by rear-mounted engines. Classic rotor heads with flapping and drag hinges, manually foldable blades, using Boeing Helicopters VR7 and VR8 aerofoils with cambered leading-edges; blades can survive hits from 23 mm HEI and API rounds, rotor brake optional. Constant cross-section cabin with side door at front, rear-loading ramp that can be opened in flight, underfloor section sealed to give flotation after water landing; access to flight deck from cabin, main cargo hook mounting covered by removable floor panel so that load can be observed in flight

FLYING CONTROLS: Differential fore and aft cyclic for pitch attitude control, differential lateral cyclic pitch (from rud-

Average cruising speed	120 kts (222 km/h, 138 mph)	132 kts (245 km/h, 152 mph)	134 kts (248 km/h, 154 mph)	138 kts (256 km/h, 159 mph)
Max rate of climb, S/L, ISA, intermediate rated power	669 m (2,195 ft)/min	464 m (1,522 ft)/min	640 m (2,100 ft)/min	464 m (1,522 ft)/min
Hovering ceiling OGE, ISA, max power	3,215 m (10,550 ft)	1,524 m (5,000 ft)	2,972 m (9,750 ft)	1,524 m (5,000 ft)
Mission radius	30 n miles (55.5 km, 34.5 miles)	30 n miles (55.5 km, 34.5 miles)	100 n miles (185 km, 115 miles)	
Ferry range				1,093 n miles (2,026 km, 1,259 miles)

Condition 1
T-O weight is gross weight for 61 m (200 ft)/min vertical rate of climb to hover OGE at 1,220 m/35°C (4,000 ft/95°F). External payload is carried outbound only. Fuel reserve is 30 minutes cruise fuel. Maximum speed shown is at T-O weight less external payload

Condition 2
T-O gross weight is maximum structural T-O weight for which vertical climb capability at S/L, ISA is 271 m (890 ft)/min. Otherwise same as Condition 1

Condition 3
T-O weight is gross weight for hover OGE at 1,220 m/35°C (4,000 ft/95°F). Radius is with inbound payload 50 per cent of outbound internal payload. Fuel reserve is 30 minutes cruise fuel. Maximum speed shown is at T-O weight

Condition 4
T-O weight is maximum structural T-O weight. Maximum ferry range (internal and external auxiliary fuel). Optimum cruise climb to 2,440 m (8,000 ft) and complete cruise at 2,440 m (8,000 ft). Fuel reserve is 10 per cent of initial fuel

[1]T-O weight is gross weight for hover OGE at 1,220 m/35°C (4,000 ft/95°F). Radius is with inbound payload 50 per cent of outbound payload. Fuel reserve is 30 minutes cruise fuel. Maximum speed shown is at T-O weight

der pedals) for directional control, automatic control to keep fuselage aligned with line of flight. Dual hydraulic rotor pitch-change actuators; secondary hydraulic actuators in control linkage behind flight deck for autopilot/autostabiliser input, autopilot provides stabilisation, attitude hold and outer-loop holds

STRUCTURE: Blades based on D-shaped glassfibre spar fairing assembly of Nomex honeycomb core and crossply glassfibre skin

LANDING GEAR: Non-retractable quadricycle type, with twin wheels on each front unit and single wheels on each rear unit. Oleo-pneumatic shock-absorbers in all units. Rear units fully castoring; power steering on starboard rear unit. All wheels are size 24 × 7.7-VII, with tyres size 8.50-10-III, pressure 4.62 bars (67 lb/sq in). Two single-disc hydraulic brakes. Provision for fitting detachable wheel/skis

POWER PLANT: Two AlliedSignal T55-L-712 turboshafts, pod-mounted on sides of the rear pylon, each with a standard power rating of 2,237 kW (3,000 shp) and maximum rating of 2,796 kW (3,750 shp). AlliedSignal T55-L-712 SSB engine has standard power rating of 2,339 kW (3,137 shp) and maximum of 3,217 kW (4,314 shp), transmission capacity (CH-47D and MH-47E) 5,593 kW (7,500 shp) on two engines and 3,430 kW (4,600 shp) OEI, rotor rpm 225.

Self-sealing pressure refuelled crashworthy fuel tanks in external fairings on sides of fuselage. Total fixed fuel capacity 3,899 litres (1,030 US gallons, 858 Imp gallons). Provision for up to three additional long-range tanks in cargo area, each of 3,028 litres (800 US gallons, 666 Imp

Prototype MH-47E Chinook refuelling from a US Marine Corps KC-130T Hercules

Lifting demonstration of Land Rover and ammunition trailer by RAF Chinook HC. Mk 2 *(Paul Jackson)* *1995*

gallons), maximum fuel capacity (fixed and auxiliary) 6,927 litres (1,830 US gallons; 1,524 Imp gallons). Oil capacity 14 litres (3.7 US gallons, 3.1 Imp gallons).

From January 1991, 100 CH-47Ds fitted with engine air particle separator (also available for RAF variant). Standard in MH-47E and optional in International Chinook are two AlliedSignal T55-L-714 turboshafts, each with a standard power rating of 3,108 kW (4,168 shp) continuous and emergency rating of 3,629 kW (4,867 shp). MH-47E has 7,828 litres (2,068 US gallons, 1,722 Imp gallons) of fuel in panniers, plus 662 litres (175 US gallons; 146 Imp gallons) in floor tanks, total fuel 8,490 litres (2,243 US gallons, 1,868 Imp gallons). CH-47D SOA and MH-47E have 8.53 m (24 ft 0 in) refuelling probe on starboard side of forward fuselage.

ACCOMMODATION: Two pilots on flight deck, with dual controls. Lighting compatible with pilots' NVGs (Nite-Op in RAF variant). Jump seat for crew chief or combat commander. Jettisonable door on each side of flight deck. Depending on seating arrangement, 33 to 55 troops can be accommodated in main cabin, or 24 litters plus two attendants, or (see under Current Versions) vehicles and freight. Rear-loading ramp can be left completely or partially open, or can be removed to permit transport of extra long cargo and in-flight parachute or free-drop delivery of cargo and equipment.

Main cabin door, at front on starboard side, comprises upper hinged section which can be opened in flight, and lower section with integral steps. Lower section is jettisonable. Triple external cargo hook system, with centre hook rated to carry maximum load of 11,793 kg (26,000 lb) and the forward and rear hooks 7,711 kg (17,000 lb) each, or 10,433 kg (23,000 lb) in unison. Provisions are installed for a power-down ramp and water dam to permit ramp operation on water, for forward and rear cargo hooks, internal ferry fuel tanks, external rescue hoist, and windscreen washers.

SYSTEMS: Cabin heated by 200,000 BTU heater/blower. Hydraulic system provides pressure of 207 bars (3,000 lb/sq in) for flying controls. Maximum flow rate 53.0 litres (14 US gallons; 11.65 Imp gallons)/min. Spherical hydraulic reservoir, volume 5,326 cm³ (325 cu in), pressurised to 1.72 bars (25 lb/sq in). Utility hydraulic system, pressure 231 bars (3,350 lb/sq in), maximum flow rate 51.5 litres (13.6 US gallons; 11.3 Imp gallons)/min. Piston type reservoir, volume 7,014 cm³ (428 cu in), of which 5,326 cm³ (325 cu in) are usable, pressurised to 3.86 bars (56 lb/ sq in). Electrical system includes two 40 kVA air-cooled alternators driven by transmission drive system. Solar T62 T-2B APU runs accessory gear drive, thereby operating all hydraulic and electrical systems.

AVIONICS (International CH-47D: US Army CH-47D assumed to be generally similar. Specific MH-47E avionics listed under that heading. Avionics for RAF HC. Mk 1 listed in 1985-86 and earlier editions)

Comms: ARC-102 HF com radio, Collins ARC-186 UHF/AM-FM, Magnavox ARC-164 UHF/AM com, C-6533 intercom, Bendix/King AN/APX-100 IFF.

Flight: APN-209 radar altimeter; AN/ARN-89B ADF; AN/ARN-118 Tacan; AN/ARN-123 VOR/glide slope/marker beacon receiver; and AN/ASN-43 gyromagnetic compass. AFCS maintains helicopter stability, eliminating the need for constant small correction inputs by the pilot to maintain desired attitude. The AFCS is a redundant system using two identical control units and two sets of stabilisation actuators.

Instrumentation: Flight instruments are standard for IFR, and include an AN/AQU-6A horizontal situation indicator.

Mission: Chelton 19-400 satellite communications antenna on some RAF helicopters.

Self-defence: RAF Chinooks have Tracor M-206/M-1 chaff/flare dispensers, GEC-Marconi ARI 18228 RWR and (from 1990) Loral AN/ALQ-157 IR jammers, Honeywell AN/AAR-47 missile approach warning equipment and Racal RNS252 Super TANS INS including GPS.

EQUIPMENT: Hydraulically powered winch for rescue and cargo handling, rearview mirror, plus integral work stands and step for maintenance.

ARMAMENT: Provision for two machine guns in crew door (starboard) and forward hold window (port).

DIMENSIONS, EXTERNAL:

Rotor diameter (each)	18.29 m (60 ft 0 in)
Rotor blade chord (each)	0.81 m (2 ft 8 in)
Distance between rotor centres	11.94 m (39 ft 2 in)
Length overall, rotors turning	30.14 m (98 ft 10¾ in)
fuselage: Army CH-47D	15.54 m (51 ft 0 in)
International CH-47D and MH-47E	15.87 m (52 ft 1 in)
MH-47E including probe	20.90 m (68 ft 7 in)
Width, rotors folded: CH-47D	3.78 m (12 ft 5 in)
MH-47E	4.78 m (15 ft 8 in)
Height to top of rear rotor head:	
CH-47D	5.78 m (18 ft 11½ in)
MH-47E	5.59 m (18 ft 4 in)
Ground clearance, rotors turning:	
front approach	3.33 m (10 ft 11 in)
rear approach: CH-47D	5.78 m (18 ft 11½ in)
MH-47E	5.59 m (18 ft 4 in)
Ground clearance, static, rear approach	4.90 m (16 ft 0½ in)
Wheel track (c/l of shock-absorbers):	
CH-47D	3.20 m (10 ft 6 in)
MH-47E	3.63 m (11 ft 11 in)
Wheelbase: CH-47D	6.86 m (22 ft 6 in)
MH-47E	7.87 m (25 ft 10 in)
Passenger door (fwd, stbd): Height	1.68 m (5 ft 6 in)
Width	0.91 m (3 ft 0 in)
Height to sill	1.09 m (3 ft 7 in)
Rear-loading ramp entrance: Height	1.98 m (6 ft 6 in)
Width	2.31 m (7 ft 7 in)
Height to sill	0.79 m (2 ft 7 in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck: Length	9.30 m (30 ft 6 in)
Width: mean	2.29 m (7 ft 6 in)
at floor	2.51 m (8 ft 3 in)
Height	1.98 m (6 ft 6 in)
Floor area	21.0 m² (226.0 sq ft)
Usable volume	41.7 m³ (1,474 cu ft)

AREAS:

Rotor blades (each)	7.43 m² (80.0 sq ft)
Rotor discs (total)	525.3 m² (5,655 sq ft)

WEIGHTS AND LOADINGS (CH-47D and International Chinook see tables, MH-47E as below):

Weight empty	12,210 kg (26,918 lb)
Useful load	12,284 kg (27,082 lb)
Max fuel weight	6,815 kg (15,025 lb)
Max T-O weight	24,494 kg (54,000 lb)

PERFORMANCE (CH-47D and International Chinook see tables, MH-47E at 22,680 kg; 50,000 lb as below):

Max level speed	154 kts (285 km/h, 177 mph)
Max cruising speed at S/L	140 kts (259 km/h, 161 mph)
Max rate of climb	561 m (1,840 ft)/min
Service ceiling	3,095 m (10,150 ft)
Hovering ceiling: IGE	2,990 m (9,800 ft)
IGE, ISA + 20°C (68°F)	2,410 m (7,900 ft)
OGE	1,675 m (5,500 ft)
OGE, ISA + 20°C (68°F)	1,005 m (3,300 ft)
Radius of action, deploy special forces team (1,814 kg; 4,000 lb) at 1,220 m (4,000 ft), 35°C (95°F) ambient temperature	505 n miles (935 km, 581 miles)
Range, self-deployment at 24,494 kg (54,000 lb) T-O weight	1,260 n miles (2,333 km, 1,449 miles)

UPDATED

OTHER AIRCRAFT

Details of **V-22 Osprey** will be found under Bell/Boeing entry; **RAH-66 Comanche** under Boeing Sikorsky.

NEW ENTRY

MILITARY AIRPLANES DIVISION (Boeing Defense & Space Group)

PO Box 3707, Seattle, Washington 98124-2207
Telephone: 1 (206) 655 1198
Fax: 1 (206) 655 7012

VICE PRESIDENT AND GENERAL MANAGER: Richard Hardy
PUBLIC RELATIONS MANAGER: Randy Harrison

UPDATED

BOEING 767 MILITARY VERSIONS

TYPE: Tanker/transport, Joint STARS and AWACS variants of Boeing 767 twin-turbofan airliner.

CURRENT VERSIONS: **767AWACS**: Described separately under Boeing Electronic Systems Division.

767T/T: Tanker/transport officially announced by Boeing, February 1995, in anticipation of Japanese order, based on 767-200R and stretched -300R (see Boeing Commercial Airplane Group entry); fuel dispensed through 'flying boom' and two underwing pods; boom remotely controlled from cabin, assisted by CCTV; first aircraft available 40 months from go-ahead. Larger 767-300R T/T will have up to seven underfloor tanks, with combined total of 31,500 litres (8,322 US gallons, 6,929 Imp gallons) of additional fuel and ability to dispense 70,000 kg (154,325 lb) of fuel at range of 500 n miles

(926 km, 575 miles); as freighter (side cargo door and reinforced floor) can carry up to 34,000 kg (74,957 lb) over 5,000 n miles (9,260 km, 5,753 miles)

767 Joint STARS: Boeing 767 proposed as alternative airborne platform to Boeing 707 for export version of this surveillance system (see Northrop Grumman E-8 in this section)

CUSTOMERS: None. Japan understood to require initial six or eight and eventual 14. Anticipated sales of 75, plus about 20 AWACS variants.

NEW ENTRY

BOEING EX

Development of this carrier-compatible maritime surveillance and early warning aircraft has been deferred by the US Navy's 1994 decision to maintain Hawkeye in production beyond 2000. Programme last described in 1994-95 *Jane's*

UPDATED

BOEING CALF (JAST)

TYPE: Advanced (STOVL) Common Affordable Lightweight Fighter

PROGRAMME: Boeing among five contenders in ARPA (US Advanced Research Projects Agency) contest, late 1992, initially rejected, but Boeing elected to continue private funding of own CALF design, hoping to re-enter competition in 1995, technology-sharing agreement with ARPA May 1993; one-tenth scale model testing begun, July 1993, Boeing partners comprise Pratt & Whitney for single YF119 engine and Rolls-Royce for direct lift and engine control technology

ARPA realigned SSF in January 1994 on Congressional instructions, allowing Boeing's direct lift design to compete against remote fans, Boeing awarded $32 million 26 month contract 25 March 1994 to study tri-service weapon system concept ($28 million), build virtual avionics engineering environment ($2 million) and define common tri-service airframe structure ($2 million)

In late 1994, Congress merged ASTOVL/CALF competition with JAST (Joint Advanced Strike Technology) programme, as detailed under US Navy in this section. Three subscale wind tunnel tests completed in 1994, tests of jet effects undertaken on model in NASA tunnel, January 1995, further trials at NASA Langley and NASA Ames into 1996. Testing due to begin in June 1995 at Seattle of 94 per cent scale powered model of Boeing CALF. Dassault of France is subcontractor to Boeing, working on multiservice common airframe concepts

DESIGN FEATURES: One-piece delta wing with movable endplates, normally canted inwards for stability. Single jet engine has second, directional, ventral exhaust nozzle at or near CG for vertical or short take-offs and transition to wingborne flight; VTOL penalty only 5 per cent of empty weight. Small design, weight approximately three-quarters of ARPA upper limit. Variants of production aircraft available for conventional operation from land (USAF), catapult-and-hook aircraft carrier operation (USN), and full STOVL (Marine Corps); last-mentioned has 95 per cent commonality with USAF aircraft, reducing to 87 per cent for USN version

PUBLIC AFFAIRS OFFICER: Foster Morgan

Boeing and Sikorsky began LHX collaboration June 1985, development centre initially Wichita, but transferred to Philadelphia in early 1990, then Trumbull in 1992

UPDATED

BOEING SIKORSKY RAH-66 COMANCHE

TYPE: Two-seat reconnaissance/attack and air combat helicopter

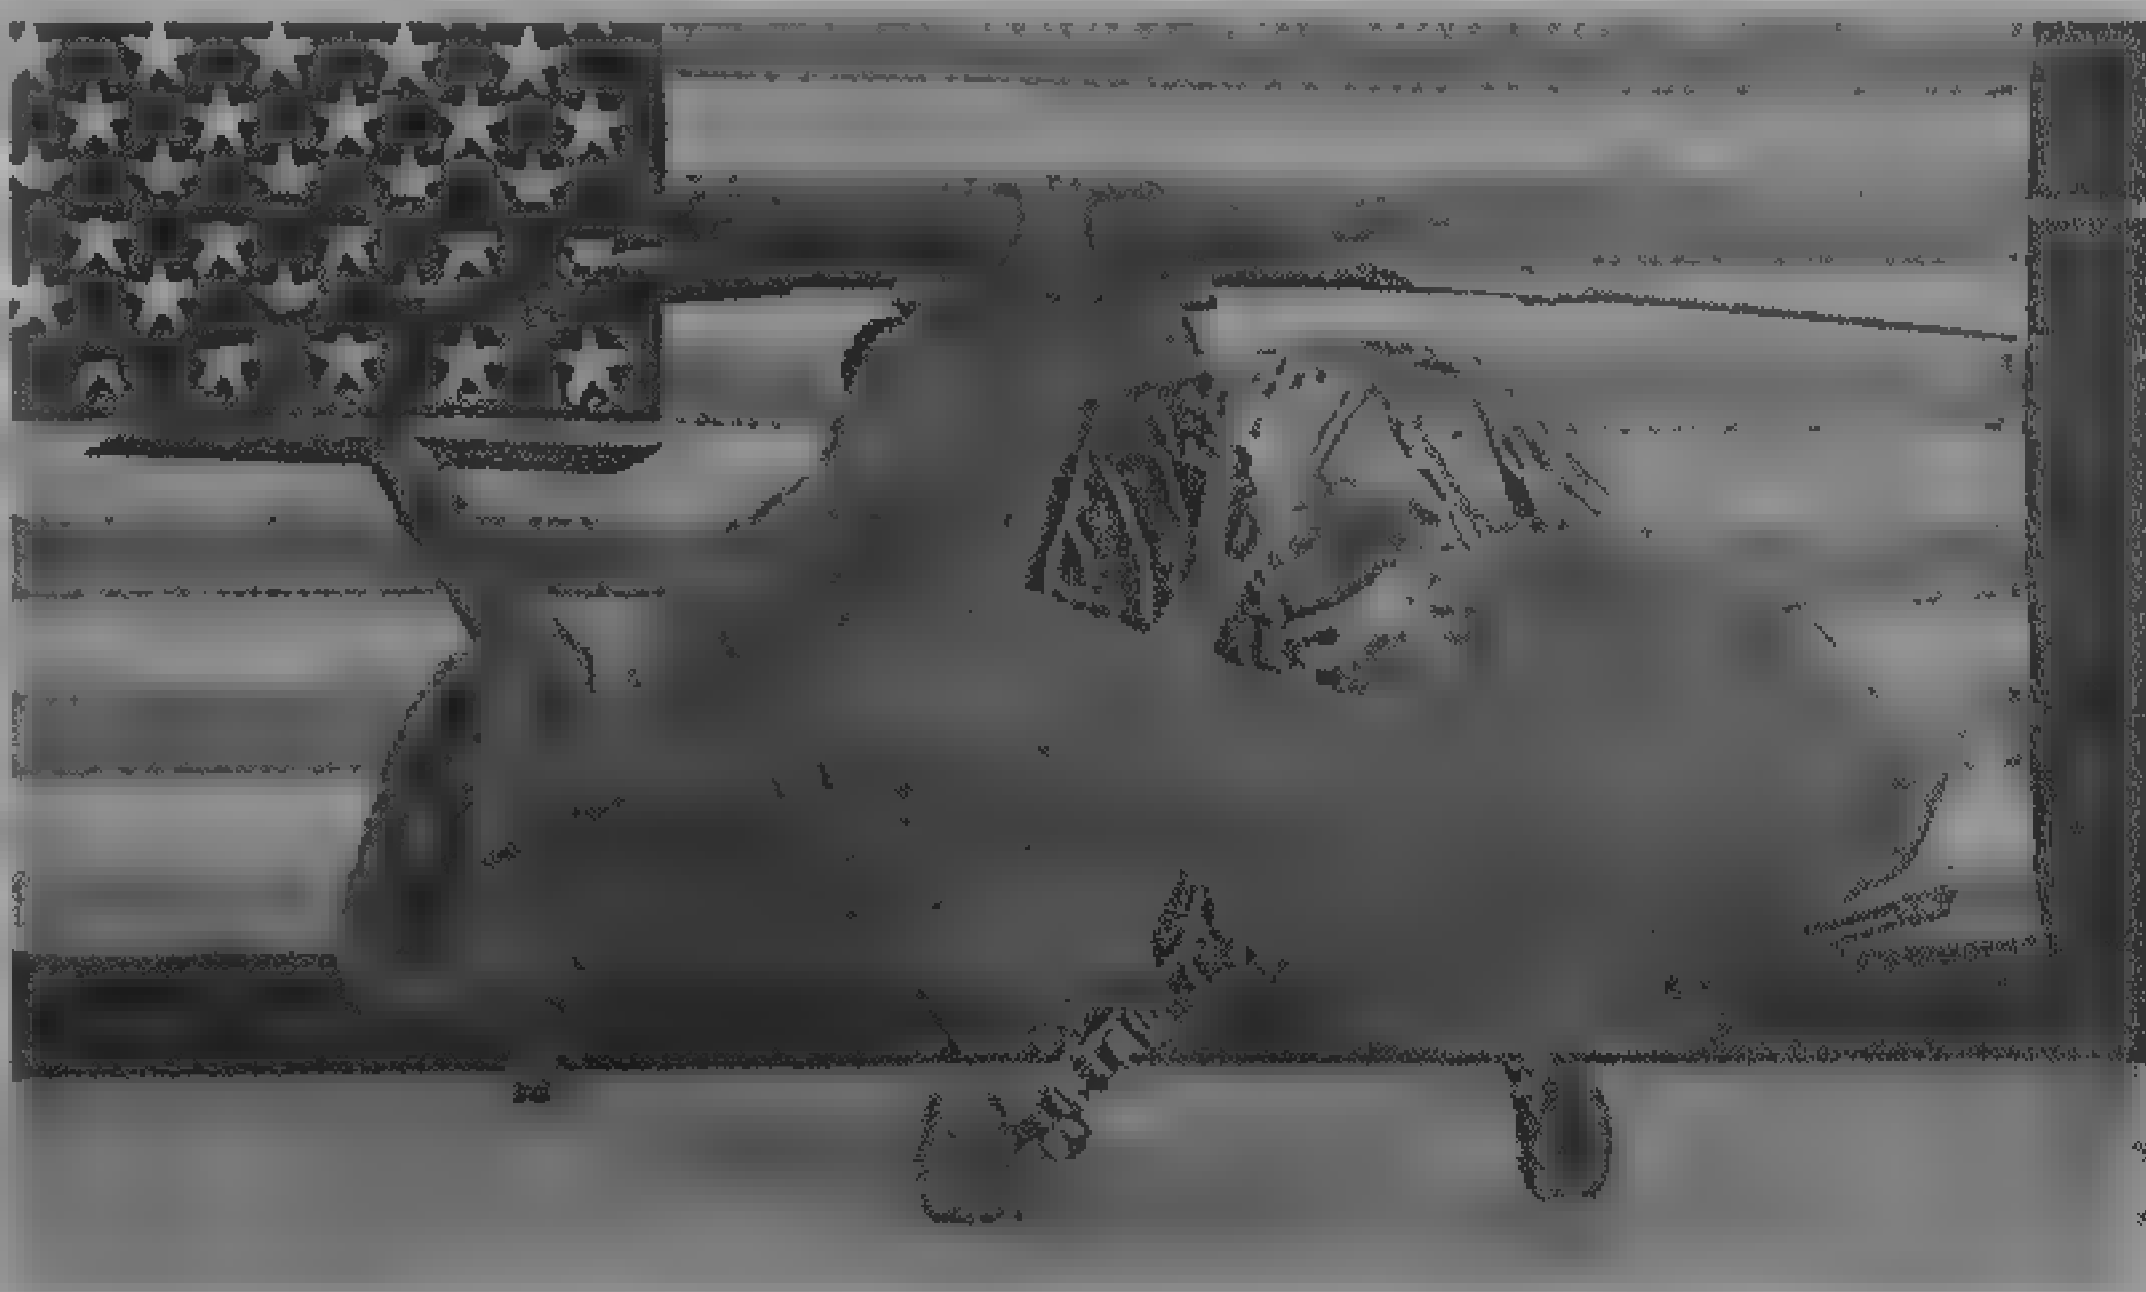
PROGRAMME: Light Helicopter Experimental (LHX) design concepts requested by US Army 1982, numerous changes of programme, current (March 1995) plan being given later in this account, original plan for 5,000 to replace UH-1, AH-1, OH-58 and OH-6, reduced in 1987 to 2,096 scout/attack only, replacing 3,000 existing helicopters, to 1,292 in 1990 (with further 389 possible). LHX request for proposals issued 21 June 1988, 23 month demonstration/validation contracts issued to Boeing Sikorsky First Team and Bell/McDonnell Douglas Super Team. Boeing Sikorsky selected 5 April 1991; to build four (reduced to three in 1992, then two in December 1994) YRAH-66 demonstration/validation prototypes in 78 month programme plus static test article (STA) and propulsion system testbed (PSTB)

LHTEC T800 engine specified October 1988. LHX designation changed to LH early 1990, then US Army designation RAH-66 Comanche in April 1991. Original timetable was: 39 month FSD phase with two additional prototypes, starting August 1995, first low-rate production contract due October 1996; initial 72 helicopters to be built by 2002, first full-rate production contract due November 1998, balance of 1,220 built by 2010. IOC in December 1998. Longbow radar to be installed from production Lot 4 onwards

FY93 budget delayed development and production phases indefinitely, anticipating Longbow integration from first aircraft, development and production phases reinstated January 1993; further three prototypes then scheduled to be built for engineering and manufacturing development (EMD) phase, in FY98-03; first production procurement in FY99; low-rate production of first 24 in FY01, followed by 48 in FY02, 96 in FY03, then 120 per year. IOC in January 2003.

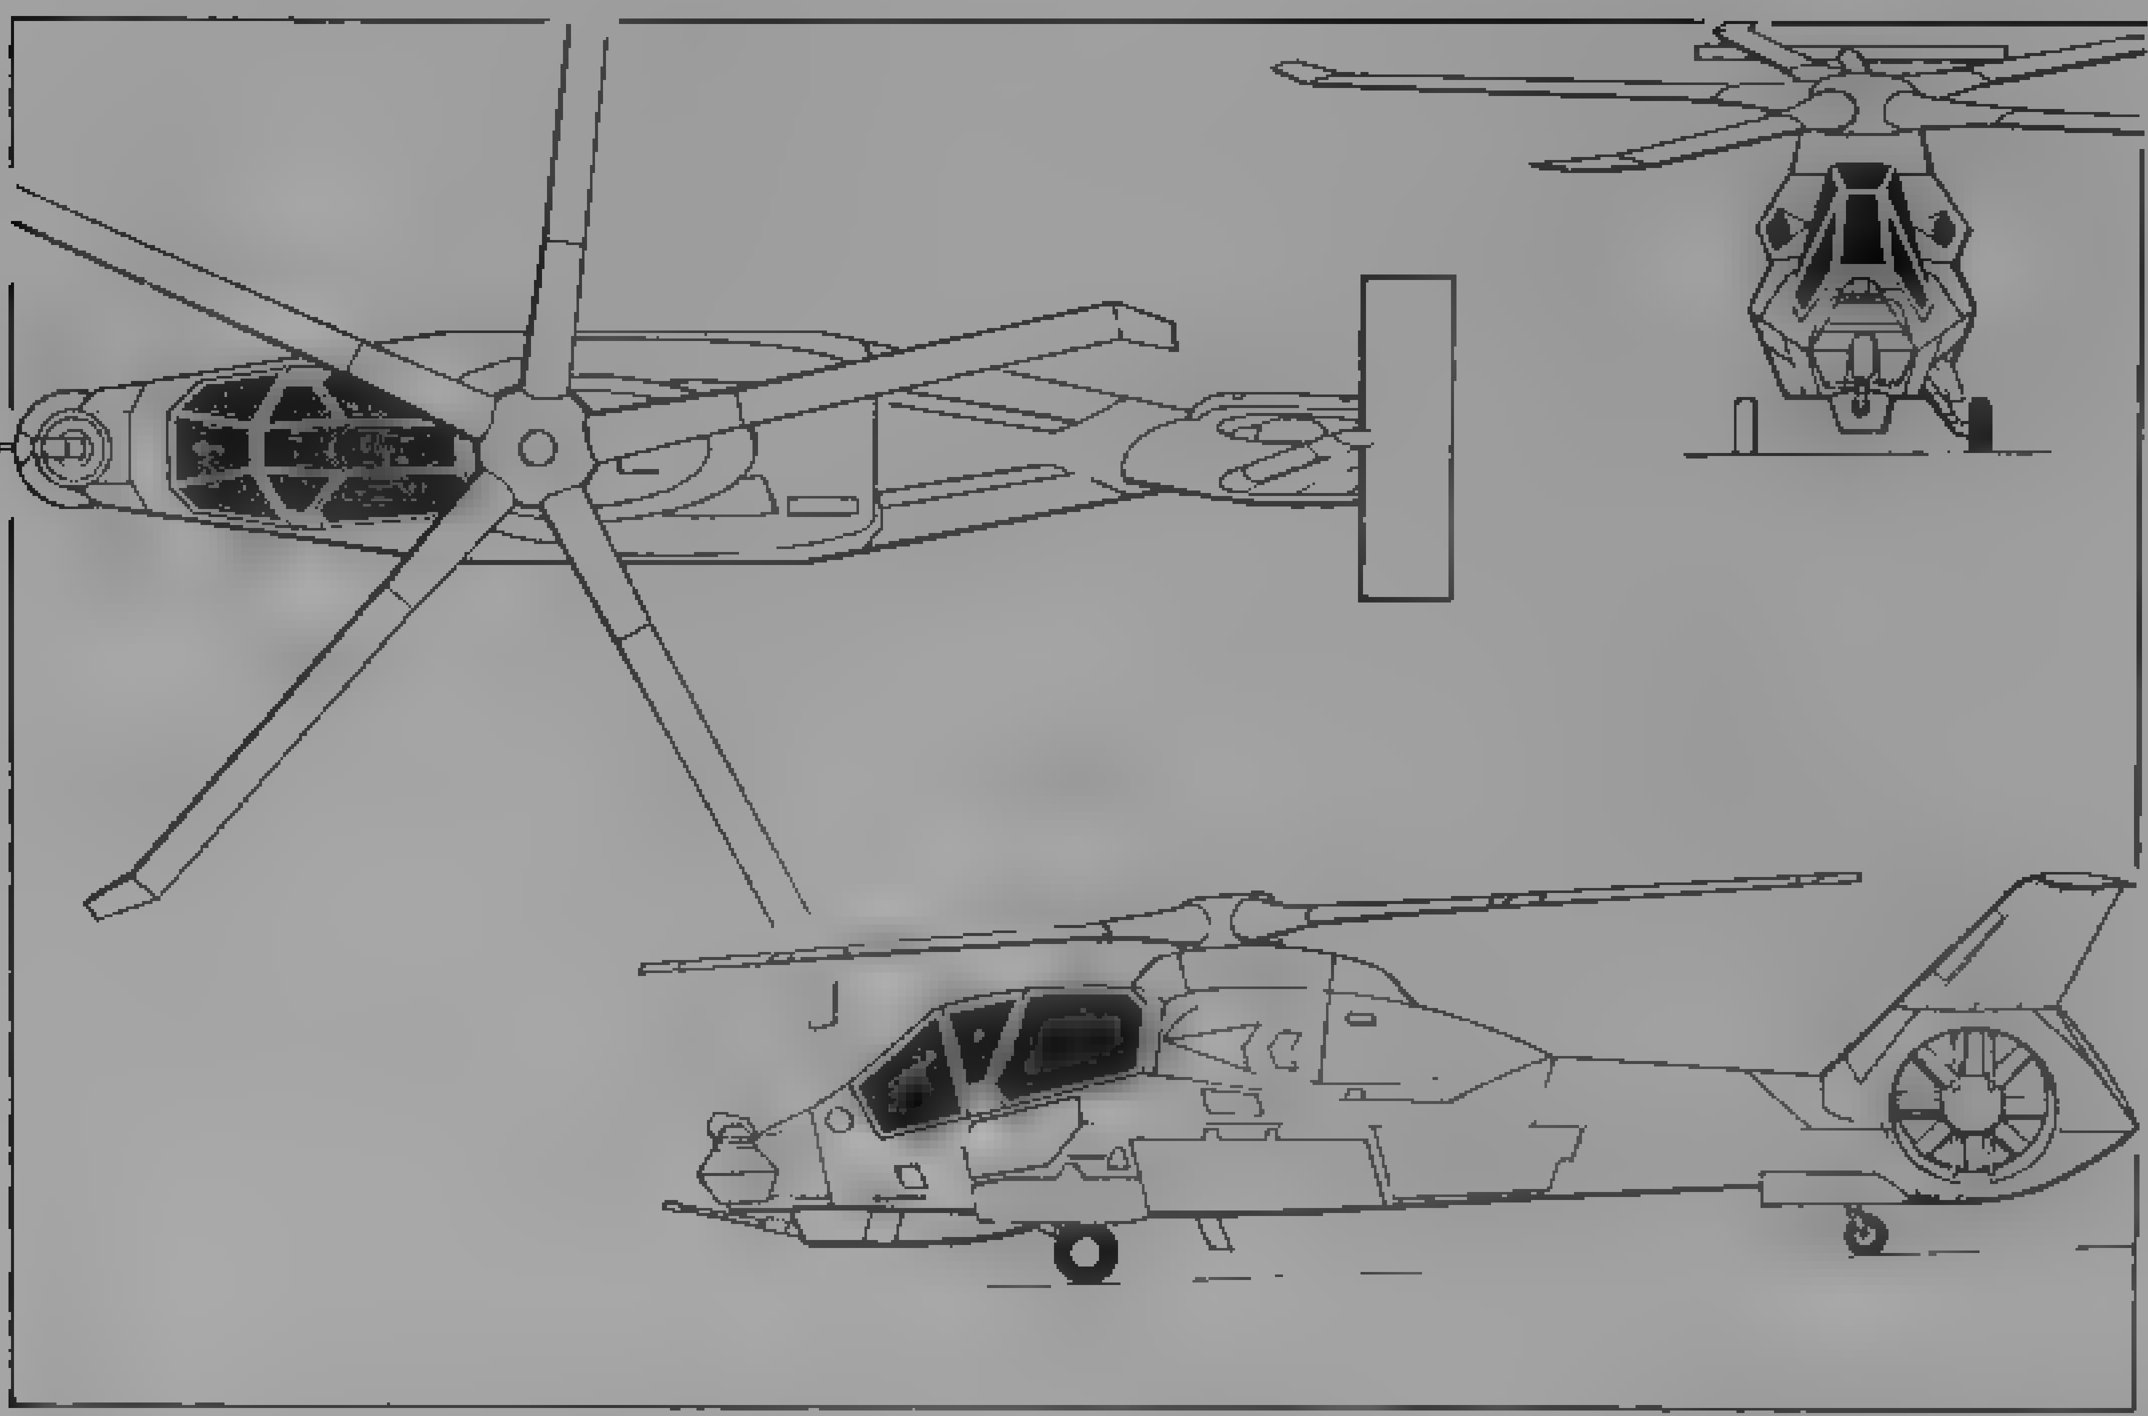
Prototype critical design review, completed in December 1993, authorised production of three YRAH-66 prototypes (first item for which manufactured in September 1993). At same time, however, further R&D economies under study, December 1994 decision reduced dem/val phase to two prototypes (lacking Longbow/Hellfire capability) and recommended deferment of production, funding delay postponed maiden flight target date from November 1995 to May 1996

In early 1995, US Army attempted to restructure programme to reinstate production phase, this successful, and **current Comanche programme** now planned as follows: two prototypes; six 'early operational capability' (EOC) aircraft with reconnaissance equipment only



RAH-66 Comanche roll-out 25 May 1995

1995



Boeing Sikorsky RAH-66 Comanche in revised, 1995, configuration *(Jane's/James Goulding)*

1995

Working mockup of RAH-66 front cockpit shows two central multifunction visual displays and central input keyboard flanked by system and weapon information displays. Sidestick cyclic control is on the starboard console

1995

(no armament) to enter service with US Army trials unit in 2001 for two years of operational development. production decision in 2003, 6,500 hours flown by eight RAH-66s up to 2006, first operational unit to form in 2007 with initial two production aircraft, plus six EOC Comanches which meanwhile retrofitted with armament. (Delay in development of weapons system allows funding to pay for EOC aircraft.) Planned procurement of 1,292

Prototype construction began 29 November 1993 with forward fuselage at Sikorsky, Stratford, Boeing built rear in Philadelphia. STA airframe delivered to Stratford 1994, at which time PSTB under construction there, front and rear sections of prototype joined at Stratford 25 January 1995, completed helicopter rolled-out 25 May 1995, first flight planned in November 1995, second prototype to follow in 1996.

First -801 growth version of T800 turboshaft began bench runs in March 1994, -801 preliminary design review completed May 1993, critical design review March 1995

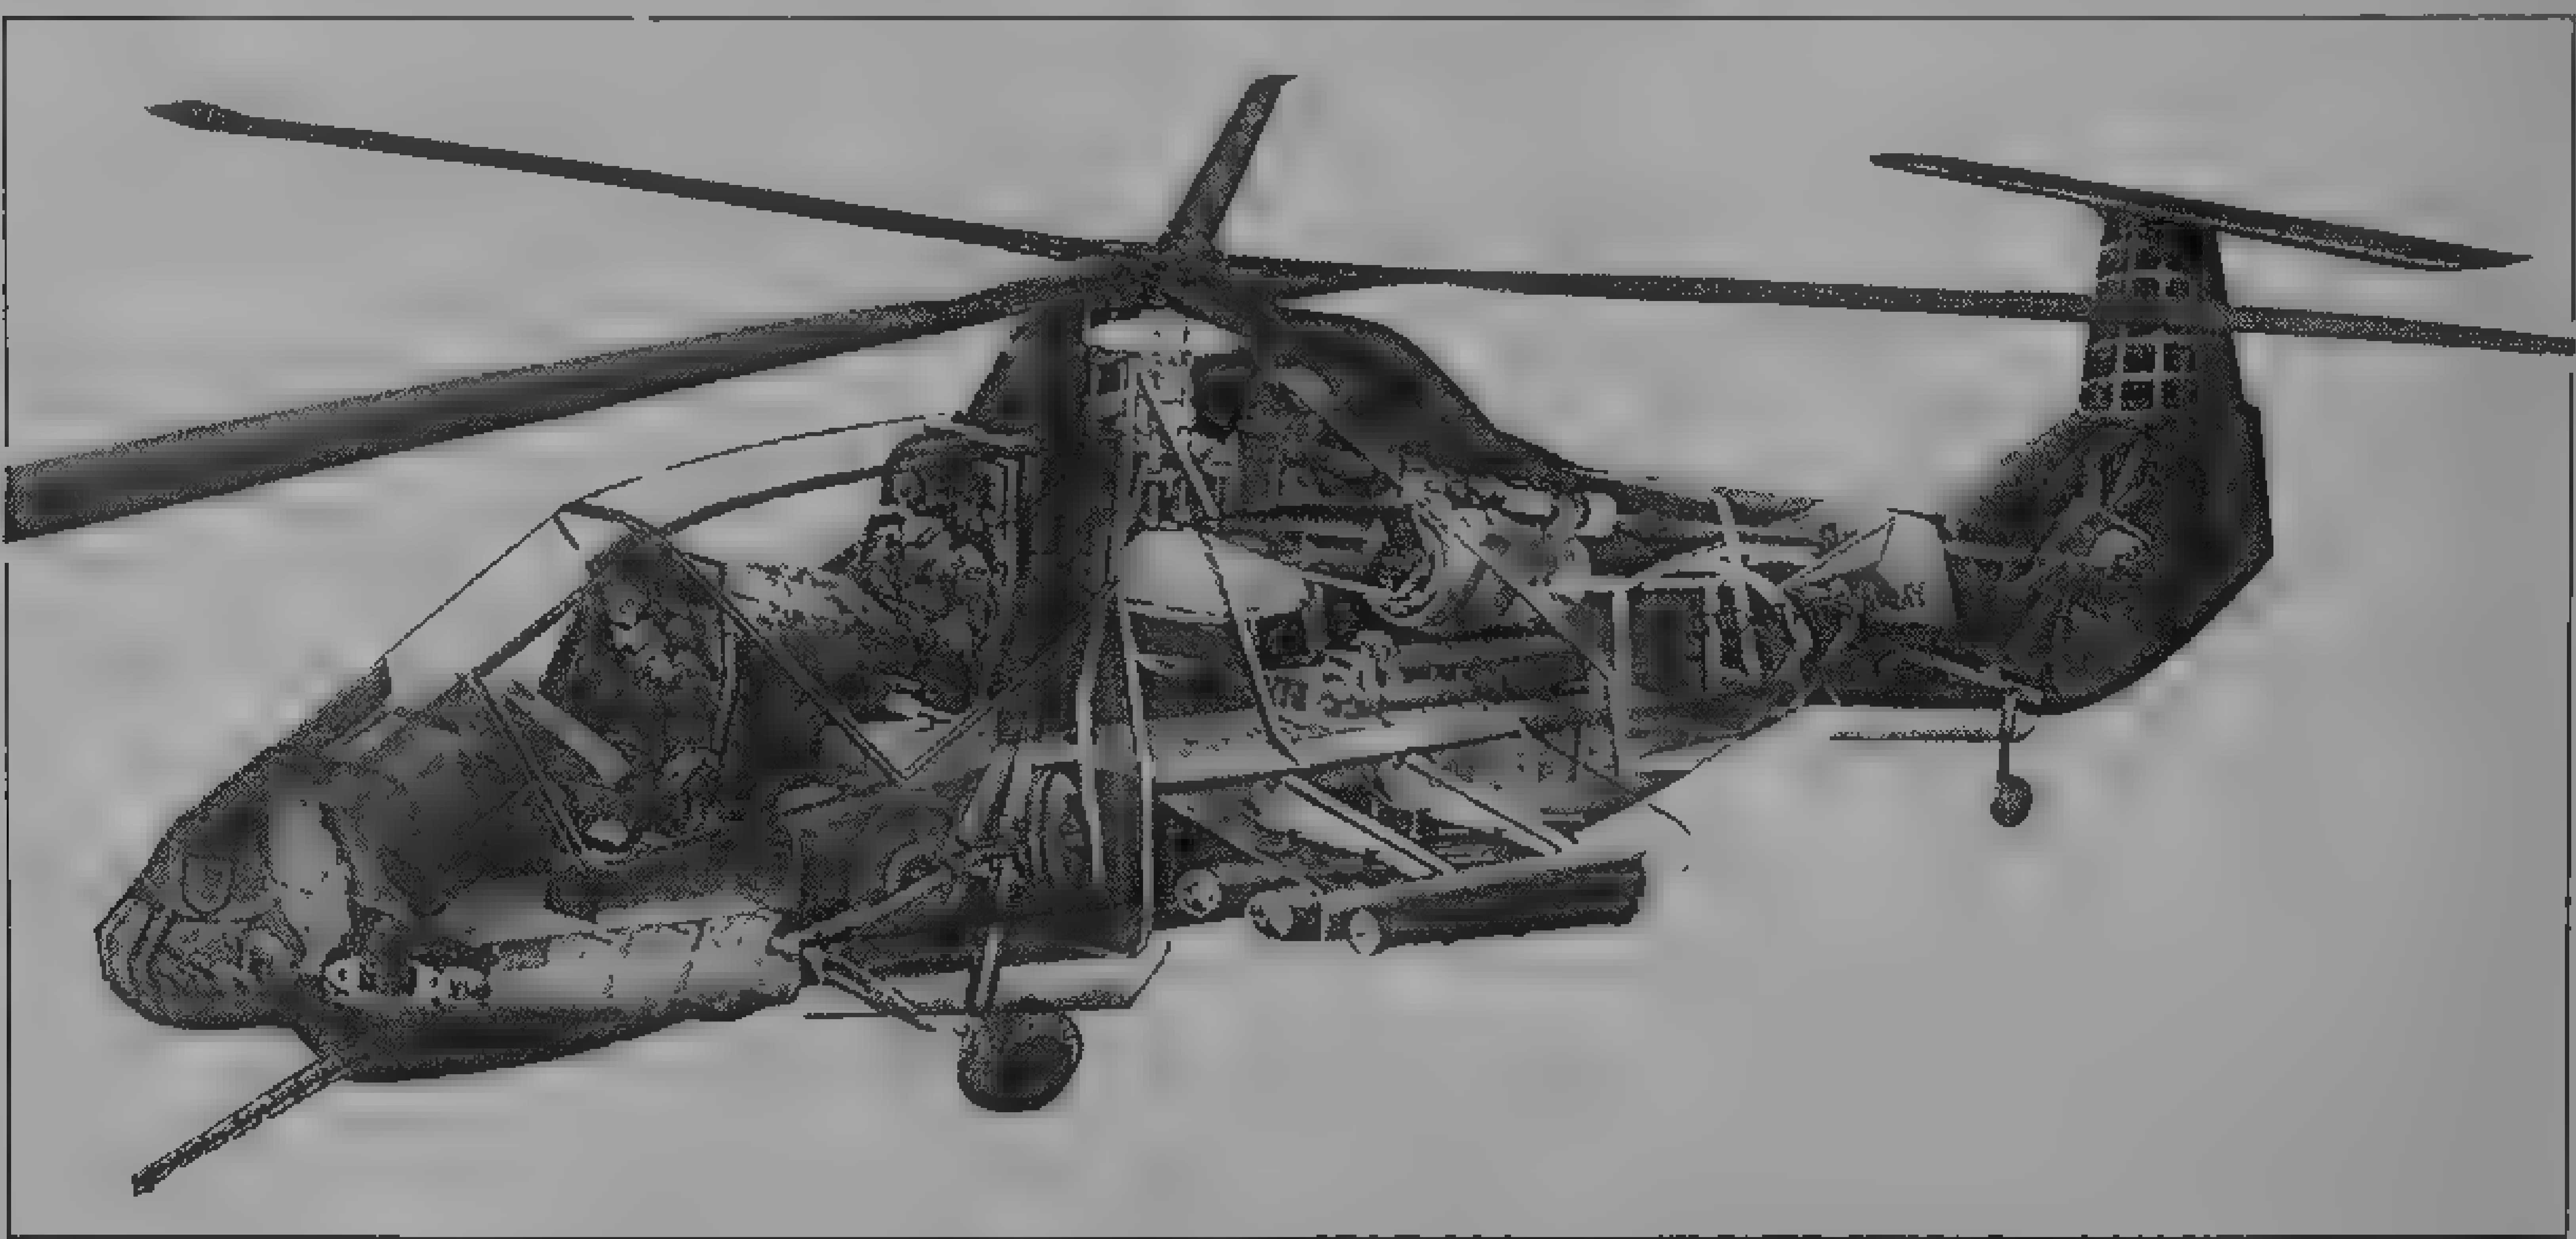
CUSTOMERS: US Army, two prototypes and six 'early operational capability' aircraft

COSTS: $34,000 million programme, including $1 960 million dem/val and $900 million FSD but reduced to $2 240 million dem/val/FSD between 1993-97 by cancellation of three of six planned prototypes, $8 9 million flyaway unit cost (1988 values), increased to $13 million by early 1993 By 1993 (in 1994 dollars, estimated), procurement unit cost $21 million, programme unit cost $27 million, Restructured programme allocated $2 18 billion between FY96 and FY01

DESIGN FEATURES: RAH-66 is lighter, but only slightly smaller, than AH-64 Apache, specified empty weight of 3,402 kg (7,500 lb) increased to 3,522 kg (7,765 lb) by early 1992, as result of Army add-ons, including allowance for Longbow radar, mission equipment package has maximum commonality with F-22A ATF technology Design has eight-blade fan-in-fin shrouded tail rotor and five-blade all-composites bearingless main rotor system, and internal weapon stowage

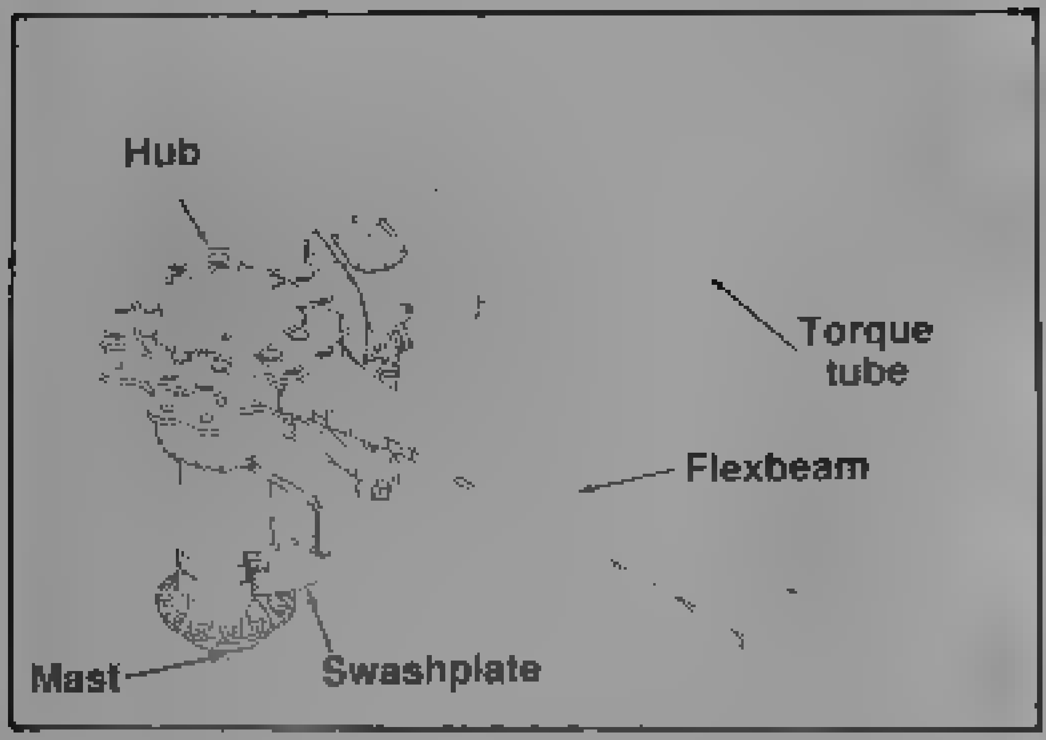
Split torque transmission, obviating need for planetary gearing T tail unit (upper part folds down for air transportation) Detachable stub-wings for additional weapon carriage and/or auxiliary fuel tanks (EFAMS external fuel and armament management system). Radar, infra-red, acoustic and visual signature requirements set to defeat threats postulated by US Army Eight deployable inside Lockheed C-5 Galaxy with only removal of main rotor ready for flight 20 minutes after transport lands. Combat turnround time 13 minutes

Other members of Boeing Sikorsky First Team include Boeing Defense and Space Group (flight control computer), Lockheed Martin Armament Systems, with Giat of France (turreted gun and ammunition feed), Hamilton Standard (flight control computer, wide field of view helmet mounted display system, air data system, environmental control and collective protection system, and air vehicle interface computer), Harris Corporation (3D digital map display, super high-speed databus, sensor data distribution network, multifunction controls and displays), Kaiser Electronics (helmet-mounted display system), Link Flight Simulation (operator training systems), Lockheed Martin (electro-optical night navigation and targeting systems), TRW Military Electronics Division with Westinghouse Defense and Electronics (signal and data processors and aircraft survivability equipment)



Internal arrangement of the Boeing Sikorsky RAH 66 Comanche, nose sensor shape has since been modified

1995



Comanche rotor head design

1995

FLYING CONTROLS: Dual triplex fly-by wire, with sidestick cyclic pitch controllers and normal collective levers. Main rotor blades removable without disconnecting control system.

STRUCTURE: Largely composite airframe and rotor system. Fuselage built around composite internal box beam, non load-bearing skin panels, more than half of which can be hinged or removed for access to interior (for example weapons bay doors can double as maintenance work platforms). Eight-blade Fantail rear rotor operable with 12.7 mm calibre bullet hits, or for 30 minutes with one blade missing. Main rotor blades and tail section by Boeing, forward fuselage and final assembly by Sikorsky.

LANDING GEAR: Retractable tail wheel type, with single wheel on each unit. Main units can 'kneel' for air transportability.

POWER PLANT: Two LHTEC T800-LHT-801 turboshafts, each rated at 1,068 kW (1,432 shp). Transmission rating 1,639 kW (2,198 shp). Internal fuel capacity 1,142 litres (301.6 US gallons, 251.1 Imp gallons). Four external tanks totalling 3,407 litres (900 US gallons, 749.4 Imp gallons) for self-deployment, total fuel capacity 4,548 litres (1,201.6 US gallons, 1,000.5 Imp gallons). Main rotor tip speed (100 per cent N_r) 221 m (725 ft)/s, 355 rpm, normal operation from 95 per cent (quiet mode) to 107 per cent (load factor enhancement).

ACCOMMODATION: Pilot (in front) and WSO in identical stepped cockpits, pressurised for chemical/biological warfare protection. Crew seats resist 11.6 m (38 ft)/s vertical crash landing.

AVIONICS: Maximum commonality required with USAF Lockheed F-22 ATF programme.

Comms: Dual anti-jam VHF-FM and UHF-AM Have Quick tactical communications, VHF-AM, anti-jam HF-SSB IFF.

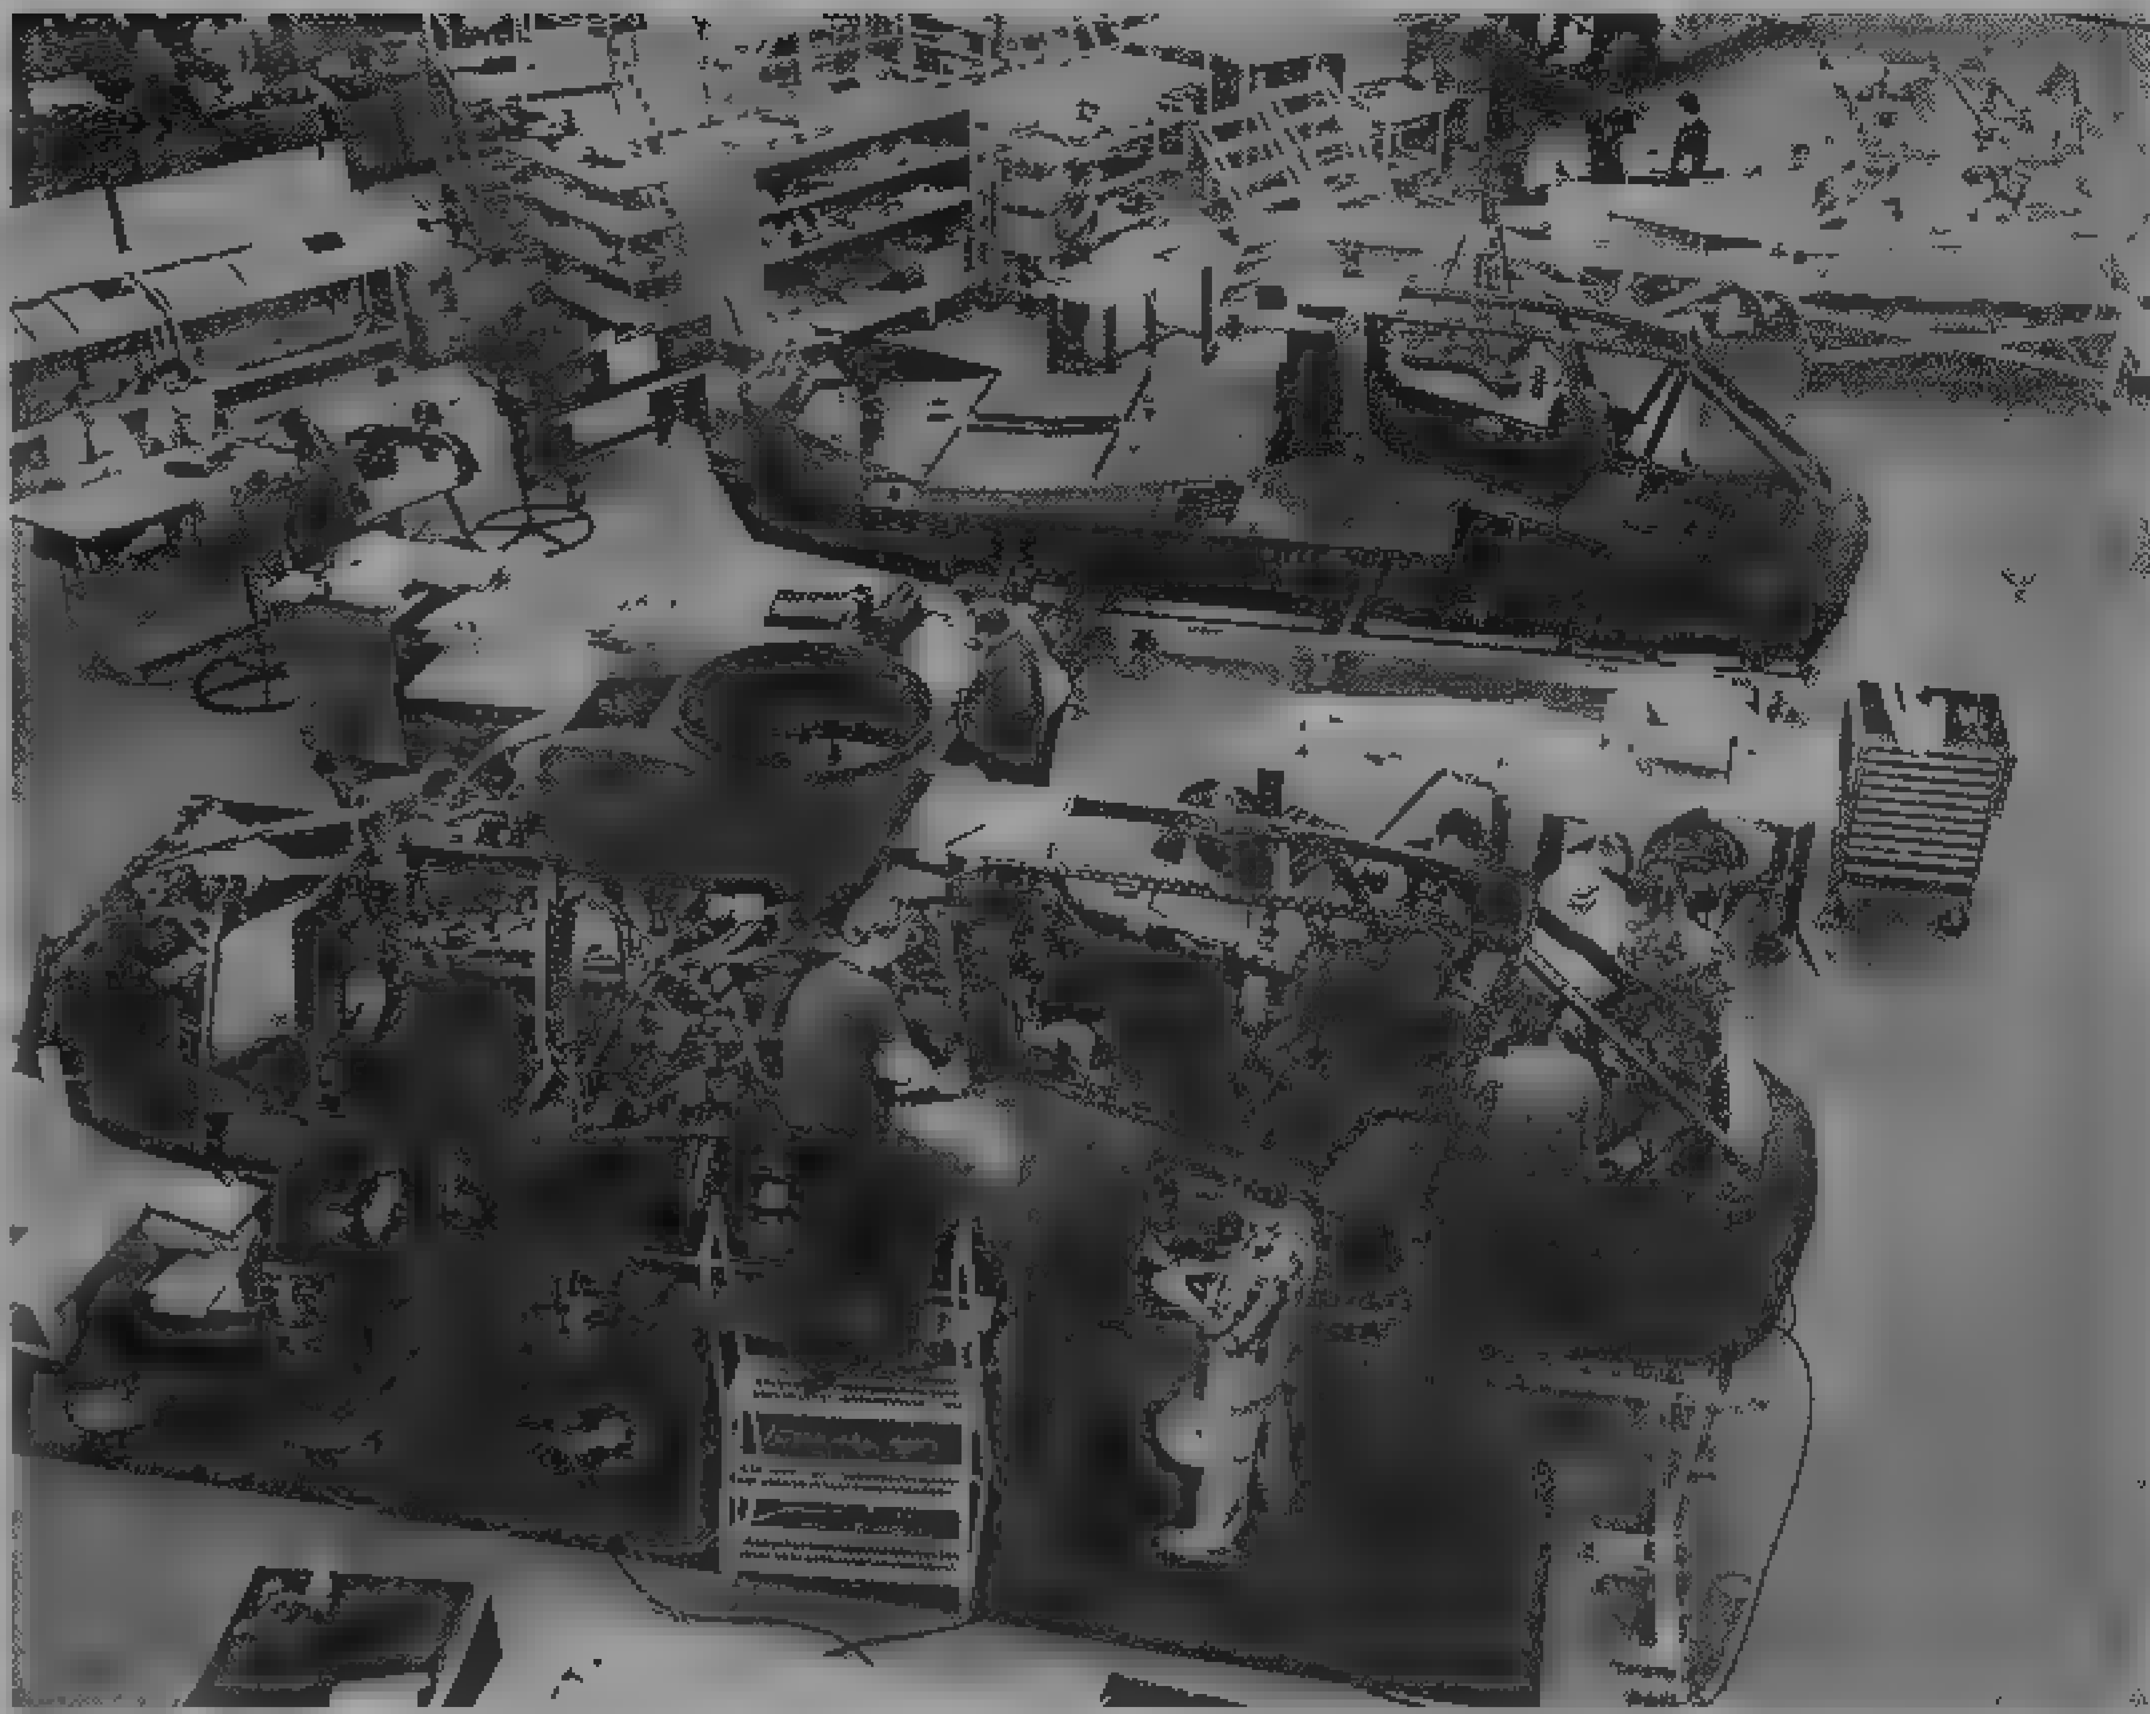
Flight: Airborne target handover system, GPS and radar altimeter. Litton AHRS, comprising two fibre optic LN-210C and one LN-100C gyro platforms.

Instrumentation: Lockheed Martin night vision pilotage system and Kaiser/Hamilton Standard helmet-mounted display, integrated cockpit, second generation FLIR targeting and digital map display. Two 15.2 × 20.3 cm (6 × 8 in) multifunction flat screen LCDs in each cockpit (one monochrome for FLIR/TV, one colour for moving map tactical situation and night operations), plus two 10.2 × 16.9 cm (4 × 6¾ in) multipurpose display (MPD) flat screen monochrome LCDs for fuel, armament and communications information in each cockpit. Three redundant databases: one low-speed (MIL-STD-1553B), one high-speed and one very high-speed (fibre optic based) for signal data distribution.

Mission: Miniaturised version of Longbow radar in one-third of fleet although all to have carriage provision.

Self-defence: Laser warning and radar warning receivers, RF and IR jammers.

ARMAMENT: Lockheed Martin three-barrel 20 mm cannon in Giat undernose turret, with up to 500 rounds (320 rounds normal for primary mission). Side-opening weapons bay door in each side of fuselage, on each of which can be mounted up to three Hellfire or six Stinger missiles or other weapons. Four more Hellfires or eight Stingers can be deployed from multiple carriers under tip of each optional stub-wing, or auxiliary fuel tank for self-deployment. All weapons can be fired, and targets designated, from push-buttons on collective and sidestick controllers.



Final assembly of Comanche prototype forward fuselage at Sikorsky, Stratford, 1994. STA airframe in centre, PSTB at rear

1995

DIMENSIONS, EXTERNAL:

Main rotor diameter	11.90 m (39 ft 0½ in)
Fantail diameter	1.37 m (4 ft 6 in)
Fantail blade chord	0.17 m (6¾ in)
Length, overall, rotor turning	14.28 m (46 ft 10¼ in)
fuselage (excl gun barrel)	13.20 m (43 ft 3¾ in)
Height over tailplane	3.37 m (11 ft 0¾ in)
Fuselage: Max width	2.04 m (6 ft 8¼ in)
Width over mainwheels	2.31 m (7 ft 7 in)
Tailplane span	2.82 m (9 ft 3 in)

AREAS:

Main rotor disc	111.21 m² (1,197.04 sq ft)
Fantail disc	1.47 m² (15.90 sq ft)

WEIGHTS AND LOADINGS (estimated):

Weight empty	3,522 kg (7,765 lb)
Max useful load	2,296 kg (5,062 lb)
T-O weight: primary mission*	4,807 kg (10,597 lb)
max alternative	5,819 kg (12,828 lb)
max (self-deployment)	7,896 kg (17,408 lb)

* *with two crew, full internal fuel, 320 rds gun ammunition, four Hellfires and two Stingers*

PERFORMANCE (at 1,220 m, 4,000 ft and 35°C; 95°F, estimated):

Max level (dash) speed	175 kts (324 km/h; 201 mph)
Vertical rate of climb	432 m (1,418 ft)/min
Masking	1.6 s
180° hover turn to target	4.7 s
Snap turn to target at 80 kts (148 km/h; 92 mph)	4.5 s
Ferry range with external tanks	1,260 n miles (2,334 km; 1,450 miles)
Endurance (standard fuel)	2 h 30 min
g limits	+3.5/−1

CESSNA

CESSNA AIRCRAFT COMPANY (Subsidiary of Textron Inc)

PO Box 7706, Wichita, Kansas 67277-7706
Telephone: 1 (316) 941 6000
Fax: 1 (316) 941 7812
Telex: 417 400

CHAIRMAN AND CEO: Russell W. Meyer Jr
EXECUTIVE VICE-PRESIDENT AND COO: David G. Assard
EXECUTIVE VICE-PRESIDENT, AIRCRAFT MARKETING AND PRODUCT SUPPORT: Gary W. Hay
GENERAL MANAGER, SINGLE-ENGINE BUSINESS: Pat Boyarski
VICE-PRESIDENT PUBLIC RELATIONS: David M. Franson

Founded by late Clyde V. Cessna 1911, incorporated 7 September 1927, former Pawnee and Wallace aircraft divisions in Wichita consolidated in Aircraft Division mid-1984, acquired by General Dynamics as wholly owned subsidiary 1985, acquisition by Textron announced February 1992.

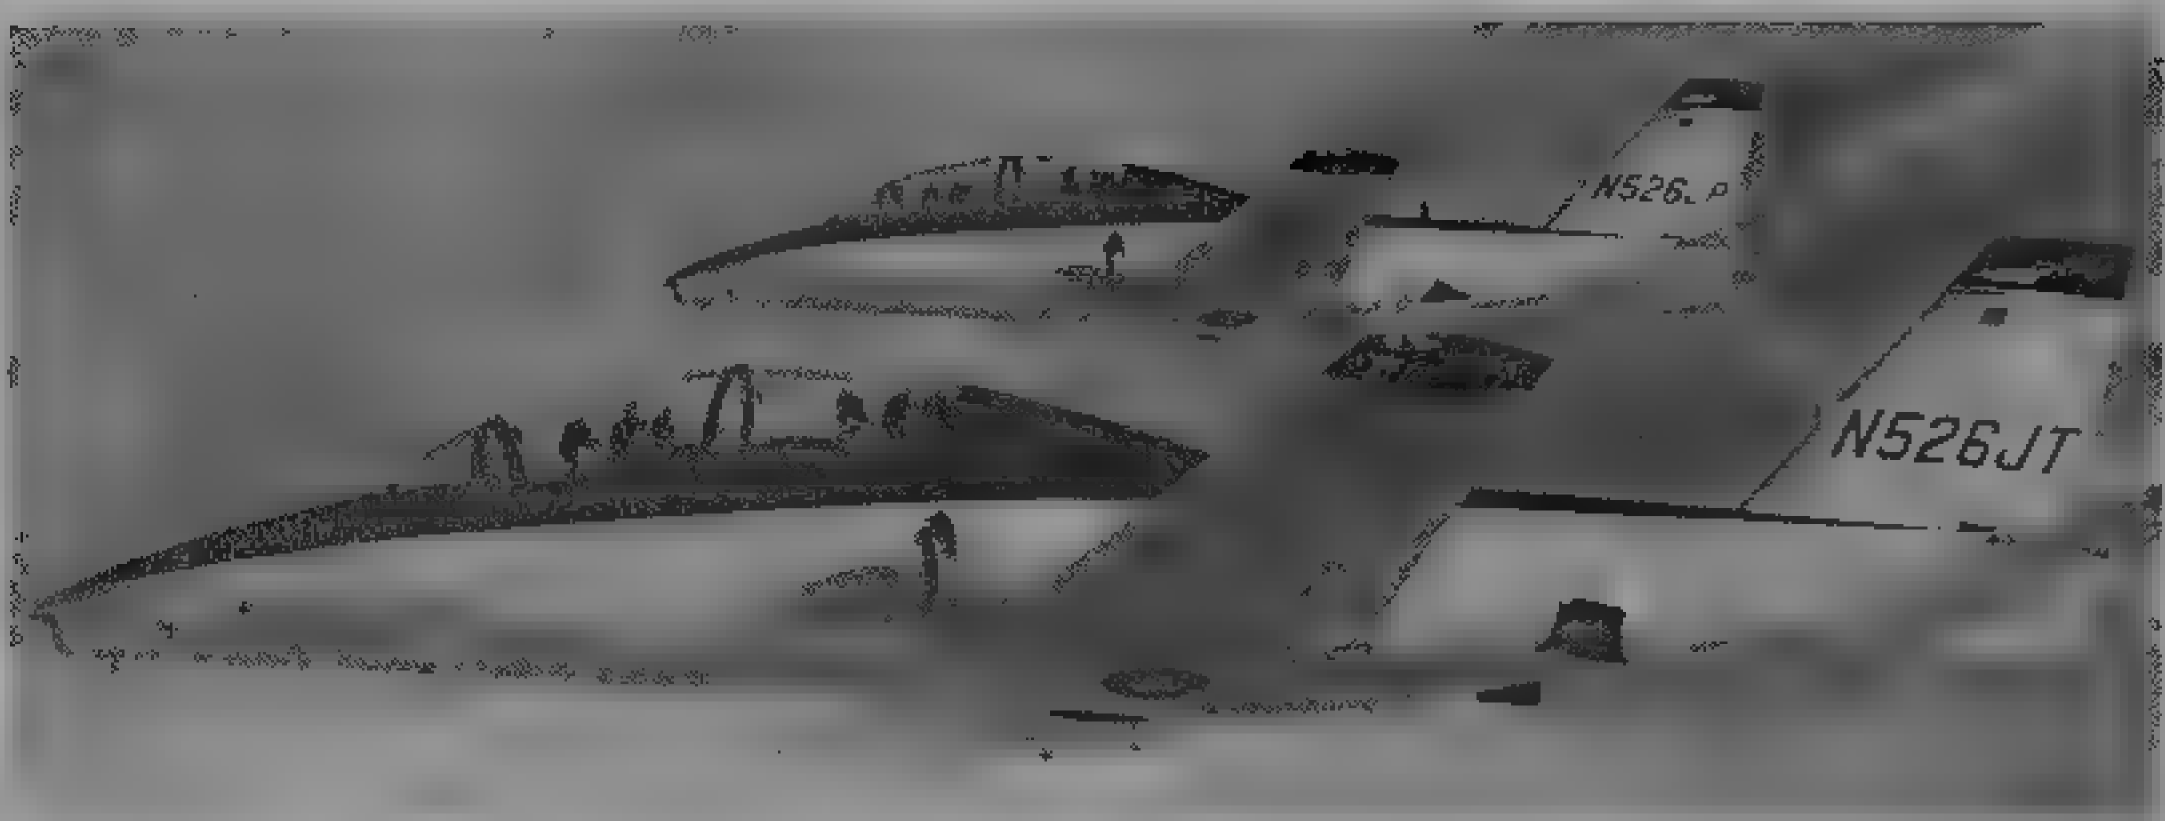
Owned subsidiaries include McCauley Accessory Division, Dayton, Ohio, Cessna Finance Corporation in Wichita. Sold 49 per cent interest in Reims Aviation of France to Compagnie Française Chaufour Investissement (CFCI) February 1989; Reims continues manufacturing Cessna F406 Caravan II and holds option to resume construction of Cessna single-engined aircraft when Cessna restarts production.

Total 178,193 aircraft produced by end of 1994. 172 aircraft delivered in 1994, comprising six Caravans, 45 Grand Caravans, nine Citation IIs, 39 Citation Vs, 10 Citation VIs, 14 Citation VIIs and 49 CitationJets, further 39, including 20 Caravans, in first quarter of 1995. Total employees 5,600.

UPDATED

CESSNA 526 JPATS CITATIONJET

TYPE: Tandem two-seat jet trainer, was unsuccessful contender in USAF/USN Joint Primary Aircraft Training System programme.



First (nearest camera) and second prototypes of the Cessna 526 JPATS CitationJet, note jetpipe deflectors on former

1995

PROGRAMME: Announced intention of entering JPATS competition with 'all American' aircraft, 1992, selected Williams International as engine partner. First flight of first prototype (N526JT) 20 December 1993, second aircraft N526JP) 2 March 1994, certified June 1994.

COSTS: Estimated at under $3 million per aircraft.

DESIGN FEATURES: Based on 525 CitationJet (refer later entry), using similar but shorter three-spar laminar flow wings with modified ailerons, redesigned tail, Williams Rolls engines in fuselage, stepped cockpits under military style canopy. Wings strengthened for 7 g. Similar flight control systems, UPC zero/zero ejection seats, cockpit pressurised to 0.34 bar (5.0 lb/sq in).

STRUCTURE: Almost entirely aluminium alloy, minimal use of composites for non-structural components only.

POWER PLANT: Two Williams-Rolls F129 turbofans, each derated to 6.67 kN (1,500 lb st). Fuel tanks in wings and fuselage.

SYSTEMS: Hydraulic system, pressure 207 bars (3,000 lb/sq in). Electrical system (28 V DC only; no AC) powered by two 300 kVA starter/generators and a 28 V lead-acid battery.

AVIONICS: Bendix/King 'glass' cockpits with 12.7 cm (5 in) square EFIS displays.

DIMENSIONS, EXTERNAL:

Wing span	11.28 m (37 ft 0 in)
Length overall	12.395 m (40 ft 8 in)
Height overall	3.81 m (12 ft 6 in)

WEIGHTS AND LOADINGS:

Weight empty	2,232 kg (4,920 lb)
Fuel weight	907 kg (2,000 lb)
Max T-O weight	3,356 kg (7,400 lb)

PERFORMANCE (estimated):

Max level speed	270 kts (500 km/h, 311 mph) CAS
Approach speed, flaps down, 50% fuel	99 kts (184 km/h, 114 mph) CAS
Stalling speed, flaps down, 50% fuel	76 kts (141 km/h, 88 mph) CAS
Service ceiling	above 10,670 m (35,000 ft)
Time to 5,485 m (18,000 ft)	5 min 48 s
Range, IFR reserves	1,050 n miles (1,945 km, 1,208 miles)

UPDATED

CESSNA SINGLE-ENGINED LIGHT AIRCRAFT

In Autumn 1993, Cessna established Single-Engine Restart Task Force to investigate possibility of resuming manufacture of some piston-engined light aircraft types whose production had been suspended in mid-1980s. Following President Clinton's signature on 17 August 1994 of General Aviation Revitalization Act, the company affirmed plans to resume production of **Cessna 172 Skyhawk, 182 Skylane, 206 Stationair** and **T206 Turbo Stationair**.

On 19 May 1994 Cessna broke ground for a 46,450 m² (500,000 sq ft) new factory at Independence Municipal Airport, Montgomery County, Kansas, to house final assembly, painting, flight test, engineering, finance, marketing and human resource operations for single-engine light aircraft range. Factory scheduled to open on 4 July 1996 and by 1998 will employ 1,000 people, and produce 2,000 aircraft annually.

New aircraft will be manufactured on existing FAA type certificates. Some 90 to 95 per cent of original tooling for 172, 182 and 206 can be salvaged from external store at Cessna's Pawnee, Wichita, plant. Structurally and externally, aircraft are expected to be similar to previous models, but will incorporate new fuel-injected Textron Lycoming engines with revised fuel systems and electronic ignition, new flight control systems, state-of-the-art Bendix/King avionics, metal instrument panels, and new safety features and interiors. Planned engines are 134 kW (180 hp) IO-360-A4M in the 172, 168 kW (225 hp) IO-540 in 182, and IO-580 (540 derivative) in 206. Cessna began taking deposits for delivery positions in June 1995.

The 172 will be first to reappear, in second half of 1996, with first delivery in early 1997, and will form about 45 per cent of first year's production total. Prototype 'Restart 172' (N6786R), modified from 1978 model 172N with 149 kW (200 hp) Textron Lycoming IO-360 engine derated to 119 kW (160 hp), made first flight at Wichita 19 April 1995. Initial batch of 25 to 30 172s will be built at Wichita to serve as company demonstrators prior to start of production at Independence. Manufacture of 182, 206 and T206 will follow at three to four month intervals. First new-production 172 and 182 will be delivered to the Aircraft Owners and Pilots Association for use as prizes in its 1996 and 1997 membership sweepstakes. Other models being considered for resumed production include 152 Aerobat, 172RG Cutlass, 182RG Skylane RG and the 210 Centurion. Descriptions of 172, 182 and 206 (as previously powered) may be found in mid-1980s and earlier editions of *Jane's*.

UPDATED

REIMS-CESSNA F406/CARAVAN II

Turboprop version of Cessna 400 series developed in France by Reims Aviation, which see.

CESSNA 208 CARAVAN I/U-27A

TYPE: Single-turboprop civil and military multimission aircraft.

PROGRAMME: First flight of engineering prototype (N208LP) 9 December 1982; first production Caravan I rolled-out August 1984, FAA certification October 1984, full production started 1985, wheeled float version certificated March 1986.

CURRENT VERSIONS: **208**: Basic utility model for passengers or cargo. Commissioned by Federal Express Corporation as **Cargomaster** freighter with special features including T-O weight 3,629 kg (8,000 lb), Bendix/King avionics, no cabin windows or starboard rear door, more cargo tie-downs, additional cargo net, underfuselage cargo pannier of composite materials, 15.2 cm (6 in) vertical extension of fin/rudder, jetpipe deflected to carry exhaust clear of pannier.

208B: Stretched version, developed at request of Federal Express. Commissioned by Federal Express as **Super Cargomaster**, first flight 3 March 1986, certificated October 1986; first delivery to Federal Express 31 October 1986. Features include fuselage stretched by 1.22 m (4 ft), payload of 1,587 kg (3,500 lb) and 12.7 m³ (450 cu ft) of cargo volume; 503 kW (675 shp) P&WC PT6A-114A from 1991.

Grand Caravan: Announced at NBAA 1990; stretched to accommodate up to 14 passengers in quick-change interior, powered by 503 kW (675 shp) P&WC PT6A-114A.

U-27A: Military utility/special mission derivative of 208 Caravan I, announced Spring 1985. US DoD designation assigned for potential FMS contract purposes only (sponsoring service, US Army), roles include cargo, logistic support, paratroop or supply dropping, medevac, electronic surveillance, forward air control, passenger/troop transport, C³I, maritime patrol, SAR, psychological warfare, radio relay/RPV control, military base support, range safety patrol, reconnaissance and fire patrol. Fittings can include six underwing and one centreline hardpoints, observation windows and bubble windows for downward view, centreline reconnaissance pod, 2.8 m³ (84 cu ft) cargo pannier from 208 and two-part electrically actuated upward- and downward-rolling shutter door with slipstream deflector.

CUSTOMERS: Federal Express Corporation took delivery of 40 208As and 210 208Bs before initial contract fulfilled in February 1992. Further order for 50 in 1994, deliveries of which commenced in January 1995 and will be completed at rate of three per month by May 1996. Brazil Central Air lines operates 19 Caravans and in June 1995 ordered 15 Grand Caravans for delivery commencing February 1996. Other customers include Royal Canadian Mounted Police (first wheeled float version); Brazilian Air Force (three plus four on order), Liberian Army (one), Royal Thai Army (10).

Total of 639 Caravans (all versions) delivered by January 1995, further 20 in first quarter of 1995.

COSTS: $1,005,000 (Caravan I), $1,090,800 (Grand Caravan), $1,138,000 (Super Cargomaster).

DESIGN FEATURES: Claimed as first all-new single-engined turboprop general aviation aircraft, intended to replace de Havilland Canada Beavers and Otters, Cessna 180s, 185s and 206s in worldwide utility role.

Main qualities claimed are high speed with heavy load, compatibility with unprepared strips, economy and reliability with minimum maintenance; can also carry weather radar, air conditioning and oxygen systems; optional packs for firefighting, photography, spraying, ambulance/hearse, border patrol, parachuting and supply dropping, surveillance and government utility missions; optional wheel or float landing gear.

First single-engined aircraft to achieve FAA certification for ILS in Cat. II conditions (Federal Express aircraft equipped), approval for IFR cargo operations 1989 made France and Ireland first European countries to allow single-engined public transport day/night IFR operation, since approved also in Canada, Denmark and Sweden.

Wing aerofoil NACA 23017.424 at root, 23012 at tip, dihedral 3° from root, incidence 2° 37′ at root, −0° 36′ at tip.

FLYING CONTROLS: Plain mechanical controls, lateral control by small ailerons and slot lip spoilers ahead of outer section of flaps, aileron trim standard, all tail control surfaces horn balanced, fixed tailplane with upper surface vortex generators ahead of elevator, elevator trim tabs, electrically actuated single-slotted flaps occupy more than 70 per cent of trailing-edge and deflect to maximum 30°.

STRUCTURE: Fail-safe two-spar wing, conventional fuselage.

LANDING GEAR: Non-retractable tricycle type, with single wheel on each unit. Tubular spring cantilever main units, oil-damped steerable nosewheel. Mainwheel tyres size 6.50-10; nosewheel 6.50-8. Oversize tyres, mainwheels 8.50-10, nosewheel 22 × 8.00-8, and extended nosewheel fork, optional. Hydraulically actuated single-disc brake on each mainwheel. Certificated with Wipline floats (with or without retractable land wheels).

POWER PLANT: 208: one Pratt & Whitney Canada PT6A-114 turboprop, flat rated at 447 kW (600 shp) to 3,800 m (12,500 ft), 208B and Grand Caravan: one 503 kW (675 shp) P&WC PT6A-114A turboprop. McCauley three-blade constant-speed reversible-pitch and feathering metal propeller. Integral fuel tanks in wings, total capacity 1,268 litres (335 US gallons, 279 Imp gallons), of which 1,257 litres (332 US gallons, 276.5 Imp gallons) are usable.

ACCOMMODATION: Pilot and up to nine passengers or 1,360 kg (3,000 lb) of cargo. Maximum seating capacity with FAR Pt 23 waiver is 14. Cabin has a flat floor with Brownline cargo track attachments for a combination of two- and three-abreast seating, with an aisle between seats. Forward hinged door for pilot, with direct vision window, on each side of forward fuselage. Airstair door for passengers at rear of cabin on starboard side. Cabin is heated and

1992

ventilated. Optional air conditioning. Two-section horizontally split cargo door at rear of cabin on port side, flush with floor at bottom and with square corners. Upper portion hinges upward, lower portion forward 180°. Optional electrically operated, flight openable tambour roll-up door with air flow deflecting spoiler. In a cargo role, cabin will accommodate, typically, two D-size cargo containers or up to ten 208 litre (55 US gallon, 45.8 Imp gallon) drums.

SYSTEMS: Electrical system is powered by 28 V 200 A starter/generator and 24 V 45 Ah lead-acid battery (24 V 40 Ah Ni/Cd battery optional). Standby electrical system, with 95 A alternator, optional. Hydraulic system for brakes only. Oxygen system, capacity 3.31 m³ (116.95 cu ft), optional. Vacuum system standard. Cabin air conditioning system optional from c/n 208-00030 onwards. De-icing system, comprising electric propeller de-icing boots, pneumatic wing, wing strut and tail surface boots, electrically heated windscreen panel, heated pitot/static probe, ice detector light and standby electrical system, all optional.

AVIONICS: Standard Bendix/King Silver Crown package.

Comms: Single VHF transceiver standard.

Radar: Bendix/King RDS-81 colour weather radar optional, housed in pod on starboard wing leading-edge.

Flight: Nav receiver, ADF and transponder standard.

Instrumentation: Sensitive altimeter, electric clock, magnetic compass, attitude and directional gyros, true airspeed indicator, turn and bank indicator, vertical speed indicator, ammeter/voltmeter, fuel flow indicator, ITT indicator, oil pressure and temperature indicator.

EQUIPMENT: Standard equipment includes windscreen defrost, ground service plug receptacle, variable intensity instrument post lighting, map light, overhead courtesy lights (three) and overhead floodlights (pilot and co-pilot), approach plate holder, cargo tiedowns, internal corrosion proofing, vinyl floor covering, emergency locator beacon, partial plumbing for oxygen system, pilot's and co-pilot's adjustable fore/aft/vertical/reclining seats with armrest and five-point restraint harness, tinted windows, control surface bonding straps, heated pitot and stall warning systems, retractable crew steps (port side), rudder gust lock, tiedowns and towbar.

Optional equipment includes passenger seats, stowable, folding utility seats, digital clock, fuel totaliser, turn coordinator, flight hour recorder, fire extinguisher, dual controls, co-pilot flight instruments, floatplane kit (from c/n 208-00030 onwards), hoisting rings (for floatplane), inboard fuel filling provisions (included in floatplane kit), ice detection light, courtesy lights on wing underside, passenger reading lights, flashing beacon, retractable crew step for starboard side, oversized tyres, electric trim system, oil quick drain valve and fan-driven ventilation system.

DIMENSIONS, EXTERNAL (208A):

Wing span	15.88 m (52 ft 1 in)
Wing chord: at root	1.98 m (6 ft 6 in)
at tip	1.22 m (4 ft 0 in)
Wing aspect ratio	9.71
Length overall: landplane	11.46 m (37 ft 7 in)
Height overall: landplane	4.27 m (14 ft 0 in)
amphibian (on land)	5.54 m (18 ft 2 in)
Tailplane span	6.25 m (20 ft 6 in)
Wheel track: landplane	3.56 m (11 ft 8 in)
amphibian	3.25 m (10 ft 8 in)
Wheelbase: landplane	3.54 m (11 ft 7½ in)
amphibian	4.44 m (14 ft 7 in)
Propeller diameter	2.64 m (8 ft 8 in)
Airstair door: Height	1.27 m (4 ft 2 in)
Width	0.61 m (2 ft 0 in)
Cargo door: Height	1.27 m (4 ft 2 in)
Width	1.24 m (4 ft 1 in)

DIMENSIONS, INTERNAL (208A):

Cabin: Length, excl baggage area	4.57 m (15 ft 0 in)
Max width	1.57 m (5 ft 2 in)
Max height	1.30 m (4 ft 3 in)
Volume	9.67 m³ (341.4 cu ft)

AREAS:

Wings, gross	25.96 m² (279.4 sq ft)
Vertical tail surfaces (total, incl dorsal fin)	3.57 m² (38.41 sq ft)
Horizontal tail surfaces (total)	6.51 m² (70.04 sq ft)

WEIGHTS AND LOADINGS (civil 208A. L: landplane, F: floatplane, A: amphibian):

Weight empty: L	1,724 kg (3,800 lb)
F	2,020 kg (4,454 lb)
A	2,177 kg (4,799 lb)

F, from water	843 m (2,765 ft)
A, from water	859 m (2,820 ft)
Landing from 15 m (50 ft): L	472 m (1,550 ft)
Landing run: L	197 m (645 ft)
Range with max fuel, at max cruise power, allowances for start, taxi and reserves stated:	
L at 3,050 m (10,000 ft), 45 min	970 n miles (1,796 km; 1,116 miles)
L at 6,100 m (20,000 ft), 45 min	1,275 n miles (2,361 km; 1,467 miles)
F at 3,050 m (10,000 ft), 30 min	898 n miles (1,663 km; 1,033 miles)
A at 3,050 m (10,000 ft), 30 min	868 n miles (1,607 km; 999 miles)
Range with max fuel at max range power, allowances as above:	
L at 3,050 m (10,000 ft)	1,115 n miles (2,065 km; 1,283 miles)
L at 6,100 m (20,000 ft)	1,370 n miles (2,537 km; 1,577 miles)
g limits	+3.8/−1.52

PERFORMANCE (U-27A. L and A as above):

Max cruising speed at 3,050 m (10,000 ft):	
L	184 kts (341 km/h; 212 mph)
A	163 kts (302 km/h; 188 mph)
Stalling speed in landing configuration:	
L	61 kts (113 km/h; 71 mph)
A	58 kts (107 km/h; 67 mph)
Max rate of climb at S/L: L	320 m (1,050 ft)/min
A	274 m (900 ft)/min
Service ceiling: L	7,770 m (25,500 ft)
A	6,100 m (20,000 ft)
T-O run at S/L: L	368 m (1,205 ft)
A, from water	500 m (1,640 ft)
T-O to 15 m (50 ft) at S/L: L	674 m (2,210 ft)
A, from water	872 m (2,860 ft)
Landing from 15 m (50 ft) at S/L, without propeller reversal: L	505 m (1,655 ft)
A	560 m (1,835 ft)
Landing run at S/L, without propeller reversal:	
L	227 m (745 ft)
A	297 m (975 ft)
Range at 3,050 m (10,000 ft) at max cruise power, allowances for T-O, climb, cruise, descent, and 45 min reserves: L	1,085 n miles (2,009 km; 1,249 miles)
A	955 n miles (1,769 km; 1,099 miles)

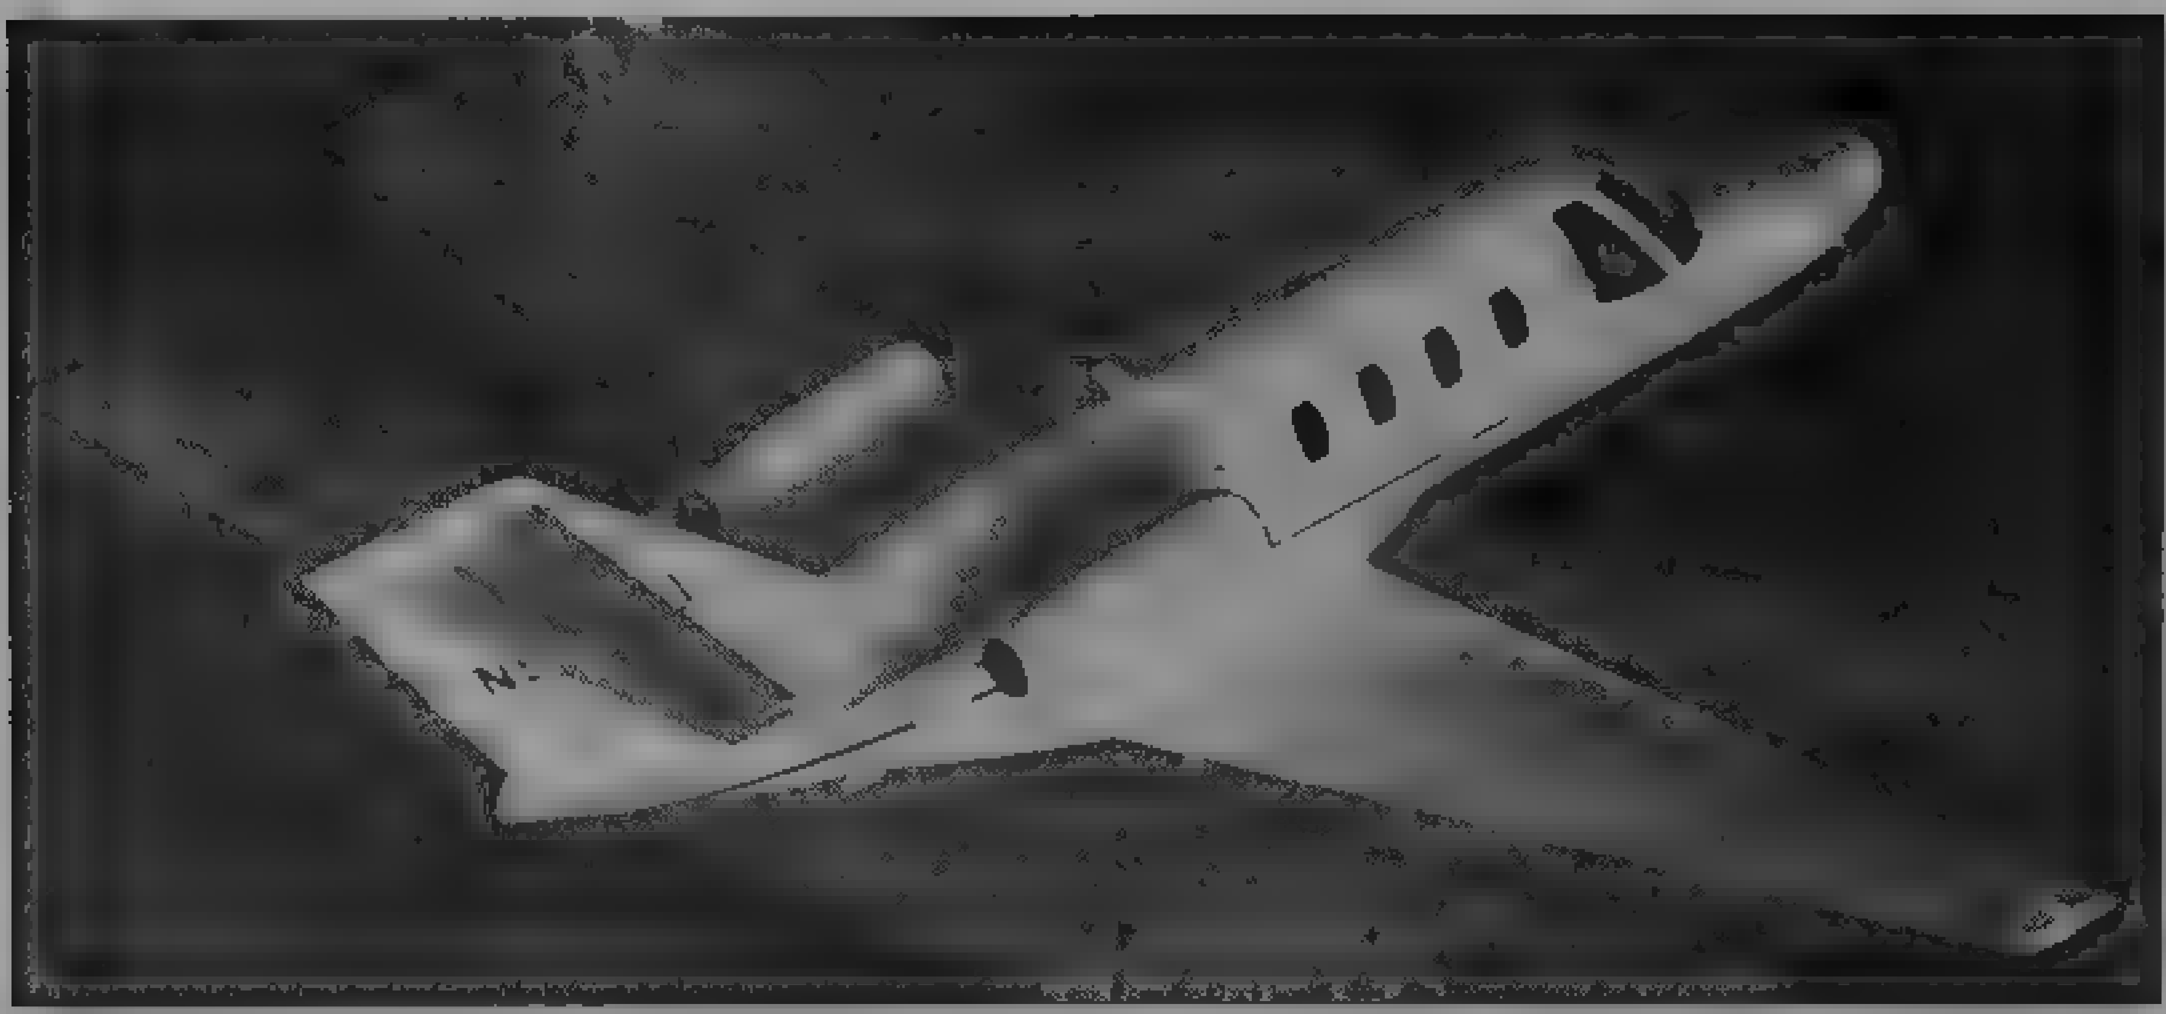
UPDATED

CESSNA 525 CITATIONJET

TYPE: Six/seven-seat business jet.

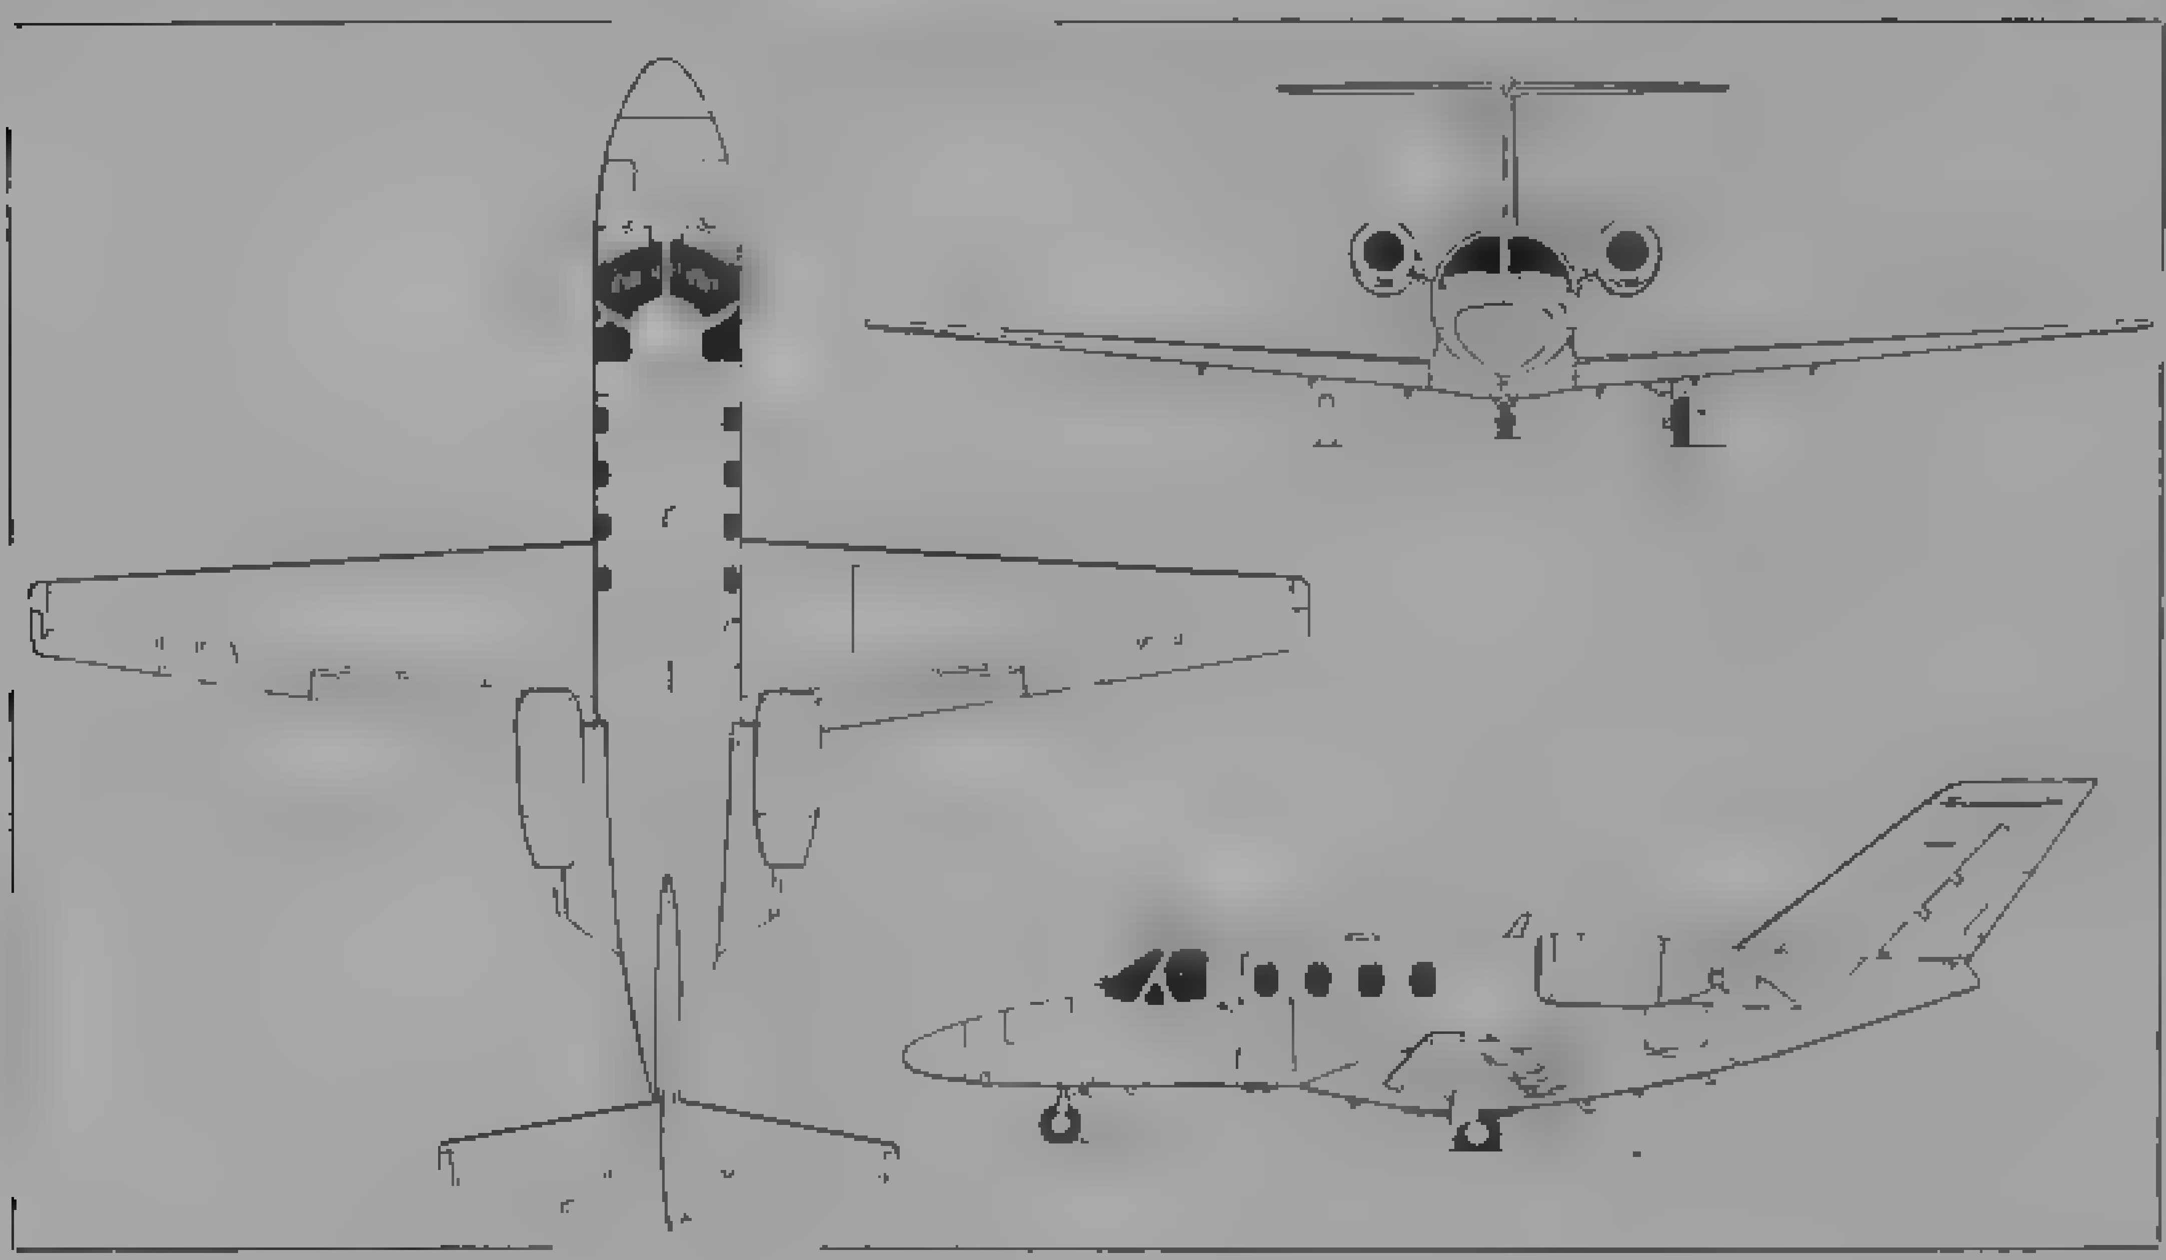
PROGRAMME: Announced at NBAA convention 1989 to replace Citation 500 and I (production of which stopped 1985); first flight of FJ44 turbofans in Citation 500 April 1990; first flight of CitationJet (N525CJ) 29 April 1991; first flight of second (preproduction) prototype 20 November 1991; FAA certification for single-pilot operation received 16 October 1992; first customer delivery 30 March 1993. Anticipated market for 1,000 in 10 years.

CUSTOMERS: Orders for 50 placed at NBAA convention 1989; production sold for 18 months after first delivery; 100th aircraft (N525CC) rolled-out 8 March 1995.



Cessna CitationJet six/seven-seat light business jet

1995



Cessna 525 CitationJet (two Williams-Rolls FJ44 turbofans) *(Jane's/Dennis Punnett)*

1990

COSTS: $3,078,000 (1994)

DESIGN FEATURES: Compared with Citation I, CitationJet has fuselage shortened by 0.27 m (10¾ in) and wing span reduced by 0.57 m (1 ft 10½ in); cabin height increased by 13 cm (5 in) by lowering centre aisle. New supercritical laminar-flow wing aerofoil, high T tail, two FJ44 turbofans, trailing link main landing gear.

POWER PLANT: Two 8.45 kN (1,900 lb st) Williams-Rolls FJ44 turbofans. Fuel load: see under Weights and Loadings.

ACCOMMODATION: Crew of two on flight deck. Main cabin with standard seating for six passengers, two in rearward facing seats at front of cabin, with four in club arrangement; seats have retractable headrests, tray tables which stow in elbow rails, and individual reading lights and ventilation ducts, standard.

SYSTEMS: Pressurisation system, maximum differential 0.58 bar (8.5 lb/sq in).

AVIONICS: Honeywell SPZ 5000 three-axis autopilot/digital flight director as core system.

Comms: Dual Bendix/King 760-channel transceivers, dual Mode S transponders, dual audio amplifiers.

Radar: Bendix/King RDS 81 colour weather radar.

Flight: Dual VHF nav receivers, ADF, DME, RMI.

Instrumentation: Two-tube EFIS with 12.7 × 12.7 cm (5 × 5 in) electronic attitude director indicator (EADI) and electronic horizontal situation indicator (EHSI) displays.

DIMENSIONS, EXTERNAL:

Wing span	14.26 m (46 ft 9½ in)
Wing aspect ratio	9.12
Length overall	12.98 m (42 ft 7¼ in)
Height overall	4.18 m (13 ft 8½ in)
Wheel track	3.84 m (12 ft 7¼ in)
Wheelbase	4.54 m (14 ft 10¾ in)
Tailplane span	5.73 m (18 ft 9½ in)
Crew/passenger door: Height	1.29 m (4 ft 2¾ in)
Width	0.60 m (1 ft 11½ in)

DIMENSIONS, INTERNAL:

Cabin: Length between pressure bulkheads	4.78 m (15 ft 8½ in)
Max width	1.46 m (4 ft 9½ in)
Height	1.46 m (4 ft 9½ in)

AREAS:

Wings, gross	22.30 m² (240.0 sq ft)
Vertical tail surfaces (total, incl tab)	4.74 m² (51.0 sq ft)
Horizontal tail surfaces (total, incl tab)	5.03 m² (54.1 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	2,823 kg (6,224 lb)
Max usable fuel weight	1,460 kg (3,220 lb)
Payload with max fuel	379 kg (836 lb)
Max T-O weight	4,717 kg (10,400 lb)
Max ramp weight	4,763 kg (10,500 lb)
Max zero-fuel weight	3,583 kg (7,900 lb)
Max landing weight	4,400 kg (9,700 lb)
Max wing loading	211.6 kg/m² (43.33 lb/sq ft)
Max power loading	279.3 kg/kN (2.74 lb/lb st)

PERFORMANCE (at max T-O weight except where indicated):

Max operating speed: S/L to 9,300 m (30,500 ft)	260 kts (482 km/h, 299 mph) CAS
above 9,300 m (30,500 ft)	Mach 0.70
Max cruising speed at 3,855 kg (8,500 lb) AUW at 10,060 m (33,000 ft)	383 kts (709 km/h, 441 mph)
Stalling speed, landing configuration	85 kts (157 km/h, 98 mph)
Max rate of climb at S/L	1,009 m (3,311 ft)/min
Rate of climb at S/L, OEI	265 m (868 ft)/min
Max certificated ceiling	12,500 m (41,000 ft)
Service ceiling, OEI	7,985 m (26,200 ft)
T-O balanced field length (FAR Pt 25)	939 m (3,080 ft)
FAR Pt 25 landing field length at max landing weight	838 m (2,750 ft)
Range with max fuel, 45 min reserves	1,456 n miles (2,696 km, 1,675 miles)

UPDATED

CESSNA 550 CITATION II

USAF designation: OT-47B

Spanish Navy designation: U.20

TYPE: Twin-turbofan business jet seating between six and 10 passengers.

PROGRAMME: Announced 14 September 1976, first flight (N550CC) 31 January 1977, FAR Pt 25 Transport Category certification for two-pilot crew March 1978; phased out in favour of Citation S/II 1984, after 503 Citation IIs delivered. Resumed production announced NBAA convention September 1985, again terminated late in 1994.

CURRENT VERSIONS: **550 Citation II**: First version for two-pilot operation. *Data refer to current production 550 Citation II (c/n 0550 and later), unless otherwise indicated.*

Citation Bravo: Described separately.

CUSTOMERS: Total 689 Citation IIs (including 88 II SPs, but excluding prototype, 15 T-47As and 161 S/IIs) delivered by January 1995, including 14 in 1993 and nine in 1994.

COSTS: $3,950,000

DESIGN FEATURES: Fuselage 1.14 m (3 ft 9 in) longer than Citation I, greater wing span, increased fuel and baggage capacities. Wing aerofoil NACA 23014 (modified) at centreline, NACA 23012 at wing station 247.95; dihedral 4°; tailplane dihedral 9°.

FLYING CONTROLS: Mechanically actuated ailerons, manual trim tab on port aileron, manual rudder trim; electric elevator trim tab with manual standby, electrically actuated single-slotted flaps, hydraulically actuated airbrake.

STRUCTURE: Two primary, one auxiliary metal wing spars, three fuselage attachment points, conventional ribs and stringers. All-metal pressurised fuselage with fail-safe design providing multiple load paths.

LANDING GEAR: Hydraulically retractable tricycle type with single wheel on each unit. Main units retract inward into the wing, nose gear forward. Free-fall and pneumatic emergency extension systems. Goodyear mainwheels with tyres size 22.0 × 8.10, 10 ply rating, pressure 6.90 bars (100 lb/sq in). Steerable nosewheel (±20°) with Goodyear wheel and tyre size 18.0 × 4.4, 10 ply rating, pressure 8.27 bars (120 lb/sq in). Goodyear hydraulic brakes. Parking brake and pneumatic emergency brake system. Anti-skid system optional. Minimum ground turning radius about nosewheel 8.38 m (27 ft 6 in).

POWER PLANT: Two Pratt & Whitney Canada JT15D-4B turbofans, each rated at 11.12 kN (2,500 lb st) for take-off, pod-mounted on sides of rear fuselage. Integral fuel tanks in wings, with usable capacity of 2,808 litres (742 US gallons; 618 Imp gallons).

ACCOMMODATION: Crew of two on separate flight deck, on fully adjustable seats, with seat belts and inertia reel shoulder harness. Sun visors standard. Fully carpeted main cabin equipped with seats for six to 10 passengers, with toilet in six/eight-seat versions. Main baggage area at rear of cabin. Second baggage area in nose. Total baggage capacity 522 kg (1,150 lb). Cabin is pressurised, heated and air-conditioned. Individual reading lights and air inlets for each passenger. Dropout constant-flow oxygen system for emergency use. Plug type door with integral airstair at front on port side and one emergency exit on starboard side. Doors on each side of nose baggage compartment. Tinted windows, each with curtains. Pilot's storm window, birdproof windscreen with de-fog system, anti-icing, standby alcohol anti-icing and bleed air rain removal system.

SYSTEMS: Pressurisation system supplied with engine bleed air, maximum pressure differential 0.61 bar (8.8 lb/sq in), maintaining a sea level cabin altitude to 6,720 m (22,040 ft), or a 2,440 m (8,000 ft) cabin altitude to 12,495 m (41,000 ft). Hydraulic system, pressure 103.5 bars (1,500 lb/sq in), with two pumps to operate landing gear and speed brakes. Separate hydraulic system for wheel brakes. Electrical system supplied by two 28 V 400 A DC starter generators, with two 350 VA inverters and 24 V 40 Ah Ni/Cd battery. Oxygen system of 0.62 m³ (22 cu ft) capacity includes two crew demand masks and five dropout constant flow masks for passengers. High capacity oxygen system optional. Engine fire detection and extinguishing systems. Wing leading-edges electrically de-iced ahead of engines, pneumatic de-icing boots on outer wings.

One of three Cessna Citation IIs of Spanish Armada *(Paul Jackson)*

1995

DIMENSIONS, EXTERNAL:
Wing span 15.90 m (52 ft 2 in)
Wing aspect ratio 8.43
Length overall 14.39 m (47 ft 2½ in)
Height overall 4.57 m (15 ft 0 in)
Wheel track 5.36 m (17 ft 7 in)
Wheelbase 5.55 m (18 ft 2½ in)
DIMENSIONS, INTERNAL:
Cabin:
Length, front to rear bulkhead 6.37 m (20 ft 10¾ in)
Max height 1.46 m (4 ft 9½ in)
Baggage volume 1.84 m³ (65.0 cu ft)
AREAS:
Wings, gross 30.00 m² (322.9 sq ft)
Vertical tail surfaces (total) 4.73 m² (50.9 sq ft)
Horizontal tail surfaces (total, incl tab)
6.56 m² (70.6 sq ft)
WEIGHTS AND LOADINGS:
Weight empty, equipped 3,504 kg (7,725 lb)
Max fuel weight 2,272 kg (5,009 lb)
Max T-O weight 6,396 kg (14,100 lb)
Max ramp weight 6,486 kg (14,300 lb)
Max zero-fuel weight 4,990 kg (11,000 lb)
Max landing weight 6,123 kg (13,500 lb)
Max wing loading 201.1 kg/m² (41.19 lb/sq ft)
Max power loading 275.3 kg/kN (2.66 lb/lb st)
PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max operating speed:
S/L to 4,265 m (14,000 ft)
262 kts (486 km/h, 302 mph) IAS
4,265 m (14,000 ft) to 8,530 m (28,000 ft)
277 kts (513 km/h, 319 mph) IAS
8,530 m (28,000 ft) and above Mach 0.705
Cruising speed at average cruise weight of 4,990 kg (11,000 lb) at 7,620 m (25,000 ft)
385 kts (713 km/h, 443 mph)
Stalling speed, clean, at max T-O weight
94 kts (174 km/h, 108 mph) CAS
Stalling speed at max landing weight
84 kts (156 km/h, 97 mph) CAS
Max rate of climb at S/L 1,027 m (3,370 ft)/min
Rate of climb at S/L, OEI 322 m (1,055 ft)/min
Max certificated altitude 13,105 m (43,000 ft)
Service ceiling, OEI 7,680 m (25,200 ft)
T-O to 15 m (50 ft) 727 m (2,385 ft)
T-O balanced field length (FAR Pt 25) 1,051 m (3,450 ft)
FAR Pt 25 landing field length at max landing weight
743 m (2,440 ft)
Range with max fuel, crew of two and six passengers, allowances for T-O, climb, cruise at 13,105 m (43,000 ft), descent, and 45 min reserves
1,760 n miles (3,260 km; 2,025 miles)
OPERATIONAL NOISE LEVELS (FAR Pt 36):
T-O 81.6 EPNdB
Approach 90.5 EPNdB
Sideline 86.4 EPNdB

UPDATED

Standard seven-seat cabin interior of Cessna Citation Bravo

1995

Prototype Cessna Citation Bravo twin-turbofan business jet

1995

CESSNA CITATION BRAVO

TYPE: Six to 10-passenger, twin-turbofan business jet.

PROGRAMME: Announced at Farnborough Air Show September 1994; prototype (N550BB, constructed from 690th production Citation II) first flight 25 April 1995; FAA certification April 1996, first customer delivery June 1996; replaces Citation II.

CUSTOMERS: USAF's Aeronautical Systems Center ordered five as **OT-47B** tracker aircraft with modified Westinghouse AN/APG-66 radars and Westinghouse WF-360 infra-red tracking systems, for delivery by March 1997.

COSTS: $4.395 million, typically equipped (1994).

DESIGN FEATURES: Based on Citation II airframe with advanced technology engines, state-of-the-art avionics and flight controls, trailing link main landing gear, more crew legroom, and cabin seats and interior as those in the Citation V Ultra. Performance improvements over Citation II expected to include 38 minutes faster climb to 12,500 m (41,000 ft), more than 20 knots (37 km/h; 23 mph) faster cruising speed at typical altitudes, and range increase of more than 250 n miles (463 km; 288 miles) with six passengers and VFR reserves.

POWER PLANT: Two 12.23 kN (2,750 lb st) Pratt & Whitney Canada PW530A turbofans, target-type thrust reversers standard.

ACCOMMODATION: Standard cabin seating for seven passengers, on pedestal-mounted seats, refreshment centre and airstair door on port side forward of wing both standard.

SYSTEMS: Oxygen system, capacity 1.81 m³ (64 cu ft) standard.

AVIONICS: Honeywell Primus 1000 with dual digital flight directors and IC 600 integrated avionics computer as core system.

Comms: Dual Bendix/King CN15000 transceivers, dual Mode S transponders, Loral cockpit voice recorder.

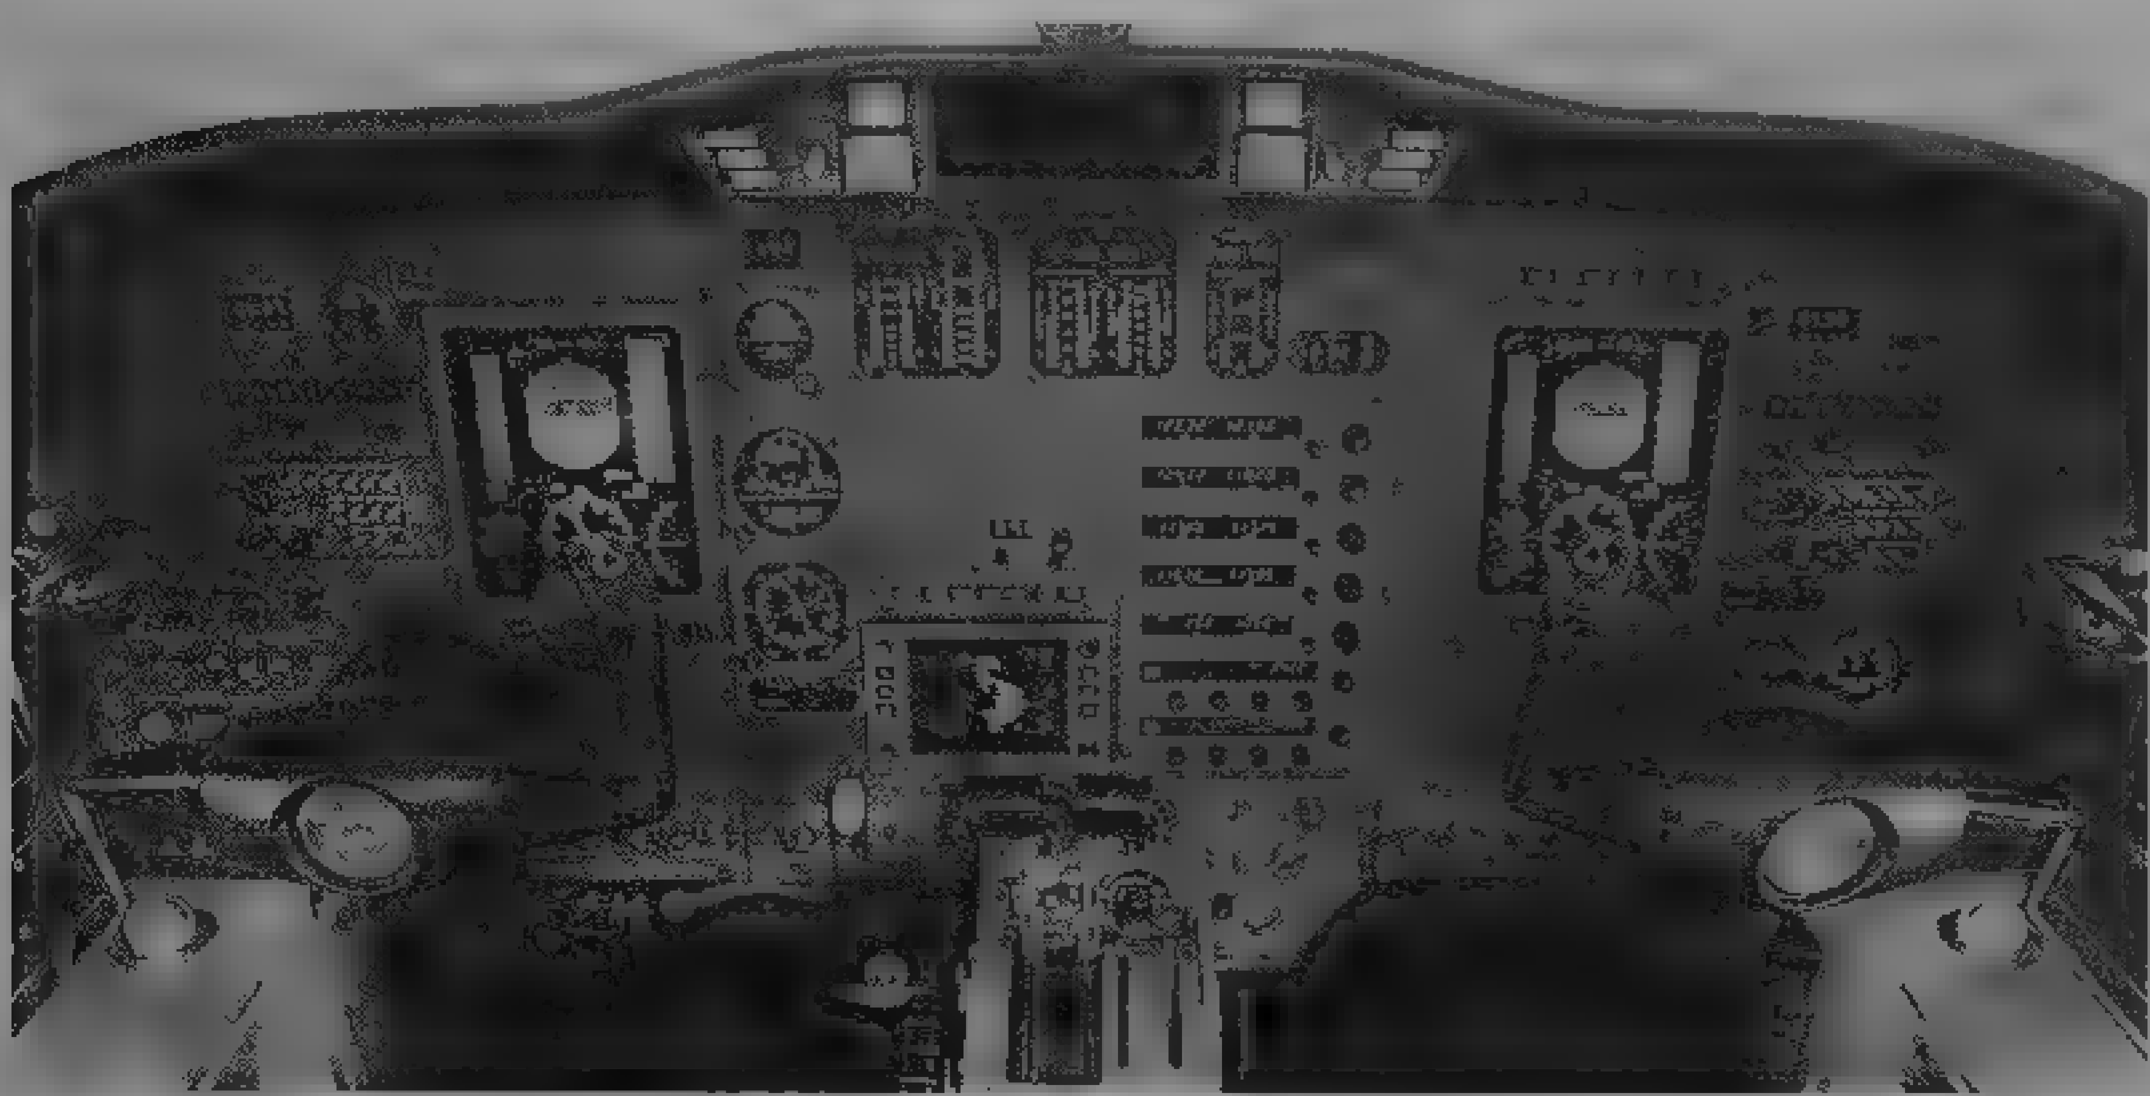
Radar: Bendix/King RDR 2000 colour weather radar.

Flight: Dual Bendix/King CN15000 receiver, DME, ADF and radio altimeter; Global GNS X long-range nav system with GPS and Vnav.

Instrumentation: EFIS with two 17.8 × 20.3 cm (7 × 8 in) primary flight display (PFD) screens combining attitude and HSI formats with additional air data; additional multifunction display (MFD) screen with map/plan/checklist capability optional.

Specification as for Citation II except:

WEIGHTS AND LOADINGS:
Weight empty 3,802 kg (8,383 lb)
Operating weight empty 3,984 kg (8,783 lb)
Max fuel weight (usable) 2,204 kg (4,860 lb)
Payload with max fuel 389 kg (857 lb)
Max ramp weight 6,577 kg (14,500 lb)
Max T-O weight 6,486 kg (14,300 lb)
Max landing weight 6,123 kg (13,500 lb)



Flight deck of Cessna Citation Bravo

1995

Max zero-fuel weight	4,989 kg (11,000 lb)
Max wing loading	216.2 kg/m² (44.29 lb/sq ft)
Max power loading	265.3 kg/kN (2.6 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated)

Max operating speed, 2,440 m (8,000 ft) to 8,500 m (27,000 ft)	275 kts (509 km/h, 316 mph)
Max operating speed at 8,500 m (27,880 ft)	Mach 0.70
Max cruising speed at 9,450 m (31,000 ft) at average cruise weight of 5,375 kg (11,850 lb)	394 kts (730 km/h, 453 mph)
Stalling speed in landing configuration	84 kts (156 km/h, 97 mph)
Max rate of climb at S/L	908 m (2,980 ft)/min
Rate of climb at S/L, OEI	271 m (890 ft)/min
Maximum certificated altitude	13,110 m (43,000 ft)
Service ceiling, OEI	8,535 m (28,000 ft)
T-O balanced field length (FAR Pt 25)	1,036 m (3,400 ft)
FAR Pt 25 landing field length at max landing weight	917 m (3,010 ft)
Range with four passengers, 45 min reserves	1,990 n miles (3,685 km, 2,290 miles)

UPDATED

CESSNA 560 CITATION V ULTRA

TYPE: Improved version of Citation V with digital autopilot, EFIS and increased payload and performance.

PROGRAMME: First flight of Citation V engineering prototype (N560CC) August 1987, announced at NBAA convention 1987, first flight of preproduction prototype early 1988, FAA certification 9 December 1988, first delivery April 1989; customers included Spanish Air Force with two SLAR-equipped aircraft, locally designated **TR 20**; total 259 built before mid-1994 change to Citation V Ultra, which announced September 1993, FAA certification June 1994; 300th Citation V/V Ultra delivered 26 July 1995, to Korean Air Lines.

CUSTOMERS: Deliveries of Ultra began July 1994, 24 delivered in 1994, recent customers include Korean Air Lines, which has ordered four as dedicated crew trainers for delivery from second quarter of 1995, and Executive Jet Aviation, with 25 for its NetJets fractional ownership scheme.

COSTS: $5.73 million (1995).

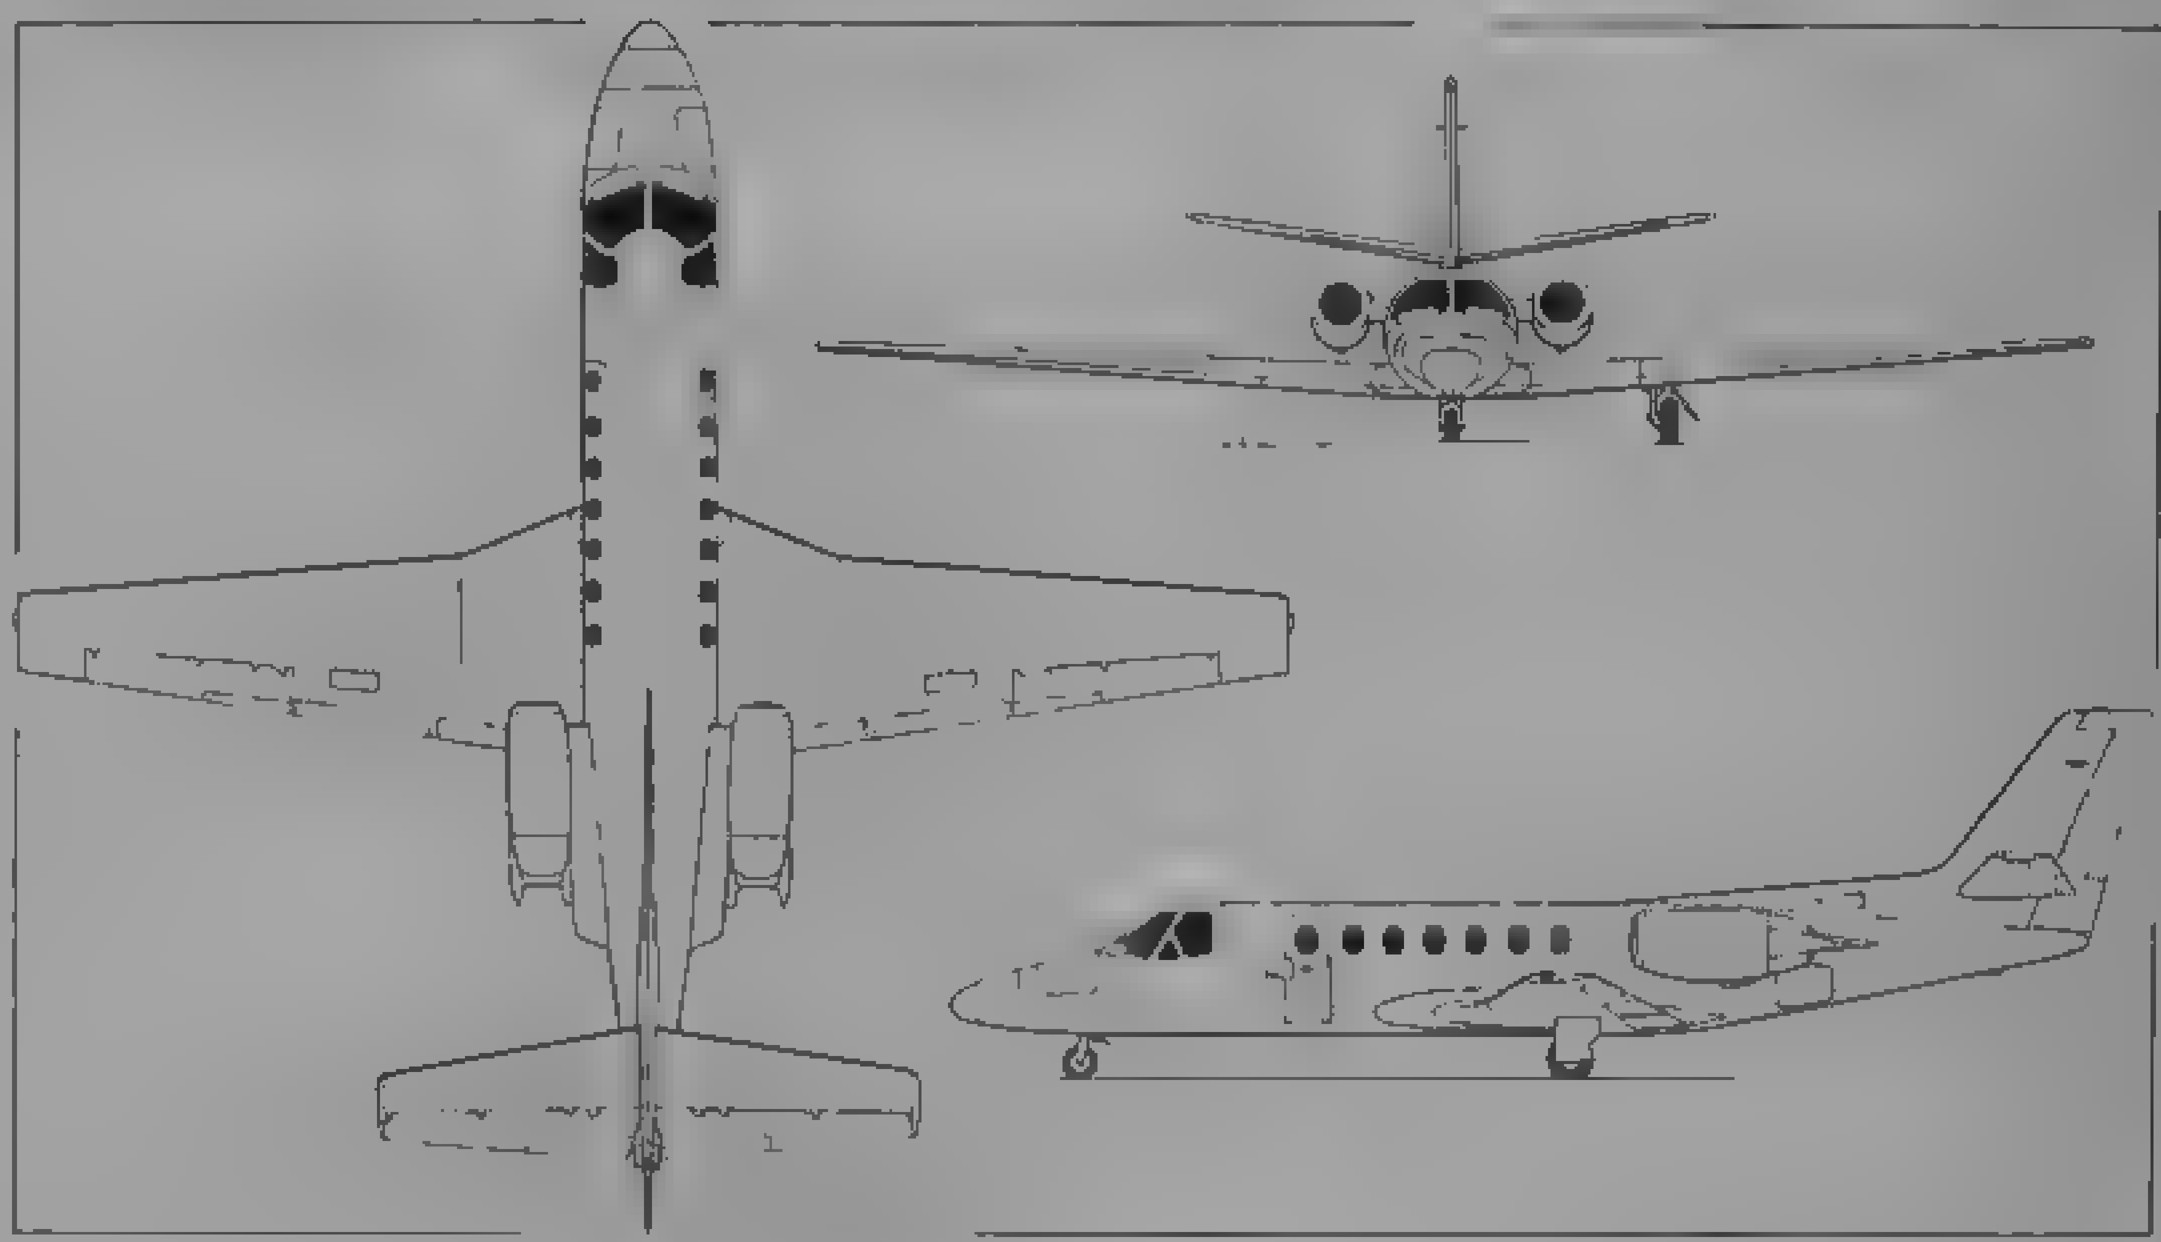
DESIGN FEATURES: Stretched version of Citation S/II for full eight-seat cabin and fully enclosed toilet/vanity area; seventh cabin window each side, two baggage compartments outside main cabin with total volume 1.16 m³ (41 cu ft) and capacity for 385 kg (850 lb) baggage. Other features include Global GNS-X navigation management system, advanced weather radar, dual transponders, encoding and radio altimeters, thrust reversers, engine synchronisers, single-point refuelling/defuelling (from c/n 307 in June 1995), 1.8 m³ (64 cu ft) oxygen system, recognition lights, and in-flight telephone. *Description and specification as for Citation II except as follows:*

POWER PLANT: Two Pratt & Whitney Canada JT15D-5D turbofans, each rated at 13.55 kN (3,045 lb st). Usable fuel 3,259 litres (861 US gallons, 717 Imp gallons).

ACCOMMODATION: Standard seating for eight passengers in double-club arrangement on swivelling and fore/aft/inboard-tracking pedestal seats, refreshment centre in forward cabin area, lavatory/vanity centre with sliding doors to rear, metallic plating on cabin fittings, veneer overlay on armrests, pleated window shades and cabin divider mirror standard, space in aft section of cabin for 272 kg (600 lb) of baggage, in addition to external baggage compartments in nose and rear fuselage.

SYSTEMS: Pressurisation system, maximum differential 0.61 bar (8.9 lb sq in).

Cessna Citation V Ultra cabin interior *1995*



Cessna 560 Citation V Ultra (two Pratt & Whitney Canada JT15D-5D turbofans) *(Jane's/Dennis Punnett)* *1988*

AVIONICS: Standard avionics package based on Honeywell Primus 1000 digital flight control system with integrated avionics computer.

Comms: Dual transponders, dual altitude reporting systems, cockpit voice recorder and in-flight telephone standard.

Radar: Colour weather radar standard.

Flight: Dual DME, coupled vertical navigation system Global GNS-X/ES with GPS, expanded keyboard and colour CDU display standard.

Instrumentation: Three-tube EFIS with 20.3 × 17.8 cm (8 × 7 in) CRTs comprising pilot's and co-pilot's primary flight display (PFD) and centrally mounted multifunction display (MFD). PFDs integrate functions of five flight instruments and several sources of navigation data, and provide trend data for airspeed, altitude and rate of climb.

DIMENSIONS, EXTERNAL:

Wing span	15.91 m (52 ft 2¼ in)
Length overall	14.90 m (48 ft 10¾ in)
Height overall	4.57 m (15 ft 0 in)
Tailplane span	6.55 m (21 ft 6 in)
Wheelbase	6.06 m (19 ft 10⅝ in)

DIMENSIONS, INTERNAL:

Cabin: Length, excluding cockpit	5.31 m (17 ft 5 in)
Max width	1.50 m (4 ft 11 in)
Max height	1.40 m (4 ft 7 in)

AREAS:

Horizontal tail surfaces (total)	7.88 m² (84.8 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	4,196 kg (9,250 lb)
Operating weight empty	4,377 kg (9,650 lb)
Payload with max fuel	470 kg (1,036 lb)
Max fuel weight (usable)	2,637 kg (5,814 lb)
Max ramp weight	7,484 kg (16,500 lb)
Max T-O weight	7,393 kg (16,300 lb)
Max zero-fuel weight	5,534 kg (12,200 lb)
Max landing weight	6,894 kg (15,200 lb)
Max wing loading	246.5 kg/m² (50.48 lb/sq ft)
Max power loading	273.1 kg/kN (2.68 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated):

Max operating speed (V_{MO}) at 8,810 m (28,900 ft)	Mach 0.75

Cessna 560 Citation V Ultra eight-seat business jet *1995*

Max cruising speed at 10,670 m (35,000 ft)
430 kts (796 km/h; 495 mph)
Stalling speed, flaps down 82 kts (152 km/h, 95 mph)
Max rate of climb at S/L 1,249 m (4,100 ft)/min
Rate of climb at S/L, OEI 367 m (1,207 ft)/min
Max certificated altitude 13,715 m (45 000 ft)
Service ceiling, OEI 7,894 m (25,900 ft)
T-O balanced field length (FAR 25) 970 m (3,180 ft)
Landing from 15 m (50 ft) at max landing weight
854 m (2 800 ft)
Range with five passengers
1,960 n miles (3,630 km, 2 255 miles)

UPDATED

CESSNA 560XL CITATION EXCEL

TYPE: Eight to 10-seat, twin-turbofan business jet

PROGRAMME: Announced at National Business Aircraft Association Convention in New Orleans October 1994; will replace Citation VI. Construction of prototype began February 1995, first flight planned for March 1996. FAA certification anticipated March 1997; first delivery December 1997

CUSTOMERS: Total of more than 50 orders received by end of January 1995; launch customers included distributor Taxi Aereo Marilia of Brazil, which has ordered six for delivery commencing during the last quarter of 1998 and concluding early in 2000

COSTS: $6.595 million (1994)

DESIGN FEATURES: Combines modified wing and tail surfaces of Citation V Ultra with shortened version of Citation X's fuselage, providing cabin with stand-up headroom

LANDING GEAR: Trailing link main landing gear

POWER PLANT: Two 16.19 kN (3,640 lb st) Pratt & Whitney Canada PW545A turbofans. Integral fuel tank in each wing, total capacity 3,694 litres (976 US gallons; 813 Imp gallons) of which 3,668 litres (969 US gallons; 807 Imp gallons) usable; single-point pressure refuelling

ACCOMMODATION: Standard seating for eight to 10 passengers with aft lavatory and dressing room. Baggage compartment in rear fuselage with external access door

SYSTEMS: Pressurisation system, maximum differential 0.64 bar (9.3 lb/sq in). Freon air conditioning system. Oxygen system, capacity 1.81 m³ (64 cu ft). Engine inlet anti-icing system. Wing leading-edges de-iced by engine bleed air; tailplane has de-icer boots, fin unprotected

AVIONICS: Standard Honeywell Primus 1000 integrated digital avionics suite with IC-600 avionics computer as core system. Collins system optional.

Radar: Honeywell Primus 650 colour weather radar.

Instrumentation: Three-tube EFIS with 20.3 × 17.8 cm (8 × 7 in) CRT screens comprising dual primary flight displays (PFDs) showing attitude/heading and all air data information, and single multifunction display (MFD) for map/plan, weather and checklist data

DIMENSIONS, EXTERNAL:
Wing span 16.98 m (55 ft 8½ in)
Wing aspect ratio 8.39
Length overall 15.88 m (52 ft 1¼ in)
Length of fuselage 15.24 m (50 ft 0 in)
Height overall 5.27 m (17 ft 3½ in)
Tailplane span 6.55 m (21 ft 6 in)
Wheelbase 4.60 m (15 ft 1¼ in)

DIMENSIONS, INTERNAL:
Cabin: Length
between pressure bulkheads 7.01 m (23 ft 0 in)
excl cockpit 5.74 m (18 ft 10 in)
Max width 1.70 m (5 ft 7 in)
Max height 1.73 m (5 ft 8 in)
Baggage capacity (aft) 2.18 m³ (77.0 cu ft)

AREAS:
Wings, gross 34.35 m² (369.7 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, approx 4,746 kg (10,463 lb)
Operating weight empty 5,153 kg (11,360 lb)
Max fuel weight (usable) 2,966 kg (6,540 lb)
Payload with max fuel 453 kg (1,000 lb)
Max ramp weight 8,573 kg (18,900 lb)
Max T-O weight 8,482 kg (18,700 lb)
Max landing weight 7,892 kg (17,400 lb)
Max zero-fuel weight 6,078 kg (13,400 lb)
Max wing loading 246.96 kg/m² (50.58 lb/sq ft)
Max power loading 262.11 kg/kN (2.57 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max operating speed (V_{MO}): S/L to 8,320 m (27,300 ft)
300 kts (555 km/h; 345 mph) CAS
above 8,320 m (27,300 ft) Mach 0.75
Max cruising speed at 10,670 m (35,000 ft)
430 kts (796 km/h; 495 mph)
Stalling speed in landing configuration
86 kts (159 km/h; 99 mph)

Max rate of climb at S/L	1,125 m (3,691 ft)/min
Rate of climb at S/L, OEI	374 m (1,229 ft)/min
Max certificated altitude	13,715 m (45,000 ft)
Service ceiling, OEI	9,860 m (32,350 ft)
T-O balanced field length (FAR Pt 25)	1,040 m (3,414 ft)
FAR Pt 25 landing field length at max weight	1,072 m (3,515 ft)
Range with four passengers, 45 min reserves	2,055 n miles (3,805 km, 2,364 miles)

NEW ENTRY

CESSNA 650 CITATION VI

TYPE: Six- to 10-passenger business jet; simplified, lower cost version of Citation III.

PROGRAMME: Announced 1990; first aircraft rolled-out 2 January 1991; first delivery 1992.

CUSTOMERS: Total deliveries 39 (14 in 1992, 13 in 1993, 10 in 1994 and two in 1995), including two to Civil Aviation Administration of China for navaid flight inspection. Further 202 (and two prototype) Citation IIIs built previously; production of VI suspended late 1994.

COSTS: $8,150,000.

DESIGN FEATURES: Citation III airframe, retains AlliedSignal TFE731-3B-100 turbofans.

FLYING CONTROLS: Variable incidence tailplane and elevator, rudder boosted to counteract asymmetric thrust, hydraulically powered ailerons with manual reversion assisted after 3° movement by outboard spoiler panel, four hydraulically powered spoiler panels on each wing, of which outboard assists aileron, two centre panels act as airbrakes and all four panels used for emergency descent and lift dumping after touchdown. Electrically actuated trailing-edge flaps in three sections each side. Stall strips on inner and outer wings and small fence and turbulators ahead of outer flaps.

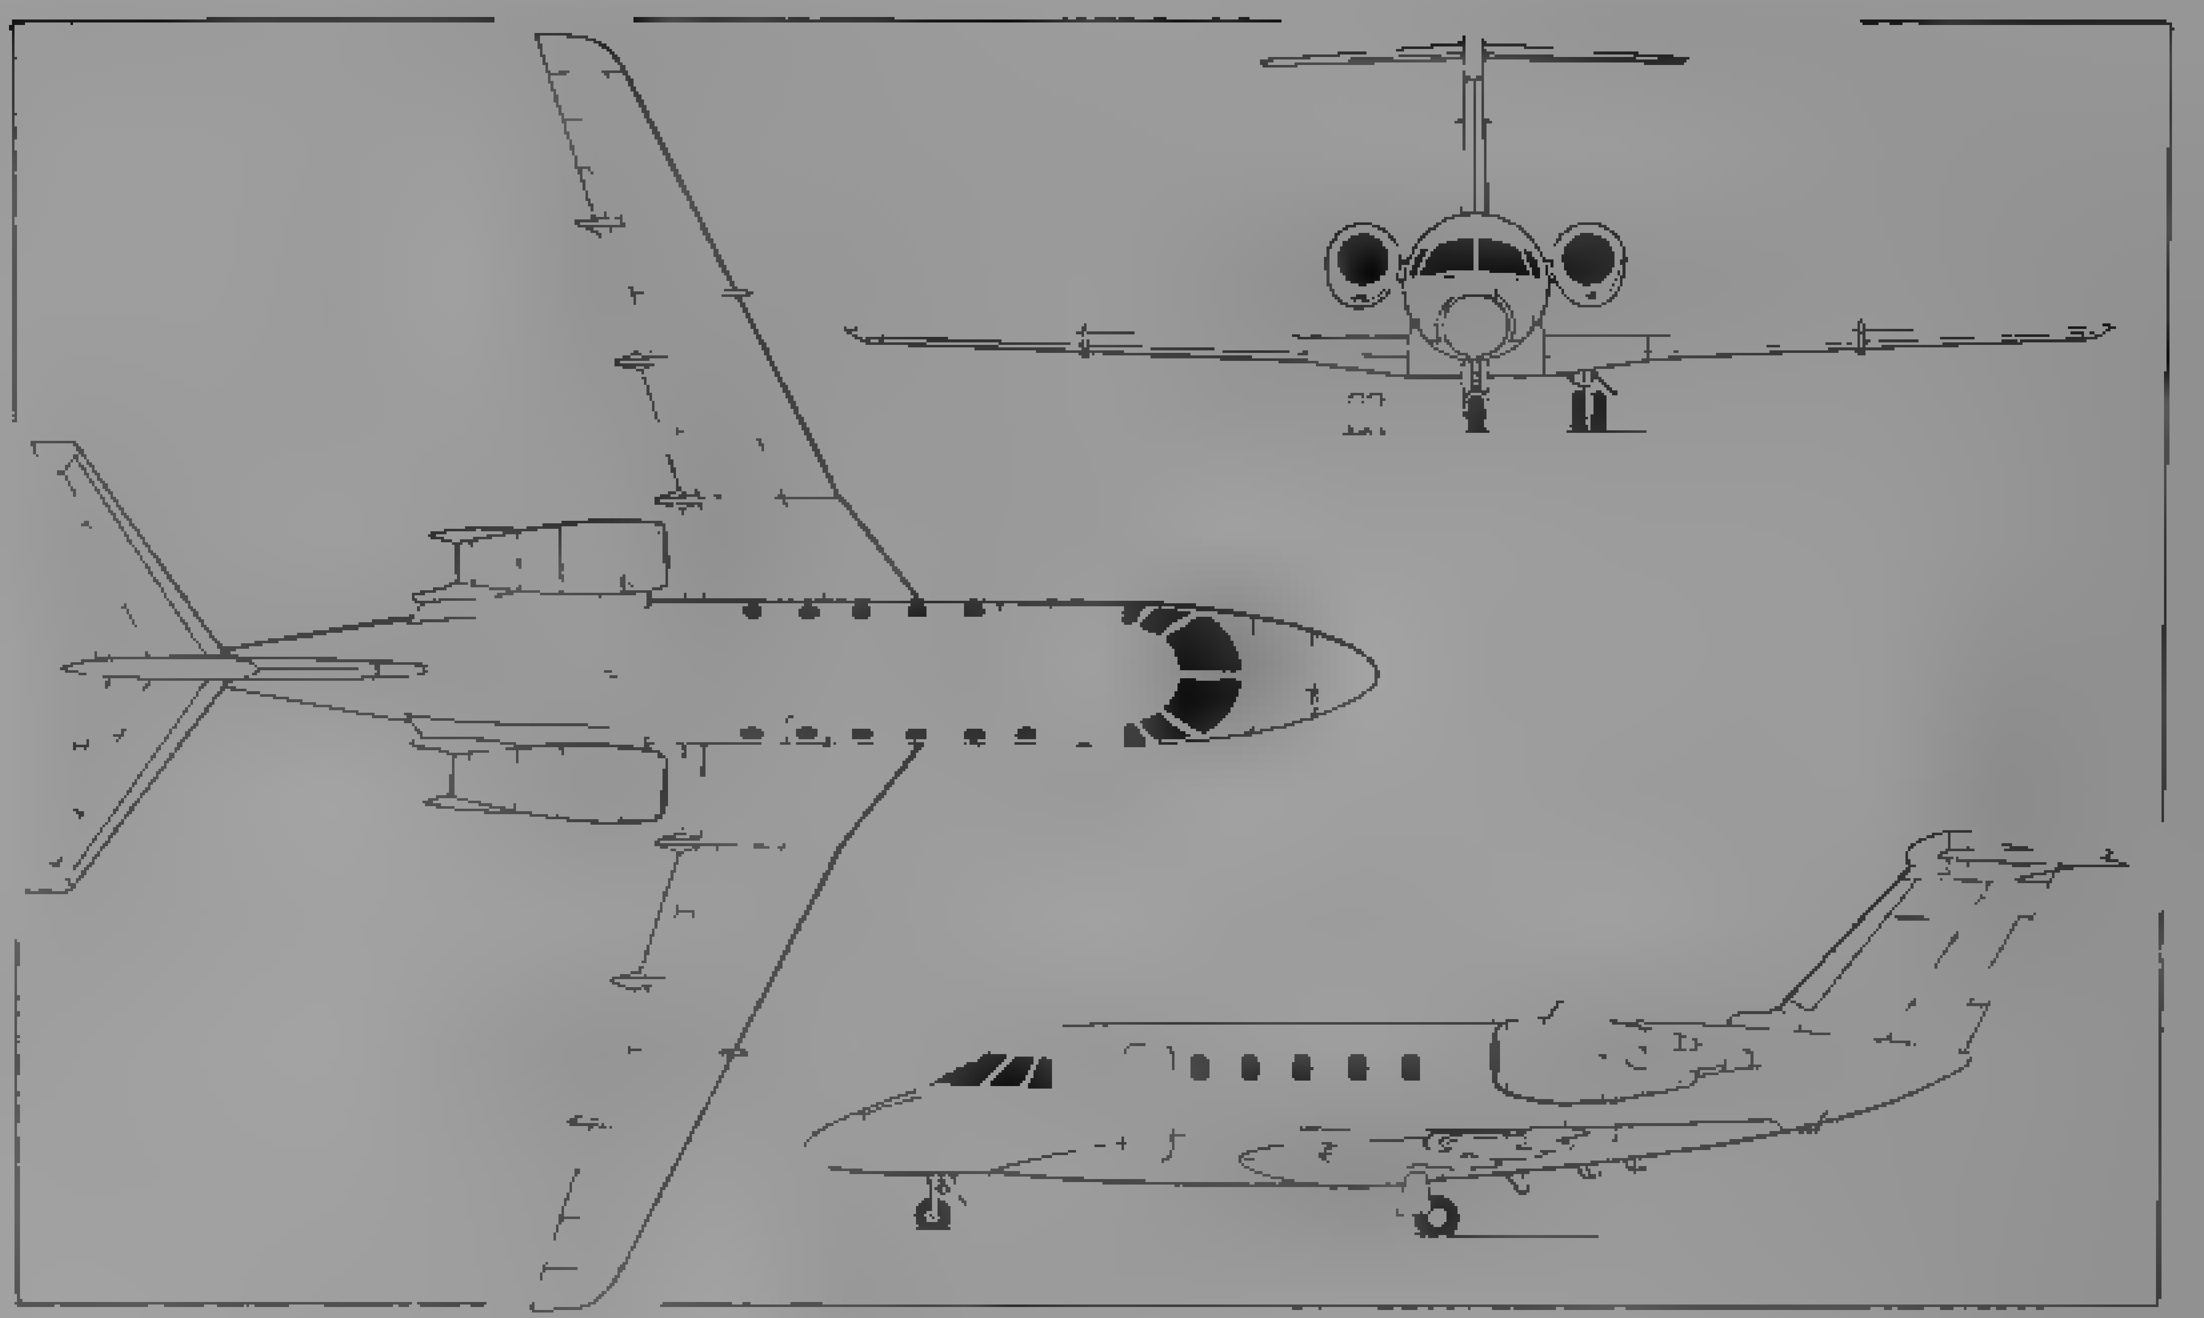
STRUCTURE: Conventional light alloy pressurised fuselage of circular section, fail-safe in pressurised area, light alloy tail surfaces, two-spar, fail-safe light alloy wing of bonded and riveted construction, wing built in three sections, flaps of Kevlar and graphite composites.

LANDING GEAR: Hydraulically retractable tricycle type. Main units retract inward into the undersurface of the wing centre-section, nosewheel forward and upward into the nose. Main units of trailing link type, each with twin wheels, steerable nose unit has a single wheel, maximum steering angle ±70 to 80°. Oleo-pneumatic shock-absorber in each unit. Hydraulically powered nosewheel steering with an accumulator to provide steering after a loss of normal hydraulic power. Emergency landing gear extension by manual release and free-fall to locked position, pneumatic blowdown system for back-up. Mainwheel tyres size 22.0 × 5.75, 10 ply rating, pressure 10.20 bars (148 lb/sq in). Nosewheel tyre size 18.0 × 4.4, 10 ply rating, pressure 8.62 bars (125 lb/sq in). Fully modulated hydraulically powered anti-skid brake system. In the event of hydraulic system failure, an electrically driven standby pump provides pressure for the brakes. Emergency pneumatic brake system. Parking brake. Turning circle based on nosewheel 6.63 m (21 ft 9 in).

POWER PLANT: Two AlliedSignal TFE731-3B-100S turbofans, each rated at 16.24 kN (3,650 lb st) for take-off, pod mounted on sides of rear fuselage. Hydraulically operated Rohr target type thrust reversers standard. Two independent fuel systems, with integral tanks in each wing, usable capacity 4,141 litres (1,014 US gallons, 911 Imp gallons). Additional fuel cell behind rear fuselage bulkhead. Single-point pressure refuelling on starboard side of fuselage, to rear of wing trailing-edge. Gravity refuelling point on upper surface of each wing. A boost pump in the port wing fills the fuselage tank when pressure refuelling is not available.

ACCOMMODATION: Crew of two on separate flight deck, and up to 10 passengers. Standard interiors only, with six individual seats, toilet at rear of cabin. The fuselage nose incorporates a radome, high-resolution radar, avionics bay and a storage compartment for crew baggage. Electrically heated baggage compartment in rear fuselage with external door on port side. Airstair door forward of wing on port side. Overwing emergency escape hatch on starboard side. Cabin is pressurised, heated and air conditioned. Windscreen anti-icing by engine bleed air, with alcohol spray back-up for port side of the windscreen. Windscreen demisting by warm air, and rain removal by engine bleed air and a mechanically actuated air flow deflector.

SYSTEMS: Environmental control system, with separate control of flight deck and cabin conditions. Direct engine bleed pressurisation system, with nominal pressure differential of 0.67 bar (9.7 lb/sq in), provides 2,440 m (8,000 ft) cabin environment to maximum certificated altitude and can maintain a sea level cabin environment to approximately 7,620 m (25,000 ft). Electrical system includes two 28 V 400 A DC starter/generators, two 200/115 V 5 kW three-phase engine-driven alternators, two 115 V 400 Hz solid-state static inverters, two 24 V 22 Ah Ni/Cd batteries and an external power socket in the tailcone. Hydraulic system of 207 bars (3,000 lb/sq in) powered by two engine-driven pressure compensated pumps for operation of spoilers, brakes, landing gear, nosewheel steering and thrust reversers. Hydraulic reservoir with integral reserve and an electrically driven hydraulic pump to provide emergency power. Oxygen system of 1.39 m³ (49 cu ft) capacity with automatic dropout constant flow oxygen mask for each passenger and a quick-donning pressure demand mask for each crew member. Engine fire detection and extinguishing system. Wing leading-edges de-iced by engine bleed air; tailplane electrically de-iced; fin unprotected. Engine intake anti-icing system.



Cessna Citation VI (two AlliedSignal TFE731-3B-100S turbofans) *(Jane's/Dennis Punnett)* *1992*

AVIONICS: Honeywell SPZ-650 integrated autopilot/digital flight director as core system. Bendix/King Series II integrated nav/com, EFIS and radar system optional.

Comms: Dual Collins VHF-22A 720-channel com transceivers, TDR-90 transponder; dual Avtech audio amplifiers, Telex microphones, headsets and speakers.

Radar: Honeywell Primus 300SL colour weather radar.

Flight: Honeywell AD650A ADI, RD650A HSI with C-14D compass system, GH-14 ADI and RD650A HSI with C-14D compass system for co-pilot, AA-300 radio altimeter; dual Collins VIR-32 nav receivers with VOR/LOC/GS and marker beacon receivers, dual RMI 30 and DME-42, single ADF 60; Jet Inc standby attitude gyro. Teledyne angle of attack system, air data computer. Stall warning system.

Instrumentation: Dual altimeters, Mach/airspeed indicators, angle of attack indicator, instantaneous rate of climb indicators and outside air temperature gauge.

EQUIPMENT: Standard equipment includes crew seats with vertical, fore, aft and recline adjustments, seat belts, shoulder harnesses and inertia reels, six individual passenger seats, three forward- and three aft-facing with vertical, fore and aft adjustment, lateral tracking and recline adjustments, seat belts and shoulder harnesses, sun visors, flight deck divider with curtain, map case, openable storm windows, electroluminescent and edge-lit instrument panels, cockpit and cabin fire extinguishers, indirect cabin lighting, cabin aisle lights, door courtesy lights, refreshment centre, executive table, aft cabin divider with curtain, emergency exit signs, internal corrosion proofing, emergency battery pack, emergency portable cabin oxygen, navigation and recognition lights, dual landing and taxi lights, dual anti-collision strobe lights, red flashing beacon, dual wing ice lights, lightning protection, static discharge wicks and tie-down provisions.

DIMENSIONS, EXTERNAL:	
Wing span	16.31 m (53 ft 6 in)
Wing mean aerodynamic chord	2.08 m (6 ft 9¾ in)
Wing aspect ratio	9.17
Length overall	16.90 m (55 ft 5½ in)
Height overall	5.12 m (16 ft 9½ in)
Tailplane span	5.60 m (18 ft 4½ in)
Wheel track	2.84 m (9 ft 4 in)
Wheelbase	6.50 m (21 ft 4 in)
Cabin door: Width	0.61 m (2 ft 0 in)
Height	1.37 m (4 ft 6 in)
DIMENSIONS, INTERNAL:	
Cabin:	
Length: front to rear bulkhead	7.25 m (23 ft 9⅛ in)
aft of cockpit divider	5.70 m (18 ft 8⅜ in)
Max width	1.73 m (5 ft 8 in)
Max height	1.73 m (5 ft 8 in)
Baggage capacity (aft)	1.56 m³ (55.0 cu ft)
Crew baggage compartment (nose)	0.17 m³ (6.0 cu ft)
AREAS:	
Wings, gross	28.99 m² (312.0 sq ft)
Vertical tail surfaces (total)	6.04 m² (65.0 sq ft)
Horizontal tail surfaces (total)	6.26 m² (67.4 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty, standard	5,851 kg (12,900 lb)
Max fuel weight	3,349 kg (7,384 lb)
Max payload	1,583 kg (3,489 lb)
Max T-O weight	9,979 kg (22,000 lb)
Max ramp weight	10,070 kg (22,200 lb)
Max landing weight	9,072 kg (20,000 lb)
Max zero-fuel weight	7,212 kg (15,900 lb)
Max wing loading	344.2 kg/m² (70.51 lb/sq ft)
Max power loading	307.24 kg/kN (3.01 lb/lb st)
PERFORMANCE (at max T-O weight, ISA, except where indicated):	
Max operating speed (V_{MO}): S/L to 2,440 m (8,000 ft)	305 kts (565 km/h, 351 mph) IAS
at 11,130 m (36,525 ft)	278 kts (515 km/h, 320 mph) IAS
above 11,130 m (36,525 ft)	Mach 0.851
Max cruising speed at 10,670 m (35,000 ft) and 7,257 kg (16,000 lb) cruise weight	472 kts (874 km/h, 543 mph)
Stalling speed: clean, at max T-O weight	125 kts (232 km/h, 144 mph) CAS
flaps and wheels down, at max landing weight	97 kts (515 km/h, 112 mph) CAS
Max rate of climb at S/L	1,127 m (3,700 ft)/min
Rate of climb at S/L, OEI	245 m (805 ft)/min
Time to 13,100 m (43,000 ft)	33 min
Certificated ceiling	15,545 m (51,000 ft)
Ceiling, OEI	7,165 m (23,500 ft)
FAR 25 T-O field length at S/L	1,579 m (5,180 ft)
FAR 25 landing field length at max landing weight	884 m (2,900 ft)
Range, zero wind, with allowances for T-O, climb, descent and 45 min reserves (two crew, four passengers)	2,346 n miles (4,345 km, 2,700 miles)
g limits	+3.2 −1
OPERATIONAL NOISE LEVELS (FAR Pt 36):	
T-O	74.0 EPNdB
Approach	85.0 EPNdB
Sideline	81.0 EPNdB

UPDATED

CESSNA 650 CITATION VII

TYPE: More powerful version of Citation VI (which see).

PROGRAMME: Announced 1990; engineering prototype first flew February 1991, FAR Pt 25 certification January 1992.

CUSTOMERS: First production aircraft (N701CD) as demonstrator, first customer delivery (N1AP) to golfer Arnold Palmer April 1992. Total deliveries 37 by end of 1994, including 14 in 1994, 53 built by May 1995.

COSTS: $9,845,125.

DESIGN FEATURES: Citation VI airframe with 18.41 kN (4,140 lb st) AlliedSignal TFE731-4R-2S turbofans for improved hot/high performance.

AVIONICS: Honeywell SPZ 8000 autopilot/flight director as core system.

Radar: Primus 870 Doppler colour weather radar.

Flight: VOR/DME, DME, Loran C, GPS, VLF/Omega and IRS/INS, digital flight control system with duplex autopilot that allows each flight guidance computer to perform independently, then monitor each other for discrepancies; Global Wulfsberg GNS X flight management system (FMS) optional.

Instrumentation: Four-tube EFIS with 12.7 × 15.2 cm (5 × 6 in) displays, five-tube EFIS optional.

Specification otherwise as Citation VI except:

WEIGHTS AND LOADINGS:	
Weight empty, standard	5,307 kg (11,700 lb)
Max fuel weight	3,350 kg (7,385 lb)
Max T-O weight	10,183 kg (22,450 lb)

Max ramp weight 10,274 kg (22,650 lb)
Max landing weight 9,072 kg (20,000 lb)
Max zero-fuel weight 7,484 kg (16,500 lb)
Max wing loading 351.3 kg/m² (71.96 lb/sq ft)
Max power loading 276.67 kg/kN (2.71 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max operating Mach number (MMO) 0.851
Max operating speed (VMO): S/L to 2,440 m (8,000 ft) 275 kts (509 km/h; 317 mph) IAS
at 11,130 m (36,525 ft) 278 kts (515 km/h; 320 mph) IAS
Max cruising speed at 11,890 m (39,000 ft) and 7,257 kg (16,000 lb) cruise weight 476 kts (881 km/h; 548 mph)
Stalling speed, flaps and wheels down, at max landing weight 97 kts (180 km/h; 112 mph)
Max rate of climb at S/L 1,354 m (4,442 ft)/min
Rate of climb at S/L, OEI 329 m (1,080 ft)/min
FAR Pt 25 T-O field length at S/L 1,430 m (4,690 ft)
FAR Pt 25 landing field length at max landing weight 881 m (2,910 ft)
Range with max fuel, six passengers and 45 min reserves 2,220 n miles (4,111 km; 2,554 miles)
g limits +3/−1

OPERATIONAL NOISE LEVELS (FAR Pt 36):
T-O (7° flap) 69.3 EPNdB
Approach (full flap) 84.8 EPNdB

UPDATED

CESSNA 750 CITATION X

TYPE: High-speed long-range business jet.

PROGRAMME: Announced October 1990; engine flew on Citation VII testbed (N650) 21 August 1992, first flight (N750CX) 21 December 1993, two preproduction aircraft to aid integration of production systems, first of these (N751CX) flown 27 September 1994, second (N752CX) flown 11 January 1995, total of 1,200 flight test hours and 750 flights by June 1995, certification scheduled for November 1995, first customer delivery April 1996.

CUSTOMERS: Total 30 orders by June 1995, representing production up to third quarter of 1997, golfer Arnold Palmer sole named customer.

COSTS: $12.95 million equipped and furnished.

DESIGN FEATURES: High maximum operating Mach number; US transcontinental and transatlantic range. Wing sweepback 37°.

FLYING CONTROLS: Dual hydraulically powered controls with manual reversion, one-piece all-moving tailplane; speed brakes and spoilers with manual back-up.

STRUCTURE: Thick wing skins, milled from solid.

The following data are provisional

LANDING GEAR: Trailing link main units, each with twin wheels, powered anti-skid brakes; steerable nose unit with twin wheels.

POWER PLANT: Two Allison AE 3007C turbofans, each rated at 28.47 kN (6,400 lb st) for take-off, pod-mounted on sides of rear fuselage, FADEC. Hydraulically operated target type thrust reversers standard. Single point refuelling.

ACCOMMODATION: Crew of two on separate flight deck, and up to 12 passengers, interior custom designed, cabin is pressurised, heated and air conditioned; 1.76 m (5 ft 9½ in) stand-up headroom, heated and pressurised baggage compartment in rear fuselage with external door. Windscreen electrically heated and demisted.

SYSTEMS: AiResearch GTCP36-150 integrated APU/air turbine starter.

AVIONICS: Honeywell Primus 2000 autopilot/flight director as core system.

Flight: Dual flight management systems (FMS), dual attitude and heading reference systems, and Honeywell GPS standard.

Instrumentation: Five-tube EFIS with 17.8 × 20.3 cm (7 × 8 in) primary flight display (PFD) and multifunction display (MFD) for pilot and co-pilot, similarly sized engine instrument and crew alerting system (EICAS) display in centre.

DIMENSIONS, EXTERNAL:
Wing span 19.48 m (63 ft 11 in)
Length overall 22.00 m (72 ft 2 in)
Height overall 5.77 m (18 ft 11 in)

DIMENSIONS, INTERNAL:
Cabin: Length, front to rear pressure bulkhead 8.69 m (28 ft 6 in)
Max width 1.74 m (5 ft 8½ in)
Max height 1.76 m (5 ft 9½ in)
Baggage compartment volume (aft) 2.04 m³ (72.0 cu ft)

WEIGHTS AND LOADINGS:
Weight empty, standard 9,163 kg (20,200 lb)
Max fuel weight 5,897 kg (13,000 lb)
Payload with max fuel 544 kg (1,200 lb)
Max T-O weight 15,649 kg (34,500 lb)
Max ramp weight 15,785 kg (34,800 lb)
Max landing weight 14,062 kg (31,000 lb)
Max power loading 262.48 kg/kN (2.70 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max operating Mach number (MMO) 0.92

Telephone: 1 (218) 727 2337
Fax: 1 (218) 727 2148
PRESIDENT: Alan Klapmeier

Previously engaged in production of kits, Cirrus now to concentrate on fully certificated factory built aircraft, first such product is ST 50.

UPDATED

CIRRUS DESIGN CIRRUS VK30

TYPE: Four/five-seat high-performance homebuilt.

PROGRAMME: First flight 11 February 1988, available in prefabricated kit form. 45 kits delivered of which 12 completed and flown by March 1995, including Allison 250-B17C turboprop-powered version.

COSTS: Airframe kit $64,500; engine kit $36,000 (turbocharged $56,000).

DESIGN FEATURES: Include natural laminar flow wing sections, large Fowler flaps, and a tail mounted pusher propeller. Current model concentrates on the Allison 250 turboprop engine. Wing sections based on NASA NLF(1)-0414F.

STRUCTURE: Wings constructed of glassfibre and polyurethane foam, with graphite spar caps. Fuselage has polyurethane foam core, graphite longerons and glassfibre skins. Ailerons and flaps are of graphite/polyurethane/vinylester, and rudder/elevators/tailplane of Kevlar/polyurethane/vinylester.

LANDING GEAR: Retractable tricycle type.

POWER PLANT: One 313 kW (420 shp) Allison 250-B17C turboprop, or 224 kW (300 hp) Teledyne Continental IO-550-G or 261 kW (350 hp) TSIO-550-B flat-six engine, driving an MT MTV-9 three-blade pusher propeller. Fuel capacity 397 litres (105 US gallons; 87.4 Imp gallons).

DIMENSIONS, EXTERNAL:
Wing span 12.09 m (39 ft 8 in)
Wing aspect ratio 12.38
Length overall 7.92 m (26 ft 0 in)
Height overall 3.25 m (10 ft 8 in)
Propeller diameter 1.88 m (6 ft 2 in)

AREAS:
Wings, gross 11.71 m² (126.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 1,089 kg (2,400 lb)
Max T-O weight 1,610 kg (3,550 lb)
Max wing loading 137.56 kg/m² (28.17 lb/sq ft)

PERFORMANCE (with 261 kW, 350 hp TSIO-550-B engine):
Cruising speed, 75% power
260 kts (483 km/h; 300 mph)
Stalling speed, flaps down, engine idling
56 kts (104 km/h; 65 mph)
Max rate of climb at S/L 549 m (1,800 ft)/min
T-O run 412 m (1,350 ft)
Landing run 328 m (1,075 ft)
Range with max fuel, 75% power, with reserves
1,347 n miles (2,494 km; 1,550 miles)
g limits +5/−3

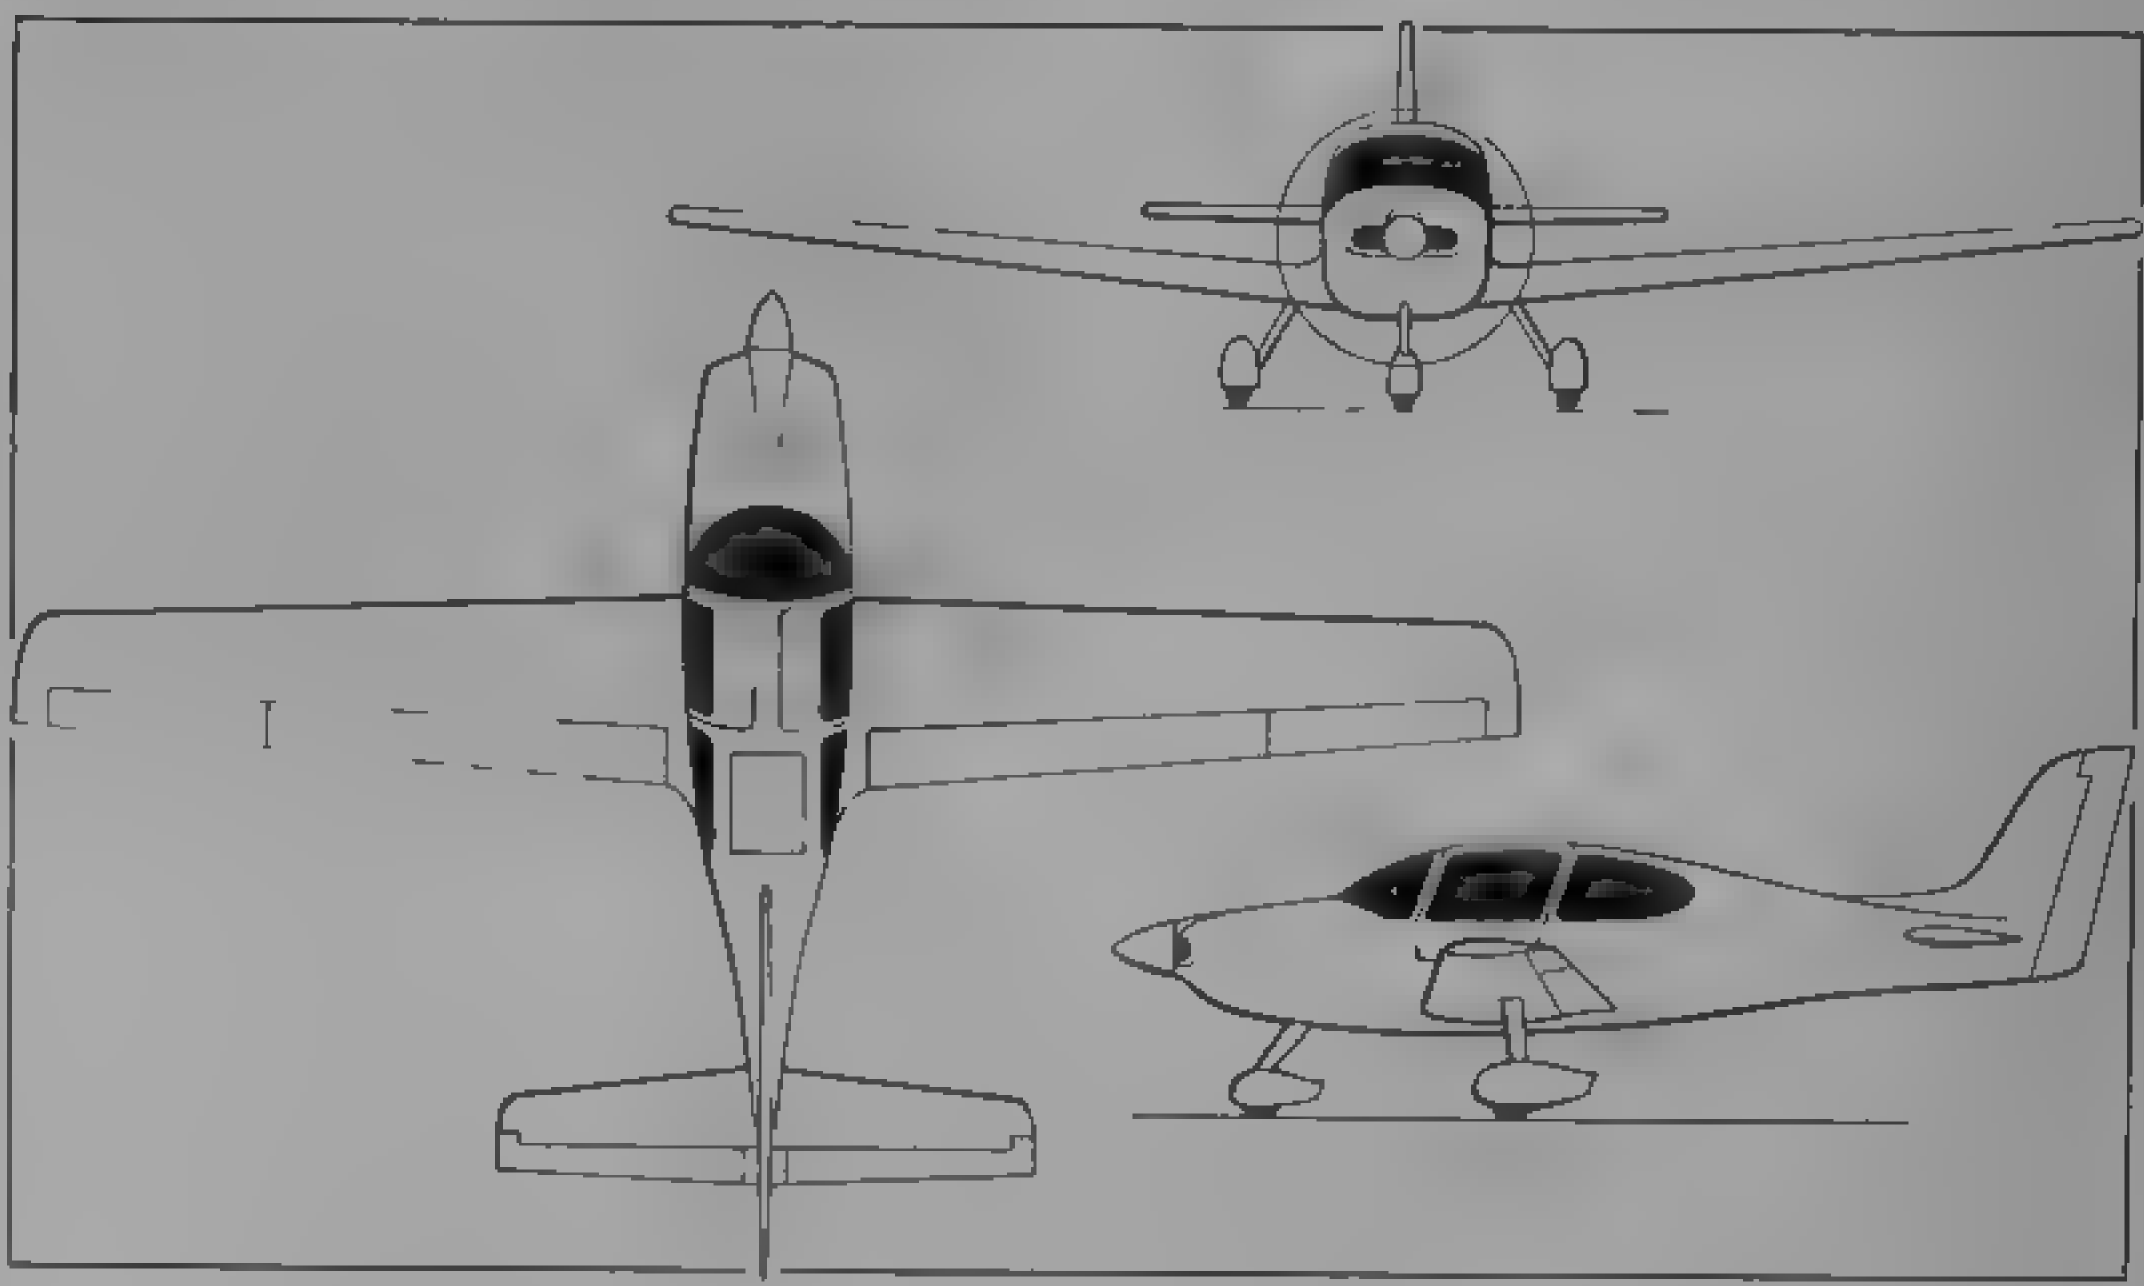
UPDATED

CIRRUS DESIGN ST 50

TYPE: Five-passenger business aircraft.

PROGRAMME: Announced 1993, first flight 7 December 1994. Cirrus Design was contracted to develop the ST 50 by Israviation Ltd (which see under Israel for ST 50 description and illustration).

UPDATED



Cirrus Design SR-20 (one Teledyne Continental IO-360ES) *(Jane's/James Goulding)*
1995

CIRRUS DESIGN SR-20

TYPE: Four-seat business aircraft.

PROGRAMME: Mockup revealed at Oshkosh 1994, first flight (N200SR) 31 March 1995, for FAR Pt 23 certification and production in 1996. Intended to develop into family of aircraft, including two-seat trainer version.

COSTS: About $130,000.

DESIGN FEATURES: Low-wing monoplane with upturned wingtips, mid-set tailplane with horn balanced elevators, horn balanced rudder, fixed tab on starboard aileron.

LANDING GEAR: Fixed, tricycle, single wheels and speed fairings throughout.

ACCOMMODATION: Four seats in pairs, two forward-hinged passenger doors.

POWER PLANT: One 149 kW (200 hp) Teledyne Continental IO-360ES driving three-blade propeller.

DIMENSIONS, EXTERNAL:
Wing span 10.67 m (35 ft 0 in)
Wing aspect ratio 9.14
Length overall 7.62 m (25 ft 0 in)
Height overall 2.80 m (9 ft 2¼ in)

DIMENSIONS, INTERNAL:

Cabin: Length	3.35 m (11 ft 0 in)
Max width	1.21 m (3 ft 11½ in)
Max height	1.25 m (4 ft 1¼ in)

AREAS:

Wings, gross	12.45 m² (134.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	789 kg (1,740 lb)
Max fuel weight	163 kg (360 lb)
Max T-O weight	1,315 kg (2,900 lb)
Max wing loading	105.66 kg/m² (21.64 lb/sq ft)
Max power loading	8.82 kg/kW (14.5 lb/hp)

PERFORMANCE (estimated):

Max cruising speed	162 kts (300 km/h; 186 mph)
Stalling speed	54 kts (100 km/h; 62 mph)
Max rate of climb at S/L	300 m (984 ft)/min
Range	799 n miles (1,480 km; 919 miles)

VERIFIED

CLASSIC WACO CLASSIC YMF SUPER

TYPE: Three-seat sport biplane.

PROGRAMME: Construction began March 1984 under type certificate of original Waco YMF-5; first flight of prototype (N1935B) 20 November 1985; FAA certification 11 March 1986.

CURRENT VERSIONS: **YMF Super:** Larger front cockpit than previously standard F-5 version (see 1992-93 *Jane's*) for commercial pleasure flying; enlarged forward door; front and rear cockpits 10 cm (4 in) longer; front cockpit 6.3 cm (2½ in) wider.

CUSTOMERS: Total 59 (including F-5s) delivered by early 1995.

COSTS: Standard equipment aircraft $215,000.

DESIGN FEATURES: Wing section Clark Y; dihedral 2°; incidence 0° on upper and lower wings.

FLYING CONTROLS: Ailerons on upper and lower wings; no tabs. Tailplane trim by screwjack actuator; ground adjustable trim tab on rudder; elevators.

STRUCTURE: Modern construction techniques, tolerances and materials applied to original design. N type interplane struts; streamlined stainless steel flying and landing wires; all-wood wing with Dacron covering; aluminium ailerons with external chordwise stiffening. Fuselage of 4130 welded steel tubes with internal oiling for corrosion protection, wooden bulkheads, Dacron covering. Braced welded steel tube tail surfaces with Dacron covering.

LANDING GEAR: Non-retractable tailwheel type. Shock-absorption by oil and spring shock-struts. Steerable tailwheel. Cleveland 30-67F hydraulic brakes on mainwheels only. Cleveland 40-101A mainwheels, tyre size 7.50-10. Cleveland 40-199A tailwheel, tyre size 3.50-4. Mainwheel fairings standard, tailwheel fairing optional. Float and amphibious landing gear optional.

POWER PLANT: One 205 kW (275 hp) Jacobs R-755-B2 air-cooled radial engine (remanufactured), driving a two-blade fixed-pitch wooden propeller. Constant-speed propeller with spinner optional. Engine enclosed with streamline aluminium 'bump' (helmeted) cowling. Fuel contained in two aluminium tanks in upper wing centre-section, total capacity 182 litres (48 US gallons; 40 Imp gallons). Refuelling point for each tank in upper wing surface. Auxiliary tanks, capacity 45 litres (12 US gallons; 10 Imp gallons) each, optional in either or both inboard upper wing panels. Standard oil capacity 15 litres (4 US gallons; 3.33 Imp gallons), with auxiliary fuel tanks 19 litres (5 US gallons; 4.2 Imp gallons).

ACCOMMODATION: Three seats in tandem open cockpits, two side by side in front position, single seat at rear. Dual

Classic Waco Classic YMF Super recreation of the Waco YMF-5 three-seat biplane *1995*

controls, seat belts with shoulder harness, and pilot's adjustable seat, standard. Front baggage compartment, capacity 11.3 kg (25 lb); rear baggage compartment, volume 0.2 m³ (7.5 cu ft), capacity 34 kg (75 lb).

SYSTEMS: 24 V electrical system with battery, alternator and starter for electrical supply to navigation, strobe and rear cockpit lights. Hydraulic system for brakes only.

AVIONICS: Customer specified.

EQUIPMENT: Toe brakes standard in rear cockpit. Compass, airspeed indicator, turn and bank indicator, rate of climb indicator, sensitive altimeter, recording tachometer, cylinder head temperature gauge and oil pressure and oil temperature gauges standard in rear cockpit. Front cockpit instruments optional. Front and rear windscreens (front removable), front and rear cockpit covers, instrument post lighting, heated pitot, tiedown rings and three-colour paint scheme with choice of two designs, also standard. Optional equipment includes exhaust gas temperature gauge, carburettor temperature gauge, g meter, vacuum or electrically driven gyro system, Hobbs meter (engine-time recorder), outside air temperature gauge, manifold gauge, oil cooler for wooden propeller, ground service plug, landing and taxi lights, front and rear cockpit heaters, flight-approved metal front cockpit cover, map case, glider tow hook, deluxe interior with carpet, leather sidewalls and interior trim, and special exterior paint designs.

DIMENSIONS, EXTERNAL:

Wing span:	
upper: F-5, YMF Super	9.14 m (30 ft 0 in)
lower: F-5, YMF Super	8.18 m (26 ft 10 in)
Length overall: F-5	7.10 m (23 ft 3⅛ in)
YMF Super	7.26 m (23 ft 10 in)
Height overall: F-5	2.57 m (8 ft 5⅛ in)
YMF Super	2.59 m (8 ft 6 in)
Wheelbase: F-5, YMF Super	1.95 m (6 ft 5 in)
Propeller diameter:	
F-5, YMF Super	2.44 m (8 ft 0 in)

AREAS:

Wings, gross	21.69 m² (233.5 sq ft)

WEIGHTS AND LOADINGS:

Basic weight empty: F-5	880 kg (1,940 lb)
YMF Super	900 kg (1,985 lb)
Max T-O and landing weight: F-5	1,256 kg (2,770 lb)
YMF Super	1,338 kg (2,950 lb)
Max wing loading: F-5	52.26 kg/m² (10.71 lb/sq ft)
YMF Super	61.67 kg/m² (12.63 lb/sq ft)
Max power loading: F-5	6.21 kg/kW (10.20 lb/hp)
YMF Super	6.53 kg/kW (10.73 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE):	
F-5, YMF Super	186 kts (344 km/h; 214 mph)
Max level speed at S/L:	
F-5, YMF Super	117 kts (217 km/h; 135 mph)
Max cruising speed at S/L:	
F-5, YMF Super	104 kts (193 km/h; 120 mph)
Econ cruising speed at 2,440 m (8,000 ft):	
F-5, YMF Super	95 kts (177 km/h; 110 mph)
Stalling speed, power off:	
F-5	51 kts (94 km/h; 58 mph)
YMF Super	53 kts (97 km/h; 60 mph)
Max rate of climb at S/L:	
F-5, YMF Super	235 m (770 ft)/min
T-O run: F-5, YMF Super	152 m (500 ft)
Range, standard fuel, 30 min reserves:	
F-5, YMF Super	286 n miles (531 km; 330 miles)

Company acquired manufacturing, marketing and support rights for Rockwell Commander 112 and 114 from Gulfstream Aerospace Corporation Summer 1988; spares and support services for existing aircraft and manufacturing based in Oklahoma. Commander 114 remains in production. Dealerships/representatives in Abu Dhabi, Australia, Germany, Netherlands, Switzerland, UK and USA (nine).

UPDATED

COMMANDER 114B

TYPE: New production version of four-seat, single-engined Commander 114A.

PROGRAMME: Certificated 5 May 1992; now in production.

CURRENT VERSIONS: **Commander 114B:** Basic version, *as detailed*.

Commander 114AT: Optimised for pilot training.

Commander 114TC: Powered by Textron Lycoming turbocharged engine, driving three-blade McCauley propeller; engineering began 1993, first flight October 1994.

CUSTOMERS: Total 93 built by January 1995; 25 delivered in 1992, 38 in 1993; 30 in 1994, 50 planned for 1995.

COSTS: Standard IFR-equipped aircraft $298,500.

DESIGN FEATURES: Improvements in 114B include new cowling design, improved cooling and induction, specially developed McCauley three-blade metal propeller, NACA scoop in dorsal fin, new interior trim and seats, better soundproofing, 28 V electrical system, and custom metal instrument panel.

FLYING CONTROLS: Conventional; electric flap control, elevator and rudder trim, dual controls.

LANDING GEAR: Retractable tricycle type; nosewheel (steerable) tyre size 5.00-5 (6 ply), mainwheel tyres size 6.00-6 (6 ply); dual brakes.

POWER PLANT: One 194 kW (260 hp) Textron Lycoming IO-540-T4B5 flat-six engine, driving a McCauley B3D 32C 419/82NHA-5 three-blade constant-speed metal propeller. Fuel in two integral wing tanks, maximum capacity 265 litres (70 US gallons; 58.3 Imp gallons), of which 257 litres (68 US gallons; 56.6 Imp gallons) are usable. Maximum oil capacity 7.6 litres (2 US gallons; 1.67 Imp gallons).

SYSTEMS: 28 V DC electrical, hydraulic, cabin heating and ventilation.

AVIONICS: *Comms:* Standard includes Bendix/King KMA 24-03 audio panel and KT 76A transponder.

Flight: KX 155 digital nav and Terra AT 3000 altitude encoder.

DIMENSIONS, EXTERNAL:

Wing span	9.98 m (32 ft 9 in)
Wing aspect ratio	7.06
Length overall	7.59 m (24 ft 11 in)
Height overall	2.57 m (8 ft 5 in)
Tailplane span	4.10 m (13 ft 5½ in)
Wheel track	3.34 m (10 ft 11½ in)
Wheelbase	2.11 m (6 ft 11 in)
Propeller diameter	1.96 m (6 ft 5 in)
Propeller ground clearance	0.19 m (7½ in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.91 m (6 ft 3 in)
Max width	1.19 m (3 ft 11 in)
Max height	1.24 m (4 ft 1 in)
Volume	2.83 m³ (100.0 cu ft)
Baggage compartment volume	0.62 m³ (22.0 cu ft)

AREAS:

Wings, gross	14.12 m² (152.0 sq ft)

Commander Aircraft Commander 114B

1995

WEIGHTS AND LOADINGS

Weight empty	927 kg (2,044 lb)
Baggage capacity	91 kg (200 lb)
Max T-O weight	1,474 kg (3,250 lb)
Max ramp weight	1,479 kg (3,260 lb)
Max wing loading	104.5 kg/m² (21.4 lb/sq ft)
Max power loading	7.62 kg/kW (12.54 lb/hp)

PERFORMANCE (at max T-O weight, ISA)

Max level speed	164 kts (304 km/h; 189 mph)
Cruising speed, 75% power	160 kts (296 km/h; 184 mph)
Stalling speed: flaps and wheels up	61 kts (113 km/h; 71 mph)
flaps and wheels down	56 kts (104 km/h; 65 mph)
Max rate of climb at S/L	326 m (1,070 ft)/min
Service ceiling	5,120 m (16,800 ft)
T-O run	317 m (1,040 ft)
T-O to 15 m (50 ft)	610 m (2,000 ft)
Landing from 15 m (50 ft)	366 m (1,200 ft)
Landing run	220 m (720 ft)
Range: at 75% power	630 n miles (1,167 km; 725 miles)
at 65% power	725 n miles (1,343 km; 835 miles)

DOUGLAS — *see McDonnell Douglas*

EXPRESS DESIGN INC

PO Box 609, 1266 South-East Lake Road, Redmond, Oregon 97756
Telephone: 1 (503) 548 2723
Fax: 1 (503) 548 2949
PRESIDENT: David Ulrich

EDI acquired assets of former Wheeler Technology Inc (1992-93 *Jane's*) which became bankrupt in late 1990; resumed production and customer support for former Wheeler Express homebuilt. Factory floor area 1,951 m² (21,000 sq ft)

VERIFIED

EDI EXPRESS

TYPE: Four seat, dual-control cross-country kit aircraft; conforms to FAR Pt 23.

PROGRAMME: Designed by Wheeler Technology Inc as high-speed cross-country kitplane, with unusual seating arrangement of one forward- and one aft-facing seat in rear, behind two side by side front seats with dual controls. Three prototypes built from kits of premoulded parts; first flight 28 July 1987. First, larger, production line Express demonstrator made first flight May 1990, powered by Teledyne Continental engine. Delivered kits incomplete at time of Wheeler bankruptcy, deficiencies made good by EDI, and at least six aircraft now completed. Complete kits now available from Express Design incorporate some modifications, which can also be retrofitted to existing aircraft.

Six-seat version also available with higher powered 194 kW (260 hp) engine under name **Loadmaster 3200**.

COSTS: Airframe kit $34,965. Loadmaster 3200 airframe kit $37,915. Engine, propeller, upholstery, finish paint and instruments not included.

DESIGN FEATURES: Wing section NASA NFL-1 0215 F (laminar flow).

STRUCTURE: Constructed of composites: sandwich material, comprising polyurethane foam core, glassfibre, unidirectional glassfibre tape and vinylester resin.

LANDING GEAR: Non-retractable tricycle type standard. Retractable gear optional.

POWER PLANT: Demonstrator fitted with 156.6 kW (210 hp) Teledyne Continental IO-360-ES1 flat-four engine; 119 or 134 kW (160 or 180 hp) Textron Lycoming engine

optional Fuel capacity 204 litres (54 US gallons, 45 Imp gallons); optional 348 litres (92 US gallons, 76.6 Imp gallons).

DIMENSIONS, EXTERNAL:

Wing span	9.45 m (31 ft 0 in)
Wing aspect ratio	7.39
Length overall	7.92 m (26 ft 0 in)
Height overall	2.13 m (7 ft 0 in)

AREAS:

Wings, gross	12.08 m² (130.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	771 kg (1,700 lb)
Baggage capacity, with four 77 kg (170 lb) persons	29 kg (64 lb)
Max T-O weight	1,313 kg (2,895 lb)
Max wing loading	108.73 kg/m² (22.27 lb/sq ft)

PERFORMANCE (149 kW; 200 hp engine, retractable landing gear):

Max cruising speed at 2,290 m (7,500 ft), 75% power	165 kts (306 km/h, 190 mph)
Stalling speed at max T-O weight:	
flaps up	55 kts (101 km/h, 63 mph)
flaps down	50 kts (92 km/h, 57 mph)
Max rate of climb at S/L	427 m (1,400 ft)/min
Service ceiling	6,100 m (20,000 ft)
T-O run	274 m (900 ft)
Landing run	366 m (1,200 ft)
Range 55% power, no reserves	991 n miles (1,835 km, 1,140 miles)
Range with auxiliary fuel tank	1,688 n miles (3,125 km, 1,942 miles)
g limits	+4.4/−2.2
	+8.8/−4.4 ultimate
Demonstrated crosswind T-O and land	29 kts (54 km/h, 33 mph)

ENSTROM

THE ENSTROM HELICOPTER CORPORATION

PO Box 490, 2209 North 22nd Street, Twin County Airport, Menominee, Michigan 49858-0490

Telephone: 1 (906) 863 1200

Fax: 1 (906) 863 6821

PRESIDENT AND CEO: Robert M. Tuttle

VICE-PRESIDENT, MANUFACTURING: John E. Hansen

VICE-PRESIDENT, ENGINEERING: Robert L. Jenny

DIRECTOR OF MARKETING: Bill May

Founded in 1959, Enstrom company passed through several hands before 1990 acquisition by investors based in Los Angeles. More than 1,000 helicopters produced. Production in China planned at Wuhan; Wuhan Helicopter Company (WHC) has been established for this purpose with four-year programme and production capacity of 100 per year for sale only in China.

UPDATED

ENSTROM F28 and 280

TYPE: Three-seat light helicopter

PROGRAMME: Basic F-28A and 280 described in 1978-79 *Jane's*; replaced by turbocharged F28C and 280C, certificated by FAA 8 December 1975 and last described in 1984-85 *Jane's*; production of these models ceased November 1981, succeeded by F28F and 280F Shark described in 1985-86 *Jane's*, and 280FX, current models detailed here.

CURRENT VERSIONS: **F28F Falcon**: Basic model certificated to FAR Pt 6 on 31 December 1980. Recent developments include redesigned main gearbox with heavy wall main rotor shaft (standard on all new F28s and retrofittable to all existing F models); optional lightweight exhaust silencer, reducing noise in hover by 40 per cent and by 30 per cent when flying at 152 m (500 ft) (can be retrofitted to existing F28F, 280F and 280FX); lightweight starter motor recently introduced for all models.

Enstrom wet and dry agricultural kit comprises two side-mounted hoppers with quick fill openings, total capacity 303 litres (80 US gallons, 67 Imp gallons), spraybar 9.04 m (29 ft 8 in) wide, extendable to 11.07 m (36 ft 4 in), manually operated clutch gives positive control of centrifugal pump with capacity for 227 litres (60 US gallons, 50 Imp gallons)/min, dry discharge rate variable from 0 to 272 kg (600 lb)/min, weight of entire quickly removable dispersal system 48 kg (105 lb).

F28F-P Sentinel: Dedicated police patrol version, first delivery October 1986, can be fitted with Locator B, Spectrolabe SX-5 or Carter searchlight and specialised police radio; same specifications and performance as F28F, can also be fitted with FLIR system.

280FX Shark: Certificated to FAR Pt 6 on 14 January 1985. Features include new seats with lumbar support and energy-absorbing foam, new tailplane with endplate fins, tail rotor guard, covered tail rotor shaft, redesigned air inlet system, and completely faired landing gear; optional pneumatic door opener; optional internal tank extends range to 339 n miles (627 km, 390 miles).

Enstrom F28F Falcon three-seat light helicopter

1995

CUSTOMERS: Chilean Army operates 15 280FXs for primary and instrument training, Peruvian Army has 10 F28Fs for training duties; Colombian Air Force operates 12 F28Fs for primary and instrument training. More than 170 F28F and 280FX helicopters in service worldwide. F28 continues in low rate production (one added to US civil register in 1994), no 280FXs since early 1992, approximately 790 F28s, 145 F280s and 72 F280FXs built.

COST: Basic price $219,900 for Falcon, $236,900 for Shark (1995).

DESIGN FEATURES: Three-blade fully articulated head with blades attached by retention pin and drag link, control rods pass inside tubular rotor shaft to swashplate inside fuselage, blade section NACA 0013.5, blades do not fold, two-blade teetering tail rotor. Poly V-belt drive system from horizontally mounted engine to transmission also acts as clutch.

STRUCTURE: Bonded light alloy blades. Fuselage has glassfibre and light alloy cabin section, steel tube centre-section frame, and stressed skin aluminium tailboom.

LANDING GEAR: Skids carried on Enstrom oleo-pneumatic shock absorbers. Air Cruiser inflatable floats available optionally.

POWER PLANT: One 168 kW (225 hp) Textron Lycoming HIO-360-F1AD flat-four engine with Rotomaster 3BT5EE10J2 turbocharger. Two fuel tanks, each of 79.5 litres (21 US gallons, 17.5 Imp gallons). Total standard fuel capacity 159 litres (42 US gallons, 35 Imp gallons), of which 151 litres (40 US gallons, 33.3 Imp gallons) are usable. Auxiliary tank, capacity 49 litres (13 US gallons, 10.8 Imp gallons), can be installed in the baggage compartment. Oil capacity 9.5 litres (2.5 US gallons, 2.1 Imp gallons).

ACCOMMODATION: Pilot and two passengers, side by side on bench seat; centre place removable. Fully transparent removable door on each side of cabin. Baggage space aft of engine compartment, capacity 49 kg (108 lb), with external door. Cabin heated and ventilated.

SYSTEMS: Electrical power on F28F provided by 12 V 70 A engine-driven alternator; 24 V 70 A system optional on F28F, standard on 280FX.

AVIONICS: Variety of fits from AR Nav, Bendix/King II Morrow and Northstar.

Instrumentation: Standard equipment includes airspeed indicator, sensitive altimeter, compass, outside air temperature gauge, turn and bank indicator, rotor/engine tachometer, manifold pressure/fuel flow gauge, EGT gauge, oil pressure gauge, gearbox and oil temperature gauge, ammeter, cylinder head temperature gauge, and fuel quantity gauge. Eight light annunciator panel consisting of low rotor rpm, chip detectors (main and tail rotor transmissions), overboost, clutch not fully engaged, low fuel pressure, starter, and low voltage warning lights.

EQUIPMENT: Shoulder harnesses for two seats, instrument lighting with dimmer control, position light on each horizontal stabiliser tip, anti-collision strobe light, landing lights, adjustable nose light and soundproofing.

Enstrom 280FX Shark (Textron Lycoming HIO-360 engine)

1995

DIMENSIONS, EXTERNAL:
Main rotor diameter 9.75 m (32 ft 0 in)
Tail rotor diameter 1.42 m (4 ft 8 in)
Distance between rotor centres 5.56 m (18 ft 3 in)
Main rotor blade chord 0.24 m (9½ in)
Tail rotor blade chord 0.11 m (4½ in)
Length overall, rotors stationary 8.92 m (29 ft 3 in)
Height to top of rotor head 2.79 m (9 ft 2 in)
Skid track 2.21 m (7 ft 3 in)
Cabin doors (each): Height 1.04 m (3 ft 5 in)
Width 0.84 m (2 ft 9 in)
Height to sill 0.64 m (2 ft 1 in)
Baggage door: Height 0.55 m (1 ft 9½ in)
Width 0.39 m (1 ft 3½ in)
Height to sill 0.86 m (2 ft 10 in)

DIMENSIONS, INTERNAL:
Cabin: Max width: F28F 1.55 m (5 ft 1 in)
280FX 1.50 m (4 ft 11 in)
Baggage compartment volume 0.18 m³ (6.3 cu ft)

AREAS:
Main rotor disc 74.69 m² (804.0 sq ft)
Tail rotor disc 1.66 m² (17.88 sq ft)

WEIGHTS AND LOADINGS (F28F Normal category):
Weight empty, equipped: F28F 712 kg (1,570 lb)
280FX 719 kg (1,585 lb)
Max T-O weight: F28F, 280FX 1,179 kg (2,600 lb)
Max disc loading:
F28F, 280FX 15.77 kg/m² (3.23 lb/sq ft)

PERFORMANCE (both versions at AUW of 1,066 kg; 2,350 lb except where indicated):
Never-exceed speed (VNE):
F28F 97 kts (180 km/h, 112 mph)
280FX 102 kts (189 km/h, 117 mph)
Max level speed, S/L to 915 m (3,000 ft):
F28F 97 kts (180 km/h; 112 mph) IAS
280FX 102 kts (189 km/h, 117 mph) IAS
Econ cruising speed:
F28F 89 kts (165 km/h, 102 mph)
280FX 93 kts (172 km/h, 107 mph)
Max rate of climb at S/L 442 m (1,450 ft)/min
Certificated operating ceiling 3,660 m (12,000 ft)
Hovering ceiling:
IGE at 1,179 kg (2,600 lb) AUW 2,345 m (7,700 ft)
OGE at 1,066 kg (2,350 lb) AUW 2,650 m (8,700 ft)
Max range, standard fuel, no reserves:
F28F 228 n miles (423 km, 263 miles)
280FX 260 n miles (483 km, 300 miles)
Max endurance 3 h 30 min

UPDATED

ENSTROM 480

Military designation: TH-28

TYPE: Five-seat turbine-powered helicopter.

PROGRAMME: Proof-of-concept 280FX powered by Allison 250 turboshaft, flown December 1988; first flight of definitive wide cabin 480/TH-28 five-seat prototype (N8631E) in October 1989; second 480/TH-28 (production prototype) flew December 1991; TH-28 model FAA certificated September 1992; four helicopters accumulated over 1,500 flight hours in test programme; FAA certification completed 1994.

CURRENT VERSIONS: **480**: Basic civil version, with four staggered seats or convertible to three-seat training/executive layout; smaller instrument console than TH-28. *Description applies to this version.*

TH-28: Military training/light patrol version, equipped with three crashworthy seats and crashworthy fuel system, capable of training two students simultaneously. Two alternative avionics configurations, one for VFR and one for IFR training.

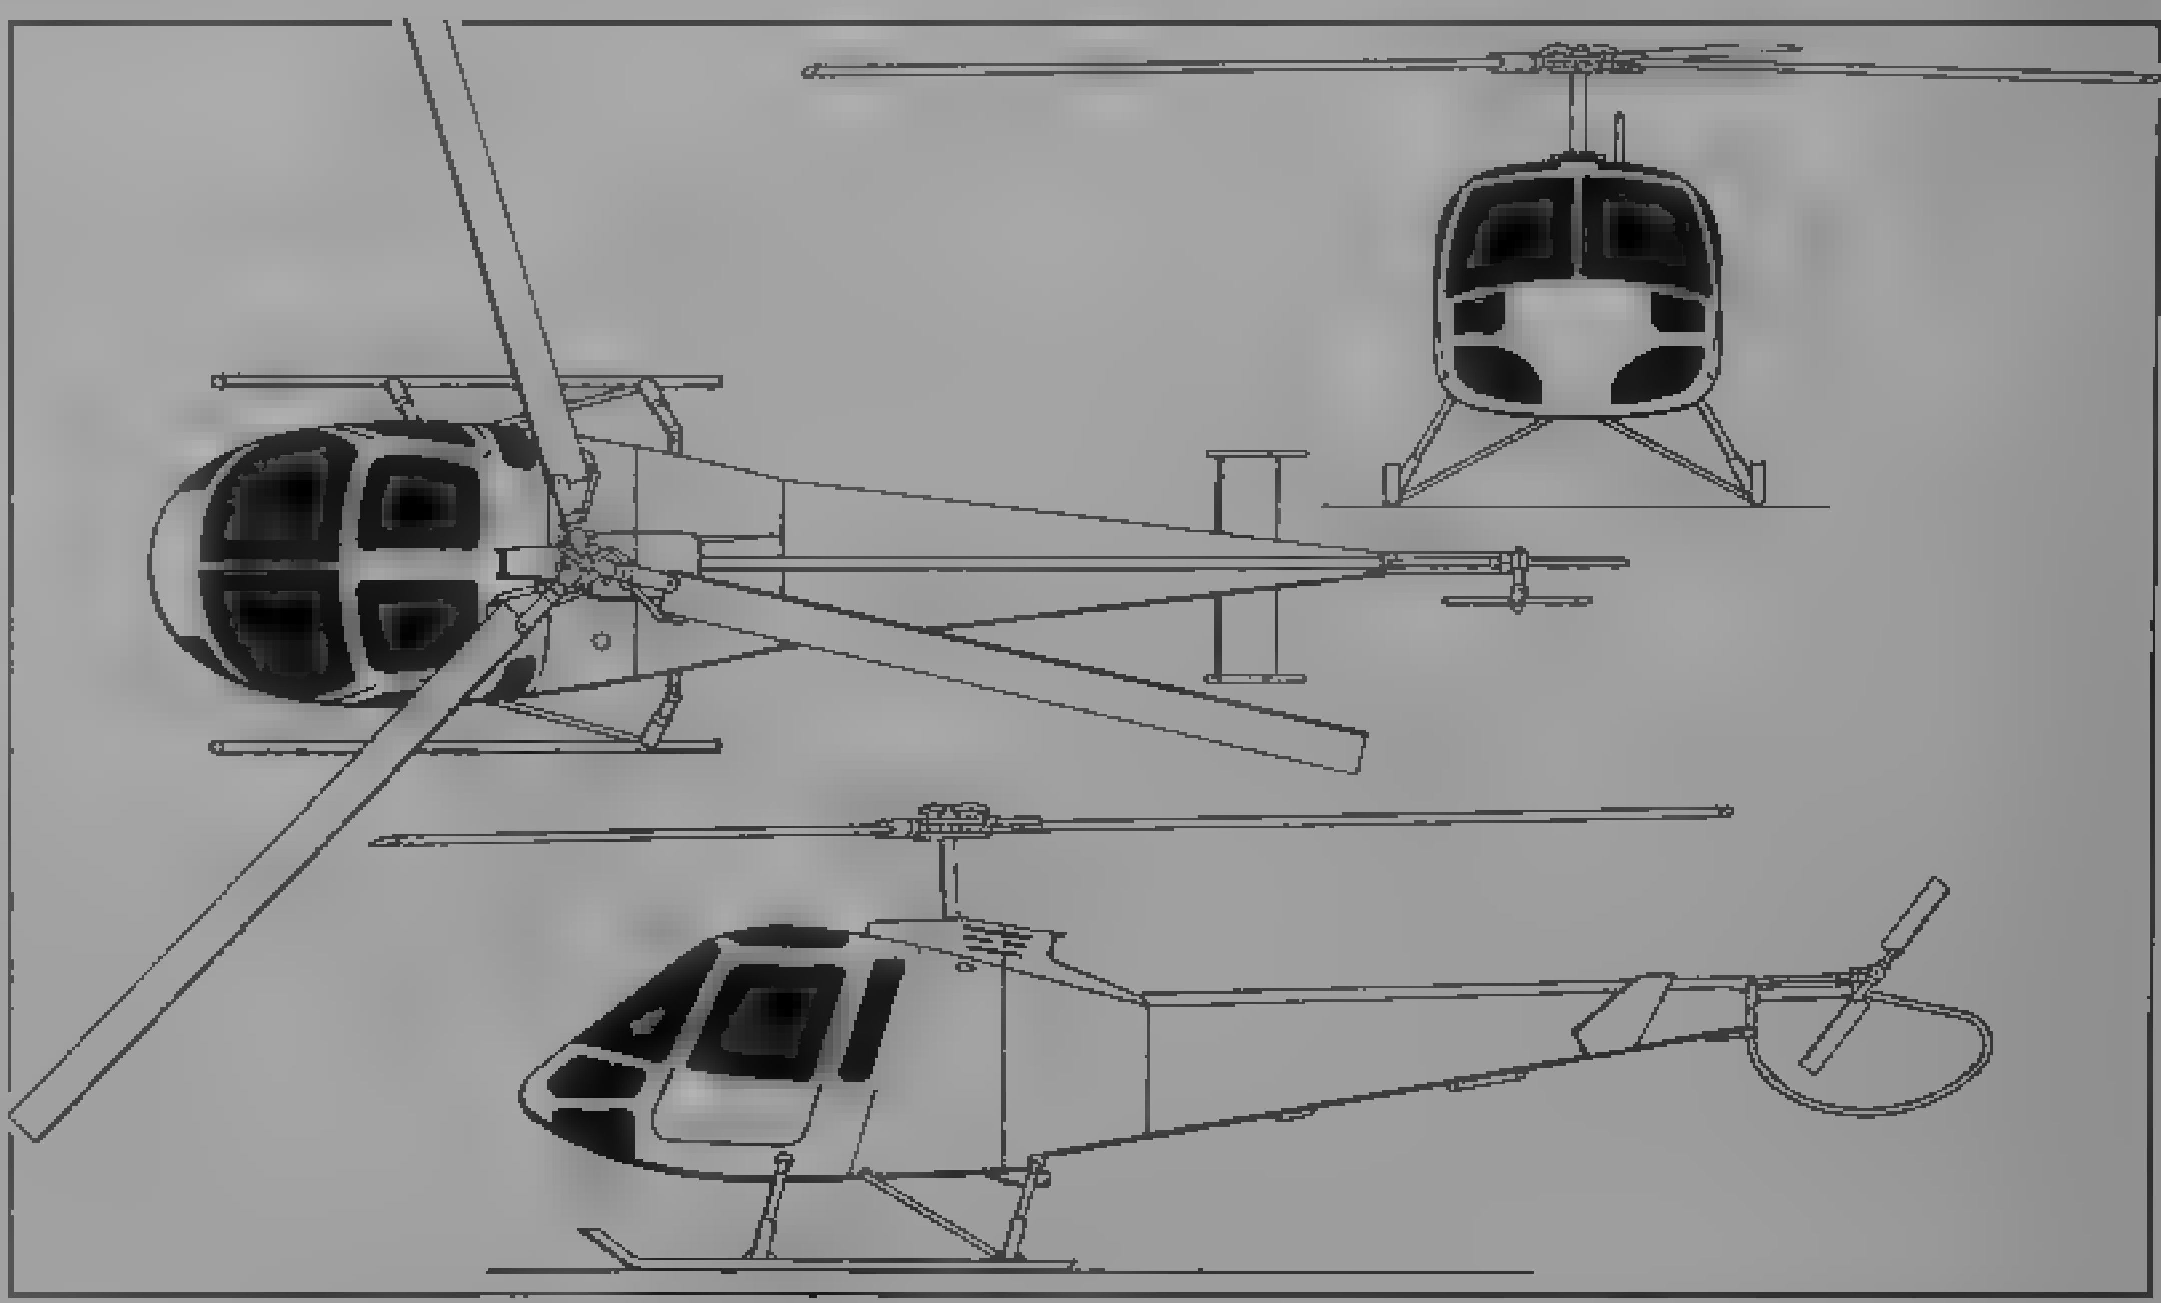
CUSTOMERS: First production 480 (N480EN) built January 1994 and to UK as demonstrator; low rate production under way, operating in Brazil, Canada, China, Germany, Switzerland, UK and USA.

COSTS: Basic price $460,000 for 480, $500,000 for TH-28 (1994).

DESIGN FEATURES: Three-blade main rotor and dynamic system as for 280FX; 313 kW (420 shp) Allison 250-C20W turboshaft, derated to 212.5 kW (285 shp) for take-off and 191 kW (256 shp) maximum continuous. Extensive crashworthiness features. Standard engine air inlet particle separator. New widened cabin able to seat three-abreast behind front seats. Civil cabin layout can be quickly rearranged (see Current Versions).

First production Enstrom 480 five-seat turbine-powered light helicopter

1995



Enstrom 480 light helicopter (Allison 250-C20W turboshaft) *(Jane's/Mike Keep)*

1993

FLYING CONTROLS: As for 280FX.

DIMENSIONS, EXTERNAL: As for 280FX except:
Distance between rotor centres 4.90 m (16 ft 1 in)
Height to top of rotor head 2.92 m (9 ft 7 in)
Skid track 2.50 m (8 ft 2½ in)

DIMENSIONS, INTERNAL:
Cabin: Max width 1.80 m (5 ft 10¾ in)

WEIGHTS AND LOADINGS:
Weight empty 760 kg (1,675 lb)
Max T-O weight 1,293 kg (2,850 lb)
Max disc loading 17.31 kg/m² (3.54 lb/sq ft)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Never-exceed speed (VNE)
121 kts (225 km/h, 140 mph)
Cruising speed: at AUW of 1,293 kg (2,850 lb)
106 kts (196 km/h, 122 mph)
at AUW of 1,134 kg (2,500 lb)
114 kts (211 km/h, 131 mph)
Max rate of climb at S/L:
at AUW of 1,293 kg (2,850 lb) 442 m (1,450 ft)/min
at AUW of 1,134 kg (2,500 lb) 482 m (1,583 ft)/min
Service ceiling 3,965 m (13,000 ft)
Hovering ceiling:
IGE:
at AUW of 1,293 kg (2,850 lb) 3,050 m (10,000 ft)
at AUW of 1,134 kg (2,500 lb) 4,265 m (14,000 ft)
OGE:
at AUW of 1,293 kg (2,850 lb) 2,105 m (6,900 ft)
at AUW of 1,134 kg (2,500 lb) 3,660 m (12,000 ft)
Max range 382 n miles (707 km, 439 miles)
Endurance 4 h 42 min

Fax: 1 (310) 391 8645
CHIEF DESIGNER: Dave Ronneberg
VICE-PRESIDENT, OPERATIONS: Diane Moser

VERIFIED

EXPERIMENTAL AVIATION BERKUT

TYPE: Tandem two-seat monoplane.

PROGRAMME: Named after Asian eagle; first flight 11 July 199?.

COSTS: Kit $29,400 (1995). Complete aircraft $65,000.

CUSTOMERS: Total of 47 sold by early 1995.

DESIGN FEATURES: Rear mounted wings with 23° of sweep, with winglets. Straight foreplane. Resembles Rutan Long-EZ, of which Dave Ronneberg built seven examples, but features larger cabin and wing strakes with upper camber lift. Intended first for sport and recreational flying; seen to have business applications as well as military. Construction takes about 1,500 to 2,000 working hours.

FLYING CONTROLS: Ailerons and rudders on main wing, elevators on canard, electrically actuated airbrake under fuselage.

STRUCTURE: Carbonfibre main spar; canard has solid core with no ribs. GFRP, Styrofoam, PVC foam and Kevlar also used.

LANDING GEAR: Electrohydraulically retractable tricycle landing gear. Marco calliper brakes and wheels.

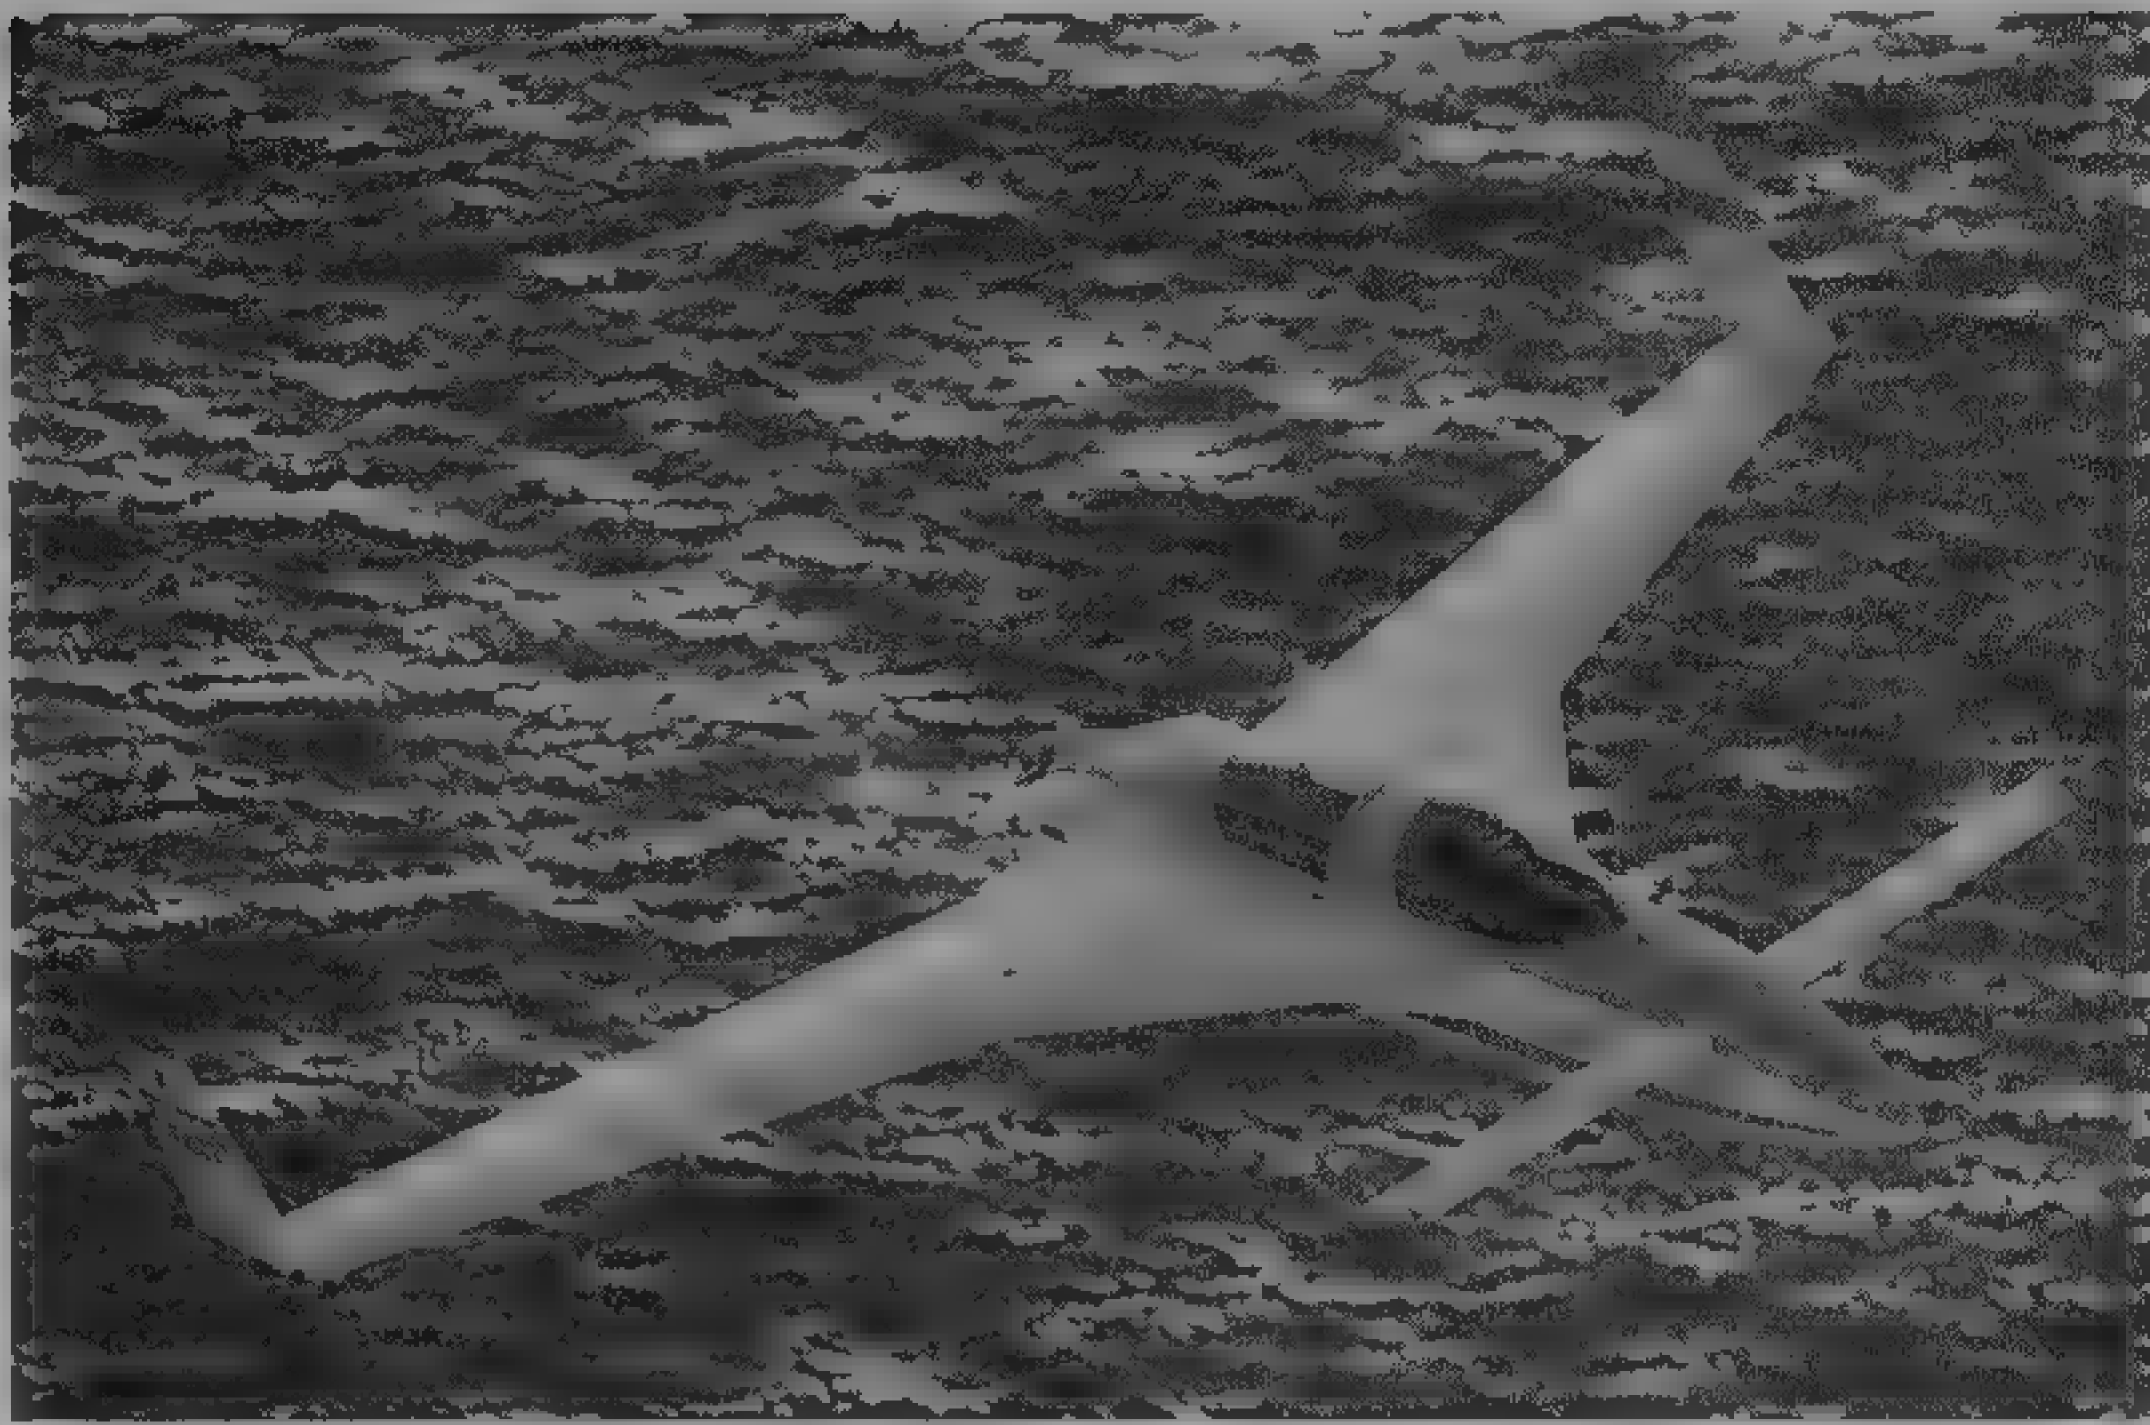
POWER PLANT: One 153 kW (205 hp) Textron Lycoming IO-360-B1A flat-four engine, driving a Light Speed Engineering Black Bart pusher propeller. Usable fuel capacity 219 litres (58 US gallons, 48 Imp gallons).

ACCOMMODATION: Two seats in tandem. 0.31 m³ (11 cu ft) baggage space in wing strakes and nose.

SYSTEMS: Hydraulic system (96.5 bars; 1,400 lb/sq in) for landing gear; 12 V electrical system with 30 Ah battery.

DIMENSIONS, EXTERNAL:

Wing span	8.13 m (26 ft 8 in)
Length overall	5.64 m (18 ft 6 in)
Height overall	2.29 m (7 ft 6 in)
Propeller diameter	1.70 m (5 ft 7 in)



Experimental Aviation Berkut two-seat canard monoplane *(Eric Sander)* *1995*

WEIGHTS AND LOADINGS:

Weight empty	469 kg (1,035 lb)
Max T-O weight	907 kg (2,000 lb)
Max power loading	5.93 kg/kW (9.76 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (V_{NE})	300 kts (556 km/h, 345 mph)
Max level speed at 1,830 m (6,000 ft)	215 kts (399 km/h, 248 mph)
Cruising speed at 2,440 m (8,000 ft)	208 kts (385 km/h, 239 mph)
Econ cruising speed at 2,440 m (8,000 ft)	187 kts (346 km/h, 215 mph)
Stalling speed (of canard)	54 kts (100 km/h, 62 mph)
Max rate of climb at S/L	610 m (2,000 ft)/min
Service ceiling	9,750 m (32,000 ft)
Range at econ cruising speed	1,290 n miles (2,389 km, 1,485 miles)

Fairchild Aircraft produces Metroliner series of 19/20-passenger regional airliners operated by commuter/regional airlines worldwide. Also produces C-26 military communications aircraft, the Multi Mission Surveillance Aircraft (MMSA); Expediter 23 for cargo/express package operations and Merlin 23 business aircraft. Workforce 1,250 in early 1994. Merlin Express Inc (MEI) established 1983 with responsibility for operations, management and maintenance of United Parcel Service Express Package Expediter fleet and provides logistics support for C-26 fleet. Fairchild Aircraft Services provides operators with repair, refurbishment, modification, engineering and spares support; also a Fairchild Marketing and Support facility in Brussels, Belgium, and a joint venture company is planned to market and support the Russian Ilyushin Il-103 light aircraft (which see); sales of Il-103 could begin at the end of 1995.

UPDATED

FAIRCHILD SA227-CC and -DC METRO 23, MERLIN 23 and EXPEDITER I and 23

US military designations: C-26A/B

TYPE: Twin-turboprop 19/20-passenger commuter airliner.

PROGRAMME: Metro III originally SFAR 41 approved; FAR 23 commuter type approval June 1990 for SA227-CC with TPE331-11U-612G engines and SA227-DC with TPE331-12-UAR-701Gs. British CAA certification of SA227-AC August 1988, required modifications included dual-redundant stall warning system, dual continuous water/alcohol injection system, modified aileron aerofoil section and externally operable escape hatches. FAR 23 commuter category requirements include all significant CAA certification modifications as required on SA227-AC aircraft. Revised airframe and engine inspection programme announced 19 August 1993, reducing phase inspections per cycle from eight to six and claiming reduction of costs for routine inspections by "upwards of 40 per cent".

CURRENT VERSIONS: **SA227-CC and -DC Metro 23**: Current high gross weight aircraft. *Detailed description applies to these versions, except where indicated.*

Tp 88: Swedish Air Force transport, three delivered, all later sold.

C-26A and C-26B: Six C-26As ordered March 1988 as US Air National Guard Operational Support Transport Aircraft (ANGOSTA), later increased to 13, delivered between March 1989 and August 1990; these have quick change passenger, medevac or cargo interiors. Contract awarded January 1991 by USAF Aeronautical Systems Division for delivery and logistics support of up to 53 C-26Bs (37 firm, options for 16) over five-year period from January 1992. First 23 C-26Bs delivered to Air and Army National Guard during 1992, first handed over on 2 January and delivered to 128th TFW at Truax Field, Wisconsin, 12 January; C-26 is first military aircraft qualified for TCAS II and GPS. See table.

Expediter I: All-cargo version, air conditioning ducts moved to increase cargo volume; reinforced cabin floor, cargo nets and guards, reduced empty weight allowing maximum payload of more than 2,268 kg (5,000 lb); first 10 to operator SAT-AIR (now Merlin Express) on behalf of United Parcel Service; first of 10 Expediter Is delivered to DHL Worldwide Courier Express April 1985 with structurally reinforced landing gear and wing main spar for maximum T-O weight 7,257 kg (16,000 lb).

Expediter 23: Increased maximum T-O weight 7,484 kg (16,500 lb), maximum payload capability about 2,495 kg (5,500 lb).

Merlin 23: Business aircraft version of Metro 23, 12- and 14-passenger interiors, certificated in FAR 23 commuter category.

CUSTOMERS: More than 950 Metro/Merlin/Expediter/Special Mission aircraft operating in 43 countries; among recent orders were two Metro 23s for Australian regional airline Kendell Airlines, 15 for Chicago based Midway Connection, two for Airwork (NZ) Limited of New Zealand, one for Hazelton Airlines (Australia) and one for LoneStar. See Current Versions for military operators. In 1994, 16 Metro 23s were delivered.

DESIGN FEATURES: Certification to FAR 23 commuter category (Amendment 34) covers ICAO Annex 8; Metro 23 has maximum T-O weight of 7,484 kg (16,500 lb); changes from Metro III include increased maximum T-O weight for increased payload, numerous minor changes arising from change from SFAR 41 to FAR 23 commuter category certification basis, continuous alcohol water injection system components relocated from nose bay to wing centre-section, and stall avoidance system. Certificated for flight into known icing, lightning strike protection equivalent to that of commercial jet transports.

FLYING CONTROLS: Mechanically operated, aerodynamically and mass balanced, manual trim tab in rudder and each aileron, electrically operated variable incidence tailplane, small ventral fin. Hydraulically operated double slotted trailing-edge flaps.

STRUCTURE: Two-spar fail-safe wing made in one piece, main spar beams have laminated caps (titanium laminations in centre-section), pressurised cylindrical fuselage of 2024

1995

Fairchild MMSA with Lockheed Martin sensor pod

1995

aluminium alloy, flush riveted, glassfibre honeycomb nose cap can contain 0.46 m (18 in) diameter weather radar antenna

LANDING GEAR: Retractable tricycle type with twin wheels on each unit. Hydraulic retraction, with dual actuators on each unit. All wheels retract forward, main gear into engine nacelles and nosewheels into fuselage. Oleo-pneumatic shock-absorber struts. Nosewheel steerable variable authority (±63° maximum) through rudder pedals or tiller. Free-fall emergency extension, with back-up of hand-operated hydraulic pump. 18 × 5.5 type VII mainwheels with tubeless tyres, size 19.5 × 6.75-10 ply, nosewheels and low-pressure tubeless tyres, size 18 × 4.40-10 ply, type VII. Tyre pressures at standard T-O weight: nosewheel 4.83 bars (70 lb/sq in), mainwheels 7.31 bars (106 lb/sq in). Aircraft Braking Systems (ABS) self-adjusting hydraulically operated dual rotor disc brakes

POWER PLANT: Metro 23 (SA227-CC) has two 746 kW (1,000 shp) AlliedSignal TPE331-11U-612G turboprops, Metro 23 (SA227-DC) has TPE331-12UHR, giving 820 kW (1,100 shp) dry and 820 kW (1,100 shp) with continuous alcohol/water injection system and 746 kW (1,000 shp) maximum continuous power. McCauley four-blade constant-speed fully feathering reversible pitch metal propellers; automatic propeller synchronising standard, in-flight windmill, start capability. Integral fuel tank in each wing, each with a usable capacity of 1,226 litres (324 US gallons; 270 Imp gallons). Total usable fuel capacity 2,452 litres (648 US gallons; 540 Imp gallons). Refuelling point in each outer wing panel. Automatic fuel heating. Oil capacity 15.1 litres (4 US gallons, 3.3 Imp gallons). Alcohol/water tank in wing centre-section, capacity 53 litres (14 US gallons, 11.7 Imp gallons), with two pumps to pump fluid to engines. Flush-mounted fuel vents. Single point rapid defuelling provisions. Negative torque sensing, single red line/autostart, automatic engine temperature limiting and engine fire extinguishing systems

ACCOMMODATION: Crew of two on flight deck (Metro 23 single pilot approved). Dual controls standard. Bulkhead between cabin and flight deck. Standard accommodation for 19 or 20 passengers seated two-abreast, on each side of centre aisle. High-back passenger seats mounted on tracks and quickly removable. Interior convertible to all-cargo or mixed passenger/cargo configuration with movable bulkhead between passenger and cargo sections. Snap-in carpeting. Tiedown fittings for cargo at 0.76 m (30 in) spacing. Integral-step passenger door on port side of fuselage, immediately aft of flight deck. Large cargo loading door on port side of fuselage at rear of cabin, hinged at top. Three window emergency exits, one on the port, two on the starboard side. Forward baggage/avionics compartment in nose, capacity 363 kg (800 lb). Pressurised rear cargo compartment, capacity 385 kg (850 lb). Cabin air conditioned and pressurised

SYSTEMS: AiResearch automatic cabin pressure control system, maximum differential 0.48 bar (7.0 lb/sq in), providing a sea level cabin altitude to 5,120 m (16,800 ft). Engine bleed air heating, dual air cycle cooling system, with automatic temperature control. Air blower system for on-ground ventilation. Vapour cycle (CFC free) cooling system may be fitted for ground and in-flight operation. Independent hydraulic system for brakes. Dual engine-driven hydraulic pumps, using fire resistant MIL-H-83282 hydraulic fluid, provide 138 bars (2,000 lb/sq in) to operate flaps, landing gear actuators and nosewheel steering. Hydraulic system flow rates 30.3 litres (8 US gallons; 6.7 Imp gallons)/min at idle power, both engines; 46.7 litres (12.34 US gallons, 10.27 Imp gallons)/min at T-O and climb power. Air/oil reservoir, pressure 2.27 bars (33 lb/sq in). Electrical system supplied by two 300 A 28 V DC starter/generators. Fail-safe system with overload and overvoltage protection. Redundant circuits for essential systems. Two 350 VA solid-state inverters supply 115 V and 26 V AC. Two 24 V 23 Ah Ni/Cd batteries for main services. Engine fire detection system and fire extinguishing system standard. Wing overheat detection system. Oxygen system of 1.39 m³ (49 cu ft) capacity with flush outlets at each seat; system with capacity of 5.04 m³ (178 cu ft) optional. Redundant stall avoidance system comprising angle indicator, visual and aural warning. Goodrich automatic, bleed air operated pneumatic de-icing boots on wing and fin, tailplane equipped with abrasion boot. Engine inlet de-icing by bleed air. Electric oil cooler inlet anti-icing. Electric propeller and windscreen de-icing

AVIONICS: All commercial avionics systems (Collins, Bendix/King and others) fitted as desired; flight data recorder and cockpit voice recorder, special/military equipment installed on request. Autopilots, global navigation and global positioning, weather/mapping/tracking radars available. Provision for installation of remotely mounted or panel-mounted avionics

EQUIPMENT: Standard equipment includes pilot and co-pilot foot warmers, edge lit consoles, pedestal and switch panels, integrally lit instruments; annunciator panel with 48 indicators; internally operated control locks, individual reading lights and air vents for each passenger; heated pitot, heated static sources; lights for baggage compartment, cargo compartment, entrance, map and instrument panel, ice inspection, landing gear inspection, navigation rotating beacon and taxi; two-speed windscreen wipers automatic engine start cycle, external power socket, and static wicks

DIMENSIONS, EXTERNAL

Wing span	17.37 m (57 ft 0 in)
Wing mean aerodynamic chord	1.84 m (6 ft 0¼ in)
Wing aspect ratio	10.51
Length overall	18.09 m (59 ft 4¼ in)
Height overall	5.08 m (16 ft 8 in)
Tailplane span	4.86 m (15 ft 11½ in)
Wheel track	4.57 m (15 ft 0 in)
Wheelbase	5.83 m (19 ft 1½ in)
Propeller diameter	2.69 m (8 ft 10 in)
Passenger door (fwd): Height	1.35 m (4 ft 5 in)
Width	0.64 m (2 ft 1 in)
Cargo door (rear): Height	1.30 m (4 ft 3¼ in)
Width	1.35 m (4 ft 5 in)
Height to sill	1.30 m (4 ft 3¼ in)
Forward baggage doors (two, each):	
Height	0.64 m (2 ft 1 in)
Width	0.46 m (1 ft 6 in)
Emergency exits (three, each):	
Height	0.71 m (2 ft 4 in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL

Cabin, excl flight deck and rear cargo compartment:	
Length	7.75 m (25 ft 5 in)
Max width	1.57 m (5 ft 2 in)
Max height (aisle)	1.45 m (4 ft 9 in)
Floor area	13.01 m² (140.0 sq ft)
Volume	13.88 m³ (490.0 cu ft)
Rear cargo compartment (pressurised):	
Length	2.34 m (7 ft 8 in)
Max width	1.57 m (5 ft 2 in)
Max height	1.45 m (4 ft 9 in)
Volume	4.06 m³ (143.5 cu ft)
Nose cargo compartment (unpressurised):	
Length	0.91 m (3 ft 0 in)
Volume	0.85 m³ (30.0 cu ft)

AREAS

Wings, gross	28.71 m² (309.0 sq ft)
Ailerons (total)	1.31 m² (14.12 sq ft)
Trailing-edge flaps (total)	3.78 m² (40.66 sq ft)
Fin, incl dorsal fin	3.40 m² (36.62 sq ft)
Rudder, incl tab	1.80 m² (19.38 sq ft)
Tailplane	5.08 m² (54.7 sq ft)
Elevators	1.98 m² (21.27 sq ft)

WEIGHTS AND LOADINGS (Metro 23):

Operating weight empty	4,300 kg (9,480 lb)
Max fuel weight	1,969 kg (4,342 lb)
Max T-O weight	7,484 kg (16,500 lb)
Max ramp weight	7,530 kg (16,600 lb)
Max zero-fuel weight	6,577 kg (14,500 lb)
Max landing weight	7,110 kg (15,675 lb)
Max wing loading	261 kg/m² (53.3 lb/sq ft)
Max power loading	4.56 kg/kW (7.5 lb/shp)

PERFORMANCE (Metro 23 SA227 DC at max T-O weight of 7,484 kg, 16,500 lb, ISA, except where indicated):

Design diving speed (V_D)
311 kts (576 km/h, 358 mph) CAS

Max operating speed (V_{MO})
246 kts (455 km/h; 283 mph) CAS

Max operating Mach number (M_{MO}) 0.52

Max cruising speed at 97% rpm, bleed low, at 3,350 m (11,000 ft) 293 kts (542 km/h, 337 mph)

Stalling speed:

flaps and wheels up
103 kts (191 km/h, 118 mph) IAS

flaps and wheels down
89 kts (164 km/h, 102 mph) IAS

Max rate of climb at S/L, bleed open
823 m (2,700 ft)/min

Rate of climb at S/L, OEI, bleed closed
176 m (580 ft)/min

Service ceiling	7,620 m (25,000 ft)
Service ceiling, OEI	3,535 m (11,600 ft)
T-O to 15 m (50 ft), wet power	1,414 m (4,640 ft)
Landing run	843 m (2,766 ft)

Range, Metro 23 (SA227 DC):

with 19 passengers and baggage, FAA IFR reserves
over 1,115 n miles (2,065 km, 1,283 miles)

with 2,268 kg (5,000 lb), FAA IFR reserves
over 533 n miles (988 km; 614 miles)

Range, C-26 with 1,315 kg (2,900 lb) payload, 1,969 kg (4,342 lb) fuel, VFR reserves
1,614 n miles (2,990 km; 1,858 miles)

UPDATED

FAIRCHILD SPECIAL MISSION AIRCRAFT

TYPE: Special mission versions of Metro 23; replaced Metro III.

PROGRAMME: Development and production on demand

CURRENT VERSIONS: **Multi-Mission Surveillance Aircraft (MMSA)**: MMSA provides aircraft not permanently configured for single mission, capable of performing multiple missions while preserving ability to return quickly to passenger, VIP, cargo or airborne ambulance/evacuation configuration. Fairchild and General Dynamics (now Lockheed Martin Tactical Aircraft Systems) joined in developing and marketing MMSA as low-cost, very capable surveillance system consisting of Metro 23, centreline-mounted surveillance pod, mission dedicated radar system, cabin-mounted command control communications and intelligence (C³I) and sensor control console and pilot displays. Electronic reconnaissance systems also available. Surveillance/reconnaissance system at time of launch (1993) comprised electro-optical camera, Loral FLIR and infra-red line scanner, Mitsubishi pilot's FLIR, systems operator's console, long-range optical system and air-to-air radar or maritime radar; other options available.

Airborne early warning: Swedish Defence Materiel Administration (FMV) ordered Fairchild study of airborne early warning (AEW) version of Metro III in 1982, carrying dorsal active array radar antenna, ordered Metro III to test Ericsson PS-890 (now FSR 890) Erieye early 1986; first flight with mockup antenna October 1986, with operating radar January 1991. See 1993-94 and earlier *Jane's* for further details. FMV eventually selected Saab 340B for AEW role.

Multimission C³I and surveillance: Multirole, multimission capability with interchangeable mission configuration units (MCUs), AN/APG-66 radar, and surveillance pod for FLIR/cameras (air-to-air and air-to-ground), capabilities and configurations, and C³I systems, can be tailored to mission requirements; special equipment modification and support are offered.

Other variants include **flight inspection, photo reconnaissance, electronic intelligence** and **airborne critical care**.

CUSTOMERS: Total 44 delivered in various configurations (Metro III, 23 and C-26). MMSA evaluated by Poland and Hungary 1993.

FREEWING

FREEWING AERIAL ROBOTICS CORPORATION

Building 340, University of Maryland, College Park, Maryland 20742
Telephone: 1 (301) 314 7794 and 7795
Fax: 1 (301) 314 9592/9590
PRESIDENT: Hugh Schmittle
EXECUTIVE VICE-PRESIDENT: Odile Legeay

Company formed as result of sponsored and partially state-funded research and flight testing of Freewing principle at University of Maryland. Four manned prototypes tested in flight or wind tunnel, leading to Mk 5 production version. Tilt body principle developed for use in US Department of Defense UAV Joint Project Office close range and vertical launch and recovery UAV programmes (see *Jane's Unmanned Aerial Vehicles and Targets* for details).

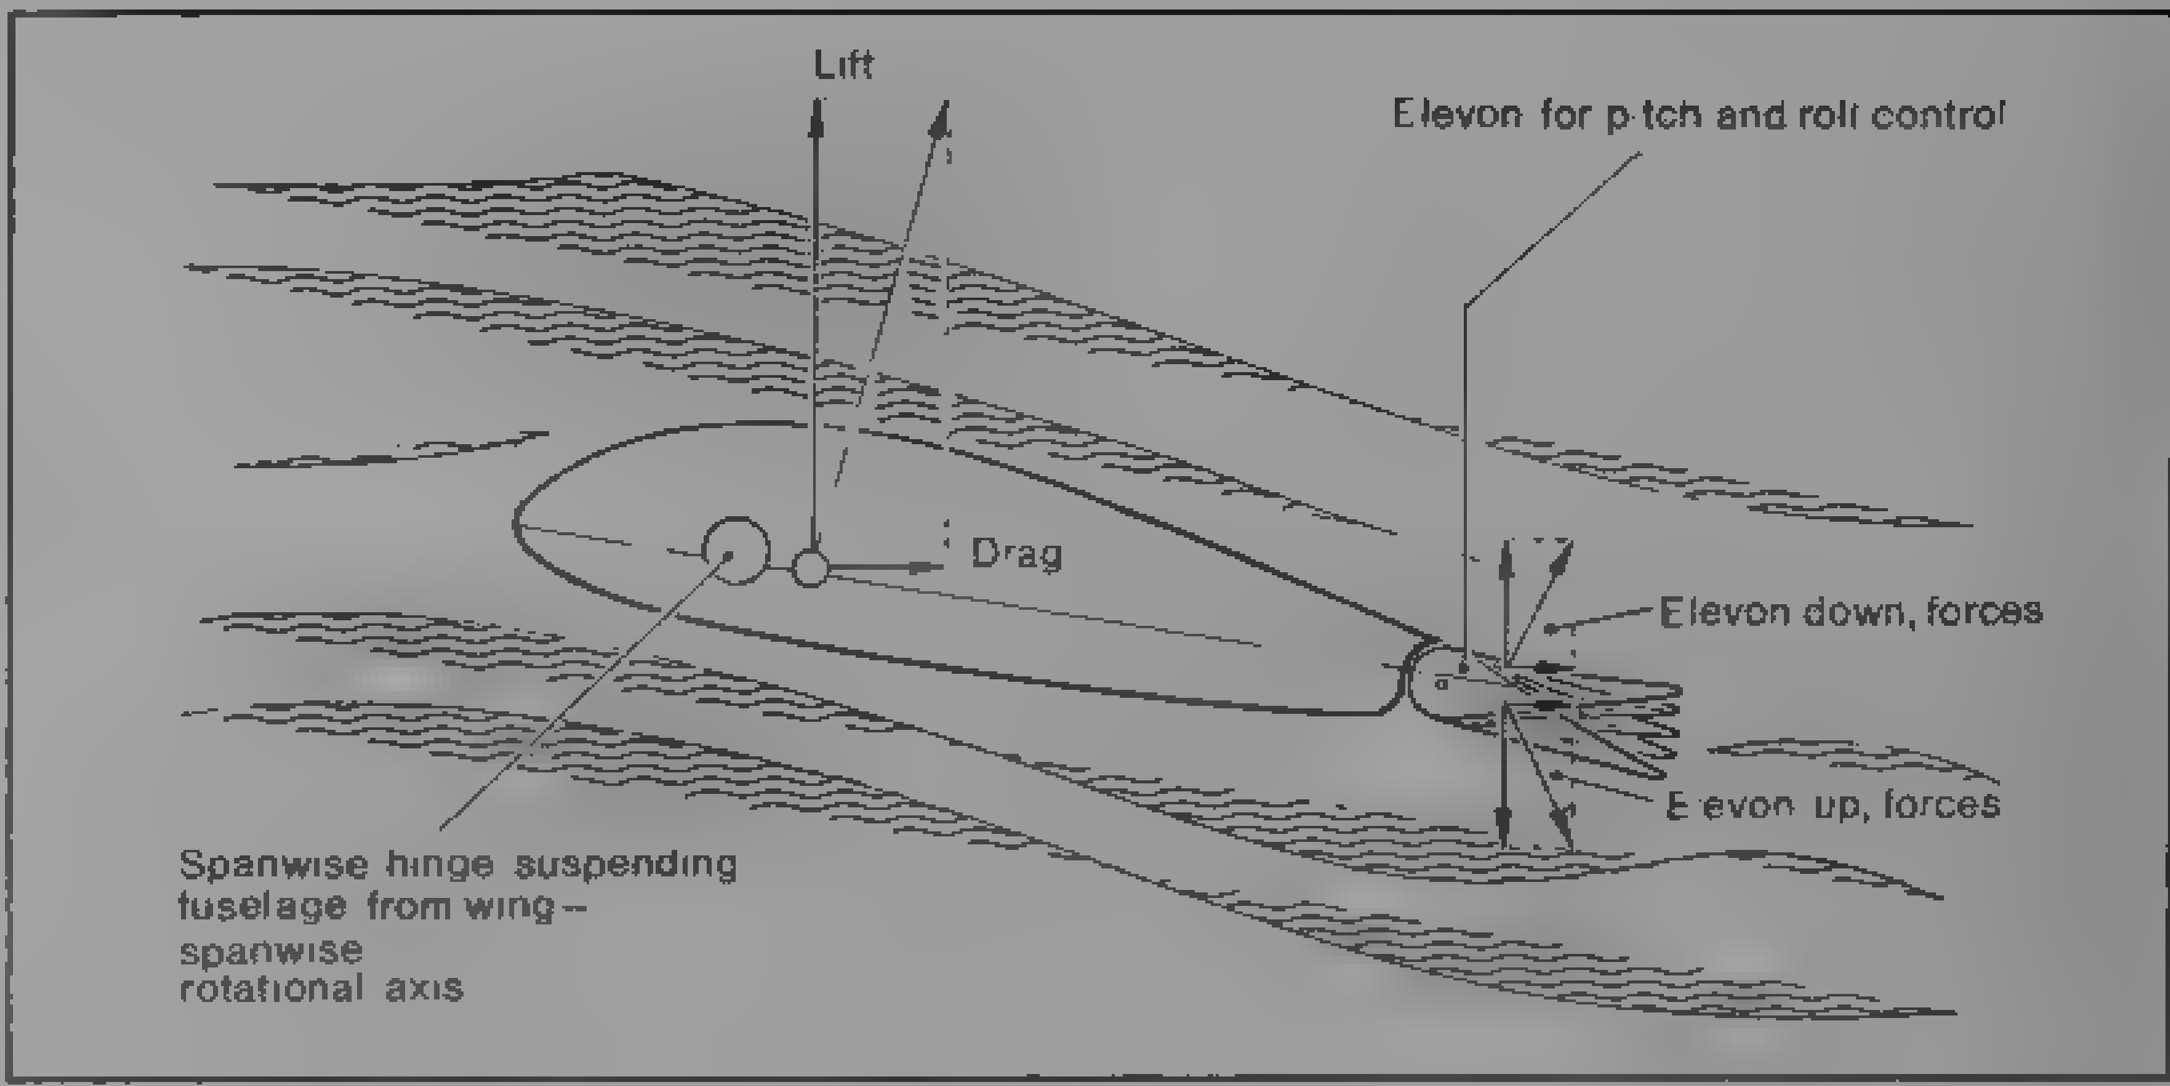
Freewing is working with Burt Rutan of Scaled Composites Inc (which see) on small UAVs using the Freewing principle with payloads up to 22.7 kg (50 lb). Company signed partnership agreement with Matra Défense in June 1994 to adapt its Scorpion Tilt-Body UAV for use on French frigates, named Marvel. Increasing emphasis on UAVs led company to change its name from Freewing Aircraft Corporation to Freewing Aerial Robotics Corporation on 23 December 1993.

UPDATED

FREEWING CONCEPT

Wing is attached to fuselage by spanwise hinges rather than by fixed bolts, and its angle of attack to air flow is governed by natural aerodynamic forces rather than through a conventional tailplane and elevator. With a conventional aircraft, rigging angle of incidence of wing to fuselage is constant, and angle of attack of wing is varied by pilot's control actions. In the Freewing, angle of attack is relatively constant and angle of incidence of wing to fuselage is allowed to vary. In flight, fuselage remains at a constant angle and wing responds to changes of air flow such as result from turbulence, by changing its angle with respect to the fuselage. This is claimed to be stall-resistant; to give very good gust response in turbulence, and to allow a wide CG range of fuselage, since torque is not transmitted through a hinge. Pitch control is through elevons on wing, the elevator on tailplane being used to set correct fuselage angle to air flow for minimum drag. Several patents cover the Freewing concept.

UPDATED



The Freewing principle, spanwise hinge mounting of wing to fuselage *(Jane's/Keith Fretwell)* *1994*

FREEWING FREEBIRD Mk 5

TYPE: Two-seat light aircraft embodying Freewing principle.

PROGRAMME: Four previous versions tested, first flight Mk 5 with 48.5 kW (65 hp) Rotax 582 two-stroke, 22 March 1993, since re-engined with 74.6 kW (100 hp) Mid-West Aero (Londavia) MWAE100R twin-chamber rotary; company plans to manufacture Freebird delayed due to concentration on tilt-body UAVs. Freewing is discussing possible licensed production with various manufacturers.

DESIGN FEATURES: Freewing principle of spanwise hinge mounting wing to fuselage (see Concept entry above); lateral control is by normal outboard ailerons; fuselage attitude is controlled separately by using elevator; CG limits of fuselage are controlled essentially by available tail trim force.

The production version Mk 5 normally flies in this mode but, in order to allow flap to be used to steepen approach and increase lift at low airspeed (which cannot be done with flying wing), wing of Mk 5 can be locked at incidence of 2° in flight; wing elevons are then used as flaps, and trimming surfaces at fuselage tail become normal elevators; mechanical switching ensures that control column always produces normal aircraft reactions.

Wing of Mk 5 has Roncz aerofoil designed for maximum C_L at low airspeed and is reflexed at trailing-edge to counter rotational moment at higher speeds; wing is free to tilt through arc of 35°; chord constant, sweep angle 10°, dihedral 0°; wing of production aircraft will be adapted for greater speed range.

FLYING CONTROLS: Mechanical, with aileron and elevator linkages passing through pivot centre; normal dual control columns operate ailerons and wing trailing-edge elevators in Freewing flight, ailerons and fuselage elevator in fixed wing flight; normal dual rudder pedals and throttle; locking lever to lock/unlock wing and transfer control functions.

STRUCTURE: Fabric covered steel tube fuselage and tail; steel tube wing centre-section, metal covered; remainder of wing is fabric covered wood; GFRP engine cowling.

LANDING GEAR: Prototype has non-retractable tailwheel type; production aircraft would have tricycle gear.

POWER PLANT: One 74.6 kW (100 hp) Mid West MWAE100R water-cooled twin-chamber rotary engine.

DIMENSIONS, EXTERNAL:	
Wing span	10.16 m (33 ft 4 in)
Wing aspect ratio	7.27
AREAS:	
Wings, gross	14.19 m² (152.78 sq ft)
Ailerons (total)	1.40 m² (15.2 sq ft)
Flaps (total)	1.12 m² (12.0 sq ft)
Tailplane	1.07 m² (11.8 sq ft)
Elevators (total)	0.84 m² (9.0 sq ft)
WEIGHTS AND LOADINGS:	
Basic weight empty	304 kg (670 lb)
Max T-O and landing weight	476 kg (1,050 lb)
Max wing loading	3.12 kg/m² (6.87 lb/sq ft)
Max power loading	3.95 kg/kW (11.67 lb/hp)
PERFORMANCE:	
Never-exceed speed (VNE)	78 kts (145 km/h, 90 mph)
Max level speed	70 kts (129 km/h, 80 mph)
Cruising speed, 5,500 rpm	61 kts (113 km/h, 70 mph)
Stalling speed, flaps up	26 kts (48 km/h, 30 mph)
Max rate of climb, pilot only	305 m (1,000 ft)/min
Normal T-O run, flaps up	91 m (300 ft)
Min T-O run, flaps up	61 m (200 ft)
Landing run, flaps up	122 m (400 ft)
Range, no reserves	113 n miles (209 km, 130 miles)
Endurance	3 h
g limits	+4/−2

GEVERS

GEVERS AIRCRAFT INC

PO Box 430, Brownsburg, Indiana 46112
Telephone: 1 (317) 367 5550
Fax: 1 (317) 852 2735
PRESIDENT, CHIEF ENGINEER: David E. Gevers
VICE-PRESIDENT: Lawrence B. Schmidt
BUSINESS MANAGER: Theresa A. Gevers
MARKETING: Robert L. Glasa

Gevers Aircraft formed 1988 to investigate feasibility of several interesting design features for new general aviation aircraft, including ability to extend or reduce wing span in flight through telescopic-mounted wingtip section, multiconfiguration landing gear; and propeller drive system resistant to engine failure.

UPDATED

GEVERS GENESIS

TYPE: Six-seat amphibious monoplane.

PROGRAMME: Design began in 1981, radio-controlled model flown in 1990; wind tunnel testing and extensive computer aided stability analysis completed 1993. Prototype construction started 1994, investment for production being sought. Patents apply.

DESIGN FEATURES: Goals include improved performance over conventional aircraft, modular and interchangeable subassemblies, twin-engined reliability with no asymmetric effect if one engine fails, multipurpose landing gear, and manufacturing and construction simplicity. Can be used as training aircraft capable of simulating variety of configurations, and as testbed for aerofoils.

Wing has centre-section attached to top of fuselage and two telescopic sections that extend wing span, movable wing sections completely enclosed by centre-section when retracted inwards. Amphibious hull, and T tail above long sweptback fin. Wing centre-section aerofoil NACA 66_3-018, dihedral 3°; sweepback 3° 17′ at quarter-chord, 0° sweep for wing extensions.

FLYING CONTROLS: Ailerons (inboard droop with extension of flaps), balance tab in rudder and anti-balance in elevator; fixed leading-edge slats on wing extensions and movable slats on centre-section, flight adjustable tailplane incidence.

STRUCTURE: Riveted aluminium alloy wings, tail and lower fuselage; cabin compartment of glassfibre.

LANDING GEAR: Converts in flight for water, land, snow or intermittent snow/hard surface operation, retractable.

POWER PLANT: Two 242.4 kW (325 hp) Textron Lycoming TIO-540 flat six engines, mounted in tandem in fuselage driving two Hartzell contrarotating, two-blade constant-speed feathering and reversible-pitch metal pusher propellers mounted aft of wing trailing-edge. In the event of failure of one engine, remaining engine drives both propellers; there is no asymmetric moment. Total usable fuel capacity 757 litres (200 US gallons, 166 Imp gallons) in two wing-mounted bladder type tanks, fuel gravity fed, with electric pumps for back-up and operation under negative g.

ACCOMMODATION: Clamshell type doors on both sides of cabin allow each passenger direct exit. Optional cabin configurations include medical and cargo layouts. During water operations, only upper half of door operational, during non-water operations lower half of door opens to floor level for ease of loading.

SYSTEMS: Pressurised and unpressurised models to be offered.

AVIONICS: *Instrumentation*: Dual VFR and IFR instrument panels, with day and night capability.

DIMENSIONS, EXTERNAL:

Wing span: extended	15.24 m (50 ft 0 in)
retracted	7.87 m (26 ft 0 in)
Wing chord: at fixed root	3.25 m (10 ft 8 in)
at fixed tip	2.03 m (6 ft 8 in)
at extension root and tip	1.12 m (3 ft 8 in)
Wing aspect ratio: extended	8.17
retracted	3.07
Length overall	11.58 m (38 ft 0 in)
Height overall	3.76 m (12 ft 4 in)
Tailplane span	4.45 m (14 ft 7 in)
Wheel track	3.20 m (10 ft 6 in)
Wheelbase	6.35 m (20 ft 10 in)
Propeller diameter	1.98 m (6 ft 6 in)
Passenger door: Height	0.965 m (3 ft 2 in)
Width	2.24 m (7 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin: Length	3.05 m (10 ft 0 in)
Max width	1.21 m (3 ft 11½ in)
Max height	1.07 m (3 ft 6 in)
Volume	3.74 m³ (132.0 cu ft)
Nose baggage compartment	0.28 m³ (10.0 cu ft)
Rear baggage compartment	0.42 m³ (15.0 cu ft)

AREAS:

Wings, gross: extended	28.61 m² (308.0 sq ft)
retracted	20.44 m² (220.0 sq ft)
Ailerons: retracted (total)	1.16 m² (12.50 sq ft)
extended (total)	2.79 m² (30.0 sq ft)
Trailing-edge flaps (total)	0.71 m² (7.67 sq ft)
Fin	4.16 m² (44.8 sq ft)
Rudder, incl tab	1.39 m² (15.0 sq ft)
Tailplane	3.81 m² (41.0 sq ft)
Elevator, incl tab	1.90 m² (20.5 sq ft)

WEIGHTS AND LOADINGS (estimated):

Weight empty	1,542 kg (3,400 lb)
Max T-O weight	2,722 kg (6,000 lb)
Max wing loading:	
extended	95.1 kg/m² (19.48 lb/sq ft)
retracted	133.2 kg/m² (27.27 lb/sq ft)
Max power loading	5.61 kg/kW (9.23 lb/hp)

PERFORMANCE (estimated, at max T-O weight, ISA):

Max level speed	267 kts (496 km/h, 308 mph)
Cruising speed at S/L:	
75% power	225 kts (417 km/h, 260 mph)
65% power	214 kts (396 km/h, 246 mph)
OEI	192 kts (356 km/h, 221 mph)
Stalling speed: flaps, landing gear and wings retracted	95 kts (175 km/h, 109 mph)
flaps, landing gear and wings extended	55 kts (102 km/h, 63 mph)
Rotation speed	66 kts (123 km/h, 76 mph)
Approach speed	71 kts (132 km/h, 82 mph)
T-O run: on land	183 m (600 ft)
on water	305 m (1,000 ft)
T-O to 15 m (50 ft) on land	427 m (1,400 ft)
Landing from 15 m (50 ft) on land	607 m (1,990 ft)
Landing run: on land	71 m (230 ft)
on water	152 m (500 ft)
Range with max usable fuel	1,912 n miles (3,540 km, 2,200 miles)

GREAT PLAINS SONERAI II, IIL, II-LT and II-LTS

TYPE: Two-seat, dual control sporting homebuilt.

PROGRAMME: Prototype of tandem two-seat Sonerai II first flown July 1973, at least 500 since built and flown. Many components, complete kits for fuselage, tail and wings, and materials, available to amateur constructors; estimated building time 850 working hours.

CURRENT VERSIONS: **Sonerai II**: Standard mid-wing model. *Description applies to this version except where indicated.*

Sonerai IIL: Low-wing instead of mid-wing configuration and 3° dihedral, first flight June 1980.

Sonerai II-LT: Similar to Sonerai IIL but has 2,200 cc VW engine standard, tricycle landing gear and larger front cockpit for taller pilot; retrofit kit was produced to allow existing Sonerais to be fitted with tricycle gear; first flight January 1983.

Sonerai II-LTS Stretched version of Sonerai II LT, first flight June 1984

COSTS: Kit: $5 200. Plans: $99 95

DESIGN FEATURES: Wing section NACA 64212

STRUCTURE: Wings of aluminium alloy construction, full-span aluminium alloy ailerons. Welded steel tube fuselage and tail unit, fabric covered except for glassfibre engine cowling

LANDING GEAR: Non-retractable tailwheel type

POWER PLANT: One 44.7, 56 or 61 kW (60, 75 or 82 hp) Great Plains converted Volkswagen 1,600, 1,834 or 2,200 cc motorcar engine, 2 200 cc version is standard for Sonerai II LT and II-LTS. Fuel capacity 38 litres (10 US gallons, 8 3 Imp gallons) for all versions except Sonerai II-LTS, which has standard capacity of 68 litres (18 US gallons; 15 Imp gallons)

DIMENSIONS, EXTERNAL:

Wing span	5 69 m (18 ft 8 in)
Wing aspect ratio	4.15
Length overall:	
all, except Sonerai II LTS	5 74 m (18 ft 10 in)
Sonerai II LTS	6 20 m (20 ft 4 in)
Propeller diameter	1 32-1 37 m (4 ft 4 in-4 ft 6 in)

AREAS:

Wings, gross	7 80 m² (84.0 sq ft)

WEIGHTS AND LOADINGS (Sonerai II):

Weight empty	227 kg (500 lb)
Utility max T-O weight	431 kg (950 lb)
Max T O weight	521 kg (1,150 lb)
Max wing loading	66 84 kg/m² (13 69 lb/sq ft)

Great Plains Sonerai II two-seat homebuilt *(Peter M. Bowers)*

1991

PERFORMANCE (Sonerai II/IIL with 1,700 cc engine, at max T-O weight. ISA):

Max level speed at S/L	139 kts (257 km/h, 160 mph)
Econ cruising speed at S/L	113 kts (209 km/h, 130 mph)
Stalling speed	38 kts (71 km/h, 44 mph)
Max rate of climb at S/L	152 m (500 ft)/min
T-O run	274 m (900 ft)
Landing run	152 m (500 ft)
Range, with reserves	304 n miles (563 km, 350 miles)
g limits: pilot only, aerobatic	±6
max T-O weight, utility	±4.4

SENIOR VICE-PRESIDENT GULFSTREAM V PROGRAMME: Preston A. Henne

SENIOR VICE-PRESIDENT NORTH AMERICAN SALES: Joseph Kent Walker

EXECUTIVE VICE-PRESIDENT MARKETING: Robert H. Cooper

EXECUTIVE VICE-PRESIDENT INTERNATIONAL SALES: Gene Rainville

MANAGER MARKETING COMMUNICATIONS AND PUBLIC RELATIONS: Julia D. Stone

Original works purchased by Allen E. Paulson from Grumman Corporation in 1978, facilities expanded and two Gulfstream models introduced when company purchased from Mr Paulson by Chrysler Corporation in 1985, Mr Paulson and Forstmann Little and Company completed repurchase from Chrysler Corporation 19 March 1990, Forstmann Little and Company bought out Paulson September 1992

AlliedSignal AiResearch facility at Long Beach International Airport, California, bought by Gulfstream in 1986 and expanded to accommodate outfitting and completion of 17 Gulfstream IVs at a time. Gulfstream also operates manufacturing plant in Oklahoma City and Mexicali, Mexico. Oklahoma Corporation's three facilities cover more than 185,800 m² (2 0 million sq ft) of manufacturing and servicing space

Certification announced 18 October 1993 of 'Quiet Spey' production hushkit to enable earlier Gulfstreams II, IIB and III (over 440 of which in worldwide service) to comply with FAR Stage 3 noise regulations

Gulfstream Aerospace Technologies (Oklahoma Operations) contracted to produce 200 wing sets for Jetstream 41 (see UK section) between 1990 (first delivery November) and 2000

UPDATED

GULFSTREAM AEROSPACE GULFSTREAM IV, IV-SP, IV-MPA and IV-B

TYPE: Twin-turbofan long-range business transport

PROGRAMME: Design started March 1983, manufacture of four production prototypes (one for static testing) began 1985, first aircraft (N404GA) rolled out 11 September 1985, first flight 19 September 1985, first flight of second prototype 11 June 1986 and third prototype August 1986; FAA certification 22 April 1987 after 1,412 hours flight testing. Westbound round-the-world flight from Le Bourget Airport, Paris, on 12 June 1987, covering 19,887.9 n miles (36,832 44 km, 22,886.6 miles), took 45 hours 25 minutes at average 437 86 knots (811.44 km/h, 504 2 mph) and set 22 world records, eastbound round-the-world flight in N400GA from Houston, Texas, on 26 and 27 February 1988 covered 20 028 68 n miles (37,093 1 km, 23,048 6 miles) in 36 hours 8 minutes 34 seconds at average 554.15 knots (1,026 29 km/h, 637 71 mph), setting 11 records and bettering United Airlines 747SP circuit flown 30 days before, aircraft carried 3,629 kg (8 000 lb) optional internal long-range tank. In March 1993, Gulfstream IV-SP N485GA set new world speed and distance records in class, at 503 57 knots (933.21 km/h; 579 87 mph) and 5,139 n miles (9,524 km, 5,918 miles) respectively, on routine business flight from Tokyo, Japan, to Albuquerque, USA

CURRENT VERSIONS: **Gulfstream IV**: Current version until 1992, *detailed description applies to this model except where indicated.* Aircraft Service Change (ASC) 190 announced 21 September 1993 costing $875,790 installed (eight-week downtime) and increasing ramp weight by 635 kg (1,400 lb) and landing weight by 3,402 kg (7,500 lb) to 29,937 kg (66,000 lb)

Gulfstream IV SP: Improved, higher weight version announced at NBAA Convention, Houston, in October 1991, prototype (N476GA, converted from standard) first flown 24 June 1992, designation applies to all new IVs sold after 6 September 1992, maximum payload increased by 1,134 kg (2,500 lb) and maximum landing weight increased by 3,402 kg (7,500 lb), with no increase in guaranteed manufacturer's bare weight empty. Payload/range envelope extended, expanded capability Honeywell SPZ-8400 flight guidance and control system

Gulfstream IV-MPA: Multi Purpose Aircraft, announced September 1994; derived from US Navy C-20G Operational Support Aircraft (which see below) to provide commercial operators with quick-change interior for up to 26 passengers in high-density shuttle layout low-density executive configuration, 2,177 kg (4,800 lb) cargo capacity, or combination, large cargo door and larger/additional emergency exits standard

Gulfstream IV-B: Improved, longer range version,

Gulfstream Aerospace Gulfstream IV SP (Special Performance)

1995

announced September 1994 as subject of development study by Gulfstream Aerospace and Texas Aerostructures, would feature increased wingspan incorporating winglet design from Gulfstream V and additional fuel capacity, providing 400 n mile (741 km; 460 mile) increase in range; project postponed, June 1995, for at least 12 months following marketing study.

SRA-4, C-20, Tp 102: Special missions aircraft described separately.

CUSTOMERS: 250th production Gulfstream IV rolled out September 1994, total 257 Gulfstream IV and IV-SPs delivered by end 1994, including 22 in 1994; 270 built 10 June 1995; order backlog stood at 30 in June 1995, ensuring that production will continue beyond 2000, with at least 100 additional aircraft manufactured. Recent customers include Executive Jet Aviation (EJA) which placed firm order in January 1995 for seven Gulfstream IV-SPs for delivery in 1995 and 1996, with options on a further 13; these aircraft will be used in EJA's NetJets fractional ownership programme.

COSTS: $23.5 million 'green' (1994).

DESIGN FEATURES: Differences from Gulfstream III (1987-88 and earlier *Jane's*) include aerodynamically redesigned wing contributing to lower cruise drag; wing also structurally redesigned with 30 per cent fewer parts, 395 kg (870 lb) lighter and carrying 544 kg (1,200 lb) more fuel; increased tailplane span; fuselage 1.37 m (4 ft 6 in) longer, with sixth window each side; Rolls-Royce Tay turbofans; flight deck with electronic displays, digital avionics; and fully integrated flight management and autothrottle systems.

Advanced sonic rooftop aerofoil, sweepback at quarter-chord 27° 40'; thickness/chord ratio 10 per cent at wing station 50, 8.6 per cent at station 414; dihedral 3°; incidence 3° 30' at root, −2° at tip. NASA (Whitcomb) winglets.

FLYING CONTROLS: Hydraulically powered flying controls with manual reversion; trim tab in port aileron and both elevators; two spoilers on each wing act differentially to assist aileron and together with third spoiler each side act collectively as airbrakes and lift dumpers; single-slotted Fowler flaps; four vortillons and a single 'tripper' strip under leading-edge of each wing ensure inboard wing stalls before outboard section.

STRUCTURE: Wing manufactured by Textron Aerostructures. Light alloy airframe except for carbon composites ailerons, spoilers, rudder and elevators, some tailplane parts, some cabin floor structure, and parts of flight deck; winglets of aluminium honeycomb.

LANDING GEAR: Retractable tricycle type with twin wheels on each unit. Main units retract inward, steerable nose unit forward. Mainwheel tyres size 34 × 9.25-16 for IV and H34 × 9.25-18 for IV-SP, pressure 12.07 bars (175 lb/sq in). Nosewheel tyres size 21 × 7.25-10, pressure 7.9 bars (115 lb/sq in). IV has Aircraft Braking Systems air-cooled carbon brakes and IV-SP has Dunlop air-cooled carbon brakes, both use Aircraft Braking Systems anti-skid units and digital electronic brake-by-wire system. Dowty electronic steer-by-wire system.

POWER PLANT: Two Rolls-Royce Tay Mk 611-8 turbofans, each flat rated at 61.6 kN (13,850 lb st) to ISA +15°C. Target type thrust reversers. Fuel in two integral wing tanks, with total capacity of 16,542 litres (4,370 US gallons; 3,639 Imp gallons). Single pressure fuelling point in leading-edge of starboard wing.

ACCOMMODATION: Crew of two plus cabin attendant. Standard seating for 14 to 19 passengers in pressurised and air-conditioned cabin. 'Quick Change' cargo/passenger version, certificated for up to 26 passengers, announced 22 December 1993. Galley, toilet and large baggage compartment, capacity 907 kg (2,000 lb), at rear of cabin. Integral airstair door at front of cabin on port side. Baggage compartment door on port side. Electrically heated wraparound windscreen. Six cabin windows, including two overwing emergency exits, on each side.

SYSTEMS: Cabin pressurisation system maximum differential 0.65 bar (9.45 lb/sq in); dual air conditioning systems. Two independent hydraulic systems, each 207 bars (3,000 lb/sq in). Maximum flow rate 83.3 litres (22 US gallons; 18.3 Imp gallons)/min. Two bootstrap type hydraulic reservoirs, pressurised to 4.14 bars (60 lb/sq in). AlliedSignal GTCP36-100 APU in tail compartment, flight rated to 12,500 m (41,000 ft) since s/n 1156. Electrical system includes two 36 kVA alternators with two solid-state 30 kVA converters to provide 23 kVA 115/200 V 400 Hz AC power and 250 A of regulated 28 V DC power; two 24 V 40 Ah Ni/Cd storage batteries and external power socket. Wing leading-edges and engine inlets anti-iced.

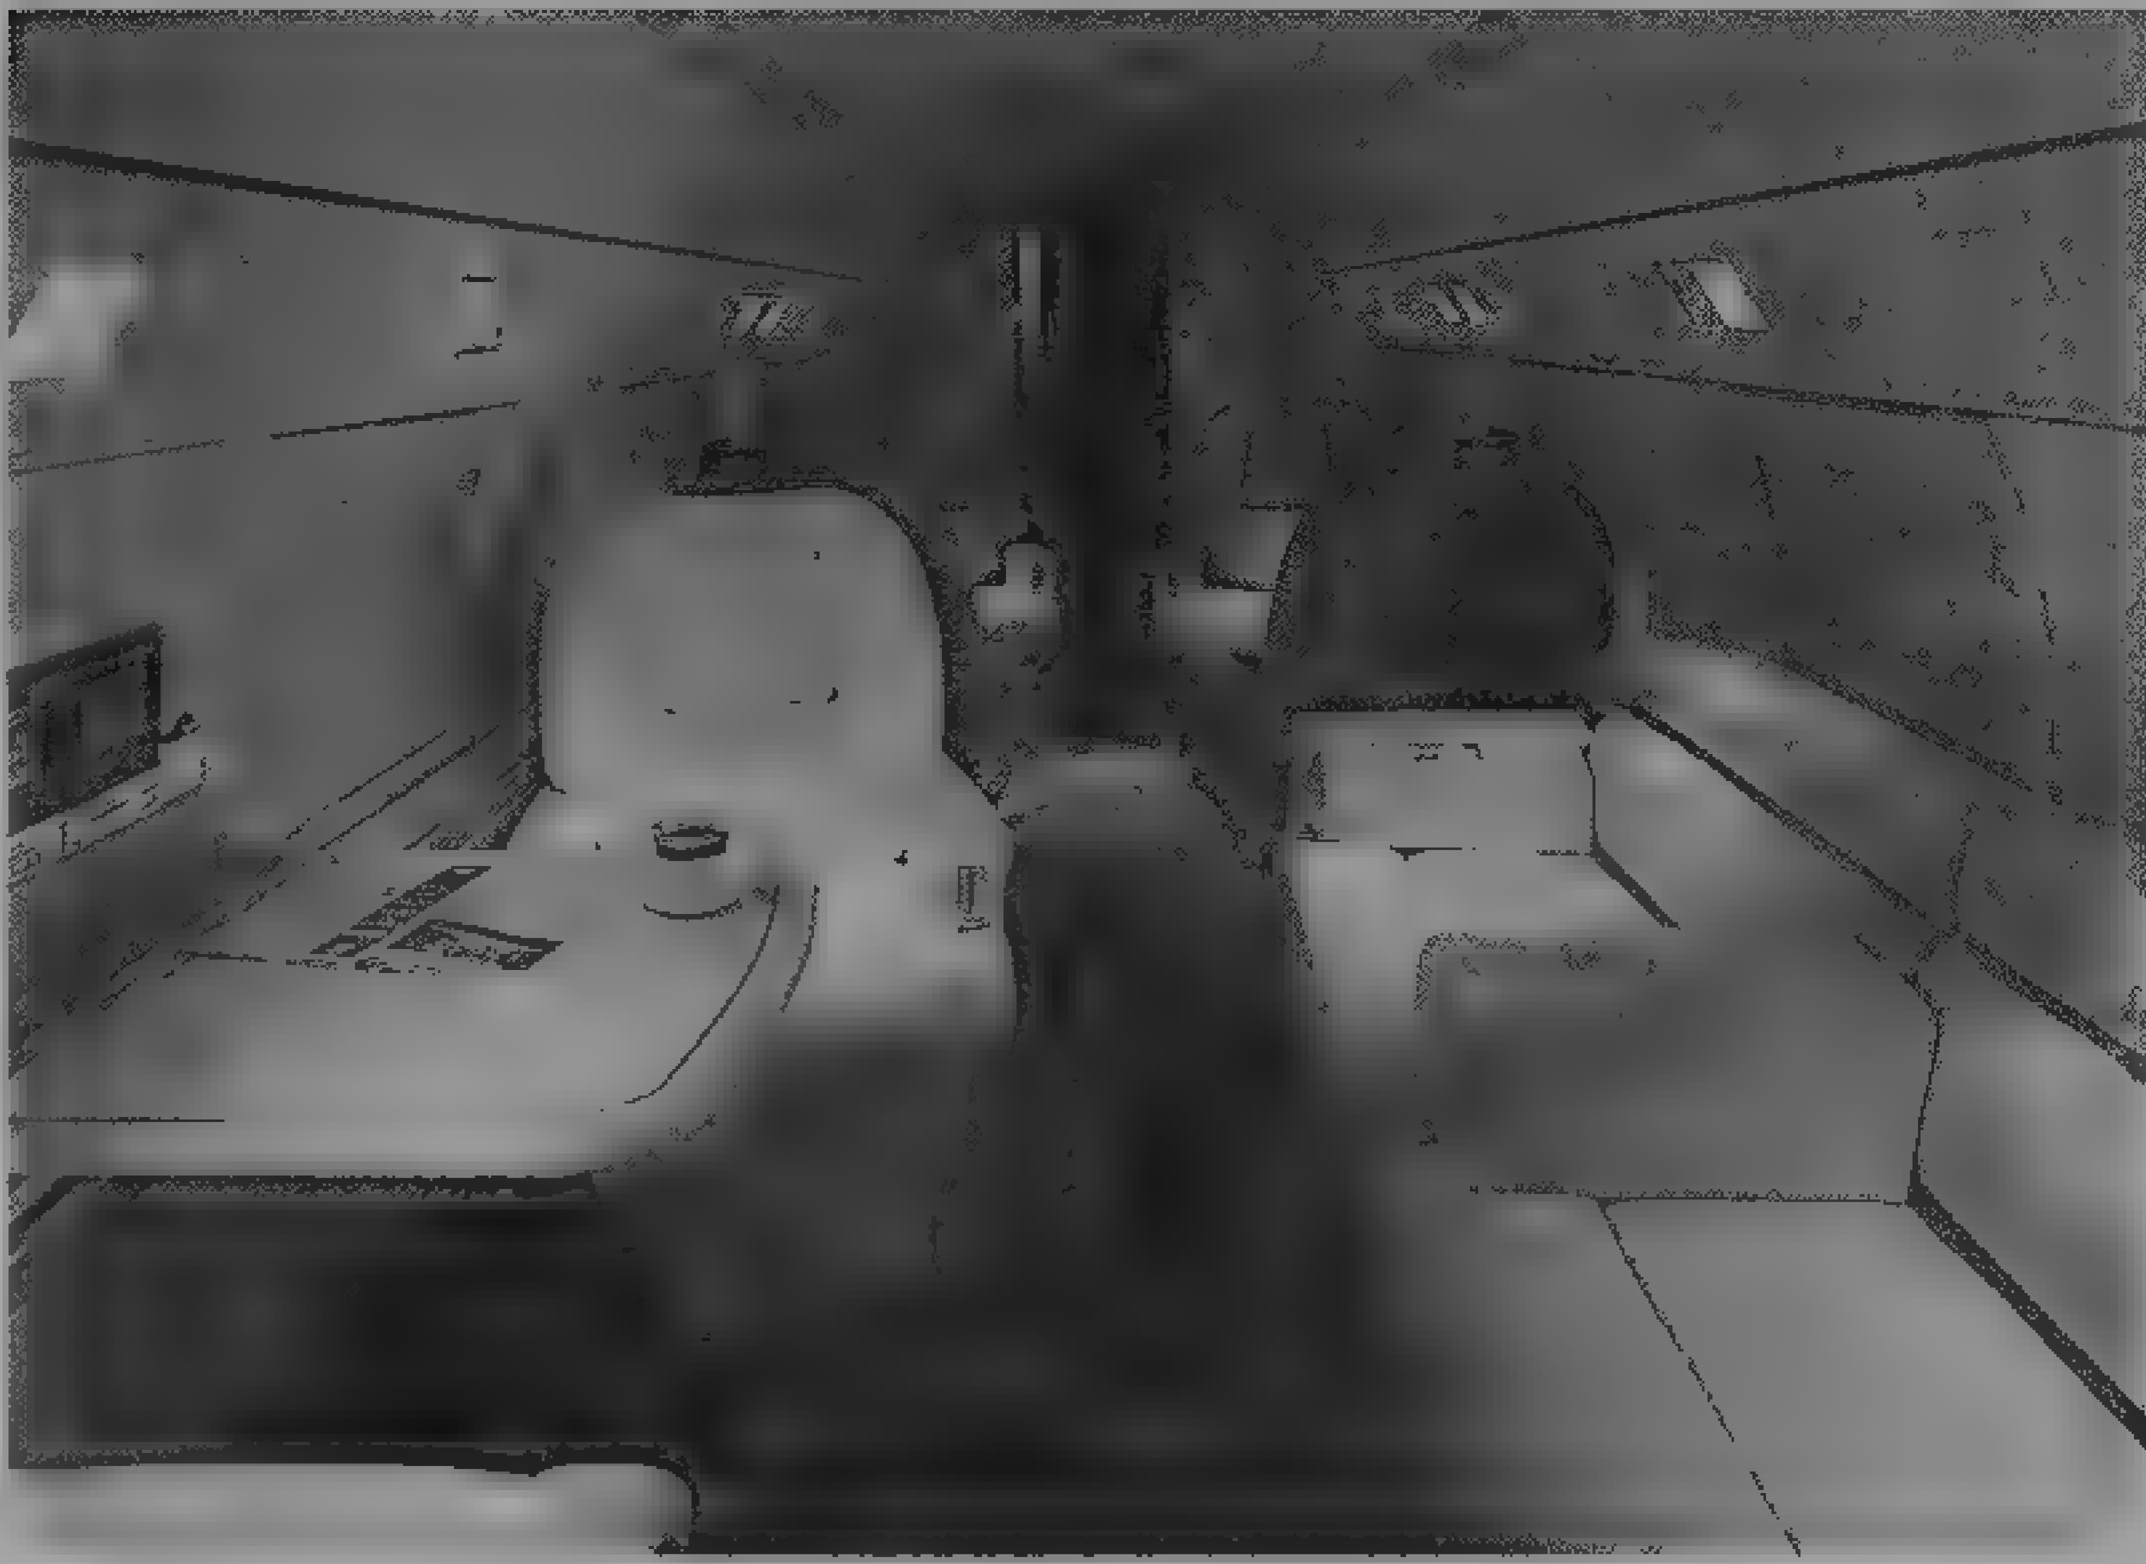
AVIONICS: *Comms*: Dual VHF/HF transceivers, transponders and cockpit audio systems, cockpit voice recorder; Racal Satfone satellite communications equipment optional.

Radar: Digital colour weather radar.

Nav: Dual VOR/LOC/GS with marker beacon receivers, dual DME, dual ADF, dual radio altimeters, optional MLS, GPS and VLF Omega.

Flight: Honeywell SPZ-8400 digital AFCS, Honeywell FMZ-800 Phase II flight management system (FMS), dual fail-operational flight guidance systems including autothrottles; dual air data systems; dual flight guidance and performance computers, dual laser INS, AHRS, flight data recorder. System integration is accomplished through a Honeywell avionics standard communications bus (ASCB).

Instrumentation: Six 20.3 × 20.3 cm (8 × 8 in) colour CRT EFIS screens, two each for primary flight display (PFD), navigation display (ND) and engine instrument and crew alerting system (EICAS).



Cabin interior of Gulfstream IV-SP business jet

1995

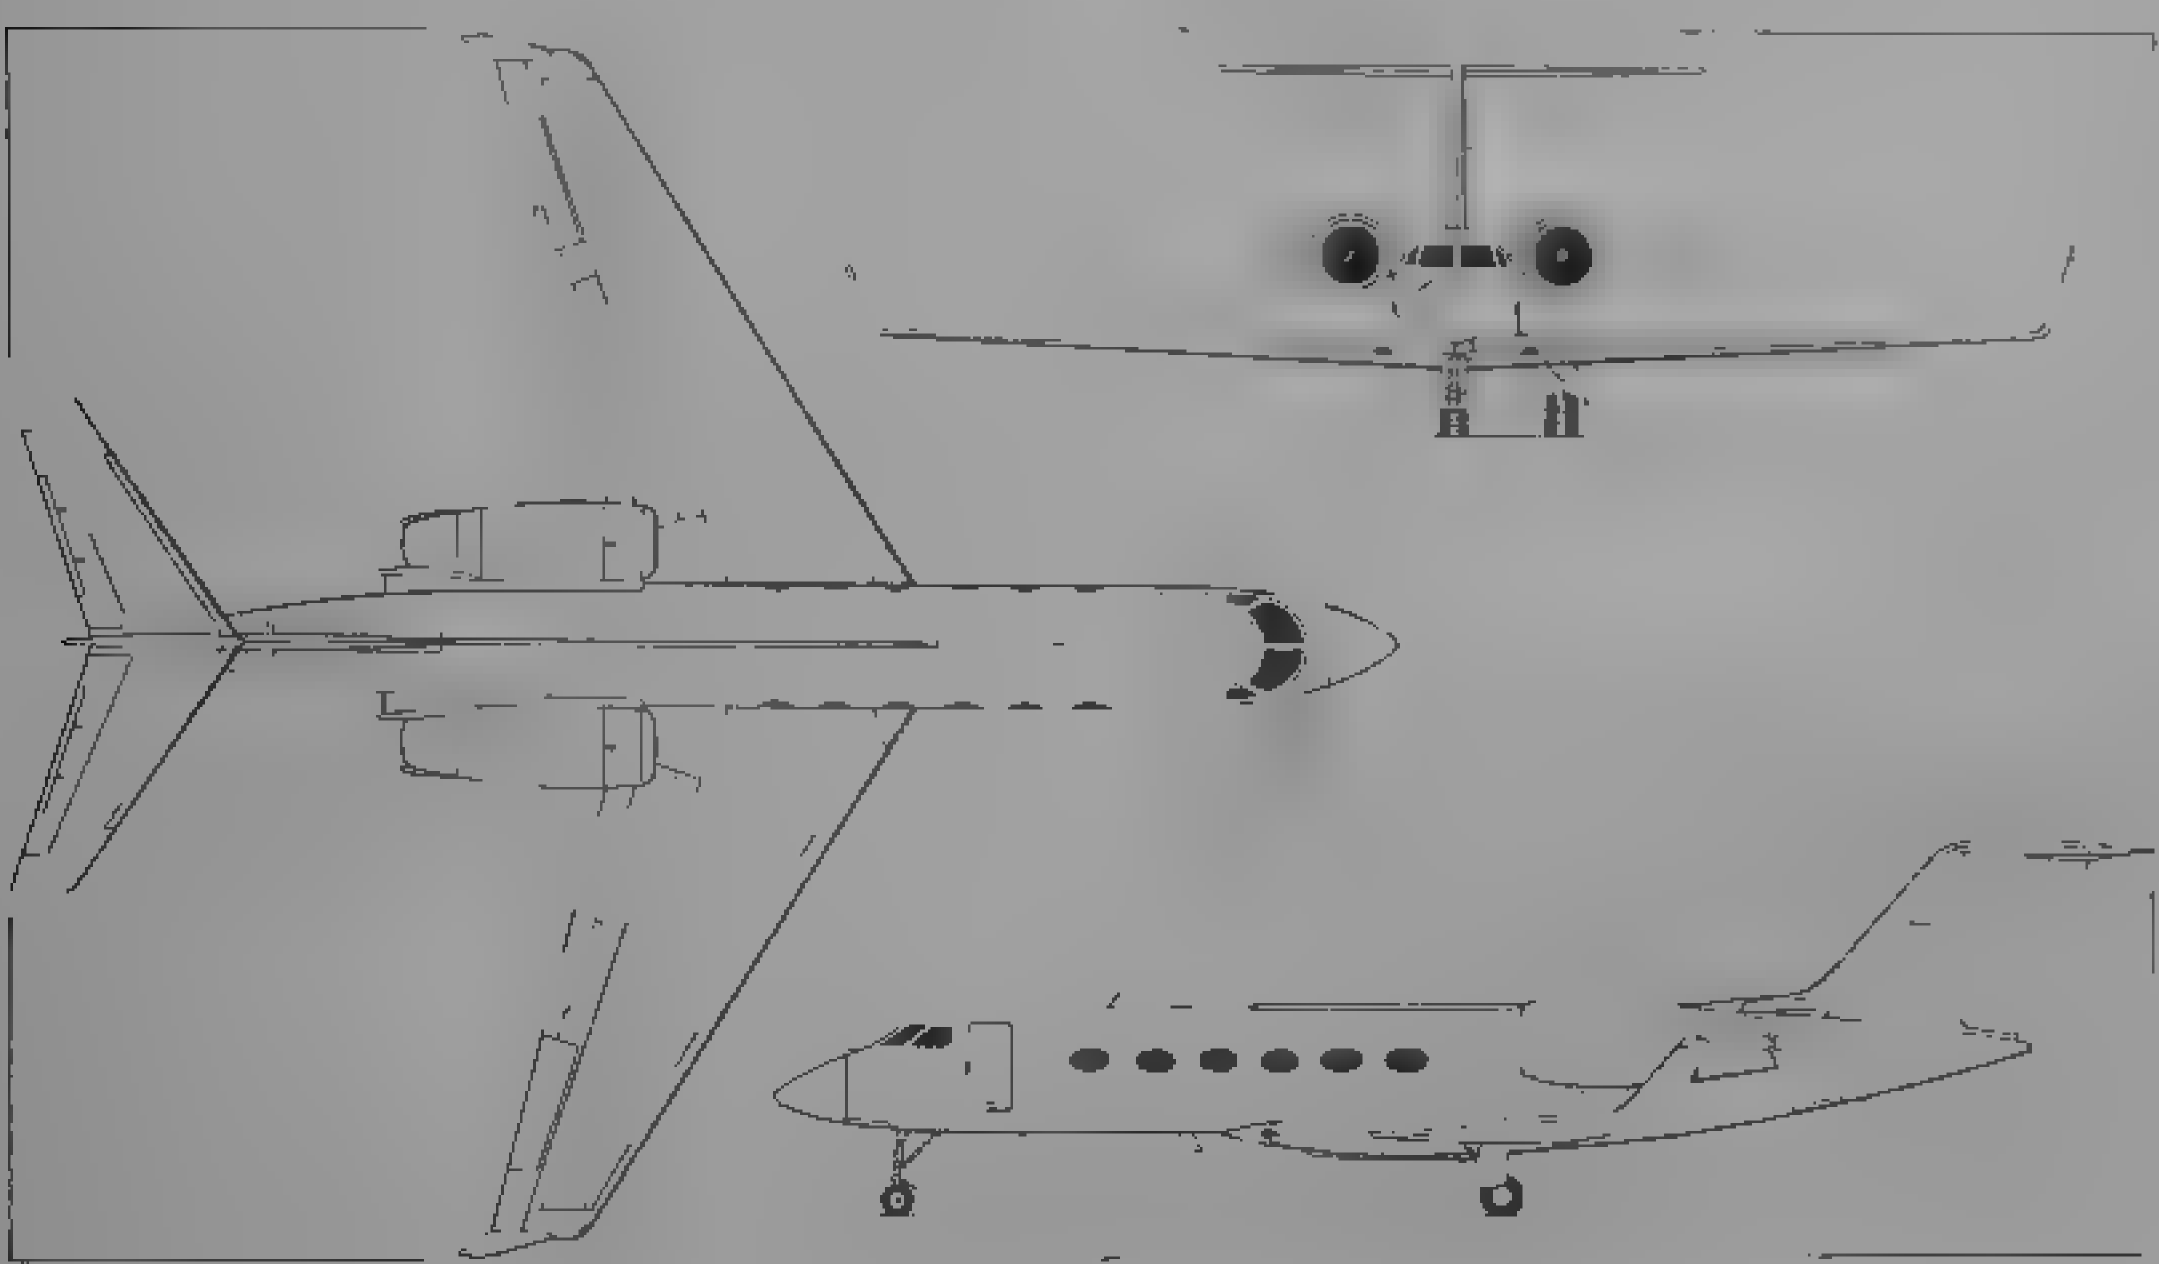
DIMENSIONS, EXTERNAL:
- Wing span over winglets: 23.72 m (77 ft 10 in)
- Wing chord
  - at root (fuselage centreline): 5.94 m (19 ft 5¾ in)
  - at tip: 1.85 m (6 ft 0¾ in)
- Wing aspect ratio: 5.92
- Length overall: 26.92 m (88 ft 4 in)
- Fuselage: Length: 24.03 m (78 ft 10 in)
  - Max diameter: 2.39 m (7 ft 10 in)
- Height overall: 7.45 m (24 ft 5¼ in)
- Tailplane span: 9.75 m (32 ft 0 in)
- Wheel track: 4.17 m (13 ft 8 in)
- Wheelbase: 11.61 m (38 ft 1¼ in)
- Passenger door (fwd, port): Height: 1.57 m (5 ft 2 in)
  - Width: 0.91 m (3 ft 0 in)
- Baggage door (rear): Height: 0.91 m (2 ft 11¾ in)
  - Width: 0.72 m (2 ft 4⅜ in)

DIMENSIONS, INTERNAL:
- Cabin
  - Length, incl galley, toilet and baggage compartment: 13.74 m (45 ft 1 in)
  - Max width: 2.24 m (7 ft 4 in)
  - Max height: 1.88 m (6 ft 2 in)
  - Floor area: 22.9 m² (247 sq ft)
  - Volume: 47.97 m³ (1,694 cu ft)
- Flight deck volume: 3.51 m³ (124.0 cu ft)
- Rear baggage compartment volume: 4.78 m³ (169.0 cu ft)

AREAS:
- Wings, gross: 88.29 m² (950.39 sq ft)
- Ailerons (total, incl tab): 2.68 m² (28.86 sq ft)
- Trailing-edge flaps (total): 11.97 m² (128.84 sq ft)
- Spoilers (total): 7.46 m² (80.27 sq ft)
- Winglets (total): 2.38 m² (25.60 sq ft)
- Fin: 10.92 m² (117.53 sq ft)
- Rudder, incl tab: 4.16 m² (44.75 sq ft)
- Horizontal tail surfaces (total): 18.83 m² (202.67 sq ft)
- Elevators (total, incl tabs): 5.22 m² (56.22 sq ft)

WEIGHTS AND LOADINGS:
- Manufacturer's weight empty
  - IV, IV-SP: 16,102 kg (35,500 lb)
- Typical operating weight empty
  - IV, IV-SP: 19,278 kg (42,500 lb)
- Max payload: IV: 1,814 kg (4,000 lb)
  - IV-SP: 2,948 kg (6,500 lb)
- Max usable fuel: IV, IV-SP: 13,381 kg (29,500 lb)
- Max T-O weight: IV: 33,203 kg (73,200 lb)
  - IV-SP: 33,838 kg (74,600 lb)
- Max ramp weight: IV: 33,384 kg (73,600 lb)
  - IV-SP: 34,019 kg (75,000 lb)
- Max zero-fuel weight: IV: 21,092 kg (46,500 lb)
  - IV-SP: 22,226 kg (49,000 lb)
- Max landing weight: IV: 26,535 kg (58,500 lb)
  - IV-SP: 29,937 kg (66,000 lb)
- Max wing loading: IV: 375.9 kg/m² (77.02 lb/sq ft)
  - IV-SP: 383.2 kg/m² (78.49 lb/sq ft)
- Max power loading: IV: 269.6 kg/kN (2.64 lb/lb st)
  - IV-SP: 274.7 kg/kN (2.69 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
- Max operating speed: 340 kts (629 km/h; 391 mph) CAS *or* Mach 0.88
- Max cruising speed at 9,450 m (31,000 ft): 505 kts (936 km/h; 582 mph)



Gulfstream Aerospace Gulfstream IV twin-turbofan business transport *(Jane's/Dennis Punnett)*

1983

Normal cruising speed at 13,715 m (45,000 ft)

UPDATED

GULFSTREAM AEROSPACE SRA-4

Swedish Air Force designation Tp 102
US military designations: C-20F/G/H
Japan Defence Agency designation U-4

TYPE: Special requirements aircraft version of Gulfstream IV

PROGRAMME: Development aircraft (N413GA) for electronic warfare support version, integrated by Electrospace Systems Inc (now CTAS see under Chrysler heading), exhibited at Farnborough Air Show 1988

CURRENT VERSIONS: **Electronic warfare support:** Development aircraft had forward underfuselage pod for jamming antennae, cabin contains operators' consoles and microwave generator and amplifier rack, modulation generator rack, radio racks, chaff supply and cutters to simulate EW from adversary aircraft and missiles, aircraft could be used to test and evaluate weapon systems and to develop electronic warfare tactics

Electronic surveillance/reconnaissance: Possible sensors include side looking synthetic aperture radar in belly mounted pod under forward fuselage, long-range oblique photographic camera (LOROP), ESM, VHF/UHF/HF communications for C³, chaff dispensers, infrared countermeasures in tailcone, SAR equipment and accommodation for operators for each system. Typical mission profile with 1,950 kg (4,300 lb) payload allows 10½ hours on station at loiter altitudes between 10,670 m and 15,550 m (35,000 ft and 51,000 ft).

Maritime patrol Equipment includes high-definition surface search radar, forward-looking infra-red detection system (IRDS), electronic support measures (ESM), flare/marker launch tubes, nav/com and ESM consoles, positions for up to eight observers/console operators, stowage and deployment for survival equipment, and crew rest area SRA-4 with 1,950 to 4,173 kg (4,300 to 9,200 lb) mass on payload including 272 kg (600 lb) expendable stores can operate at 600 n mile (1,112 km; 690 mile) radius for four to six hours; outbound flight at 12,500 m (41,000 ft) and 454 knots (841 km/h, 523 mph), search at 3,050 m (10,000 ft), but spend one-third of time at 61 m (200 ft); return flight at 13,715 m (45,000 ft.

Gulfstream C-20G Operational Support Aircraft of the US Navy

1995

ASW Equipment includes nose radar able to detect periscope and snorkels, FLIR, sonobuoy launchers, acoustic processor, magnetic anomaly detector (MAD) in tail, ESM torpedo stowage in weapon bay under forward fuselage, and anti shipping missile carried on each underwing hardpoint. Mission profile with six crew and 2,503 kg (5,518 lb) payload can stay over 4¼ hours in hi-lo loitering and manoeuvring at 1,000 n mile (1,852 km; 1,151 mile) radius. Mission profile for **anti-shipping** with two missiles allows 1,350 n mile (2,500 km, 1,553 mile) outbound flight at high altitude; descent to 61 m (200 ft) for 100 n mile (185 km, 115 mile) attack run at 350 knots (649 km/h 403 mph); launch missile 50 n miles (93 km, 57 miles) from target, return to base at 13,715 m (45,000 ft)

Medical evacuation: Accommodation for 15 stretchers and attendants

Priority cargo transport: Cargo door (see below) plus floor-mounted cargo roller system

C-20F: US Army administrative transport (one), delivered to Davison Air Command, Andrews AFB, Maryland, 1991

C-20G. Operational Support Aircraft (OSA) for US Navy (four) and USMC (one). Convertible interior for passengers and cargo (26 passengers; large cargo door, larger/additional emergency exits). First two for USN delivered 4 February and 7 March 1994 and equip VR-48 at Naval Air Facility at Washington, DC

C-20H USAF aircraft, one delivered March 1994 and based at Andrews AFB, Maryland, second aircraft scheduled for delivery December 1995

U-4 Selected late 1994 by Japanese Air Self-Defence Force for U-X multimission aircraft requirement, funds for two VIP/transport/training/support aircraft, valued at $72 million, included in FY95 budget, total order will be for nine aircraft, two for delivery in 1995 and 1996, three in 1997 and two in 1998, configuration to be confirmed, but expected to include medevac capability, high-density seating for up to 18 passengers plus crew, and possibly cargo door

CUSTOMERS US services, as detailed above Swedish Defence Materiel Administration (FMV) concluded contract 29 June 1992 for three Gulfstream IVs, one as **Tp 102** transport (delivered 24 October 1992 to F16 Wing at Uppsala), remaining two to be modified as **Tp 102B** for electronic intelligence gathering, to be operated by Swedish Air Force delivery in 1995 and enter operational service 1997, replacing Caravelles. Japanese Civil Aviation Bureau SRA airways flight inspection aircraft delivered December 1993 Turkish Air Force one in 1993 Other sales to undisclosed customers

DESIGN FEATURES Missions include surveillance/reconnaissance, electronic warfare support, maritime patrol, antisubmarine warfare, medical evacuation priority cargo and administrative transport. Cabin arranged for rapid role changes; upward-opening cargo door 1 60 m (5 ft 3 in) high by 2.11 m (6 ft 11 in) wide can be fitted to starboard ahead of wing to allow for bulky cargo, mission equipment or stretchers

GULFSTREAM AEROSPACE GULFSTREAM V

TYPE: Twin turbofan, long range business transport

PROGRAMME Study announced at NBAA Convention, Houston, in October 1991. Go-ahead commitment and engine selection (BMW Rolls-Royce BR710) announced at Farnborough Air Show in September 1992, Risk-sharing agreement with wing designers/manufacturers (Vought, now Northrop Grumman, and ShinMaywa) announced at Paris Air Show in June 1993, and with tail (and later floor panel) manufacturer (Fokker) at NBAA Convention in September 1993. Production parts manufacturing commenced in September 1993, first metal for tail cut April 1994, first fuel ground run of engine 1 September 1994, assembly of first wing began mid-October 1994, first fuselage joined May 1995; first tail assembly delivered by Fokker June 1995. Maiden flight scheduled for 15 November 1995; three (of four) test aircraft, including one static test article, to be completed during 1995; certification in mid-October 1996, five production aircraft scheduled for completion in 1996, building up to an annual production rate of 24 in 1997 and beyond

Freight door of C-20G, starboard side, forward of wing *(Paul Jackson)*

1995

CUSTOMERS $2 billion firm order backlog by June 1995, with $3 billion/100 order backlog anticipated by time of first customer delivery in late 1996 break even on non-recurring research and development costs expected at or before sale of 65th aircraft, only announced customer Executive Jet Aviation took options on two aircraft in January 1995, for delivery in 1998-99

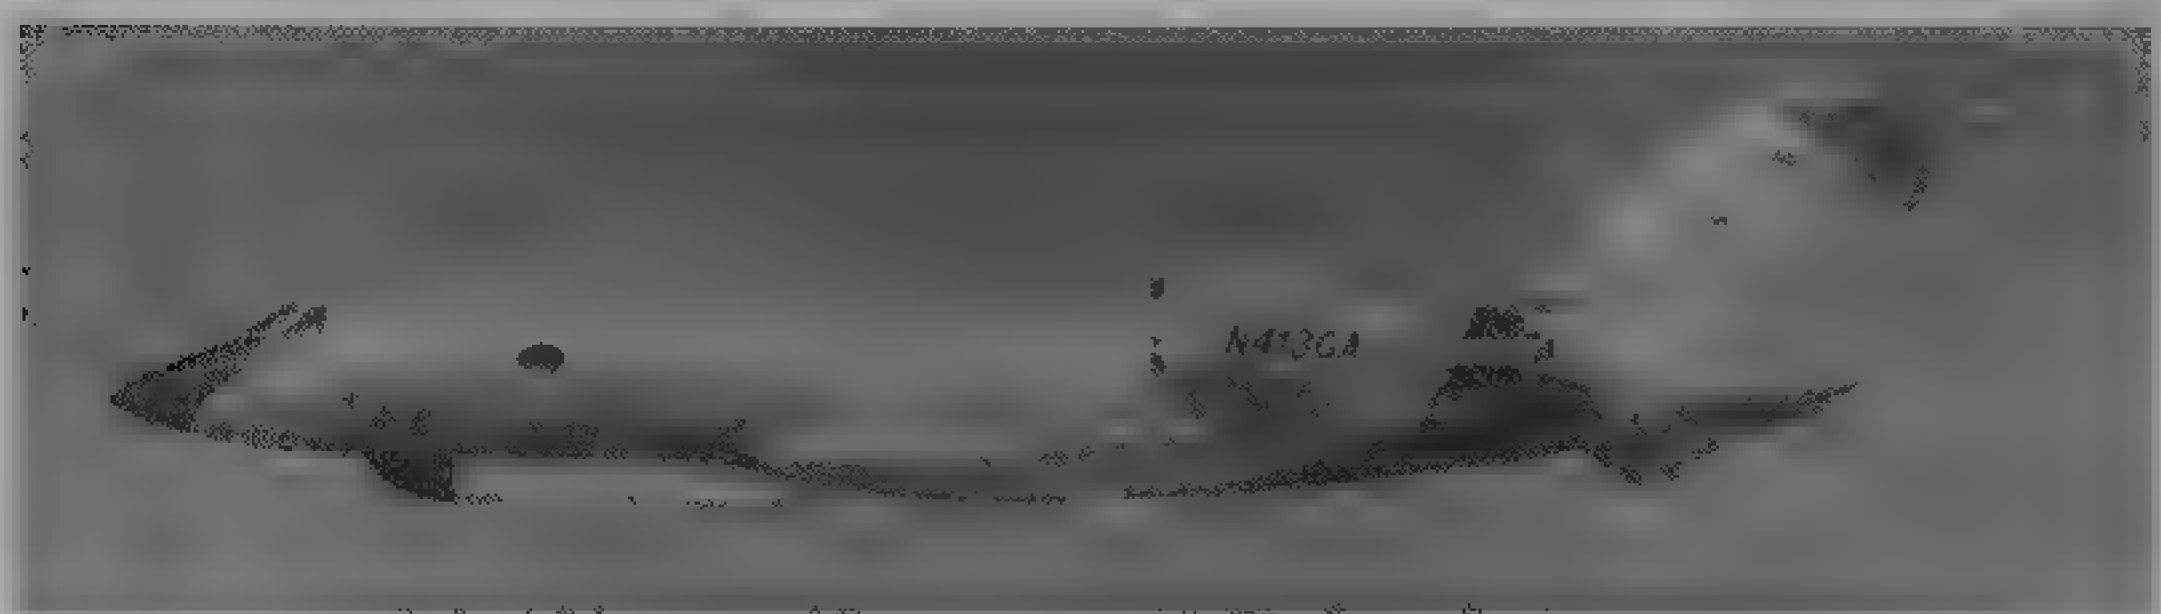
COSTS $29.5 million (fixed price) for first 24 aircraft, then $30.5 million (fixed price) up to 39th aircraft

DESIGN FEATURES. Gulfstream IV fuselage stretched by plugs behind cockpit and over wing, larger wing of same basic shape and interior structure, but 10 per cent more efficient than Gulfstream IV's, larger vertical and horizontal tail surfaces, flight deck volume increased by moving bulkhead 0.30 m (1 ft) aft to provide more space for pilots and to accommodate full size jump seat· cockpit layout and instrumentation generally similar to Gulfstream IV-SP, but redesigned to incorporate human engineering changes in system control functions, airstair door moved aft by 1 52 m (5 ft); avionics bay relocated Computational fluid dynamics and CATIA design system used extensively in development.

POWER PLANT Two 65 61 kN (14,750 lb st) BMW Rolls-Royce BR710-48 turbofans

ACCOMMODATION· Crew of two/three plus cabin attendant Standard seating for 15 to 19 passengers in pressurised and air conditioned cabin

SYSTEMS Cabin pressurisation system is digitally controlled to provide a fully automatic cabin altitude up to 15,545 m (51 000 ft) Sundstrand electrical power generating system profile integrated with the flight management system (FMS), and will maintain equivalent of 1,830 m (6,000 ft) AlliedSignal RE220 APU, designed specifically for



Development prototype of the Gulfstream SRA-4 electronic warfare support aircraft

1991

Gulfstream V, will provide engine-starting capability up to 13,110 m (43,000 ft), 40 kVA of electrical power for ground and flight use up to 13,715 m (45,000 ft), and ground air conditioning, with almost twice the cooling air flow rate of the Gulfstream IV's APU.

AVIONICS: *Flight:* Bendix/King enhanced ground proximity warning system (EGPWS); Sundstrand maintenance data acquisition unit.

Instrumentation: Honeywell SPZ-8000 digital AFCS/FMS with six 20.3 × 20.3 cm (8 × 8 in) colour LCD EFIS displays, Honeywell/GEC Marconi Model 2020 HUD.

Mission: IBM satellite based international communications system, including airborne voice, data, networking, fax and teleconferencing facilities, provides Gulfstream V with 'office in the sky' capability.

DIMENSIONS, EXTERNAL:	
Wing span over winglets	28.50 m (93 ft 6 in)
Length overall	29.39 m (96 ft 5 in)
Height overall	7.72 m (25 ft 4 in)
Tailplane span	10.72 m (35 ft 2 in)
DIMENSIONS, INTERNAL:	
Cabin:	
Length, aft of flight deck	15.26 m (50 ft 1 in)

HILLER AIRCRAFT CORPORATION

7980 Enterprise Drive, Newark, California 94560-3497
Telephone: 1 (510) 744 1500
Fax: 1 (510) 744 1600
PRESIDENT AND CEO: Jeffrey H. Hiller
VICE-PRESIDENT MARKETING: Don Malcolm
DIRECTOR, CUSTOMER SUPPORT: Walt Dalrymple
CHIEF ENGINEER: Harley Stallman
DIRECTOR OF COMMUNICATIONS: Charles M. Evans

Production assets acquired in 1994 from Rogerson Aircraft Company by investment consortium led by Jeffrey Hiller, son of Hiller Aircraft's original founder Stanley Hiller; company relocated from Port Angeles, Washington State, to Newark, California; company's programme includes supply of spare parts and support to operators of Hiller UH-12 series helicopters, has resumed production of three-place UH-12E series of light utility helicopters. Operations at Newark started September 1994, resuming production of spare parts for some 1,000 Hiller helicopters still flying. Flight testing of new UH-12E5 five-seat helicopter began January 1995.

UPDATED

HILLER UH-12E3 and UH-12E3T

TYPE: Three-seat utility helicopter

PROGRAMME: Resumed production of Hiller UH-12E in 1995.

CUSTOMERS: Since 1959, nearly 1,500 UH-12E series have been built. First flight, UH-12E3 from new production (N101BX), 2 June 1995, individual certification 6 June 1995, type certification expected late 1995. Deliveries begun of 15 for sales agency in Southeast Asia; production, three a month; first two UH-12E3T versions to fly in Autumn 1995.

POWER PLANT: One 253.5 kW (340 hp) Textron Lycoming VO-540-C2A flat-six engine, installed vertically and derated to 227.5 kW (305 hp). Engine muffler optional. Alternatively, UH-12E3T version with 313 kW (420 hp) Allison 250-C20B turbine, derated to 224 kW (300 hp). Single bladder fuel cell, capacity 174 litres (46 US gallons; 38 Imp gallons), mounted in lower portion of rear fuselage, beneath engine. Two optional auxiliary fuel tanks, mounted in fuselage on each side of engine, capacity 76 litres (20 US gallons; 16.6 Imp gallons) each.

ACCOMMODATION: Three persons side by side on bench seat. Seat belts with provision for shoulder harness. Dual controls optional. Forward-hinged door on each side, with sliding window. Baggage compartment immediately aft of engine. Heater/defroster optional.

DIMENSIONS, EXTERNAL:	
Main rotor diameter	10.80 m (35 ft 5 in)
Tail rotor diameter	1.68 m (5 ft 6 in)
Length overall, rotors turning	12.41 m (40 ft 8½ in)
fuselage	8.69 m (28 ft 6 in)
Height to top of rotor head	3.08 m (10 ft 1¼ in)
Skid track	2.29 m (7 ft 6 in)
DIMENSIONS, INTERNAL:	
Cabin: Length	1.52 m (5 ft 0 in)
Max width	1.50 m (4 ft 11 in)
Max height	1.35 m (4 ft 5 in)
Floor area	1.16 m² (12.5 sq ft)
AREAS:	
Main rotor disc	91.97 m² (990.0 sq ft)
Tail rotor disc	2.57 m² (27.7 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty	798 kg (1,759 lb)
Max T-O weight	1,406 kg (3,100 lb)
Max disc loading	15.28 kg/m² (3.13 lb/sq ft)

PERFORMANCE (Lycoming piston engine, at max T-O weight, except where indicated):

Never-exceed (V_{NE}) and max level speed	83 kts (154 km/h; 96 mph)
Cruising speed	78 kts (145 km/h; 90 mph)
Max rate of climb at S/L	393 m (1,290 ft)/min
Vertical rate of climb at S/L	225 m (740 ft)/min
Service ceiling:	
at AUW of 1,270 kg (2,800 lb)	4,575 m (15,000 ft)
at max T-O weight	2,255 m (7,400 ft)
Hovering ceiling IGE:	
at AUW of 1,270 kg (2,800 lb)	3,170 m (10,400 ft)
at max T-O weight	2,315 m (7,600 ft)
Hovering ceiling OGE:	
at AUW of 1,270 kg (2,800 lb)	2,070 m (6,800 ft)
at max T-O weight	1,155 m (3,800 ft)
Range, 30 min reserves:	
standard fuel	150 n miles (278 km; 173 miles)
auxiliary fuel	316 n miles (585 km; 364 miles)
Endurance with auxiliary fuel, 30 min reserves	4 h

UPDATED

First new production Hiller UH-12E3 three-seat light helicopter *1995*

New five-seat Hiller UH-12E5 in intended production form *1995*

HILLER UH-12E5

TYPE: Five-seat utility helicopter

PROGRAMME: Flight testing began early 1995 (N20EW converted from UH-12E4). First new-build UH-12E5 completed June 1995. Deliveries in hand of five for sales agency in Southeast Asia.

DESIGN FEATURES: Similar to UH-12E3, but seats two in front and three in rear of enlarged cabin, latter based on Hiller 'L' series with wider doors.

ISAE OMEGA 2

TYPE: Light tandem-seat sport and aerobatic aircraft

PROGRAMME: Evolved from Streak 90 Palomino of 1966. ISAE President Brent Brown bought Palomino prototype and tooling; Omega 2 is revised design; first public appearance at Experimental Aircraft Association Convention in 1993. Initially produced in kit form but kits withdrawn in 1994. FAR 23 aerobatic certification continues in 1995.

DESIGN FEATURES: Low-wing monoplane, tandem seating and retractable undercarriage to give low drag; slightly swept fin and tailplane; fin and both tailplane units are identical to simplify building; construction time about 1,900 hours.

FLYING CONTROLS: Frise ailerons, conventional elevators and rudder; three-position manually operated flaps; electric pitch trim through stick-switch operating elevator tab.

STRUCTURE: Two-spar wing; aluminium alloy skins.

LANDING GEAR: Retractable tricycle type, hydraulically actuated; all tyres 5.00-5; steerable nosewheel.

POWER PLANT: One 224 kW (300 hp) Textron Lycoming AEIO-540-L engine, driving a Hartzell constant-speed propeller. Fuel in wing integral tanks, capacity 170 litres

(45 US gallons, 37.5 Imp gallons); fuel selector on cockpit floor ahead of front seat

ACCOMMODATION: Tandem seats adjustable fore and aft, provision for parachutes for aerobatic training, if required

SYSTEMS: 28 V electrics; hydraulic power pack for landing gear

AVIONICS: Customer fi

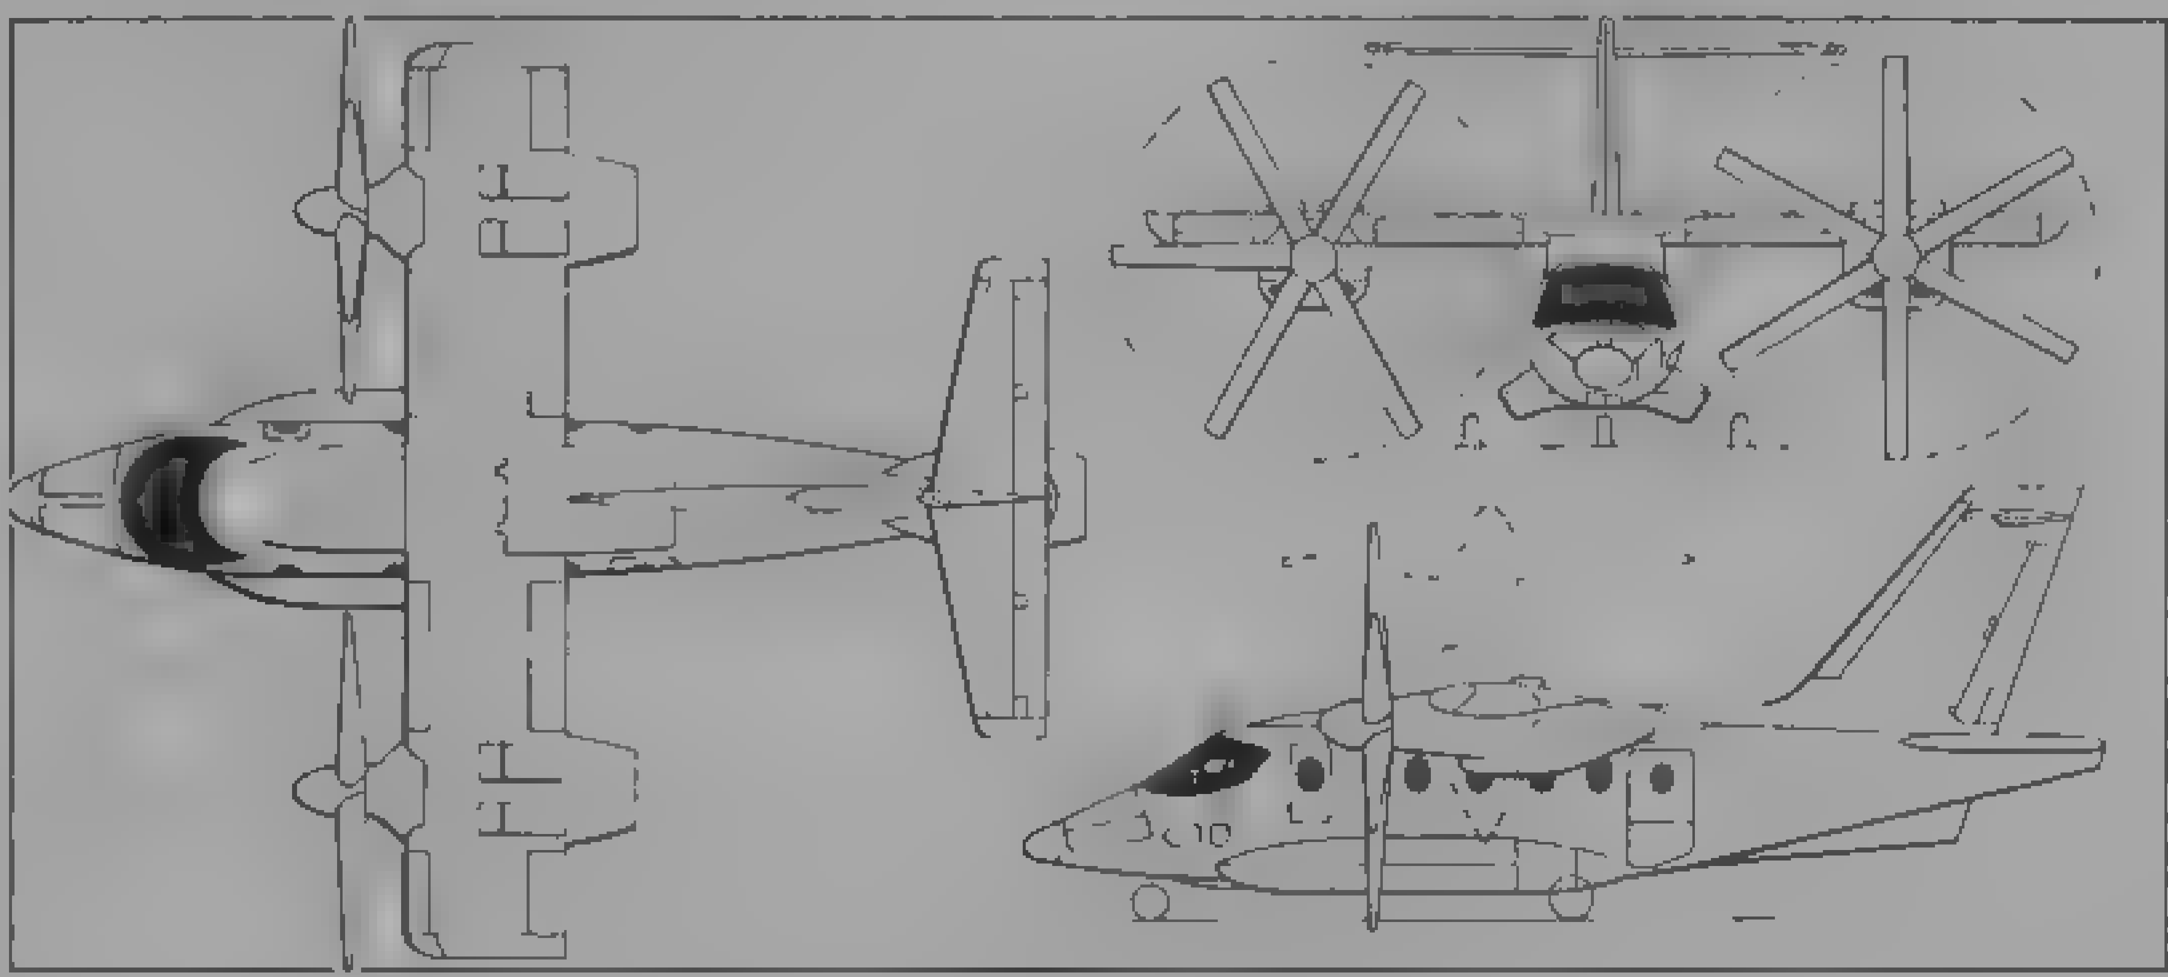
CHAIRMAN AND CEO: Taiichi Ishida

Ishida Aerospace Research (IAR), a US-registered aerospace-related R&D company, is a subsidiary of Ishida Foundation of Nagoya, Japan, a non-profit organisation concentrating on research in transportation systems. IAR participates in tilt-wing aircraft research with long-term intention of forming joint venture with other US research organisations and aerospace companies for development and production phases of tilt-wing aircraft. In July 1993, Ishida Foundation directed that engineering work on TW-68 be put temporarily on hold while IAR reorganised towards more emphasis on R&D. A second subsidiary of the Foundation, TW-68 Industries Inc (see 1993-94 *Jane's*), originally designated to be responsible for prototype and production phases, has been disbanded.

UPDATED



Ishida TW-68 (four P&WC PT6B-67R turboshafts) *(Jane's/Mike Keep)*

1992

ISHIDA TW-68

TYPE: Four-engine twin-propeller tilt-wing utility transport.

PROGRAMME: See Japanese section of 1993-94 *Jane's* for previous history. Development launched in Fort Worth, Texas, in 1987, with aim of 1996 first flight; FAA has accepted application for civil certification, aircraft intended to meet interim airworthiness criteria for powered lift transport category aircraft. Intended primarily for offshore oil and commercial utility markets, secondary uses are intercity transportation and public service roles.

COSTS: Projected development costs approximately $400 million, standard aircraft $8 to 9 million (1994).

DESIGN FEATURES: Designed as 14-passenger V/STOL transport, wings pivoting from horizontal to vertical to achieve this. High-mounted wing pivots at centre section to align propeller thrust vector with direction of flight (vertical for hovering T-O and spot landing, intermediate wing incidence for short T-O, run-on landing, climb and approach, horizontal for conventional forward cruise). Large diameter propellers ensure strong slipstream across full span of wings; slipstreams combined with full-span leading-edge slats and trailing-edge flaps assist in maintaining attached air flow and are designed to permit flights through high angles of attack during steep descents at mid-conversion wing incidence.

Designed to achieve short-field T-O in two to three fuselage lengths, integrated design of propeller/wing aerodynamics, high-lift devices and flight control system enables approaches at glide slope descent angles of up to 10° in level attitude. Horizontal T tail changes incidence as a function of wing incidence to enhance smooth transitions through conversion; limited tailplane incidence range ensures a fully flying tail without stall during transition from VTOL to aeroplane mode flight. Ducted tail fan at aft end of fuselage designed for quiet operation, and is less vulnerable to damage than a conventional tail rotor.

FLYING CONTROLS: Manual/electrical control of wing incidence. Conventional aileron/elevator/rudder control during flight in aeroplane mode; in VTOL mode with wings fully tilted, roll control is by differential propeller thrust, pitch control by tail fan, and yaw by differential flap settings. Propeller pitch controls thrust in both modes. Tail fan stopped in forward cruise, when elevators take over pitch control function.

LANDING GEAR: Retractable tricycle type. Main units retract into fairings on fuselage sides.

POWER PLANT: Four 1,025 kW (1,375 shp) P&WC PT6B-67R turboshafts, two in each nacelle, adapted for vertical operation, each pair driving a six-blade slow-turning propeller

Artist's impression of Ishida TW-68

1994

(800 rpm for V/STOL, 680 rpm in cruise). Engine pair each side drive propeller via twin-pack gearbox, and are cross-shafted across wing to ensure continuous power to both propellers in the event of an engine failure. See under Weights and Loadings for fuel details.

ACCOMMODATION: Flight crew of two. Cabin seating for nine (corporate) or 14 (commuter) passengers, or equivalent freight or other payload.

DIMENSIONS, EXTERNAL:

Wing span	12.44 m (40 ft 9½ in)
Total span (incl propellers)	13.53 m (44 ft 4¾ in)
Wing chord, constant	2.32 m (7 ft 7¼ in)
Wing aspect ratio	5.37
Length overall	15.42 m (50 ft 7¼ in)
Fuselage: Max width	1.86 m (6 ft 1¼ in)
Height overall	5.55 m (18 ft 2½ in)
Propeller diameter	5.46 m (17 ft 10¾ in)

DIMENSIONS, INTERNAL:

Cabin: Length	5.58 m (18 ft 3½ in)
Max width	1.86 m (6 ft 1¼ in)
Max height	1.76 m (5 ft 9½ in)
Volume	14.55 m³ (514 cu ft)
Baggage volume	3.57 m³ (126 cu ft)

AREAS:

Wings, gross	28.80 m² (310.0 sq ft)

WEIGHTS AND LOADINGS:

Operating weight empty	5,618 kg (12,386 lb)
Max fuel weight	2,097 kg (4,624 lb)
Payload with max fuel	903 kg (1,990 lb)
Max T-O weight	8,618 kg (19,000 lb)
Max wing loading	299.2 kg/m² (61.29 lb/sq ft)
Max power loading	2.10 kg/kW (3.45 lb/shp)

PERFORMANCE (estimated):

Max cruising speed at 7,620 m (25,000 ft)	310 kts (574 km/h, 357 mph)
Best range speed at 7,620 m (25,000 ft)	250 kts (463 km/h, 288 mph)
Time to climb to 7,620 m (25,000 ft)	9 min
Max certificated ceiling	8,840 m (29,000 ft)
Hovering ceiling IGE: normal	1,495 m (4,900 ft)
OEI	1,035 m (3,400 ft)
Max range: 14 passengers	760 n miles (1,408 km, 875 miles)
nine passengers	920 n miles (1,705 km, 1,059 miles)

KAMAN

KAMAN AEROSPACE CORPORATION (Subsidiary of Kaman Corporation)

Old Windsor Road, PO Box No. 2, Bloomfield, Connecticut 06002
Telephone: 1 (203) 243 7100 or 242 4461
Fax: 1 (203) 243 7514
Telex: 710 425 3411
PRESIDENT AND CEO: Walter R. Kozlow
VICE-PRESIDENT ENGINEERING: David J. White
MARKETING MANAGER: William H. G. Douglass
DIRECTOR, PUBLIC RELATIONS: J. Kenneth Nasshan
PUBLIC RELATIONS REPRESENTATIVE: Elizabeth K. Healey

Founded 1945 by Charles H. Kaman, now Chairman and CEO of Kaman Corporation. Developed servo-flap control of helicopter main rotor, initially in contrarotating two-blade main rotors, and still used in H-2 Seasprite four-blade main rotor. R&D programmes sponsored by US Army, Air Force, Navy and NASA include advanced design of helicopter rotor systems, blades and rotor control concepts, component fatigue life determination and structural dynamic analysis and testing. Kaman has undertaken helicopter drone programmes since 1953, is continuing advanced research in rotary-wing unmanned aerial vehicles (UAVs).

Kaman is major subcontractor in many aircraft and space programmes, including design, tooling and fabrication of components in metal, metal honeycomb, bonded and composites construction using techniques such as filament winding and braiding. Participates in programmes including Northrop Grumman A-6 and F-14, Bell/Boeing V-22, Boeing 737, 747, 757 and 767, Sikorsky UH-60 and SH-60, and NASA Space Shuttle Orbiter. Kaman also supplies acoustic engine ducts for P&W JT8D and thrust reversers for GE CF6-80C/E engines.

Kaman designed and, since 1977, has been producing all-composite rotor blades for Bell AH-1 Cobras for US and foreign armies, participated in AH-1 air-to-air Stinger (ATAS) programme, supplied composite-blade kits for Boeing CH-46 Sea Knights.

KAMAN SH-2G SUPER SEASPRITE

No new SH-2Gs have been built since 1993, but 18 SH-2Fs have been converted to this standard for the US Navy and a further 10 are being upgraded for Egypt under a $100 million contract awarded 22 February 1995, as described in *Jane's Aircraft Upgrades*.

UPDATED

KAMAN K-1200 K-MAX

TYPE: Single-seat external lift intermeshing rotor helicopter and military multimission intermeshing rotor aircraft (MMIRA). Sometimes known as 'Aerial Truck'.

PROGRAMME: First flight (N3182T) 23 December 1991, first public showing 22 March 1992; first flights of second prototype (N131KA) 18 September 1993 and first production aircraft (N132KA) 12 January 1994, third prototype is static and drop test aircraft to prove 20 year life at 1,000 hours per year and with 30 return logging sorties per hour. Certification to FAR Pts 27 and 133 achieved 30 August 1994 after 800 hour/32 month programme. Deliveries one every two months until September 1995, then one per month. N133KA of Scott Paper achieved 1,000 hours in eight months, 22 June 1995, as first K-Max to achieve this total. Uses include logging, firefighting, agricultural spraying, constructing and surveying.

CUSTOMERS: First six purchase-leased to operators on $1,000 per hour, 1,000 hours per year basis; initial customer Erickson Air Crane ordered three, received two before company restructuring required return in March 1995, others to Louisiana-Pacific from October 1994, Scott Paper November 1994 and Weyerhauser December 1994. (Pilot training by Kaman on two HH-43F Huskies.) Further orders from Midwest Helicopters of Canada (delivery June 1995), Saab Helicopters AB (Scandinavian sales agent), Wescor Forest Products Co, Heli-Union of France (placed 12 June 1995) and, in Switzerland, Heliog (first delivery, May 1995) and Heliswiss. Kyokuto Boeki Kaisha appointed Japanese K-Max agency in June 1994 and to receive first of expected five K-Maxes, plus one HH-43 trainer, October 1995.

COSTS: $3,500,000.

DESIGN FEATURES: Kaman intermeshing rotor ensures all engine power produces lift, rotor disc loading is very low and airspeed is limited to reduce rotor stresses, rotor transmission life intended to be same as airframe life; all internal spaces painted white and provided with lights to ease night-time servicing, freight compartment beneath transmission casing allows carriage of special tools or parts, no hydraulics, transmission and engine fluid lines located on opposite sides of helicopter to avoid servicing errors; fuselage is narrow to give good downward view; panels in domed side windows can be opened to give direct vision or doors can be removed altogether. Electronic engine instruments and hook load measuring sensor record engine

Kaman K-Max single-seat helicopter in the insignia of Erickson Air-Crane

Detail of Kaman K-Max rotors

1993

cycles and any overloads, but also give the pilot an immediate record of operations for billing purposes, avoiding paperwork for pilot. Inter blade drag damper pins can be removed so that blades swing sideways to align for parking in narrow spaces

Normal rotor rpm range between 250 and 270 unloaded and 260 and 270 with external load, giving maximum blade tip speed of 200 m (658 ft)/min, translational lift is attained at 12 knots (22 km/h; 14 mph), rpm reduced to 200 for autorotation and airspeed of 50 knots (92 km/h, 57 mph) then gives a power-off descent rate of 366 to 427 m (1,200 to 1,400 ft)/min

FLYING CONTROLS: Blade angle of attack controlled by trailing-edge tabs and light control linkage, avoiding need for hydraulic power; an electric actuator in each tab control run is operated by pilot to track the blades on ground or in flight

In normal powered flight, turns at or near the hover are effected by applying differential torque to the rotors by means of differential collective pitch commanded from the foot pedals; a small fore-and-aft cyclic pitch change also occurs, at low powers near autorotation, this would produce directional control reversal, because differential collective pitch change would cause drag on the unwanted side so a non-linear cam between collective lever and rotor blade controls phases out differential collective from a 'dwell zone' at about 25 per cent collective demand and replaces it progressively with differential cyclic

Intermeshing rotors cause pronounced pitch attitude change in response to collective pitch change; the K-Max tailplane is connected to collective to alleviate this, to reduce blade stresses and produce touchdown and lift-off in level attitude, fixed fins on tailplane are in rotor downwash and rear fin is outside rotor disc; rudder is connected to foot pedals to help balance turns

STRUCTURE: Light alloy airframe; GFRP and CFRP rotor blades and tabs. Tail assembly weighs 36.3 kg (80 lb) and can be removed quickly by two people

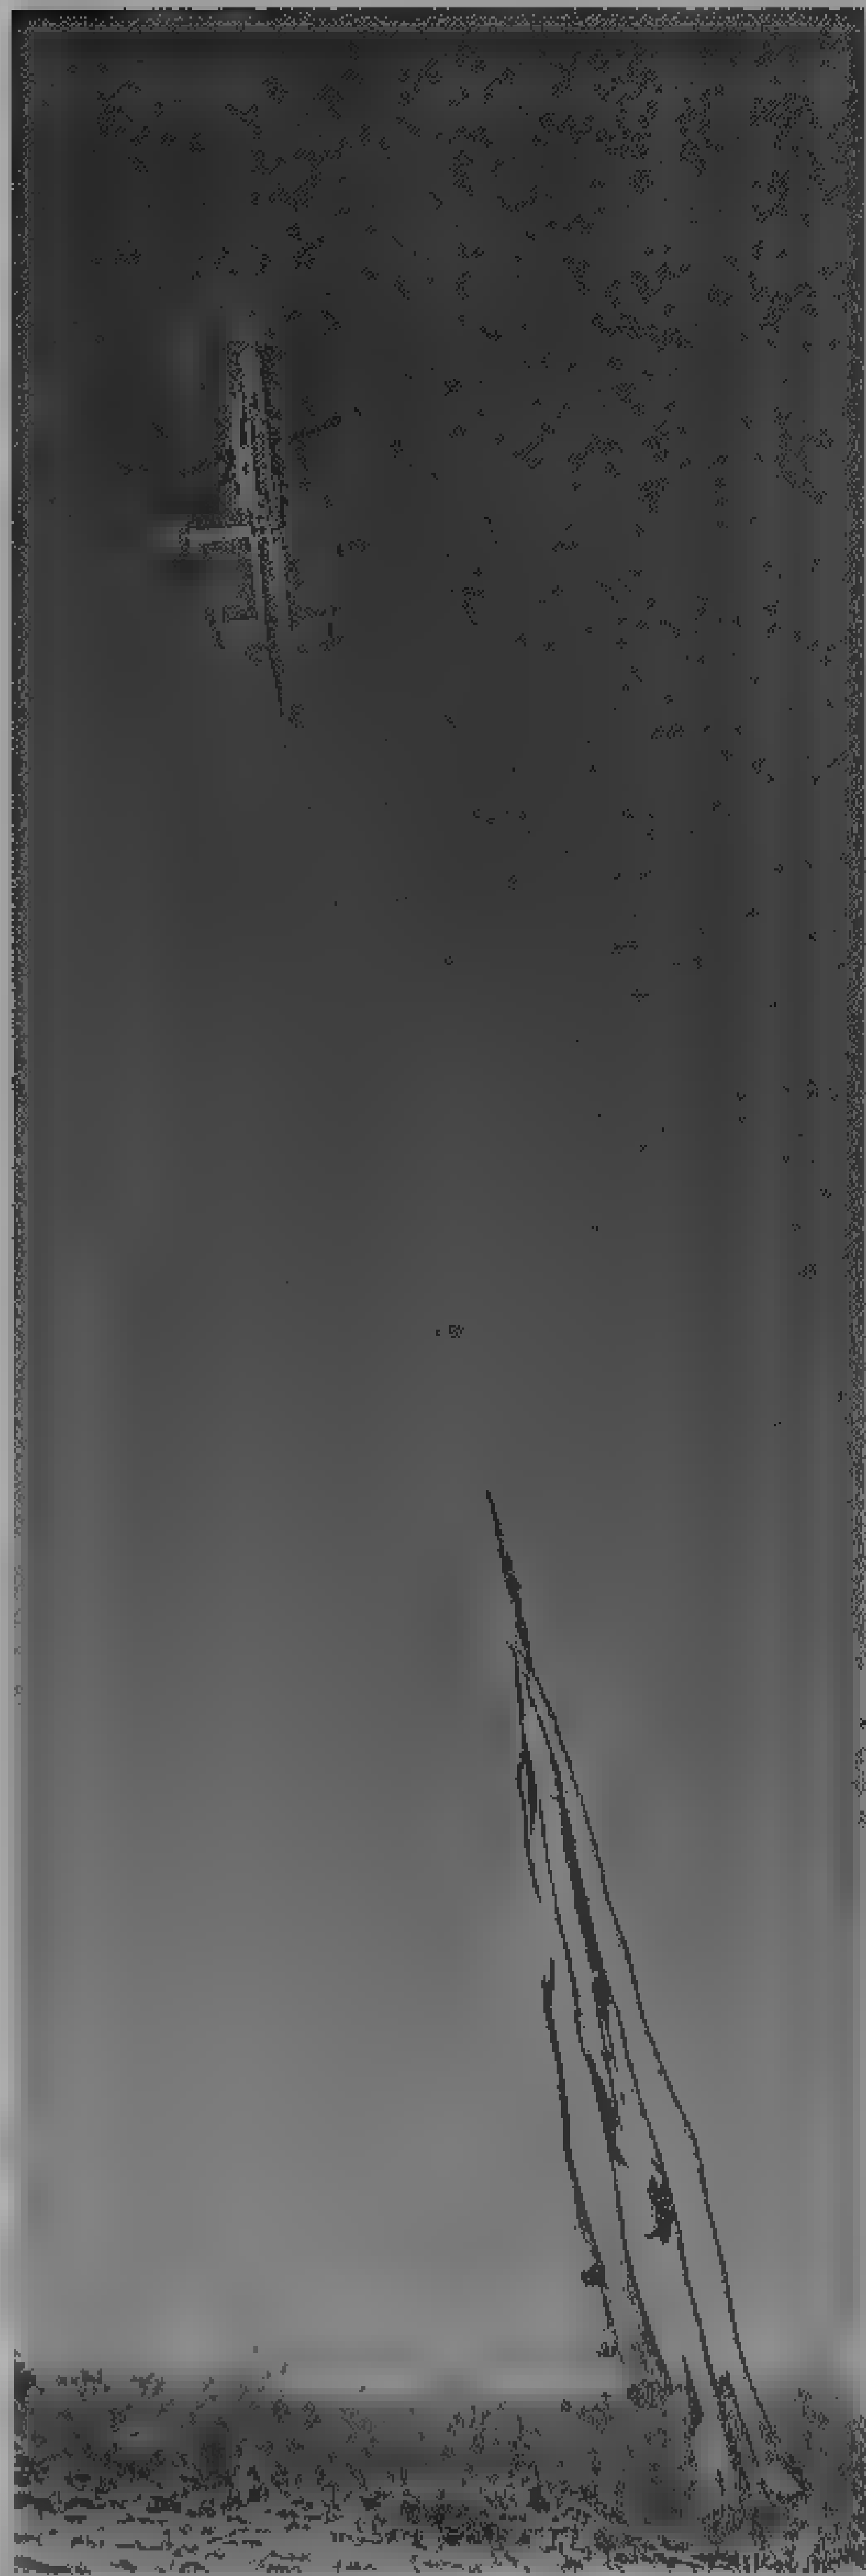
LANDING GEAR: Fixed, tricycle, nosewheel is out of pilot's field of view, impact sustaining suspension with transverse mounting tube for mainwheels; rubber-in-compression suspension for mainwheels; oleo for nosewheel, bear paw plate round each wheel for operation from soft ground and snow; nosewheel swivels and locks, mainwheels have individual foot-powered brakes and parking brake

POWER PLANT: One 1,118 kW (1,500 shp) Lycoming T53-17A-1 turboshaft (civil equivalent of military T53 L-703), with particle separator, flat rated at 1,007 kW (1,350 shp) for take-off up to about 2,315 m (7,600 ft) and 1,007 kW (1,340 shp) continuous up to about 1,980 m (6,500 ft), transmission rated at 1,119 kW (1,500 shp) and designed for 10,000 hour life with 1,500 hour overhaul intervals. Fuel capacity 863 litres (228 US gallons, 199 Imp gallons) located at aircraft CG, receptacle for hot refuelling with rotors running, dual electric fuel pumps

ACCOMMODATION: Pilot only, in Simula crash impact absorbing seat with five-point harness, seat and rudder pedals adjustable; heater and windscreen demister; windows removable for operation in hot weather, curved windscreen in production version. Tool/cargo compartment 0.74 m³ (26 cu ft) fitted with 2,268 kg (5,000 lb) stress tiedown rings. Design includes provision for unmanned operation

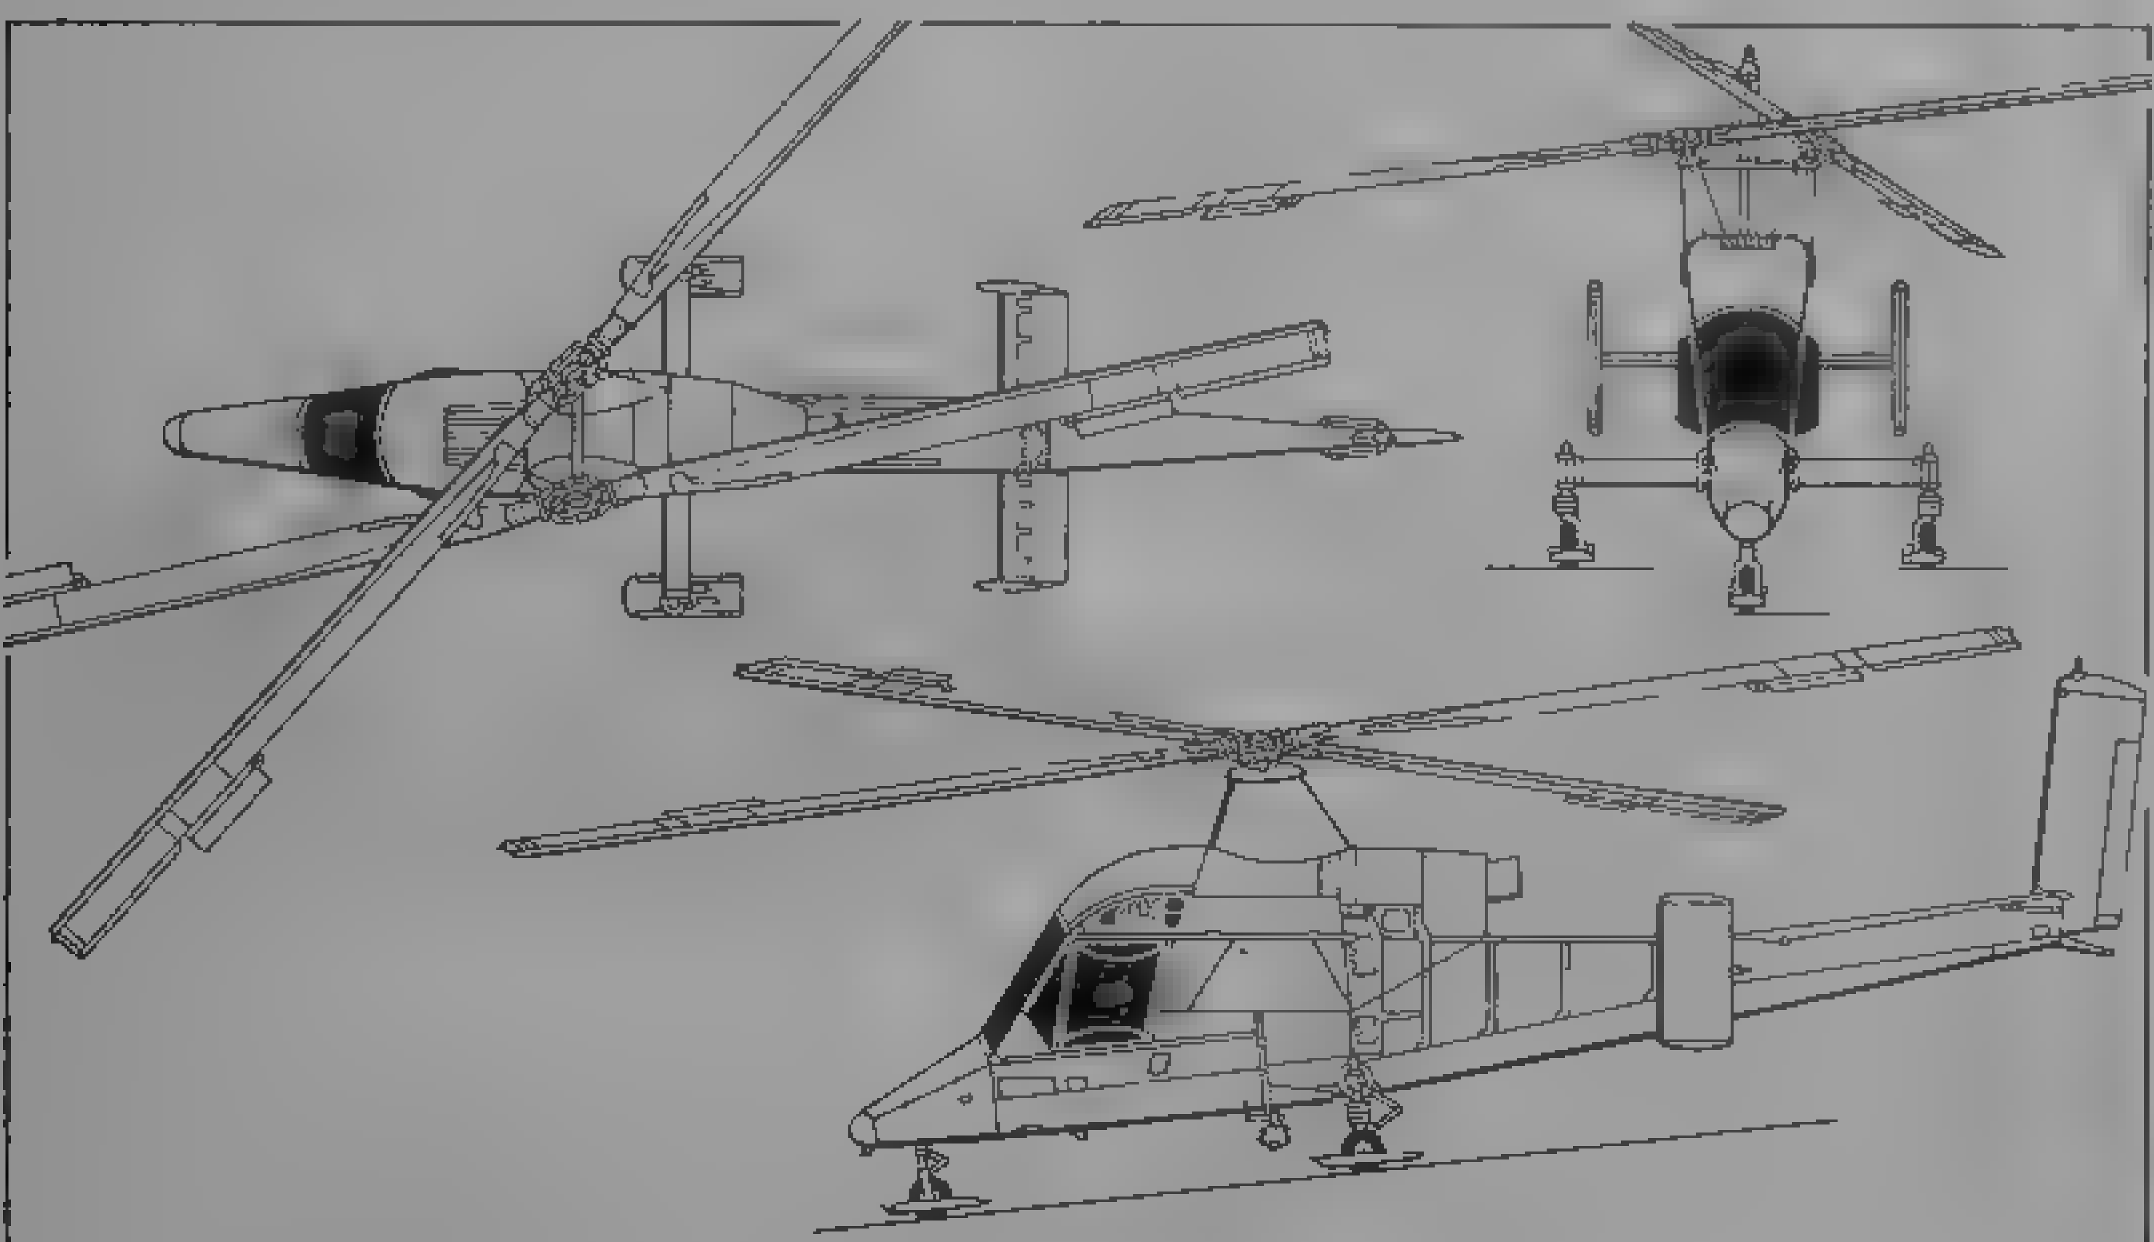
SYSTEMS: DC electrical system with starter/generator, no hydraulics

EQUIPMENT: Pilot-controlled swivelling landing light, standard configuration is for lifting slung loads, but electrical fittings provided for Bambi firefighting bucket, Loadcell and long-line hook gear, kits planned for patrol, firefighting tank and snorkel system, agricultural applications and similar missions



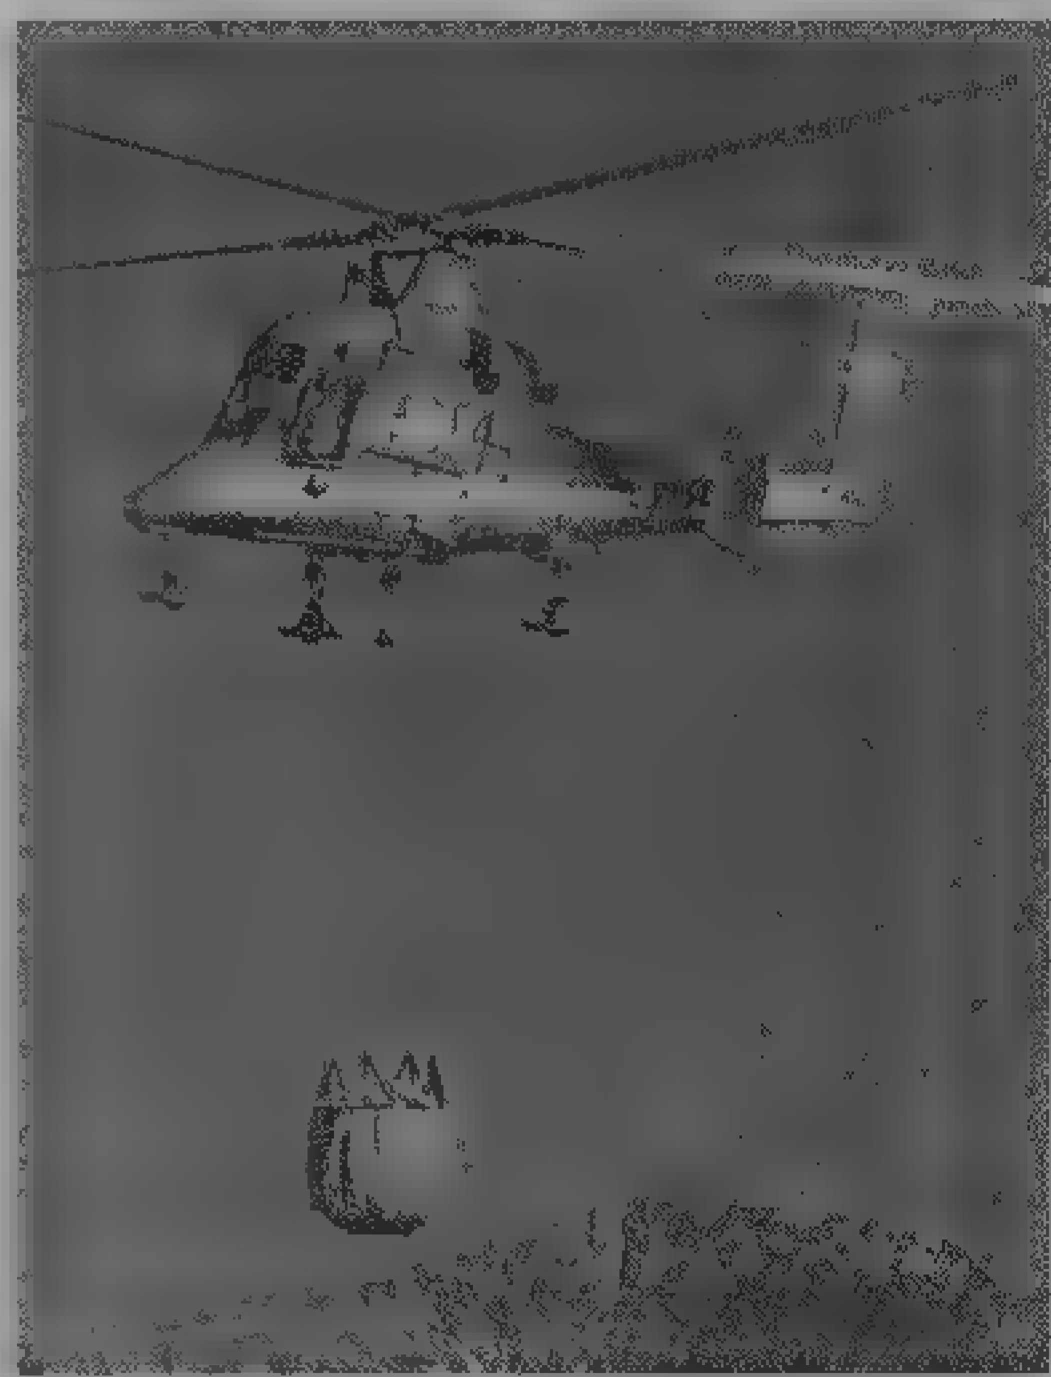
Kaman K-Max in operational role

1995



Production version of Kaman K-Max intermeshing rotor helicopter (*Jane's/Mike Keep*)

1993



K-Max demonstrator lifting 2,498 litre (660 US gallon; 550 Imp gallon) Bambi fire-bucket

1995

DIMENSIONS, EXTERNAL:

Rotor diameter, each	14.73 m (48 ft 4 in)
Length overall, rotors turning	15.85 m (52 ft 0 in)
Wheel track	3.56 m (11 ft 8 in)

WEIGHTS AND LOADINGS:

Operating weight empty	2,041 kg (4,500 lb)
Max hook capacity	2,721 kg (6,000 lb)
Max fuel weight	699 kg (1,541 lb)
Max T-O weight:	
without jettisonable load	2,721 kg (6,000 lb)
with jettisonable load	5,216 kg (11,500 lb)
Max transmission power loading (T-O power)	4.25 kg/kW (7.0 lb/shp)

PERFORMANCE:

Never-exceed speed (VNE): clean	100 kts (185 km/h, 115 mph)
with external load	80 kts (148 km/h, 92 mph)
Max rate of climb at S/L, normal flat rated torque	762 m (2,500 ft)/min
Target hovering performance: OGE with 2,268 kg (5,000 lb) slung load and 1½ h fuel	2,440 m (8,000 ft)

OPERATING NOISE LEVEL (FAR Pt 36), limit 87 dB(A):

Flyover	Average of 82 dB(A)

PRESIDENT AND CEO: Donald L. Stroud
MARKETING DIRECTOR: Duane L. Closs

KAC employs over 50 persons at its Norman plant.

NEW ENTRY

KESTREL KL-1

TYPE: Four/six-seat, single-engine utility aircraft.

PROGRAMME: Designed to meet FAA Pt 23 Normal and Utility requirements; rolled-out (N960KA) 21 April 1995, first flight expected in August/September 1995.

CURRENT VERSIONS: Five projected variants:

KL-1A: Baseline version, *to which description below generally refers*.

KL-1B: Deluxe four-seat version, Textron Lycoming IO-360-ES engine derated to 142 kW (190 hp) at 2,550 rpm and driving three-blade, constant-speed propeller. Estimated price $107,750 (1995).

KL-1C: High-performance version, Textron Lycoming IO-520 engine derated to 172 kW (230 hp) at 2,400 rpm and driving three-blade, constant-speed propeller. Estimated price $135,000 (1995).

KL-1D: Six-seat utility and cargo version; Textron Lycoming TSIO-550-B engine derated to 242 kW (325 hp) at 2,500 rpm and driving three-blade, constant-speed propeller; floatplane conversion available. Estimated price $225,000 (1995).

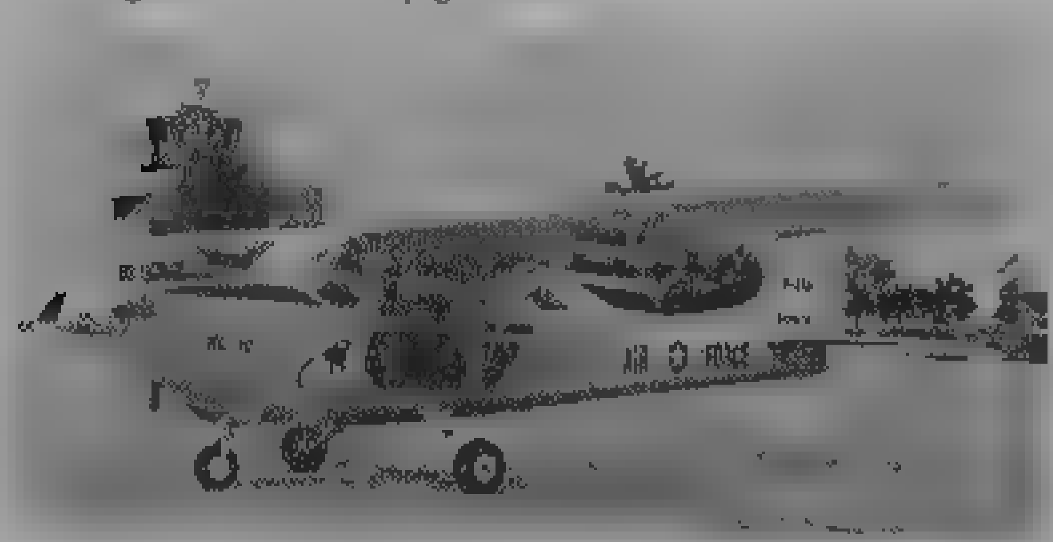
KL-1R: Retractable landing gear version of baseline or deluxe aircraft, 142 kW (190 hp) IO-360-ES engine. Estimated price $125,000 (1995).

COSTS: $89,000 (1995) for KL-1A; other prices as above.

DESIGN FEATURES: Cantilever, high-wing monoplane designed with CAD and constructed from graphite composites. Military version has observation windows at cabin floor level and provision for underwing armament.

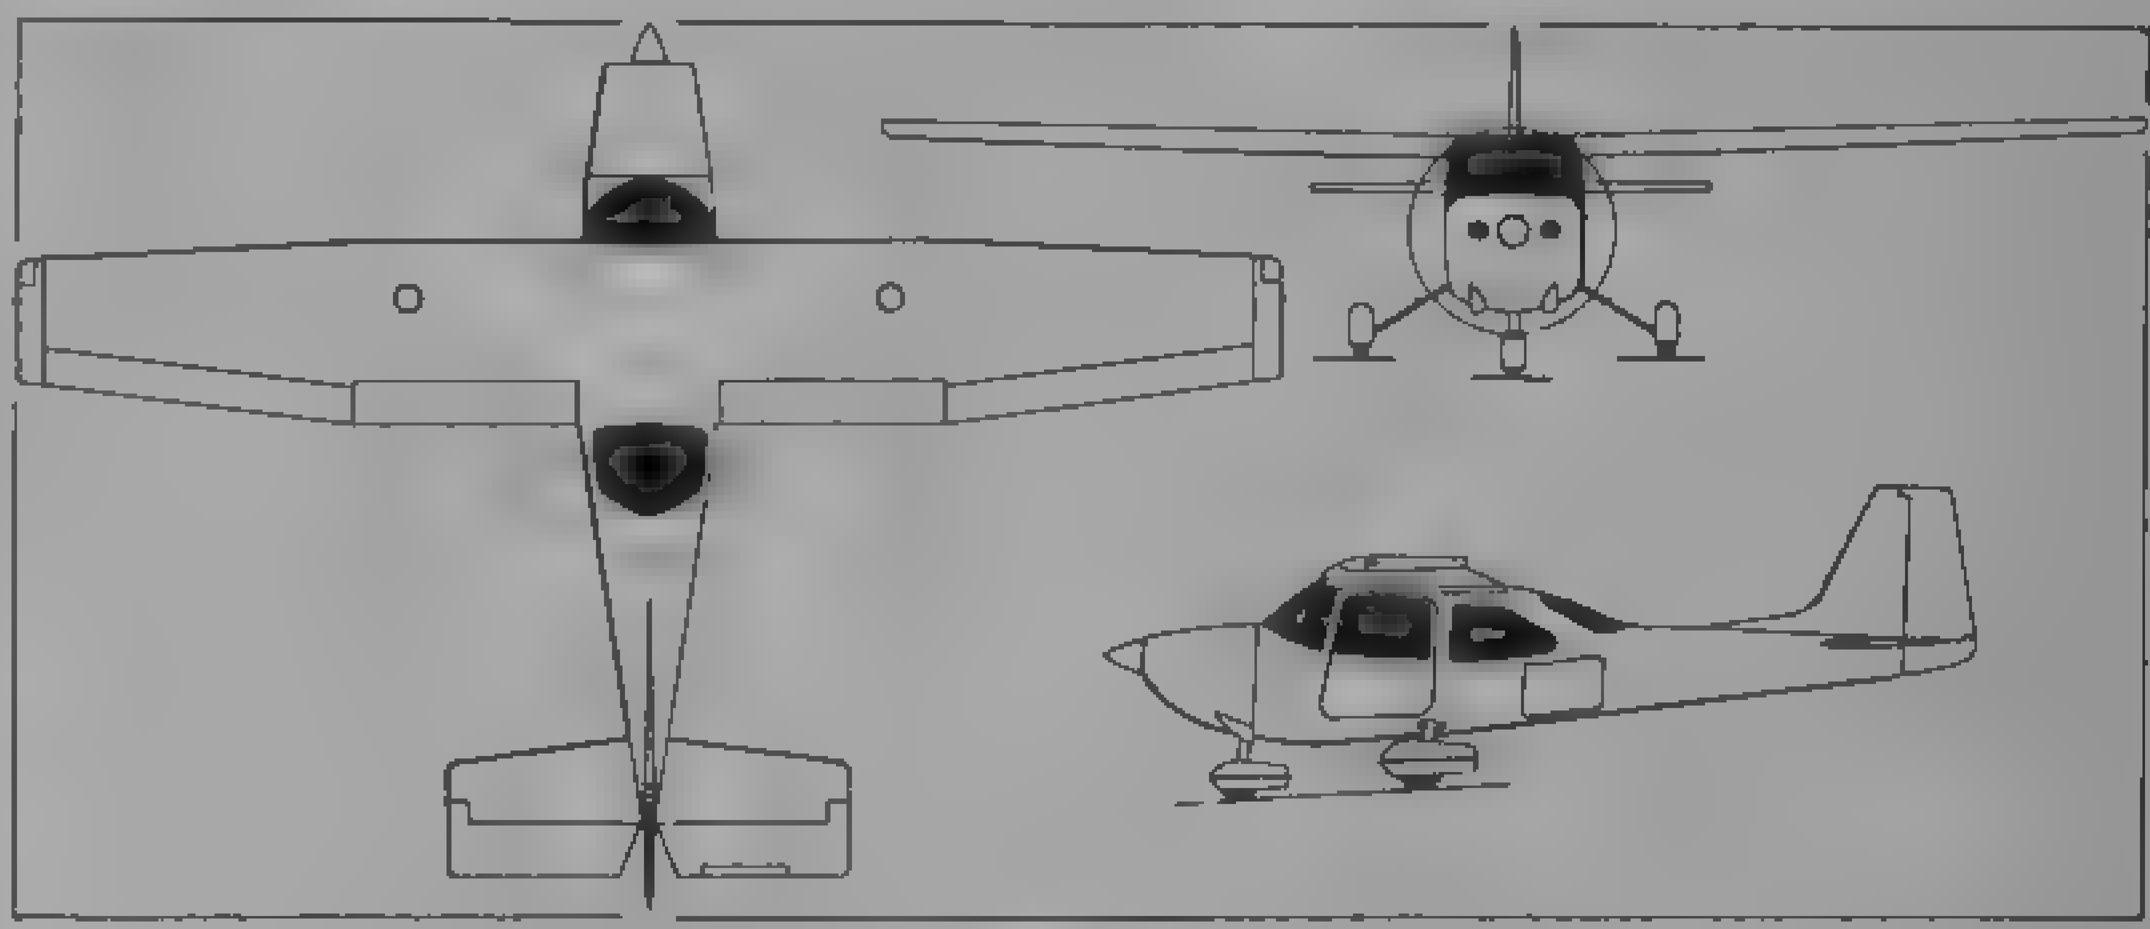
LANDING GEAR: Fixed tricycle, spring steel, single wheels throughout.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320-D2G four-cylinder piston engine, driving two-blade, fixed-pitch propeller. Fuel capacity 265 litres (70 US gallons, 58.3 Imp gallons).



Mockup of military version of KL-1C with additional observation windows and armament *1995*

Prototype Kestrel KL-1A (Lycoming O-320 piston engine) *1995*



Kestrel KL-1A four-seat utility aircraft (*Jane's/Paul Jackson*) *1995*

AVIONICS: Basic equipment included in list price.

ARMAMENT: Provision for light weapons pylon under each wing of military versions.

DIMENSIONS, EXTERNAL:

Wing span	11.20 m (36 ft 9 in)
Wing chord: at root	1.63 m (5 ft 4 in)
at tip	1.13 m (3 ft 8½ in)
Length overall	8.15 m (26 ft 9 in)
Height overall	2.73 m (8 ft 11½ in)
Tailplane span	3.56 m (11 ft 8 in)
Tailplane chord: at root	1.27 m (4 ft 2 in)
at tip	1.00 m (3 ft 3¼ in)
Wheel track	2.69 m (8 ft 10 in)
Propeller diameter	1.88 m (6 ft 2 in)

AREAS:

Wings, gross	16.69 m² (179.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	624 kg (1,375 lb)
Max T-O weight	1,134 kg (2,500 lb)
Max wing loading	67.96 kg/m² (13.92 lb/sq ft)
Max power loading	9.51 kg/kW (15.63 lb/hp)

PERFORMANCE:

Cruising speed: 75% power	124 kts (230 km/h, 143 mph)
65% power	108 kts (200 km/h, 124 mph)
Stalling speed	47 kts (87 km/h, 54 mph)
Max rate of climb at S/L	213 m (700 ft)/min
Service ceiling	3,965 m (13,000 ft)
T-O run	272 m (890 ft)
Landing run	165 m (540 ft)
Range at 2,440 m (8,000 ft), no reserves	946 n miles (1,752 km, 1,088 miles)

Fax: 1 (817) 430 4807

Angel, developed by The King's Engineering Fellowship (TKEF) through donations and designed by Carl Mortenson, follows earlier Evangel (described in 1974-75 *Jane's*).

VERIFIED

KING'S 44 ANGEL

TYPE: Light twin-engined STOL utility aircraft.

PROGRAMME: Design started November 1972; prototype construction began January 1977; prototype (N44KE) built on production tooling, first flight 13 January 1984; structural testing began 1990; certification to FAR Pt 23 (Normal category) for day, night, VFR and IFR conditions gained 20 October 1992. Production began December 1993, planned three aircraft in 1994 and 10 in 1995; none appears to have been completed.

COSTS: Standard aircraft, IFR-equipped $585,000 (1995).

Full description in 1994-95 edition; abbreviated entry follows.

DESIGN FEATURES: Designed for missionary air taxi, air ambulance, air observation/patrol, fishery/pipeline/border inspection, tracking, mining/oil/rubber/forestry operations, ranching and firefighting leader roles.

Wing section NACA 23018-23010 with modified leading-edge; sweepback 15° 36′ at leading edge, 11° at quarter-chord; dihedral 5° 24′, incidence 3° at root, −0° 22′ at tip.

FLYING CONTROLS: Manual (cable) actuated. Almost full span hydraulically actuated semi-Fowler flaps deflecting to maximum 37°. Lateral control by multiple small plate spoilers immediately forward of flaps; spoilers outboard of flaps to assist during single-engined flight.

Prototype King's Angel 44 light twin for missionary and commercial roles (*Kenneth Munson*) *1995*

STRUCTURE: Riveted aluminium alloy and welded steel tube, broad-chord fin and rudder with large dorsal fin.

LANDING GEAR: Retractable tricycle type. Minimum ground turning radius 5.11 m (16 ft 9 in).

POWER PLANT: Two 224 kW (300 hp) Textron Lycoming IO-540-M1C5 flat-six engines, mounted on top of the wings inboard and each driving a Hartzell three-blade constant-speed feathering pusher propeller. Fuel capacity 844 litres (223 US gallons, 185.7 Imp gallons).
ACCOMMODATION: Up to eight persons, including pilot
DIMENSIONS, EXTERNAL:

Wing span	12.16 m (39 ft 10¾ in)
Wing aspect ratio	7.06
Length overall	10.21 m (33 ft 6 in)
Height overall	3.51 m (11 ft 6 in)

AREAS:

Wings, gross	20.94 m² (225.4 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,760 kg (3,880 lb)
Max T-O and landing weight	2,631 kg (5,800 lb)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE)	209 kts (387 km/h, 240 mph)
Max level speed at S/L	180 kts (333 km/h, 207 mph)
T-O run	201 m (658 ft)
T-O to 15 m (50 ft)	387 m (1,270 ft)
Landing from 15 m (50 ft)	325 m (1,065 ft)
Landing run	178 m (584 ft)
Range with max fuel, VFR reserves: 65% power	1,263 n miles (2,339 km, 1,453 miles)

Lake LA-250 Renegade (250 shp Textron Lycoming IO-540-C4B5) *(Mike Vines/Photolink)* 1995

LAKE LA-250 RENEGADE and TURBO 270 RENEGADE

TYPE: Lengthened five-passenger version of LA4-200.
PROGRAMME: LA-250 FAA certificated August 1983.
CURRENT VERSIONS: **LA-250 Renegade:** Standard version. *Described below.*

Turbo 270 Renegade: Turbocharged version with Textron Lycoming TIO-540. Set world altitude record of 7,465 m (24,500 ft) for small amphibians August 1983. Exports to China 1995 preceding planned licenced assembly and eventual manufacture in that country (see CAWAC entry in International section).

Special Edition Sea Fury: Renegade with salt water operating package including lifting rings, stainless steel brake discs, custom interior and survival package. Available since Summer 1990.

LM Lean Machine: Low-cost version of Renegade with basic instrumentation, standard fuel tanks, 45 kg (99 lb) increase in payload. Announced late 1994, but not officially launched by early 1995, pending minimum launch orders of 15 aircraft.

Seawolf: Military version, radar mounted ahead of engine pod, two hardpoints beneath each wing. Described in 1992-93 *Jane's*. No known customers, but marketing under way in 1995.

CUSTOMERS: Well over 100 sold, no new aircraft registered in USA since late 1980s.
DESIGN FEATURES: Single-step all-metal double-sealed boat hull, 1.05 m (3 ft 5 in) longer than LA4-200 with deeper V bottom and additional strakes, retractable water rudder in base of aerodynamic rudder. Tapered wings attached directly to hull sides; wing section NACA 4415 at root, 4409 at tip, dihedral 5° 30′, incidence 3° 15′.
FLYING CONTROLS: Manually operated ailerons, elevators and rudder; ground adjustable aileron trim tabs, outer portion of port elevator separate from inboard and operated hydraulically as trimmer; hydraulically operated slotted flaps.
STRUCTURE: Wing has duralumin leading/trailing-edge torsion boxes separated by single main spar, light alloy monocoque wing floats, hull alodined and zinc chromated inside and out, polyurethane external paint, metal ailerons and tail surfaces.

LANDING GEAR: Hydraulically retractable tricycle type. Consolidated oleo-pneumatic shock absorbers in main gear, which retracts inward into wings. Nosewheel retracts forward. Oleo extension increased compared with LA4-200 for greater ground clearance, wheelbase increased by 0.43 m (1 ft 5 in). Gerdes mainwheels with Goodyear tyres, size 6.00-6, pressure 2.41 bars (35 lb/sq in). Gerdes nosewheel with Goodyear tyre size 5.00-5, pressure 1.38 bars (20 lb/sq in). Gerdes disc brakes, parking brake. Nosewheel free to swivel 30° left/right.
POWER PLANT: One 186 kW (250 hp) Textron Lycoming IO-540-C4B5 flat-six engine in Renegade and Sea Fury driving a Hartzell three-blade constant speed Q-tip metal pusher propeller. Turbocharged TIO-540-AA1AD engine of same rating in Turbo Renegade. Standard usable fuel capacity 204 litres (54 US gallons, 45 Imp gallons), optional usable capacity of 340 litres (90 US gallons; 75 Imp gallons).
ACCOMMODATION: Enclosed cabin seating pilot and five passengers. Front and rear seats removable. Front seats have inertia reel harnesses as standard. Dual controls standard, dual brakes for co-pilot optional. Entry via two front-hinged windscreen sections, upward-hinged gull-wing cargo door standard. Baggage compartment (larger than in LA4-200) aft of cabin. Windscreen defrosting.
SYSTEMS: Vacuum system for flight instruments. Hydraulic system, pressure 86.2 bars (1,250 lb/sq in), for flaps, horizontal trim and landing gear actuation, hand pump provided for emergency operation. Engine-driven 12 V 60 A alternator and 12 V 30 Ah battery. Janitrol 30,000 BTU heater optional.
AVIONICS: Bendix/King, Collins and Narco, and autopilots by Brittain and Edo-Aire Mitchell, are available to customers' requirements. Basic installation includes com and nav antennae, cabin speaker, microphone and circuit breakers.
EQUIPMENT: Standard equipment includes:

Instrumentation: Full blind-flying instruments, electric clock, manifold pressure gauge, outside air temperature gauge, recording tachometer, fuel pressure and quantity indicators, oil pressure and temperature indicators, cylinder head temperature gauge, ammeter and stall warning device. Control locks, carpeted floor, four fresh air vents, tinted glass for all windows, dual windscreen defrosters, inertia reel shoulder harness on front seats, shoulder restraining on rear seats, map pocket on front seats, baggage tiedown straps, landing and taxi lights, navigation lights, strobe light, heated pitot, fuselage nose bumper, paddle, cleat, line, full flow oil filter, quick fuel drains, and inboard and outboard tiedown rings.

Optional equipment includes hour meter, shoulder harness for rear seats, alternate static source, manual/automatic bilge pump, cabin fire extinguisher, and external metallic paint finish.

DIMENSIONS, EXTERNAL:

Wing span	11.68 m (38 ft 4 in)
Wing chord, mean	1.35 m (4 ft 5 in)
Wing aspect ratio	8.64
Length overall	8.64 m (28 ft 4 in)
Height overall	3.05 m (10 ft 0 in)
Tailplane span	3.05 m (10 ft 0 in)
Wheel track	3.40 m (11 ft 2 in)
Wheelbase	3.13 m (10 ft 3 in)
Propeller diameter	1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin: Length	2.03 m (6 ft 8 in)
Max width	1.05 m (3 ft 5½ in)
Max height	1.32 m (3 ft 11½ in)

AREAS:

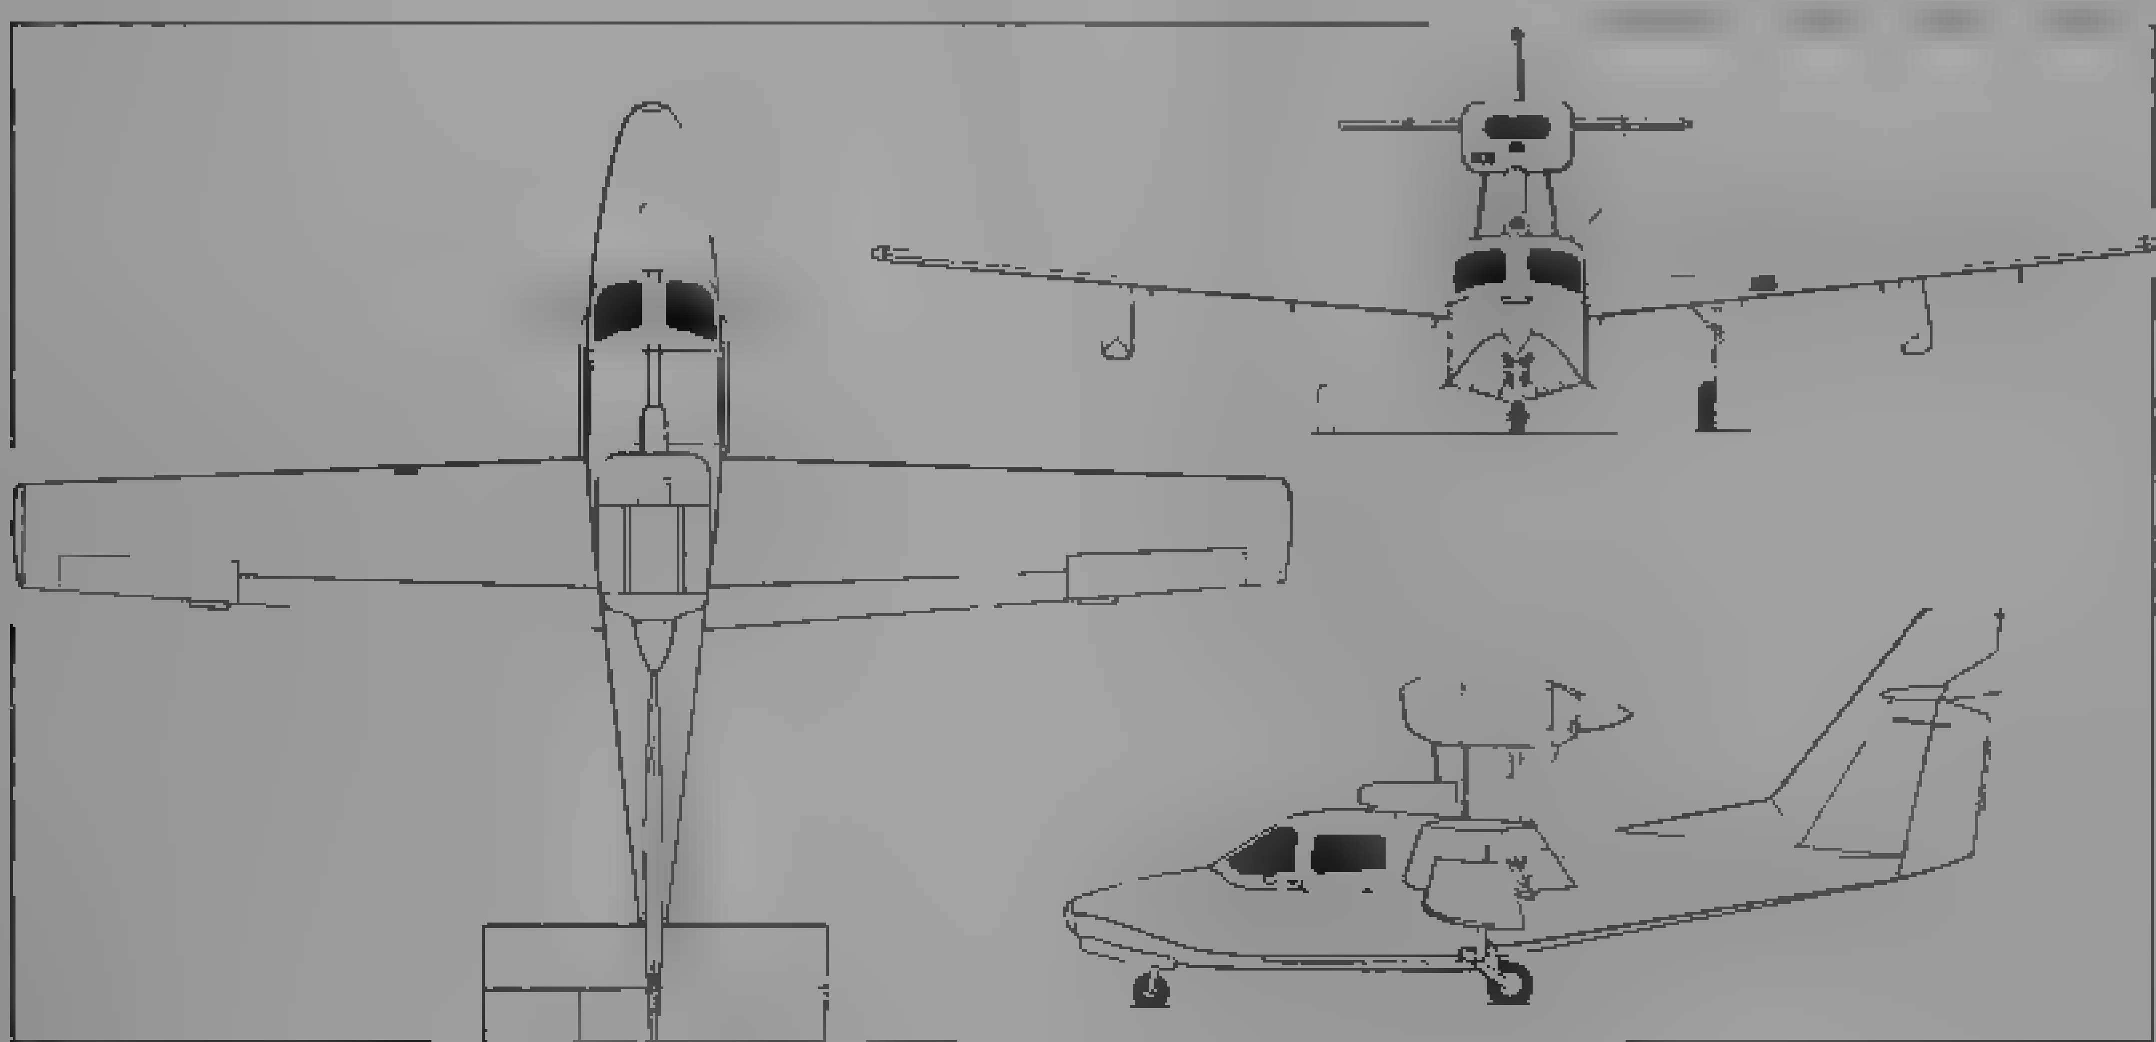
Wings, gross	15.79 m² (170.0 sq ft)
Ailerons (total)	1.16 m² (12.5 sq ft)
Trailing-edge flaps (total)	2.28 m² (24.5 sq ft)
Fin	1.25 m² (13.5 sq ft)
Rudder	0.79 m² (8.5 sq ft)
Tailplane	1.45 m² (15.6 sq ft)
Elevators (total)	0.78 m² (8.4 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped: Renegade	839 kg (1,850 lb)
Turbo Renegade	875 kg (1,930 lb)
Max usable fuel	240 kg (528 lb)
Max ramp, T-O and landing weight	1,383 kg (3,050 lb)
Max wing loading	87.6 kg/m² (17.94 lb/sq ft)
Max power loading	7.42 kg/kW (12.2 lb/hp)

PERFORMANCE (at max T-O weight, S/L, ISA):

Never-exceed speed (VNE): Renegade	148 kts (274 km/h, 170 mph)
Max level speed at 1,980 m (6,500 ft): Renegade	139 kts (258 km/h, 160 mph)



Lake LA-250 Renegade six-seat amphibian *(Jane's/Dennis Punnett)* 1991

Max cruising speed
Renegade, 75% power at 1,980 m (6,500 ft)
132 kts (245 km/h, 152 mph)
Turbo Renegade, 78% power at 6,100 m (20,000 ft)
148 kts (274 km/h, 170 mph)
Stalling speed, power off:
landing gear and flaps up
54 kts (100 km/h, 62 mph) IAS
landing gear and flaps down
48 kts (89 km/h, 56 mph) IAS
Max rate of climb at S/L 274 m (900 ft)/min
Service ceiling: Renegade 4,480 m (14,700 ft)
Turbo Renegade 6,100 m (20,000 ft)
T-O run: from land 268 m (880 ft)
from water 381 m (1,250 ft)
Range with max fuel, 30 min reserves:
Renegade 900 n miles (1,668 km, 1,036 miles)
Endurance at 78% power: Turbo Renegade 5 h 18 min

More than 1,377 Lancairs (including out of production Model 235) sold to customers in 34 countries.

UPDATED

LANCAIR INTERNATIONAL LANCAIR 320

TYPE: Side by side two-seat sporting and cross-country kit aircraft.

PROGRAMME: Followed Lancair 235 (1993-94 *Jane's*), introducing larger fuselage, increased flap effectiveness, and longer landing gear with oleo-pneumatic nose strut. On 8 January 1990 received FAA approval under 51 per cent rule for **Fast-Build** kit, which reduces construction time by more than 700 working hours.

CUSTOMERS: 990 kits sold, 300 flying by early 1995.

COSTS: 1995: Kits $20,950, Fast Build $27,950. Plans $425.

DESIGN FEATURES: See Programme. Wing section NLF 0215F.

STRUCTURE: Composite airframe of Nomex honeycomb, polyimide Rohacell foam and epoxy resin.

LANDING GEAR: Retractable tricycle type.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320 flat-four engine. Fuel capacity 163 to 200 litres (43 to 53 US gallons; 36 to 44 Imp gallons). Two optional 38 litre (10 US gallon; 8.3 Imp gallon) auxiliary fuel tanks.

ACCOMMODATION: Two seats, side by side, under single piece, forward-hinged canopy.

DIMENSIONS, EXTERNAL:
Wing span 7.16 m (23 ft 6 in)
Wing aspect ratio 7.27
Length overall 6.40 m (21 ft 0 in)
Height overall 2.13 m (7 ft 0 in)
Propeller diameter 1.78 m (5 ft 10 in)
AREAS:
Wings, gross 7.06 m² (76.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty 472 kg (1,040 lb)
Max T-O weight 764 kg (1,685 lb)
Max wing loading 108.25 kg/m² (22.17 lb/sq ft)
Max power loading 6.42 kg/kW (10.53 lb/hp)
PERFORMANCE:
Max level speed at S/L 226 kts (418 km/h, 260 mph)
Cruising speed at 2,285 m (7,500 ft)
208 kts (386 km/h, 240 mph)
Stalling speed 55 kts (102 km/h; 63 mph)
Max rate of climb at S/L 503 m (1,650 ft)/min
Service ceiling 5,485 m (18,000 ft)
T-O run 214 m (700 ft)
Range, no reserves 1,260 n miles (2,333 km, 1,450 miles)
g limits +9/-4.5 ultimate

Lancair ES fixed gear four seater

1995

Kenyan registered Lancair 320 *(Paul Jackson)*

1995

LANCAIR INTERNATIONAL LANCAIR 360

Similar to Lancair 320 but with 134 kW (180 hp) Textron Lycoming O-360 engine. Empty weight 442 to 483 kg (975 to 1,065 lb), maximum level speed 230 knots (426 km/h, 265 mph); maximum rate of climb at S/L 594 m (1,950 ft)/min.

VERIFIED

Lancair International Lancair IV with retractable undercarriage

1995

LANCAIR INTERNATIONAL LANCAIR IV

TYPE: Four-seat homebuilt with dual controls.

PROGRAMME: Kit deliveries began 1990. On 20 February 1991, prototype set NAA world speed record between San Francisco and Denver of 314.7 knots (583.2 km/h, 362.4 mph).

CURRENT VERSIONS: **Lancair IV**: Standard version, *to which description mainly applies*.

Lancair IV-P: Pressurised version, first flight 1 November 1993. Provides 0.34 bar (5.0 lb/sq in) differential, equipment from Dukes of California, which also supplies Beech 1900 and Aerostar 601.

CUSTOMERS: 337 kits sold, eight flying by early 1995.

COSTS: Kit: $47,900 (1995), pressurised version: $69,900.

DESIGN FEATURES: Conventional seating for four persons in airframe of new design, high cruising speeds.

FLYING CONTROLS: Conventional control plus Fowler flaps.

STRUCTURE: Carbonfibre/Kevlar/epoxy airframe, with Nomex honeycomb cores.

LANDING GEAR: As Lancair 320.

POWER PLANT: One 261 kW (350 hp) Teledyne Continental TSIO-550-B1B twin-turbocharged flat-six engine. Fuel capacity 303 litres (80 US gallons; 66.6 Imp gallons).

DIMENSIONS, EXTERNAL:
Wing span 9.19 m (30 ft 2 in)
Wing aspect ratio 9.29
Length overall 7.62 m (25 ft 0 in)
Height overall 2.44 m (8 ft 0 in)
Propeller diameter 1.93 m (6 ft 4 in)
AREAS:
Wings, gross 9.10 m² (98.0 sq ft)

WEIGHTS AND LOADINGS

Weight empty	794 kg (1,750 lb)
Max T-O weight	1,315 kg (2,900 lb)
Max wing loading	144.5 kg/m² (29.59 lb/sq ft)
Max power loading	5.04 kg/kW (8.29 lb/hp)

PERFORMANCE

Cruising speed, 75% power	287 kts (531 km/h, 330 mph)
Stalling speed	63 kts (116 km/h, 72 mph)
Max range, 75% power at 7,620 m (25,000 ft), standard fuel, no reserves	1,260 n miles (2,333 km, 1,450 miles)
g limits	+9/-4.5 ultimate

UPDATED

LANCAIR INTERNATIONAL LANCAIR ES

TYPE: Four-seat cabin monoplane.

PROGRAMME: Prototype unveiled at Oshkosh Autumn 1992; flight testing continuing 1993. Certification awaiting new simplified version of FAR Pt 23 governing light aircraft.

CUSTOMERS: 52 kits sold by Spring 1994, two flying by March 1995.

COSTS: $34,950 for kit.

DESIGN FEATURES: Low-wing monoplane; hardtop cabin with paired side by side seats.

STRUCTURE: All-composites.

LANDING GEAR: Non-retractable tricycle type.

POWER PLANT: One 149 kW (200 hp) Teledyne Continental IO-360 flat six engine; two-blade constant-speed propeller.

WEIGHTS AND LOADINGS

Max T-O weight	1,315 kg (2,900 lb)

PERFORMANCE

Max cruising speed	more than 165 kts (306 km/h, 190 mph)
Max range	more than 1,130 n miles (2,092 km, 1,300 miles)

Laron Aviation Technologies is US distributor for CFM Shadow and Streak Shadow (see UK section).

NEW ENTRY

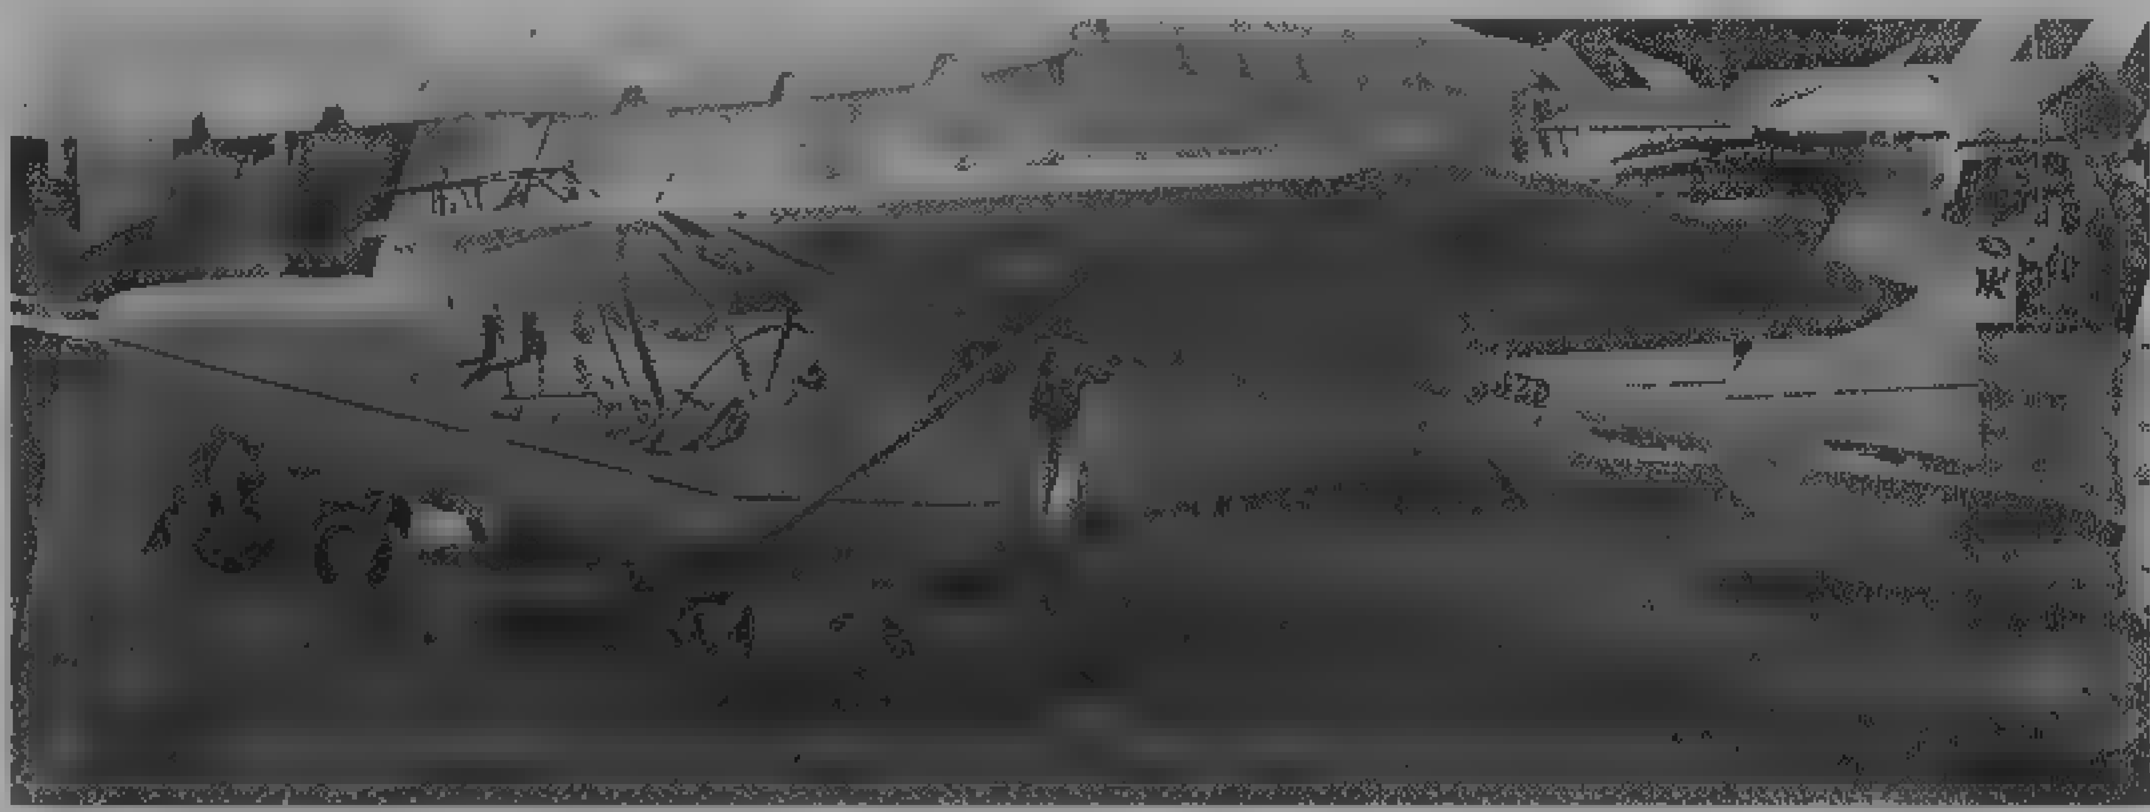
LARON STAR STREAK

TYPE: Modified CFM Shadow.

PROGRAMME: Introduced 1995.

DESIGN FEATURES: Climb performance and cruising speed improved by use of 70.8 kW (95 hp) Hirth F-30 four-cylinder two-stroke engine and redesigned wing. Wing chord reduced by 20.3 cm (8 in) and span increased by 0.61 m (2 ft 0 in) with tapered wingtips.

NEW ENTRY



Laron Wizard (Rotax 582 engine) *(Geoffrey P. Jones)* 1995

LARON WIZARD

TYPE: Two-seat light aircraft.

PROGRAMME: South Korean design by Ho Sun Park, chairman of Dong-In Industrial Company, refined following May 1994 agreement with Laron; production kit deliveries expected to begin by mid-1995.

DESIGN FEATURES: Braced high-wing monoplane with pusher engine, twin-boom tail unit and tricycle landing gear; sits tail-down on ground.

FLYING CONTROLS: Conventional mechanical with electric trim. Electrically actuated trailing-edge flaps.

STRUCTURE: Preformed glassfibre epoxy. Available as starter kit, quick-build kit, or four-stage kit (fuselage/wings/tail/engine and instruments).

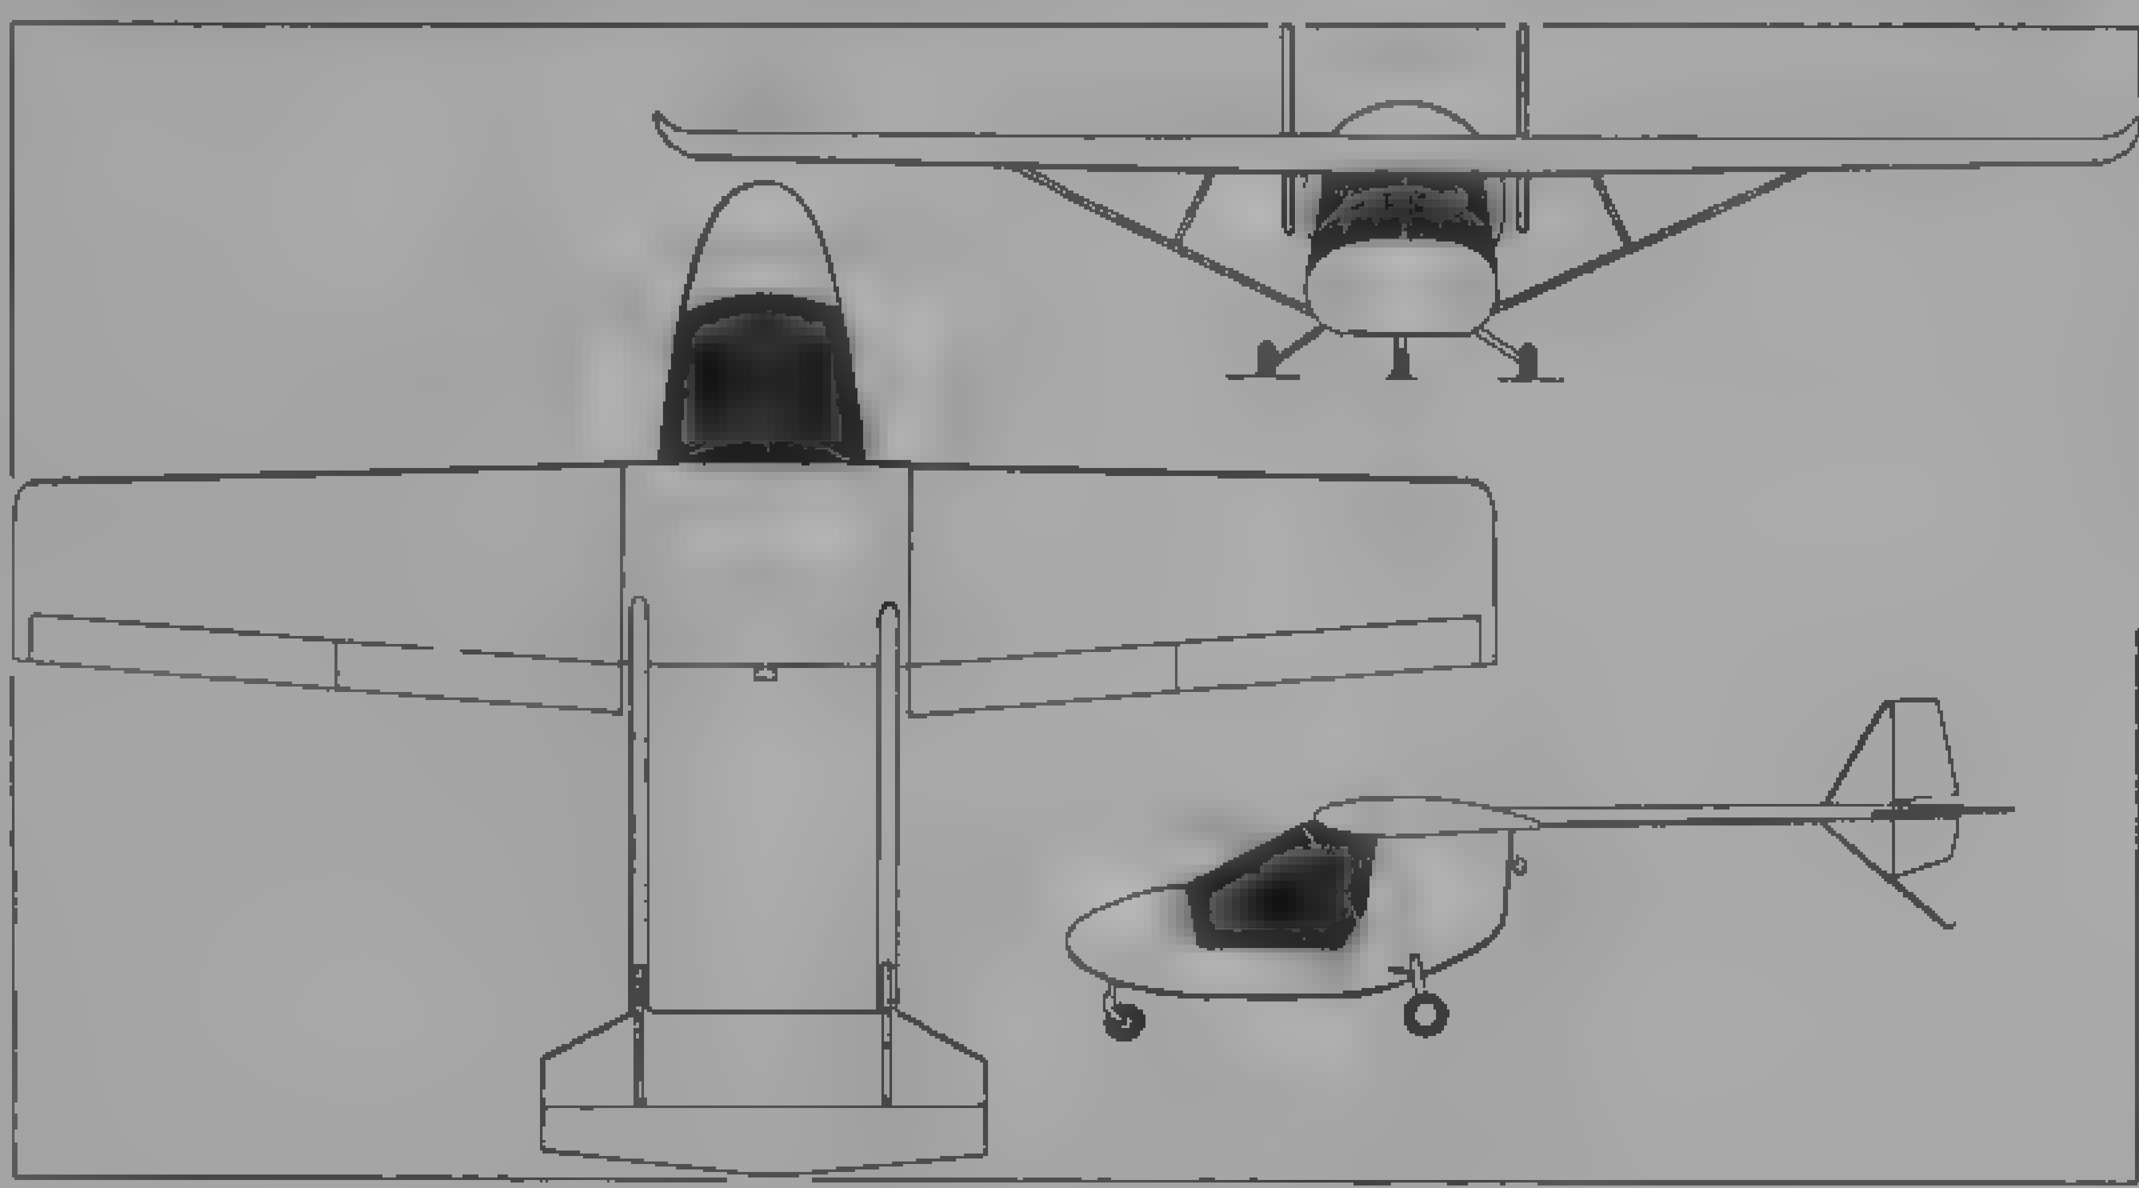
LANDING GEAR: Non-retractable tricycle type with steerable nosewheel. Hydraulic disc brakes. Float and ski gear optional.

POWER PLANT: One 47 kW (63 hp) Rotax 582 two-cylinder two-stroke engine, driving a three-blade fixed-pitch ground-adjustable pusher propeller; 59.6 kW (80 hp) Rotax 912 optional. Fuel capacity 38 litres (10 US gallons, 8.3 Imp gallons).

ACCOMMODATION: Side by side seats for two persons with full safety harnesses and dual controls.

AVIONICS: *Instrumentation:* VFR standard.

EQUIPMENT: Navigation lights and Honda Goldwing conversion optional.



Laron Aviation Technologies two-seat lightplane *(Jane's/Paul Jackson)* 1995

DIMENSIONS, EXTERNAL

Wing span	9.45 m (31 ft 0 in)
Length overall	6.10 m (20 ft 0 in)
Height overall	1.37 m (4 ft 6 in)
Propeller diameter	1.32 m (4 ft 4 in)

AREAS

Wings, gross	13.01 m² (140.0 sq ft)

WEIGHTS AND LOADINGS

Weight empty	209.5 kg (462 lb)
Fuel weight	17 kg (38 lb)
Max T-O weight	419 kg (924 lb)
Max wing loading	32.22 kg/m² (6.60 lb/sq ft)
Max power loading	8.93 kg/kW (14.67 lb/hp)

PERFORMANCE (at max T-O weight):

Never-exceed speed (V_{NE})	104 kts (193 km/h, 120 mph)
Max level speed	87 kts (161 km/h, 100 mph)
Max cruising speed, 80% power	69 kts (129 km/h, 80 mph)
Econ cruising speed, 50% power	65 kts (121 km/h, 75 mph)
Stalling speed: flaps up	35 kts (65 km/h, 41 mph)
flaps down	30 kts (56 km/h, 35 mph)
Max rate of climb at S/L: two-seat	274 m (900 ft)/min
single-seat	457 m (1,500 ft)/min
Service ceiling	4,575 m (15,000 ft)
T-O and landing run	61 m (200 ft)
Range: at max cruising speed	174 n miles (322 km; 200 miles)
at econ cruising speed	186 n miles (344 km, 214 miles)

Company originally founded 1960 by Bill Lear Snr as Swiss American Aviation Corporation (SAAC); transferred to Kansas 1962 and renamed Lear Jet Corporation. Gates Rubber Company bought about 60 per cent of company 1967, company renamed Gates Learjet Corporation. 64.8 per cent of company acquired by Integrated Acquisition Inc September 1987 and renamed Learjet Corporation; all manufacturing moved from Tucson, Arizona, to Wichita during 1988, leaving customer service completion and modification centre in Tucson.

Acquisition of Learjet by Canada's Bombardier announced April 1990 and concluded 22 June 1990 for $75 million; name changed to Learjet Inc. Bombardier assumed responsibility for Learjet's line of credit, now part of Bombardier Aerospace Group, North America (which see under Canada). Wichita workforce 2,915 in 1994, Tucson 600; total 3,773 at all locations.

Learjet is major subcontractor for Lockheed Martin Astronautics, Boeing and US Air Force. Has subsidiary to maintain 82 Learjet 35As operating with US Air Force and Air National Guard (as C-21As). Total 1,790 Learjets built by June 1995, including 362 LJ23/24s, 367 LJ25s, five LJ28s, four LJ29s, 63 LJ36s and 147 LJ55s.

Learjet bought manufacturing and marketing rights and tooling of Aeronca thrust reversers, for application to Learjet and other aircraft, March 1989.

Total of 39 deliveries in 1993, 36 in 1994.

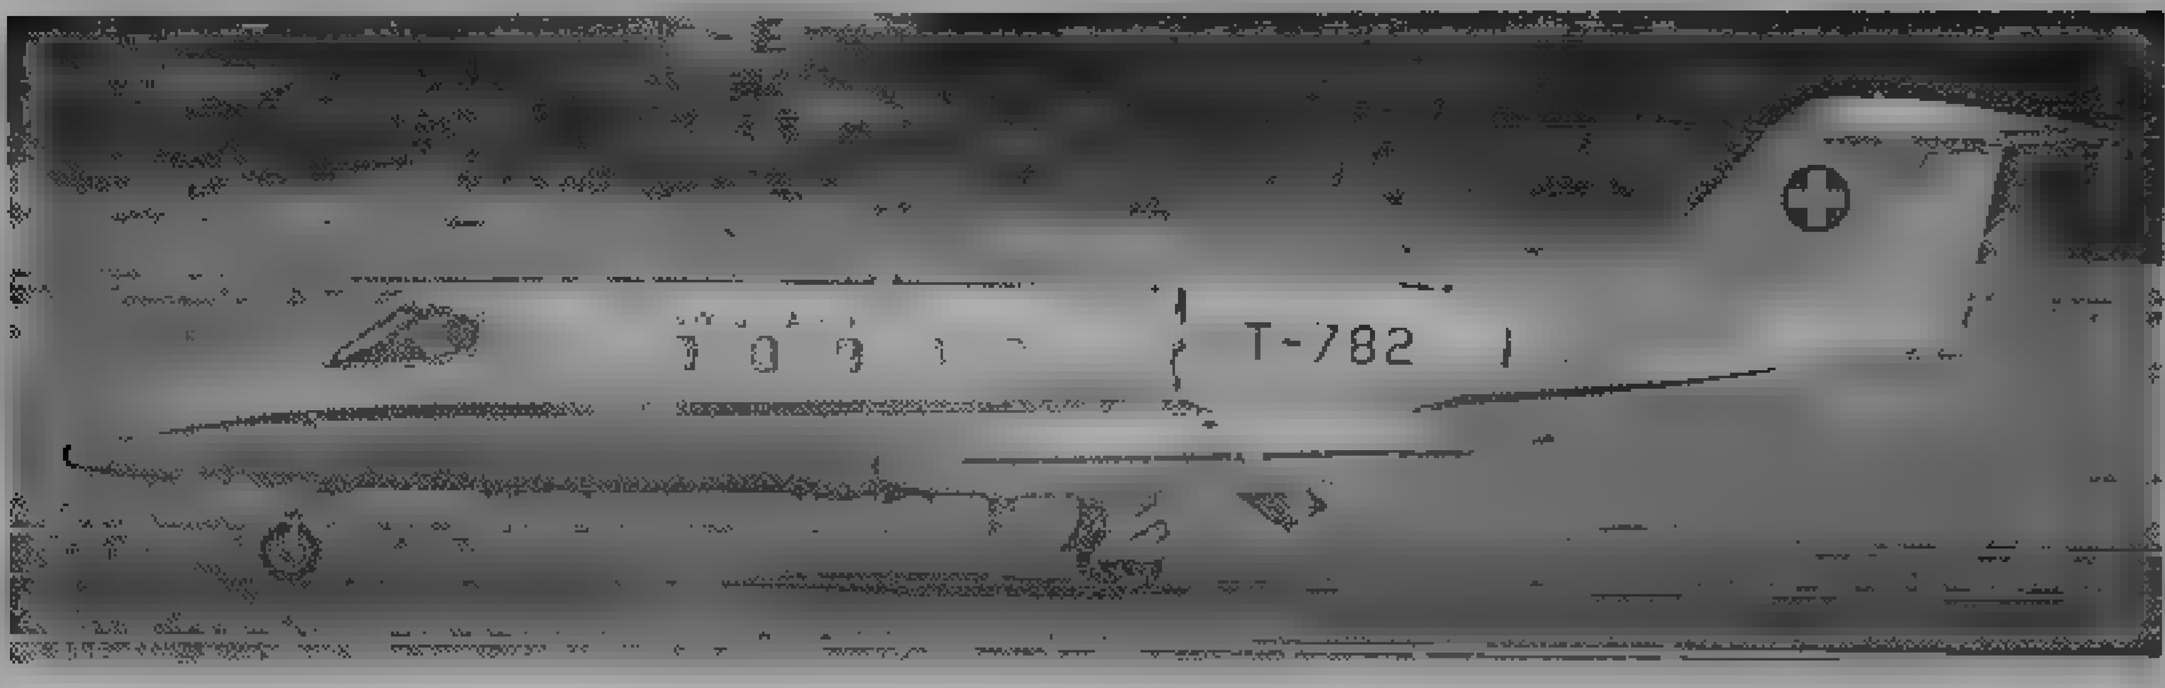
UPDATED

LEARJET 35A and 36A

US Air Force designation: C-21A

TYPE: Light twin-turbofan business jet.

PROGRAMME: First flight of first turbofan Learjet (known as Model 26 and using AlliedSignal TFE731-2s), 4 January 1973; production Models 35 and 36, differing in fuel capacity and accommodation, announced May 1973. FAA



Learjet 35A of Swiss Air Force *(Paul Jackson)*

1995

certification July 1974. French and UK certification 1979. Currently available to special order only.

CURRENT VERSIONS: **Learjet 35A** and **36A**: Current production models of 35 and 36, with higher standard maximum T-O weight. *Abbreviated description of this version follows*; full details in 1994-95 and earlier editions.

C-21A: USAF received 80 Learjet 35As, used as Operational Support Aircraft for priority cargo, medevac and personnel transport; four more C-21As bought 1987 by Air National Guard and assigned to Andrews AFB, Maryland.

Special missions versions: Described separately.

CUSTOMERS: Three 35As and one 36A delivered 1993, none delivered in 1994. Total 676 built.

COSTS: Standard 35A $4.94 million (1993); 36A $5.14 million (1993).

DESIGN FEATURES: Wing section NACA 64A109 with modified leading-edge, dihedral 2° 30′, incidence 1°, sweepback at quarter-chord 13°.

FLYING CONTROLS: Manually actuated flying controls, balance tabs in both ailerons and electrically operated trim tab in port aileron; electrically actuated variable incidence tailplane, electric trim tab in rudder; small ventral fin; hydraulically actuated single-slotted flaps, hydraulically actuated spoilers ahead of flaps.

STRUCTURE: All-metal, eight-spar wing with milled skins, fail-safe fuselage.

LANDING GEAR: Retractable tricycle type, with twin wheels on each main unit and single steerable nosewheel (±45°).

POWER PLANT: Two AlliedSignal TFE731-2-2B turbofans, each rated at 15.6 kN (3,500 lb st), pod-mounted on sides of rear fuselage.

ACCOMMODATION: Crew of two on flight deck, with dual controls. Up to eight passengers in Learjet 35A; Learjet 36A can accommodate up to six passengers.

SYSTEMS: Heating and pressurisation by engine bleed air, with a maximum pressure differential of 0.65 bar (9.4 lb/sq in), maintaining a cabin altitude of 1,980 m (6,500 ft) to a height of 13,715 m (45,000 ft).

Hydraulic system supplied by two engine-driven pumps. Pneumatic system of 124 to 207 bars (1,800 to 3,000 lb/sq in) pressure for emergency extension of landing gear and operation of brakes. Electrical system powered by two 30 V 400 A brushless generators. Oxygen system for emergency use.

AVIONICS: *Comms*: Dual Collins VHF-22A com transceivers, Bendix/King KHF 950 HF.

Radar: Honeywell Primus 450 colour weather radar.

Flight: Dual Collins VIR-32 nav receivers; ADF-60; dual DME-42, dual TDR-90 transponders.

DIMENSIONS, EXTERNAL:
- Wing span over tip tanks: 12.04 m (39 ft 6 in)
- Length overall: 14.83 m (48 ft 8 in)
- Height overall: 3.73 m (12 ft 3 in)

DIMENSIONS, INTERNAL:
- Cabin: Length incl flight deck: 35A: 6.63 m (21 ft 9 in)
  - 36A: 5.77 m (18 ft 11 in)
  - excl flight deck: 35A: 5.21 m (17 ft 1 in)
  - 36A: 4.06 m (13 ft 4 in)
  - Max width: 1.50 m (4 ft 11 in)
  - Max height: 1.32 m (4 ft 4 in)

AREAS:
- Wings, gross: 23.53 m² (253.3 sq ft)

WEIGHTS AND LOADINGS (35A and 36A):
- Weight empty, equipped: 4,590 kg (10,119 lb)
- Max payload (incl full fuselage tank): 1,534 kg (3,381 lb)
- Max T-O weight: 8,300 kg (18,300 lb)

PERFORMANCE (35A and 36A, at max T-O weight, ISA, except where indicated):
- Max operating Mach number (MMO): 0.81
- Max level speed at 7,620 m (25,000 ft): 471 kts (872 km/h; 542 mph)
- Max cruising speed, mid-cruise weight, at 12,500 m (41,000 ft): 460 kts (852 km/h; 529 mph)
- Max rate of climb at S/L: 1,323 m (4,340 ft)/min
- Service ceiling: 12,500 m (41,000 ft)
- Range with four passengers, max fuel and 45 min reserves:
  - 35A: 2,196 n miles (4,067 km; 2,527 miles)
  - 36A: 2,522 n miles (4,671 km; 2,902 miles)

UPDATED

LEARJET 35A/36A SPECIAL MISSIONS VERSIONS

TYPE: Special mission adaptations for Learjet 35A/36A.

CURRENT VERSIONS: **EC-35A**: Used for EW training simulation or as standoff ECM/ESM platform.

PC-35A: Maritime patrol; equipment includes 360° sea surveillance digital radar, high-resolution TV, FLIR, IRLS, ESM, MAD, integrated tactical displays, and VLF Omega or other long-range navaids, hardpoint under each wing with Alkan 165B ejector for external stores up to 454 kg (1,000 lb); drop hatch for rescue gear, multitrack digital recorders, homing systems, ASW sonobuoy systems and data annotated hand-held cameras.

RC-35A and RC-36A: Reconnaissance versions, standard installations include long-range oblique photographic (LOROP) cameras, side-looking synthetic aperture radars, and surveillance camera system in external pods. Geological versions delivered to China (see Customers).

UC-35A: Utility versions for transport, navaids calibration, medevac and target towing. Certificated tow systems include Hayes Universal Tow Target System (HUTTS) with or without MTR-101, Flight Refuelling LLHK, MRTT and EMT TGL targets, and Marquardt aerial target launch and recovery tow reel.

U-36A: Extensively modified for Japan Maritime Self-Defence Force (JMSDF). Six delivered for target towing, anti-ship missile simulation and ECM, tip pods extended in association with ShinMaywa, to house HWQ-1T missile seeker simulator, AN/ALQ-6 jammer and cameras. Additional equipment includes long range ocean surveillance radar in underbelly fairing, AN/ALE-43 chaff dispenser, ARS-1-L high-speed tow sleeve with scoring, two-piece windscreen with electrical demisting for low level missions, expanded underwing stores capability, greater maximum T-O and landing weights.

CUSTOMERS: Total of 23 customer countries include Argentina, Australia, Bolivia, Brazil, Chile, People's Republic of China (two 36As delivered 1984, plus three 35As with geological equipment and Goodyear SLAR delivered 1985), Finland (three 35A target tugs also equipped for mapping, medevac, pollution control, oblique photography and SAR), Germany (four 35A/36A target tugs), Japan, Mexico, Peru, Saudi Arabia, Sweden, Switzerland, Thailand, UK, USA and Yugoslavia. Nearly 200 Learjet 30 Series aircraft now flying with or for military services, including 84 C-21As (see previous entry).

DESIGN FEATURES: Civilian and paramilitary missions include aerial survey, aeronautical research, airways calibration, ASW, atmospheric research, border patrol, ESM/ECM, geophysical survey, maritime patrol, pilot training, radar surveillance, reconnaissance, search and rescue, and weather modification.

PERFORMANCE (PC-35A at max T-O weight, ISA):
- Operating speed:
  - at 11,275-12,500 m (37,000-41,000 ft): 415 kts (769 km/h; 478 mph)
  - at 4,575-7,620 m (15,000-25,000 ft): 319 kts (590 km/h; 367 mph)
  - S/L to 610 m (2,000 ft): 250 kts (463 km/h; 288 mph)
- Max rate of climb at S/L: 1,380 m (4,525 ft)/min
- Range:
  - at high altitude: 2,249 n miles (4,165 km; 2,588 miles)
  - at medium altitude: 1,617 n miles (2,995 km; 1,861 miles)
  - at low altitude: 1,060 n miles (1,963 km; 1,220 miles)

UPDATED

LEARJET 31A

TYPE: Twin-turbofan business jet.

PROGRAMME: Learjet 31 introduced September 1987, first flight of aerodynamic prototype 11 May 1987; first production aircraft (N311DF) used as systems testbed. FAA certification 12 August 1988. Learjet 31A and 31A/ER announced October 1990 to replace Learjet 31.

CURRENT VERSIONS: **Learjet 31**: See 1990-91 *Jane's*.

Learjet 31A: Current version, *description applies to this model, except where indicated*.

Learjet 31A/ER: Optional extended range version with 2,627 litres (694 US gallons; 578 Imp gallons) fuel and higher maximum T-O weight.

CUSTOMERS: Total of 105 built by June 1995, including 36 of original Learjet 31, 18 Learjet 31As delivered in 1993 and 14 in 1994. Recent new orders include one 31A delivered to the government of Namibia for use of head of state and two 31As for delivery in September 1995 to Singapore Airlines, joining four 31s already in service for cadet pilot and first officer training.

COSTS: Standard Learjet 31A $4.59 million (1995).

DESIGN FEATURES: Learjet 31 (1990-91 *Jane's*) combined fuselage/cabin and power plant of Learjet 35A/36A with wing of Learjet 55, delta fins added to eliminate Dutch roll, stabilise aircraft at high airspeeds, induce docile stall and reduce approach speeds and field lengths; stick pusher/puller and dual yaw dampers no longer required for departure; stick shaker and single yaw damper retained for comfort.

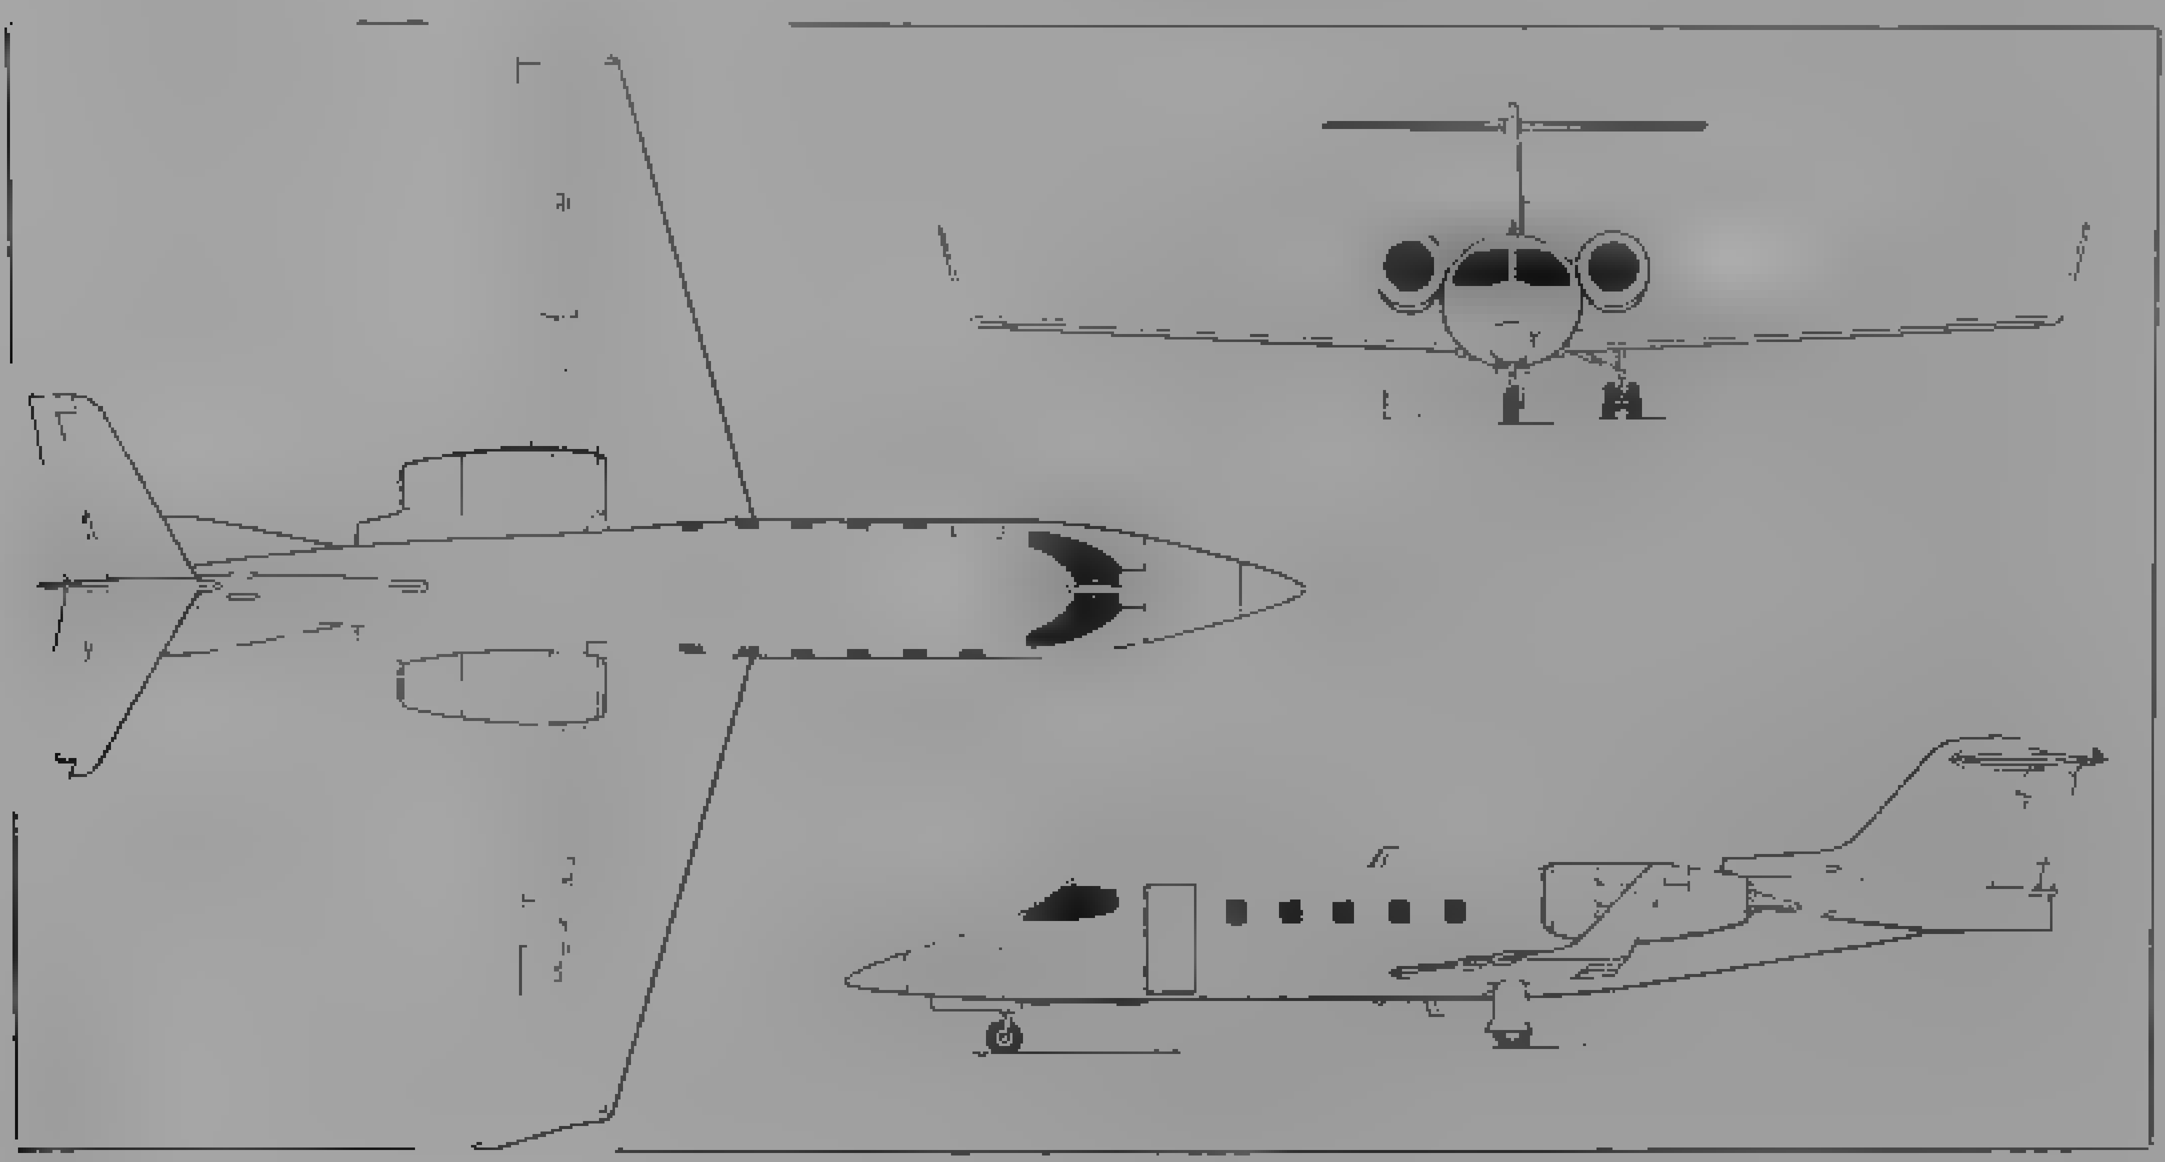
Additional features of Learjet 31A include cruise Mach number up to 12,500 m (41,000 ft) increased 4 per cent to 0.81 and VMO increased from 300 knots (556 km/h; 345 mph) to 325 knots (602 km/h; 374 mph) IAS. Increases mainly benefit descent from high altitudes. Learjet 31A also features integrated digital avionics package.

FLYING CONTROLS: All control surfaces mechanically actuated, ailerons have brush seals and geared tabs, electrically actuated trim tab on port aileron. Electrically actuated tailplane incidence control has separate motors for pilot and co-pilot and single fault survival protection, aircraft can be manually controlled following tailplane runaway and landed with reduced flap. Rudder has electric trim tab, automatic electric rudder assist servo operates automatically if rudder pedal loads exceed 22.6 kg (50 lb). Full-chord fences bracket the ailerons, air flow between fences corrected by arrowhead energisers on leading-edge, row of round-head screws aft of leading-edge and two rows of energiser strips near ailerons. Single spoiler panel in each wing used as airbrake and lift dumper. Hydraulically actuated flaps extend to 40°. Optional drag parachute mounted on inside of baggage hatch under tail.

STRUCTURE: Multispar wing with machined skins.

LANDING GEAR: Retractable tricycle gear, main legs retract inward, nose leg forward, twin mainwheels with anti-skid disc brakes; nosewheel has full-time digital steer-by-wire replacing speed limited steering of Learjet 31. Maximum airspeed with gear extended 260 knots (481 km/h; 299 mph); tyre limiting speed 183 knots (339 km/h; 210 mph). Ground turning radius about nosewheel 11.91 m (39 ft 1 in).

POWER PLANT: Two 15.56 kN (3,500 lb st) AlliedSignal TFE731-2-3B turbofans with digital electronic engine



Learjet 31A business aircraft *(Jane's/Dennis Punnett)*

1991

controller giving automatic retention of power settings above 4,575 m (15,000 ft) and special idling control for descent from 15,545 m (51,000 ft). Engine synchroniser fitted. Optional Dee Howard 4000 thrust reverser system weighs 109 kg (240 lb). One integral fuel tank in each wing holds 641 kg (1,413 lb), standard fuselage tank 608 kg (1,340 lb), ER fuselage tank 804 kg (1,773 lb), fuselage fuel transferred by gravity or pump, single-point pressure refuelling standard.

ACCOMMODATION: Cabin furnishings include a three-seat divan, four Erda 10-way adjustable individual seats in club seating arrangement, side-facing seat with toilet, two folding tables, baggage compartment, forward privacy curtain, overhead panels with reading lights, indirect lighting, air vents and oxygen masks. New interior offering 0.5 cm (2 in) more headroom and three cabin configurations announced October 1994 and introduced on 100th aircraft May 1995.

SYSTEMS: Hydraulic system operates flaps, landing gear, airbrake, wheelbrakes and thrust reversers; system pressure 69 to 120.6 bars (1,000 to 1,750 lb/sq in); pneumatic standby for gear extension and wheelbrakes. Normal cabin pressure differential 0.64 bar (9.4 lb/sq in) with automatic flood engine bleed if cabin altitude exceeds 2,820 m (9,250 ft), pop-out emergency oxygen for passengers and masks for crew. Electrical system based on two starter/generators, two Ni/Cd batteries and two inverters; both buses can run from one engine, electrics operate tailplane incidence, rudder assister and nosewheel steering. De-icing by bleed air for wing, engine intakes and windscreen, tailplane electrically heated, fin not protected. Alcohol spray for radome to stop shed ice entering engines, controls prevent internal ice and condensation during long descents. Single engine at idle, burning 15.9 kg (35 lb) fuel every 10 minutes, acts as APU.

AVIONICS: Bendix/King integrated digital avionics package with five-tube EFIS. Universal UNS-1M flight management system (FMS), and dual KFC 3100 autopilots/flight directors.

EQUIPMENT: Throttle-mounted landing gear warning mute and go-around switches, nacelle heat annunciator, engine synchroniser and synchroscope, recognition light, wing ice light, emergency press override switches, transponder ident switch in pilot's control wheel, engine synchroniser and synchroscope, flap preselect, crew lifejackets, cockpit dome lights, cockpit speakers, crew oxygen masks and fire extinguisher are standard.

DIMENSIONS, EXTERNAL:

Wing span	13.33 m (43 ft 8 in)
Wing aspect ratio	7.21

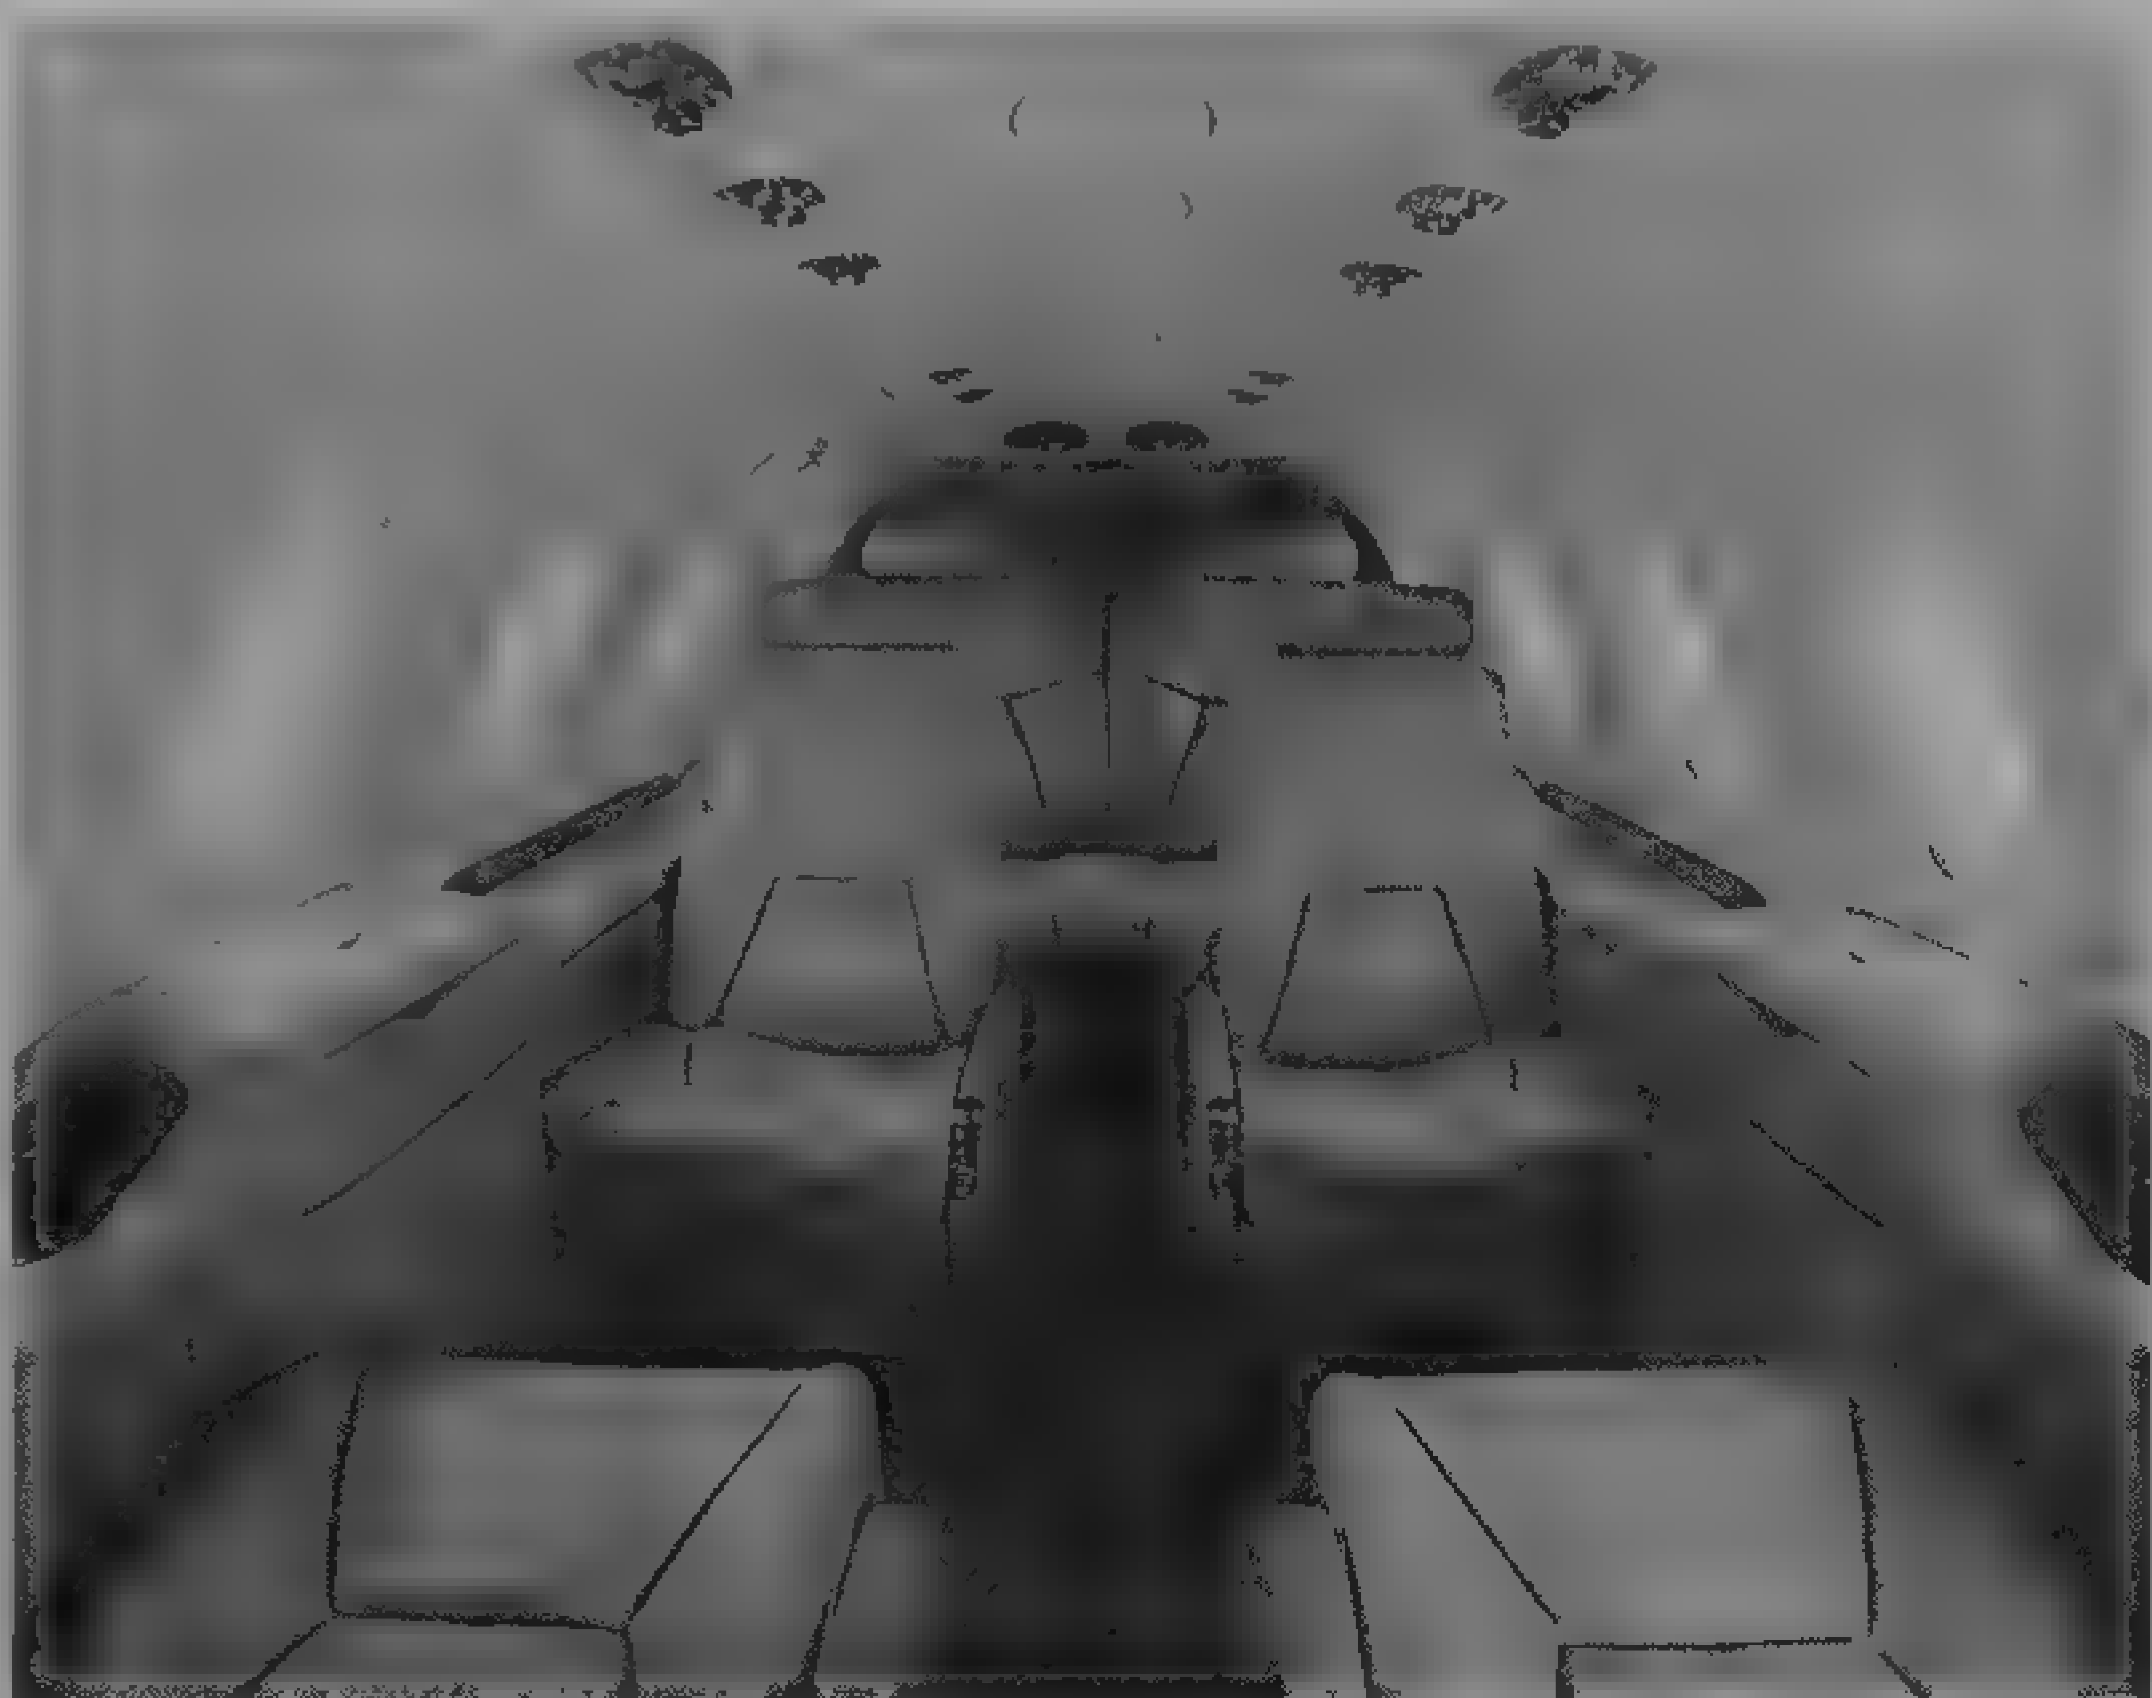
31A/ER	87.0 EPNdB

UPDATED

LEARJET 45

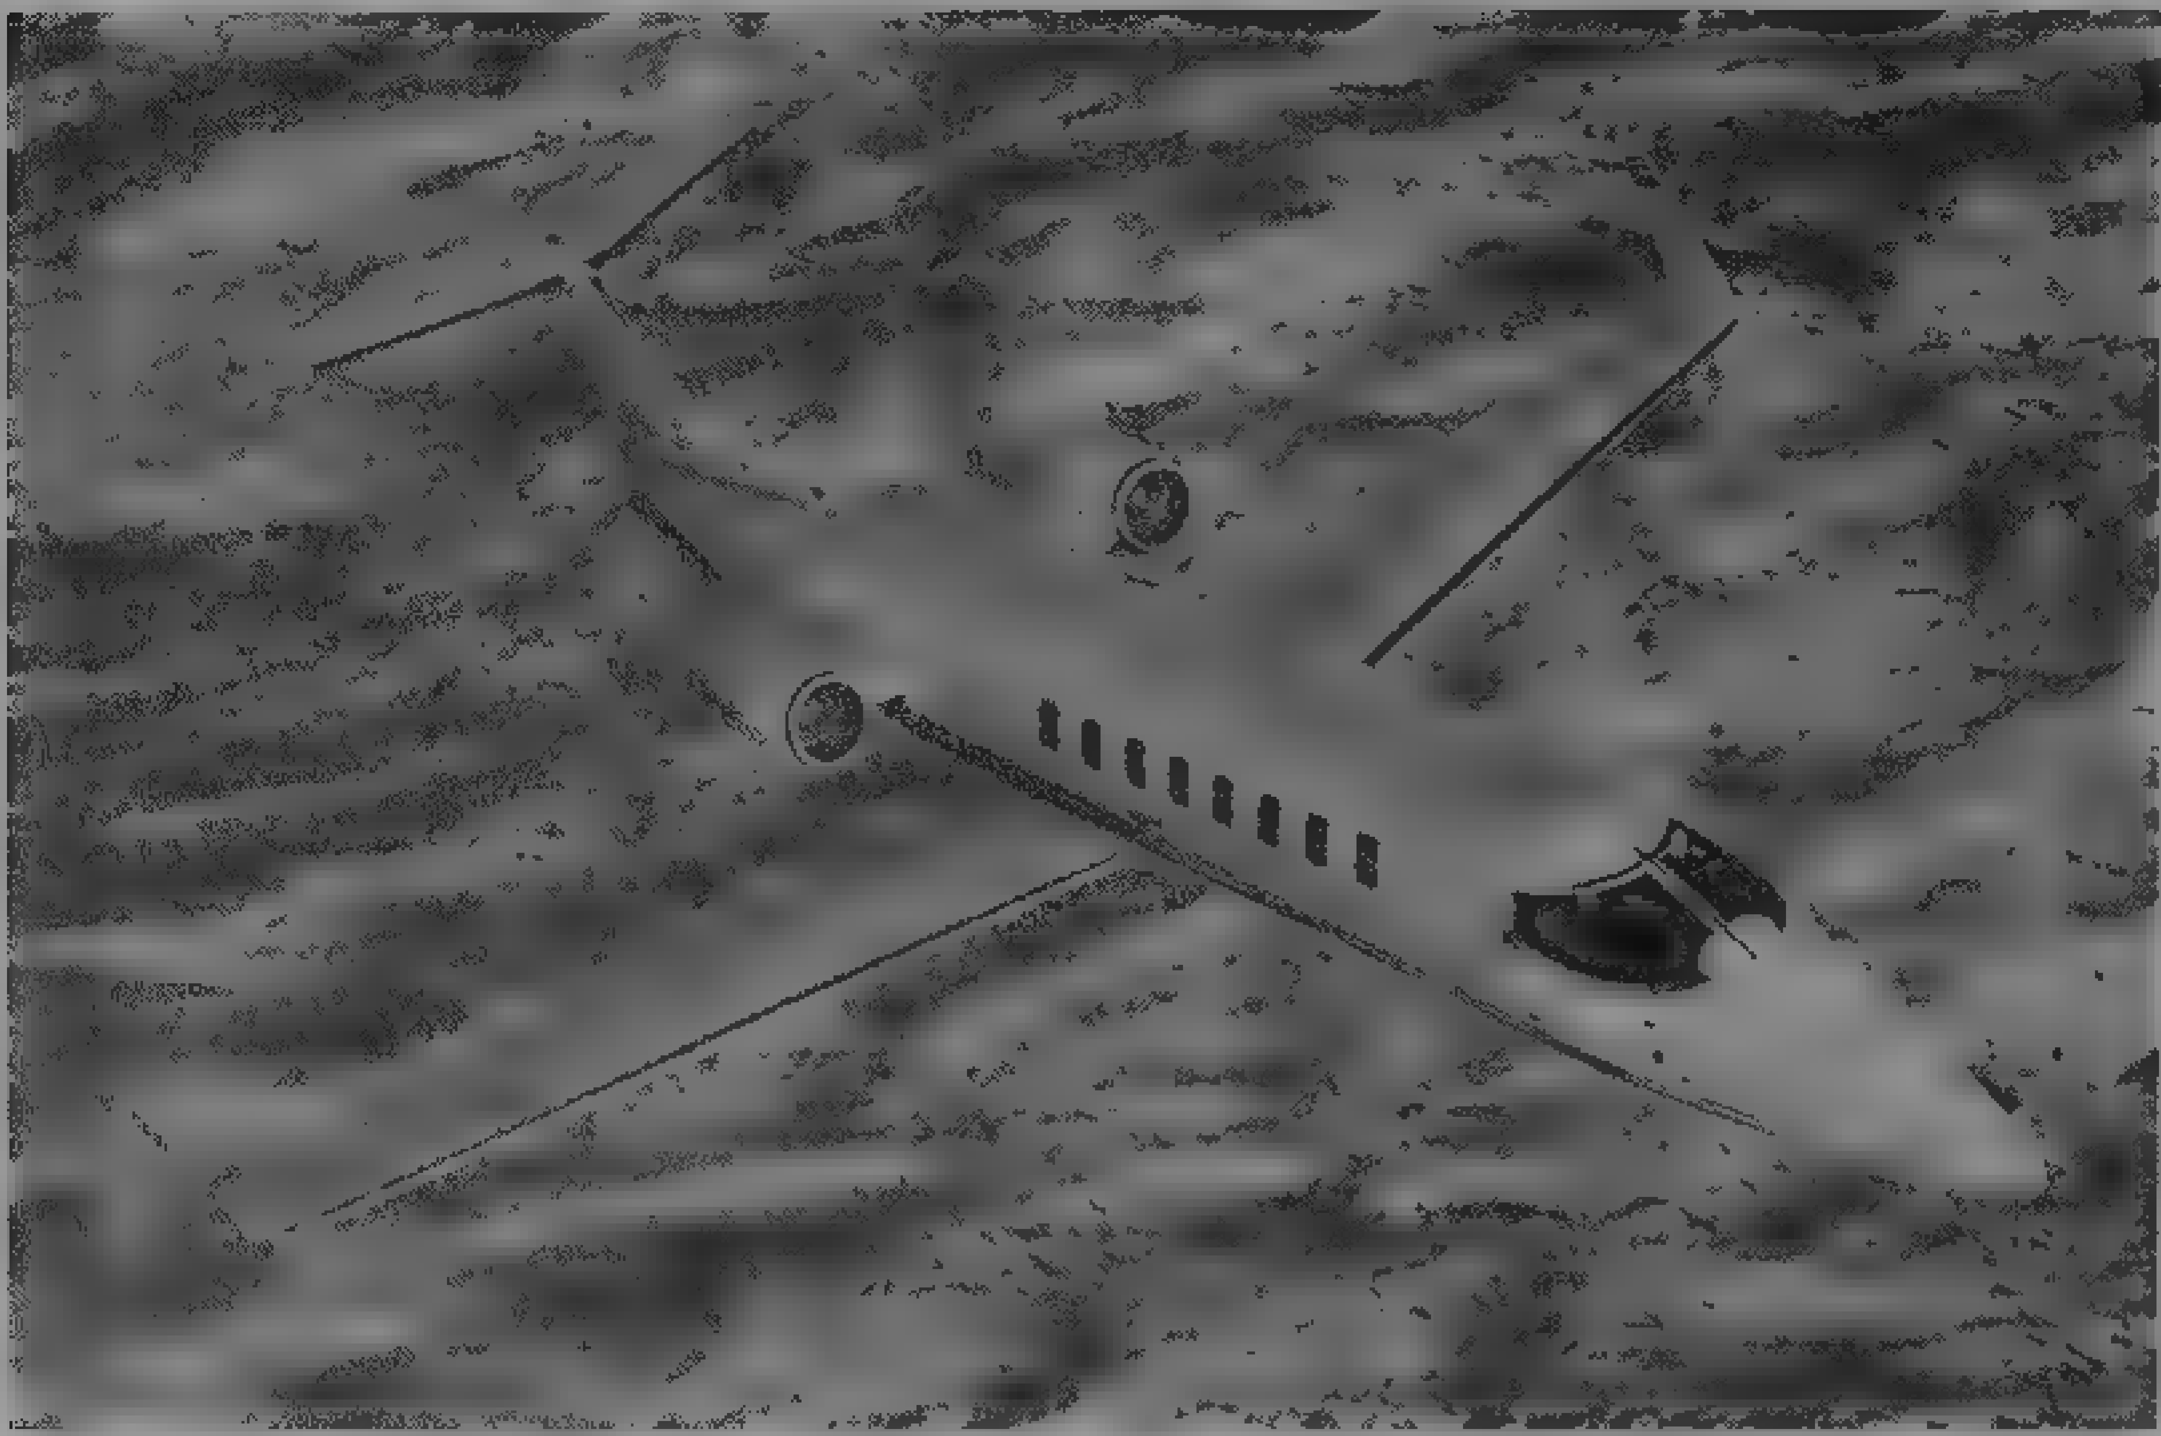
TYPE: 10/12-seat business jet.

PROGRAMME: Design started September 1992, unveiled at NBAA Convention 20 September 1992, certification planned for 1996 to latest FAR and JAR standards, production planned for maximum rate of 60 per year. Other members of Bombardier group are involved. Learjet is responsible for project co-ordination, final assembly, testing and certification. Wing and fuselage of first production aircraft mated at Wichita 4 November 1994; first flight scheduled 22 September 1995, five aircraft to be used for aerodynamic, mechanical systems, avionics and function



New Learjet 31A interior, with increased headroom, introduced in mid-1995 from 100th aircraft (N31LR)

1995



Computer-generated image of Learjet 45 eight/10-passenger business jet

1995

and reliability testing leading to FAA certification in December 1996, first deliveries January 1997. Production will total 24 in 1996, 36 in 1997 and 48 in 1998.

CUSTOMERS: More than 100 ordered by June 1995, including four by Singapore Airlines for delivery in fourth quarter of 1997 as crew trainers.

COSTS: $6.095 million (June 1995)

DESIGN FEATURES: Designed to combine docile handling characteristics of 31/31A and 60 with exceptional fuel efficiency and good overall performance, and offer increased maintainability and reliability, new larger fuselage, wing and tail unit, exceptional head and shoulder room, wing carry-through spar recessed beneath floor; latest technology systems. Wing designed with NASA.

STRUCTURE: Computervision CADDS 5 digital design system adopted by Learjet for tail design and Shorts for fuselage, concurrent engineering technique used. Short Brothers of UK manufacture the fuselage and de Havilland of Canada the wings.

LANDING GEAR: Retractable tricycle trailing-link type, for softer and smoother taxying.

POWER PLANT: Two AlliedSignal TFE731-20 turbofans, each flat rated at 15.57 kN (3,500 lb st), target type thrust reversers; FADEC engine control. Total fuel capacity 3,392 litres (896 US gallons; 746 Imp gallons). Engine testing began January 1995 with TFE731-20 installed in one nacelle of Learjet 31A test bed.

ACCOMMODATION: Two pilots plus eight to 10 passengers. Galley and coat closet.

AVIONICS: Honeywell Primus 1000 integrated avionics system.

Comms: Dual Primus II nav/ident radios.

Radar: Primus 650 weather radar standard. Primus 870 advanced weather radar with turbulence detection optional.

Flight: Dual Primus II nav radios. Microwave landing system (MLS) optional. Primus 1000 digital autopilot/flight director standard. Honeywell traffic collision and alert system (TCAS II) optional.

Instrumentation: Primus 1000 with EICAS, dual PFDs and MFDs, flight and navigation information displayed on four 20.3 × 17.8 cm (8 × 7 in) EFIS screens, heart of system is IC-600 integrated avionics computer, which combines EFIS and EICAS processor.

DIMENSIONS, EXTERNAL:

Wing span	13.35 m (43 ft 9½ in)
Length overall	17.89 m (58 ft 8½ in)
Height overall	4.48 m (14 ft 8½ in)

DIMENSIONS, INTERNAL:

Cabin:	
Length: incl flight deck	7.54 m (24 ft 9 in)
excl flight deck	6.02 m (19 ft 9 in)
Max width	1.55 m (5 ft 1 in)
Max height	1.50 m (4 ft 11 in)
Volume, excl flight deck	14.02 m³ (495 cu ft)
Baggage compartment volume	1.42 m³ (50.0 cu ft)

WEIGHTS AND LOADINGS:

Weight empty	5,307 kg (11,700 lb)
Max payload	1,497 kg (3,300 lb)
Max fuel weight	2,721 kg (6,000 lb)
Max T-O weight	8,845 kg (19,500 lb)
Max ramp weight	8,958 kg (19,750 lb)
Max landing weight	8,709 kg (19,200 lb)
Max zero-fuel weight	6,804 kg (15,000 lb)
Max power loading	284.0 kg/kN (2.79 lb/lb st)

PERFORMANCE (estimated, at max T-O weight):

Max cruising speed at 11,275 m (37,000 ft)	464 kts (859 km/h; 534 mph)
Econ cruising speed at 13,715 m (45,000 ft)	407 kts (753 km/h; 468 mph)
Max rate of climb at S/L	975 m (3,200 ft)/min
Service ceiling	13,715 m (45,000 ft)
T-O to 10.7 m (35 ft)	1,280 m (4,200 ft)
Landing from 15 m (50 ft)	911 m (2,990 ft)
Range with four passengers, zero wind, ISA:	
VFR	2,200 n miles (4,074 km; 2,532 miles)
NBAA IFR	1,850 n miles (3,426 km; 2,129 miles)

UPDATED

LEARJET 60

TYPE: Medium-range business jet.

PROGRAMME: Announced 3 October 1990 as Learjet 55C successor; first flight of proof-of-concept aircraft with one PW305 turbofan 18 October 1990; flight testing resumed 13 June 1991 with two PW305s and stretched fuselage (more than 300 hours flown by May 1992); first production aircraft first flight (N601LJ) 15 June 1992; certification awarded 15 January 1993, deliveries started immediately.

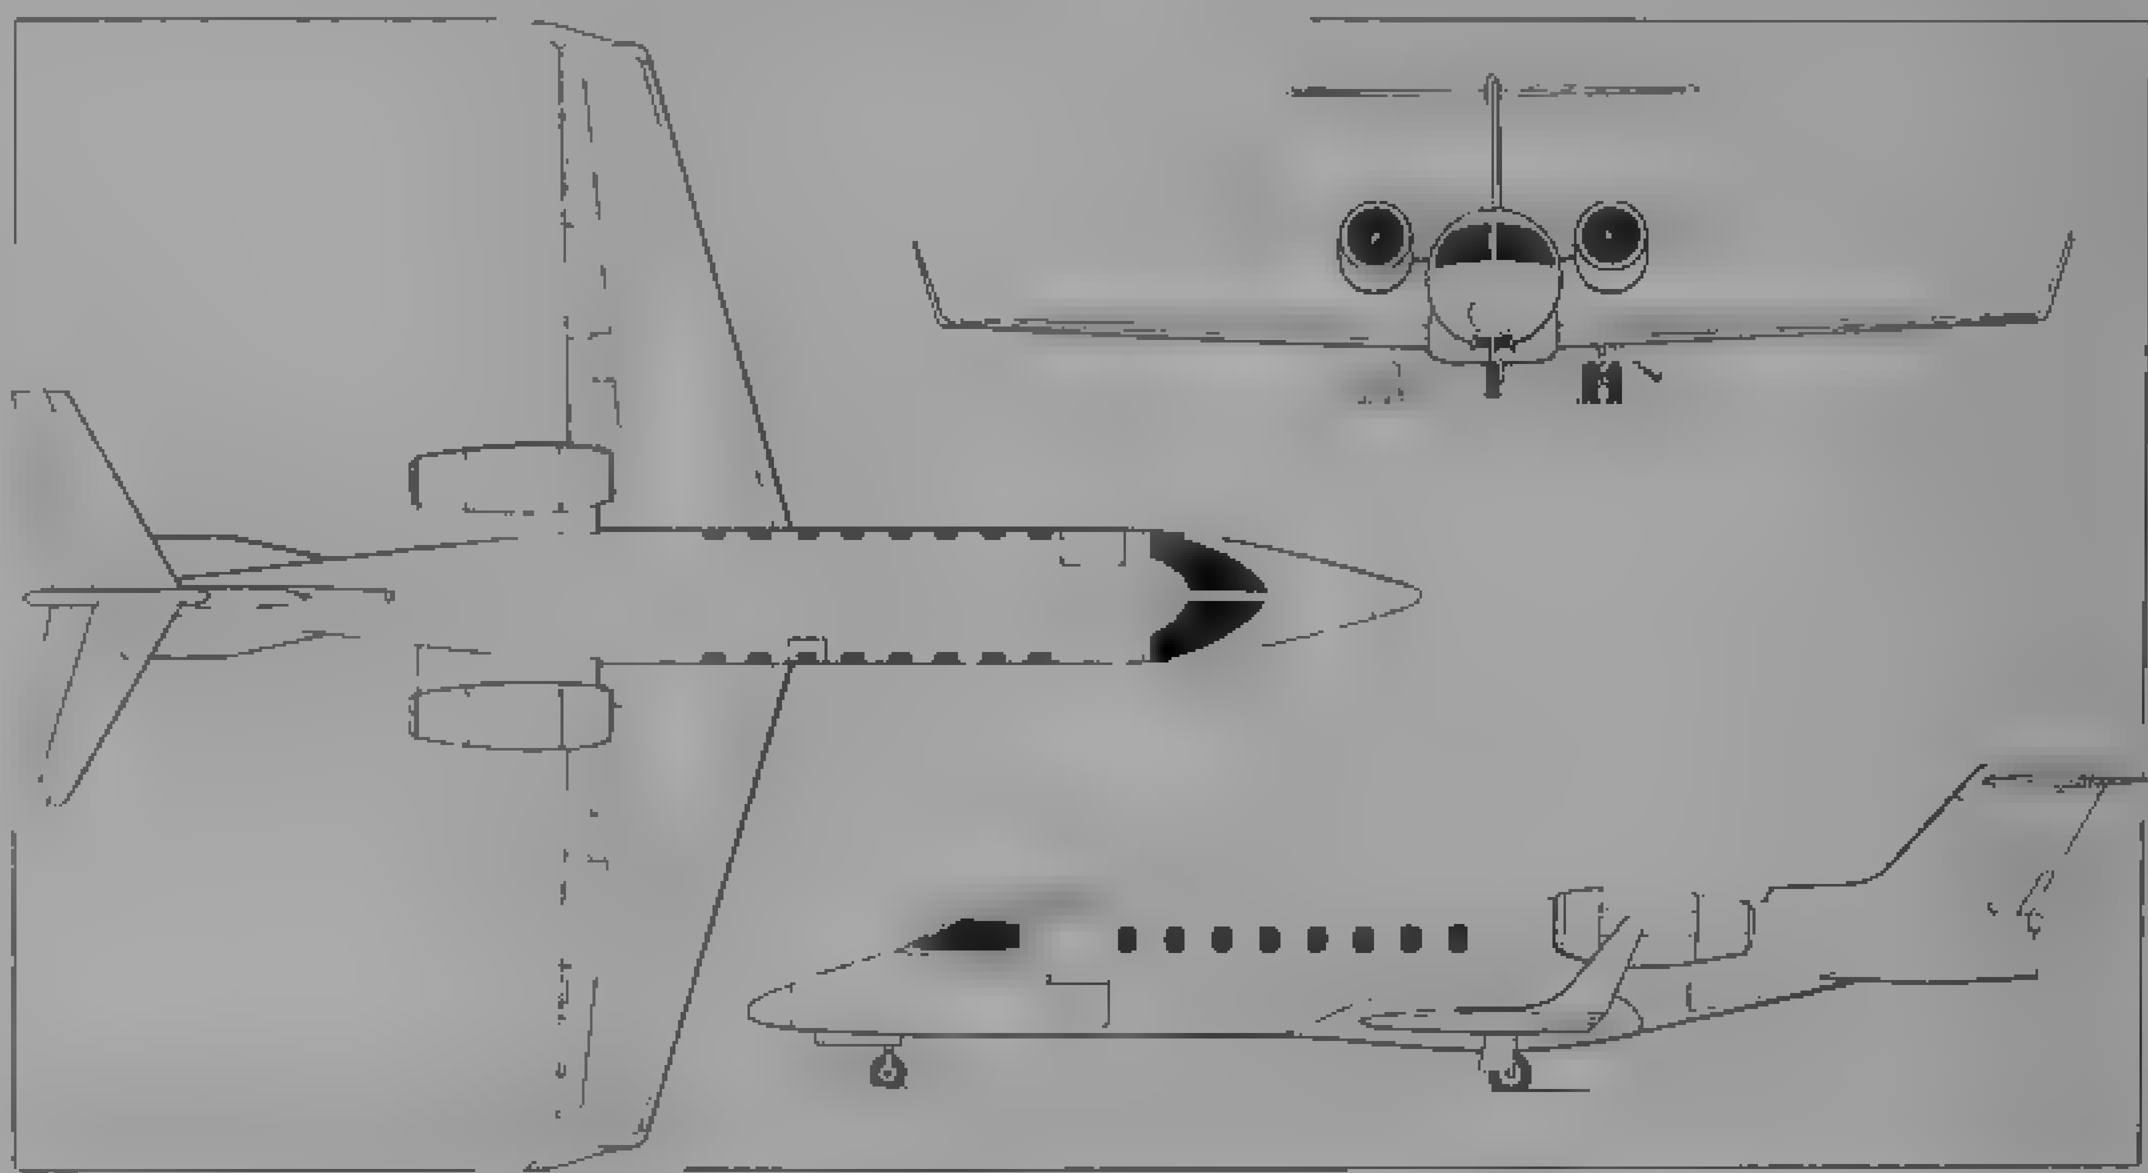
CUSTOMERS: Total 16 delivered in 1993, 22 in 1994; 51 delivered by June 1995 including 11 in first quarter of that year. Customers include the FAA, which has ordered five, with seven options, to be outfitted by E-Systems, Greenville, Texas, Division for flight inspection missions, first delivery 28 June 1995, and the government of Malaysia, which is scheduled to take delivery of a flight inspection aircraft in December 1995.

DESIGN FEATURES: Largest Learjet, P&WC PW305 engines; T tail, winglets, delta fins.

FLYING CONTROLS: Spoilers can be partially extended to adjust descent rates.

POWER PLANT: Two Pratt & Whitney Canada PW305 turbofans with FADEC, each flat rated at 20.46 kN (4,600 lb st) at up to 27°C (80°F). Total fuel capacity 3,560 kg (7,850 lb).

ACCOMMODATION: Two crew and six to nine passengers; gross pressure cabin volume 15.57 m³ (550 cu ft); compared with 55C, main cabin is 0.71 m (2 ft 4 in) longer and rear baggage hold section 0.38 m (1 ft 3 in) longer; full-across aft toilet has flat floor, large mirror, coat closet and external servicing, total 1.67 m³ (59 cu ft) baggage capacity divided between an externally accessible hold (larger than that of Learjet 55C) and internal pressurised, heated compartment



Learjet 45 eight/10-passenger business jet (two AlliedSignal TFE731-20 turbofans) *(Jane's/Dennis Punnett)*

1995

Assembly of first Learjet 45 began at Wichita 4 November 1994

1995

that is accessible in flight, galley cabinet has storage for dinnerware, warming oven, cold liquid dispensers and ice storage, entertainment centre, 10-way adjusting seating is standard

SYSTEMS: Windscreen demisted by electrically heated gold film which also diminishes sun heating in flight and on ground and produces warmth during prolonged flight at high altitude. Full time digital steer by wire nosewheel control operates throughout taxying, take-off and landing

AVIONICS: Standard fully integrated all-digital Collins Pro Line 4

Flight: Four-tube EFIS, dual digital air data computers, dual navigation and communications radios, dual automatic AHRS, Collins AMS-850 avionics management system, advanced Collins autopilot and long-range navaid as standard, circuit breaker and controls panels redistributed as in Learjet 31A

DIMENSIONS, EXTERNAL:

Wing span	13.34 m (43 ft 9 in)
Wing chord: at root	2.74 m (9 ft 0 in)
at tip	1.12 m (3 ft 8 in)
Length: overall	17.88 m (58 ft 8 in)
fuselage	17.02 m (55 ft 10 in)
Height overall	4.47 m (14 ft 8 in)
Tailplane span	4.47 m (14 ft 8 in)
Cabin door: Width	0.64 m (2 ft 1 in)
Height to sill	0.69 m (2 ft 3 in)

DIMENSIONS, INTERNAL:

Cabin: Length, incl flight deck	7.04 m (23 ft 1 in)
Max width	1.80 m (5 ft 10⅞ in)
Max height	1.71 m (5 ft 7½ in)

WEIGHTS AND LOADINGS (A: standard, B: optional):

Weight empty: A, B	6,278 kg (13,840 lb)
Max fuel (usable): A, B	3,560 kg (7,850 lb)
Max T-O weight: A	10,319 kg (22,750 lb)
B	10,478 kg (23,100 lb)
Max ramp weight: A	10,432 kg (23,000 lb)
B	10,591 kg (23,350 lb)
Max landing weight: A, B	8,845 kg (19,500 lb)
Max power loading: A	252.3 kg/kN (2.47 lb/lb st)
B	256.2 kg/kN (2.51 lb/lb st)

PERFORMANCE (estimated at max T-O weight, ISA):

Max cruising speed	463 kts (858 km/h; 533 mph)
Max operating altitude	15,545 m (51,000 ft)
Balanced field length: A	1,582 m (5,190 ft)
B	1,634 m (5,360 ft)

Range with VFR reserves
2,740 n miles (5,074 km; 3,153 miles)

Range with four passengers from runway shorter than 1,494 m (4,900 ft)
2,398 n miles (4,441 km; 2,760 miles)

Range examples:
can fly New York-Los Angeles against 85 per cent Boeing winds with NBAA reserves
can reach either US coast after taking off from Aspen, Colorado, in ISA + 20° with four passengers

LIGHTNING BUG

LIGHTNING BUG AIRCRAFT CORPORATION

PO Drawer 40, Sheldon, South Carolina
Telephone: 1 (803) 846 8584/1800

Company is under same ownership as White Lightning Aircraft Corporation (which see)

NEW ENTRY

LB AIRCRAFT LIGHTNING BUG

TYPE: Single-seat high-performance sporting monoplane

CUSTOMERS: Five flying by April 1995. Production rate approximately one kit every three weeks (1995)

COSTS: $20,500 (1995) for kit which includes engine and propeller. $1,000 deposit on ordering

DESIGN FEATURES: Compact, low-wing monoplane; conforms to FAR Pt 23 Utility category at 480 kg (900 lb); Aerobatic category at 363 kg (800 lb). Claimed that basic airframe can be flown after only 300 man-hours of work. Four kits will fit into standard container for shipping

FLYING CONTROLS: Conventional mechanical ailerons, elevator and rudder. Elevator tab for pitch trim, fixed tabs on ailerons and rudder

STRUCTURE: General construction of composites, stainless steel and aluminium 2024-T3 or 7075-T6. Moulded parts use E glass, epoxy resin, PVC foam and Baltek mat

LANDING GEAR: Fixed mainwheels with spats, retractable nosewheel. Same wheels and tyres as Long EZ.

POWER PLANT: One 67.1 kW (90 hp) AMW Cuyuna 745 FI liquid-cooled two-stroke engine, with fuel injection and dual ignition, driving fixed-pitch propeller through reduction gear; variable pitch propeller under investigation. Fuel capacity 87 litres (23 US gallons; 19.2 Imp gallons); grades 100 LL or Mogas.

ACCOMMODATION: Single seat accommodates pilot with maximum weight of 127 kg (280 lb) and maximum height 1.98 m (6 ft 6 in).

SYSTEMS: Electrical system 12 V 30 Ah battery, alternator fit appropriate to engine.

AVIONICS: Customer specified.

DIMENSIONS, EXTERNAL:
Wing span — 5.44 m (17 ft 10 in)
Wing aspect ratio — 7.95
Length overall — 5.32 m (17 ft 5½ in)
Height overall — 1.55 m (5 ft 1 in)
Tailplane span — 1.78 m (5 ft 10 in)
Propeller diameter — 1.37 m (4 ft 6 in)

AREAS:
Wings, gross — 3.72 m² (40.0 sq ft)
Tailplane — 0.77 m² (8.26 sq ft)

WEIGHTS AND LOADINGS:
Weight empty — 215 kg (475 lb)
Max fuel weight — 62.6 kg (138 lb)
Max T-O weight: Utility category — 408 kg (900 lb)
Aerobatic category — 363 kg (800 lb)
Max wing loading — 109.85 kg/m² (22.50 lb/sq ft)
Max power loading — 6.09 kg/kW (10.00 lb/hp)

PERFORMANCE (at max T-O weight, ISA):
Max level speed — 217 kts (402 km/h, 250 mph)
Econ cruising speed at 75% power — 200 kts (370 km/h, 230 mph)
Stalling speed, power off:
flaps up — 74 kts (137 km/h, 86 mph)
flaps down — 54 kts (100 km/h, 62 mph)
Max rate of climb at S/L at 139 kts (257 km/h, 160 mph) — 457 m (1,500 ft)/min
Service ceiling — 6,100 m (20,000 ft)
T-O run — 244 m (800 ft)
Landing run — 305 m (1,000 ft)
Range with max fuel, 75% power — 764 n miles (1,416 km, 880 miles)

CHAIRMAN AND CEO: Daniel M. Tellep
PRESIDENT: Norman Augustine

Former Lockheed Aircraft Corporation renamed Lockheed Corporation in September 1977. Merger with Martin Marietta announced 30 August 1994 and completed 15 March 1995. Combined corporation is largest defence contractor in USA, with annual sales worth $23 billion. Activities include design and production of aircraft, electronics, satellites, space systems, missiles, ocean systems, information systems, and systems for strategic defence and for command, control, communications and intelligence.

Lockheed Martin Corporation is largest US DoD contractor, largest NASA contractor and largest US DoE contractor, 1995 merger having resulted in emergence of company with 170,000 employees and organised into four major business groups. **Aeronautics Sector** (see next entry); **Information and Technology Services Sector** (comprising Lockheed Martin Management & Data Systems, Lockheed Martin Information Sciences Group, Lockheed Martin Services Group, Lockheed Martin IMS, Lockheed Martin Commercial Products Group, Lockheed Martin Manned Space Systems and Lockheed Martin Space Operations), **Electronics Sector** (comprising Lockheed Martin Armament Systems, Lockheed Martin Communications Systems, Lockheed Martin Control Systems, Lockheed Martin Defense Systems, Lockheed Martin Electronics & Missiles, Lockheed Martin Government Electronic Systems, Lockheed Martin Ocean, Radar & Sensor Systems and Sanders); and **Space and Strategic Missiles Sector** (comprising Lockheed Martin Missiles & Space, Lockheed Martin Astronautics, Lockheed Martin Astro Space and Lockheed Martin Technical Operations). Subsidiary concerns include Lockheed Martin Energy Systems, Lockheed Martin Specialty Components, Lockheed Martin Environmental Systems & Technologies, Lockheed Martin Idaho Technologies, Lockheed Martin Utility Services and Sandia Corporation.

Lockheed Martin Aero & Naval Systems

Prior to merger that culminated in creation of Lockheed Martin Aeronautics Sector, Lockheed aircraft manufacturing activity consolidated at Marietta in 1990, with move of P-3 Orion assembly line from Palmdale, established work on C-130 and P-3 programmes, plus F-22 development, continues at Marietta under management of Lockheed Martin Aeronautical Systems. Lockheed Martin Skunk Works retains autonomy at Palmdale within LMAS grouping, which has workforce in excess of 40,000.

PRESIDENT: John S. McLellan
EXECUTIVE DIRECTOR, PUBLIC AFFAIRS: Brian Johnstone

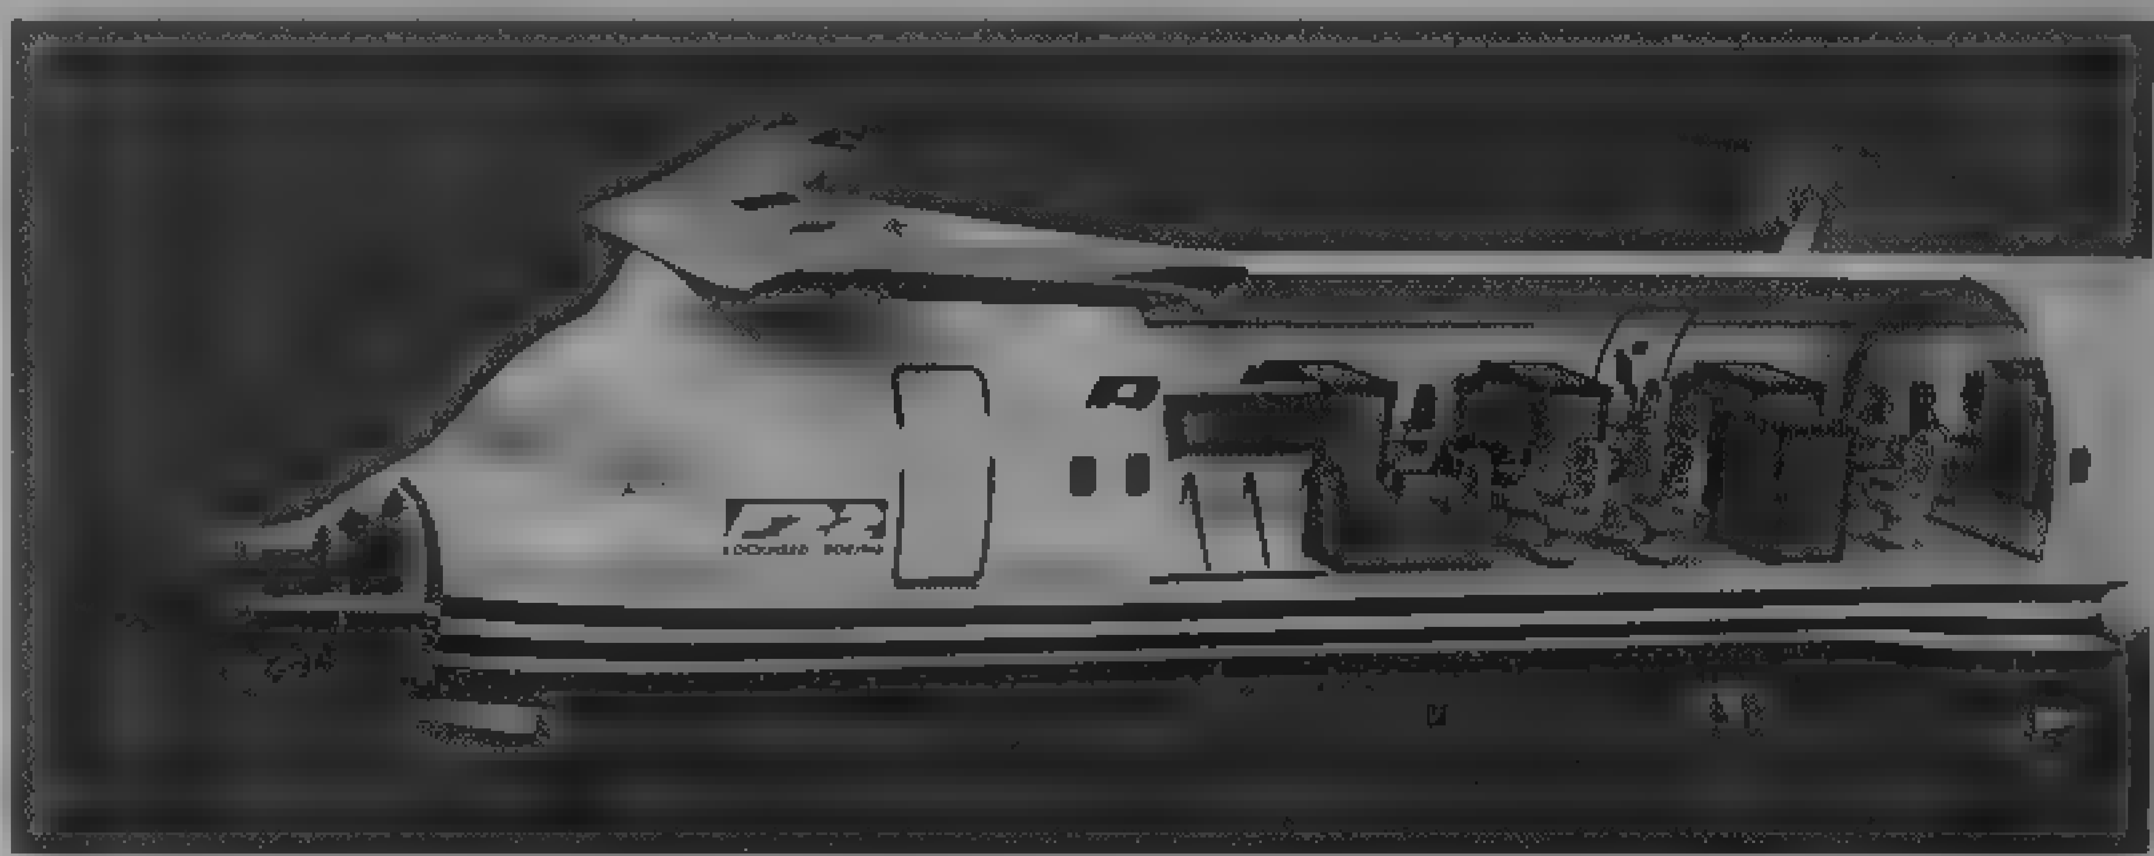
In April 1991, Lockheed won competition to produce F-22 with General Dynamics (now Lockheed Martin Tactical Aircraft Systems) and Boeing Military Airplanes. Lockheed and Vought are studying advanced tactical surveillance aircraft (ATS), based on combining S-3A airframe with electronically scanned array radar in triangular dorsal radome, to replace E-2C; studies into Future Theater Airlifter (FTA) for 21st century tactical transport; company expects to be involved in NASA High-Speed Civil Transport (HSCT) programme.

Other long-term activities at Marietta include production of C-130H and C-130J Hercules. Re-winging of C-5A completed 1987 and new C-5Bs completed March 1989; C-5D offered in 1995 to meet possible USAF requirement; other new work consists of P-3C line, transferred from Burbank, and F-22. Between December 1991 and December 1993 Marietta conducted $20 million concept exploration and development contract for potential A-X (later A/F-X) attack aircraft for US Navy in consortium also including Boeing and General Dynamics. Following cancellation of A/F-X, Lockheed Martin continuing private-venture development VG strike fighter derivative of F-22.

Lockheed Martin working to develop standard avionics suite for future versions (upgrades) of P-3 Orion, S-3 Viking and AEW aircraft, open architecture design for maximum flexibility and system growth, elements include AN/APS-145 radar, GPS and communications/navigation system.

Marietta workforce cut by over 2,000 to 10,500 by end of 1995.

UPDATED



Model of Boeing 757 modified to serve as F-22 Flying Test Bed with nose radar and representative wing section above flight deck

1995

LOCKHEED MARTIN 645

US Air Force designation: F-22

TYPE: US Air Force next generation tactical fighter, formerly known as Advanced Tactical Fighter (ATF) programme.

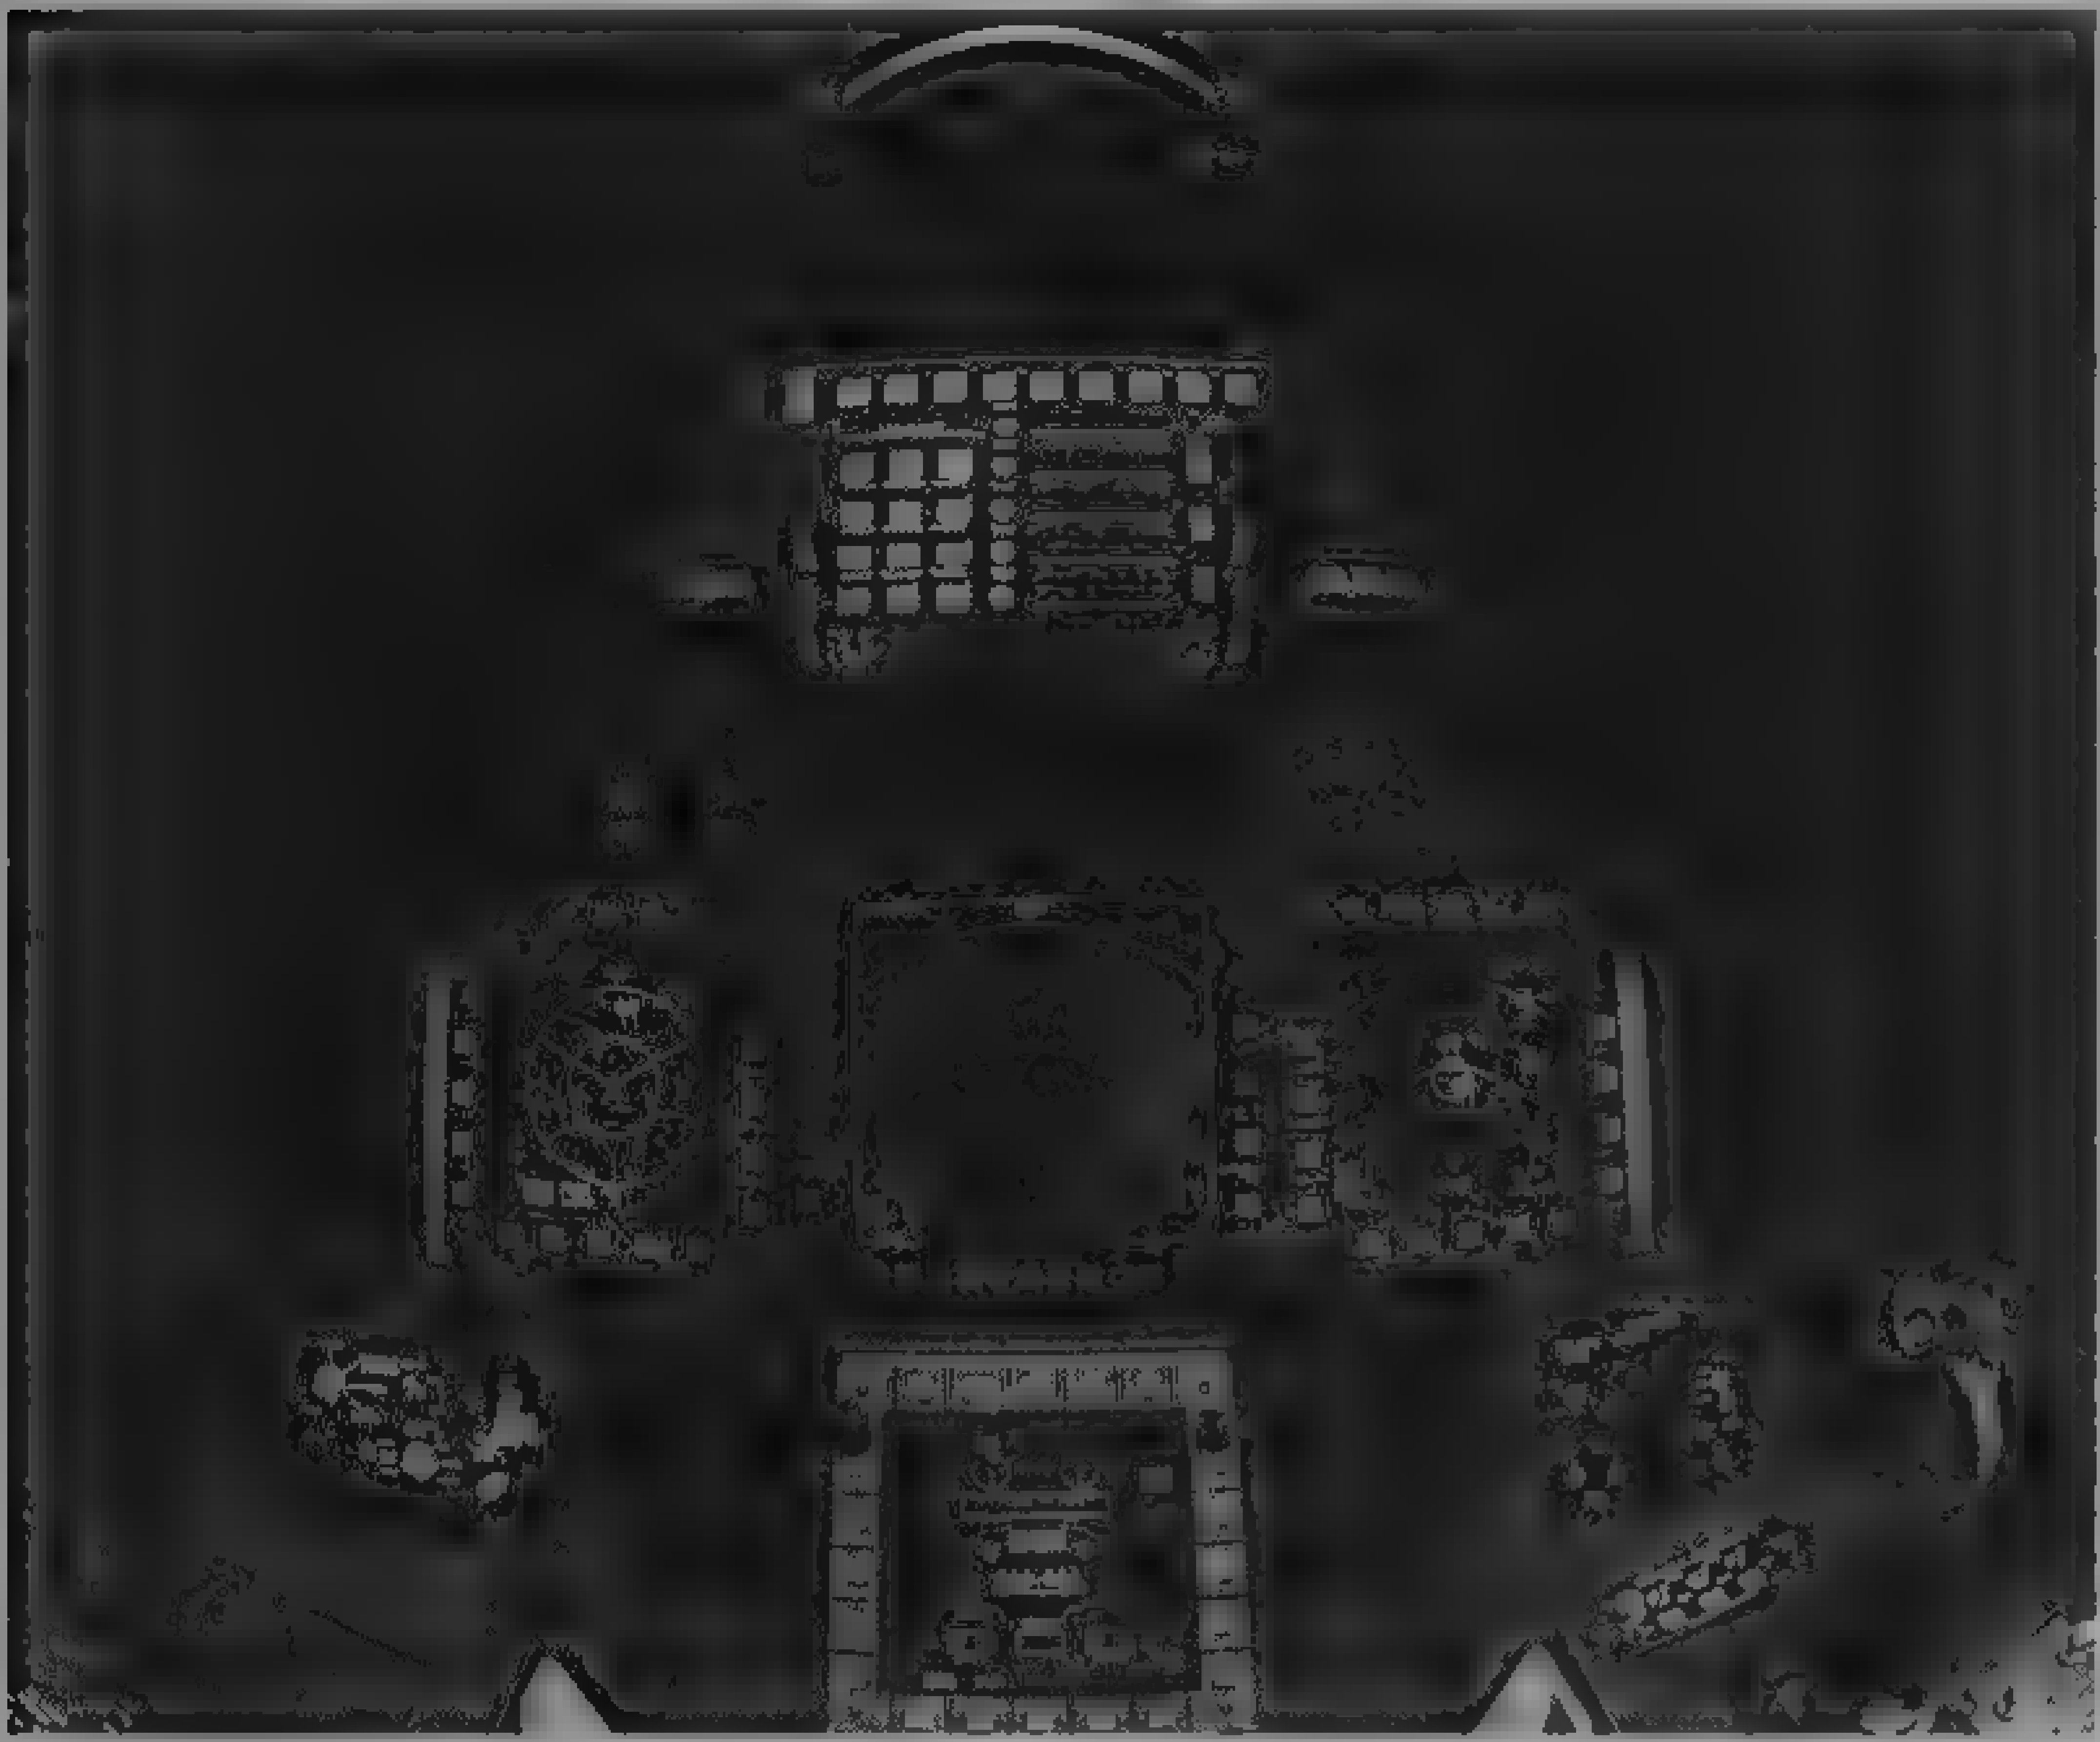
PROGRAMME: US Air Force ATF requirement for 750 (now 442) McDonnell Douglas F-15 Eagle replacements incorporating low observables technology and supercruise (supersonic cruise without afterburning), parallel assessment of two new power plants, request for information issued 1981, concept definition studies awarded September 1983 to Boeing, General Dynamics, Grumman, McDonnell Douglas, Northrop and Rockwell, requests for proposals issued September 1985; submissions received by 28 July 1986. USAF selection announced 31 October 1986 of demonstration/validation phase contractors, Lockheed YF-22 and Northrop YF-23 (see 1991-92 *Jane's*), each produced two prototypes and ground-based avionics testbed; first flights of all four prototypes 1990. Competing engine demonstration/validation programmes launched September 1983, ground testing began 1986-87, flight-capable Pratt & Whitney YF119s and General Electric YF120s ordered early 1988: all four aircraft/engine combinations flown.

Decision of 11 October 1989 extended evaluation phase by six months, draft request for engineering and manufacturing development (EMD) proposals issued April 1990: first artists' impressions released May 1990; final engineering and manufacturing development (EMD) requests issued for both weapon system and engine 1 November 1990; proposals submitted 2 January 1991, F-22 and F119 power plant announced by USAF as winning combination 23 April 1991. EMD contract given 2 August 1991 for 11 (since reduced to nine) flying prototypes (including two tandem-seat F-22Bs), plus one static and one fatigue test airframes, design underwent several detail refinements through early 1990s, immediately previous layout being Configuration 644, first flight mid-1997, some 12 months late, due to three consecutive fiscal year budget cuts, preliminary design review covering all aspects of the design completed 30 April 1993, final assembly will remain at Marietta rather than moving to LMTAS (Lockheed Martin Tactical Aircraft Systems) at Fort Worth, critical design review February 1995, preproduction batch of four aircraft scheduled to be awarded 1997, IOC 2004. Minor design changes for production F-22 announced July 1991; see Design Features, Dimensions and Areas. Suggested name of SuperStar rejected in 1991 and F-22 remains unnamed. Ground attack role added May 1993 (see under Armament).

Lockheed teamed with General Dynamics (Fort Worth) and Boeing Military Airplanes to produce two YF-22 prototypes, civil registrations N22YF (with GE YF120) and N22YX (P&W YF119), USAF serial numbers

87-0700 and 87-0701 assigned, but only 87-0701 applied during second phase of testing, from late 1991. N22YF rolled out at Palmdale 29 August 1990; first flight/ferry to Edwards AFB 29 September 1990 first air refuelling (11th sortie) 26 October 1990; thrust vectoring in flight 15 November 1990; anti-spin parachute for high angle of attack tests on 34th to 43rd sorties, flight testing temporarily suspended 28 December 1990; 43 sorties/52 hours 48 minutes. N22YX first flight Palmdale-Edwards 30 October 1990, AIM-9M Sidewinder (28 November 1990) and AIM-120A AMRAAM (20 December 1990) launch demonstrations; achieved Mach 1 8 on 26 December 1990; temporarily grounded after 31 sorties/38 hours 48 minutes, 28 December 1990. Flight test demonstrations included 100°/s roll rate at 120 knots (222 km/h, 138 mph) and supercruise flight in excess of Mach 1 58 without afterburner

Second (F119-powered) YF-22 taken by road to Palmdale mid-1991, fitted with strain gauges, began further 100 hour test programme 30 October 1991, gathered data on aerodynamic loads, flight control aerodynamic effects, vibration/acoustic fatigue and maximum coefficient of lift, flown by 6511th Test Squadron (F-22 Combined Test Force) of 6510th Test Wing at Edwards AFB, non-fatal crash landing at Edwards 25 April 1992, following pilot induced oscillations, total 100 hours 24 minutes in 70 flights since October 1990, non flyable, but repaired for use as antenna testbed at Rome Air Development Center Griffiss AFB, New York



F-22 cockpit concept demonstrator at Marietta

1995

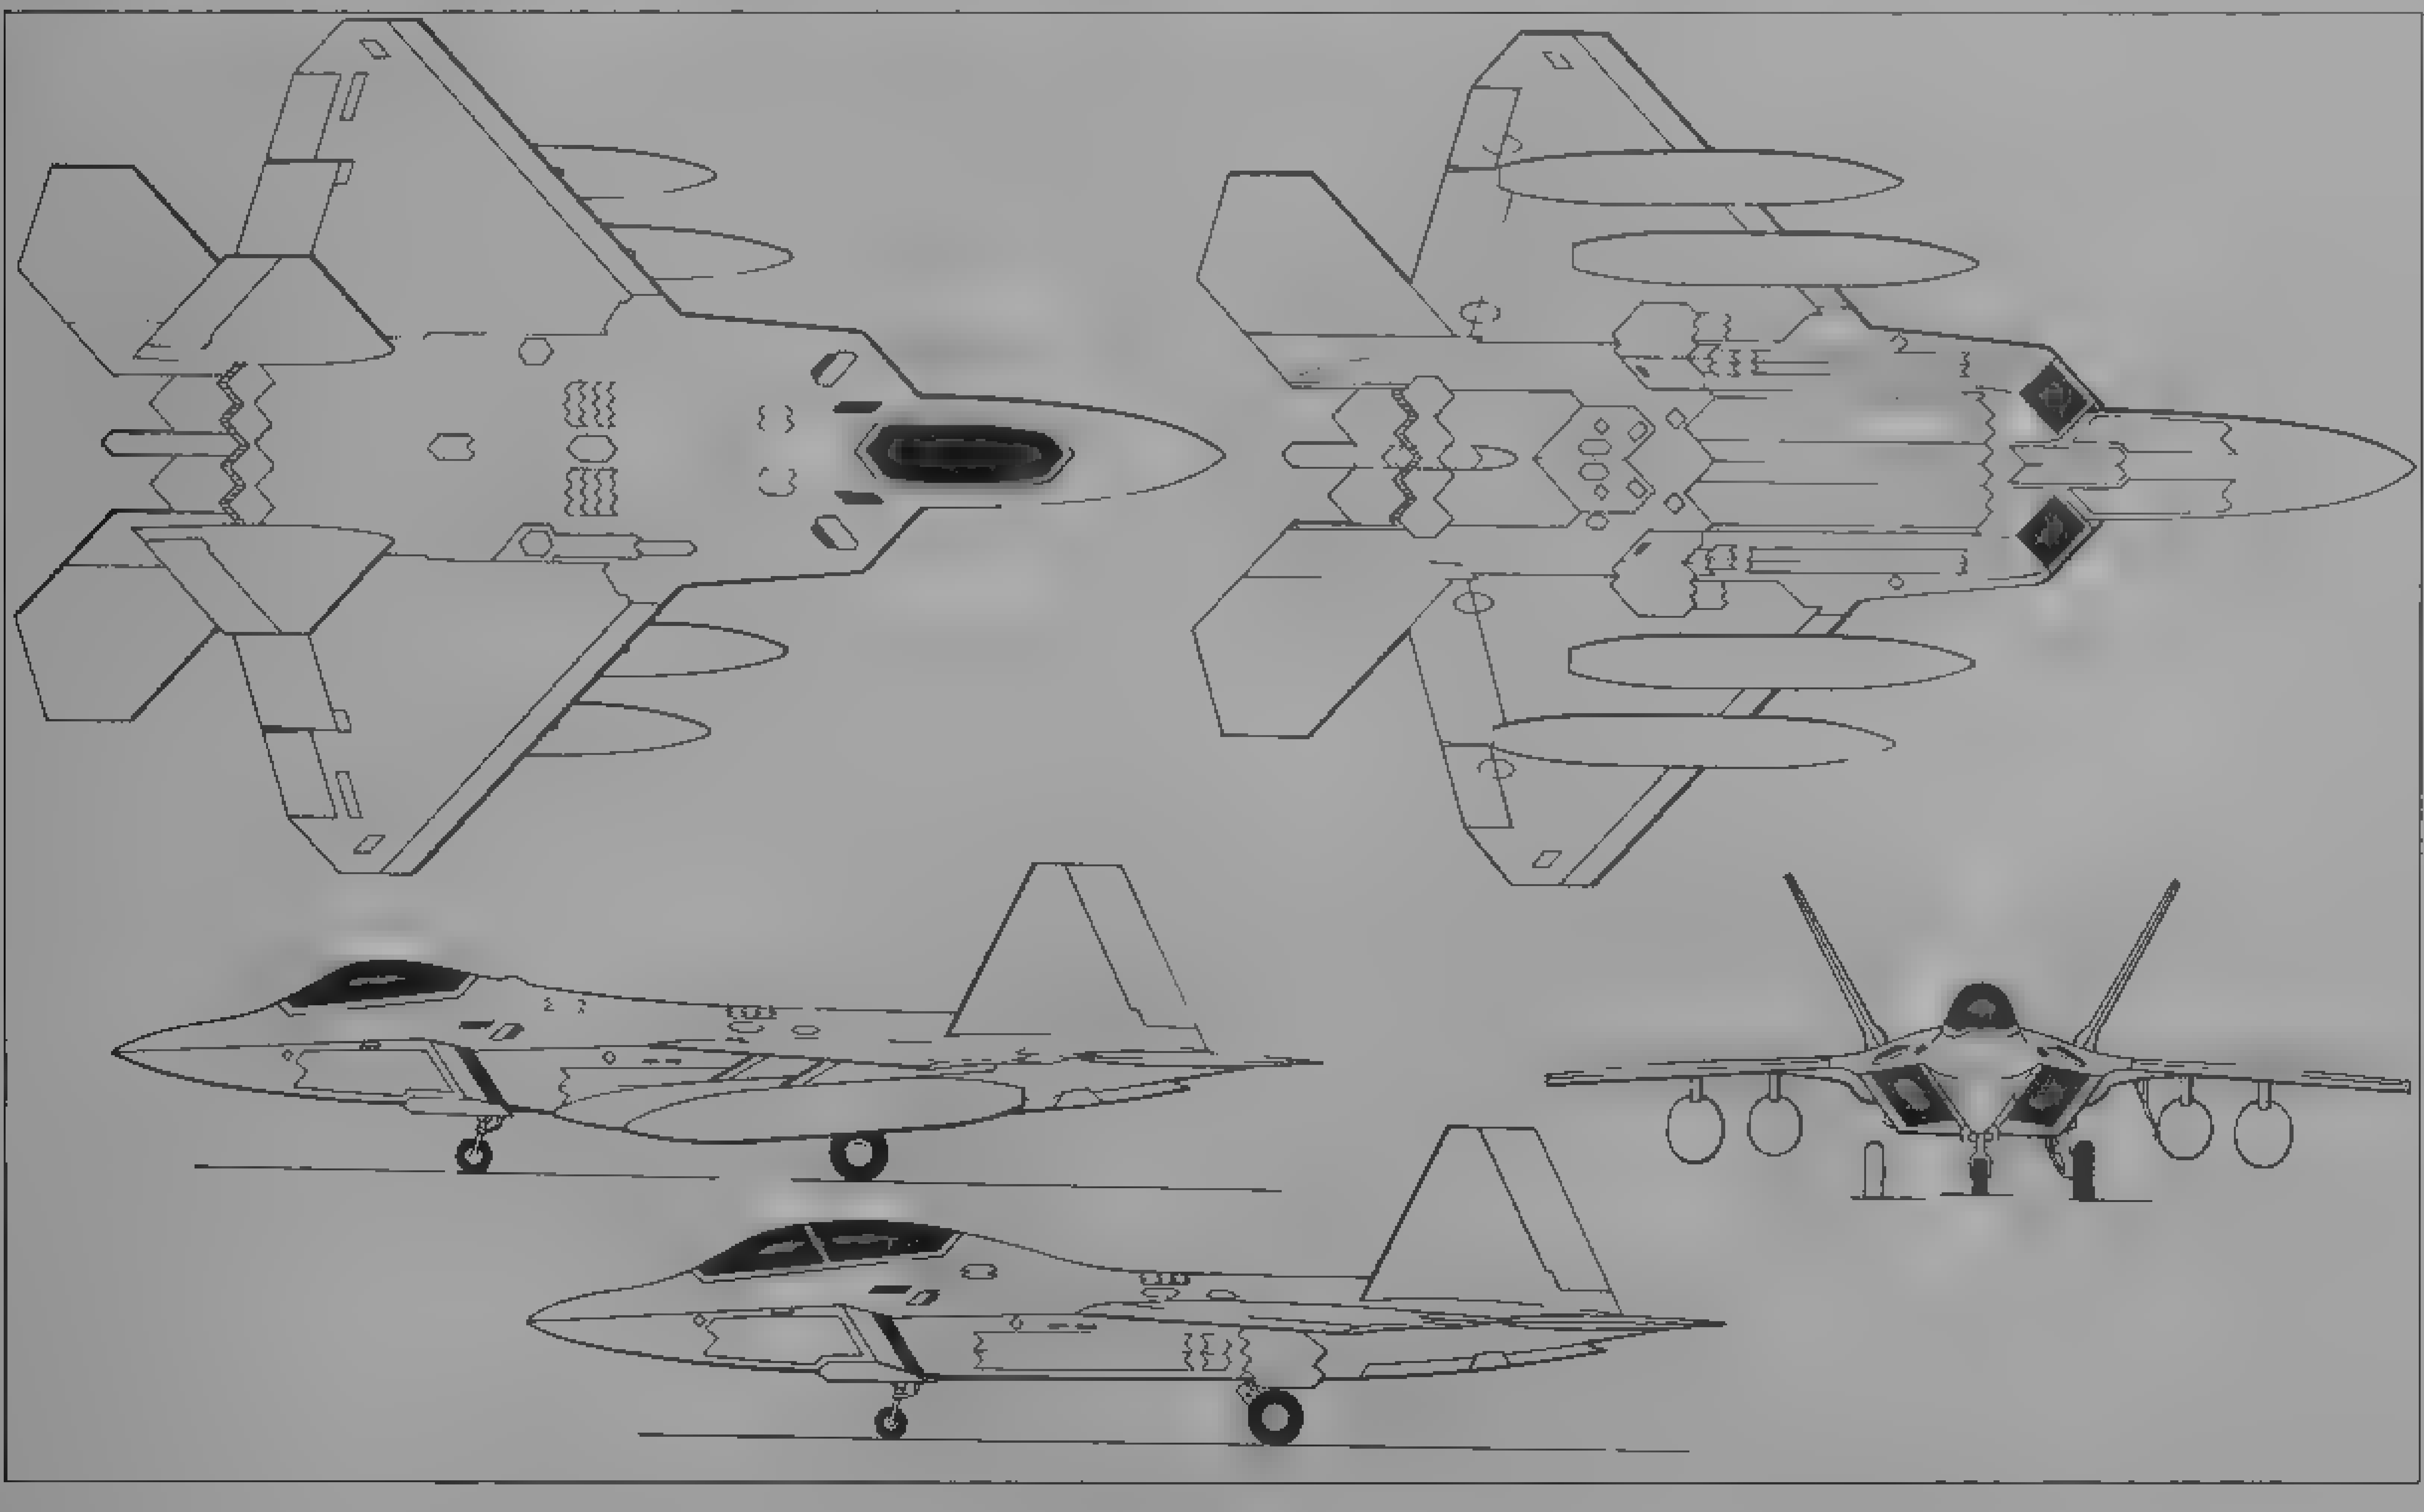
Combat roles reassessment of early 1993 added air-to-ground attack with precision guided munitions (PGMs) to F 22's roles Under $6 5 million contract addition on 25 May 1993, weapon bay and avionics to be adapted for delivery of AIM-9X missile and 454 kg (1,000 lb) Joint Direct Attack Munition (JDAM), two JDAMs will replace two AIM 120A AMRAAMs in main weapon bay, required provision for two AGM 137A Tri Service Standoff Attack Missiles (TSSAM) on underwing pylons later cancelled, as was TSSAM programme. Decision of April 1995 permitted 3 per cent weight increase as consequence of Critical Design Review completed two months previously, new limit is 14,365 kg (31,670 lb) including uncertainty allowance of 227 kg (500 lb)

Lockheed responsible for project control and systems integration, workload shared equally between three partners during dem/val phase, EMD and production plan calls for Lockheed Martin Aeronautical Systems to construct forward fuselage and components, including cockpit, with avionics architecture and functional design, displays, controls, air data system, apertures, edges, tail assembly, landing gear, environmental control system and final assembly Boeing responsible for wings, fuselage aft sections, powerplant installation, auxiliary power generation system radar, infra-red search and track system (if fitted in production aircraft) and avionics ground prototype

Avionics flight tested in a modified Boeing 757 (N757A) (first flight 17 July 1989) Follow-on modifications to 757 will involve mounting representative F 22 wing section above forward fuselage to test conformal antennae plus radar in F-22-type nosecone. Boeing providing supporting simulators and training systems. LMTAS responsible for mid-fuselage and key systems including electrical, hydraulic, fuel, flight controls and armament also integrated electronic warfare system (INEWS), integrated communications/navigation/identification avionics (CNI) and INS subsystems Acquisition of former General Dynamics gave Lockheed Martin control of 67 5 per cent of programme; this involves 650 suppliers in 42 US states

EMD aircraft (c/n 4001) first flight planned Summer 1997; low-rate production decision in August 1998; first production delivery August 2000; high-rate production decision due March 2002

CURRENT VERSIONS (specific): Test programme to begin with first flight of initial EMD aircraft in May 1997, will subsequently extend over five years, involving total of nine EMD aircraft, plus two non-flying static and fatigue test articles and four preproduction verification (PPV) F-22s In excess of 2,900 test flights and approximately 5 500 hours expected to be accumulated at Edwards AFB Flight Test Center



Production (Configuration 645) Lockheed Martin F-22A with additional side view of two-seat F-22B
(Jane's/James Goulding)

1995

Clear division of test assignments will result in four aircraft being allocated to airframe structure evaluations, with remaining five concentrating on avionics test taskings. Use of separate instrumentation configurations for airframe and avionics-dedicated test articles provides back-up for almost every F-22 aircraft and offers potential to switch missions between test fleet if necessary. Specific tasks allocated to EMD aircraft currently anticipated to be as follows

Aircraft **4001** Initial flight set for May 1997 at Lockheed Martin's Marietta, Georgia facility. Transfer to Edwards likely after completion of about six sorties, with subsequent role being evaluation of flying qualities, flutter and loads characteristics

Aircraft **4002**: Maiden flight due late 1997 or early 1998. Tasks to include performance assessment plus stores separation and jettison as well as some electronic warfare and infra-red signature evaluations

Aircraft **4003**: Expected to enter flight test approximately 16 months after initial example (late in third quarter of 1998). Earmarked for loads testing plus crosswind landings, validation of arrester hook and weapons bay environment work

Aircraft **4004** Due to begin flight test in about April 1999. Allocated to avionics development, but also to be used for low observables evaluation including radar cross-section and infra-red signature assessments

Aircraft **4005**: Avionics development tasks, from mid-1999

Aircraft **4006**. Avionics development tasks, from about fourth quarter of 1999

Aircraft **4007**: First two-seat F-22B, with flight trials due to begin early 2000. Initial objectives are clearance of two-seat airframe configuration, embracing structural load assessment. Will subsequently be allocated to avionics development.

Aircraft **4008**: To join test effort about Spring 2000. Allocated to avionics development tasks and also destined to validate F-22 observability specification data

Aircraft **4009**: Second F-22B, due to fly about mid-2000. Avionics development and observability trials

PPV F-22A aircraft numbers **4010** to **4013** will be responsible for majority of military utility test tasks, including one allocated to hot and cold trials using climatic laboratory at Eglin AFB, Florida

CURRENT VERSIONS (general) **F-22A/B**: Single/two-seat production versions for USAF

NATF Projected US Navy variant to replace Grumman F-14 Tomcat, development abandoned

CUSTOMERS: US Air Force two YF-22 demonstrators planned 11 EMD aircraft reduced to nine (including two tandem-seat), plus one static and one fatigue test airframes in January 1993; original 648 production aircraft programme reduced to 442 in January 1994, latter to be funded from 1997, beginning with four preproduction verification (PPV) aircraft, followed by series production of 438, final delivery in 2011

F-22 PLANNED PROCUREMENT

Total		**391**	**60**	**451**

COSTS: $818 million contracts to both ATF teams, October 1986, for 54 month studies, each airframe team investing own funds (Lockheed/Boeing/GD team investment totalled $675 million), each engine contractor, about $50 million, total $3,800 million spent by USAF on both ATFs up to April 1991; programme cost for 648 aircraft was $13,000 million for development (1991 base year) and $52,500 million for production (1994 then year), programme acquisition cost $162 million (1994), fly-away cost $61.2 million at 1991 prices. EMD contract, August 1991, comprised $9,550 million for 11 (subsequently nine) airframes, plus $1,375 million to P&W for 33 (later amended to 27) engines. FY94 US Congressional appropriation of $2,100 million was $163 million below expectations, resulting in slippage of critical design review and first flight. Similarly, FY95 appropriation of $2,300 million was $100 million below expected figure, leading to further delay in maiden flight and on 9 December 1994, Defense Secretary William Perry announced 10 per cent cut (approximately $210 million) in FY96 budget for F-22 programme

Lockheed Martin YF-22 prototype during trials

1995

DESIGN FEATURES (F-22) Low observables configuration and construction; stealth/agility trade-off decided by design team; target thrust/weight ratio 1.4 (achieved ratio possibly 1.1 at T-O weight), greatly improved reliability and maintainability for high sortie-generation rates, including under 20 minute combat turnround time; enhanced survivability through 'first-look first-kill' capability; short T-O and landing distances; supersonic cruise and manoeuvring (supercruise) in region of Mach 1.5 without afterburning, internal weapons storage and generous internal fuel, conformal sensors

Wing and horizontal tail leading-edge sweep 42° (both 48° on YF-22), trailing-edge 17° forward, increased to 42° outboard of ailerons (straight trailing-edge on YF-22); all-moving five-edged horizontal tail (four-edged elements on YF-22). Vertical tail surfaces (18 per cent larger on YF-22) canted outwards at 28°; leading- and trailing-edge sweep 22.9°, biconvex aerofoil. F-22's wing and stabilator areas same as YF-22, despite re-profiling. F-22 wing taper ratio 0.169, leading-edge anhedral 3.25°; root twist 0.5°, tip twist –3.1°, thickness/chord ratio 5.92 at root, 4.29 at tip, custom-designed aerofoil. Horizontal tails have no dihedral or twist

Sidewinder AAMs stored internally in sides of intake ducts, with AMRAAMs, Sidewinders or JDAM 1000 precision guided munitions in ventral weapons bay. Diamond-shaped cheek air intakes with highly contoured air ducts, intakes approximately 0.46 m (1 ft 6 in) farther forward on YF-22, single-axis thrust vectoring included on PW119, but specified performance achievable without

Additional production F-22 changes from YF-22 include decreased wingroot thickness, modified camber and twist (increasing anhedral), all 48° plan angles changed to 42°; blunter nose, wheelbase reduced by approximately 0.46 m (1 ft 6 in); wheel track reduced by same; revised undercarriage legs and doors; constant chord ailerons, re-profiled cockpit canopy; dorsal airbrake deleted

FLYING CONTROLS Triplex, digital, fly-by-wire system with sidestick control, using line-replaceable electronic modules to enhance maintainability, thrust vectoring utilised to augment aerodynamic pitch control power and provide firm control even at low speeds and high angles of attack. Technology and control concepts demonstrated throughout the flight envelope during Prototype Air Vehicle test programme, including flight at AoA greater than 60°, wind tunnel testing with models of production aircraft successfully attained AoAs greater than 85°

Ailerons and flaperons occupy almost entire wing trailing-edge; full-span leading-edge flaps, conventional rudders in vertical tail surfaces; slab taileron surfaces, air brake not included (differential rudder for speed control) sidestick controller. Control surface authorities: leading-edge flaperons 3° up/35° down (5°/37° overtravel), trailing-edge flaperons 20° up/40° down; aileron ±20°, horizontal tail 30° up/25° down, rudder ±30°, speedbrake (rudder) 30° out

STRUCTURE Largely metal (aluminium/titanium/steel 33/24/5 per cent) in prototypes. Extensive use of thermoset and thermoplastic composite structures; combined total of between 27 and 28 per cent in production aircraft

LANDING GEAR Menasco retractable tricycle type, stressed for no-flare landings of up to 3.05 m (10 ft)/s. Nosewheel tyre 23.5 × 7.5-10; mainwheel tyres 37 × 11.5-18

POWER PLANT: Two 155 kN (35,000 lb st) class Pratt & Whitney F119-PW-100 advanced technology reheated engines reportedly developed from F100 turbofan. Two-dimensional convergent/divergent exhaust nozzles with thrust vectoring for enhanced performance and manoeuvrability

ACCOMMODATION Pilot only on zero/zero modified ACES II ejection seat and wearing tactical life support system with improved g-suits and pressure breathing. Pilot's view over nose is –15°

SYSTEMS. Include Normalair-Garrett OBOGS, AlliedSignal APU and Smiths 270 V DC electrical distribution system

AVIONICS. Final integration, as well as integration of entire suite with non-avionics systems, undertaken at F-22 Avionics Integration Laboratory, Seattle, Washington, airborne integration supported by Boeing 757 flying testbed

Radar Westinghouse/Texas Instruments AN/APG-77 radar (air-to-air and navigation)

Flight: TRW communications-navigation-identification subsystem, Litton inertial reference system

Instrumentation Fused situational awareness information is displayed to pilot via four Sanders/Kaiser colour liquid crystal multifunction displays (MFD); MFD bezel buttons provide pilot format control

Mission: Hughes common integrated processor (CIP); CIP also contains mission software that uses tailorable mission planning data for sensor emitter management and multisensor fusion, mission-specific information delivered to system through Fairchild data transfer equipment that also contains mass storage for default data and air vehicle operational flight programme, stores management system. General purpose processing capacity of CIP is rated at more than 700 million instructions per second (Mips) with growth to 2,000 Mips, signal processing capacity greater than 20 billion operations per second (Bops) with expansion capability to 50 Bops; CIP contains more than 300 Mbytes of memory with growth potential to 650 Mbytes

Self-defence. Sanders/General Electric AN/ALR-94 electronic warfare (RF warning and countermeasures) subsystem

ARMAMENT. Internal long-barrel M61A2 20 mm cannon with hinged muzzle cover and 480-round magazine capacity (production F-22). Three internal bays (see Design Features) for AIM-9 Sidewinder (one in each side bay) and/or four AIM-120A or six AIM-120C AMRAAM AAMs and/or JDAM 1000 PGMs on hydraulic weapon racks in main weapons bay. Four underwing stores stations at 317 mm (125 in) and 442 mm (174 in) from centreline of fuselage capable of carrying 2,268 kg (5,000 lb) each

DIMENSIONS, EXTERNAL:

Wing span: YF-22	13.11 m (43 ft 0 in)
F-22	13.56 m (44 ft 6 in)
Wing chord	
at root (theoretical)	9.85 m (32 ft 3¾ in)
at tip (reference)	1.66 m (5 ft 5½ in)
at tip (actual)	1.14 m (3 ft 9 in)
Wing aspect ratio: YF-22	2.20
F-22	2.36
Length overall YF-22	19.56 m (64 ft 2 in)
F-22	18.92 m (62 ft 1 in)
Height overall YF-22	5.36 m (17 ft 7 in)
F-22	5.00 m (16 ft 5 in)
Tail span: horizontal surfaces	8.84 m (29 ft 0 in)
vertical surfaces	5.97 m (19 ft 7 in)

Wheelbase	6.04 m (19 ft 9¾ in)
Weapon bay ground clearance	0.94 m (3 ft 1 in)
AREAS:	
Wings, gross: YF-22 and F-22	78.0 m² (840.0 sq ft)
Leading-edge flaps (total)	4.76 m² (51.2 sq ft)
Flaperons (total)	5.10 m² (55.0 sq ft)
Ailerons (total)	1.98 m² (21.4 sq ft)
Vertical tails (total): YF-22	20.25 m² (218.0 sq ft)
F-22	16.54 m² (178.0 sq ft)
Rudders/speedbrakes (total): F-22	5.09 m² (54.8 sq ft)
Stabilators (total):	
YF-22 and F-22	12.63 m² (136.0 sq ft)
WEIGHTS AND LOADINGS (estimated):	
Weight empty: YF-22	over 13,608 kg (30,000 lb)
F-22, target	14,365 kg (31,670 lb)
Max T-O weight: F-22	almost 27,216 kg (60,000 lb)
PERFORMANCE (YF-22, demonstrated):	
Max level speed: supercruise	Mach 1.58
with afterburning	Mach 1.7 at 9,150 m (30,000 ft)
Ceiling	15,240 m (50,000 ft)
g limit	+7.9
PERFORMANCE (F-22A, design target, estimated):	
Max level speed at S/L	800 kts (1,482 km/h, 921 mph)
g limit	+9

UPDATED

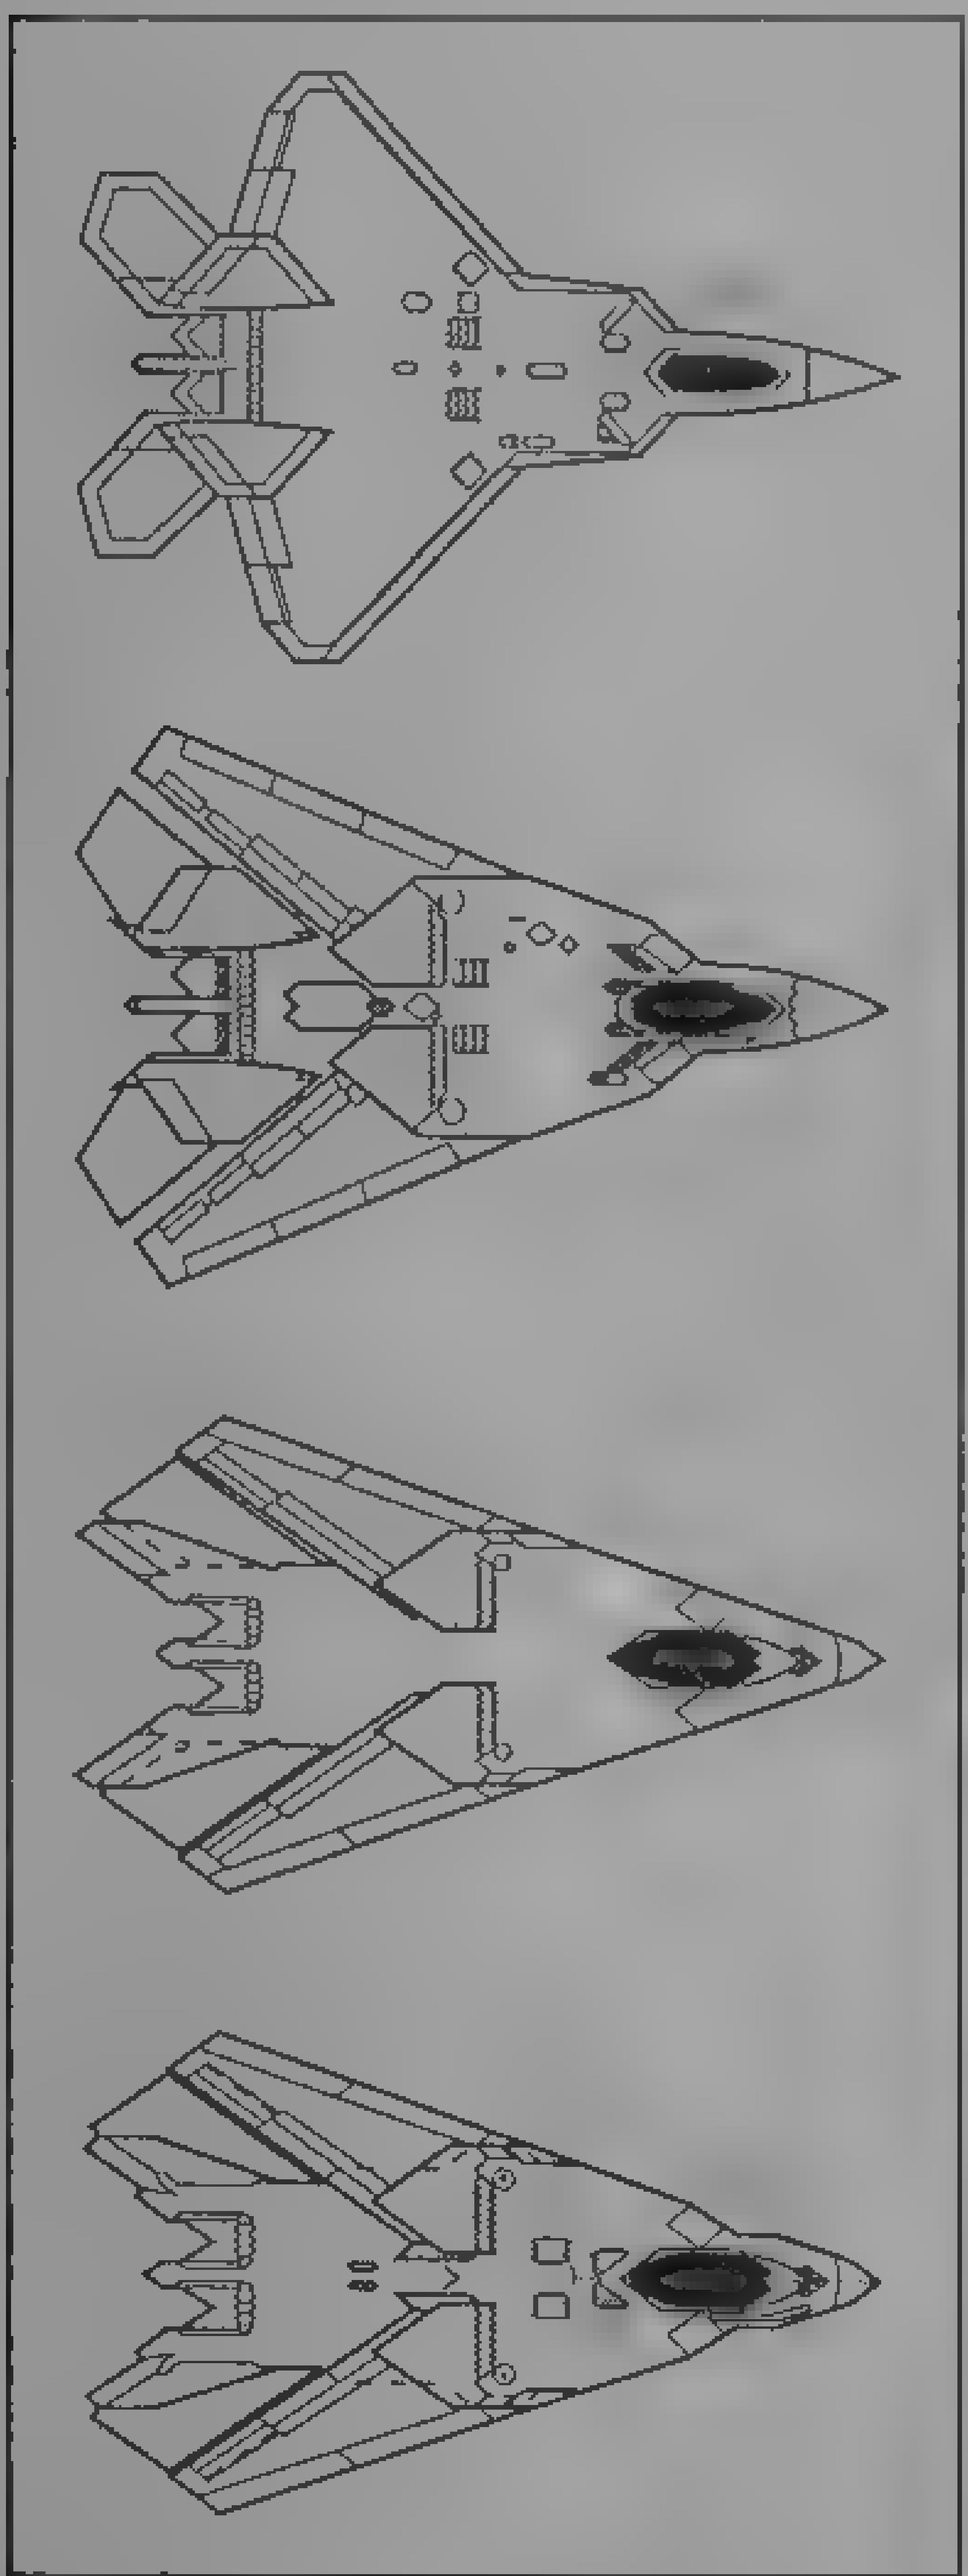
Lockheed Martin YF-22 prototype showing thrust-vectoring nozzles

1994

LOCKHEED MARTIN/BOEING/P&W F-22 NAVAL VARIANT ('A/F-22X')

TYPE: Two-seat naval strike/attack fighter.

PROGRAMME: Private venture by Lockheed ASC/Boeing/Lockheed Fort Worth, derived from F-22/NATF/AF-X contracts. NATF and AF-X cancelled and Lockheed's concept exploration and development contract (in parallel with six rival companies and consortia) expired on 17 December 1993; Lockheed further refined design to A/F-22X as possible Grumman A-6 Intruder replacement; to await USN decision on follow-on to A/F-X.



Derivation of Lockheed's 'A/F-22X' (bottom) from F-22A (top) via NATF/A and A-X (A/F-X)

1994

DESIGN FEATURES: Incorporates variable geometry and thrust vectoring, similar in size to Grumman F-14 Tomcat; folded size slightly larger than McDonnell Douglas F/A-18 Hornet; low-observables concept with four internal weapons bays. Almost 20 per cent parts commonality with F-22; 50 per cent technology commonality. Leading-edge sweepback 16° (fully forward) to 71° (fully swept); oversweep for carrier stowage, 77°; horizontal tail sweepback, 55°; vertical tail sweepback, 60°; vertical tails divergence, 60°.

POWER PLANT: Two 112.5 kN (25,300 lb st) Pratt & Whitney PW7000 turbofans (developed from F-22's F119) with thrust vectoring.

ARMAMENT: Internal stowage for weapons up to size of McDonnell Douglas AGM-84 Harpoon anti-ship missile.

DIMENSIONS, EXTERNAL:	
Wing span: fully forward	20.62 m (67 ft 8 in)
fully swept	11.33 m (37 ft 2 in)
Length overall	18.80 m (61 ft 8 in)
Height overall	4.52 m (14 ft 10 in)

UPDATED

LOCKHEED MARTIN/AERMACCHI/ROLLS-ROYCE L839 T-BIRD II

TYPE: Jet primary trainer (unsuccessful JPATS candidate); modified Aermacchi MB 339A.

PROGRAMME: Lockheed received MB 339A as demonstrator May 1992, cylindrical wingtip fuel tanks as on MB-339C and small wing fences added, engine hushkit being developed by Aermacchi and Rolls-Royce, negligible performance difference between T-Bird II and MB-339A with Viper 680-582 engine and hushkit fitted; Martin-Baker Mk 16L zero/zero seats; Textron Aerostructures selected as manufacturing partner, mid-1993. Completed joint USAF/USN evaluation in September 1994. Further details in Aermacchi entry in Italian section.

UPDATED

LOCKHEED MARTIN 185/285/685/785 ORION

US Navy designation: P-3

Canadian Forces designations: CP-140 Aurora/CP-140A Arcturus

TYPE: Land-based maritime patrol and ASW aircraft.

PROGRAMME: Lockheed won competition for off-the-shelf ASW aircraft 1958; first flight aerodynamic prototype 19 August 1958; first flight fully equipped YP-3A (YP3V-1) 25 November 1959; details of initial production P-3A and WP-3A in 1978-79 *Jane's*, details of P-3B and EP-3B in 1983-84 *Jane's*. P-3C produced from 1969. P-3A/B are Model 185, P-3C is Model 285. Total 641 P-3s built in

Artist's impression of 'A/F-22X' proposal

1994

Lockheed Martin/Aermacchi MB-339 evaluated in JPATS competition

1995

Grey camouflaged Lockheed Martin P-3C-IIIR of Jacksonville based VP-5 *(Paul Jackson)*

1995

California (Burbank, then Palmdale), last delivered (to Canada) May 1991, production line reopened at Marietta, Georgia, August 1991, first P-3C from Marietta (for Korea) rolled out 28 June 1994, first flight October 1994, delivery March 1995. Following cancellation of P-7, USN, Germany, UK and others considering upgraded Orion.

In near term, USN to implement Anti-Surface Warfare Improvement Program (AIP) to enhance operational capability. Loral Electronic Systems prime contractor for $115 million project and will supply information processing and display system with upgrade package including fleet-wide standardisation on Texas Instruments APS-137 radar and addition of synthetic-aperture ground imaging capability. Improved Loral AN/ALR-66 ESM also to be fitted, plus long-range electro-optical sensor and compatibility with Hughes AGM-65D Maverick ASM. Lockheed Martin Aircraft Services responsible for aircraft integration.

Structural life enhancement of older Orions addressed by USN's Sustained Readiness Program (SRP), won by E-Systems/Northrop Grumman team which was awarded initial $203 million contract covering 68 P-3Cs in late 1994. Lockheed also to update radio fit under Communications Improvement Program (CIP). Previously announced USN intent to retain 247 P-3Cs until 2015 evidently threatened by reductions expected to result in front-line force of eight squadrons with 12 aircraft each, plus slightly smaller Reserve component.

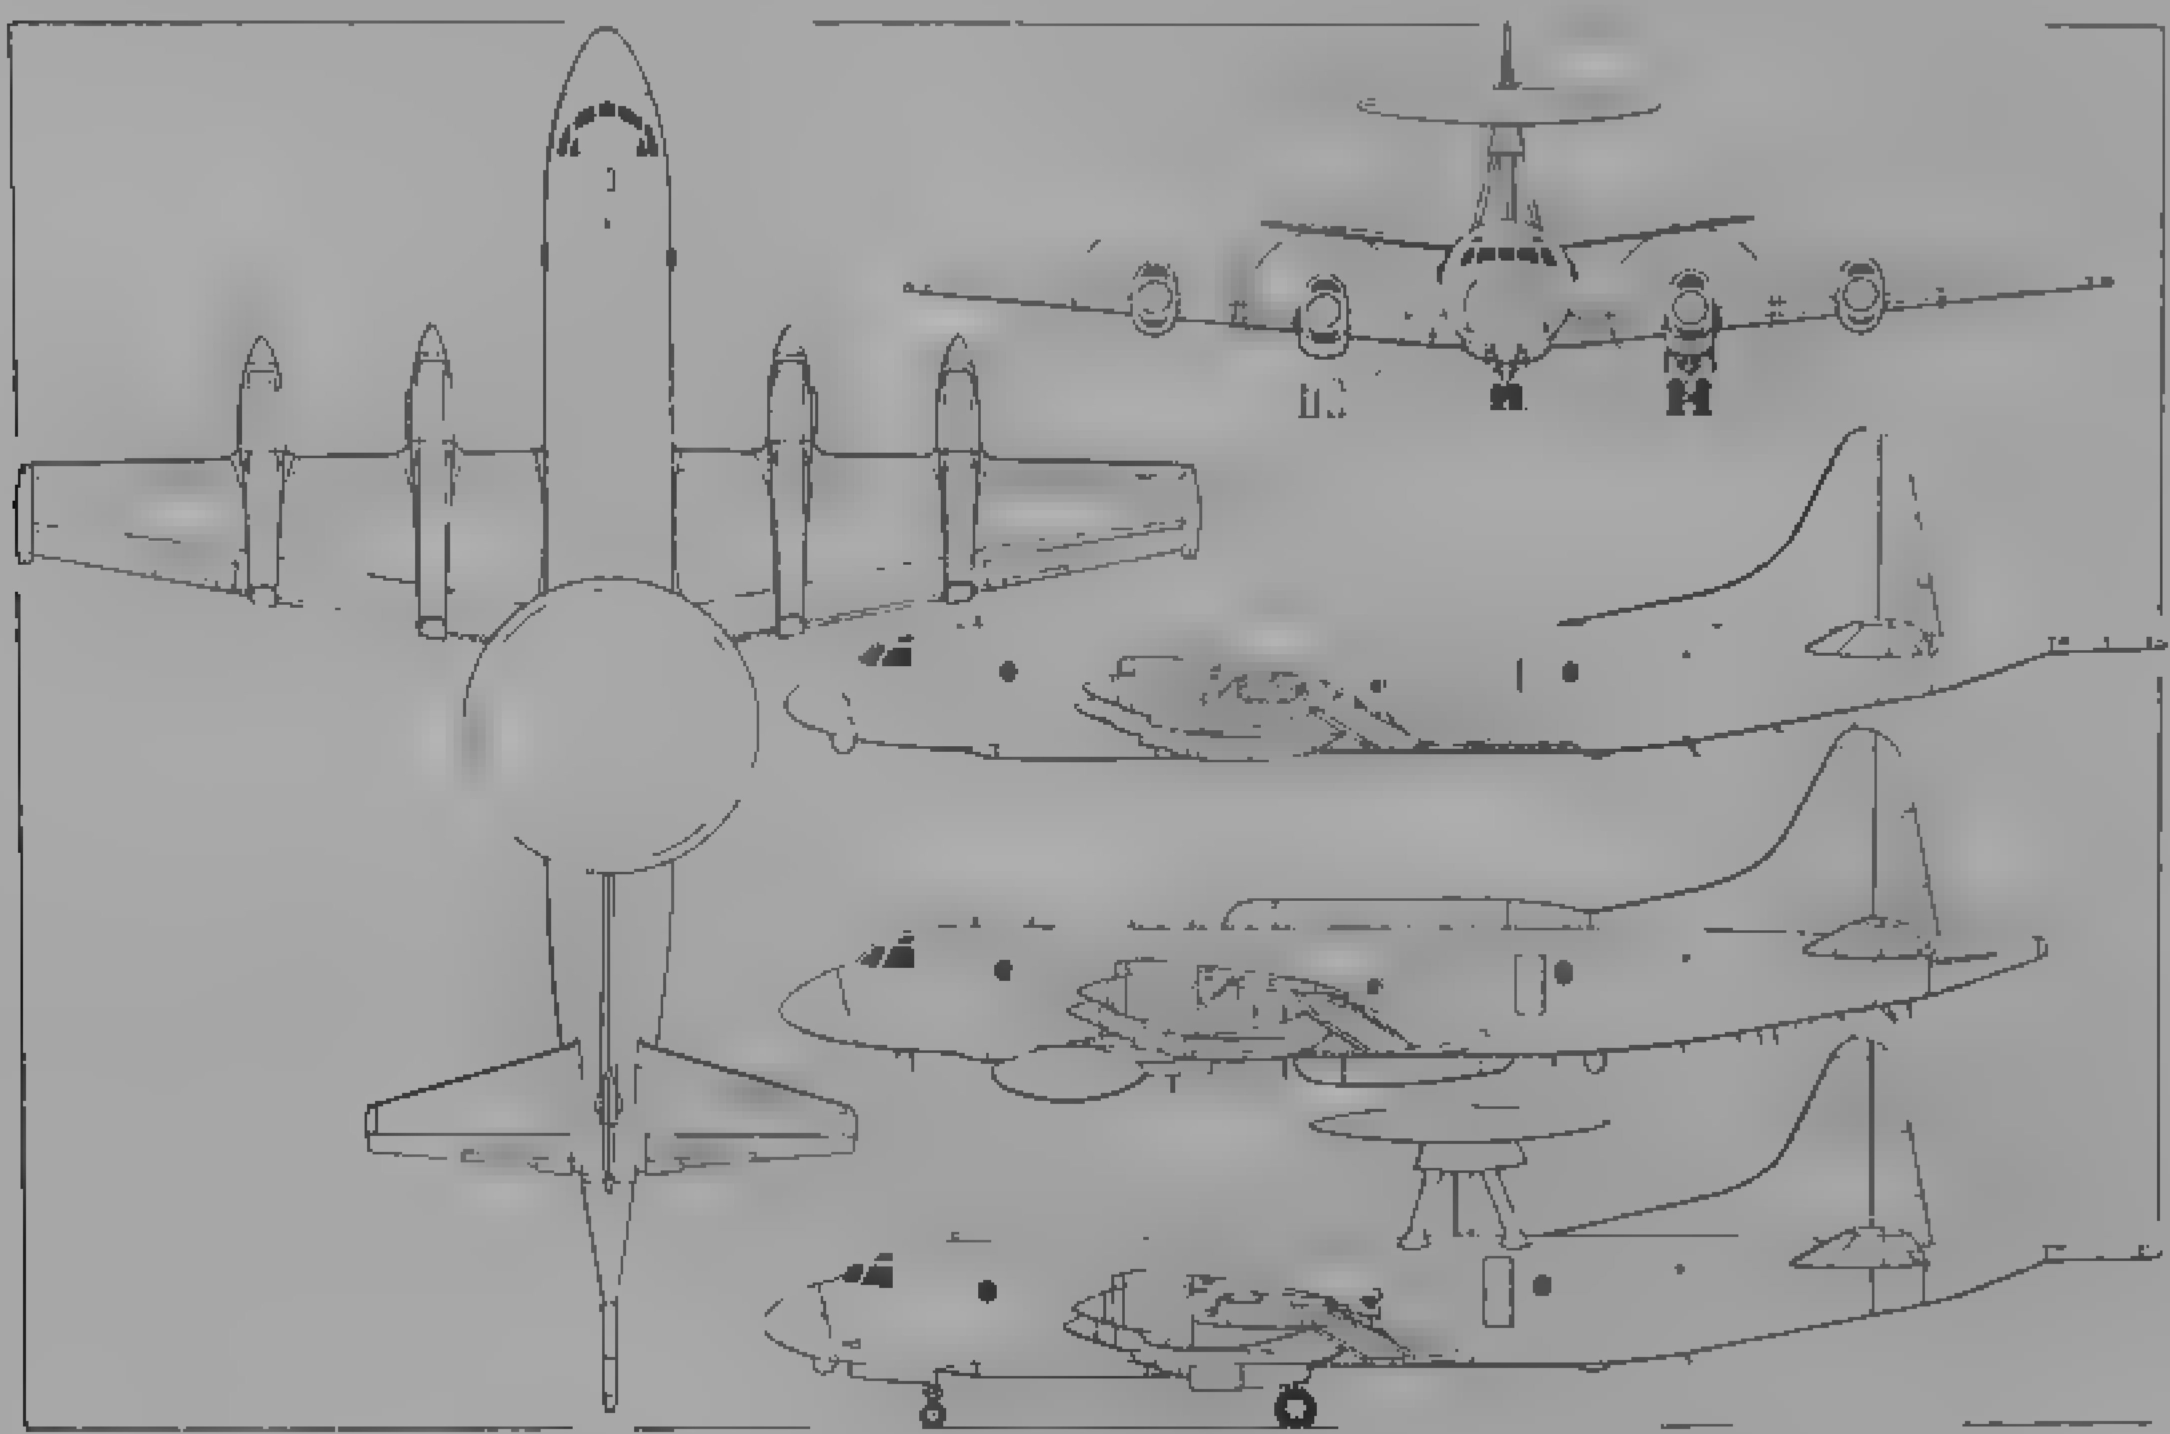
Production of new Orions (temporarily) ends in 1995, following final Korean aircraft. In longer term, Lockheed offering upgraded Orion 2000 (see below) to UK as Nimrod replacement for RAF; interest also from US Navy, sales prospects in Middle East and Pacific Rim.

CURRENT VERSIONS: **P-3C**: First flight 18 September 1968, in service 1969, introduced A-NEW system based on Univac computer integrating all ASW information for retrieval, display and transmission of tactical data without routine log-keeping. USN received 118 of P-3C Baseline variant.

P-3C Update I: (Model 285A, Baseline P-3Cs followed from January 1975 by 31 P-3C Update I; new avionics and software included magnetic drum to increase computer memory sevenfold, new versatile computer language, Omega navigation, improved directional acoustic frequency analysis and recording (DIFAR) processing sensitivity, AN/ASA-66 tactical displays for two sensor stations, and improved magnetic tape transport.

Update II: (Model 285A) Applied to 45 aircraft built from August 1977; added infra-red detection system (IRDS) and sonobuoy reference system (SRS), Harpoon missile system incorporated from August 1977. Further 36 USN P-3Cs as interim **Update II.5** of 1981 including more reliable navigation and communication systems, IACS submarine communications link, MAD compensation group adaptor; standardised wing pylons; and improved fuel tank vents.

Update III: (Model 285G for USN) Deliveries started May 1984, applied to last 36 USN P-3Cs, includes new IBM Proteus acoustic processor (doubling sonobuoy handling capacity), new sonobuoy receiver replacing DIFAR, improved APU, and higher capacity environmental control system. Baseline P-3C to III retrofit kit first installed in P-3C of VP-31 in 1987 (new designation **IIIR**), fitting of 18 more kits started June 1987; USN planned force of 138 Update III/IIIR aircraft, following cancellation of Update IV, further 109 may be added, giving standard fleet of 247 P-3Cs by 2006. Pakistan Orions, basically Update IIIs, have certain systems replaced by export-standard equipment and thus known as **II.75** versions. *Detailed description applies to P-3C/Update III except where indicated.*



Lockheed P-3 AEW&C, with added side views of EP-3E Aries II (centre) and P-3C Orion (top) *(Jane's/Dennis Punnett)*

1993

Update IV: Programme cancelled by US Navy on 14 October 1992, but was in full-scale development by Boeing Defense and Space Group for installation from early 1990s; prototype conversion (160292) flew December 1991; equipment stripped out and prototype returned to normal use, originally intended for P-7A LRAACA, all 109 P-3C Update I, II and II.5 were to be retrofitted.

Outlaw Hunter/OASIS: Single P-3C (159507) of VP-19 modified for 1991 Gulf War by USN and Tiburon Systems under Outlaw Hunter programme as over-the-horizon (OTH) targeting platform with ability to maintain battle area overall plot for battle group commanders. Two further P-3Cs (157329, 161011), designated OASIS I and II (OTH Airborne Sensor Information System) modified for joint operation.

AP-3C: Upgrade of Australian P-3C/Ws, involving 18 aircraft to be refurbished with new radar, com/nav systems plus new acoustic processor and data management system. Joint US/Australian venture with E-Systems of Dallas, Texas as prime contractor, handling development, engineering, prototype and test phases. Aerospace Technologies to modify remaining 17 Orions at Avalon and also responsible for logistics support management. AWA Defence Industries to lead development of integration and test and training centre in Australia and also develop operational mission simulator software. Honeywell to undertake navigation system upgrades, cockpit modifications and weapon systems maintenance training. First modified aircraft due for return to RAAF in late 1997 and last in 2000.

NP-3C: Proposed Kawasaki built calibration aircraft, cancelled when role transferred to UP-3C.

UP-3C: Kawasaki built service trials and training aircraft; one for JMSDF funded FY91, first flight (9151) late 1994.

UP-3D: Kawasaki ECM trainer for JMSDF, two ordered from FY94 and FY95 funds.

EP-3: Elint version of P-3C developed by Kawasaki (which see) for JMSDF (first flight October 1990), two aircraft (9171-9172) ordered FY87 and FY88, delivered March and November 1991. Further two ordered FY93 and FY95 from JMSDF requirement for five.

EP-3E Aries II: Ten P-3As and two EP-3Bs converted to EP-3E Aries I or similar 'Deepwell' (seven) and 'Batrack' (EP-3Bs) standards; radars in large canoe-shaped fairings above and below fuselage and ventral radome forward of wing, avionics believed to include GTE-Sylvania AN/ALR-60 communications intercept and analysis system, Raytheon AN/ALQ-76 noise jamming pod, Loral AN/ALQ-78 automatic ESM system, Magnavox AN/ALQ-108 IFF jammer, Sanders AN/ALR-132 infra-red jammer, ARGO Systems AN/ALR-52 instantaneous frequency measuring equipment, Texas Instruments AN/APS-115 frequency agile search radar, Hughes AN/AAR-37 infra-red detector, Loral AN/ASA-66 tactical display, Cardion AN/ASA-69 scan converter and Honeywell AN/ASQ-114 computer.

Twelve low-houred P-3Cs selected to replace EP-3E Aries I with USN special reconnaissance squadrons VQ-1 at Agana NAS, Guam, and VQ-2 at Rota, Spain, equipment transferred from original EP-3E but moderate upgrade includes faster processing and standardisation of previous two configurations within Aries I and addition to wingtips of IBM AN/ALR-76 ESM/RWR in pods, first Aries II conversion (156507) completed November 1988, to Patuxent River test centre 21 July 1990; first delivery (157320) to VQ-2 29 June 1991, initial five conversions by Lockheed Aircraft Service Company (now LMAS,

Two 'Slicks' and a 'Dome'— P-3A(CS) and P-3 AEW&C, respectively — of the US Customs Service

1993

Aeromod Center at Greenville, South Carolina, but contract then reassigned to Naval Air Depot, Alameda, 31 July 1991 before being suspended in October 1992 with seven conversions incomplete

CP 140A Arcturus: Three P-3s for Canadian Forces, no ASW equipment, for environmental and fishery patrol replacing CP-121 Trackers; equipment includes Texas Instruments AN/APS-134 Plus radar, Honeywell AN/APN-194 RAWS, Bendix/King AN/ASW 502 AFCS, Canadian Marconi AN/APN 510 Doppler radar, Litton LN 33 INS and a Leigh AN/ASH-502 flight recorder Delivered to IMP Group at Halifax, Nova Scotia, for completion, final departure from Palmdale, 30 May 1991 delivery to CF December 1992 (140119) to February 1993 based at Greenwood

P-3 AEW&C: Airborne early warning and control, first flight of prototype (N91LC) converted from Australian P-3B and fitted with empty Randtron AN/APA-171 7 32 m (24 ft) diameter rotodome 14 June 1984, testing of installed General Electric AN/APS-125 radar began 1988 Proposed military version would include C[3] system to receive, process and transmit tactical information on HF, UHF, VHF and Satcom channels, AN/ARC-187 satellite communication system, and Collins five-tube colour EFIS 86B flight instruments General Electric AN/APS 145 radar available from late 1989

First order from US Customs May 1987 for one plus option for three, first flight US Customs aircraft with AN/APS-125 radar 8 April 1988 aircraft (N145CS ex N91LC) called *Blue Eagle* delivered to NAS Corpus Christi, Texas 17 June 1988 and used for anti-narcotics patrol over Caribbean and Gulf of Mexico, retrofitted with AN/APS-138, second ex-RAAF P-3 AEW&C (N146CS) *Blue Eagle II*, fitted with improved AN/APS-138 radar, delivered to US Customs June 1989, third and fourth (N147CS and N148CS, both ex-USN P-3Bs) delivered 26 June 1992 and 26 May 1993 Requirement exists for further two Additional systems include CDC AN/AYK-14 computer with Honeywell 160LM array processor, dual Sanders Milgraphics touch-sensitive colour display screens for digital target data, Hazeltine AN/TPX-54 IFF, dual AN/ARC-182 VHF/UHF com radios, dual AN/ARC-207 HF and dual Wulfsberg VHF/UHF-FM radios. Type nickname P 3 Dome

P-3 Orion II: Marketing abandoned mid-1993. Proposed P-3C upgrade to replace cancelled P-7A Update IV avionics plus new wings and engines (Allison T406 or GE T407) and, possibly HUDs and flat-panel cockpit displays having high commonality with Hercules II

EP-3J Orion: Electronic warfare trainer based on conversion of P-3B with AN/USQ-113 communications intrusion and deception system, plus AN/ALQ 167, AN/ALQ-170 and AN/AST-4/6 pods. Modified by Chrysler Technologies Service with VAQ-33 squadron at Key West; first delivery 17 March 1992, two aircraft (152719 and 152745), transferred to VP 66 in 1993 Planned Phase 2 modifications to include AN/ALT 40(V) radar jammer

P-3T/UP-3T: Conversions of USN P-3A for Thailand five airframes purchased 1992, two for modification to P-3T, one to UP-3T, and two for spares breakdown. P-3T modifications at NAS Jacksonville, Florida. ASW configuration similar to TacNavMod, with AN/AWG-19 HACLCS Harpoon control system. UP-3T utility aircraft retains some sensor capability, including SENTAC, ESM, AN/AAS-36 IR detection and TO-441/A tactical computer

P-3W: Australian P 3Cs have AQS 901 processing system and Barra sonobuoys in place of Proteus and AN/AQA-7 equipment of USN P-3C Upgrade of 10 with Elta ESM equipment (replacing AN/ALQ-78) begun by AWADI in Australia, 1991; other upgrades planned P-3W is local designation of P 3C-II 5, earlier P-3C IIs retain original designation See AP 3C entry

First Marietta built Orion is also first P 3C for Korea

1995

Orion 2000: Under development with GEC Marconi and Hunting to meet RAF requirement for BAe Nimrod replacement, draws on technology developed for C-130J Hercules (which see) including engines and propellers and on interior developed for CP 140 Aurora, although with high proportion of UK avionics. Improved colour displays, increased sonobuoy stowage and ergonomic improvements to reduce crew fatigue, two-crew flight deck with observer's seat

CUSTOMERS: US Navy, 552, comprising one YP-3, 157 P-3As of which 38 modified to UP 3A, seven to EP 3A, six to RP-3A, five to VP-3A (three via WP-3A), 12 to TP-3A two to EP-3B and 10 to EP-3E, 124 P-3Bs one converted to NP-3B and one under conversion in 1991 to RP-3B, 267 P-3Cs, 12 intended for EP-3E-II conversion, one RP-3D two National Oceanographic and Atmospheric Administration WP 3Ds Final USN P 3C (163295) delivered 17 April 1990. Status of USN Orion force after 1995

Revised crew positions in proposed Orion 2000

1995

disbandments shown in table, new total of 13 regular ASW squadrons. Last Reserve P-3A ASW mission 22 March 1990 (152158 of VP-64); last regular USN P-3B ASW mission 11 September 1990 (VP-22). P-3B retired by Reserve in 1994 but few special mission aircraft still active. Total of 14 test dedicated aircraft of Naval Air Warfare Center given common NP-3D designation in 1994 (previously RP-3A, UP-3A, EP-3B, RP-3D).

Total 90 P-3s from Californian production for export to Australia (10 Model 185B P-3Bs, one transferred from US Navy; 10 P-3C IIs and 10 P-3C-II.5s, both Model 285D); six P-3Bs transferred to Portugal as P-3P, one to New Zealand, two to US Customs (after conversion to AEW&C); Canada (18 CP-140 Auroras, three CP-140A Arcturus); Iran (six Model 685A P-3Fs); Japan (three Model 785A P-3C-II.5s from Lockheed, Kawasaki 66 P-3C-II.5s and 27 P-3C IIIs, including two EP-3s and one UP-3C, delivered by 31 March 1994, with five more P-3C-IIIs, one UP-3C, two UP-3Ds and two EP-3s to follow; P-3C-II.5 to be updated); Netherlands (13 Model 285E P-3C-II.5s); New Zealand (five P-3Bs updated to P-3Ks, plus one ex-Australian P-3K); Norway (five Model 185C P-3Bs, two transferred from US Navy, and four P-3C-IIIs, five P-3Bs transferred to Spain and two converted to P-3N, last conversion re-delivered 21 June 1992) and Pakistan (three P-3C Update II.75s, crew training completed December 1991, aircraft embargoed by US government and stored). Marietta production initially for South Korea (eight P-3C Update IIIs with AN/APS-134 radar, first flight, by 165098, October 1994, last delivery September 1995). Four USN P-3As transferred to US Customs as UP-3As (alternative designation P-3A(CS) 'Slick') fitted with IR detection system and AN/APG-63 lookdown radar. Chile obtained two P-3As and six UP-3As from USN, first delivery 3 March 1993, no sensor upgrade planned.

COSTS: $600 million for eight P-3Cs for South Korea 1990; $840 million (1990) including engines, training and spares. C$159 million for three semi-complete CP-140A airframes, plus C$59 million for radar, spares, logistics and project management.

DESIGN FEATURES: Pressurised cabin. Wing section NACA 0014 (modified) at root, NACA 0012 (modified) at tip; dihedral 6°, incidence 3° at root, 0° 30′ at tip.

FLYING CONTROLS: Hydraulically boosted ailerons, elevators and rudder; fixed tailplane. Lockheed-Fowler trailing-edge flaps.

STRUCTURE: Conventional aluminium alloy with fail-safe box beam wing.

LANDING GEAR: Hydraulically retractable tricycle type, with twin wheels on each unit. All units retract forward, main wheels into inner engine nacelles. Oleo-pneumatic shock-absorbers. Mainwheels have size 40-14 type VII 26 ply tubeless tyres, pressure 7.58 to 12.41 bars (110 to 180 lb/sq in) at 36,287 kg (80,000 lb) T-O weight, 12.41 bars (180 lb/sq in) at 57,606 kg (127,000 lb) T-O weight, 13.10 bars (190 lb/sq in) at 61,235 kg (135,000 lb) maximum normal T-O weight. Nosewheels have size 28-7.7 type VII tubeless tyres, pressure 10.34 bars (150 lb/sq in). Hydraulic brakes. No anti-skid units.

POWER PLANT: Four 3,661 kW (4,910 ehp) Allison T56-A-14 turboprops, each driving a Hamilton Standard 54H60-77 four-blade constant-speed propeller. Fuel in one tank in fuselage and four wing integral tanks, with total usable capacity of 34,826 litres (9,200 US gallons; 7,660 Imp gallons). Four overwing gravity fuelling points and central pressure refuelling point. Oil capacity (minimum usable) 111 litres (29.4 US gallons; 24.5 Imp gallons) in four tanks.

ACCOMMODATION: Normal 10-man crew: pilot, co-pilot and flight engineer on flight deck, tactical co-ordinator, nav/com operator, two acoustic sensor operators, radar/ESM/IRDS/MAD operator, ordnance man and flight technician, up to 11 additional relief crew or passengers. Flight deck has wide vision windows, and circular windows for observers are provided fore and aft in the main cabin, each bulged to give 180° view. Main cabin is fitted out with five-man tactical compartment (containing advanced electronic, magnetic and sonic detection equipment), an all-electric galley and large crew rest area.

SYSTEMS: Air conditioning and pressurisation system supplied by two engine-driven compressors. Pressure differential 0.37 bar (5.4 lb/sq in). Hydraulic system, pressure 207 bars (3,000 lb/sq in), for flaps, control surface boosters, landing gear actuation, brakes and bomb bay doors. Three hydraulic pumps, each rated at 30.3 litres (8.0 US gallons; 6.7 Imp gallons)/min at 0 to 152 bars (0 to 2,200 lb/sq in); 22.7 litres (6.0 US gallons; 5.0 Imp gallons)/min at 205 bars (2,975 lb/sq in). Class one non-separated air/oil reservoir, Type B pressurised. Electrical system utilises three 60 kVA generators for 120/208 V 400 Hz AC supply. 24 V DC supply. Integral APU with 60 kVA generator for ground air conditioning, electrical supply and engine starting. Anti-icing by bleed air on wing and electrical heating on tailplane and fin. Electrically de-iced propeller spinners.

AVIONICS: *Comms*: Two AN/ARC-161 HF transceivers, two AN/ARC-143 UHF transceivers, AN/ARC-101 VHF receiver/transmitter, AN/AIC-22 interphone set and AN/APX-72 IFF transponder.

Radar: AN/APS-115 (360° coverage).

Flight: Two LTN-72 inertial navigation systems, AN/APN-227 Doppler; two VIR-31 VOR/LOC/GS/MB receivers, AN/ARN-83 LF-ADF, AN/ARA-50 UHF direction finder, AN/ARN-81 Loran A and C, AN/ARN-118 Tacan, AN/APN-194 radar altimeter, two AN/APQ-107 radar altimeter warning systems, A/A24G-9 true airspeed computer, AN/ASW-31 automatic flight control system and glide slope indicator. P-3Cs delivered from 1975 have Omega navigation.

Instrumentation: AN/AJN-15 flight director indicator for tactical directions. HSI for long range flight directions. AN/ASA-70 tactical display. AN/ASA-66 pilot's display. AN/ASA-70 radar display, two auxiliary readout (computer stored data) displays.

Mission: Core system of P-3C Update III is AN/UYS-1 Proteus. AN/ASQ-114 general purpose digital computer. AN/AYA-8 data processing equipment and computer-controlled display systems; on-top position indicator. ASW equipment includes two AN/ARR-72 sonar receivers, replaced in Update III by AN/ARR-78, two AN/AQA-7(V)8 DIFAR (directional acoustic frequency analysis and recording) sonobuoy indicator sets, hyperbolic fix unit, acoustic source signal generator; time code generator; AN/AQH-4(V) sonar tape recorder, AN/ASQ-81 MAD; AN/ASA-64 submarine anomaly detector, AN/ASA-65 magnetic compensator; AN/ASA-69 radar scan converter, undernose AN/AAS-36 IRDS, KA-74 forward computer-assisted camera, KB-18A automatic strike assessment camera with horizon-to-horizon coverage, RO-308 bathythermograph recorder, AN/AGC-6 teletype and high-speed printer, HF and UHF secure communications units, AN/ACQ-5 datalink communication set, AN/APX-76 SIF interrogator.

P-3Cs delivered from 1975 have AN/ASA-66 tactical display for the sonar operators; updated avionics/electronics package featuring addition of an extra 393K memory drum and fourth logic unit, new magnetic tape transport and, to accommodate the new systems, revised

US NAVY ORION SQUADRONS

Squadron	Variant	Base
Regular Navy

operational software computer program in CMS-2 language. GEC Marconi AQS 901 acoustic signal processing and display system in P-3Ws of RAAF. Netherlands aircraft to receive AN/AAQ-22 SAFIRE FLIR as retrofit.

Self-defence. AN/ALQ-78 electronic countermeasures set. AN/ALR 66(V)3 installed in Japanese and Norwegian P-3Cs and as retrofit in P-3P and CP-140; wing span increased by some 0.81 m (2 ft 8 in) to accommodate associated ESM antennae and receivers. Similar Israeli Elta equipment for Australian retrofit. Loral AN/ALQ-157 IR jammers retrofitted each side of rear fuselage on USN P-3Cs.

EQUIPMENT: Searchlight replaces one wing pylon, starboard. Search stores, such as sonobuoys and sound signals, are launched from inside cabin area in the P-3A/B. In the P-3C sonobuoys are loaded and launched externally and internally. Sonobuoys are ejected from P-3C aircraft with explosive cartridge actuating devices (CAD), eliminating the need for a pneumatic system. Australian P-3s use SSQ-801 Barra sonobuoys.

ARMAMENT: Weapons bay, 2.03 m wide, 0.88 m deep and 3.91 m long (80 × 34.5 × 154 in), forward of wing, and 10 underwing pylons. Stores can include (weapons bay/underwing, maximum): Mk 46 torpedo 8/0; Mk 50 torpedo 6/0; Mk 54 depth bomb 8/10, Mk 82 560 lb bomb 8/10, Mk 83 980 lb bomb 3/8, Mk 36 destructor 8/10; Mk 40 destructor 3/8; LAU-68A pod (seven 2.75 in rockets), or LAU-69A (19 2.75 in rockets), or LAU-10A/C (four 5 in rockets), or SUU-44A (eight flares) 0/4, Mk 52 mine 3/8, Mk 55 or Mk 56 mine 1/6, Mk 60 torpedo 0/6; AGM-84 Harpoon anti-ship missile 0/8. Two AIM-9L Sidewinder AAMs underwing for self-defence. Maximum total weapon load includes six 2,000 lb mines under wings and a 3,290 kg (7,252 lb) internal load made up of two Mk 101 depth bombs, four Mk 44 torpedoes, pyrotechnic pistol and 12 signals, 84 sonobuoys, 100 Mk 50 underwater sound signals (P-3A/B), 18 Mk 3A marine markers (P-3A/B), 42 Mk 7 marine markers, two B.T. buoys, and two Mk 5 parachute flares. Harpoon missiles are standard fit on a proportion of US Navy P-3Cs and AGM-65D Maverick ASM capability to be added as part of Anti Surface Warfare Improvement Program.

DIMENSIONS, EXTERNAL:

Wing span	30.37 m (99 ft 8 in)
Wing chord, at root	5.77 m (18 ft 11 in)
at tip	2.31 m (7 ft 7 in)
Wing aspect ratio	7.5
Length overall	35.61 m (116 ft 10 in)
Height overall	10.27 m (33 ft 8½ in)
Fuselage diameter	3.45 m (11 ft 4 in)
Tailplane span	13.06 m (42 ft 10 in)
Wheel track (c/l shock-absorbers)	9.50 m (31 ft 2 in)
Wheelbase	9.07 m (29 ft 9 in)
Propeller diameter	4.11 m (13 ft 6 in)
Cabin door: Height	1.83 m (6 ft 0 in)
Width	0.69 m (2 ft 3 in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck and electrical load centre:	
Length	21.06 m (69 ft 1 in)
Max width	3.30 m (10 ft 10 in)
Max height	2.29 m (7 ft 6 in)
Floor area	61.13 m² (658.0 sq ft)
Volume	120.6 m³ (4,260 cu ft)

AREAS:

Wings, gross	120.77 m² (1,300.0 sq ft)
Ailerons (total)	8.36 m² (90.0 sq ft)
Trailing-edge flaps (total)	19.32 m² (208.0 sq ft)
Fin, incl dorsal fin	10.78 m² (116.0 sq ft)
Rudder, incl tab	5.57 m² (60.0 sq ft)
Tailplane	22.39 m² (241.0 sq ft)
Elevators, incl tabs	7.53 m² (81.0 sq ft)

WEIGHTS AND LOADINGS (P-3B/C):

Weight empty	27,890 kg (61,491 lb)
Max fuel weight	28,350 kg (62,500 lb)
Max expendable load	9,071 kg (20,000 lb)
Max normal T-O weight	61,235 kg (135,000 lb)
Max permissible weight	64,410 kg (142,000 lb)
Design zero-fuel weight	35,017 kg (77,200 lb)
Max landing weight	47,119 kg (103,880 lb)
Max wing loading	507.0 kg/m² (103.8 lb/sq ft)
Max power loading	4.18 kg/kW (6.87 lb/ehp)

PERFORMANCE (P-3B/C, at max T-O weight, except where indicated otherwise):

Max level speed at 4,575 m (15,000 ft) at AUW of 47,625 kg (105,000 lb)	411 kts (761 km/h, 473 mph)
Econ cruising speed at 7,620 m (25,000 ft) at AUW of 49,895 kg (110,000 lb)	328 kts (608 km/h, 378 mph)
Patrol speed at 457 m (1,500 ft) at AUW of 49,895 kg (110,000 lb)	206 kts (381 km/h, 237 mph)
Stalling speed: flaps up	133 kts (248 km/h, 154 mph)
flaps down	112 kts (208 km/h, 129 mph)
Rate of climb at 457 m (1,500 ft)	594 m (1,950 ft)/min
Time to 7,620 m (25,000 ft)	30 min
Service ceiling	8,625 m (28,300 ft)
Service ceiling, OEI	5,790 m (19,000 ft)
T-O run	1,290 m (4,240 ft)
T-O to 15 m (50 ft)	1,673 m (5,490 ft)
Landing from 15 m (50 ft) at design landing weight	845 m (2,770 ft)
Mission radius (3 h on station at 457 m, 1,500 ft)	1,345 n miles (2,494 km, 1,550 miles)
Max mission radius (no time on station) at 61,235 kg (135,000 lb)	2,070 n miles (3,834 km, 2,382 miles)
Ferry range	4,830 n miles (8,945 km, 5,558 miles)
Max endurance at 4,575 m (15,000 ft):	
two engines	17 h 12 min
four engines	12 h 20 min

UPDATED
